KENE (EDMUND) bishop of Ely the son of an alderman of Lynn in the county of Norfolk where he was born in 1713. From the Charterhouse school he removed to Caius college Cambridge but quitted that society in 1739 on being elected fellow of Peter-house. His brother Mr Benjamin Keene procured him the following year from Mr Robert Wall pole the valuable benefice of Stanhope in the diocese of Durham in the gift of the crown. Eight years afterwards on the death of Dr Whalley he was chosen head of his college and was called on in his turn to serve the office of vice chancellor of the university. In 1752 he was raised to the episcopal bench as bishop of Chester and two years afterwards resigned his university appointments. Bishop Mawson dying in 1770 Dr Keene was translated to the see of Ely the revenues of which diocese he much improved as well as the general condition of the pecuniary resources of the bishopric by procuring an act of the legislature enabling him to part with the old and dilapidated palace which then occupied the site of Ely place on the north side of Holborn and to erect with the proceeds the present episcopal residence in Dover street. Fortunately the surplus of revenue derived from this source after the erection of the new building being estimated at upwards of 5000L per annum. Dr Keene as a prelate was celebrated for his unaffected piety learning and munificence his death took place in 1781.—*Chalmers's Bug Dict*

KELL (JOHN) an eminent mathematician and natural philosopher of the last century. He was born at Edinburgh in 1671 and studied in the university of that city under the mathematical professor David Gregory. On the removal of that gentleman to Oxford Mr Kell went with him and was admitted a student of Balliol college. There he exhibited experiments illustrative of the Newtonian philosophy by means of an apparatus of his own invention, and he likewise acquired great credit by his examination of Dr Burnet's *The City of the Earth and of Whiston's Speculations* on the same subject. In 1700 he read lectures on natural philosophy as deputy for the Sedleian professor Mr Thomas Millington.

K E I

He published in 1701 his *An Introductory ad veram Physicam*, which was several times reprinted, and was translated into French. About 1708 he was chosen a fellow of the Royal Society, and at that period he carried on a controversy with Leibnitz relative to the discovery of the doctrine of fluxions in which Kell advocated the cause of Mr Isaac Newton in opposition to the claims of Leibnitz. In 1709 he was appointed treasurer to the German exiles from the palatinate and he attended them to the settlements provided for them by our government in America. He returned home next year, and was made Savilian professor of astronomy at Oxford. He not long after defended the philosophy of Newton against the Cartesians in a paper presented to the Royal Society *On the Rarity of Matter and the Tenacity of its Composition*. In 1711 he received the appointment of decypherer to the queen and in 1713 the university of Oxford conferred on him the degree of MD. He published in 1715 an edition of Euclid's Elements and three years after a Latin work on astronomy which he translated into English and printed in 1721 under the title of *An Introduction to the true Astronomy or Astronomical Lectures* read in the Astronomical School of the University of Oxford. This was his last labour in the cause of science as he died September 1st 1721.—*KILL (JAMES)* younger brother of the foregoing was born in 1673 and studied medicine at Edinburgh and afterwards at Leyden. Returning to England he read lectures on anatomy both at Oxford and Cambridge and obtained the diploma of MD at the latter university. In 1703 he settled as a physician at Northampton and practised there with much reputation till his death which happened in 1719 owing to that horrid disease a cancer in the mouth. He was the author of a popular compendium of *Anatomy of the Human Body* 1720, and he carried on a controversy with Dr Junn and published several physiological tracts and papers in the *Transactions of the Royal Society* of which he was a fellow.—*Bug Brit. Mer tm's Bug Philos.*

KEISER (REINHARD) an eminent musician and composer of Leipzig born 1673 and educated in the university belonging to his native city. He is considered as the father of German melody and possessed a fancy as inexhaustible as original being the author of one hundred and eighteen operas in all of which is discernible the vigour of a fertile imagination corrected by study and experience. Of these his *Circe*, brought out at Hamburg in 1734 was the last and most beautiful. He was for many years director of the open-house at Hamburg and on one occasion saved that concern from absolute ruin by his exertions in bringing out no fewer than eight new operas in one year. Keiser died in 1755 and it is much to be regretted that from the scarcity of the scores, his writings are now comparatively little known.—*Bug Dict of Mus.*

KETH (JAMES) a brave and experienced

warrior, as well as an able and successful politician, field marshal of Prussia, and the confidential friend of its sovereign. He was descended of a noble house in Scotland, being the youngest son of William Keith, earl marshal of that kingdom, and was born in 1696. As the valet of a family more illustrious than wealthy, the law was marked out for him by his father, as the pursuit by which he was to attain to competence and reputation; but the breaking out of the rebellion in 1715 developed at once his military propensities and gave the future colour to his fate. His mother herself warmly attached to the house of Stuart added her persuasions to the dictates of his own inclination and nothing more was wanting to induce him, at the early age of nineteen, to join the Pretender's standard. The noise of the battle of Sheriffmuir so unfortunate to the cause he had embraced, drove him into voluntary exile; he escaped from the conflict wounded and with difficulty and effected a retreat to France. Here he subsisted for some time on supplies furnished him from Scotland, and applied himself with great diligence and perseverance to the study of mathematics and military tactics, having previously made considerable progress in classical and general literature under the auspices of the celebrated Redidman. In 1717 he quitted Paris for Italy whence he proceeded to Spain in the capital of which kingdom he was fortunate enough to obtain the countenance and friendship of the duke of Lina who procured him a command in Orsmond's Irish brigade. He subsequently accompanied his patron when appointed ambassador to Russia, where through the duke's recommendation he obtained the rank of lieutenant-general from the czarina who also conferred on him the order of the black eagle. In the Russian service he continued several years distinguishing himself as well in the field as in the cabinet during the wars of the country of his adoption with Turkey and Sweden. In the revolution, which ended by the elevation of the czarina Elizabeth to the throne he also took a prominent part, but at length on some disgust he requested and obtained his dismissal. On leaving Russia he went to Berlin where the king of Prussia to whom his abilities were well known received him with open arms and raised him to the distinguished and responsible post of governor of his metropolis, and field marshal of his forces. He made him also his confidential companion selecting him as his associate in a tour which he made incognito through part of the north of Europe. In the subsequent wars of that martial monarch, field-marshal Keith contrasted to display the greatest military talents as well as zeal in his service till his career was finally closed by a cannon shot in the unfortunate battle of Hochkirchen fought on the 14th of October, 1758.—*Chalmers's Biog. Dict.*

KEITH (THOMAS) a native of Braasdaubton, near Beverley Yorkshire born 1759 Having received a respectable education from his parents, and finding himself on their de-

cease much straitened in his pecuniary resources he came to London in 1781 with the view of turning his talents to account, and soon acquired distinction as a mathematician. In 1804 his reputation as an accountant procured him the appointment of secretary to the master of the king's household to which was added six years afterwards, the professorship of geography and sciences to the princess Charlotte of Wales. In 1814 the situation of accountant to the British Museum becoming vacant, the archbishop of Canterbury conferred it on Mr Keith who retained it till the day of his death June 29 1824. His writings are "The Complete Practical Arithmetician" 1789 an abridgment of which afterwards passed through several editions. "An Introduction to the Science of Geography," "An Introduction to the Theory and Practice of Plane and Spherical Trigonometry" 1801, a "Treatise on the Use of the Globes" 1805 and "Elements of Geometry" 1814. He also superintended the publication of several editions of Hawney's "Complete Measurer" and Paterson's "Book of Roads"—*Gent. Mag.*

KELLERMANN (FRANCIS CHRISTOPHER) duke de Valmy peer and marshal of France, senator grand cordon of the legion of honour grand cross of the order of St Louis &c. He was born at Strasburgh in 1735 and entered into the army as a private hussar at the age of seventeen. His ardent intelligence and passion for arms soon attracted the observation of his superiors and having given manifest proofs of his talents and courage in the seven years war he was made an officer and rapidly promoted till in 1788 he was made a quarter master general. Having adopted with enthusiasm the principles of the revolution he was in 1792 appointed commander of the army of the Moselle. He then effected a junction with Dumourier on the plain of Champagne and on the 17th of September he greatly distinguished himself by his defence of the position of Valmy which contributed much to the success of the campaign. He next served under Custine who denounced him to the National Convention and though he justified himself against the accusation of that officer several similar attacks followed, and at length he was arrested and confined in the military prison of the abbey at Paris. Fortunately his trial did not take place till after the expiration of the reign of terror and he was acquitted. In 1793 he took the command of the army of the Alps and Italy, but he was soon superseded by Bonaparte. On his return to Paris in 1798 he was nominated a member of the military board established by the directory. In 1801 he was president of the conservative senate, and the following year made a marshal of the empire. Under Napoleon he served with credit in Germany and Prussia, but having in 1814 voted for the restoration of royalty he continued to be employed under the new regime till his death in 1820.—*Bug Nove. des Contemp. Diet. des H M de 1820. S.*

KELLEY alias TALBOT (EDWARD) a famous reputed alchymist and necromancer, was born at Worcester in 1555 and educated at Gloucester hall, Oxford. Wood observes, that being of an unsettled mind, he left Oxford abruptly and was guilty of some crime in Lancashire for which he lost his ears. He afterwards became an associate of the learned and credulous Dr Dee in his ridiculous incantations and Rosicrucian impostures, to whose article we refer for their adventures in Germany previous to their quarrel and separation in 1589. For some time after Kelley contrived to live handsomely by his impostures until the detection of some of his impositions reduced the emperor Rudolph to imprison him. He had the address however to obtain his release and is even said so far to have conciliated the emperor as to obtain the honour of knighthood. He was soon detected in new knaveries and being imprisoned a second time he attempted to escape from a window by means of his sheets but falling to the ground from a considerable height, he expired soon after in consequence of the bruises which he received in 1595. His works are

A Poem of Chemistry and A Poem of the Philosopher's Stone both inserted in Ashmole's *Theatrum Chymicum Britannicum* a treatise has right to which however is questioned entitled, *De Lapide Philosophorum* published at Hamburgh in 1676 8vo and several Latin and English discourses printed in Dr Marc Casaubon's True and faithful Relation of what passed for many years between Dr John Dee and some Spirits. According to Landen his treatise *De Spiritu Medicinae* Kelley was also author of *Fragmēta, aliquot edita a Combachio Gezamari* 1647 12mo several of his MSS are in the Ashmolean museum at Oxford.—Athen. Oxon. vol. 1 *Weaver's Funeral Monument*.

KELLGREN (JONAS HENRY) a Swedish poet and man of letters born in 1751. He studied in the university of Abo in Finland and afterwards delivered lectures on literature at that place. He then removed to Stockholm where he distinguished himself by his talents for poetry and the drama. He was fortunate enough to obtain the patronage of the king Gustavus III and was one of the first members of the Swedish academy founded by that prince. He died April 12 1795. The works of Kellgren consist of odes epistles and tragedies, translations from Horace Tibullus and Voltaire, and essays on moral philosophy and he was also conductor of a periodical journal.—*Bog Urn*

KELLISON (MATTHEW) an English Catholic divine of considerable eminence as a controversial writer was born in Northamptonshire about 1560 and brought up in the family of lord Vaux whence he was sent for education to the English colleges at Douay and Rheims. He afterwards went to Rome where he remained seven years, and on his return was created DD and became chancellor of the university of Rheims. After a residence of twelve years at Rheims he removed to Douay

in 1613 and was declared president of that college by a patent from Rome. He died January 1 1641. His works are, "Survey of the New Religion," Reply to Sutcliff's Survey of the New Religion, *Oratione contra Henricum IV*, "The Gagg of the Reformed Gospel," *Examen Reformationis*; The Right and Jurisdiction of the Prince and Prelate A Treatise on the Hierarchy of the Church. A brief and necessary instruction for the Catholics of England" &c. Sutcliffe and Montague were his chief Protestant controversial opponents.—*Dodd's Church Hist.*

KELLY (HUGH) a dramatic and miscellaneous writer, was born in 1739 on the bank of the lake of Killarney in Ireland. His father was a person of good family in reduced circumstances who being obliged to depend upon his own personal industry in Dublin could do no better than supply his son with a small portion of education, and apprentice him to a stay-maker. He accordingly served out his time in that capacity and then repaired to London where he met with no success in his own business but having attained the friendly notice of an attorney of reputation who employed him in his office, he remained in this situation until by accidental acquaintance with some book sellers he was enabled to cultivate his literary inclinations, by becoming editor to the Ladies Museum and other periodical publications, in which his light vein of poetry and facility in the composition of minor essays, soon procured him ample employment. His industry enabled him to cope with the added difficulties of a wife and rising family and politics also engrossing a share of his attention he wrote many pamphlets on public affairs, and among others a *Vindication of the Administration of Mr Pitt*. The *Babbler* a collection of essays in two volumes, *Louisa Mildmay*, and a poem in imitation of the *Rosciad* of Churchill followed and in 1767 appeared his first comedy of *False Deityacy* the decided success of which led to the composition of *A Word to the Wise*. The latter was driven from the theatre by a report that he was employed to write for the ministry but a liberal subscription by the court party when the piece was published made him ample amends in a pecuniary point of view. A tragedy called *Clementina* succeeded but it met with little attention and aware of the political hostility which existed against him he induced a friend to found his School for Wives, which was received with decided approbation and acknowledged by the real author when its success was ensured. In the mean time he resolved to study the law and entering himself a member of the society of the Middle Temple he was called to the bar in 1774. His next dramatic production was the *Romance of an Hour* which was succeeded by the *Man of Reason* the last of his dramatic attempts, for injured by his too sedentary application an abscess formed in his side which terminated his existence on the 3d of February 1777 in the thirty eighth year of his age. He left a widow and five

K.E.L.

children. In whose benefit his play of "A Went-to-the-Wife" was performed before a crowded audience about a month after his death. His works were also collected and published in due, with a life of the author. Kelly was a lively and versatile writer of respectable, but not commanding talent, and his drama is ingenious, but too pathetic and sentimental for due infusion of the vivacity on which account although a few of his pieces were popular for a season not one of them reaches the stage.—*Life as above*

KELLY (JOHN) a learned English clergyman, a native of Douglas in the Isle of Man where his ancestors had from time immemorial possessed a small freehold. He was born in 1750, and was educated in the free grammar school of Douglas, and was led by his early sympathies to pay a particular attention to the vernacular dialect of the Celtic tongue which was spoken in the island. His skill in the Manx language of which at the age of seventeen he sought to compile a grammar and dictionary introduced him to bishop Hildesley who employed him in translating the Bible into the Manx tongue and ordained him a minister of the episcopal congregation of Ayr in Scotland. Here he was engaged by the duke of Gordon to attend the studies of the marquess of Huntly and through the same patronage he obtained the rectory of Copford in Essex. On the attainment of this preferment he entered at St. John's college Cambridge and attained the degree of LLD. In 1803 he published A Practical Grammar of the Ancient Gaelic or Language of the Isle of Man, and in 1805 issued proposals for A Triglot Dictionary of the Celtic Tongue as spoken in the Highlands of Scotland Ireland and the Isle of Man which last was nearly completed when the sheets were destroyed by the fire on the premises of Mr Nichols the printer Doctor Kelly died in 1809.—*Gent Mag*

KELLY (MICHAEL) the son of a wine merchant of Dublin of the same name who for many years acted as master of the ceremonies at the castle. The subject of this article was born in the year 1762 and at a very early age gave proofs of a strong genius for music which his father encouraging placed him under the best masters which the Irish metropolis could furnish. Raussum being at this time engaged in Dublin, gave him lessons in singing, and prevailed on his friends to send him to Naples, where he arrived in his sixteenth year and was much patronised by sir William Hamilton the British minister at that court studying under Pineroli at the Conservatorio La Madona della Loreto. He also received lessons from Aprini the first singing master of his day, who procured him an advantageous engagement at Leghorn. He subsequently performed with success at most of the Italian theatres in quality of *primo tenore* and travelling into Germany was one of the original actors in the *"Nozze di Figaro"* of Mozart with such celebrated composer he contracted a close intimacy during his stay at Vienna where he just accepted an engagement in the

service of the emperor Joseph. In this month he was much esteemed, till having at length obtained permission for a year's absence in order to visit his friends in England; he never returned to the continent, but settled in London. Here he made his first appearance at Drury Lane theatre in April 1787 as Lieut in the opera of *Lisette and Clarielle* and retained his situation as first singer at that theatre the musical performances of which he also directed till his final retirement from the stage. In 1797 he furnished the music to *A Friend in Need*. The *Celtic Spectre*, &c. which in the succeeding year he followed up by the most popular of all his compositions the aria and marches, &c in Colman's musical romance of *Bluebeard*. From this period till 1819 he continued to write, and in the course of the intervening years set upwards of sixty pieces most of which were successful. For some time previous to his decease he had been partially deprived of the use of his limbs by a paralytic affection, his faculties and memory were however spared him to the last. Of the latter an evidence exists in his *Reminiscences* an amusing work in two volumes, 8vo which appeared a few months previously to his decease replete with anecdotes of his contemporaries and familiars. His death took place at Ramsgate on the 15th October 1826—*Bog Duf of Mrs Kelly's Reminiscences*.

KEMBLE (JOHN PHILIP) one of the most eminent tragedians of the British stage since the days of Garrick. He was the eldest son of Roger Kemble manager of a company of comedians at Prescot in Lancashire in which county he was born February 1757 and received the rudiments of education at the Roman Catholic seminary of Sedgley park Staffordshire. With the view of qualifying him for one of the learned professions, he was afterwards placed by his father at the college of Douay where he early distinguished himself by his proficiency in elocution. On his return to England having completed his academical pursuits he entered immediately upon the profession of an actor for which he had long exhibited a decided predilection performing at Liverpool York Edinburgh and other provincial towns of inferior note. At that period of his life he produced a tragedy on the story of Beharino which was acted a Liverpool besides altering and adapting to the stage several of the works of the early English dramatists. He also printed about the same time a volume of *Fugitive Pieces* in verse with the appearance of which he was however so disengaged that on the very day after their publication, he bought up and destroyed every copy he could recover. One which escaped his hands has since been sold by Mr King the auctioneer for 24. 5s. Mr Kemble appeared for the first time in London on the Drury Lane boards September 30, 1783 in the part of Hamlet, and was received with great applause, it was not, however, till the succession of Smith from the stage in 1788, that he took that decided lead in tragedy which

K E M

he ever after maintained. In 1787 he married Miss Brewster, daughter of Mr Hopkins the prompter of Drury lane theatre. On the succession of Mr King Mr Kemble succeeded to the management of Drury-lane theatre, which he enjoyed with only a short interruption till 1801 during which period the drama was much indebted to him for various and considerable improvements. He also used the influence which his situation gave him in restoring to the stage several old plays of merit, as well as in bringing forward many new productions some of which were considerably altered and improved by himself. Among these are said to be 'Deaf and Dumb' 'The Stranger' 'Siege of Belgrade &c. In 1794 he brought out a musical entertainment of his own founded on the incidents of a French novel and entitled 'Lodouka,' which had a great run at the time and has since been revived with benefit to the theatre. In 1802 he visited the continent and having passed twelve months at Paris and Madrid returned to London when he purchased a sixth share of Covent-garden theatre and became manager of that establishment. Here he continued his career with great success till the destruction of the theatre by fire in 1809. In the autumn of the same year the present edifice being constructed, opened with an increase of prises which together with certain obnoxious arrangements in regard to the private boxes created for a series of nights the disturbances known by the name of the O P riots and gave rise to a contest between the management and the public in which the former was at length worsted. Mr Kemble took his farewell of the stage on the 23d of July 1817 on which occasion he was complimented with a public dinner and other honourable tokens of esteem and shortly after retired to the continent where he died at Lausanne in Switzerland February 26 1823 of a paralytic attack after a few hours illness. As an actor Kemble was of the school which qualifies spontaneous conception and feeling with profound consideration measured dignity and learned precision. His merits were therefore differently appreciated by the admirers of the drama, according to their various theories in respect to impulsives or reflective personation. By all however he was regarded as a highly gifted actor and the impression which he made in characters more immediately adapted to his style of excellence such as Cato 'Coriolanus' Hamlet 'John Jaques' 'Pearl-dock &c. will last as long as the recollection of them. His management both of Drury lane and Covent garden theatres but especially of the latter was also marked by the exhibition of much refined and accurate taste in the rectification of scenic decoration and the adoption of appropriate costume, adding thereby both to the splendour and illusion of the drama. The learning elegant manners, and accomplishments of Mr Kemble introduced him into the best company in reference both to rank and talent, by whom he was at once

K E M

courted and esteemed; and taken altogether he may be regarded as a conspicuous instance of the compatibility of his profession with distinguished reputation and general respect. *GEORGE STARKEY KEMBLE*, brother of the foregoing, an able actor. He was born May 3, 1756 at Kingswear in Devonshire, his mother herself no actress having played that very night the part of Anne Boleyn, in the play of Henry VIII was put to bed just at the time when, as queen she was supposed in the drama to have given birth to the present Elizabeth. He was originally destined for the medical profession, and apprenticed to a surgeon at Coventry but soon quitted it for the stage and after going through the usual ordeal of the provinces appeared at Covent-garden September 23 1783. He afterwards became successively manager of the theatres of Edinburgh Glasgow Liverpool and Newcastle and acting manager at Drury lane. On the stage he was chiefly remarkable for playing Falstaff it is said without stuffing. His last appearance on the boards was in the part of sir Christopher Curry May 20 1822 a fortnight before his death.—*Ann Brog Boaden's Life of Kemble*

KEMP Mus D (*JOSSEPH*) a musical composer of great respectability born in 1778 at Exeter in the cathedral of which city he was early placed as a chorister under the celebrated William Jackson at that time organist there. In 1802 having obtained the situation of organist in Bristol cathedral he removed thither and in the same year composed one of his best anthems 'I am Alpha and Omega' for the benefit of the Institution for affording Assistance to the Widows and Orphans of Clergymen in indigent Circumstances. In 1807 a prospect of advancement in his profession opening to him in the metropolis, he went to London and although disappointed in the immediate views which brought him up continued to reside there till 1814 when he returned to his native city. His war anthem 'A Sound of Battle is in the Land' performed by him at Cambridge in 1809 as an exercise for his bachelors degree in music was much admired, and the favourable impression it produced occasioned a dispensation being granted to him of the time usually deemed necessary to be passed between the taking that degree, and attaining that of doctor in the same science to which he was admitted in the July of the same year. While in London Dr Kemp delivered several courses of lectures at the Russel and other institutions, in which he explained his 'New System of Musical Education' proving the Science to be one of Simplicity arising out of a Scale of Nature. He died May 22 1824. His principal works are his 'New System' printed on upwards of 100 cards 'Twenty Psalmical Melodies'; 'The Jubilee' an entertainment performed at the Haymarket, 'The Siege of Ischia, an opera' and 'The Vocal Magazine' with a variety of songs, glee duets &c.—*Bog Duct of Mrs. Kempelev* (WOLFGANG, baron von) fa-

K. K. M.

name as the inventor of the automaton chess player, was a native of Szekesfehervar in Hungary. He displayed much talent when young as a mechanician; and as early as 1765 he announced the construction of his automaton or chess-player, which afterwards attracted so much attention. In 1785 the chess-playing figure was first exhibited at Paris, and it afterwards made its appearance in London, where it surprised and pleased those who witnessed its performance. It consisted of a figure in a Turkish dress, seated at a table the top of which was marked as a chess-board. The arm of the automaton by means of internal machinery was capable of executing about a dozen motions which it appeared to perform spontaneously so as to play a game at chess with any visitor. Baron Kempelen or his assistant was always present on those occasions, to direct by some incomprehensible method the motions of the figure. While the movements were taking place the noise of a fly wheel was heard, and after a certain time the machinery required winding up like a clock before it could again be brought into action. Various conjectures have been advanced as to the means by which the action of this machine was directed. The most probable of which is that a child was concealed in a drawer under the table which supported the chess board. It is true that the whole cavity beneath the table as well as the body of the figure was opened and exhibited to the spectators previously to the commencement of an exhibition, but as the inside of the automaton and the space under the table were not shown at the same time the child might move from one part to the other so as to deceive those who witnessed the performance. It is easy to conceive that by means of some audible signal the baron might have directed the evolutions of the automaton. This very ingenious man also constructed a speaking figure of which he published an account in a curious work, entitled "La Mecanisme de la Parole ouvr de la Description d'une Machine Particuliere, et enrichie de 27 Planches." Vienna 1791 8vo, also printed in German. He contrived likewise a printing press for the use of Mademoiselle Paradis, a famous blind musician. As specimens of his literary talents he published German poetry a drama, called "Perseus and Andromeda. The unknown Benefactor" a comedy &c. He died at Vienna in 1804.—*Burg Univ. Edinburgh Encyclopedia, Art. Automation*.

KEMPIS (THOMAS) rendered eminent by the popularity of his devotional tract, was born in 1380 at Kemp, a village in the diocese of Cologne whence he took his name. He studied in a seminary of considerable repute at Duyvendorp, where he was admitted on a foundation for the charitable instruction of the children of persons in humble circumstances. Hence he became distinguished by his piety and attachment to a contemplative life, on which account in 1399 he obtained letters of recommendation from the founder of the monastic regular canons of Mount St. Agnes,

K E N

in the district of Zwoll of which his brother was prior. After a probation of six years, he received the habit of the order, and in 1403 was ordained a prior. He spent the remainder of a long life in the assiduous practice of the prescribed duties of the cloister, and in composing sermons, devotional treatises, and lives of devout persons. He died in 1471 in the ninety second year of his age leaving a high reputation for humility, benevolence, and sanctity. His works which are chiefly practical and devotional, are written in a pleasing animated, and impressive style not unadorned with enthusiasm and of these a collection was printed at Antwerp 1615 3 vols. 8vo. Many of them have been translated into various languages particularly the celebrated treatise "De Imitacione Christi" which however has also been attributed to John Gerard a Benedictine abbot who lived some time before Kempis, and a long controversy the particulars of which may be seen in our authorities existed for sixty years, without settling the point. This celebrated work was translated into English by Dr Stanhope and first printed in 1696.—*Fisher's Theatrum. Cœlestium Genit. Mag.* vols 83 and 84.

KELN (THOMAS) a learned and pious dignitary of the English church, who was a native of Berkhamstead in Hertfordshire and was educated at Winchester school and New College Oxford. He obtained a fellowship in Winchester college in 1666 and subsequently a living in the Isle of Wight, and a prebendal stall at Westminster. About 1679 he went to Holland to officiate as chaplain to the princess of Orange and afterwards to Tangier as chaplain to the earl of Dartmouth. In every station which he held he exhibited a conscientious propriety of conduct and unyielding morality which procured him the respect of the licentious court of Charles II, and strange as it may appear conciliated the favour of that profligate prince. For residing at Winchester when the king, attended by his female favourites visited that city his house was despatched by his majesty's harbinger for the lodging of Neil Gwyn, but Dr Ken, thinking such an inmate unsuitable for a man of his function positively refused to admit her. When the king was informed of his conduct, he coolly said "Mra Gwyn must find lodgings elsewhere," and to the surprise of his courtiers he took the first opportunity to promote this conscientious supporter of the dignity of his character. Dr Ken became a chaplain to Charles II in whose reign he was made bishop of Bath and Wells. His firmness of principle was again exemplified in his petition to James II against reading the declaration for liberty of conscience, in which he was associated with archbishop Sancroft and five other prelates with whom he encountered the memorable prosecution the event of which greatly contributed to weaken the authority of the misguided monarch. After the revolution, bishop Ken refused to take the oath of allegiance to king William, in consequence of which he was deprived of his prebend. He

KEN

KENNERLEY (John) supported by those who held episcopal consecrations, and greater Anno Domini 1600 on him a plowman. He resided long with the family of Thynne at Lympstone in Devonshire, and died there in 1711. His works, consisting of sermons, poems, &c., were published in 4 vols. 8vo. 1727, with an account of his life by his nephew, sergeant Hawking.—*Athen's G. Blog.*

KENNEDY (JAMES) bishop of St Andrew's, Scotland and founder of the college of St Salvator. He was the younger son of James Kennedy of Darnure by the countess of Angus, his wife, daughter of Robert III and was born about 1405 or 1406. Entering into holy orders he was preferred by James I to the bishoprics of Dunkeld, and in 1440 advanced to that of St Andrew's. During the minority of James III, he was appointed one of the lords of the regency but in fact enjoyed the whole power and conducted himself with great prudence. He died in 1446, and was interred in the collegiate church in the precincts of St Salvador which college or university he liberally endowed for the maintenance of a provost four regents, and eight bursars or exhibitors. He is said to have written some political advices entitled *Mona Politica*, and a *'History of his Own Times'*, both of which are probably lost.—*Mechan's Lib. Aunc.*

KENNEDY (John) a physician born in Scotland, who resided some years at Smyrna and died at an advanced age in 1760. He is recognised as an authority of considerable abilities, but very little is known of his personal history. He wrote a dissertation on the cure of Carcerus, of which 256 were in his own possession in which he maintained that Osiris was that emperor's guardian god-dam, while Dr Stokesley affirmed that it was his wife. It is lamentable to add that this foolish controversy produced much needless expenditure.—*Nichols's Lit. Aunc.*

KENNEDY (John) a clergyman of the establishment, who was rector of Bradley in Derbyshire where he died in 1770. He was deemed a skilful mathematician and was author of *A Scriptural Chronology* 8vo. *An Examination of Jackson's Chronological Antiquities*, 8vo, "The Doctrine of Commensurability" 8vo. He also attempted a perfect chronology of the Hebrew Bible in regard to which his opinions were controverted by Ferrius and by the rev Thomas Bowen of Bristol, in the *Christian Magazine*.—*Gent Mag.*

KENNELL (Walter) a learned English prelate born at Dover in 1660. He was the son of a clergyman and was educated at West minister school and Edmund Hall, Oxford where he applied closely to study and entered the lists as a political partisan by the publication, in 1689, of a pamphlet, which greatly offended the whigs of that period. The next year he published a bullet, in which he advocated similar sentiments, and in 1694 appeared his translation of the "Ecclesiasticus Mo Mo" of Eusebius! About the same time he

Bios. Distr.—*Vox. II.*

KEN

took the degree of M.A. and was presented by the King of Ambrodes in Oxfordshire. In 1696 he made public a translation of Pliny's panegyric of the emperor Trajan, which was considered as a covert eulogium on the reigning monarch, James II., but he regarded the impatience as impious to his character and therefore warmly contumelious. At White Hart on a shooting-party in 1699 his skull was fractured by the bursting of his gun in consequence of which he was obliged to undergo the operation of trepanning and ever after wore a black patch on the injured part. At Oxford he distinguished himself as an eloquent preacher, and an active benedictional teacher. In 1693 he obtained the rectory of Shottesbrooke in Berkshire; in 1699 he became DD and the next year was appointed minister of St Botolph's, Aldgate, London. He was made arch deacon of Huntington in 1701 at which time he engaged in a controversy with Dr Attorney relative to the power of the English convocation. He now indeed courted the patronage of the whigs whom he had formerly excommunicated, and through the influence of the duke of Devonshire he obtained the deanery of Peterborough. His opposition to Sacheverell exposed him to much obloquy and he was denounced as an enemy to the queen and her government. Considered as a traitor to the cause he had first espoused,

means were adopted to render " " among which was the representation of a dean under the character of Judas in a painting of the last supper which was placed as an altarpiece in the church of Whiteschaple, by order of the rector Dr Welton. This picture attracted much notice and being deservedly reprobated it was at length removed by the direction of the bishop of London. Dr Ken next maintained his popularity in spite of all opposition, and in 1718 he was promoted to the bishopric of Peterborough which he held till his death in 1728. The works of bishop Ken relate to antiquities, ecclesiastical history and theology, and they display considerable talent and industry. He assisted in editing a collection of English historians, 3 vols folio, and published "Parochial Antiquities attempted in the History of Ambrodes, Burcester and other adjacent parts," 1695 4to once reprinted, "The Register and Chronicle ecclesiastical and civil," 1722, fol, both which works are still held in estimation. *Athen's G. Blog. Blog. Una.*

KENNET (Basil) younger brother of the bishop born in 1674. He was educated for the same profession at Corpus Christi college Oxford of which he became a fellow in 1697. Through the interest of his brother he was made chaplain to the English factory at Leghorn a situation which exposed him to some danger from the power of the Inquisition. Orders were issued for his imprisonment but the remonstrances of lord Sunderland the secretary of state secured his freedom, and he retained his post till ill health obliged him to return home. He died soon after at Oxford in 1716. Among his publications, which rels

K E N

chiefly to theology and classical literature, is a treatise on Roman Antiquities, which was reckoned the best work on the subject till it was superseded by the late production of Dr Adam.—*Biog. Brit.* *Chambers's Biog. Dict.*

KENNICOTT (BENJAMIN) an eminent Episcopal divine and biblical critic, who was a native of Totness in Devonshire where his father was parish clerk. After being educated in a grammar school at Totness, he obtained the office of master of a charity school in the same place. His disposition for study attracted the observation of some friends by whose assistance he became a student of Wadham college, Oxford, 1734. Here he applied himself with assiduity to theological researches, and in 1747 he gave a specimen of his talents in Two Dissertations, the first on the Tree of Life in Paradise and the second on the Oblation of Cain and Abel. Soon after he was chosen to a fellowship at Exeter college, and as a tribute to his merit, the degree of BA was conferred on him without the payment of the usual fees. He proceeded MA. in 1750 about which time he formed the design of collating the Hebrew MSS. of the Old Testament, and in 1753 he published a tract, entitled The State of the printed Hebrew Text of the Old Testament considered the object of which was to draw the attention of the public to his undertaking. Some of the members of the university viewed this scheme with apprehensive alarm, and Mr. Hales, afterwards bishop of Norwich, wrote a pamphlet, entitled A View of Mr. Kennicott's Method of correcting the Hebrew Text, with three Queries formed thereon and humbly submitted to the Consideration of the Learned and Christian World. These and other animadversions which his plan provoked did not however deter the learned critic from proceeding, and accordingly having obtained a liberal subscription he commenced his task of collation in 1756, from which period he published annual accounts of the progress which he made. He was now presented to the vicarage of Culham in Oxfordshire and appointed one of the preachers at Whitehall. He took the degree of DD. in 1761, and a pension of £200. was bestowed on him by the king. In 1767 he obtained the office of keeper of the Bodleian library, and in 1770 he was made a prebend of Westminster which prebendarian he exchanged for a canonry at Christchurch. His death took place August 15. 1783. The Hebrew Bible of Dr. Kennicott, with the various readings of MSS. appeared in 1776 2 vols. folio to which he added, Dissertatione in Veteris Testamentum Hebraicum cum varia lectionibus 1780 folio. He also published tracts and sermons, and wrote Remarks on select Passages of the Old Testament, printed after his death.—*Chambers's Biog. Dict.* *Aikin's G. Biog.*

KENYERICK (WILLIAM) a miscellaneous writer of some celebrity was born at Watford in Hertfordshire. He was brought up to the business of a miller which he quitted with a wife to cultivate literature, and so

K E N

might have ensured mediocrity had his conduct been equal to his abilities. He qualified a doctor's degree at Leyden, what seems to have appeared for the first time as no notice in a pamphlet, entitled "The Grand Question debated, or an Essay to prove that the Head of Man is not neither can it be immortal," 1751. This he immediately answered himself in a "Reply," to prove the exact reverse, a piece of quackery in which he often indulged afterwards, when desirous of attracting attention to his pretensions. He followed up these publications with "The Kapelin;" "The Paragonade in imitation of the Decades;" and similar minor poetical attempts, which attracted little notice. In 1758 appeared his Epistles Philosophical and Moral which afford the best specimens of his poetry. About the same time he engaged as a writer in the Monthly Review and in 1765 published "A Review of Dr Johnson's new edition of Shakespeare and thereby produced a controversy in which however Johnson himself took no part. In 1766 he produced his not unamusing comedy entitled Falstaff's Wedding in professed imitation of Shakespeare, which piece went through two editions but was only performed once for a benefit. He soon after wrote another comedy called The Widowed Wife which had but middling success. In 1770 and 1771 he published two pieces on the perpetual motion and in 1772 was involved in a law suit with Garrick whom he hitled in an abusive poem entitled Love in the Sods. In 1773 he collected the works of Lloyd and produced The Duellist a comedy which lasted only one night. He also compiled a Dictionary of the English Language 4to which is a work of some talent. In 1774 he delivered lectures on Shakespeare and the following year commenced The London Review which contained many critiques of merit contaminated however by personal hostility and a malignant and vituperative style. He also undertook translations of the works of Buffon and Voltaire and certainly exhibited great literary industry. He died in 1779 less lamented than he might have been, had he exerted the talents which he possessed in a manner more honourable to literature and considerate of the claims and feelings of others.—*Monthly Rev.* *Brit.*

KENT (EDWARD duke of) fourth son of George III. king of Great Britain was born Nov 2. 1767. He was educated in England by Dr Fisher afterwards bishop of Salisbury and was then removed to Gottingen and subsequently to Geneva, where he remained until 1790, when he proceeded in a military capacity to Gibraltar. He subsequently served under Gen. Dorchester in Canada and in 1793 fought under Gen. Charles Grey at the capture of St. Lucia. In 1794 he again repaired to America, and served as major general until 1796, when he became lieutenant-general and returned to England. In 1799 he was created duke of Kent and Strathearn, and earl of Bute, and the same year revisited America, but returned again in 1805. In 1809 he was

made governor of Gildestant but his actions of discipline being exceedingly rigid, (a failing which produced great military dissatisfaction wherever he commanded,) so dangerous a mutiny followed that he was recalled the following year. In 1812 he married the youngest daughter of the duke of Saxe Coburg and the widow of the prince of Leiningen. Having been led into expenses, which exceedingly diminished his income he慷慨ly adopted a plan of strict economy and led a very retired life first in Germany and then in England, to reduce it to practice. In May 1819 his duchess produced him a daughter who was called Alexandrina Victoria the first of which names was adopted in compliment to the Russian emperor Alexander. This princess at present immediately following the duke of Clarence in the succession may be deemed heiress presumptive of the crown in the second generation. Soon after this event, the duke of Kent retired to Sidmouth for the benefit of his health, but while resident there he was attacked by a pulmonary complaint which carried him off very suddenly on the 23d of January 1820. The duke of Kent was a prince of respectable endowments, and the liberal patron of every feasible schema for the relief and improvement of his fellow creatures a fact which made his military severity the more remarkable. The truth however was, that he had the improvement of the moral condition of the soldiery very much at heart and sought their behalf by incompatible means. His Royal Highness was an excellent letter writer and pleasing orator, and at the time of his death was highly popular and generally respected. His widow still survives, and with her brother prince Leopold the husband of the late lamented princess Charlotte at present assumes the principal guardianship of the infant princess who is so likely to become the future sovereign of Great Britain.—*Perseus. Ann. Reg.*

KENT (JAMES) an English musician of deserved credit for the simplicity and harmony of his sacred compositions. He was born in 1700 at Winchester and educated in the choir of that cathedral under Vaughan Richardson till his talent procured his removal to the Chapel Royal where under Dr Croft he laid the foundation of his future excellence. He became subsequently organist first to the chapel of Trinity College Cambridge and eventually succeeded to a similar situation in his native city where he remained till his decease in 1776. Few pieces of cathedral music are more generally popular than his anthems, 'Hear my Prayer' and

'My Song shall be of Mercy' —*Eleg. Duct. of His*

KENT (WILLIAM) an ingenious artist, was born in Yorkshire in 1685. He was apprenticed to a coach painter but conscious of superior talent, repaired to London where he obtained patronage, and was enabled by the magnificence of some friendly gentlemen to repair to Rome, and to study under cavalleri Luti. He also became acquainted with

Mrs Burlington, who on their return to England, lodged him in her house, and assisted his employment as a painter in the walls both of history and portrait. In these departments of art however he never obtained celebrity but talent lying chiefly in ornamental architecture some specimens of which at Holkham, Stowe, and other places are much admired. He is also regarded by Horace Walpole as the inventor of modern gardening which he rendered more natural graceful, and pleasing. He copied the sunk fence says the last-mentioned writer and saw that all nature was a garden. He likewise broke up the old uniformity of straight huts and corresponding parts, and threw wood water and ground into the beautiful shapes presented by nature. The taste of Pope is supposed to have aided that of the artist and when time shall have deserved the works of the latter his fame will live in the poet's allusion to the scenes of Esher.

Where Kent and Nature vied for Pelham's love.

The patronage of queen Caroline and several persons of rank procured for him the places of master carpenter architect principal painter and keeper of the pictures to the crown. He died at Burlington house in 1743 aged sixty five and was buried at Chiswick.—*Walpole's Anec. of Paint.*

KENYON (Lloyd lord) an eminent English lawyer the son of Lloyd Kenyon Esq of Gredington in Flintshire where he was born in 1733. After having been articled clerk to an attorney in the country he became a student at Lincoln's Inn and commenced barister in 1761. He practised first in the court of Chancery and then in that of the King's Bench where he distinguished himself by his defence of lord George Gordon on his indictment for treason in 1780. He was made attorney general in 1782 then a Welsh judge, and in 1784 was promoted to the office of master of the rolls. He succeeded lord Mansfield as chief justice of the court of King's Bench in 1788 when he was raised to the peerage. He died in 1802.—*Brydges's Edit. of Collins's Perseus.*

KEPLER (JOSEPH) a celebrated astronomer and mathematician known in the annals of science as the discoverer of the laws of motion of the planetary bodies which compose the solar system. He was the son of a military officer and was born at Wiel in the duchy of Wirtzberg December 27 1571. The narrow circumstances of his father exposed him to difficulties in the progress of his studies but the native energy of his mind enabled him to overcome them and he took his degrees in philosophy at Tübingen. In 1591 he became the pupil of Michael Maestlinus, an eminent mathematician, under whom he made a great progress. He soon after applied himself to divinity and acquired some fame as a preacher but he relinquished the gown for a profession more suited to his inclinations and in 1594 obtained the mathematical chair in the university of Gratz in Styria. In 1596 he

spent a body of eight months, and two years after he was recalled from his office in consequence of his preferring the Protestant faith; but, so far from vexed by the seizure of Spain, although he received an invitation from Alfonso, Duke of Praga to join him at Prague no less than in the prosecution of his astronomical researches, under the patronage of Rudolph, emperor of Germany. He consequently resigned his post, and returned with his family and library to Bohemia in the year 1600. His own illness on his arrival, and the death of the Danish philosopher in the following year, prevented Kepler from co-operating with him in his scientific pursuits, but he was introduced to the emperor, who ordered him to complete the tables begun by Tycho Brahe which were to be called the "Helioplatinae Tabulae." On this work he was occupied during the greater part of the remainder of his life, and he carried it on and completed it amidst the inconveniences and obstacles which arose from the irregular payment of his pension from the emperor and of the expenses attending the undertaking. In 1609 he published a specimen of the work and in 1627 it issued from the press in a finished state. About two years after he retired to Prague in Bohemia, where he again suffered from want of punctuality in the payment of his pension. This obliged him to take a journey to Ratisbon to obtain the arrears due to him, and the fatigue of travelling brought on an illness which put an end to his life soon after his arrival in that city in the month of November 1626. Among his numerous scientific productions may be mentioned his Cosmographical Mystery, 1616, "Optical Astronomy" 1616.

Account of a new Star in Sagittarius 1604; "New Astronomy or Celestial Physician," in Commentaries on the Planet Mars; "New Ephemerides from 1617 to 1620," "Copernican Astronomy 1618 1623," Harmony of the World, and a treatise on Comets; besides which he wrote on chronology the geometry of solids, trigonometry, logarithms, and elliptics. To this great philosopher we owe the discovery of the true figure of the orbits of the planets, which he demonstrated to be ellipses, and he further shewed that the planets describe areas proportional to their periodic times of revolution; and that the squares of their periodic times are proportional to the cubes of their mean distances. Such are the principles of planetary motion, generally denominated the laws of Kepler.—*Marty's Big Phiz. Hutton's Met Disc. Adm. & G. Big.*

KERPEL (Avervres) a celebrated English admiral, the second son of William earl of Albemarle. He entered the sea service at an early age, and accompanied admiral Anson round the world. Having by his professional military ability gradually reached distinction in the service, in 1718 he was appointed to the command of the channel fleet. On the 12th of July in that year, he fell in with the French *Amirauté* and *d'Orvilliers* off Ushant when no engagement ensued, which, although per-

petrated very warmly, did not last. A short delay becoming necessary to repair damage, which that battle had accomplished, the admiral made signal for his men and overcame to assume their proper stations. This order was obeyed with great alacrity by sir Robert Harland, who led the van, but sir Hugh Palliser, commanding the rear took no notice of the signal, and refused to join his commander until eight prevented a renewal of the battle. The conduct of the rear admiral being severely attacked in the public papers, he demanded of his commander-in-chief a formal disavowal of the charges brought against him. The latter although he had made no complaint himself, indignantly refused, on which admiral Palliser immediately exhibited articles of accusation against him, although he had a second time sailed with him, and had not before uttered a syllable to his prejudice. The lords of the Admiralty immediately fixed a day for the trial of admiral Kepel, who was honourably acquitted and received the thanks of both houses of parliament for his services. Palliser was next tried and reprimanded, but the public indignation was so great that he was obliged to resign his seat in the house of Commons, and to vacate several offices which he held under government. In 1722 admiral Kepel was raised to a peerage under the title of viscount Kepel baron Elden and was at two different periods opposed first lord of the Admiralty. He died in October 1736 unmarried. He was regarded as very able in his profession, and a man of great integrity and humanity.—*Colins's Passage.*

KERALIO (Louis Félix Guimard de) an ingenious man of letters, who was a native of Rouen in Brittany. He embraced the military profession, and after having attained the rank of major, he retired from the service with the decoration of the order of St Louis. He then fixed his residence at Paris, where he devoted his time to the study of literature and the education of his daughter. About 1766 he was called to Paris to undertake the office of governor to the infant don Ferdinand, who had at the same time for his tutor the abbot Conduillier. Soon after he became professor of tactics at the military school under the patronage of the duke de Choiseul which post he filled with great reputation till the period of the Revolution, when on the establishment of military schools in the provinces he was nominated inspector general. He also was made commandant of a battalion of the national guard of Paris. His death took place at Creil in the vale of Montmorency, December 10 1793. He was the author of *Histoire de la Guerre des Russes et des Turcs*, en 1736—39 et de la *Pax de Belgrade* à trois voix. 17mo. *Histoire de la Guerre entre la Russie et la Turquie et particulièrement de la Campagne de 1739*, avec des Notes et des Observations 1773, 4to. besides other works original and translated.—*Heg. Univ.*

KERGUFLIN TREMARREC (Yves Jeannin de) an eminent French navigator born at Brest about 1745. He entered young into

K E M

the navy and obtained the rank of Lieutenant in 1767. After being employed on an expedition to the coast of Biscay, to protect the whale fishery he was sent by his government on a voyage of discovery to the South Sea. On his return he gave a flattering account of a supposed continent towards the South Pole some points of which he had visited. He was sent in 1773 to make further discoveries, but the result of his researches only served to show the little value of the country he discovered, and he was arrested and confined in the castle of Sausset after his return to France, on the charge of having ill-treated one of his officers. In his prison he wrote several memoirs relative to maritime affairs and having at length obtained his liberation he again engaged in the sea service. He died in 1797. Kerguelen published accounts of his voyage to Iceland and likewise of his southern expeditions. His name is preserved in the appellation of an island in the southern Hemisphere Kerguelen's land, or the Isle of Desolation.—*Biog Univ.*

KERI (John) a learned Hungarite prelate of the seventeenth century. After completing his studies he became a member of the religious order of the hermits of St Paul and was some time after taken from the cloister to be made bishop of Szirma whence he was translated to the see of Watsee. He died at Ivrana in 1685. Besides many other works, he was the author of a curious history of the invasions of Hungary by the Turks, entitled *Ferocia Martis Turciæ*.—KRI (Francis Borczi) a native of Zemplin in Hungary who entered into the society of the Jesuits, among whom he was for some time professor of philosophy and mathematics. He cultivated astronomy with much success and made some improvements in the telescope. He died at Buda in 1769 leaving behind him the reputation of great worth and learning. His literary reputation depends on his works relative to the history of the eastern empire entitled "Imperatores Orientis compendio ex libris, ex compendiis Græcis Scriptoribus a Const. Mag. ad Const Ult. 1744 folio, and "Imperatores Ottomani a capta Constanti nopol. 1749 folio, in nine parts continued by Father Nich. Schmit.—*News. Dict Hist Biog Univ.*

KERR (Robert) a surgeon at Edinburgh who distinguished himself as an industrious writer. He was a member of the Royal and Antiquarian Societies of Edinburgh and devoted himself principally to the cultivation of the physical sciences, relative to which he published several works, original and translated. He died in May 1814. Among the productions of his pen are Lavoisier's "Elements of Chemistry," Berthollet's "Essay on Bleaching," and Cuvier's "Essay on the Theory of the Earth translated from the French. The Animal Kingdom, or Zoological System of Linnaeus," 1792 4to. "The Natural History of Quadrupeds and Serpents," 1802, 4 vols. 8vo, "A General View of the Agriculture of the County of Berwick," 1809 8vo, Me-

K E T

moirs of the Life of William Sandie," 1811, 2 vols. 8vo; and a "General Collection of Voyages" 18 vols. 8vo.—*Watt's Hist. Eng. Biog. Univ.*

KERGAUD (Armand Guy Simon comte) a native of Finistre, of a family belonging to the province of Brittany. He entered into the navy and served with credit previous to the commencement of the French revolution. He connected himself with the philosophists, whose writings prepared the way for that event; and in 1788 he published a pamphlet, entitled "Le Bon Sens" 8vo in which he attacked the privileged orders. In the constituent assembly he was often consulted on naval affairs, and his measures being opposed he warmly attacked his adversaries in his speeches and in the public journals. He took an active part in the proceedings of the national convention and became a member of the jacobin club, but after the dispersion of that society in 1791 he joined the more moderate party of the Girondists. He attempted in vain to stop the career of the terrorists, and on the trial of the king he proposed an appeal to the people, and the abolition of the monarch till the restoration of peace. Finding his efforts unavailing he sent in the resignation of his seat in the convention. Called to account for his conduct, he defended himself with firmness and refused to resume his place. His friends made great efforts to save him from the proscription which awaited him but in vain for having endeavoured to cover himself he was discovered and put to death December 4, 1793, at the age of fifty two. Besides writing tracts on naval and political affairs he was engaged with Condorcet and others in the "Journal de la Société de 1789" 13 vols. 8vo.—*Biog Univ. Dict. des M. du 18me. S.*

KETT (Haway) an able divine and an accomplished scholar born at Norwich in 1761. He commenced his education at the grammar school of his native city under Mr Lessou and benefited also much by the occasional assistance and instructions of the celebrated Dr Part. In 1777 he was removed by his friends to Oxford and entered as a commoner at Trinity college in that university where he obtained a scholarship the following year. In 1783 he graduated as A.M. and soon after succeeded to a fellowship, and became one of the college tutors. In 1790 he was appointed Banham lecturer and in October 1793, became a candidate for the professorship of poetry against Mr Harens but lost the election by a majority of twenty votes. In 1806 he resigned his tutorship, and shortly afterwards all his college offices though he still continued a resident of Oxford till the winter of 1823, when he retired to Charlton in Gloucestershire on his marriage with Miss White, a lady of that place. Mr Kett's death was occasioned by accidentally upsetting out of his depth while bathing when on a visit to his friend Mr J. Gibbons of Stanwell, June 30, 1825. The only church preference of which he died possessed, was the perpetuation

curacy of Ryelham, Lancashire, a sister-city, although in the course of his very eventful career most of the valuable benefices belonging to his college had been by turns at his option all of which he systematically and disinterestedly declined in favour of his juniors. By his will the bulk of his property amounting to £5,000, was bequeathed, after his widow's decease, to three charitable institutions, of which the Radcliffe Infirmary was one. His writings, devotional and miscellaneous, consist of contributions to the "Olla Podrida," a series of essays published by him in 1767, in conjunction with Mr Munro and Dr (afterwards bishop) Horne; "Juvenile Poems" 1793. This collection of youthful effusions he afterwards took some pains to suppress, being perhaps principally incited by the criticisms of his friends, who freely professed themselves of opinion that his poetic powers were not of the first order. To this circumstance his friend and fellow colleague Warton, alluded in an enigma which derived its point from a personal peculiarity of Mr Kett, and which probably tended to enforce his desire of calling in these productions of his early muse, it runs thus—

Our Kett not a poet!
Why how can you say so?
For if he's no Ovid
He's surely a Naso.

He also published, "History the Interpreter of Prophecy" 1790 a treatise evincing much reflection and extensive reading which has received the marked approbation of bishops Tomline and Porteus to the former of whom the author bequeathed the copy right. It has gone through several editions. A Tour to the Lakes of Cumberland and Westmoreland followed in the same year and in 1802 appeared the work by which he is most generally known his "Elements of General Knowledge" which ran rapidly through nine editions. His other works are "Logic made easy" 1809 "Emily a Moral Tale" 1809 and 1812, a new edition of "Headley's Beauties of English Poetry with a Life of the Author" 1810 and "Flowers of Wit" 2 vols. 12mo, 1814. He is also said to have left behind him in MS a translation of Lubinus' collection of Greek Proverbs with notes a work in which he had been some years engaged.—*Gent. Mag.*

KELLEWELL (JOHN) was born at North Allerton in Yorkshire March 10 1653. He was educated at the free-school of his native town, whence he was sent to Edmund Hall Oxford, and in 1675 obtained a fellowship in Lincoln College. He entered early into orders, and was very young when he wrote his celebrated book entitled "Measures of Christian Obedience," although not published until 1691. In 1688 lord Digby presented him to the living of Colesfield in Warwickshire but refusing to take the oaths to William and Mary at the Revolution he was deprived of it in 1690, and retired to London, where he continued to write and publish books as he had done during his residence in the country. He

died of a consumption in 1705 at the age of forty-two. His works are collected and printed in 4 vols. folio—*Memoirs of his Life* 1728. *Bog. Brit.*

KLEULEN (LOOMER VAN) a Dutch geometricalian who taught mathematics at Brada and afterwards at Amsterdam. He acquired great celebrity by his calculation of the approximate correspondence between the diameter of a circle and its circumference. In this respect he far surpassed Archimedes, Menaechmus, Viete, and other mathematicians, who had preceded him. He died at Leyden in 1616 and was buried at the church of St Peter in that city. His writings consist of a treatise in Dutch, of which Saelisse published a translation entitled *De Circulo et adscriptis* 1619 etc., "The First Principles of Arithmetic and Geometry and Geometrical Problems." —*Montuks et His of the Mathematics*. *Bog. Ustv.*

KEYSLER (JOHN GEORGE) a German antiquary who was a native of Thornau. He was born in 1689 and after having finished his studies at the university of Halle he travelled in Germany France and the Netherlands as tutor to the sons of count Giech Buchau. He subsequently undertook the tuition of the grandsons of baron Bernstorff minister of state to the elector of Hanover with whom he visited several parts of Europe. He was in England in 1718 when he was chosen a fellow of the Royal Society. The latter part of his life was spent in retirement, under the patronage of his pupil in Hanover where he died in 1743 aged fifty-four. He was the author of a work of much learning and research entitled *Antiquitates Selectae Septentrionales et Celtae* 1720, and of travels through Germany Bohemia, Hungary etc of which there is an English translation.—*New Diet. Hist.*

KHILKOFF (ANDREW JACOB LEVITCH) a Russian prince who was sent by Peter the Great ambassador to Sweden in 1700. He had scarcely arrived there when war broke out between Russia and Sweden, and Charles XII irritated against the cabinet of Moscow took the unjustifiable step of imprisoning the Russian ambassador who remained in confinement nearly twenty years. He employed himself in writing the history of his native country a work which became very popular in Russia. Being set at liberty on peace taking place, he died in his way home at the isle of Aland in October 1718.—*Bog. Ustv.*

KIDDER (RICHARD) bishop of Bath and Wells a prelate of considerable learning and ability. Wood assigns Sussex as the county which gave him birth, other accounts state him to have been a native of Suffolk. He received a university education at Emmanuel College Cambridge of which he became a member in 1649. Succeeding to a fellowship of this society he took holy orders and obtained from the college the benefice of St. ground Huntingdonshire of which he was deprived in 1662 for refusing an episcopal ordination. His firmness or his conviction however, appear at length to have given way as

for afterwards, as confirming, was presented to the living of Bayes in Essex by the curie of Essex. In 1674 he was collated to St Mary Ostwich in the city of London seven years after which he obtained a stall in Notwiche cathedral and in 1681 was further promoted to the deanery of Peterborough. In 1691 bishop Ken being deprived of the see of Bath and Wells, on account of his adherence to the cause of James II, dean Kidder was selected by William as his successor and he was an consequence raised to the episcopal bench. Two years after his elevation he preached the Boylean lecture, and continued to preside over his diocese for more than twelve years, till the memorable storm which passed over most parts of the west of England on the night of the 26th of November 1703. On that occasion the bishop and his wife had retired to rest when they were overwhelmed by the sudden fall of a stack of chimneys in the episcopal palace at Wells, and were not extricated till life in both had become extinct. Many of the bishop's works survive him the principal of which are a Demonstration of the Messiah in three parts originally printed in three octavo volumes, with his Boylean lecture annexed and again in folio. A Commentary on the Pentateuch in 2 vols 8vo has preface to which drew him into a controversy with Le Clerc who has published the correspondence written in elegant Latin in his

Bibliothèque Chouane, also The Young Man's Duty Charity directed and other devotional and polemical tracts.—*Bieg Bru*

KIEN LONG emperor of China, distinguished for his love of literature was born in 1710 and succeeded his father Yuntchian in 1735. He lived in a state of peace until 1759 when he engaged in war with the Songanians, and taking possession of all Calmuc Tartary he extended his dominions to the frontiers of Siberia and Bucharia. The conquest of Calmuc Tartary also gave him virtual possession of Thibet, and he secured his conquests by establishing strong garrisons. He was in his turn annoyed by an invasion on the part of the sovereign of Ava, in which great ravages were committed but the enemy finally retreated. Kien Long favoured the Christian religion, but rather in a private than in a public manner as in 1753 he interdicted its exercise by a formal order and he had previously even persecuted those who openly professed it. The missionaries were in consequence obliged to proceed with great caution although several of them were in the emperor's service, and treated with great respect as men of science and learning. On the suppression of the jesuits in 1774, China was less visited by scientific persons than heretofore which induced Kien Long to send to Canton and invite artists and learned men of all the European nations, and particularly astronomers. This advantage possessed on his own part a taste for poetry and natural history. Of his poetical talents we have specimens in his panegyrics on the tea-plant and on the Tartarian capital of Moukden both of which eulogies have been

translated into French by Father du Halde, missionary at Pekin, who also supplied a version of a poem by the emperor in Chinese verse, on the conquest of Calmuc Tartary. Kien Long resolving to immortalize the remembrance of his victories by the graver, engaged French artists to copy some Chinese paintings, in which they were represented, but Louis XV had them engraved for him at his own expense. The larger Chinese collection on agriculture contains several poems of this subject on rural occupations and incidents; and he established a library of no fewer than 600,000 volumes, containing copies of all the most interesting works in China. Into this collection he admitted three books, written by the jesuits, on the Christian religion. A description of the Chinese empire which appeared in Bassing's Magazine was also compiled by his order. Kien-Long seems to have been of a mild and benevolent disposition upon the whole although occasionally represented as otherwise. He died at Pekin in 1786 after a reign of fifty years.—*Hirshing's Manual of Eminent Persons who died in the Eighteenth Century*

KIERNANDER (JOHN ZECHARIAH) a zealous missionary was born at Alckland in Sweden November 21 1711. He was educated at the university of Upsal and at the age of twenty four repaired to Halle in Saxony where he was patronized by professor Franke, who recommended him to the English society for promoting Christian knowledge. Under the auspices of the latter he was sent out a missionary to Caddalore on the surrender of which to the French in 1758, he removed to Calcutta and opened a school preaching sometimes in the English and at others in the German and Portuguese languages. In 1767 he laid the foundation of a new church at Calcutta, the expense of which amounting to 8000L fell chiefly on himself and he also erected a school close to it for two hundred and fifty children. Embarrassed by these efforts his church was seized by his creditors but was redeemed by the pious interference of Mr Grant. He subsequently accepted the office of chaplain at the Dutch settlement of Chinsura on the capture of which in 1795 he removed once more to Calcutta where he died in April 1799.—*Anacharsis*

KILLIGREW There were three brothers of that name equally distinguished by their loyalty wit, and talents who flourished under the two Charleses. They were the sons of sir Robert Killigrew a knight of a good family. WILLIAM the eldest was born in 1605, at Haworth Middlesex, and after going through the usual course of a university education at St John's college, Oxford, made the tour of Europe. On his return to England he obtained a place at court, as one of the gentle men ushers of the privy chamber to Charles I with the government of Peasmarsh castle. During the civil wars he suffered materially both in purse and person in consequence of his obstinate adherence to the royal cause, in

recognition she would be granted after the restoration she had established, based on the marriage of Charles II., obtained the post of vice-chancellor. This office he enjoyed more than two-and-twenty years, employing his leisure hours in the cultivation of a taste for the drama and general literature. He composed four plays, "Solanus," "The Bishop of Gloucester," "Greneade," and "Pandora." Oxford, 1666. These pieces, though now forgotten were popular in their day and received the approbation of the poet Waller in particular. His other writings are, "Midnight and Daily Thoughts;" and the "Artless Midnights Thoughts of a Gentleman at Court," &c. &c. two essays written in the decline of life on the instability of human happiness. He died in 1693.—THOMAS the second, was born in 1611 and died before his elder brother in 1662. He was one of Charles I's pages, and on the decline of the king's party accompanied the prince of Wales into exile. During this his forced absence from England, he visited France, Italy, and Spain and after the restoration was appointed by the new king with whom he was a great favourite one of his grooms of the bedchamber. A lively vein of merriment combined with a certain oddity both of person and manner appear to have placed him high in the good graces of Charles who would frequently allow him free access to his person when charmed of the fine rapt and dignity in the state were refused it, till Killigrew at length became almost the inseparable companion of his monarch's more familiar hours. He wrote eleven pieces for the stage which have been collected and printed in one volume folio, 1664 but we look in vain in them for traces of that face countenance and mien, which together with the encouragement he received from royalty procured him the appellation of King Charles's jester. He has been in West minister abbey.—HENRY, the youngest of the three, was one year younger than his brother Thomas. When he survived about six years. He was educated for the church at Christchurch, Oxford, and acted for a while as chaplain to the cavallier. In 1648 he graduated as doctor in divinity and obtained a stall at Westminster. From this place of pre-eminence the parliamentarian party ejected him during the Commonwealth when he, in common with the rest of his family underwent considerable deprivations, but on the re-establishment of monarchy he was fortunate enough to obtain in addition to the restoration of his prebend the living of Wheathampstead, Herts, and the mastership of the Savoy. He appears in his youth to have possessed the same bent towards the drama which marked the other two, and first wrote a tragedy when only seventeen years old, under the title of "The Conspiracy." In 1655 he published a corrected ver. 111. of this play, changing the name to that of "Patinus and Endora." These are extempore-made revised versions of his compositions. The family boast also several names distinguished in the annals of

literature. Dame Catherine Killigrew, wife of Sir Henry, a descendant of the said name, daughter for his diplomatic services, was celebrated as one of the most accomplished scholars of her day. She was the daughter of Sir Anthony Cooke, of Godly hall Essex, born about the year 1530, and to a full acquaintance with the classical as well as some of the Oriental languages, added considerable poetic talents. Her death took place in 1600. Anna Killigrew, daughter of the dame mentioned in a former part of this article was born in 1600. She gave strong indications of genius at an early age and became equally eminent in the sister arts of poetry and painting, as well as distinguished for her exemplary piety and unblemished virtue amidst the seductions of a licentious court. She was one of the maids of honour to the duchess of York of whom, as well as of her husband, afterwards James II she executed portraits. She fell a victim to the small pox in the summer of 1685 and has not only been charmed by Wood as "A grace for beauty and a muse for wit," but has also been celebrated by the greatest of her literary contemporaries John Dryden. Several historical paintings of hers are in existence and a quarto volume of her poems appeared the year after her decease. The ode written by Dryden on this subject is peculiarly admired by Dr Johnson. She was buried in the Savoy chapel where is a very neat monument with a Latin inscription, commemorating her beauty accomplishments, and virtues. Praised as she has been Wood asserts, that she was even superior to the commendations so freely bestowed on her—*Bug. Bellard's Learned Ladies.*

KIMBER. There were two English authors of this name in the last century father and son. Of these Isaac the elder, born at Wantage, Berks, in 1692 was a dissenting minister at Nantwich, Cheshire and afterwards pastored to a congregation which he assisted at a chapel in Old Artillery lane, London. His principal source of income however was derived from the booksellers, for whom he compiled a "History of England," 4 vols. 8vo, a "Life of Bishop Beveridge," prefixed to an edition of his works a "Life of Oliver Cromwell" 8vo together with a variety of discourses, essays, &c. some of which appeared in the London Magazine. His death took place in 1738. His son FOWARD, born 1719 was apprenticed to a bookseller but quitted the business early in life for the army in which he served a campaign in America. On his return to England he left the service and became an author by profession in which capacity, besides editing the London Magazine to which his father had been a principal contributor he also published a "History of England," in ten octavo volumes, a peregrine and a baronetage of the United Kingdoms, and "The Adventures of Joe Thompson" a novel. He died in 1769.—*Chambers' Biog. Dict.*

KIMCHI, the name of three learned Jewish scribes, who flourished about the time of

the world, and the commencement of his thirtieth century. Of them, David and Moses were the sons of rabbi Jeshua, born in Spain, and through both eminent for their Hebrew instruments and their singular acquaintance with many Oriental languages, yet David far exceeded both his father and brother in reputation. He is considered as the best grammarian of his nation, and his writings are still regarded as standard works among the Jews. Of these the best known to the general reader are an excellent grammar and lexicon of the Hebrew tongue which furnished Buxtorf with the materials for his "Thesaurus et Lexicon Linguae Hebreorum." His commentaries on the books of the Old Testament are also highly esteemed. His grammar first appeared at Venice in 1546, and was soon followed by a treatise on the Hebrew radicals. Rabbi David passed the principal part of his life in Narbonne, and in the schism which took place between the Spanish and French Jews in 1232 respecting the books of Rambanides was appealed to by both sides as an arbitrator. He lived to an extreme old age and died in 1240. The best edition of his "Dictionarium Talmudicum" is that of 1598 folio.—Moxon.

KING (EDWARD) a poet of the seventeenth century, chiefly memorable as having been the subject of Milton's comedy entitled *Lycidas*. He was an 1632 fellow of Christ's college, Cambridge, and appears to have been distinguished alike for his private worth and for his literary abilities. As his celebrated epitaph informs us—

He knew

Himself to sing and build the lofty rhyme
He was unfortunately drowned in 1637 in his passage to Ireland from Chester. Some of his compositions have been published in Nichols's Collection of Poetry.—Chalmers's Biog. Dif.

KING (EDWARD) a very profound and erudit English antiquary. He was a native of Norwich, and studied at Clare hall, Cambridge, and afterwards at Lincoln's inn where having completed his education as a lawyer he was called to the bar. He obtained the office of recorder of King's Lynn in Norfolk, but was clearly distinguished by his attention to literature. He was chosen a fellow of the Royal society in 1707 and three years after, he became a fellow of the society of Antiquaries. Of the latter he was elected president, Feb. 21 1754 after the death of Dr Milner; but circumstances induced him to resign the office on the 23d of April following, when lord De Ferrers, afterwards earl of Worcester, was chosen in his stead, and Mr King withdrew entirely from the society. Whilst he continued connected with that learned association, he published several valuable papers in the *Archæologia*; particularly a series of "Observations on Ancient Castles." He subsequently produced a most elaborate work in three volumes folio, entitled *Mosaiques Antiquæ*, comprising a variety of information relative to English architecture anterior to the Norman

conquest, the results of subsequent research and extensive reading. He also prepared a tract relating to Oxford castle; but he did not confine his attention to archaeology; for besides some smaller pieces, he was the author of a treatise entitled "Monitis of Criticism, applying or illustrating some few Passages in the Holy Scripture upon philosophical Principles, and an enlarged View of Things," 1708, &c. This production, as well as his "Remarks on the Signs of the Times" &c. displays a propensity for fanciful speculation, more or less obvious in all the works of this learned and ingenious writer. He died in London, April 16 1807.—Gent. Mag.

KING (GEORGE) a drapier and writer on heraldry in the seventeenth century. He was a native of Lichfield and after being educated at a grammar school in that place, he became secretary and assistant to sir William Dugdale, and having acquired a knowledge of engraving, he was afterwards employed by Ogbly in executing the plates for some of his numerous compilations. In 1677 he obtained the office of rouge dragon, and subsequently that of Lancaster herald, and he also was secretary to the commissioners of public accounts, and to the comptrollers of the army. Besides a political tract he published "The Order of the Installation of Prince George of Denmark, Charles Duke of Somerset, and George Duke of Northumberland, as knights of the garter and a similar work relating to the Installation of Henry duke of Norfolk, Henry earl of Peterborough, and Lawrence earl of Rochester." He died in 1712 aged 64.—*Chalmers's Biog. Dict.*

KING (DR HANWY) a divine and poet of the seventeenth-century. He was the son of Dr John King, bishop of London, whom James I, by what may fairly be termed a royal patent, used to style "The King of Preachers." The son of this prelate was born in 1591 and was educated at Westminster school and Christ's college Oxford where he took the degree of M.A. Having been ordained, he was made chaplain to James I, and after enjoying some minor benefices, in 1638 he was promoted to the deanship of Rochester and in 1641 he became bishop of Chichester. This preferment he lost on the subversion of the episcopal government in the church but recovered it at the restoration of Charles II. He died in 1669. His works consist of sermons and other religious publications, besides "A poetical Version of the Psalms," Poems, Elegies, Parades, and Sonnets," 1657, 8vo, and poetical pieces in Greek and Latin.—*Father & Workman's Athene, Oxon.*

KING (JOHN GALT) an English divine and writer on ecclesiastical antiquities. He was born in Norfolk in 1731, and received his education at Caius college Cambridge where he graduated B.A. in 1752 and M.A. in 1763. He subsequently obtained the degree of D.D. and became a fellow of the Royal and Antiquarian Societies. In 1764 he was appointed chaplain to the English factory at Petersburg, and while in that situation he composed a

were entitled "The Religious Controversies of the Great Church in Russia," containing an Account of its Doctrines, Works, and Discipline," 1772, 8vo; and in 1773 he published "A Letter to the Bishop of Durham containing some Observations on the Climate of Russia and the Northern Countries, with a View of the Flying Mountains at Zaraisk Sella, near St Petersburg," &c. Returning to his native country he obtained the master of Wombridge, Herefordshire, in 1782, and he afterwards officiated as preacher at a chapel in the metropolis. He died in 1797. He published in the *Archologia Observations on the Barberini Vase*, and at the time of his death he was engaged in writing a number of manuscripts.—*Acta et Cen. Blag.*

KING (FRANCIS) born king of Gehilim, an eminent English lawyer and theological writer. He was born in 1669 in the city of Exeter where his father carried on the business of a grocer. He was intended for the same occupation, but displaying a strong inclination for literature, Mr. Locke, his maternal uncle persuaded his father to send him to the university of Leyden. He appears to have turned his attention chiefly to divinity, and the fruit of his studies appeared in a work, entitled "An Inquiry into the Constitution, Discipline, Unity and Worship of the primitive Church" 8vo, but on his return from Leyden, he became a student of the Inner Temple, and in 1692 he was introduced into the House of Commons, as member for Beccalston in Devonshire. He did not however relinquish his theological researches, having published in 1702, "The History of the Apostle's Creed" as the author of which he is principally known in the literary world. In 1708 he was chosen recorder of London, and received the honour of knighthood. He was appointed by the house of Commons, one of the managers of the trial of Dr. Sacheverell in 1709, and in 1712 he appeared as the gratuitous defender of the famous Whiston, on his prosecution for heresy. On the accession of George I in 1714, he was made chief justice of the Common Pleas and remained a member of the privy council; and in 1735 he succeeded Lord Macclesfield as lord chancellor, when he was raised to the peerage. He resigned the seals in 1753, and died 10 July the next year.—*Biog. Brit. Acta et Cen. Blag.*

KING (MICHAEL) a clergyman of the church of England, whose polemical writings attracted some notice. He was a native of Shoreditch, and was educated at New College Oxford, where he proceeded MA, in 1774 and also obtained a fellowship. He afterwards became vicar of St. Peter's Morville in Cambridgeshire, and in 1783 he married the daughter of Sir Francis Bernard, a lady distinguished for her literary talents. He was likewise rector of Westling in Shropshire, and held both livings till his death in 1810 at the age of sixty. He is best known as the author of "Letters from Abbotus Plymley to his brother, on the Catholic Question" however, which he published a treatise on the In-

spiration of the Scriptures, and upon the alliance between Church and State.—*Cent. Mag.*

KING (THOMAS) a distinguished theatrical performer and dramatic writer born in London in 1730. He is said to have been entitled to an attorney, but led by inclination he left the lawyer's desk to join a company of players. In 1748 he made his first appearance at Drury-lane theatre, and after performing two seasons without attracting much notice, he repaired to Bath and also went to Ireland, where his path to professional eminence was less obstructed by the interests of rival performers. Having established his reputation as a comic actor he returned to Drury-lane in 1759 and soon became a great favourite with the public. In 1763 he produced a musical entertainment called "Love at First Sight," in which for the first time he exhibited a specimen of his talents as a vocalist. In 1766 he arrived at the height of his reputation by his performance of the part of Lord Ogby in the *Clarendon Marriage*. In 1770 and 1771 he was manager and part proprietor of the Bristol theatre which situation he relinquished for a share in the theatre of Sadler's Wells. He disposed of his interest in the latter in 1785, and became deputy manager at Drury-lane, where he remained about six years, and then visited Dublin and Edinburgh. Returning to London in 1799 he performed at Covent-garden but soon resumed his former station at Drury-lane theatre and held it till 1801 when he withdrew from the stage in consequence of a dispute with some of the proprietors. He survived his final retirement about four years, dying December 11 1805. Besides the piece already mentioned he was the author of "Neck or Nothing" a farce "A Peep behind the Curtains" or "The New Rehearsal," a comedy "Virtue's last Stake" a comedy, and "Lover's Quarrels" altered from Vanbrugh.—*Biog. Dram. Their Dict.*

KING (WILLIAM) a man of wit and learning, who flourished at the beginning of the last century. He was born in London in 1663, and received his education partly under Dr. Busby at Westminster whence he removed to Christ Church college, Oxford. He took the degree of MA in 1688 and commenced author by publishing a refutation of the errors of Varillas relating to Wickliffe in his *History of Heresies*. He now entered on the study of jurisprudence and having taken his doctor's degree he became an advocate in the ecclesiastical court. In 1694 he published "An Answer to the pretended Account of Denmark," designed as an answer to Lord Moleworth's work relative to that country. Dr King's piece procured him the office of secretary to the princess, afterwards queen Anne. He produced in 1698 "A Journey to London" a burlesque on Dr Martin Lister's Journey to Paris, which was followed by the "Transactioneer" a satire on the Royal Society and its president Sir Hans Sloane. In 1703 or 1705 he went to Ireland

which he was made judge of the Admiralty committee for pilotage, keeper of the records, and vice-chancellor to the privyse; but he resented this emolument from these lucrative places, owing to his indolence and inattention. Returning to England in 1708 his friends procured him the office of gazetteer which he soon resigned, and died December 25 1712 of disease brought on by intemperance. He assisted in the very journal, called the " Examiner" and published a translation of Ovid's Art of Love and other pieces of light poetry. His Original Works in Prose and Verse, 1776 3 vols. 8vo, were edited by Mr John Nichols.—*Bug Brit. Allen's Lives of the Poets.*

KING (WILLIAM) a learned Irish prelate who was a native of Antrim, but of Scotch extraction. He received his education at Trinity college Dublin where he took the degree of BA in 1670 and that of MA in 1673 when he was ordained a deacon. The next year he entered into full orders, and was appointed chaplain to the archbishop of Tuam in 1676. He was subsequently made a prebend and precentor of Tuam chancellor of the church of St Patrick at Dublin and master of St Werburgh's parish in that city. His zealous opposition to the measures of the Roman Catholic party in the reign of James II insured his preferment after the expulsion of that prince. In 1688 he was promoted to the deanery of St Patrick's and in 1691 he was consecrated bishop of Derry. In 1702 he was translated to the archiepiscopal see of Dublin, and in 1717 he was nominated one of the lords justices of Ireland in office which he also filled in the years 1721 and 1723. He died May 8th 1729 aged seventy nine. He was distinguished for his wit as well as his learning. Having been disappointed in his expectations of being raised to the primacy of Ireland on the death of archbishop Lindsey it being assigned as a reason for passing him over that he was too far advanced in years—he received Dr Boutier the new primate at his first visit without paying him the customary compliment of rising to salute him apologizing for the apparent incurvity by saying My lord I am sure your grace will forgive me because you know I am too old to rise. Archbishop King is principally noted at present as the author of a treatise De Origine Mali the object of which is to show that the presence of material and moral evil in the world is not inconsistent with the power and goodness of the supreme being. This work provoked the unadversaries of the celebrated Boyle as it impeached his arguments on the Maccabean system. Some remarks on it were likewise published by Leibnitz whose objections as well as those of other opponents, are considered in the additions to an English translation of the work by Law afterwards bishop of Carlisle.—*Bug Brit. Allen's G. Bug.*

KING (WILLIAM) an ingenious writer of the last century. He was born near London in 1685 and received his education at Balliol college, Oxford, where he proceeded LLD in

1715. He was made secretary to the duke of Gramont and afterwards to the earl of Arundel, successive chancellors of the university, and he subsequently became principal of St Mary-hall and public orator. His death took place in 1763. He edited some of the works of Dr South, and published many tracts in the Latin language, chiefly on temporary topics, besides which he wrote an amusing autobiographical work containing anecdotes of his contemporaries, which made its appearance only a few years since, in an octavo volume.—*Nash's Lit. Anec.*

KINGSTON (ELIZABETH, duchess of) was born in 1780 and was the daughter of colonel Chudleigh, governor of Chelsea college who dying while she was young left her almost unprovided for. She resided with her mother who, through the interest of Pulman afterwards earl of Bath procured her the post of maid of honour to the princess of Wales, the mother of his late majesty. Her wit and beauty procured her many admirers, and in spite of the levity of her manners, a serious offer of marriage from the duke of Hamilton. But while that nobleman was on the continent Mrs Hazmer the aunt of Miss Chudleigh with whom she was on a visit persuaded her niece to marry privately captain Hervey a naval officer afterwards earl of Bristol. She soon conceived a violent dislike of her husband heightened by the discovery that she had been deceived into an opinion that the duke of Hamilton had forgotten her. Her marriage which took place August 4th 1744 was kept a secret, and her refusal of advantageous proposals of marriage which she subsequently received, offended her mother and subjected her to reproaches which induced her to go abroad. She went in company with a major in the army with whom she proceeded to Berlin where they parted. She is said to have been well received by the king of Prussia and also at the court of Dresden, and on her return to England (as Miss Chudleigh) she resumed her situation of maid of honour. Deafous of breaking off her union with captain Hervey she adopted the infamous expedient of tearing the leaf out of the parish register in which her marriage was entered; but repeating of this step in consequence of her husband's succeeding to the peerage she contrived to have the leaf replaced. Not long after the duke of Kingston made her a matrimonial offer on which she endeavoured to procure a divorce from lord Bristol. He at first opposed her scheme, but at length he assented to it, and she obtained the wished-for separation. On the 8th of March 1769 she was openly married to Evelyn Pierrepont duke of Kingston on whose death in 1773 she found herself left mistress of a splendid fortune under the condition of her not again becoming a wife. But she was not permitted to enjoy her riches undisturbed. The heirs of the duke commenced a suit against her for legacy in consequence of which she was tried before the house of Lords, and was found guilty, but on her pleading the privilege of peerage the

used punishment of branding in the hand was resented, and this was done "on paying the sum of office." This severity had been secured that it was not inflicted by this process. The remainder of the life of this remarkable wreath was spent abroad, and she died at her seat near Rostchildheim in France, August 25, 1768.—*Biog. Univ.*

KIPLING, DR. (THOMAS) dean of Peterborough, and regius professor of divinity at Cambridge, of St John's college in which university he was a member. In 1792 he preached the Boyle's lecture but never printed it, and the year following a Dr Fred, fellow of Jesus college, publishing some opinions hostile to the established church, Dr Kipling accepted the unpopular office of promoter or prosecutor against him in the university courts, a proceeding which terminated in Mr Fred's expulsion and drew upon himself some severe strictures from the pen of Dr Edwards, a unitarian clergyman. Dr Kipling died in February 1821. His works are—*The Elementary Parts of Dr Smith's Complete System of Optics* '40, 1778. *Codex Theodon Novis Cantabrigiensis, Evangelia et Apostolorum Acta complectens, quadrat Latere Gra co-Latinis*, folio, 2 vols. 1793. "The Articles of the Church of England proved not to be Calvinistic" '8vo, 1802, and an 8vo pamphlet entitled "Certain Accusations brought lately by the Irish Papists against Bentham and Irish Protestants examined," 1809.—*Gr. Mag.*

KIPPIES (ANDREW) an eminent dissenting divine and biographer was born at Nottingham, March 26, 1725, being the son of a silk hosiery of that town. He was educated under Dr Doddridge at Northampton, and in 1746 became minister of a dissenting congregation at Boston in Lincolnshire. In 1750 he removed to Dorking in Surrey and in 1753 succeeded Dr Hughes, as pastor to a dissenting congregation in Prince-street, Westminster. His settlement at Westminster had the foundation of an extensive estimation with the general body of protestant dissenters and on the death of Dr Jennings in 1763 he was appointed classical and philological tutor to the academy supported in London by the funds of William Coward, esq. and sustained that office with great appreciation for more than five and twenty years. In 1767 he received the degree of DD from the university of Edinburgh and in 1778 and 1779 became a fellow of the Society of Antiquaries and of the Royal Society. On the disestablishment of Coward's academy, he assisted some time in another institution formed at Hackney for the education of ministers and others in the dissenting connexion, but in a few years after would resign his share in the conduct of it. He died of a fever originating in a cold caught on a journey on the 5th of October 1795 leaving behind him a high and merited reputation for learning, conduct, and abilities. Dr Kippies was a frequent writer in the *Monthly Review*, and laid the foundation of the *New Annual Register*. On the application of the dissidents in 1778, for the enlargement of the

act of reformation, he wrote a "Vindication" of that measure. In 1783 he published "An Dissertation on the Provincial Treaty with America." He was also author of lives of sir John Pringle, captain Cook, Dr Doddridge, and Dr Lardner; that of captain Cook singly and those of the others to be prefixed to new editions of their works. But the literary undertaking to which Dr Kippes devoted his principal attention during the later years of his life was an improved edition of the *"Biographia Britannica"*. This work has attained considerable reputation but was conducted on a plan so elaborate that no termination of it on the same scale is ever likely to be attempted. The labours of Dr Kippes extended only to five folio volumes forming a very small part of the projected plan. His candour and liberality as a biographer are conspicuous, but his anxiety to make all his authorities testify for themselves gives a diffuse undigested result which might have been beneficially avoided by more spirit and decision.—*Rev. Cyclop. Gr. Mag. Adu. &c. G. Biog.*

KIRBY (JOHN JOSUAS) a native of Purfleet in Suffolk who from the humble condition of a house painter raised himself by his talents and industry to a respectable rank among the artists of his day and was elected a fellow both of the Royal and Antiquarian Societies. He was born in 1716 and first attracted public notice by a series of drawings, which he published taken from the monumental and other antiquities of the county in which he lived. A treatise on perspective which he edited in 1754, increased his reputation and introduced him to the knowledge of the earl of Bute through whose interest he was appointed drawing master to queen Charlotte and clerk of the works at Kew palace. His other writings are—*The Perspective of Architecture* 2 vols. folio 1761 printed at the expense of the late king. *A Map of Suffolk* 1766 originally drawn by his father and a vindication of the principles laid down in his work on Perspective against the attacks of an Italian named Sangati. He is also known as the father of the celebrated Mrs Trimmer. Mr Kirby died in 1774.—*Chalmers's Biog. Diet.*

KIRCHER (ATHANASIUS) a learned German jesuit, born at Freida, about the commencement of the seventeenth century. Having completed his education at Wurtzburg in Franconia he became in 1633 a member of the college belonging to his order at Avignon. Father Kircher was a good Orientalist, as well as an excellent mathematician but the fanciful nature of some of his studies has caused most of his productions to be considered rather curious than useful. The elucidation of hieroglyphics was a favourite pursuit with him in his attempts to unravel which he occasionally fell into some singular absurdities. His industry as a writer was unwearyed, the whole of his works occupying no fewer than twenty volumes in folio eleven in quarto, and three in octavo. Of these the principal are, his "*Egyptus Aegyptiacus* & vols. folios;

"*Chaldaea, Egyptiaca.*" "Phoenicia Nova," & "Ars magna secundum Combinatianam;" "Pythagoras Magistri," fol., "Inventio extantissimæ," 4to, "Mandus Sabotanus," 2 vols., "Musurgia Universalis," 2 vols. folio; "Tutus Babilo;" "Clara Illustratio;" "Præstans Graecorum Catoptrice" 4to, "Arca Noe," "Poligraphus," folio, "Organica Mathematica" "Lingua Egyptiaca restituta," "Ars magna lucis et umbrae folio, &c. &c. In his "Musurgia Nova" he lays claim to the invention of the Zôchan harp, and in his "Phœnix Nova," to that of the speaking trumpet. He was afterwards professor of Hebrew and mathematics at Rome, where he died in 1660.—There were also two protestant divines of the same name in Germany about the same period. CONRAD KIRCHER a native of Augsburg is advantageously known as the compiler of an excellent concordance of the Old Testament in Greek and Hebrew, the corresponding words of the former language being arranged throughout under those of the latter. This work was printed at Frankfort in 1607.—The other JOHN KRÄCKER was born at Tübingen in the dutchy of Württemberg and made some noise by his conversion from protestantism to the Romish church, the reasons for which change he published and provoked several answers from the Lutheran champions. He went into Hungary in 1640 and is supposed to have died there soon after.—Moret.

KIRCHMAN (JON) a native of Lübeck in Germany eminent for his classical attainments. He was born in 1572, and having acquired the rudiments of a learned education in his native city went in 1593 to Frankfort on the Oder. Here he continued to prosecute his studies with equal perseverance and success till 1597 when he proceeded to Jena, and afterwards entered himself of the university of Strasburg. The state of his finances precluding all possibility of indulging from his own means his favourite propensity which led him to foreign travel, he was at length fortunate enough to acquire the confidence of a rich citizen of Lameburg, who sent him through France and Italy at his own expense, in quality of tutor to his son. On his return in 1602 he settled at Rostock where the following year has reputation as a second scholar obtained him the professorship of poetry. In 1604 he published the work by which he is most advantageously known to posterity a dissertation "On the Funeral Ceremonies used among the Romans." He also published another work, "De Anna," which was much esteemed on account of its illustrations of that branch of antiquities. He was much employed in education, and a great many scholars were sent to him from the review cities of Germany. While at Beeskow he contracted a marriage, and was at length called to provide over the university of Lübeck. He left many works behind him among which, in addition to the one already mentioned, are "The Horoscope of the Duke of Mecklenburgh" and treatises on logic and rhetoric. He performed the functions of rec-

tor of the university of Lübeck with distinction, which however did not prevent it from decaying. His death took place in 1653.—Moret. Hist. Nat. Mém.

KIRKLAND (THOMAS) an ingenious medical and surgical writer and practitioner, who studied at the university of Edinburgh and took the degree of M.D. He established himself as a physician at Ashby-de-la-Zouch, in Leicestershire, where he pursued his professional career to the advanced age of seventy seven and died in 1798. In the early part of his life he attended the family of Lord Ferrers at Stanton Harold where he was called when that nobleman shot his steward, Mr Johnson. Dr Kirkland behaved with great spirit and address on that unfortunate occasion and was principally instrumental in procuring the arrest of the homicide. As a surgeon he distinguished himself by a controversy with Mr Pott relative to the propriety of amputation in cases of compound fractures. He also wrote on gangrene, fevers, puerperal disease, apoplexy and paralytic affections, &c. &c., but his principal performance is entitled, "An Inquiry into the present state of Medical Surgery" 1783, 1786 2 vols. 8vo.—Gent. Mag. Regn. Edit.

KIRSTENIUS (PETER) a celebrated physician, was born at Breklap in Salem, in 1577. He was the son of a merchant, who died while he was an infant, and he was designed by his guardians for trade; but in consequence of his avidity for knowledge, being allowed to embrace a learned profession, he was sent to study physic at several of the German universities. Having heard a high character of the works of Avicenna, he resolved to study Arabic in order to read them in the original language. He took the degree of M.D. at Basel and returning to Ryssow, was made vector of the college in that city but at length he confined himself wholly to the practice of physic and the cultivation of the Arabic language in which he printed such works as he deemed most useful. He was finally invited by the celebrated chancellor Oxenstiern to Sweden and was made medical professor at Upsal, where he died in 1640. He is author of "Grammatica Arabica;" "Tract. Specimen characterem Arabicorum;" "Decas Sacrae Canticorum Arabicorum;" "Vita quatuor Evangelistarum ex codicibus Manuscriptis Arabicis;" "Liber Secundus Canonis Avicennæ;" "Liber de vero usc. ab eo Medicorum;" "Note in Evangelium S. Matthei ex collatione septuaginta Arabicorum Synopsis, Egyptianorum, Graecorum, et Latinorum." —Moret.

KIRKWAN (RICHARD) a distinguished modern writer on chemistry, geology and the kindred sciences. He was a native of the county of Galway in Ireland, and was educated at the university of Dublin, where he took the degree of LL.D. He devoted himself with great labour to chemical and mineralogical researches, and became a member of the Royal Irish Academy, and also a fellow of the Royal Society. He published in the Philosophical Transactions for 1751, 1755 and 1755,

"Experiments and Observations on the Specific Gravity and Mineralic Power of various Soils Schottestey," which important subject he further prosecuted in the "Philosophical Transactions" for 1783. In 1784 appeared his "Elements of Mineralogy," 2 vols. 8vo, which was translated into German by Croll, and subsequently republished with additions and improvements. In 1787 he published an "Essay on Phlogiston and the conservativeness of Acids," designed as a defence of the theory of chemistry advanced by Dr Priestley. This very ingenious production was translated into French by the advocates for the anti-phlogistic hypothesis, and published with annotations on the rival system which made a convert of Dr Kirwan, whose rejection of the principles he had so ably supported had a considerable influence in producing the revolution which took place in chemical science. He produced, besides the foregoing works, "An Estimate of the Temperature of different Latitudes" 1787 8vo, a treatise on the Analysis of Mineral Waters 8vo and another on Logos 8vo. To which may be added, various communications to the learned societies to which he belonged. At Dublin he founded an association for the express purpose of cultivating mineralogy and as a geologist he distinguished himself by advocating what has been called the Neptunian theory of the earth, in opposition to that of Dr James Hutton. His death occurred in 1812.—*Gent. Mag.*

KIRWAN (WALTER BLAKE) an Irish divine eminent for his popularity as a preacher. He was born at Galway in 1754, and educated at the English Catholic college of St Omers whence he removed to Louvain where he took priest's orders, and became professor of philosophy. In 1778 he was appointed chaplain to the Neapolitan embassy in London and attained some fame by his exertions in the pulpit. In 1787 he resolved to conform to the establishment, and preached to his first protestant congregation in St Peter's church Dublin. His skill in the delivery of charity sermons was so great, that in 1788 the governors of the general daily schools of several parishes in Dublin entered into a resolution

That from the effects produced by the sermons of the rev Walter Blake Kirwan from the pulpit, his officiating in this metropolis was considered a peculiar national advantage and that vestries should be called to consider the most effectual method to secure to the city an instrument, under Providence of so much public benefit.' In the same year he was preferred to the probaedry of Howth, and to the rectory of St Nicholas Dublin, and finally presented to the deanship of Killala. Wunden was told of his attraction to episcopacy, and it was often necessary to keep off the crowds from the churches in which he preached by guards and palisades. He died unshaven by his tabernacle October 27 1803, leaving a widow with two sons and two daughters, the duc and duchess of whom was granted a pension of 3000 per annum. In

1814 a volume of his sermons, *Sermons published*, which is the only work of his which reached the press.—*Life prefixed to Sermons.*

KLAPROTH (MANNI HESSE) a very eminent German writer on chemistry and mineralogy. He was chemical professor at Berlin, and particularly distinguished himself by his skill in the analysis of various substances, especially those belonging to the metallic kingdom. He discovered the metal called uranium, and ascertained the properties of talium and titanium and he also discovered the zircon earth and the mellite acid. His analytical researches which are extremely interesting and important are chiefly comprised in his "Beiträge zur chemischen Kenntnis der Mineralienkörper," Berlin 1800 1810 5 vols. 8vo and "Chemische Abhandlungen gemacht im Jahre 1815" Berlin 1815 8vo. Selections from his chemical essays have been translated into English. Klaproth died, far advanced in years, in the beginning of 1817.—*Bug Univ.*

KLEBER (J B) a French military officer of distinction under the republican government. He was a native of Strasbourg and is said to have been an architect, which profession he relinquished for the army and entered into the service of the bishop of Munster which he left in 1783 for that of France. He rapidly obtained advancement during the first revolutionary commotions, and in 1793 he was employed against the royalists of La Vendee. He was afterwards removed to the army of Ardenne, and then to that of the Sambre and Meuse in which he displayed great skill in his manoeuvres during the campaign of 1794 when he was a general of division. In 1795 he commanded at Dusseldorf and in 1796 he contributed much to the success of Jourdan at the opening of the campaign. The directory gave him the command of the army of the Sambre and Meuse which he resigned to Hoche. After the treaty of Campo Formio he passed to the army professedly destined for the invasion of England and he then accompanied Buonaparte in his expedition to Egypt. He was wounded at the attack of Alexandria but he marched into Syria, where he commanded the corps of observation during the siege of Acre, and the rear-guard in the ensuing retreat. When Buonaparte left Egypt Kleber was appointed commander of the army in his room, a situation of great difficulty and danger from the state of the French troops and the power of the enemies to whom they were opposed. He however captured the city of Cairo and made an alliance with Murad Bey. The unpromising situation of affairs induced him to enter into negotiations for the removal of the French army from Egypt but before that event took place he was assassinated by an Arab in 1800.—*Bug Univ. Dict Hist des H. M. ds 18ma. 8*

KLEIN (JAMES THOMAS) an eminent naturalist, who was born at Königsberg, in 1805. He became secretary to the senate of Danzig a situation which afforded him leisure for the cultivation of science. He engaged in extensive correspondence, and wrote on

K.L.O

among very despatched and simple history. Cuvier represents him as having been a truly industrious acquire, but deficient in taste and genius. He was a member of the Academy of Sciences of St Petersburg, of the Royal Society of London, and of the Institute of Edinburgh, and one of the founders of the Society of the Lovers of Natural History of Duncan. He died in 1759. A list of his works, which are very numerous, may be found in our authorities.—*Bug Umr. Gronovii Biol. Regni Animal. et Lapid.*

KLEIST (EWALD CHRISTIAN von) a Poet-meraman by birth who, by the exercise of his poetical abilities on the subject of the seasons has been by some considered the German Thomson. He was born in 1715 at Zobbin and after serving with credit in the Danish army entered that of Prussia in which he obtained a commission as major to the regiment Von Haussen. He fell in action gallantly fighting against the Russians at Kunernsdorf in the August of 1759. Besides his celebrated poem on Spring, printed in 1749 he was the author of some idylls which are considered scarcely inferior in simple elegance to those of Gesner. He also wrote a series of moral essays which possess much merit, a romance entitled *Cassades* and a professional treatise on military tactics which appeared in the year of his death.—*Now Diet Hist.*

KLINGFNSTIerna (SAMUEL) a Swedish philosopher and mathematician born near Linkoping in 1689. He studied at Upsal where he first applied himself to the law in compliance with the wishes of his friends but he relinquished this pursuit for the more congenial study of mathematics. In 1723 he composed two dissertations on the height of the atmosphere and on the improvement of the thermometer which were inserted in the memoirs of the Royal Society of Upsal. In 1727 he commenced traveling in Germany France and England and returned to Sweden in 1730. He was then confirmed in the post of professor of mathematics, which had been promised to him during his travels. He held it till his death October 28th 1785. Klingfniesterna is principally distinguished for his researches relating to optics, and he was the author of many memoirs on various branches of philosophy and mathematics, in the Transactions of the academy of Stockholm the Royal Society of Upsal, and the Royal Society of London of which last he was a foreign associate. He also published the *Elements of Euclid* in Latin, and *Muschenbecks Natural Philosophy* in Swedish.—*Bug Umr.*

KLOPSTOCK (FREDERIC TACOPHILUS) an eminent German poet, was born at Quedlinburg, July 2 1724. His father a man of singular, but elevated character, was bailiff of the place, and he was the eldest of eleven children. After an elementary education at home, he was sent to the college of his native place, where he made himself familiar with the learned languages, and attempted compositions both in prose and verse. In the latter

R.L.O

he manifested talents, and early exhibited the forte epic of "The Messiah," to which he was excited by a patriotic wish to visit the poetic character of Germany in opposition to the sneers of certain French writers who denied to its natives the possession of any sort of talent for poetry. In 1745 he was removed to the university of Jena, where he studied theology, but in the midst of his academic pursuits, he found leisure to sketch the first three cantos of "The Messiah" which he composed in German hexameters, regardless of the asserted uniformity of the Teutonic languages for the rules of Greek and Latin prosody. In 1746 he removed to Leipzig, and became member of a society of literary young men who occasionally published their essays in a paper entitled *The Bremen Contributions*, in which he inserted his completed cantos of the Messiah. He subsequently quitted Leipzig and became tutor in the house of a relation named Weiss about which time an amatory but unrequited attachment gave a peculiar hue to his poetical labours. At length the publication of ten books of his "Messiah," made his name celebrated throughout Germany and acquired him hosts both of admirers and of critics. The former were chiefly among those who were equally alive to poetry and devotion while the latter were composed of stern theologians who disliked the mixture of scripture history with poetical invention and of rigid grammarians who carp'd at his innovations in regard to style and versification. Klopstock himself profited by these controversies, but wisely forbore to mingle in them. In 1750 he travelled into Switzerland, where he was received with great respect, and he became so pleased with the scenery of that country and the simple manners of its inhabitants, that he intended to spend the remainder of his life there, when he received an invitation from baron Bernstorff to reside at Copenhagen with assurances of such a pension as would permit him to devote himself solely to literature. He acceded to this proposal and proceeding to Copenhagen by way of Hamburg, he there became acquainted with Miss Muller, an amiable young lady of literary talents, who having read his Messiah with enthusiasm, had ardently desired to see the author. The steps by which this acquaintance ripened into tenderness, are described with great beauty and simplicity in his well-known letters written when she had become his wife to Samuel Richardson and afterwards published in that writer's correspondence. The reception of Klopstock at Copenhagen was highly cordial and the manner in which he passed his life is most interestingly described in the same letters. He lost this amiable and affectionate lady in childhood a few months after the foregoing pleasing account was sketched, and to perpetuate her memory he published in 1759 some literary productions which she left behind her. He lived chiefly at Copenhagen until 1771 when he removed as Danish legate to Hamburg; and he subsequently became counsellor to the

ment of Berlin. Afterward he left with a pension. He died at Berlin, and part of his last money he left to the Mendelssohn and other schools and charities. (Philadelphia March 16, 1883.) In the second year of his age, he was endowed with great memory. Klopstock, a poor, distinguished by excellence of imagination and sentiment, but amiss in his style, which is very great, is in age to like himself in metaphysical abstractions, and his thoughts of feeling sometimes approach to extravagance. The Mendelssohn is twenty cantos, containing twenty thousand hexameter lines, proves at once his fertility and prolixity. His odes, lyric poems, and dramas are all much admired by his countrymen, but the latter are better adapted to the closet than the stage. A great portion of the poetical merit of Klopstock consists in his noble and energetic style and diction which unhappily can scarcely be appreciated out of Germany. He was also a prose-writer of no mean rank, and his "Grammatical Dialogues" in particular are much esteemed.—*Mom. of Fred. and Mary Klopstock. Ross's Cyclop. New Diet Hist.*

KLOTH (CHRISTIAN ADOLPHUS) an eminent German scholar and critic was born in 1788 at Bischofswiesen near Dresden. He showed a very early attachment to letters, which induced his father, who was a clergy man, to spare no expense in his education. After acquiring the rudiments of learning by private tuition, he repaired to Gorlitz and studied the Greek and Latin classics under Baumgarten. Here he distinguished himself in versatility by the composition of a Latin poem on the destruction of Zittau, and by a treatise in defence of Corio against Plutarch and Don Chrysostom. In 1756 he removed to Leipzig where he took a part in the "Acta Eruditorum," and wrote two satirical pieces, entitled "Moses Eruditus" and "Genesius Sacch," the severity of which against the prevailing taste for glorifying and generalizing science, produced from a host of enemies. In 1761 he published "Opuscule Poetica," and repaired from Leipzig to Jena, where he opened a school. The next year however he accepted a professorship at Gottingen and published a treatise "De Venetianis Virgili," a Miscellanea Critica, and applied himself with great ardor to the study of ancient gems and paintings. His country now presented him offices from more than one German prince, but for some time he preferred the chair of philosophy at Gottingen, to which he was appointed by the king of Great Britain. Some success on his reputation at Gottingen at length induced him to accept the invitation of the king of Prussia to become professor of philosophy at Halle, according to his departure he published "Historia Historiarum" et Satyricorum. In 1771 he published a second work of the same kind, entitled "Dionacula Nemungana" and "Historique romain."

"Dionysia Antiquitatis." Besides the works already mentioned he wrote, "Ode to the Memory of Leibnitz," "Liberatio de Minervae Romana," "Anteversationes in Theophrasti Characteres Edition," "Discourse de la fable Androch. Harault," "Elegies," "Carmen," "Fables Petit Buronniere," "Radicala Literaria," and various other pieces and dissertations, a list of which may be seen in our authorities—*Mores de Vitis Philologorum. Ross's Cyclopedie.*

KLUIT (ADRIAN) a Dutch historian and juridical writer. He was born at Dordt in 1735, and studied at Utrecht, where he became a proficient in ancient literature. He was employed as a teacher in several schools, and at length was made rector of that of Middleburg, where he obtained a professorship in 1776. Three years after he was nominated professor of archæology and Dutch history and diplomacy at Leyden. His political opinions occasioned his removal from the chair in 1793 notwithstanding which he continued his lectures and literary labours till 1802 when he was restored to his office. In 1806 he was constituted professor of statistics under the regal government. His death took place January 12 1807 owing to the destruction of his house from the explosion of a boat laden with gunpowder which was moored to the quay near which he resided. Among his principal productions is his history of the political affairs of Holland in 1793 5 vols. See—*Biog. Univ.*

KNELLER bart. (or GODFRAY) an eminent portrait painter was born at Lebeck about 1646. His father who was surveyor-general of the mines to count Mansfeld, designed him for a military life and he was sent to Leyden to study mathematics and fortification. Subsequently perceiving his decided bent for painting he wisely acquiesced, and placed him under Bol and Rembrandt at Amsterdam. He visited Italy in 1672 where he became a disciple of Carlo Maratta and Bernini, and painted several historical pieces and portraits both at Rome and Venice. He did not however remain long in Italy and on his return he was induced to visit England in company with his brother John Zachary Kneller in 1674. They were recommended to a Hamburg merchant, for whom Godfrey painted a much admired family picture which being seen by the Duke of York the latter introduced the painter to Charles II by whom he was much patronized. He was equally favoured by James II and William III, for the latter of whom he painted the beauties of Hampton-court, and several of the portraits in the gallery of alcabre. He also took the portrait of the earl Rochester the same sovereign, who in 1685 banished and made his guardians of the privy chamber. Queen Anne continued him in the same office, and George I made him a baronet. He dedicated to Rochester his art to an accomplished age, and had reached his seventy-fifth year at his death in 1722. His interment took place at Wapping church where, under a splendid canopy, was deposited his remains, covered by a pall, on which was inscribed in English by Pope. Whether as an emin-

K N I

sacrifice of sacrificing his just reputation to laude, on many occasions his negligence being extreme. The arts of his heads are extremely graceful and his colouring is lively true and harmonious his drawing correct, and his disposition judicious. On the other hand he displays a singular paucity of imagination in his pictures even in his portraits the heads alone merit much attention the attitudes, action and drapery being simple, varying and ungraceful. Wealth was his leading object and that he attained, spending however with great freedom. He was extravagantly vain possessed a fund of humour and a lively talent at repartee many pleasant specimens of which have been duly recorded. About seventy five of his heads have been engraved.—*Watkins & Anec D'Argenville Vies de Peint Big Brit*

KNIGGE (ADOLPH FRANCIS FREDERICK baron von) a German philosopher and man of letters, born near Hanover in 1757. He studied at Gottingen and after having made some campaigns as a military man he visited many of the courts and cities of Germany more in the character of a philosophical observer of men and manners than as a candidate for wealth or honours. He died May 6 1796 at Bremen where he belonged to the collegiate chapter. Baron Knigge published many works on philosophy morals and the belles lettres in a popular style which procured him much reputation among his contemporaries. The best of his productions is his treatise *Über den Umgang mit Menschen—Of Commerce with Mankind*.—*Big Lit.*

KNIGHT esq (RICHARD PAYNE) an eminent patron of learning and the fine arts to the study and encouragement of which he devoted a great portion of his time and ample fortune. His father a man of large landed property from a dread lest the delicacy of his son's constitution should be still further impaired by the discipline of a public school kept him at home till his fourteenth year prohibiting from the same motive almost all application to study but on his decease which took place at that period young Knight was placed at a large seminary where he soon distinguished himself by his love for and progress in, classical literature. The pursuit of this, his favourite study formed afterwards the principal relaxation from his public duties as representative of Ludlow for which borough he sat in several successive parliaments. In every thing connected with art he was eminently skilled and his opinion eagerly consulted, while the splendid collection of ancient bronzes medals pictures and drawings assembled in his museum at his house in Soho-square evinced equal proofs of his taste and liberality. The whole of this valuable collection he bequeathed at his death to the British museum a patriotic legacy which was afterwards legalised by an act of parliament passed expressly for that purpose. As an author he distinguished himself by the force and depth of historical acumen the variety of his knowledge and his perfect familiarity with the domestic habits and customs of the ancients.

Big Dict.—Vol. II

K N Q

His principal prose writings are, *An Account of the Remains of the Worship of Proserpine lately existing at Isernia in the Kingdom of Naples and its connexion with the Mystic Theology of the Ancients*, 4to 1796; *An Analytical Essay on the Greek Alphabet*, 4to, 1791, *Analytical Inquiry into the Principles of Taste* 8vo 1805 and *Prolegomena in Homerum*, reprinted in the Classical Journal. In his capacity of poet he published *The Landscape* a didactic poem 8vo, 1794 a review of which he afterwards printed in 1795. *The Progress of Civil Society* a didactic poem 4to 1795 and a monody to the memory of Fox 8vo 1806. His last work was *The Romance of Alfred*. Among his manuscripts is said to be a curious and valuable correspondence with the late John Philip Kemble on the subject of the Greek drama. In politics Mr Knight was a whig of the old school. He died April 28 1824, aged seventy six.—*Am. Biog.*

KNIGHT (SAMUEL) an English divine born in 1674 in London where he was brought up at St Paul's school and afterwards removed to Trinity college Cambridge. He is principally known as the author of a well written and interesting life of Dr John Colet, dean of St Paul's and founder of the establishment in which he received the rudiments of his education. Dr Knight also published a similar biographical memoir of the dean's learned contemporary and friend Erasmus which is replete with much valuable information. He was fortunate in obtaining some rich ecclesiastical preferments holding the vicarage of Clipperton and the rectories of Borough green and Blundeston with a stall in Ely cathedral and the archdeaconry of Berkshire. His death took place in 1746 when his remains were deposited in the chancel at his living of Blundeston in Huntingdonshire.—*Aldis's G. Biog. Dict.*

KNIGHTON or KNYGHTON (HENRY) an English ecclesiastic and historian who flourished during the latter moiety of the fourteenth century. He was a canon of Leicester abbey and besides a chronicle of events from the Norman invasion to his own times wrote a more detailed account of the life and actions of Richard II with the circumstances which led to and accompanied the usurpation of the crown by Bolingbroke. This work is to be found in the collection of 1652.—*Nicolson Hist. Lib.*

KNOES (OLAUS ANDERSON) a learned Swede born about the middle of the eighteenth century. After having been for some time a tutor in the university of Upsal where he obtained the degree of master of arts he became professor at the gymnasium of Skara in the province of Westgotland. He died in 1804. Professor Knos deserves notice as the historian of Swedish literature. His works are "Historia Academiae Upsalensis" part i—vii Upsal 1757—90 and "Historia Litterarum Vestrogothicae Lundorum Postcarum," part i—viii; besides dissertations and letters—*Big Univ.*

K N O

KNOLES (RICHARD) author of an able and well-known history of the Turks was born in Northamptonshire, and was entered at the university of Oxford about 1560. He is said to have been a fellow of Lincoln college which he left to be master of the free-school of Sandwich in Kent; and he proved himself adapted to the situation by publishing for the use of his scholars, a compendium of the Latin Greek, and Hebrew Grammar London 1600. Aiming at the fugitive character of historian he composed his History of the Turks, folio 1610 being the labour of twelve years. It has passed through several editions and is extected in a manner which has transmitted his name with honour to posterity. Several continuations have appeared the last of which is that of sir Paul Rycaut. Knolles is also author of the lives and conquests of the Ottoman kings and emperors until 1610 and

A Brief Discourse on the Greatness of the Turkish Empire. He likewise translated Bodin's "Six Books of a Commonwealth". Dr Johnson thought so highly of Knolles's history that he was of opinion nothing could have prevented him from being more popular but the remoteness and barbarity of the people whose story he relates.—*Atlas. Oxon. John son's Rambler* No. 122.

KNORR (GEORGE WOLFGANG) a German engraver born at Nuremberg December 30 1705. Till the age of eighteen he followed the occupation of a turner after which he adopted that of engraving. He also cultivated painting and executed some landscapes. Later in life the study of books gave him a taste for natural history to which he principally devoted his talents. He published *Thesaurus Rei Herbariae Hortensique universalis, &c.* 1750 folio, *Deliciae Naturae selecte* folio, and a collection of monuments &c from ancient sepulchres. He died in 1758.—*Bug. Univ.*

KNOTT (EDWARD) a learned English Jesuit whose real name was Mathias Wilson and who is chiefly known by the part which he sustained in the controversy with Chillingworth. He was born at Pegsworth in Northumbria in the year 1580 and having been educated took priest's orders, and in his twenty-sixth year entered among the jesuits. He taught divinity at the English college at Rome and was afterwards appointed provincial of England. He died in London in January 1656 and was buried in the church of St Pancras. This jesuit was the author of several controversial works in which he displayed great acuteness and learning. It was to answer to him that Chillingworth wrote his "Religion of the Protestants" to which Knott rejoined by a work entitled *Inidelity unmasked* "wherein the latitudes of principle displayed by his opponent afforded him several advantages.—*Bug. Brit. Morn.*

KNOWLES (THOMAS) an able English divine and excellent classical scholar born in 1575 at Ely and educated in the grammar school of that city, whence he removed on a scholarship to Pembroke hall, Cambridge. Of this society he in due course became fellow,

K N O

and obtained eventually a stall in the cathedral belonging to his native place with the livings of Hickworth Chedburgh and Wingate, and the incumbency of St Mary's at Berry in which latter place his death occurred in 1602. He was the author of a great variety of devotional and controversial tracta among which are a series of twelve sermons, on the existence and attributes of the Devil printed together in one octavo volume, *Lectures for Passion Week*, six epistles of *Advice to a Young Clergyman*, *Primitive Christianity in Defence of the Trinity* a Reply to Clayton's *Essay on Spirit* On the Divine Legation of Moses On Charity and Sunday Schools The Tithe Bill, The Test Act, &c &c and a sermon on the ceremony of episcopal confirmation as practised in the church of England.—*Gene. Mag.*

KNOX (JOHN) the chief instrument and promoter of the reformation in Scotland. He was descended from an ancient and honourable family and born at Gifford in East Lothian in 1505. He received his primary education at the grammar school of Haddington, whence he was removed to the university of St Andrews where he received the degree of MA much before the usual age. Having embraced the ecclesiastical profession he began as usual with the study of scholastic divinity in which he so much distinguished himself that he was admitted into priest's orders before the time appointed by the canons. He soon became weary of the subtle theology of the schools, and resolved to apply himself to that which was more plain and practical. This alteration of opinion led him to attend the sermons of Thomas Guillame or Williams a man of eminent who was so bold as to preach against the pope's authority and he was still more impressed by the instructions of the celebrated George Wishart, so that he quickly relinquished all thoughts of officiating in the church of Rome and became tutor to the sons of the lords of Long Niddrie and Ormesby, who had embraced the reformed doctrines. Here he contrived to preach not only to his pupils but to the people of the neighbouring burgh, until interrupted by cardinal Beaton archbishop of St Andrews who obliged him to abscond and he thought of returing to Germany. The persuasion of the fathers of his pupils, and the assassination of Beaton by the League, encouraged him to remain, and he took shelter under the protection of the latter in the castle of St Andrews, where he instructed his scholars and notwithstanding the opposition of the sub-prior and clergy of St Andrews he preached the principles of the reformation with extraordinary courage and boldness. This continued until the castle of St Andrews surrendered to the French in July 1547 when he was carried with the garrison into France and remained a prisoner on board the galley until the latter end of 1549. Being then set at liberty he passed over to England and arriving in London was licensed either by Cromwell or the protector Somerset, and appointed preacher, first at Berwick, and after

K N O

wounds at Newcastle. In 1552 he was appointed chaplain to Edward VI and preached before the king and council at Westminster who recommended Cranmer to give him the living of Allhallows in London, which he declined, not choosing to conform to the English liturgy as it then stood. It is even said that he refused a bishopric regarding all prolixity as unworthy of the kingdom of antichrist. He however continued his practice as an itinerant preacher until the accession of Mary in 1554 when he quitted England and sought refuge at Geneva where he had not long resided before he was invited by the English congregation of refugees there at Frankfort to become their minister. He unwillingly accepted this invitation, at the request of John Calvin, and continued his services until embroiled in dispute with Dr Cox afterwards bishop of Ely who strenuously contended for the liturgy of king Edward. Knox in his usual style of bold vituperation having in a treatise published in England called the emperor of Germany as great an enemy to Christ as Nero his opponents accused him to the senate of treason both against the emperor and queen Mary on which he received private notice of his danger and again retired to Geneva whence after a residence of a few months he ventured in 1555 to pay a visit to his native country. Finding the professors of the protestant religion greatly increased in number and formed into a society under the inspection of regular teachers he finally joined them and produced so great an effect by his exertions, both in Edinburgh and other places that the Roman catholic clergy alarmed at his progress, summoned him to appear before them in the church of the black friars in that metropolis, on the 15th May 1556. This summons he purposed to obey resting on the support of a formidable party of nobles and gentry which so alarmed his opponents that they dropped the prosecution. Thus encouraged he continued preaching with additional energy and boldness, and was even induced to write to the queen regent Mary of Lorraine a letter in which he earnestly exhorted her to listen to the Protestant doctrines. While thus occupied he was strongly invited to pay a visit to the English congregation at Geneva, and he accordingly departed for that place in July 1556. He was no sooner gone than the bishop summoned him to appear before them and as that was impossible, they passed sentence of death against him as a heretic and burnt him in effigy at the cross at Edinburgh. Against this sentence he drew up an energetic appeal which was printed at Geneva in 1558, previously to which, he was invited to return to Scotland and had actually reached Dieppe on his way when he received other letters recommending delay which suspicion he unshaken by such strong remonstrances against iniquity and backsliding, that those to whom he addressed these entered into a solemn bond or covenant, dated December 3, 1557, "that they would follow forth their master, and confess themselves and what-

K N O

ever God had given them into his hands, rather than suffer idolatry to reign, and the subjects to be defrauded of the only food of their souls. Knox in the mean time had returned to Geneva, where he published his treatise entitled, 'The First Blast of the Trumpet against the monstrous Regiment of Women' chiefly aimed at the cruel government of queen Mary of England and at the attempt of the queen regent of Scotland to rule without a parliament. A Second Blast was to have followed, but the accession of queen Elizabeth to the throne of England who was expected to be friendly to the Protestant cause prevented it. In April 1559 he would have visited England but was prevented by the resentment felt by Elizabeth at his late treatise he therefore proceeded directly to Scotland, where he found a persecution of the protestants just ready to commence at Stirling. With his usual intrepidity he hurried to the scene of action to share the danger and mounting a pulpit by a vehement harangue against idolatry he inflamed the people with extreme rage. The indiscretion of a priest who immediately on the conclusion of this discourse was seen preparing to celebrate mass and to decorate the altar for that purpose precipitated his hearers into direct violence and a general attack was made on the churches of the city in which the altars were overthrown, the pictures destroyed and the images broken into pieces. The people next proceeded to the monasteries which many fabrics they almost levelled to the ground and acted with a degree of energy and fury which nothing could for the moment restrain. As these notorious proceedings were censured both by the reformed preachers and by the leaders of the same party historians have agreed to regard them as an uncoercted outrage and a mere accidental eruption of popular fury. From this time Knox continued to promote the reformation by every means in his power, and by his correspondence with the secretary Cecil was chiefly instrumental in establishing the negotiation between the Congregation and the English, which terminated in the march of an English army into Scotland. Being joined by almost all the great men of the latter country these forces soon obliged the French troops who had been the principal supporters of the tyranny of the regent, to quit the kingdom and the parliament was restored to its former independence. Of that body the majority had embraced Protestant opinions and no opportunity was omitted of assailing the ancient religion until at length the presbyterian plan, recommended by Knox and his brethren was finally sanctioned, the old ecclesiastical courts being abolished and the exercises of religious worship, according to the rites of the Romish church, prohibited. In August 1561 the unfortunate Mary then widow of Francis II king of France arrived in Scotland to reign in her own right. She immediately set up a mass in the royal chapel which being most frequented, excited the zeal of Knox, who was equally intolerant with the leaders of the conqueror's party, and in

K N O

the face of an order of privy council allowing the private mass, he openly declared from the pulpit, " that one mass was more frightful to him than ten thousand armed enemies landed in any part of the realm. This freedom gave great offence, and the queen had long and angry conferences with him on that and other occasions, in which he never paid the slightest homage either to sex or quality. He preached with equal openness against the marriage of Mary with a papist, and Darnley after his union, being induced to hear him he observed in the course of his sermon that ' God set over them, for their offences and ingratitude boys and women.' The share taken by this ardent and intrepid minister in the ensuing unhappy transactions is subject rather for history than biography. In the year 1567 he preached a sermon at the coronation of James VI when Mary had been de-throned, and Murray appointed regent. In 1572 he was greatly offended with a convention of ministers at Leith for admitting the titles of archbishop and bishop to remain during the king's minority although he approved of the regulations adopted in reference to their elections. At that time his constitution was quite broken, and he received a great additional shock by the dreadful news of the atrocious massacre of St Bartholomew. He had now ever strength enough to preach against it which he desired the French ambassador might be acquainted with but soon after took to his bed, and died on the 24th of November 1572. He was interred at Edinburgh several lords attending and particularly the earl of Morton, that day chosen regent, who as soon as he was laid in his grave thus exclaimed

There lies he who never feared the face of man who hath been often threatened with dag and dagger but yet both ended his days in peace and honour ' for he had God's providence watching over him in an especial manner when his life was sought. The character of this eminent reformer has been sketched with great candour and impartiality by Dr Robertson in his history of Scotland who, in observing upon the severity of his deportment impetuosity of temper and jealous intolerance justly observes that the qualities which now render him less amiable fitted him to advance the reformation among a fierce people and enabled him to encounter dangers and surmount opposition to which a more gentle spirit would have yielded. This is a truth which can be rejected neither by warm admirers on the one hand nor by those who imbued with the tolerant notions of a more enlightened era, are shocked at the absence of moderation on all sides. That John Knox was a man of exalted principles great intellectual energy undaunted intrepidity and exemplary piety and morality will be freely admitted by the impartial of every class. He was twice married, and had two sons by his first wife, who were educated at St John's college, Cambridge, of which they became fellows. His writings, in addition to those already mentioned, etc. " A faithful Admonition to

the Professors of the Gospel of Christ in the Kingdom of England 1554 " A Letter to Queen Mary Regent of Scotland, " " A steady Exhortation to England for the speedy embracing of Christ's Gospel. After his death appeared his History of the Reformation of Religion within the Realm of Scotland " at the end of the fourth edition of which, Edin'burgh 1732 folio, are appended all his other works.—M'Crie's *Life of Knox* Robertson's *Hist. of Scot.*

KNOX (ROBERT) an English mariner in the East India service was born about 1641. He went to sea in a ship commanded by his father in 1660 and was wrecked on the coast of Ceylon, in which island he remained a captive among the natives for twenty years. At the expiration of that time he contrived to escape to a Dutch settlement, whence he obtained a passage to Batavia and thence to England. In 1661 he published his *Historical Relation of the Island of Ceylon* " He was cousin to Strype the historian.—*Preface to the above Work*

KNOX DD (VICKERS) an eminent divine author of a variety of works both in theology and points literature. He was born December 8 1752 and educated at Merchant Taylors' school whence he proceeded in due course upon a fellowship to St John's college Oxford. On the death of his father he was chosen his successor in the head mastership of Tunbridge grammar school over which he presided thirty three years till returning in 1812 he was himself in turn succeeded by his son. He held the livings of Ruiswell and Ramsgate Crays in Essex and the chapelry of Shiphorne in Kent. His works many of which have been translated into various European languages are *Essays Moral and Literary* 3 vols. 8vo and 12mo. *Liberal Education* 2 vols. ditto, *Winter Evenings* 3 vols. ditto *Personal Nobility or Letters to a Young Nobleman* 1 vol. 12mo. *Christian Philosophy* 2 vols 12mo. *Considerations on the Nature and Efficacy of the Lord's Supper* 1 vol. 8vo and a pamphlet

On the National Importance of Classical Education, with a variety of sermons on different occasions. He also published for the use of his school expurgated editions of Horace and Juvenal and a series of selections from the works of the best English authors, generally known as *Elegant Extracts and Elegant Epistles*. On the commencement of the war consequent on the breaking out of the French Revolution several pamphlets in opposition to the belligerent counsels which prevailed were generally attributed to him as well as a translation of Erasmus's *Bellum dulce iniquum*, printed with the signature Antipolemus.

He is also regarded as the author of a searching tract, entitled 'The Spirit of Despotism' published anonymously in 1794 and since reprinted. Dr Knox wrote the Latin language with great purity and elegance both in prose and verse paying the greatest attention to the harmony and rhythm of his sentences. His death took

K O C

place at Tunbridge, September 6, 1821.—

KNOX (WILLIAM) under secretary of state in the American department, previous to the independence of the United States. He published Extra Official State Papers, for the Preservation of the Constitution and Promotion of the Prosperity of the British Empire 1799 8vo and Observations upon the Liturgy containing proposals for a reformation of that part of the church service. He died in 1810 at the age of seventy-eight.—*Oreg.*

KNUTZEV (MATTHIAS) a formal professor of Atheism of the seventeenth century. He was a native of Holstein but first broached his opinions at Königsberg in Prussia and in consequence of assuming that all ideas of God and religion should be laid aside and the dictates of reason and conscience be alone pursued his followers were denominated Conscientarians. He gave the substance of his doctrines in a short letter dated from Rome from which it appears that he denied the existence of both a good and an evil principle deemed churches and priests useless and held that there is no life beyond the present for which conscience is a sufficient guide. He made some noise in his day and was answered by the Lutheran professor Mussia. He however died in obscurity as the date of his death is not recorded.—*Moren. Chateaupr.*

KNUTZEN (MARTIN) professor of philosophy at Königsberg in Prussia, was born in 1713 and died in 1751. He left several learned works the principal of which are

Systema Casuarum efficiuntium Elementa Philosophie Rationalis. Methodia Mathematica demonstrans, Thesomata de Parabolis Infinitis and a Defence of the Christian Religion 4to in German.—*Nouv. Dict. Hist.*

KOBURGER (ANTHONY) a printer of the fifteenth century who exercised his profession at Nuremberg with so much distinction that Badus Ascensus styles him Librarianorum Principes et inter fideles atque honestos mercatores non inferior loco pontus and he praises him for the beauty and accuracy of his typography. He printed editions of the Bible and other works which are much in request among book-collectors. His death took place in 1513.—*Bieg. Univ.*

KOCH (CHRISTOPHER WILLIAM) professor of public jurisprudence at Strasburgh a writer distinguished for his laborious researches concerning the antiquities of the middle ages. He was born in 1737 and was educated at the university of Strasburgh under the celebrated Schoepf. History genealogy and the canon law were the pursuits which chiefly engaged his attention. After publishing an academical dissertation on collation to ecclesiastical dignities and benefices, he produced in 1769 his commentary on the German pragmatic sanction. He succeeded to his professorship on the death of Schoepf in 1771, and became head of the diplomatic school, whence proceeded many statesmen and ministers. The progress of the French Revolu-

K O E

tion for a time interrupted his literary pursuits, and having been chosen a member of the legislative assembly his patriotic opposition to the measures of the Jacobins occasioned his imprisonment. After eleven months captivity he was liberated on the fall of Robespierre and he was then called, by the unanimous voice of his fellow citizens to the direction of the department. He quitted this office in 1795 to resume his professional duties, which were again interrupted by public employments. In 1810 he was made honorary rector of the academy of Strasburgh which office he held till his death October 25 1813. He was the author of a View of the Revolutions of Europe from the Overthrow of the Roman Empire in the West to our own Times 3 vols. 8vo a history of treaties since the peace of Westphalia and other valuable works.—*Bieg. Univ.*

KOCHANOWSKI (JAN) a Polish nobleman who was one of the best poets his country has produced. He was born in 1532 and studied in Germany after which he visited Paris Rome and Padua where his talents attracted great notice. He made acquaintance with the chancellor Zamoyski who became his zealous patron. On his return to Poland king Sigismund wished to have engaged him in his service but he preferred the indulgence of his literary taste in retirement to rank and honour. He died about 1584. His works have procured him great celebrity among his countrymen and his version of the Psalms of David obtained for him the appellation of the Pindar of Poland. His compositions may be found in the Selection of Polish Authors printed at Warsaw 1803 1803 in twenty volumes.—*Bieg. Univ.*

KOEHLER (JOHN BERNARD) a native of Lubeck distinguished in the last century as a classical scholar. At the age of seventeen he published a dissertation on the Deutes who predated over marriage among the Greeks and Romans. In 1766 he was nominated professor of history and philosophy in the university of Kiel, and from 1781 to 1786 he occupied the chair of the Greek and Oriental languages at Königsberg. His death happened April 3 1802. Koehler published Remarks on Dion Chrysostom 1765 Notes and Observations on Theocratus 1767 tracta on Roman Law a German translation of the Iphigenia in Aulis of Euripides and made collections for an edition of Herodotus, besides writing articles in periodical journals, and other literary labours.—*Bieg. Univ.*

KOEHLER or KOELER (JOHN DAVID) one of the most industrious writers of the age in which he lived. He was born in 1684 near Leipzig and studied at Wittenberg where he devoted himself to history and the belles lettres. He became secretary to baron de Strahlen, whom he quitted in 1710 for the professorship of logic at Altona and he was soon after made librarian to the university. In 1714 he obtained the chair of history and in 1717 he was appointed tutor to the margrave of Brandenburg Bayreuth. Notwithstanding

K O K

his various engagements, he published a considerable number of valuable works, chiefly relating to history and archaeology, of which a list may be seen in our authority. The emperor Charles VI, as a mark of respect for his talents, gave Koester his portrait, suspended from a chain of gold. He became at length professor of history at Göttingen and retained the situation for twenty years, dying March 10 1715.—*Biog. Univ.*

KOENIG There were several of this name. **GEORGE MATTHIAS** the first upon record, was a Francouan born in 1616 at Alzey where his father had the superintendence of the public library. On his decease he was succeeded by his son whose learning and abilities also procured him the professorships of Greek and poetry. He compiled a Latin Biographical Dictionary of considerable merit printed in octa quo volume in 1678. His death took place about the year 1699.—**JOHANN GERHARD KOENIG** a physician of Courland in Lithuania, born 1728 was a pupil of the celebrated botanist Linnaeus. He visited various countries especially Iceland and the East Indies, keeping up throughout his travels a regular correspondence with his old instructor on the subject of their mutual study. Much of this has appeared and the late sir Joseph Banks purchased several manuscript works of this philosopher respecting the natural productions of the regions he had gone through. He died in India in 1785.—There were also two brothers in the last century **DANIEL** and **SAMUEL KOENIG** natives of Switzerland. Of these the former translated

Arbuthnot on *Ancient Coms'* into the Latin language of which Reuts afterwards published an edition at Utrecht in 1756; Daniel was killed in his twenty-second year at Franeker by the mob who in a popular commotion fell upon him under the supposition that he must be a French spy as he had been heard to converse in that language. Samuel was a good mathematical scholar and filled the professor's chair at Franeker in philosophy and ethica. He afterwards settled at the Hague on the invitation of the prince of Orange who made him his librarian. Maupertuis at that time president of the academy at Berlin of which Koeng was a member quarrelled with him and by his influence with the body procured his expulsion in consequence of an attack levelled at himself, but an able "Appeal" prevented any diminution of reputation to the discarded associate who died in 1737.—*Now Durt. Hist. Hutton's Math. Dict.*

KOENIGSMARCK (MARIA AURORA) countess of) the daughter of a Swedish general officer and born in the territory of Bremen, about 1673. Left to the care of her mother in consequence of the death of her father who was killed at the siege of Bonn she was carefully educated at Hamburg. In her seventeenth year her mother died, and this misfortune was followed by the loss of her brother count Paliss de Koengsmarck. That nobleman after having rendered his name illustrious in England by his share in the assassination of

K O E

Mr Thynne (for which the persons he employed were executed,) was suspected of an intrigue with the wife of George I then elector of Hanover by whose order Koengsmarck was privately put to death. He left a considerable fortune in the hands of his bankers of Hamburg, and they refused to surrender it to his heirs on the pretext that there was no legal evidence of his decease. Aurora and her two sisters went to Dresden to implore justice from the elector of Saxony Frederick Augustus, and that prince notorious for his gallantry admitted with the charms of the beautiful suitor, left no means untried to seduce her and at length succeeded. In 1696 she became the mother of a son named Maurice known in history as the famous count Saxe. Illness succeeding her confinement, having given occasion to her being supplanted in the heart of her sickly admirer by a new favourite she retired to the abbey of Quedlinburg, where she employed herself in the education of her son. The elector however still retained a great esteem for her and in 1702 he sent her on a diplomatic mission to his formidable enemy Charles XII of Sweden with whom his claims to the throne of Poland had involved him in a hazardous contest. The countess could not obtain an interview with the stern warrior on which she pleasantly said She was very unlucky to be the only person in the world on whom that great prince would turn his back. She afterwards offended Augustus by advising him to displace his principal minister on which she was forbidden to appear at court. She consoled herself in her retreat by the tenderness of her son to whose improvement she consecrated the rest of her life. This highly gifted and accomplished female died about 1725. She wrote a great number of odes and other pieces in German preserved in manuscript at Quedlinburg.—*Biog. Univ.*

KOERNER (THOPÔRE) an eminent German lyric poet born at Dresden in 1788. In his childhood he manifested an ardent imagination and a taste for literature which was encouraged by the attentions of the celebrated Schiller who was a friend of his father. In 1811 he finished his studies at Leipzig. He was forbidden to attend any of the Saxon universities on account of his political sentiments, he repaired to Vienna and became a dramatic writer. His pieces were very successful and he obtained the post of secretary to the management of the court theatre with a salary of two thousand florins. Always an enthusiast for the liberty of Germany the retreat of Bonaparte from Russia inspired him with military ardour and hardly leaving Vienna he went to Breslau and enlisted as a common soldier in the Prussian army. His bravery at the battle of Lützen procured him promotion soon after he was dangerously wounded in an ambuscade. When recovered, he joined the army and received a lieutenancy as the reward of his conduct in an engagement on the 6th of October, 1812, but he lost his life ten days after on the plains of Leipzig. The

K O M

periodical productions of this modern Tyrian; was collected and published at Vienna in 1814, under the title of "The Lyre and the Sword."—*Bog. Univ.*

KOLBE or KOLBEN (Peter) a Dutch writer chiefly known as the author of an account of the Cape of Good Hope. He was born in 1675 in the principality of Bayreuth where his father was a receiver of the taxes. He studied at Nuremberg under Esenauer, director of the school of painting eminent for his skill in astronomy, in which science Kolbe made so much proficiency as enabled him to give lectures at Halle where he entered himself a student of the university in 1700. He afterwards travelled with Baron von Kroese privy counsellor of Prussia, and in 1705 he went to the Cape of Good Hope and was appointed secretary to the colonies of Stellenbosch and Drakenstein. He continued in this situation ten years when becoming afflicted with blindness he returned to Europe. He afterwards recovered his sight, and became rector of the school of Newstadt on the Aisch where he remained till his death December 31 1726. He wrote a tract "De Aquas Capitis Bonae Spei" inserted in the *Acta Eruditorum Lips. 1716* and "A Description of the Cape of Good Hope" Nuremberg 1719 folio which has been translated into English and various other languages. A vehement attack was made upon the accuracy and veracity of Kolbe by the French abbé de La Caille who described his work as more resembling a series of fables than an authentic narrative. On the other hand Foster in his "Voyage round the World" ascribes the censures of La Caille to interested motives and asserts that it would be easy to refute almost every criticism which the abbé has passed on this intelligent and enterprising traveller. The great number of accounts of the Cape of Good Hope published since the works of these writers render the settlement of the question at present of very little moment.—*Aukn's G. Bog. Bog. Univ.*

KOMARZEWSKI (JOHN BAPTIST) a Pole of a noble family who was knight of several orders FRS. of London member of the Literary Society of Warsaw &c. He received a good education under the patronage of one of the ministers of king Stanislaus Augustus and he was employed by that prince on several important missions to the courts of Russia, Germany and Turkey. His services were rewarded with the rank of lieutenant general first aide de-camp to the king and intendant general of mines. On the partition of Poland he went to Russia but refusing the offers of Catherine II who would have retained him in her service he finally settled at Paris where in 1809 he published a "Hydrographical Chart of Poland" with the construction of which he had been charged by the late king. He also invented an instrument useful to miners, called the Subterranean Graphometer. He died at Paris in 1810 aged sixty-six. Besides his labours as a man of science he was the author of a political

K O S

tract entitled "Coup d'œil rapide sur les causes réelles de la décadence de la Pologne," 1805 8vo.—*Bog. Univ. des Contemp.*

KOOTEN ('IMODORI VAN) a classical scholar and Latin poet born at Leeuwarden in the United Provinces, in 1749. He studied at Franeker and in 1773 became rector of the Latin school of Camper. In 1779 he removed to Middleburg and in 1784 he succeeded the learned Schrader under whom he had been educated, at Franeker. The political commotions which took place in Holland obliged him to quit his office and his country in 1787 when he went to Paris with his friend and colleague Walckenaer or Walckenaeur son of the celebrated Hallenser. He returned to Holland in 1793 and occupied a public situation which he left to accompany M. Walckenaer on an embassy to Spain and returning with that gentleman he resided with him during the remainder of his life. He died in 1814. He distinguished himself as an elegant writer of Latin poetry and a collection he published under the title of "Debile Poetica" Amsterdam 1792 1805 8vo. contains many of his compositions while his critical skill appears in his publication of "Incerti auctores (vulgo Pandari Theban) Epitome Iliadas Homericæ," 1809 8vo.—*Bog. Univ. des Contemp.*

KORIHOLT (CHRISTIAN) There were two learned theologians of this name, the elder a native of Burg in the island of Friesland was born in January 1633. Having received the rudiments of a classical education in the place of his birth he visited Sleiwick, Leipsic, Jena, and other German universities, and at length settled at Rostock as Greek professor in 1652. Better prospects opening to him through the countenance of the reigning duke of Holstein he retained his chair little more than three years, when he removed to Kiel as professor of divinity and eventually succeeded to the vice chancellorship of that university. He published a variety of tracts on subjects connected with religion. Among others essays "On the Pagan Mahometan, and Jewish Religions," "On the Origin and Nature of Christianity," "On the Persecutions of the Primitive Church" On the three Impostors Herbert Hobbes, and Spinoza, 4to. "On the State and Progress of Schools and Academies" more especially in Germany folio. "On the Harmony of Reason with Revelation" "On the Nature of Philosophy" &c. His death took place in the spring of 1694.—His grandson of the same name was born about the year 1769 and was the author of an "Account of the British Antiquarian Society" and an edition of the letters of Leibnitz written in the French and Latin languages the former contained in one the latter in four volumes. He also wrote several devotional tracts in his capacity of divinity professor in the university of Göttingen where he died in 1751.—*Nouv. Dict. Hist.*

KOSCIUSKO (TRADERS) a celebrated Polish patriot. He was of noble descent, but

K O S

His family being by no means wealthy he was educated in the military school at Warsaw where he made a great progress in the study of mathematics and drawing. He was, in consequence of his proficiency nominated one of four students sent at the expense of the establishment to improve their knowledge in France. On his return to Poland he had a commission given him but being refused promotion he determined to go to America where war was then carrying on between Great Britain and her colonies. There he became adjutant to general Washington and acquired by his talents and bravery the esteem of those with whom he served, and he was also rewarded with the cross of the Cincinnati. After the conclusion of the war he lived in retirement in his native country till 1789 when he was made a major general in the army by the diet in which the management of public affairs was vested. He was afterwards employed as a general of division under the younger Poniatowski when he displayed great skill and courage in opposition to the attempts of the Russians against the independence of Poland. Finding his efforts for freedom paralysed by the weakness or treachery of others he gave in his resignation, and was afterwards forced to become an exile from his country. He had retreated to Leipzig in 1793 when the Polish army and the people in general impatent under the yoke of Russia were ready for insurrection. All eyes were turned towards Kościuszko whom they chose for their leader and messengers were sent to him from Warsaw to acquaint him with the schemes and wishes of his compatriots. In compliance with the invitation he proceeded towards the frontiers of Poland, but apprehensive of compromising the safety of those with whom he acted he was about to defer his enterprise and set off for Italy. He was however persuaded to return and arriving at Cracow at the very time when the Polish garrison had expelled the troops of Russia he was chosen on the 24th of March 1794 generalissimo with all the power of a Roman dictator and he immediately published an act authorising insurrection against the foreign authorities and established a new government. He then proceeded to support colonel Madiński, who was pursued by the Russians, and having joined that officer they attacked and defeated the enemy on the 4th of April with inferior numbers. His army now increased to nine thousand men, the insurrection extended to Warsaw, and in a few days the Russians were driven from that palatinate. Kościuszko mustered his forces with those of general Grochowski, and found himself at the head of an army fifteen thousand strong. He obtained some advantage over the Russians on the 8th of June, at Szaszkociny but the king of Prussia arriving to the assistance of the enemy Kościuszko suffered a defeat and was exposed to great personal danger. From this period he waged a disadvantageous warfare against his too powerful opponents till the 4th of October when he was completely defeated and

K O T

taken prisoner at the battle of Mislejowice. He was sent to Russia, and confined in a fortress near St Petersburg, till the accession of Paul I who through real or affected admiration of the character of Kościuszko set him at liberty. In May 1797 he took his departure for the American United States where he was honourably received by the government and people. He returned to Europe the following year and settled in France where he passed a great part of the remainder of his life. Buonaparte in vain endeavoured to engage him in his ambitious schemes for the subjection of Poland and even made use of the name of Kościuszko in his proclamations, but the wary and disinterested patriot comprehended the nature of his designs and rejected his overtures. He died at Solre in Switzerland on the 16th of October 1817.—*Dictionnaire H M du 18me S Biog Nouve des Contemp.*

KOSTER (Hans) an ingenious writer born in Portugal of English parents. He made a voyage to Brazil where he resided six years, and having acquired an intimate knowledge of the country he published in London in 1816 an interesting account of his travels reprinted in 2 vols. 8vo in 1817. He died at Ferman buco in South America, in 1820 at the age of twenty six.—*Biog Nouve des Contemp Lond Mag.*

KOSHTA BEN LOUKA a Christian philosopher of Basilea in Syria who wrote in the reigns of the successors of Haroun al Raschid. His love of science induced him to go to Constantinople where he made a collection of valuable works in the Greek language previously unknown to the Arabians. On account of his learning he was called to Bagdad to translate into Arabic the writings of the Greeks, and when he had completed his task he retired into Armenia where he died about the end of the ninth century. Among the principal labours of Ben Louka are translations of the Aphorisms of Hippocrates, the Barulcus of Hero of Alexandria, of which the original is not now extant, and a work of Antolykus on Astronomy. An enumeration of the books composed and translated by this philosopher may be found in the first of the annexed authorities.—*Curt Bubholz Arabic-Human. Encyclop. tom 1. Biog Ura.*

KOTHB EDDIN or COTBEDDIN (Mohamed Ben MOHAMMED) an Arabian historian who was a native of Mecca. When Yemen was conquered by the Turks in 1569, Kothb eddin was appointed professor in one of the four colleges of the sacred city, where it was his duty to explain the koran according to the doctrines of the sect of the Hamites, to which he belonged. He is said also to have studied medicine. His death took place in 1580. He wrote a valuable narrative of the Ottoman conquest of Yemen and an account of the Holy City i.e. Mecca, comprising curious details not to be found elsewhere.—*Biog Ura.*

KOTZEBUE (Augustus Frederick Fer-

KOTSEBEE (see) was born May 3, 1781 at Weimar, in Germany where his father was a counsellor of legislation. He is said to have manifested a talent for poetry when only six years old. His education was commenced at the gymnasium of his native place, and completed at the academies of Darmstadt and Jena. He was destined for the profession of law but he wished to become a man of letters and there was scarcely any branch of literature which did not in some degree engage his attention. At the age of twenty he was invited to St Petersburgh by the Prussian ambassador who was the friend of his father and who procured him the office of secretary to M de Bauer general of engineers. On his death, Kotzebue was nominated by the czarina a counsellor and placed in a judicial situation at Revel where in 1783 he became assessor of the primary tribunal, and at length president of the government, which post he occupied ten years with the rank of lieutenant colonel in the army. Having received his discharge he retired to an estate which he possessed at some distance from Karlsruhe, and consecrated his leisure to the cultivation of dramatic literature. He had previously produced some pieces for the theatre at St Petersburgh which had contributed to procure him the favour of the empress. In 1792 he was called to the direction of the theatre at Vienna whether he proceeded but after a short time he relinquished his new situation and went to Weimar. He had resided there three years when the intrigues of his wife who was a native of Russia induced him to return thither but he had scarcely arrived on the frontiers of the empire when he was arrested by order of Paul I who suspected him to be the author of some revolutionary pamphlets in which he was personally attacked. Kotzebue was transported to Kurgau in Siberia, and he published an account of his journey his residence there has attempts to escape and various other adventures in a very amusing but apparently not very authentic work entitled *The most remarkable Year of my Life*. He was however soon recalled and as he states well received by the emperor who confided to his direction the theatre of St Petersburgh. This situation he wished to resign but could not obtain permission to do so till after the death of Paul I. In April 1801 Kotzebue set off for Weimar where he arrived soon after. Some disputes which he had with Goethe and the two Schlegels induced him to remove to Paris where he experienced the most gratifying attentions from the French literati, and it is not at all to his credit that he repaid their kindness by the publication of a calumnious work which he called *My Recollections of Paris*. He created the Italians with equal illiteracy in his *Recollections of Rome and of Naples*. About the end of 1803 he commenced, in conjunction with M Merakel a journal entitled *Der Freyenthaler* — *The Sincere* in which Napoleon Bonaparte was attacked with virulence. In 1813 Kotzebue continued

to be employed on literature and particularly to his pen are ascribed many political and diplomatic papers issued by the cabinet of St Petersburgh. He attended the war in the campaign of 1813 as political secretary to the army, and he was afterwards nominated general of Russes at Konigsberg whence he was called in 1816 to St Petersburgh to be attached to the office of foreign affairs. In 1817 the emperor Alexander authorized him to return to his own country and appointed him his literary correspondent in Germany with an allowance of 15,000 roubles, and a commission to give an account of the state of public opinion among the people. The manner in which he executed this employment caused his destruction. His calumnious accusations against the students of the German universities having rendered him the general object of their detestation one of them, a young enthusiast named Sandt went to Mainz where Kotzebue resided and killed him in his own house by stabbing him with a poniard March 23, 1819. Kotzebue is known in England as a dramatist in consequence of some of his plays having been translated for the British stage. His *Misanthropy and Repentance* the English version of which has received the unmeaning title of *The Stranger* may be considered as a fair specimen of his talents. He affixed his name to more than three hundred dramas, but many of them were merely retouched by him having been purchased of their authors and others are translations — *Bug Uru*, *Bug Nous des Contemp.*

KOULI KHAN see NADIR SHAH

KRAFT (George Wolfgang) a German philosopher who was educated at Tubingen where he took the degree of MA in 1728 and the same year was appointed professor of mathematics at St Petersburgh. Five years after he was made lecturer on natural philosophy and in 1738 he was chosen a member of the Royal Academy of Berlin. His great reputation induced the prince of Wurtemberg of whose dominions he was a native to recall him home to take the chair of mathematics and natural philosophy at Tubingen where he presided till his death in 1754. Besides several separate works on natural philosophy he was the author of many interesting and important papers in the Transactions of the Academy of St Petersburgh. One of his most remarkable productions is a description of the house built of ice at St Petersburgh in 1740 which was published in Russian and German and of which there is a French translation by P. L. Leroy 1741 4to, with plates. — *Bug Uru*.

KRANTZ or KRANTZIUS (Albertus) a learned German historian and philosopher of the fifteenth century born at Hamburg of the ecclesiastical chapter of which his native city he was elected dean in 1498 having been for sixteen years previously professor of theology and philosophy in the university of Roskot. His reputation as an able and upright diplomatist too was so well established, that

K. R. A.

In a dispute which occurred, between the powers of Holstein and Denmark, the contending potentates voluntarily submitted their difference, which was of a territorial nature, to his arbitration. He was the author of a Latin "Chronicle of the Kingdoms of Denmark, Sweden, and Norway." A History of Saxony from the earliest Periods, another of the same church, entitled Metropolis, a "History of the Ancient Vandals," and a treatise on logic all written in the same language.

—Meyer's *Nouer Diet Hüt*

KRASCHENNIKOF (STEPHEN) a Russian traveller and naturalist, born at Moscow in 1712. He was sent in 1733, with three academicians of St Petersburg, to visit Siberia and collect an account of the country and its productions. After assisting in their researches, he was directed to proceed to Kamtschatka in 1736, where he prosecuted his researches alone till 1738 when he was joined by Steller who left him two years after to embark on an expedition with Bering. Kraschenikof returned to Siberia, and proceeded with the academicians to St Petersburg in 1743. His labours were rewarded with admission into the Academy of Sciences and he was nominated professor of natural history. From the papers of Steller and his own observations he drew up an account of his travels, which he had finished a short time before his death in 1754. His book appeared at St Petersburg 2 vols. 4to 1754 and an abridged English translation was published in London in 1764 4to and it was also translated into French and German.—Bog Univ.

KRASICKI (IGNATIUS) count de Sagan prince bishop of Warmia and archbishop of Gnesna, one of the most illustrious of the Polish literati of the eighteenth century. The first partition of Poland in 1772 having reduced him under the dominion of Prussia and consequently deprived him of his functions in the senate of his country he endeavoured to benefit the public by his writings. He was much esteemed by Frederick the Great, who took pleasure in his lively and spirited conversation. This prince having one day said to Krasicki—"I hope you will take me into Paradise under your episcopal mantle"—The prelate replied—"No sire that would be impossible for your majesty has cut it too short for it to conceal any contraband commodity." His works both in prose and verse are much admired by his countrymen, and he particularly excelled in exposing what was ridiculous in national manners. Among his compositions are *Myszendoros* a heroic-epic poem in ten cantos on the story of Popiel one of the ancient kings of Poland having been devoured by rats and mice. *Monachomachia*, or the War of the Monks, in six cantos, said to be his chef d'œuvre, "*Anti-Monachomachia*" in six cantos "*Fables*," The War of Chocim, and Institutions of Ossian. He died March 14 1801, aged sixty-six.—Bog Univ. Bog Univ. *de Coutemps.*

KREBS (JOSEPH GOTTLIEB) a German

K. R. A.

writer on philology, who was a native of Strasbourg. He studied at Basle, and afterwards at Leipzig, where he received M.A. and gave public lectures with great success. At length he became professor of history at Wittenberg, and died there in 1736 aged fifty-two. He conducted the "Neue Zeitungen" or "New Literary Gazette of Leipzig" 1715—1735, 18 vols. 8vo, and *Nova Literaria* in Supplementum Actorum Eruditorum divulgata 1718—1723 6 vols 8vo and he also published "Programma de incrementis studio Historiarum Seculo xviii. atlatis Wittenberg 1727 4to and other works relative to the history of literature, and he deserves to be noticed as the author of the notes to Menck's treatise on the quackery of the learned, signed Crispinus and Kendalchus, in the Leipzig edition of 1712.—Bog Univ.

KRAUSS OR KRAUS (JOHN BAPTIST) a learned German ecclesiastic one of the most indefatigable writers which the order of St Benedict has produced. He was born at Ratzeburg January 12 1700. After he had gone through his first studies in different convents of Bavaria, having taken the monastic habit at the age of fifteen he was sent by his superiors to the abbey of St Germain des Prés, Paris. Returning to Ratzeburg in 1724 he occupied various offices in the monastery of St Emmeran, of which he was nominated prince abbot in 1742. He preached there twenty years dying June 14 1762. Meusel has given a list of his works on theology, criticism, and history amounting to forty in number. Among them are Catalogus Bibliothecae Sancti Emmerani Ratibus 1748—50 4 vols. 8vo, and a history of the abbey of St Emmeran in German 1732 4to.—Meusel's *Geschichte Deutschland* Bog Univ.

KRAY (baron de) an Austrian general who was a native of Hungary. He entered young into the army and served as colonel against the Turks. He was promoted to the rank of major general and in 1793 1794 and 1795 he was employed in the Netherlands and upon the Rhine. In 1796 he had a command in the army of Wartensleben when he so much distinguished himself that he was made a lieutenant field marshal. He displayed in a striking degree his skill and courage in the battles of Altenkirchen, Forchem, Bamberg, Wetzlar, Giessen &c. The army commanded by general Werneck having suffered great losses when opposed by the French under Hoche in 1797 most of the Austrian general officers were tried before a council of war at Vienna, when De Kray was acquitted of blame. He then passed to the army of Italy and after the death of the young prince of Orange he had the chief command of the Austrian army. The brilliant manner in which he opened the campaign of 1799 made way for the future triumphs of Melas and Suworow. He directed the siege of Mantua, of which he made himself master, and returning to Vienna in February 1800, he was received with great distinction by the emperor Francis. He then succeeded the archduke Charles in

K R U

the command of the army of the Rhine, but was obliged to retreat before the French and peace put an end to his military operations. He died at Vienna in January 1801 leaving the reputation of having been one of the ablest of the Austrian generals employed during the French revolutionary wars.—*Dic des H M de 18me S. Blog Nouv des Contemp.*

KROMAYER. There were two German divines of this name JOHN the elder was a native of Cobelen, born 1576 From Eisleben where he was pastor to a Lutheran congregation, he removed to Weimar in quality of superintendent and passed the remainder of his life there. He wrote a paraphrase on the prophetic writings of Jeremiah, ‘On the Harmony of the Four Evangelists’ with two other treatises, entitled His toriae Ecclesiasticae Compendium and Ex amen Christianae Concordiae’. His death took place in 1643.—JEROME the younger was nephew to the above born in 1610 at Zeutz. He studied divinity at Leipzig and eventually obtained the professor’s chair in that science as well as that of history in the same university. Jerome Kromayer was the author of several polemical and other treatises written for the most part in the Latin language the principal of which are Historia Ecclesiastica Loci Anti Syncretisticae ‘Scrutinum Religiosum’, Theologia Pos tivo-polemica Polymathia Theologica and a Commentary on St Paul’s epistle to the Galatians, and on the Book of Revelations. He died in 1670.—*Friher: Thesaurus Moveri.*

KRUDENER (baroness VALERIE DE) a religious enthusiast of recent notoriety was the daughter of the Russian count Wittowkoff governor of Riga, where she was born in 1762. At an early age she married baron Krudener appointed ambassador by Catherine II to the court of Berlin, and subsequently to Venice. Here the secretary of legation fell in love with her and committed suicide, on which event she wrote a romance which she entitled after her own christian name Valerie. At the breaking out of the French revolution she resided in the south of France but afterwards returned to Germany where in 1806 she assumed the character of a prophetess and pleaded a mission to establish the reign of Christ upon earth. On the fall of Napoleon she followed the emperor Alexander to Paris, and declared after the example of many similar visionaries in respect to predominant potentates, that he was appointed regenerator of the world. Her predictions excited much attention, and when the allied sovereigns quitted Paris she retreated into Switzerland where she preached the approach of the millenium, which induced thousands of the credulous mountaineers to listen to her mission. At length the states interfered her followers were dispersed and after being attended to by a few whose character in society should have preserved them from such delusion, she visited the Crimea, and died at Karasubazar, Dec. 26, 1824.—*Gent Mag.*

K R U

KRUNITZ (JOHN GAVAEUS) a German physician and natural philosopher of eminence, who was a native of Berlin. He studied at Gottingen, Halle and Frankfurt on the Oder, at which last university he received the degree of MD after having written an inaugural thesis ‘De Matritanorum multorum morborum remedio’ 1749 4to. He commenced practitioner of physic at Frankfort, but meeting with little success he removed to Berlin, where he distinguished himself as one of the most indefatigable writers in a country in which literary industry is common. The most considerable of his productions is an ‘Econo mico-technological Encyclopaedia or general system of political domestic and moral economy of geography of natural history and of the arts, commenced in 1773 and continued through seventy two volumes 8vo to the article ‘Leiche a corpse beyond which the author was prevented from proceeding by his death which took place in 1796. The work has been continued by the brothers F J and H G Floerke and in 1818 had reached only the letter R and the 120th volume of this interminable publication. Krunitz who was a member of several learned societies, co operated in many periodical works on medical natural history &c.—*Blog Univ. Blog Nouv. des Contemp.*

KRUSEMARK (BARON DE) a Prussian general and statesman descended of a family distinguished for military services. Having acquired a knowledge of diplomatic details and the interests of different courts he was employed in several missions by the court of Berlin. In 1806 the king of Prussia sent him to attempt the negotiation of peace with Bonaparte and not succeeding he was despatched to St Petersburg where he formed a coalition which led to the treaty of Tilsit. In the course of 1809 he was appointed ambassador to the court of France and he sustained that function in 1813 but subsequent events obliged him to quit the country. A correspondence ensued between baron Krusemark prince Hardenburg and the duke of Bassano which has been preserved as affording interesting materials for a history of the times. After the conclusion of the peace of Paris in 1814, he was sent envoy extraordinary from the court of Berlin to Vienna, where he died in 1821.—*Blog Nouv. des Contemp.*

KRUSINSKI (JUDAS THADDEUS) a Polish jesuit who was born about 1677. Destined from his youth to the missionary service in Persia, he was sent to Isphahan, where his extensive acquaintance with the Oriental languages enabled him to gain important and interesting information. In 1720 he was nominated advocate general of the missions in Persia, and father Barnabas de Milan bishop of Isphahan made him his secretary and interpreter. He returned to Europe in 1725 and settled at Kamianek in 1729. He removed to Jaroslaw and Lemberg in 1741, and in 1748 he went to the diet of Warsaw as chaplain to count Tarlow, but he passed the latter years

K U H

of his life at Kandiauk, and died in 1754. Krauski wrote in Latin a circumstantial and accurate account of the overthrow of the dynasty of the Sophias of Persia, and the conquest of that country by the Afghans. Father Der Corcens à "Histoire de la dernière Révolution de Perse" 1738 2 vols. 12mo is a translation of this work made from the manuscript. A Turkish version by the author was printed at Constantinople in 1729, from which there is extant a Latin translation by professor J. C. Clodius of Leipzig 1731 4to, and the original memoirs of Krauski at length appeared in 4to, from the Lemberg press, in 1734 together with a dissertation by the author "De Legationibus Polono-Persicis." This genuine edition is a work of extreme rarity.—*Bog Univ.*

KUH (EPHRAIM MOSES) a German poet born of a Jewish family at Breslau in 1731. His early disposition for study induced his father to propose making him a rabbin, but he had no taste for the subtleties of the Talmud and wished to devote his time to the belles lettres. He was placed in a financial situation at Berlin under his uncle where he cultivated the society of Mendelssohn Lessing Ramler and other men of letters and so entirely neglected the care of his fortune, that at length he was allowed to follow his inclinations, and his friends allowed him a pension for his support. He travelled in Holland France, and Italy carrying with him his library. On his return to Germany he was attacked with hypochondria which degenerated into insanity. It was in the lucid intervals of his unfortunate malady that he composed his best poetical pieces. Medical means removed his mental disease but in 1765 he was seized with palsey and died at Breslau April 3 1790. He is said to have left in manuscript more than five thousand poems from which a selection was made by Rumler printed at Zurich in 1792 2 vols.—*Bog Novae et Contemp.*

KUHLMAN (QUIRINUS) a visionary enthusiast of the seventeenth century born in 1651 at Breslau. In early life he was a youth of great promise and when only fifteen years of age wrote a treatise on ethics and a book of epigrams but being attacked with a severe fit of illness in his eighteenth year his brain became affected and on the recovery of his bodily strength his diseased imagination gave vent to the wildest absurdities. He pretended to have acquired the faculty of foreknowledge and of holding communion with invisible spirits. These day dreams acquired additional force from the persons of Jacob Behmen's works, which he met with in Holland the following year, while the more to confirm him in his extravagancies a worthy associate appeared in the same country in the person of one John Rothe a self styled prophet. To this fanatic Kuhlmann dedicated a treatise, which he printed at Leyden in 1674 under the title of "Prodromus quinquevni murabilis," expressing the utmost faith in his pretensions and the most unbounded veneration for

K U N

his persons. His thoughts, however, appear not to have been so exclusively confined to spiritual subjects as he would have had it believed inasmuch as he was neither averse to the pleasures of the table nor to female society of the most equivocal description. After visiting several parts of Europe he travelled into the east till on his return through Russia, one of his prophecies was of a nature so distasteful to the government there that he was seized and brought to the stake at which he perished with the fortitude of a martyr October 3 1689.—*Mores.*

KUHNJUS (JOACHIM) an eminent scholar and acute critic of the seventeenth century born at Grunswalde in Pomerania in 1647. He studied at the universities of Stado and Jena, whence he removed to the Suabian college of Oettingen of which society he was chosen president in 1669. His situation however he relinquished in 1676 for the Greek professorship at Strasburg to which he afterwards added that of Hebrew. His editions of the works of Pausanias Diogenes Laertius and Alcan are much admired for the deep eruditon displayed in the annotations. He also wrote a commentary on Julius Pollux and published a series of philosophical questions drawn from the books of the Old and New Testaments in 4to. His death took place in 1697.—*Aceron Mores.*

KULM (JOHN ADAM) a physician and anatomist born at Breslau in 1680. He studied at several German universities and graduated at Halle in 1715. After having travelled in Holland and Germany he went to Danzig and became professor of natural philosophy and medicine at the gymnasium in that city. He was a member of the Academia Curiosorum Naturae and of the Royal Academy of Berlin in whose collections many of his memoirs were published, but he chiefly distinguished himself by his anatomical tables with engravings printed in German in 1728 and republished in France Germany Holland, and Italy. He died in 1745.—*Joscher's Ger. was Bog. Diet. Bog. Univ.*

KUNCKEL (JONN) a native of Huyum in the dutchy of Sleswick born in 1630. He was an able chemist and distinguished himself by several important discoveries in that branch of science especially by the extraction of phosphorus from urine. He was much esteemed by several of the German princes and chosen a member of the Imperial academy but at length entered the service of the king of Sweden who caressed him much and even admitted him into the order of nobility. Besides a treatise which he wrote on the discovery already mentioned he also published an account of some improvements in the art of making glass, and was the author of some ingenious Chemical Observations printed in 1678 at London in one duodecimo volume. He died at Stockholm in 1703.—*Newt. Diet. Hist.*

KUNRATH or KHUENBATH (HEINR.) a German chemist or rather alchymist born in Saxony about 1560. After having finished his studies, he travelled over Lower Germany

K U S

and going to Basel, took the degree of M.D. in 1582. He practised as a physician at Hanau, and afterwards at Dordrea where he died in 1603. He published several curious works in a mystical style, the most important of which is his *Amphitheatrum sapientiae eternae solus vere Christiano-kabbalisticum, divino-magnum &c.* Hanau 1609 folio.—*KUNRATH* (CONRAD) supposed to have been the brother of the preceding was a skilful chemist, and was the author of a treatise on distillation, and another on hellebore roots wormwood sugar &c.—*Bog Univ*

KUSTER (LUDOLPH) a learned Westphalian of great critical acumen and research born at Blomberg in 1670. His own abilities and the interest of his patron baron Spanheim procured him at an early age the appointment of tutor in the family of the count de Schwein prime minister to the king of Prussia for his services in which capacity he was rewarded with a pension of 400 livres and a promise of the first vacant professorship in the university. Kuster then in his 25th year proceeded to visit the principal libraries in Holland Germany and France, chiefly with the view of collating the principal manuscripts of Suidas an edition of whose works he had it in contemplation to publish. At Paris he was especially successful and from three copies in the Royal Library there restored many passages and fragments before unpublished. This laborious work he at length completed in England and printed it at the Cambridge press in 1705 on which occasion that university not only presented him with the honorary degree of LL.D. but made him some flattering offers as an inducement to a protracted residence there. These however he thought proper to decline and returned to Berlin, where the promised professorship awaited him. He was afterwards appointed to superintend the Royal Library but being from some unknown cause dissatisfied with his situation resigned both his chair and office after a very short time and once more returning to Holland dedicated his time to the bringing out a new edition of Aristophanes which appeared at Amsterdam in 1710. In the mean time his religious opinions originally conformable with those of Luther appear to have undergone a material change which the jesuits of Antwerp during his temporary residence in that city acted upon so strongly as to draw from him in 1713 an abjuration of Protestantism. The king of France now rewarded his learning or his conversion by the grant of a pension of 2000 livres, and ordered his name to be inserted in the list of the associates of the academy of Inscriptions. He did not however survive this event more than three years, dying at Paris in the autumn of 1716 of an abscess. Kuster not only wrote the Latin language with singular purity and elegance but was still more celebrated for his thorough acquaintance with the Greek to the cultivation of which tongue, in fact, he more professedly directed his attention, and but few scholars of his age were con-

K U T

sidered able to compete with him in this respect. His principal works, in addition to those already mentioned, are a *Critical Dissertation on the History of the Poet Homer*; a new edition in Greek and Latin, of Iamblichus' Life of Pythagoras 4to, a treatise

On the Use of Medical Terms among the Greeks considered a very useful book, *Bibliotheca Novorum librorum ab 1697 usque ad 1699 in 5 vols.* *Bibliotheca Literarum collecta a L. Neocoro,* *Diatribae Anti-Gromoviana* *Diatribae de Museo Alcazaradino,* and *Sepulchri Nasorum Pictura Antiqua.* —*Bog Univ Dridin's Edition of Harmer's Clasina.*

KÜTTNER (CHARLES GOTTLÖB) a German traveller born in Saxony in 1753. He studied at Leipzig and after having been for eight years a teacher at Basel he undertook the education of an Irish nobleman. He afterwards travelled as tutor to young Englishmen through most of the countries of Europe and at length died at Leipzig February 14 1805. He understood several languages and had acquired extensive knowledge of mankind. He wrote in German Letters on Ireland Letters of a Saxon in Switzerland Travels in Germany Denmark &c., and Observations on England.—*Bog Univ*

KUTUZOW or *KOUTOUSSOFF* *SMO LENSKY* (MICHAEL LAVRIONOVITCH GOLEMICHEFF prince of) a famous Russian general and minister of state born in 1740. He was educated at Strasburgh where he learnt the French and German languages. At the age of sixteen he commenced his military career as a corporal in the artillery and shortly after he became a lieutenant in the regiment commanded by Suvarow. In 1762 he was chosen aide-de camp to the prince of Holstein Beck and was made a captain. In 1764 he went to Lavoma, and made five campaigns against the Poles, and then served under count Romanow in the war with Turkey when he particularly distinguished himself at the battles of Pruth Kagoul and on other occasions. He behaved with equal gallantry in the Crimea in 1773 and 1775, and in 1782 he arrived at the rank of colonel. In November 1784 he was appointed a major-general, and hostilities having again taken place between the Russians and Turks, he commanded from August 1787 to July 1788 a separate corps destined to cover the southern frontier and prevent the enemy from passing the Bog. He was afterwards employed under prince Potemkin at the siege of Oczakow where he was dangerously wounded, and on his recovery he joined Suvarow before Izmailow and was present at the sanguinary assault and capture of that place. In 1791 he was made a lieutenant general and on the 26th of June that year he added to his fame at the battle of Matchine which terminated the Turkish war. In 1793 and 1794 he was Russian ambassador at Constantinople and on his return he commanded in Finland. Under Paul I he continued to be employed in Finland and afterwards in Holland. The emperor

M U Y

M Y R

Alexander appointed him military governor of St Petersburg ; and on the occurrence of hostilities between France and Austria, Kutusow commanded the Russian army destined to resist the Austrians. His services were rewarded with the grand cordon of the order of Maria Theresa. He was present at the battle of Austerlitz, which was fought in opposition to his advice and which was so disastrous to the combined forces. In 1806 he commanded the army of Moldavia and in 1809 he was governor of Lithuania. His next service was against the Turks, when his success in capturing the army of the grand vizier Nadr Pacha, in November 1811, was recompensed with the title of count, and the portrait of his sovereign set with diamonds. He afterwards concluded the treaty of Bucharest May 16 1812 on which account he was made a prince of the Russian empire. A new war with France becoming inevitable, the talents of Kutusow were again put in requisition and the emperor nominated him president of the council of state and generalissimo of his armies. On the 26th of August, 1812 this general commanded the Russians against Buonaparte in the obstinately contested and bloody battle of Borodino in which the invaders gained the advantage notwithstanding the talents and bravery of the Russian chief who was rewarded by his master with the rank of field-marshall. The French gained possession of Moscow, but the emperor Alexander refusing to treat with Buonaparte, the latter was obliged to relinquish his hardly earned conquest, and commenced his retreat. The disasters which befel the French and the exploits of Kutusow who followed them into Prussia, cannot be particularly detailed. While his forces after having expelled the invaders from their native country were assisting in the liberation of Germany the Russian general was attacked with a mortal disease. He died April 16th 1813 at Breslau in Silesia.—*Bio. Univ. Biol. Nouv. des Contemp.*

KUYP or CUYP (ALBERT) a painter of great originality and merit was born at Dordt in 1656. He was the son of an able landscape painter, whom however he far exceeded and became one of the most agreeable artists that ever lived. He particularly excelled in the purity and brilliancy of light, and he was not surpassed, even by Claude or any other painter in an accurate representation of the atmosphere and of the lighsome effects of sunshine. The works of this artist, of whose life very little is known, embellish some of the finest collections in England, and as they are very highly finished, that circumstance, added to the number of them, implies a long life. The gallery of the marquis of Stafford in par-

ticular contains some highly valued pictures by Kuyper—*Pittonianum. Rec's Cyclop.*

KYDERMYNSTEE (RICHARD) an English historian and controversialist, who flourished towards the close of the fifteenth and the commencement of the succeeding century. He is supposed to have derived his name from the town so called which has been considered that of his birth though some accounts state him to have been a native of Worcester. He was of the order of St Benedict, received his education at Oxford and is principally known as the author of a history of Winchcombe monastery in Gloucestershire a religious establishment of which he became the superior. That work however has not yet appeared in print the only treatise of his published being a polemical attack on the doctrines of Luther which issued from the press in 1531. His death took place in 1531.—*Athen. Oxon. Dodd's Ch. Hist.*

KYNASTON (or FRANCIS) an English knight one of the esquires of the body to king Charles I. He was born at Otley in Shropshire 1587 and became at first a member of Oriel college, Oxford but quitted that society as well as the university for Cambridge where he graduated. He makes a respectable figure among the poets of his day and wrote not English but Latin verse with facility and elegance. His best specimen of the latter is a translation of the "Troylus and Cressida" of Chancery. His other works are "Cynthiae, 1641 and "Leoline and Sydians". A literary club dignified by its members with the sounding title of "Museum Minerva" was founded by him, but on the death of the president in 1642 the society was dissolved.—There was also JOHN KYNASTON an English clergyman born at Chester about the year 1732. He became fellow of Brasenose college Oxford, in 1751 and was the author of a treatise "De Impetu C. Corneho Tacto falso obiectata" which though originally written as a college exercise was subsequently printed and gained its author great credit. He died in 1783.—*Athen. Oxon. Censura Literaria; vol. II.*

KYRLE (JOHN) surnamed by Pope 'the man of Ross', an English gentleman who possessed an estate of 500L a year at Ross in Herefordshire where he died in 1734 at the age of ninety Dr Warton in his *Essay on the Writings and Genius of Pope* says, Kyrie was the Howard of his age and that he deserved to be celebrated beyond any of the heroes of Pindar. The splendid eulogium of the poet on the man of Ross is too well known to need repetition, and it is sufficient to remark, that it is believed to be substantially founded on truth.—*Lamproni's Univ. Eng.*

LAADIE (Jouy) a celebrated French Jesuit, was born at Bourg in Gascogne in 1603. He was educated at the Jesuit's college at Bordeaux and in consequence of his aptitude, his master sought to engage him in their fraternity and succeeded after the death of his father who was gentleman of the bedchamber to Louis XIII. He continued among the Jesuits until 1639 during which time he distinguished himself by many visionary opinions, and by an attempt to imitate the ascetic life of St John the Baptist. At length he obtained his discharge from the society a release which he had ardently desired, and proceeded to Paris, where he acquired the patronage of the bishop of Amiens who presented him to a prebend. He was soon after deputed with another ex jesuit, to visit a convent of females at Abbeville where it is said that he took such liberties under the plea of spiritual abstraction as rendered it necessary for him to retire under another name to Bassac, where he acquired the confidence of the bishop which he lost in a similar manner. Strange to say he was enabled to play the same part a third time by practising a similar deception on the archbishop of L'Isleoune. Constrained once more to abscond after some more disguises and adventures, in October 1650 he embraced the Protestant religion at Montauban. Being chosen pastor in that town he preached with great reputation for eight years, and advanced his favorite opinions in regard to spirituality and mental prayer with considerable success. Bayle relates a curious anecdote of the freedom which in the exercise of that spiritual devotion he endeavoured to take with a young lady whom he sought in marriage but that inquisitorial author seems not to rest implicitly on his authority. He was finally banished from Montauban for some intemperate interference with a Catholic funeral and withdrew to Geneva whence he repaired to Middleburgh, where he was invited to become pastor to a Walloon congregation. In this situation he acquired great influence and authority and began to avow his peculiar opinions without reserve. These were sufficiently wild and mystical but assuming the attractive guise of ardent contemplative devotion and pure spirituality and being recommended by powerful eloquence he acquired some distinguished converts, and among others, the celebrated Anna Maria Schurman of Utrecht and the princess Elisabeth daughter of the elector palatine. In 1667 he engaged in a controversy with the pastor of the Walloon church at Utrecht which dispute and its consequence after occupying the notice of several synods were referred to that of Dort, which assembly on the refusal of Labadie to appear deposed him. In contempt of this decree he collected a crowd of his followers, who broke open the church of Middleburgh in which he preached and administered the communion, an act of intemperance which led to his expatriation from Zealand. He was then obliged to submit, and

sought an asylum between Utrecht and Amsterdam where he erected a little community, and set up a press. About this time he sought to unite with the famous Antinomist Bocqignon who was too fond of exclusive sway himself to listen to his overtures. In 1670 he removed, under the protection of the princess palatine to Hervorden in Westphalia, but was soon constrained to remove to Lübeck, whence he was driven by the wars to Altona where he died in 1672 in the arms of Mademoiselle Schurman who had accompanied him in all his migrations. He was the author of a variety of publications besides his treatises on mental prayer to which he gave such quaint titles as "The Herald of King Jesus," "The Empire of the Holy Ghost," "The Holy Decades" &c all of which have reached merited obscurity. The sect formed by this turbulent enthusiast having been kept up principally by his own imposing manners and commanding eloquence soon fell into oblivion upon his death and few or no traces of it are at present visible.—*Bayle Morel Mosheim.*

LA BASIE (JOSEPH BIMAN baron de) a learned antiquary born at Carpentras in Dauphiny in 1703. Having finished his studies at the college of his native place he determined against the wishes of his friends to become a recluse and took refuge among the jesuits at Avignon. His ardour however was subdued by the persuasion of one of his uncles, and he entered into the army but he afterwards became a lawyer and a magistrate. An acquaintance which he formed with the president Bouquier inspired him with a passion for antiquities and he was chosen an honorary member of the academy of Inscriptions. He died in 1742. He published a valuable edition of the "Science des Médailles" of Father Jobert and many dissertations on numismatics and other branches of archaeology in the memoirs of the academy to which he belonged.—*Bug Univ.*

LABAT (JOHN BAPTIST) a celebrated voyager and writer of travels was born at Paris in 1663. At the age of twenty he entered the Dominican order and after acting as professor of philosophy at Nancy he embarked in 1693 for the West Indies in quality of a missionary. After occupying for a considerable time the cure of Macosba in Martinique he returned to Europe in 1705 and landing at Cadiz travelled through Spain to Italy where he remained several years, during which time he composed his "Nouveau Voyage aux îles de l'Amérique," 6 vols. Paris, 1722 which is a lively pleasant production, and was exceedingly well received. His residence in Spain and Italy furnished materials for another work, published in 1730 under the title of "Voyage du Père Labat en Espagne et en Italie" 8 vols. 12mo. He also assisted as compiler and editor of various publications of a kindred nature on the authority of others. Father Labat died at Paris in 1738.—*Morel Nouv. Dict Hist.*

LABBE (Félix) the name of a learned jesuit of Bourges, born in 1607. He distin-

glished himself highly as a philosopher, critic, and general scholar, and was a professor of moral and phisology at Paris. Among his works, which are numerous and valuable are treatises "De Scriptoribus Ecclesiastucis," 2 vols. 8vo, and "De Byzantine Historiae Scriptoribus," 16mo, Nova Bibliotheca MSS. Lab." folio, 2 vols. Bibliotheca Barcarum, folio and 4to "Bibliotheca Anti Janacemaria," 4to, Concordiarum Collectio Maxima, folio 17 vols., Concordia Chronologica, folio, 5 vols. Concordia Sacra et Profana Chronologica," 12mo Chronologus Francorum, 6 vols. 12mo Notitia Dignitatum omnium Imp. Roman. 12mo Eruditus Pronuntiationis Catholicæ Indices, 12mo and the lives of several eminent fathers of his order. His death took place in 1667.—*Nouv. Dict. Hist.*

LA BEDOYERE (CHARLES ANGELIQUE FRANCOIS HUCHET count de) born of an ancient and noble family at Paris in 1786. At the age of twenty he entered into the army and became an officer of the imperial guard in which he served at the battle of Eylau, and afterwards in the campaign of Pomerania. In 1808 and 1809 he was attached to the staff of Eugene Beauharnais as aide-de-camp. He then served in Spain under marshal Lannes and was severely wounded at Tudela. In the Russian expedition so disastrous to the French and their commander La Bodoyere was colonel of the 112th regiment of infantry during the retreat from Moscow and he distinguished himself at the head of his troops in 1813 at the battles of Lutzen and Bautzen in Saxony. After the abdication of Napoleon, he returned to Paris and his corps being reduced he was in 1815 made colonel of the seventh regiment of infantry in garrison at Grenoble. When the ex-emperor landed in France La Be depute joined him at Vizille and he was the first officer who brought a regtment to his assistance. His devotion was rewarded with the post of aide de camp to Napoleon; he was made also general of brigade, soon after he was tenant-general and raised to the peerage. At the battle of Waterloo he is said to have been one of the last who left the field and he returned to Paris, and took his seat in the chamber of peers. There he in vain endeavoured to oppose the progress of events and on the capitulation of the metropolis he followed the army beyond the Loire. When the troops were disbanded, he determined to emigrate to America, aware of the fate which awaited him should he remain in France. Having however ventured to visit Paris to take leave of his wife, he was discovered and arrested. Being tried before a military commission August 4, 1815, he was condemned to suffer death and the sentence was executed a few days afterwards.—*Biog. Nouv. des Contemp.*

LABERIUS (Dacimus) a Roman knight for the last age of the republic who having acquired some celebrity as a dramatic author by the composition of the short satirical pieces *Item propositio*, *Julius Caesar* at that time fast losing his absolute power, compelled him to

appear himself upon the stage in one of his own "Mimes." The angry poet however, with equal wit and courage contrived to render his disgrace the means of annoyance to his persecutor whom he took that opportunity of laeling unmercifully though present in an extempore address preserved by Aulus Gellius. Laberius died in the year 44 or as some say 46 before the Christian era.—*Vetus Poet. Lat. Brevi*

LA BLANCHERIE (MANNES CLAUDE PARIN de) a French writer born at Langres in 1758. After having finished his studies at Paris, he made a voyage to the French colonies in America, where his feelings revolted at the treatment of the negro slaves and he speedily returned home. At Paris he opened a general board of correspondence for the arts and sciences, to spread the knowledge of improvements through the different countries of Europe. At the commencement of the Revolution he emigrated to England, and resided in London in a house once occupied by sir Isaac Newton a circumstance of which he took advantage to attract the public attention. He obtained the patronage of the duke of Buccleugh who procured him a pension from government, to which he was principally indebted for his future support. He died in London in 1811. He was the author of *Extrait du Journal de mes Voyages ou Histoire d'un jeune Homme pour servir d'Ecole aux Peres et aux Mères* Paris 1776 2 vols. 12mo and a literary journal commenced in January 1779 and continued under different titles to eight volumes 4to besides other works—*Biog. Univ. Biog. Nouv. des Contemp.*

LABOUREUR There were three French authors of this name **CLAUDE LE LABOUREUR** a monk of St Barbe in the early part of the seventeenth century was the author of a commentary on the Lyons breviary printed in 1643 he also published a history of the religious foundation to which he belonged another of the house of St Colombe a tract on heraldry &c.—Of his two nephews, **Jean** the elder born at Montmorency in 1623, is said in early life to have been a menial servant. In his twenty first year he accompanied the French embassy to Warsaw and on his return published an account of his journey. He subsequently embraced a religious life rose to be king's almoner and a commander of St Michael with the rich priory of Juviné. He wrote a History of Charles VI of France, *Memoirs of the Marechal de Guertrant*

Monuments of illustrious Persons interred in the Church of the Celestines at Paris 4to, 1642 "Genealogies of the Budos and other noble Breton Families" *Memoirs of Michael du Castelmeu &c* His death took place in 1675.—**Louis** the younger known as the author of some miscellaneous pieces in verse died in 1679.—*Nouv. Dict. Hist.*

LACARRY (GILES) a French jesuit, born in 1603 who became successively professor of polite literature philosophy and theology. Notwithstanding that he performed missions

A. C.

went west through various departments of baseness in the army, he found time to be the author of several useful works in illustration of the history of his country. Of these the most considerable are, *Historia Galliarum sub Praetore Prostorum Galliarum* 1672 4to, *Historia Celiorum et Gallo in exteris Nationes Missarum* 1677 4to, *De Regibus Francorum et Legi Salica*, *Historia Romana* 1671 4to including the period from Julius Caesar to Constantine, and illustrated by medals, *Notitia Provinciarum Imperii atri usque cum Nota* 1670 4to. He also gave editions of *Velleius Paterculus* and of *Tacitus de Moribus Germanorum*.—*Nicetus Mores*

LA CHABEAUSSIERE (ANGE ETIENNE XAVIER FOISSON DE) perpetual secretary to the philotechnic society and a member of many literary associations in France and elsewhere. He was born at Paris in 1752 and was educated at the college de Quatre Nations. He was destined for the ecclesiastical profession but he preferred that of arms, and was admitted among the guards of the count d'Artos. In that corps he contracted an intimacy with D'Alayrac in conjunction with whom he wrote a comic opera, called *L'Echape totale*. He became a popular dramatist and many of his works display considerable comic talent. During the Revolution he was imprisoned and narrowly escaped becoming a victim to the tyranny of Robespierre on whose fall he was liberated. In 1798 he was appointed administrator of the opera, but he held the office only a short time. He died at Paris September 10 1820. Besides his plays, he was the author of *Cuvres diverses* 1811 8vo, *Possesse galantes et gracieuses d'Anacreon*, *Bon Moschus*, *Callulus et Horace traduites ou mitées en vers*

813 8vo *Apologues Moraux*, 1814 8vo a translation of *Tibullus* published under the name of Mirabeau, and a prose translation of the *Aeneis* remaining in MS.—*Bug Nouv des Contemp*.

LA CHAPELLE (abbé de) a French philosopher of the last century. He cultivated mathematical science with great success, and contributed much by his writings to promote a taste for philosophical researches. He held the office of royal censor and was a member of the academies of Lyons and Rouen and a fellow of the Royal Society of London, but he lived much in retirement dividing his time between the society of a few scientific friends and his literary occupations. He died at Paris about 1792. He was the author of some valuable treatises on mathematics, and of two curious works entitled *Le Ventriole ou l'Angastrimythe* 1773 12mo and *Traité de la construction du Scaphandre ou du Bateau de l'Homme* 1774 8vo.—*Bug Nouv des Contemp*.

LA CLOS (PETER AMBROSE FRANCIS CRONELLOS DE) born at Amiens in 1741, entered at the age of eighteen into the corps of royal artillery and the following year he was made a sub-lieutenant. He was a captain in 1776, when he was sent to the Isle of Aix to construct a fort. In 1790 he was supernumerary.

Bug. Doc.—Vol. II.

very necessary to the last duke of Orléans, whom he followed to England towards the close of that year. On his return to Paris in July 1802 La Clos became one of the principal conductors of the famous Jacobin "Journal des Amis de la Constitution." He soon relinquished this office and retired from the army, but in 1792 he resumed his profession. Being appointed governor of the French establishments in India, he was preparing to go thither in 1793, when he was arrested and committed to prison. After the events of the 9th of Thermidor he was liberated and obtained a civil situation. Buonaparte employed him as a military officer and he served in the artillery on the Rhone and in Italy with the rank of general of brigade. He died at Tivoli in Italy October 5 1803. As a literary man La Clos is known as the author of a licentious novel entitled *Les Liaisons Dangereuses*, which affords too just a picture of the absolute and revolting manners of French society before the Revolution. He also wrote

Poème Fugitives said to be graceful and spirited and a letter to the French academy, designed to deprecate the character of marshal Vauban as an engineer.—*Bug. Nouv des Contemp*.

LACTANTIUS (*LUCIUS CELIUS* or *CACILIANUS FIRMIANUS*) an eminent father of the church was, as some say an African but according to others, a native of Fermo in the marche of Ancona. The former is most likely as he studied rhetoric at Sicca a city of Africa under Amelius, and attained so high a reputation by a production called *Symposium* or *The Banquet* that when Dioclesian entertained a design to render Ascomedia a rival to Rome he appointed Lactantius to teach rhetoric in that city. It is by some supposed that he was originally a Pagan and converted when young to the Christian religion, but Lardner thinks otherwise and that he was a Christian during the persecution of Dioclesian is unquestionable. It appears that owing to the improbabilities of his profession or other causes he existed in very narrow circumstances which it is however reasonable to conclude were amended when appointed by the emperor Constantine Latin preceptor to his son Crispus, after whose untimely death he appears to have been again neglected. Little more is known of his personal history except that he lived to an advanced age but the exact time of his death is not recorded. As a Christian writer Lactantius is thought to treat divinity too philosophical but at the same time he is deemed the most eloquent of all the early ecclesiastical authors, and his Latinity has acquired him the title of the Christian Cicero. His principal work is entitled "Institutiones Divinae," lib. VII which is an able and spirited reply to two heathen writers of note, who published pieces against Christianity. Of this treatise he published an abridgment and added to it another tract, entitled "De fa de Divina." He was also author of a treatise "De operibus Dei," in which he vindicates the operations of God. U

doctrine of God's predestination, by demonstrating the excellencies of his principal work, man, in illustration of which, he gives an elegant description of the properties of the human body and mind. Other works are attributed to him as ' Two Books to *Zecclapades*' " Eight Books of *Lettres*, a poem, entitled ' The Fisher,' in hexameter verse, and lastly a well-known book, called ' *De Mirribus Persecutionis*,' which is however thought not to belong to Lactatius by the most able critics. The poems ' *De Phœnix*' ' *De Pascha*', and ' *De Passione Domini*', although contained in most of the editions of his works, are now generally deemed spurious. The latest and best edition of Lactantius is that of the abé Longlet *Pana*, 1746 2 vols. 4to.—*Cens Hist Lit Dupuis, Lovelace*

LACY (JAS.) a dramatic writer who lived in the reign of Charles II. He was a native of Doncaster in Yorkshire, and was at first bred a dancing master but subsequently became a lieutenant in the army. Possessed of a good person and a large share of humour he was finally tempted to quit the military profession for the stage on which as a comedian he was universally admired and held in such esteem by Charles II that the king had his picture painted in no fewer than three characters. He was author of the following comedies, none of which however became stock pieces—' *The Dumb Lady*' ' *Sir Hercules Buffoon*' ' *Old Troop*' and ' *Savvy the Scot*' He died in 1681.—*Bog Dress*.

LADVOCAT (JEAN BAPTISTE) a learned French jesuit, professor of Hebrew and divinity in the university of Paris, and afterwards librarian to the Sorbonne. He was a native of Champagne born in the diocese of Toul in 1709 Dr Keamcott derived much valuable assistance from him especially in the collection of manuscripts in the king's library at Paris, as did also Dr Vossius in the compilation of his Geographical Dictionary. His own works consist of a ' Dissertation on the Comets' " Letters on the Authority of the original Texts of Holy Writ,' an ' Historical Dictionary,' in two octavo volumes, reprinted with additions, in four, ' Critical Remarks on certain new Translations of the Scriptures from the Hebrew' a ' Dissertation on the sixty seventh psalm;' and a ' Grammar of the Hebrew Language.' He died in 1765.—There was also a metaphysical writer of this name at Paris, Louis François Ladvocat dean of the chamber of accounts born 1644 who after a life prolonged to nearly a century died there in 1735.—*Bog Univ*

LAERT (PRIER DE) usually called Bamboccius, according to some from his personal deformity, but it is more reasonably conjectured by Balmont and Lanzi, that he was so deformed from his painting such subjects as the Indians call ' *Bamboccio*' as fairs, feasts, humours, matrimonies, &c. This coarse painter was born at the village of Cimino near Nardini, in 1648. His parents having very circumstances, allowed him to follow his early inclination for painting and

after having him instructed in the elementary principles of design, sent him to Italy for improvement. During a residence of sixteen years at Rome he was distinguished at once for the vivacity and amiability of his disposition and lived in habits of intimacy with Nicholas Poussin and Claude, and in company with these celebrated artists, made designs of the most interesting movements in the vicinity of Rome. After acquiring considerable reputation in that capital he was at length induced, by the earnest entreaties of his friends to return to Holland, and in 1639 he quitted Rome with much regret, and settled at Haarlem. He quickly attained great celebrity which he maintained unrivaled until obliged to share it with Wouwermans the development of whose talents excited much uneasiness in Lear. The pictures of the latter are finely composed, his figures and animals are spirited and correct and his colouring rich and vigorous. Although inferior to Wouwermans in neatness and delicacy of pencil he excels him in energy of touch in the intelligent management of the chiar-oscuro, and in fertility of invention. The works of Bamboccio being scarce are held in high estimation and he etched several plates from his own designs, in a very masterly manner. Want of economy added to the rivalry of Wouwermans, which lessened his employment reduced him to indigence in his latter days, and a severe asthmatic attack being added to his other afflictions life became insupportable and he is said to have terminated his existence by throwing himself into a well in 1673 at the age of sixty.—*Bryson's Dict of Paint and Eng*

LAET (JOHN DE) a writer of the seven teenth century distinguished by his knowledge in history and geography. Scarcely any thing is known of his life except that he was a director of the Dutch East-India Company and intimate with Saumane. He died in 1640 leaving some very useful works behind him the chief of which are ' Novus Orbis' Leyden 1633 folio an account of America, which has been much used by later geographers, ' Historia naturalis Brasiliæ' folio 1640, ' De Regis Hispanie Regnis et Opibus, &c., Respublica Belgariæ,' Gallo, ' Turcici Imperii Status,' and ' Persici Imperii Status.' The four last of these works form part of the little books called ' Respublicæ' printed by Elzevir. He latterly employed himself in an edition of Vitruvius, which was also printed by Elzevir 1649. His account of America involved him in a controversy with Grotius, concerning the origin of the Amerindians, in which that eminent scholar was evidently defeated, and as usual on such occasions lost his temper in consequence.—*Chrysippus Burdigay's Life of Grotius*

LA FEBTE IMBAULT (MARIE THÉRÈSE GROFFIER marquise de) daughter of the celebrated madame Geoffrin, born at Paris in 1715, married in 1733 to the marquis de la Ferté, great grandee of the marshals of that

L A F

misses; and died at Paris in 1791. She distinguished herself not only by her literary talents, but also by her opposition to the philosophical party among the French literati of the last century, with whom her mother had been intimately connected. In 1771 the marquis de Croissac a man of wit and a friend of madame de La Feré Imbault, founded the burlesque order of the Lanturelii, of which he appointed that lady the grand mistress, while he was himself the grand master. This whimsical institution gave rise to a great many songs and lively verses, and it attracted so much attention that Catherine II was accustomed to advise all the Russian nobles who visited Paris to become Lanturelii an honour which was sought by several sovereign princes. The marchioness drew up a series of extracts from the writings of the ancient Pagan and Christian philosophers, for the instruction of the grandchildren of Lewis XV., and she wrote a great number of letters to persons of rank and celebrity which remain in manuscript in the hands of her husband's relations.—*Bug Uniu. Bug Nouv des Contemp.*

LAFITAU (JOSEPH FRANCIS) a French jesuit who was a native of Bourdeaux and was employed as a missionary among the savages of North America. On his return to Europe he published a work entitled 'Mœurs des Sauvages Américains comparées aux Mœurs des premiers Temps' Paris 1734 4 vols 12mo and another on the discoveries and conquests of the Portuguese in the New World which last was reprinted in 1753 in 2 vols. &c. He died in 1740.—LAFITAU (PATER FRANCIS) brother of the preceding was also a jesuit, and obtained considerable reputation as a pulpit orator. He was employed on a mission to Rome on the subject of the disputes in France relative to the bull *Urgentias*, when his manners and conversation procured him the favour of pope Clement IX who made him bishop of Sisteron in Provence when he left the society of Jesus to preache over his diocese. He died at the castle of Toul in 1764. Besides some religious works he was the author of a history of the Constitution *Urgentias*, and the history of Pope Clement IX in which he displayed his seal against Janseman.—*Bug Uniu. Nouv Dict. Hist.*

LAFITE (MARY ELISABETH de) a French lady who published several popular works for the use of young persons. She was born at Paris about 1750 and died in London in 1794. Among her productions are, 'Reponses à Démocrit ou Essai d'une Mémoire d'exercer l'Attention,' Lausanne 1791 12mo. 'Entretiens, Drames, et Comedies Morales à l'Usage des Enfants,' 2 vols 12mo, dedicated to the queen of England, and several times reprinted. She also translated into French some of the works of Wieland, Gellert, and Lavater.—*Bug Uniu.*

LAFOSSÉ (STEPHEN WILLIAM) a French writer of antiquities on veterinary surgery in the last century. He was veterinary marshal to the king of France, and he made great im-

L A G

provements in the art which he professed, by collecting the information to be found in preceding authors, as well as by his own researches. His works are 'Traité sur le véritable Siège de la Morve des Chevaux' 1749 8vo. 'Observations et Découvertes faites sur les Chevaux avec une nouvelle Pratique de la Ferrure' 1754 8vo and a memoir published at the academy of Sciences. He died in 1765.—His son, PHILIP STEPHEN LAFOSSÉ has published several valuable works relative to the anatomy diseases, and management of the horse. Haller in his *Bibliotheca Chirurgica*, notices both the father and son as writers of the first note in the peculiar department of art which they cultivated.—*Bug Uniu. Bug Nouv des Contemp.*

LAGARAYE (CLAUDE TOUSSAINT MAROT de) a native of Brittany distinguished for his philanthropy. He was born at Rennes in 1675 and was educated at the college of Harcourt at Paris. His life and fortune were consecrated to the benefit of his fellow creatures he founded schools for the young and hospitals for the sick and aged, and studied medicine and chemistry with a view to increase his means of becoming serviceable to mankind. In 1736 he published a work entitled 'Recueil Alphabetique des Prognostics dangereux et mortels sur les différentes Maladies de l'Homme' and in 1745 another called 'Chimie hydraulique pour extraire les Sels essentiels des Végétaux Animaux et Minéraux, avec l'Eau pure,' 12mo. He died at Dinan in Brittany in 1755. For a detailed account of the benevolent deeds of this friend of humanity the reader is referred to the abbé Carron's *Époux chartables ou Vie du Comte et de la Comtesse de Lagaraye* Rennes 1782 8vo.—*Bug Uniu.*

LAGERBRING (SVEN) a Swedish historian, who was born in 1707 and died in 1783. He was professor of history in the university of Lund in Scania a counsellor of the chancery and a member of the academy of history and belles lettres at Stockholm. He is chiefly known as the author of a history of his native country in the Swedish language in four volumes quarto the first of which appeared in 1769. This work extends no lower than the year 1437 but Lagerbring also compiled an abridgment of Swedish history to modern times of which a French translation was published at Paris, 1788 12mo. He also wrote tract 'De Antropophagus' De Statu Rei Literariae in Suecia per Tempora Ummens Calmarianus and 'De Vanitate Artis Decratoriae,' besides a treatise on statistics, and many other works.—*Bug Uniu.*

LAGERLOEF (PETTER) professor of the tone at Upsal and historiographer of Sweden in the seventeenth century. He was well acquainted with the learned languages, and distinguished himself by his writings in Latin both in prose and verse. In 1653 he was employed by Charles XI to draw up an historical description to accompany a collection of national monuments, called *Suecia antiqua et moderna*. Among the numerous dissertations

LAG

which he published, may be mentioned. *Hist. Lingue Graeca*, Upsal 1685, two " De Antiquitate et Sua Genua Sacrae", 1689, *Observationes in Linguam Sacra* m, 1694, and " De magno Sinuaria Impetu", 1697. Lageroef died in 1699 aged 51.—*Biog. Univ.*

LAGERSTROEM (MAGNUS von) com mander of commerce and director of the Swedish East India company. He was born at Stockholm in 1656 and after studying in some of the German universities he travelled in Germany and Denmark. He then engaged in trade which he soon relinquished to become corrector of the press established at Stockholm by the learned James Wilde, historiographer of Sweden. He now translated several French, German and Danish works composed an English grammar and wrote on political economy. In 1732 he was appointed secretary to the East India company of Got tenburgh, of which he afterwards became a director. In this situation he greatly distinguished himself by procuring from abroad curious and important objects of natural history and by aiding and promoting scientific researches. Lundens, in a dissertation entitled *Cinaensis Lagerstroemiana*, described some of the curiosities which this philosopher had procured for the cabinets of his native country and botanists have consecrated to his memory a genus of plants called *Lagerstromia*. He was a member of the Academy of Stockholm, and of the Royal Society of Upsal. His death took place July 8 1739.—*Biog. Univ.*

LAGNY (THOMAS FAVET de) an eminent French mathematician was born at Lyons in 1660. He was educated for the bar, but having accidentally met with Fournier's Euclid and Pellecher's Algebra, he gave himself wholly up to mathematics. In 1686 he came to Paris and was appointed tutor to the duke of Noailles, and in 1692 published "New and Concise Methods for the Extraction and Approximation of Roots" to which work at once established his fame in that department of science. In 1697 appeared his "New Elements of Arithmetic and Algebra" and in the same year he was appointed royal professor of hydrography at Rochefort. In 1715 the regent duke of Orléans made him sub director of the General Bank in which he lost the greater part of his fortune. He was subsequently appointed a pensioner of the Academy of Sciences and sub librarian to the king and lastly director of the academy. He died in 1734. Lagny made many important improvements and discoveries which are found in a great multitude of his papers printed in different volumes of the Academy of Sciences. Besides the works already mentioned, he published another separate treatise "On the Cubature of the Sphere" "A general Analysis, or Method of resolving Problems," published by Recher under the name of Lagay, now known to be the work of the editor ~~and~~—only by the papers of his deceased friend, *Merton's Math. Doc.*

LAMBERT MARSINI (Janova) a learned jo-

LAG

sunt one of the first philologists of his time, was a native of Genoa, and born in 1694. He studied at the college of Prato in Tuscany, among the jesuits, and entered into the order in 1713. His superiors in 1721 sent him to the college of Arezzo to teach the belles lettres. He was afterwards removed to Florence, where he was professor of rhetoric for twenty years. While in that situation he had a literary quarrel with the abbé Lami who suspected him of being the author of some satirical pieces which were really written by father Corderi. About 1750 Lagomarzio was called to Rome, and made professor of Greek in the Roman college, where he died in 1773. He added several works which he published, chiefly relating to classical literature he left in MS. a collection in thirty volumes entitled "Teatrum Viatorum illustrium Sop. Jess. ab initio eodem tempore Ordine chronologico usque ad nostram hanc Etatem perpetua nec unquam interrupta Annorum serie digesta". The object of this laborious undertaking was to justify his order from all the odious imputations to which it had been subjected.—*Biog. Univ.*

LA GRANGE (JOAQUIN LOUIS) a very eminent mathematician and philosopher was born Nov 2d 1736 at Turin, where his father who had been treasurer of war resided in reduced circumstances. In the first instance he was more inclined to classical than to mathematical pursuits, but being accidentally incited by a memoir of Halley to pay attention to the latter he made such a progress, that at the age of sixteen he became professor of mathematics at the Royal Artillery school of Turin. When he had discovered the talents of his pupils most of whom were older than himself he selected the most able as his more intimate friends and in thus early association originated the academy of Turin. In 1759 this institution published a first volume of transactions, wherein La Grange inserted several important solutions and deserved the honour of which he allowed to his friend Fouscnez and others while some appeared in his own name of still greater pretension. In this volume he first applied the theory of recurring consequences and the doctrine of chances to the differential calculus. He soon after corrected Newton's calculations of the motions of fluids and made several useful discoveries in adjustment of the theory of vibration which labours excited so much admiration from Euler that he rested not until he was enabled to announce to La Grange that he was chosen a member of the academy of Berlin. He soon after visited Paris where he was received by the various men of science with great distinction and where he published his celebrated *Mecanique Analytique*. In 1766 he accepted an invitation to Berlin and he was appointed director of the academy of that capital, for physical and mathematical science. He soon gained universal esteem, and enriched the memoirs of the academy with a number of highly interesting papers. On the death of Frederic he returned to Paris, and took his seat in the

L A I

Academy of Sciences. On the Restoration he lost his pension, but when the new institutions were formed he was appointed professor of the Normal school and subsequently in the Polytechnic school, where he found himself once more in a capacity which completely suited him. While holding this employment he published his *Fonctions Analytiques*, his *Leçons sur le calcul et le Traité de Relations numériques des Equations*. He also undertook a new edition of his *Mécanique Analytique*, at which revision he laboured with an assiduity that undermined his health and a decay of nature ensuing he expired on the 10th April 1813 in his seventy-seventh year. The last few years of the life of this celebrated man of science were honoured with nearly all the distinction Napoleon could bestow. He was member of the Imperial Institute and Board of Longitude senator and count of the empire grand officer of the Legion of Honour and grand cross of the Imperial Order of Reunion.—*Lif's by Delambre*

LA GUERRE (*Louis*) a painter of his time on ceilings staircases halls &c being an assistant to and imitator of the celebrated *Vernin*. His father was master of the menu-gear at Versailles and he had Louis XIV for his godfather. He was originally intended for the church but his taste for drawing being known to the king the latter recommended his parents to bring him up a painter. He studied under Le Brun and at the age of twenty came to England and was immediately employed by *Vernin* upon the large work at St Bartholomew's hospital. His work being much approved he was engaged to paint *The Labours of Hercules* at Hampton court by king William as also to decorate the mansions of many of the nobility. In a few years however he will be known by little except the saucy line of *Pope* Where sprawl the saints of *Vernin* and *La Guerre*. He was seized with an apoplexy while a spectator in Drury lane theatre in 1791 and expired almost immediately.—*Walpole's Anecd.* *Pilkington*.

LAINÉZ (ALEXANDER) a French wit and poet, born at Chumay about 1650. Having finished his studies at Rheims he went to Paris where he became intimate with the chevalier de Colbert who took him with him to the army. He afterwards travelled for three or four years in Europe and Asia, and on his return fixed chiefly at Paris. His learning was varied and extensive and his society was much coveted, on account of his shining talents for conversation. He published nothing but many of his *jeux d'esprit* have been preserved and long after his death which took place in 1710 a small volume of his poetry was edited by *Titan du Tillet*.—*Voltaires Scie de Louis XIV* *Biblio. Univ.*

LAINÉZ (JAMES) a Spanish ecclesiastic the associate of the famous Ignatius Loyola and his successor as general of the order of the jesuits. He was born in 1512, and was educated at the university of Alcalá, where he took the degree of doctor. At Paris he be-

L A I

came connected with Loyola, whom he assisted in the foundation of the new community, of which he was one of the first members and whose constitutions he probably composed. On becoming general of the jesuits he obtained a papal decree, rendering the office permanent in the person who should be chosen to fill it, and vesting the general with the power of making all sorts of contracts without consulting his brethren giving authority and authenticity to his comments and explanations of the constitutions, with the power to make new constitutions, or alter the old ones, and also to have prisons independent of the secular authority for the punishment of refractory members. He thus founded a spiritual imperium in imperio the influence of which, both in church and state produced important events in every part of the world while the society continued to subsist. Lainez was present at the council of Trent, in the character of divine to the papal see and he distinguished himself no less by his ability than by his zeal for the interests of the church. In 1561 he went to France and disputed with the Protestants at the conference at Pau. On his return to Rome pope Paul IV offered him a cardinal's hat which he refused. He died in 1565.—*Ribadeneira Vit Jac Lainesi. Moret Aikin.*

LADING (MALCOLM) a Scottish historian, was born at Stryorey in Orkney in 1562. He was educated at Kirkwall whence he was removed to the university of Edinburgh after which he studied law and was called to the bar. On the death of Dr Henry he completed the unfinished volume of that author's history of England. His chief work is a History of Scotland in four volumes 8vo in which he gave considerable offence to the chivalrous and Jacobite partisans of Mary queen of Scots owing to the strong manner in which he sums up against the personal character of that unfortunate sovereign. He served in parliament under the last short administration of Mr Fox to whose politics he was much attached. His last literary undertaking was an edition of the poems of *Ossian* to which he has prefixed a dissertation in which it is generally agreed that he has proved their inauthenticity at least to the extent to which authority was claimed for them by Macpherson. Mr Laing died in 1819.—*Gent Mag*

LALIRE (FRANCIS XAVIER) a French biblographer of the first century born according to some at Vadans or as others affirm, at Dole in France Compté in 1739. He assumed the cowl of a friar Minime at an early age and devoted his life principally to studies connected with the origin and progress of literature. He was the author of a Latin biographical treatise on the lives and actions of the principal literary characters of the fifteenth century a French version of which he afterwards published, under the title of *Mémoires pour servir &c*. His other works are a Catalogue of printed Books from the Invention of the Art to the Commencement of the Sixteenth Century 2 vols. 8vo "On the Origin and Fea-

LAKE

size of the Art of Painting in Tranche Consue," 1700; a supplement to Mattole's "Annales de Typographie," "Specimen Historique Typographique Muséenne," 1701; "Exposition des Abbétons Ugoletti;" and "Serie d'Exposition Abbétoni," 1702. He became a great favorite with cardinal Loménie, who made him his Notary. The time and place of his decease are variously stated, as well as those of his birth, some asserting that it took place at Sens in 1800, others placing it at Paris in the following year.—*Bug. Uni.*

LAIRÉSSE. There was a family of Flemish painters of that name of whom GABRIEL son to the elder Lairésse, has acquired by far the greatest reputation. He was born in 1640 at Lierze and soon outstripped his father, who made him his pupil in the exercise of his own art. He is particularly distinguished by the high finish with which his pictures are executed and is considered the Raphael of the Dutch school, nor have any of his countrymen ever equalled him in historical painting. This talented artist was also a good engraver and understood music scientifically while of his literary abilities he has left a favourable specimen, in a treatise on the principles of his art. He survived the loss of his right some years and died at length at Amsterdam in 1711. His book has been translated into English, and his chef-d'œuvre in painting is considered a large picture of the child Moses trampling on the Egyptian diadem.—His three brothers, EUSTACHE, JONAS and JAMES LAIRÉSSE, were artists of some note the two former excelling in the delineation of animals, the latter in flowers. Two of his sons also followed the profession of their father but with inferior pretensions to eminence.—*D'Argenville Vie de Peint.*

LAKE (GERARD) viscount Lake an English general who distinguished himself in the East Indies. He was born in 1744, and at the age of fourteen obtained an ensigncy in the foot-guards. He served in Germany during the seven years war, and in 1781 he was in America under Cornwallis, when he manifested himself at the siege of New York. After the taking of that place he returned home and was made aide de camp to the king. On war with France taking place he went to Holland to command the first brigade of guards and was concerned in several engagements in 1793 and 1794. He was afterwards employed against the Irish insurgents and in 1800 he was nominated commander-in-chief of the British forces in India. In September 1803 he gained a victory over the Mahratta army and the French general Perron, on the plains of Dabhi, and delivered Shah Aslam, whom they had held in captivity. He afterwards triumphed over Scindia and Holker and obliged the latter to conclude a treaty of peace in February, 1806. He returned to England in September, 1807, when as the reward of his exertions, he was created Lord Lake, baron of Dilling and Lawford, and soon after raised to the title of viscount, and made governor of Plymouth. He died, after a short illness,

February 21, 1808.—*Bug. Portug., Bug. Noves des Comptes.*

LALANDE (JAMES DE) an eminent French lawyer, born at Orléans in 1622. He became a counsellor of the bailliage and presidency of Orléans in 1652; and the following year doctor and professor of jurisprudence in the university there. After having filled important municipal offices he died in 1703. He was the author of several works on law and judicial antiquities, among which are "Commentaire sur le Costume d'Orléans, 1677 folio; and "Traité de Bon et l'Amboise-Bar 1674, &c.—*Mores. Bug. Uni.*

LALANDE (JOSEPH JEROME LE FRANÇAIS DE) one of the most distinguished astronomers of the present age. He was born of an honourable family at Bourg on Bresse in France July 11 1732. Educated with minute attention to religious duties he displayed his abilities, when very young, by composing sermons and mystic romances. The remarkable comet of 1744 first drew his attention to the heavenly bodies and his taste for astronomy was fixed by the observations of father Bertrand mathematical professor at the college of Lyons on the great eclipse of the 27th of July 1748. He wished to become a jesuit that he might devote himself entirely to study, but his friends objecting to this plan sent him to Paris where he studied the law and was admitted an advocate. He became acquainted with Delisle, who had established an observatory in the house in which he resided and Lalande obtained permission to assist him in his operations. He also attended the lectures on astronomy delivered by Messier at the Collège de France, and obtained the friendly patronage of Lomonossoff who lectured on natural philosophy at the same college. The latter procured him a commission to go to Berlin to make some astronomical observations with a view to determine the parallax of the moon, and on his return to France he gave an account of his labours in a memoir published in the Transactions of the Academy of Sciences at Paris, and of that of Berlin, of which he had been chosen a member. At the age of about twenty one he was nominated to the place of astronomer which had been vacant many years. His researches relative to the moon connected him with La Caille, who had made observations at the Cape of Good Hope, while he was at Berlin, and this circumstance set him at variance with his former friend, Lomonossoff who had a dispute with La Caille. As it was necessary to ascertain with precision the diameter of the moon Lalande constructed a heliometer of a larger size than any which had been before contrived with which he made the requisite observations, and extended his researches to other heavenly bodies. He next turned his attention to gravimetry, and composed the article

"Cadrans" for the Encyclopédie Méthodique, and he afforded important assistance to La Caille in a work on comets. When Maleski, on becoming a pensioner of the Academy of Sciences, relinquished the direction of the

M. A. L.

"Connaissance des Temps," Lalande obtained the editorship, and continued to publish that work from 1760 to 1775. In 1762 he published at Paris, a volume, entitled "Exposition du Calcul Astronomique," and about the same time he succeeded Delisle as professor of astronomy at the Collège de France. He now found himself in his proper element and inspired with an ardent zeal for the improvement of the science which he taught; he attracted around him a number of persons, to whom he imparted instruction almost gratuitously, and made his house a school whence proceeded a host of young astronomers who filled the observatories, and introduced into the navy the use of the best instruments and the most accurate modes of making calculations. His services were well appreciated, and he was received into the naval academy of Brest and obtained from the government a pension of one thousand francs. In 1764 appeared the first edition of his very valuable

Traité de l'Astronomie in two volumes, enlarged to four volumes in the fourth edition, published in 1780 to which is subjoined a memoir by Dupuis, which formed the basis of his treatise *De l'Origine des Cultes*, the idea of which he had taken from the lectures of Lalande. The transit of Venus in 1769 occupied much of his attention and from the various observations transmitted to him he drew up a "Mémoire sur le Passage de Vénus, observé le 3 Juin 1769 pour servir de suite à l'Explication de la carte publiée en 1764, Paris 1772" 4to His *Réflexions sur les Comètes qui peuvent approcher de la Terre*, and his *Lettre sur l'Anneau de Saturne* both attracted much notice at the time of their publication. In 1755 he produced his celestial globe of one foot in diameter, and in 1776 he enriched the supplements to the *Encyclopédie* with many curious articles. He was for a long time one of the contributors to the *Journal des Savans* having furnished the articles relative to mathematics and natural philosophy. He also assisted in the *Nécrologie des Hommes célèbres de France*, the *Journal de Physique*, the

Magan Encyclopédique the *Acta Eruditorum*, the *Philosophical Transactions* and those of other learned societies. In 1793 he published "Abrégé de Navigation hystorique théorique et pratique avec des Tables horaires" 4to and in 1794 he resumed the direction of the "Connaissance des Temps" which he retained till 1807. For a long time he published every year "L'Historie de l'Astronomie" which though little more than a collection of titles of books, and dates of discoveries forms a useful record for reference. Among the most important future labours of his life may be noticed his Catalogue de mille étoiles circumpolaires" 1795, "Histoire des Mathématiques de Montaigne," second edition, 1800 which he completed by the publication of two volumes in 1803, "Bibliographie Astronomique," printed at the expense of the government as was his "Histoire Céleste Française, contenant les Observa-

M. A. L.

"tions de plusieurs Astronomes François." Though Lalande has been charged with atheism and atheism, there seems to be little if any foundation for such accusations. After the 10th of August, 1792 he hazard'd his own life to save Dupont de Nemours whom he concealed in the observatory of the Marais college, and he also protected the abbé Garner and gave an asylum in the observatory to some of the priests who had escaped from the massacres at the abbey and whom he made past for astronomers. He even wrote a treatise in favour of monarchy, but he was in general too much occupied with the cultivation of science to attend to politics. To rebuff the imputation of atheism, we are told that every year in the holy week he was accustomed to have read to him the "Passion of Jesus Christ." By temperance and exercise he preserved his health to an advanced age and remained to the last moment his characteristic firmness of mind and tranquility of manners. He died April 4 1807. At the time of his decease Lalande was a member of the French board of longitude and of the legion of honour and an associate of the principal academies of science in Europe.—*Bug Uva. Bug Novae Contemp.*

LALANDE (MICHAEL RICHARD DE) a French musician born at Paris of poor parents in 1657. He was placed as a singing boy in the choir of St Germain l'Auxerrois, where his talent for music developed itself. Having learnt without a master to play on the violin he was so piqued at being refused admission into the orchestra of the opera by Lully, that he broke his instrument, and determined never to touch the violin again. He then applied himself to the harpsichord and organ, on which he acquired a great facility of execution and obtained reputation as an organist at several of the Parisian churches. He was recommended by the duke de Noailles to Lewis XIV who made him master of music in the chapel royal and a knight of the order of St Michael. He died in 1736 leaving numerous motets, ballets and other compositions, sacred and profane.—*Bug Uva. Bug Novae Contemp.*

LALLEMAND (RICHARD CONTRAT) a French printer who acquired literary reputation by several good editions of the classics. He was born at Rouen in 1726 and after having finished his studies entered on the practice of his profession which was also that of his father. After having filled other municipal offices at Rouen he became mayor of that city, and Lewis XV gave him letters of nobility. He died April 3, 1807 at the age of eighty-one. Among the works which issued from his press may be mentioned a French and Latin Dictionary, and "L'Ecole de la Chasse aux Chiens courants par Verner de la Contrie to which Lallemand prefixed an analytical catalogue of authors who have written on the chase with critical notes.—**RICHARD XAVIER FELIX LALLEMAND DE MAUPAS**, brother of the preceding became an ecclesiastic and was vicar-general of Avranches. He devoted his time to the culture of

letter, and in 1800 he was elected president of the academy of Rome. At the Revolution he found an asylum in England whence he subsequently returned, and presided at the ceremony of the re-establishment of the academy of Rome. He died in that city in 1810. Besides other literary labours, he wrote a memoir on the ancient history of speech, which he read in the academy in 1790 and afterwards enlarged but which has never been published.—*Bug. Uss.*

LALI (GIOVANNI BATTISTA) an Italian lawyer and poet, was born at Novara in 1578. He was employed by the courts of Rome and Parma in the government of several places, and died much esteemed for integrity and severity of manners in 1637. He wrote a poem upon the destruction of Jerusalem, which gave him a place among the best poets of his time; but he was much more happy in his attempts at burlesque his *Pistola Giocose*, *Domenico Moretto* and *'Il mal Francese* being among the best pieces of the kind. He also travestied some poems of Petrarch and the *Aeneid* of Virgil and wrote a work in his proper profession entitled *Vindictarum Præcitatrum Materiarum in utroque Iure*, which obtained some reputation.—*Moreri. Thibouch.*

LALLY (THOMAS ARTHUR count) a brave, but imprudent, and unfortunate Irish officer in the service of France. He was of a family which had followed the fortunes of James II and having entered the French army he signalised himself so much in the battle of Fontenoy that he was made a brigadier-general on the field of battle. He also drew up the plan of a descent upon England which would have been put into practice but for the defeat of Charles Edward at Culloden. In 1756 he was selected for his capacity and bravery to restore the French influence in India, for which purpose he was made governor of Pondicherry. It was soon perceived however that he wanted the prudence, moderation and disinterestedness necessary for so distant and critical a scene of action, and after a little partial success against the English in the first instance he was finally obliged to retire to Pondicherry which was besieged and taken by the British on the 16th January 1761 the garrison with Lally being made prisoners of war. On this catastrophe a torrent of invective assailed the unfortunate leader from all quarters, he having offended every body concerned by his haughty humour, and violent temper and conduct. He was even accused of having sold Pondicherry to the English notwithstanding the avowed hatred which as a Jacobite he felt for them. He arrived a prisoner of war in England in September 1761 and the following month was allowed to return to France, where after a long imprisonment, he was brought to trial for treachery abuse of authority and unjust exactions. Being found guilty he was condemned to be decapitated, which sentence he suffered with circumstances of great cruelty on the 4th May 1766 in the sixty eighth year of his age. In 1783 his son, Lally Tollendal, the representative of the estates of his father

with a reversal of the proceedings; which were manifestly unjust, count Lally being one of those victims to public clamour like Admiral Byng and many more who have been sacrificed to the unpopularity of an incapable administration; the practice of which unpopularity in his case was favoured by the strong temper and turbulent imprudence of his character.—*Nost. Dict. Hist.*

LALUZERNE (CHARLES WILLIAM DE) descended of an ancient Norman family and born at Paris in 1736. Destined from his youth to the ecclesiastical profession, he studied at the seminary of St Magloire and then at the house of Navarre and obtained orders in 1762. He was vicar general of Narbonne in 1765 when he was elected agent general of the French clergy. Louis XV in 1770 nominated him to the diocesan episcopal see of Langres and in 1773 he pronounced his master's funeral oration at the church of Notre Dame. Called to the assembly of the notables in 1787 he was the following year chosen a deputy of the clergy to the states-general. He was one of the first who proposed the establishment in France of a representative system like that of England, and he advocated other patriotic measures for the relief of his country. He was president of the constituent assembly on the 31st of August, 1789 but he soon after found it necessary to return to his diocese and at length he emigrated to Switzerland, whence he removed to Germany and Italy. Under the government of Napoleon he returned to France, and in 1803 he published a pastoral letter announcing his submission to the concordat. In 1814 the king invited M. de Laluzerne to re-assume his rank of duke and peer, and he was soon after made a cardinal. He died at Paris in 1822. His works, which are numerous include the following:—*Dissertation sur la liberté de l'homme*; *Sur l'existance et les attributs de Dieu*; *Instructions pastorales sur le schisme de France* 1808, 2 vols. 12mo.; *Dissertation sur les églises catholiques-protestantes*, 1816, 2 vols. 12mo.; *Dissertation sur la Vérité de la Religion* 2 vols. 12mo.; *Sur la Différence de la Constitution Française de la Constitution Anglaise* 1816 8vo.; *Sur la Responsibility des Ministres* 1816 8vo.—*Bug. Uss.*

LAMANON (ROBERT DE PAUL) a French naturalist of considerable promise was born at Salou in Provence in 1752 of a respectable patrilineage. He was destined for the church and rose to the dignity of canon; but having acquired property by the death of his father and elder brother he determined to follow the bent of his inclination for the physical sciences. He ascended and explored the Alps and Pyrenees and upon his return home applied himself with great ardour to the different branches of natural philosophy. He was deeply employed in his great work, "The Theory of the Earth" when the French government projected a voyage round the world. He immediately accepted the offer made him

L A M

of accompanying it, and refusing all salary he sailed with the expedition on the first of August, 1765. On their arrival at Missionna, one of the islands of the southern archipelago eager to examine the country, he debarked with Langle the second in command and after having satisfied their curiosity they were on the point of returning, when the natives attacked them and Lamanon and several of the boat's crew fell a sacrifice to their fury. Many of his papers are in the *Mémoires de l'Académie des Sciences*.—*Ross's Cyclop.*

LAMARTIERE (comte de) a French general of artillery who commenced his military career as a sub-lieutenant in 1757. After having served with distinction in Germany in the seven years war he was employed in the island of Guadeloupe. He then published several tracts on artillery and the casting of cannon which procured him much reputation. In 1789 he was made a colonel and in the revolutionary wars he contributed much to the success of the important operations in which he was engaged. His services were rewarded with the rank of general of division in 1795; when he was employed in the army of the Rhine and Moselle and in Germany. In January 1803 he was called to the senate and nominated a grand officer of the legion of honour. In 1814 the king made him a peer of France and a member of the council for the inspection and improvement of the Polytechnic school. He died in 1819. A new edition of his *Recherches sur la fabrication en général des bouches à feu* was published in 1817 and he was also the author of *Recherches sur les meilleurs effets à obtenir des artilleries* 1812 2 vols 8vo.—*Bibl. Nouv. des Contemp.*

LAMB bert, DCL (or JAMES BLAND Burtons) an ingenious English writer on subjects connected with politics, poetry and the drama. He was the son of George Burges esq. an officer in the British army holding the situation of comptroller general of the customs in Scotland, and was born at Gibraltar June 8 1758. He was educated at Westminster school and whence he was removed to University college Oxford. On quitting the university he made the tour of France, Italy, Switzerland, and Germany and on his return entered himself of Lincoln-s-man by which society he was called to the bar in Easter term 1777. In the practice of the law as a profession he continued till the renewal of an intimacy which he had contracted early in life with Mr Pitt and the duke of Leeds induced him to embark in politics under their auspices, and in 1787 he took his seat in the house of Commons, as member for the borough of Helston in Cornwall. Two years after this, his parliamentary debut, he was appointed to one of the under-secretaryships in the foreign office and in 1794 made a joint commissioner of the privy seal. About this period, in conjunction with another gentleman belonging to the same department, he established the Sun newspaper under the sanction of the premier and took a prominent part in conducting it. In 1795 he resigned from office with a baronet's patent, and

L A M

the appointment of knight marshal of the royal household devoting himself for the remainder of his life to the enjoyment of literary leisure. Sir James was three times married, and had by his second lady a family of ten children. In 1821 he obtained under the age master, permission to assume the name of Lamb only by which designation he continued to be known till his death in 1825. Among his writings which are numerous are *Considerations on the Law of Insolvency* 1783, 8vo, and a letter to the earl of Effingham on the same subject; an "Address to the County Gentlemen of England on County Courts," 8vo 1789, *Letters on the Spanish Aggression at Nootka*, published under the signature Verus, in 1790. *The Birth and Triumph of Love* 4to 1796 a poem written to illustrate a series of designs by the princess Elizabeth, an epic poem in eighteen books on the history and achievements of Richard Coeur de Lion 8vo 2 vols. 1801. *The Exodus* a sacred epic written in conjunction with C. Becker 4to, 1807 1808, *Riches* a play altered from Massinger's *City Madam* 1810 reprinted afterwards with other dramatic works in 2 vols. 8vo and *The Dragon Knight* a romance. Towards the close of his life he turned his attention principally to the study of divinity and in 1819 published his last work, *Reasons for a new Translation of the Bible*. In private life he was remarkable for the general amity of his manners and was very generally respected.—*Gent Mag.*

LAMBALE (MARIE THERESE LOUISE DE SAVOIE CARIGNAN) princess de was born at Turin September 8 1749 and was married to the duke of Bourbon Penthièvre whom she soon lost by death, and remained a widow in the flower of youth and beauty. She was appointed superintendent of the household of Marie Antoinette, queen of France with whom she became a great favourite. Being informed of the intended flight of the royal family to Varennes madame de Lamballe proceeded to Dieppe whence she reached England in safety. There she might have found a secure asylum, if friendship for her mistress had not prompted her to return and share her fate. She went with the queen to the prison of the Temple where she continued till the commune of Paris ordered her removal to La Force. On the 3d of September 1792 she was summoned to appear before her self-constituted judges. When questioned as to her connexion with the queen she answered I have nothing to say. It is indifferent to me whether I die sooner or later. I am prepared for the worst. Some sentiments of admiration and pity were manifested by the people, and several voices demanded her life but violence prevailed and being stabbed on the spot with sabres she was dragged amidst a heap of mangled bodies, and murdered with circumstances of revolting cruelty which afforded a striking example of the mischievous effects of despotism in degrading the national character of the infuriated Parisian mob. That instance of their barbarity is the more memorable as there was no

L A M

ting as the intellect or character of the victim which could reasonably have excited the anger of the populace; she is said to have been kind and obliging to her dependants and to have displayed moderation in the exercise of that power and defiance which she derived from her high station and connections. Her character has remained free from reproach amidst the storms of the Revolution, and even her cruel murderers and their abettors respected the memory of this unfortunate princess. Some memoirs have recently been published in England, professedly compiled from manuscripts of madame de Lamballe.—*Nouv. Diet. Hist.*

LAMBARDE (WILLIAM) an English lawyer of the sixteenth century, a native of the metropolis, born 1536. He was called to the bar by the society of Lincoln's Inn and rose to be master of the rolls and record-keeper in the Tower of London the first of which appointments he obtained in 1557 and the latter three years afterwards. Being possessed of considerable property at Greenwich in Kent, (for which county he was a magistrate) he founded several almshouses in that parish with a liberal endowment, and died in 1601. Besides a *Perambulation of the County of Kent*, in 4to, now scarce he wrote several professional works. Of these, the principal are a treatise on the ancient law of England called *Archonomia* another on the office and duties of a justice of the peace under the title of *Erenarchus* and *On the office of Constable*. After his decease appeared two other productions of his pen the one *A Topographical and Historical Dictionary* the other a treatise on English courts of justice entitled *Archon*.—*Lefroy by Nichols.*

LAMBECIUS (PARIS) a native of Hamburg born 1628 distinguished by his early and successful application to classical as well as general learning. Having prosecuted his studies with great perseverance in the Dutch and French capitals, he published, while resident in the latter metropolis a critical dissertation on the works of Antius Gellius, entitled

Prodromus Leucaniorum &c.; which gained him great credit especially when the age of the author who had but just attained his nineteenth year was taken into consideration. From Paris he proceeded through Italy and on his return home obtained the historical professorship in the university of his native city which he was soon after in 1659 called on to preside over in quality of rector. This honourable post however he filled little more than two years as ill sorted marriage, contracted on his part from mercenary motives drove him from Germany even before the expiration of the honeymoon. He left Hamburg for ever and repaired in the first instance to Rome where he became a member of the Romish church and subsequently to Vienna. In this capital his reputation as a man of letters procured him the countenance of the reigning emperor who made him his librarian and in this capacity he completed,

with considerate care and industry a catalogue of all the manuscripts and other valuable works in the imperial collection. This laborious compilation fills eight folio volumes, and is entitled *Commentarium de Augmentis Bibliotheca Caesaris Vndeobconis*, hoc vix. He was also the author of a work in two quarto volumes, called *Origines Hamborgenses*, containing the annals of his native city from the commencement of the ninth to the close of the thirteenth century. Lambecius died in 1680, of dropsy.—*Cheswynd Moore: Sart. Oeuvr.*

LAMBERT (ANNE THIRYSE marquise de) a literary lady of considerable talent, a native of the French metropolis, born 1647. She was married in her nineteenth year to Jean Lambert marquis de St Bris. In 1686 this union was dissolved by the death of her husband on which she employed the large fortune left her in patronizing learning and learned men to whom her mansion was constantly accessible. After her decease her own writings were collected and published in two duodecimo volumes they consist principally of *Avis d une mere a son fils et a sa fille*, *Traité de l Amitié*, *Nouvelles Reflexions sur les femmes*, *Sur la Vieillesse*, *La Femme Hermite &c.* These works are all marked by much taste sense and good feeling. Madame de Lambert reached the advanced age of eighty six and died at Paris in 1733.—*Moore: Nouv. Diet. Hist.*

LAMBERT (GEOFFREY) an English painter who obtained some celebrity towards the middle of the last century. His taste led him to imitate the style of Gaspar Poussin, in which he has composed some pictures of acknowledged merit. He also painted scenes from common nature and presented a picture of that description to the Foundling hospital which is much admired. The East India house in Leadenhall-street is also decorated with six large pictures painted by him of the Company's settlements in India. He died in 1765. According to Edwards this artist founded the celebrated beef-steak club.—*Edwards: Supplement to Walpole's Anecd. Recd. Cyclop.*

LAMBERT (JOHN) a distinguished parliamentarian general in the civil wars of Charles I was descended of a good family, and was a student of law at the commencement of the troubles. He acted as colonel of the battle of Marston Moor, and had a superior command at Naseby. He also gained several advantages against Langdale and Mgrave in the north, and became a great favourite with the independent party. He served under Cromwell in Scotland and when Charles II pushed into England, Lambert hung upon his rear with a body of cavalry. After the battle of Worcester Lambert was intrusted with the motion in the council of officers for creating a protector but opposed the design of making Cromwell king as contrary to his own ambitious views, on which account he was deprived by the Protector of his commission but allowed a pension of 3000l. per annum. On the death of Cromwell he returned to public life, and became the soul of the malcontents to the protectorate of

his son Richard. He was successfully employed by parliament to quell the insurrection of Sir George Booth in Cheshire, but a petition to parliament, which he instigated his officers to draw up, was deemed so dangerous by that body that they immediately cashiered him, but such was his temporary influence with the soldiery that he procured the appointment of a committee of public safety. He encountered however a successful rival in general Monk, who being at this time head of the army of Scotland, began to entertain the design of restoring the monarchy. As he incurred suspicion the committee deputed Lambert to advance northward with a body of troops to overawe him; but Monk crossing the Tweed in 1650 while at the same time the parliament reassumed its authority Lambert was deserted by his troops, and soon after arrested and committed to the tower. His sudden escape in April threw Monk into great alarm, but before he could assemble any considerable force from the soldiers, who were flocking to him from all quarters, he was retaken. At the Restoration he was brought to trial but behaved with so much submission that though condemned he was reprieved at the bar and banished for life to the island of Gurnsey, where he survived more than thirty years amusing his leisure with cultivating flowers, and copying them with his pencil an art which he had acquired from Baptist Gaspar. He is said to have died a Roman Catholic.—*Hume's Hist of Eng Granger*

LAMBERT (JOHN HENRY) an eminent mathematician and astronomer was born at Mulhausen in the Sundgau a town in alliance with the Swiss cantons on the 29th August 1728. His father was a tailor in humble circumstances who intended him for his own business but being sent to a public school he so distinguished himself by his abilities that an attempt was made to provide him with the means of studying theology which however proved unsuccessful and he was obliged to follow his father's employment. In this situation he spent the greatest part of the night in study and obtaining an old mathematical treatise discovered so much ardour and ingenuity that several learned men were benevolently induced to instruct him gratis and he successively became clerk to some iron works and armamentes to M Iselin of Basil who conducted him a newspaper, and became his sincere and constant friend. In 1748 this gentleman recommended him to baron Salis president of the Swiss convention, to become tutor to his children, and aided by the encou-
ragement of his new patron and the scientific intercourse which he met with in his circle he enlarged the sphere of his acquirements in an extraordinary degree. After living eight years at Coire during which period his talents as a philosopher and mechanician were rendered manifest by various scientific compositions and inventions he repaired in 1756 with his pupils to Gottingen and soon after published his first separate work entitled "De la Route de la Lumière par les Aurores."

In 1758 he visited Paris took his degree, and became acquainted with d'Alambert and Euler. In 1759 he published his celebrated work "On Perspective," and in the following year appeared his "Photometry" by which he added a new branch to the science of mixed mathematics. In the three or four following years he published "Letters on the Construction of the Universe" "A Treatise on the principal Qualities of the Orbits of the Comets" "New Organon." In 1766 he visited Berlin and was introduced to Frederic the Great, who admitted him a regular member of the academy of that capital an appointment which enabled him to devote himself wholly to his favorite studies. He enriched the transactions of various societies with his papers and treatises all of which bear the stamp of eminent and original genius. Most of his mathematical pieces have been collected in three volumes by himself. The king of Prussia made a considerable addition to his pension a short time before his death which took place the 25th September 1777 in his forty ninth year when he fell a victim to a disease produced by over application. Lambert forms one of the most conspicuous examples on record, of the mastery which great genius and energy will sometimes exert over untoward circumstances to the production of the most extraordinary result.—*Rae's Cyclop. Amer & G Big.*

LAMBERT (MICHAEL) a French musician born at Vivonne in 1610. He was celebrated for the art and taste with which he accompanied himself on the lute and he is regarded as the first in France who infused genuine grace and feeling into vocal music. He was appointed master of music to the king's chamber and persons of the first distinction assembled at his house to acquire taste in singing on which account a species of musical academy immensely arose. He composed some small motets and there still remains, by him a collection of airs in two three and four parts, with a continued bass.—*Nouv. Dict. Hist.*

LAMBERT of Schaffhausen a celebrated Benedictine who in 1058 undertook a journey to Jerusalem. On his return he composed a chronicle of affairs from Adam to the year 1077 the last twenty years of which is a valuable history of Germany. This chronicle which was printed in 1669, is contained in the first volume of the Germania written by Pistorius. A monk of Erfurt supplied a continuation until 1473 which is to be found in the same collection.—*Nouv. Dict. Hist.*

LAMBERTI (LUVIN) a learned Hellene born at Reggio in Lombardy in 1758. Being designed for the profession of an advocate he was sent to Modena, to study jurisprudence, but he was more attracted by general literature and having made some proficiency he became secretary to the papal nuncio at Bologna. This situation he soon left, and went to Rome where he became acquainted with the learned antiquary Visconti who introduced him to the Borghezza family to whom he recommended himself by a work which he composed

L A M

on the antiquities and sculptures of the villa Borgogna. When the effects of the French invasion were about to extend to Italy Lamberti returned to Reggio, whence he went to Milan, and in 1796 joined in the measures of Bonaparte for establishing a national republic of which he became a member of the grand legislative council. General Brune afterwards gave him a place in the executive directory of the Cisalpine republic. After the battle of Marengo had put the French in possession of the north of Italy Lamberti was made a member of the Italian Institute and he was subsequently made professor of the belles lettres at the college of Brescia and keeper of the public library. The most important work of Lamberti was the edition of Homer in Greek printed by Bodoni at Parma in folio. He went to Paris to present a copy of this magnificent production on vellum to Bonaparte who made him a present of 12 000 francs. Among his original works are Italian poems and a drama and he published a volume of translations from the Greek poets. He died in 1813.—*Bug Univ.*

LAMBIN (DIONYSIUS or DENYS) a French critic and grammarian of the sixteenth century born at Montreal in Picardy in 1516. His talents and industry raised him to a most respectable rank among the scholars of his day and he became from a lecturer on the Greek language at Amiens professor royal of philology and the belles lettres in the university of Paris. He was the author of a treatise on the excellence and utility of the Greek tongue, together with rules to be observed in rendering it into Latin a *Life of Cicero*, a *moral Epistles* &c besides two discourses, "De Philosophia cum Arte dicendi conjuncta" and "De Ratiocino principatu et recta Institutione". He also published translations into Latin of the *Ethics* and *Poetics* of Aristotle and of some of the Orations of Zelimus and Demosthenes together with annotations valuable for the information they contain on Cicero Horace Plautus and Lucretius. Lambin had been for some time in the service of cardinal Tournon his religious principles were however in conformity with those of the Huguenots, and soon after the massacre of St Bartholomew in 1572 in which his friend Peter Ramus perished grief for his loss, and a melancholy apprehension that a similar fate might be reserved for himself combined to hurry him to the grave in his fifty sixth year.—*Morari. Sacri Orationes.*

LAMBINET (Paris) a jesuit, eminent as a bibliographer. He was born in the department of Ardennes in France in 1745, and studied in the college of Charleville which he left to the jesuits. Entering into the order he confirmed a member of it till its suppression when he joined the Premonstratensian order. There he quitted after some years and became a scoldier, with the consent of the superior general of the congregation. He published in 1785, "Notes de quelques manuscrits qui accompagnent l'Histoire des Pays Bas," and in the "Recueil des Journaux," several

L A M

listes on the *bible des pastores* and the *Ambrosian Missal*, but the most important work of the abbe Lambinet is his "Recherches historiques, littéraires, et critiques sur l'origine de l'imprimerie particulièrement sur les premières établissements au 15^e Siècle dans la Belgique" 1798 8vo the second edition of which, forming 3 vols 8vo was published in 1810. He died of palsy in 1813.—*Bug Univ. Bug Nouv des Contemp.*

LAMBLARDIE (JACQUES ELIX) a French engineer born at Loches in Touraine in 1747. He was intended for the church but he forsook theology for mathematics, and being admitted into a public school, under Perronet, he was, after five years study employed as a sub-engineer on the coast of Normandy. The scientific memoirs which he then composed and the professional skill which he manifested, occasioned the construction of sluices at Terport and Dieppe to be entrusted to him. In 1783 he was sent as engineer to the port of Havre and subsequently to the department of the Somme and also nominated member of the commission for the management of works at Cherbourg. In 1793 he became assistant to Perronet in the school of bridges and highways and on his death Lambardie succeeded him and he was also appointed first director of the Polytechnic school. He died in 1801. His works comprise a memoir on the coasts of Upper Normandy 1789 4to and others on the turning gates of locks, and on different kinds of moveable bridges.—*Bug Univ. Bug. Nouv des Contemp.*

LAMBTON (WILLIAM) an English officer distinguished for his labours in the cause of science. He was a lieutenant-colonel in the army and was for more than twenty years employed in the East Indies where he conducted a grand trigonometrical survey of the country. He died January 20 1823 at Kimga Ghant, fifty miles south of Nagpur while proceeding in the execution of his duty towards that place. The Transactions of the Royal and Asiatic Society of which he was a member afford ample evidence of the extent and importance of the labours of colonel Lampton in his measurement of an arc of the meridian in India, extending from cape Comorin to a new base line measured near the village of Takoorkeya fifteen miles south-east of Ellichpore.—*Anns Bug. vol. viii.*

LAMET (ADRIAN AUGUSTINE DE BUSSY DE) a learned doctor of the Sorbonne distinguished as a theological casuist. He was admitted to the college in 1646 and took his degree in 1650. Being related to cardinal de Retz he adhered to that statesman in his disgrace, and followed him in his retreats to England Holland and Italy. On his return to France he took up his residence at the Sorbonne. Though his birth and talents might have procured him high preferment in the church he held no benefice except a priory at Enve le Gaillard. He died in 1691 aged about seventy. After his death was published a work entitled "Résolutions de plusieurs cas de Conscience" 8vo of which a more

L A M

complete edition was published by the abbé Goujet, with the title of " Dictionnaire des Cas de Conscience, par De Lamet et Fromageau, &c. 1733 3 vols. folio.—*Bug Uss*

LAMEY (ANDREW) a learned writer on history and diplomatics who was a native of Minster in Germany. He was the pupil of Schnephin and afterwards became his co-advisor. With him he visited the archives and libraries of Alsace to collect materials for the history of that province in the middle ages. The elector Charles Theodore made him keeper of the Palatine library at Mannheim, and in 1763 he was appointed perpetual secretary of the academy newly founded in that capital. He was also made a privy councillor of the elector and died at Mannheim in 1802 aged seventy five. He published Codex principis obam Laurensianus Abbatis diplomaticus Mannheim 1768 3 vols 4to. The Diplomatic History of the ancient Counts of Ravensberg 1779 4to besides a number of dissertations in the Memoirs of the Academy of Mannheim.—*Bug Uss*

LAMI There were three celebrated characters of that name in the eighteenth century, of these two were more immediately contemporary BEAURAND LAMI a native of Mâcon born 1610 was educated by the fathers of the oratory in his native city and in 1638 became a member of their society at Paris. In 1667 he received priest's orders and became professor of philosophy at Saumur and Angers, but becoming a convert to the opinions of Descartes his enemies at the latter place procured a royal order which deprived him of his church preferment, compelled him to abandon his scholars and return to Grenoble. There his friend cardinal le Camus the bishop received him made use of his advice and services in the regulation of his diocese and admitted him professor of divinity. His works scientific and theological are various and much esteemed they consist of The Elements of Geometry and Mathematics 2 vols 12mo. A Treatise on Perspective, The Harmony of the Gospels, 2 vols 4to, The Art of Speaking with Reflections on Poetry 12mo, Apparatus Biblicus, 4to a valuable work since translated into English.

Discourses on the Sciences De l'aberration du Fœtus folio and A Demonstration or Evidences of the Truth of Christianity His death took place in 1715 at Rouen in Normandy.—FRANCIS LAMI born in 1636 at Montereau in the diocese of Chartres served in early life in the army but quitted the profession of arms for the church and became a monk of the order of St Benedict. He distinguished himself by his writings against Spinoza and was considered one of the ablest polemics of the age in which he lived. His works which are written with much purity and elegance of style consist of a treatise entitled ' Nouvel Athéisme renversé,' ' Traité de la Connaissance de soi-même,' 12mo 6 vols. La Rhetorique du Collège," " L'Iscredule amand à la Religion des," " Les Gemmements de l'Amé sous la

L A M

Tyrannie du Corps;" " Lettres Philologiques," " Les Premiers Elémens, &c.;" and Conjectures sur divers Effets de l'Antiquité."

He died in 1711 at St Denys.—GIOVANNI BATTISTA LAMI a native of Santa Croce in Tuscany was born in 1697. Having completed his studies at Pisa, he continued to reside for some time in that university of which he became vice rector. Afterwards he removed to Florence where he was appointed public librarian professor of ecclesiastical history and chaplain to the grand duke who was much amazed by his wit which equalled his learning. He published a valuable edition of the works of Meunius in twelve folio volumes. His own writings are De Recita Christianorum Fide in eo quod Mysterium Divinæ Trinitatis spectat, a work which gave great umbrage to the jesuits who formally attacked it. De Eruditioe Apostolorum ' Sancta Ecclesiae Florentinae Monumenta' folio, 3 vols. De Rebus Patrum Nicaniorum Fide Memorable Italorum Eruditioe præstantium, 2 vols., Lemoni d' Antichità Tosane 4to 2 vols., and Dialogi d' Anticeti Nemesis. His death took place in 1770 or as others say in 1774 at Florence.—*Fabroni Vita Italorum*.

LAMIA the name of an Athenian courtesan, the daughter of Cleonor equally celebrated for the charms of her person and the brilliancy of her wit. She was by profession a flute player and excelled most of her contemporaries in the art but hearing that her favourite instrument was carried to great perfection in Egypt she travelled into that country where she became the mistress of Ptolemy Soter. On the defeat of that prince by Demetrius Poliorcetes, about three centuries before the Christian era Lamia fell together with other captives into the hands of the conqueror over whom the handsomest man of the age she soon acquired a complete ascendancy although her personal attractions were then considered to be upon the wane. Her influence procured from Demetrius great concessions in favour of her countrymen the Athenians who in their gratitude went so far as to raise a temple to her honour under the denomination of Venus Lamia. Plutarch and Athenaeus both bear ample testimony to the qualities of her mind and if the antique engraving on an amethyst in the king of France's collection give a true portrait of her features, her beauty is still less questionable. The exact time of her decease is uncertain.—*Lamprive's Classical Diet*

LAMIRAL (DOMINIQUE HARCOUNT) a French navigator born at Lyons about 1730. He entered young into the army and while in garrison at Havre he was noticed by M. Eyries, a naval officer who made him his secretary. His patron being sent to Senegal as governor of that colony in 1779 took out Lamiral who was agent of the company of Guiana. The latter remained in Africa till the peace of 1783, and returned thither again in 1785. The company being dissatisfied with his conduct, recalled him in 1787. He was suppressed during the reign of terror, and on the

L A M

liberation he obtained some civil employment. He died in 1795. Lamépi was the author of "L'Afrique et le peuple Africain comparés sous tous leurs rapports avec notre Commerce et nos Colonies," Paris, 1789 8vo, principally designed as a cimétière against the company from whose service he had been dismissed but comprising many curious facts and observations. He also published "Mémoire sur Stuttgart," 1791 4to.—*Bibl. Univ.* *Bibl. Nouv. des Contemp.*

LAMOIGNON (CHRISTIAN FRANCOIS de) marquis de Bayville born at Paris in 1644 was the son of Guillaume de Lamogna a president of the parliament of Paris, celebrated for the integrity and talent displayed in his

Remonstrances and Discourses." The elder Lamogna, who died in 1677 in his sixtieth year himself superintended the education of his son, and did much both by precept and example towards forming in him that solid taste and love of literature for which as well as for judicial ability he was afterwards so highly distinguished. These pursuits did not interfere with his close application to the study of jurisprudence as a profession he entered heartily and vigorously into it, and to his manly and unaffected style of eloquence may be attributed in a great measure the first reformation of French pleading from the bombast and pedantry whicli had till then disgraced it. In 1673 he was appointed advocate general to the king Louis XIV who honoured him with his personal notice and on the presidency of the parliament becoming vacant in 1698 conferred that post upon him. In the discharge of the duties of this responsible station he continued till 1707 when he was permitted to resign it in favour of his son. He survived his retirement from public life only two years. Of his literary works La Philadelphie and a letter on the death of Bourdaloue alone appeared.—*Moreri. Dict Hist.*

LA MOTTE (HOUARD DE) see MOTTE

LAMOURETTE (ADRIEN) a French ecclesiastic, who figured during the Revolution and was one of its victims. He entered into the congregation of the Lazarists and in 1789 he was grand vicar of Arras. He was one of those who wished to reconcile religion with philosophy, and his principles having connected him with Mirabeau he was employed to write the *Projet d'adresse aux François sur la Constitution civile du Clergé* which that statesman delivered at the tribune of the constituent assembly. In March 1791 Lamourette was nominated to the constitutional bishopric of the Rhône and Loire, and in the month of September following he was admitted into the legislative assembly. He there distinguished himself by his moderation. After the massacres in September 1792 he retired to Lyons; and being made a prisoner on the taking of that city by the republicans he was sent to Paris where he suffered under the guillotine, January 10, 1794, at the age of about 50. He published "Pensées sur la Philosophie," 1785, 8vo, "Pensées sur la Philosophie de la Vol. 1789,

L A M

8vo, and several other works.—*Bibl. Univ.* *Bibl. Nouv. des Contemp.*

LAMGUROUX (J V F) professor of natural history in the university of Caen and corresponding member of the Institute was a native of Agen. He published "Dissertation sur plusieurs espèces de Fucus peu connues et nouvelles, avec leurs Descriptions tant en Latin qu'en Français," Agen, 1805, and he subsequently produced a more important work entitled *Histoire des polypes coralliens flexibles vulgairement nommés Zoophytes* 1816 8vo. He was engaged on a

Marus Flora, and other scientific works at the time of his decease which occurred March 26 1825. Mr Dawson Turner says M. Lamguroux was a man who perhaps deserved more than any other individual at the hands of every student of marine botany. His treatises upon the classification of the Submerged Algae have been honoured with admission into the Mémoires du Muséum d'Histoire Naturelle, and have procured him the distinction of being elected into the National Institute. His subsequent publication on the Corallines, is an admirable manual in a very different difficult branch of natural history. In 1817 he published at Caen an account of a new variety of corn cultivated with advantage in several parts of the northern provinces of France.—*Bibl. Nouv. des Contemp.* *Turner's Tour in Normandy* vol II. *Dublin's Tour in Normandy &c*

LAMPLE (FREDERIC ADOLPHUS) a Westphalian ecclesiastic born in 1683 at Dethmold. He became minister to a Lutheran congregation at Bremen of the university belonging to which city he was afterwards chosen rector having resigned in order to fill that situation the professionals of divinity and ecclesiastical history to which he had been appointed at Utrecht in 1720 and 1726. He was a man of considerable learning and his treatise *De Cymbalis Veterum* printed in one volume 12mo has been highly spoken of. His other works are *A Commentary on the Gospel of St John* in three vols 4to, and a *Synopsis of Sacred and Ecclesiastical History*. His death took place at Bremen in 1729.—*Bibl. Germanica.*

LAMPILLAS (don FRANCIS XAVIER) a Spanish ex jesuit, born at Jaen in 1739. He occupied the chair of belles lettres in the college of Seville when his order was suppressed in 1767. He then retired to Italy and settled at Genoa where he devoted himself to the study of the Italian language and literature. He chiefly distinguished himself by his *Saggio historico o Apology for Spanish Literature*, Genoa, 1778-81 6 vols 8vo, the object of which was to vindicate the literary character of his countrymen against the criticisms of Bettinelli and Tiraboschi. The abbe Lampillas also wrote some Italian poetry. He died at Genoa in November 1798.—*Bibl. Univ.*

LAMPRIDIUS (ELIUS) the name of a Latin historian, who flourished in the early part of the fourth century, under Diocletian

and Constantine the Great. Of his works there are yet extant the lives of the emperors Antoninus, Commodus Didius Julianus, and His Mogulakes. The life of Alexander Severus, which, according to the Palatine manuscript, is the work of Spartian, has been by other authorities ascribed to him. The four lives first mentioned were printed at Milan and are to be found in the *Histories Augustae Scriptores*, 3 vols. 8vo 1671 — *Vest His. Lat.*

LAMPRIDIUS (BENEDICTUS) a Cremonee celebrated in the sixteenth century as an elegant Latin poet and an accomplished scholar. In 1521 he removed from Rome where he taught the classical languages with great reputation, to Padua and continued to reside in that university till Federico Gonzaga duke of Mantua, invited him to his capital in order to superintend the education of his son. Lampridius imitated the style of Pindar in some lyric effusions and that not unsuccessfully but he is principally known by his epigrams, written in the Greek and Latin languages. His compositions are to be found in the *Declaratio Poetarum Italorum*. His death took place about the year 1540.—*Tirbouchi.*

LANA (FRANCIS DE) an Italian mathematician born at Brescia in 1637. He was a jesuit and celebrated as a teacher of philosophy and mathematics. He published in 1670 a work a collection of inventions under the title of *Prodrromo all artis Maestra* a work of which another edition appeared in 1694 under the title of *Magisterium Nature et Artis*, 3 vols folio. In this production he first gave a hint of the principle of exploring the air by the aid of machines inflated with gas his treatment of which subject was printed separately at Naples in 1764. He died about 1700 — *Nouv Dict Hist.*

LANCASTER (JAMES) an early English navigator whose name is connected with the establishment of a commercial intercourse between this country and the East Indies. He made a voyage to America in 1591, and he afterwards sailed round the Cape of Good Hope and visited Ceylon and Fulo Penang when the mutinous conduct of his crew obliged him to return home. In 1594 he engaged in a predatory expedition to South America took several prizes and captured the town of Fernambuco in Brasil. In 1600 he went with a fleet to the East Indies formed a commercial treaty with the king of Achen and established a friendly correspondence with the state of Bantam in the island of Java. He returned to his native country in 1603. Lancaster in his last voyage procured some information relative to a north-west passage to the East Indies, which occasioned the subsequent expeditions of Hudson and others. Baffin gave the name of Lancaster's Sound to an inlet which he discovered in 74° of north latitude. This navigator, who is said to have received the honour of knighthood, died in 1620.—*Habicht. Purvex. Bag. Uss.*

LANCERLOT (CLAUDE) a French ecclesiastic, born in 1619 at Paris. The reputation which he early acquired by his progress in

signature obtained for him the appointment of tutor to the prince of Conde. He afterwards became a member of the monastery of Port Royal, where he lectured on the *bible*.—*Istoria.* His friend, De Barres, abbot of St Cyran, subsequently induced him to take the vows, as monk of the order of St Benedict, in his abbey but when this society was suppressed and its members dispersed on the death of their superior Lancelot was banished to Quemperlay in Lower Brittany where he died after three years of exile, in 1695. The *Nouvelle Methode pour apprendre la langue Latine* 8vo 1664 the *Nouvelle Methode pour apprendre le Grec*, 1656, which are known in England as the Port Royal Grammars, were of his composition as was also "The Garden of Greek Roots," and a treatise *On the Hemina an ancient Measure*, which from having been published anonymously may have been usually considered the joint production of the members of the society. He also compiled a Spanish, an Italian and a General and Rational Grammar and was the author of a Dissertation on Sacred Chronology, a Life of M. de St Cyran, a Selection of Epigrams 3 vols 12mo and *Relation du Voyage d Alet*. — *Merson. Nouv Dict Hist.*

LANCELOT (ANTHONY) a learned Frenchman born in 1675. His father who was a Parisian tradesman intended him for the church gave him a classical education and obliged him to take the tonsure when young. But thinking his destined profession to twice ran away from home to avoid embracing it, and at length he was permitted to exchange it for the law. Having finished his studies he was made sub librarian at the Massary college where he applied himself to the examination of MSS. of the middle ages, and made extracts from the most curious. He then assisted Bourchenu de Valbonnes in his history of Dauphiny and passed five years in that province where he made inventories of the principal archives. He was afterwards employed to collect the titles of nobility of the family of Luynes which undertaking led to the composition of his *Memoires pour les Faits de France avec les Preuves* printed at Paris 1720 folio. He was made secretary to the king and in 1732 he obtained the place of inspector of the royal college. In 1737 he was sent to Nancy to make an inventory of the archives of the provinces of Lorraine and Bar then recently united to France. On his return to Paris he died of apoplexy November 8 1740. Lancelot was a member of the academy of Inscriptions, whose memoirs he published a great number of dissertations relating to the history and antiquities of the middle ages.—*Bag. Uss.*

LANCELOT or LANCILOTH (D SACORRO) an industrious and ingenious writer born at Perusia in Italy about 1575. He embraced the ecclesiastical profession, and entered into the congregation of mount Olivet; and having been made an abbot, he travelled through the principal cities of Italy and be-

came a member of several academies. At Rome he formed an acquaintance with the famous Gérard-Nodot, who persuaded him to go to Paris; where he died in 1648, owing to disease brought on by excessive application to study. He was the author of a history of the College of which he belonged, of three curious treatises designed to prove that man kind is not degenerate, and another on the impossibility of ancient history, and he left behind him a large quantity of manuscripts.—*Bibl. Univ.*

LANCISI (GRAMMIA) an Italian physician of eminence was born at Rome in 1654. He studied philosophy and divinity but at length chose the profession of medicine in which he obtained great celebrity and became professor of anatomy in the college della Sapienza. He was also appointed physician to three succeeding popes, and obtained at once honour, reputation and fortune. He died in January 1720 at the age of sixty-five and left a library of more than twenty thousand volumes to the hospital of the Holy Ghost for the use of the young physicians and surgeons who attended the patients therein. He published an edition of his works which are highly esteemed in 2 vols. 4to 1718 under the title "Mariae Lan- eni Archivum pontificum Opera"—*Fabroni Vita Italorum.*

LANCRE (Parva de) a famous demonologist of the seventeenth century who was a native of Bourdeau. He was descended of a respectable family and becoming a counsellor of parliament, he was sent in that capacity to the provinces of Labourd and Gascony to superintend the trials of persons accused of sorcery. Being deeply infested with the common errors of his time a belief in the frequency of demoniacal possessions and contracts with the devil he acted on that opinion and condemned to death multitudes who in the present age would be regarded as lunatics or impostors. De Lancre was made for his services a councillor of state, and died at Paris about 1630. Two curious works proceeded from his pen, entitled "Le Tableau de l'Inconstance des mauvais Anges et Demons" 1612, 4to, and "L'Incredulité et Méfiance du Sortilegio phénoménos curiosissimos, ou il est traité de la Fascination de l'Attouchement," etc. 1622, 4to.—*Bibl. Univ.*

LANCRINCK (PETER HENRY) an able artist, was born at Antwerp about 1626. He was designed by his mother the widow of an officer for the church; but in consequence of his predilection for painting she placed him with an artist of eminence at Antwerp, and he soon discovered great skill especially in landscape. His mother dying he became possessed of a small fortune, with which he was induced to try his fortune in England. He met with a reception suitable to his merit, and besides painting many pictures for sir William Williams and others, was much employed by sir Peter Lely in painting the ground, landscapes, flowers, ornaments, and other scenes the property of his principal pictures. Lely took his own performances in

landscape are much admired for invention, colouring, and warmth, and he was particularly successful in this class. He died in August 1697.—*Walpole's Anecd. Bibl. Brit.*

LANDAIS or LANDOIS (PARVAN) the son of a tailor at Vitre in Champagne, who being employed under the tailor of Francis II, duke of Brittany in 1475 insinuated himself into the good graces of that prince, who made him his grand treasurer. He became one of the most adroit politicians then in Europe, resourceful and secret in his schemes and indefatigable in carrying them into execution but vindictive and cruel to persons of all ranks who were so unfortunate as to give him offence. Having imprisoned the virtuous chancellor Chauvin who died in confinement, his conduct provoked such general indignation, that the duke thought it necessary to order a judicial examination of the proceedings of his unworthy favourite. The commissioners of justice hastened his trial and having condemned him to be hanged the sentence was executed without waiting for the sanction of the duke who without doubt intended to pardon him. His execution took place July 19 1485.—*Moreri.*

LANDEV (JOHN) an eminent English mathematician was born at Peakirk near Peterborough in the year 1719. He became an early contributor to the Lady's Diary and in 1754 communicated to the Philosophical Transactions, "An Investigation of some Theorems which suggest several remarkable properties of the circle" which paper excited considerable attention. In 1755 he published a volume of Mathematical Lectures and soon after became agent to earl Fitzwilliam an employment which he held until within two years of his death. In 1764 appeared his "Residual Analysis" which he never completed, and in 1766 he was elected a fellow of the Royal Society. In addition to many other able papers he gave in the sixtieth volume of the Philosophical Transactions "A new Theory of the Rotatory Motion of Bodies, affected by forces disturbing such motion." This paper may be seen among many others equally curious in a volume of "Memoirs" which he published in 1780. This subject in respect to which he was led to a different result from the celebrated mathematicians, D'Alembert and Euler, employed him more or less until his death just living long enough to complete a second volume of his "Memoirs" which contains his last labour on the solution of the general problem concerning rotatory motion. His death took place January 15 1790 in the seventy first year of his age. Mr Landen was as much esteemed for benevolence and integrity as for his scientific abilities.—*Hutton's Math. Diet.* Gen. Mag. 1790

LANDINUS (CAMPORASA) an Italian scholar, philosopher and poet, was born in Florence in 1446. After pursuing his studies at Volterra he was constrained by his father to apply to jurisprudence but by the favour of Cosimo and Pietro de Medici, he was enabled to devote himself to polite literature, and he

L A N

was also appointed by the latter tutor to his son, who afterwards celebrated Lorenzo, with whom an attachment, highly honourable to both parties, took place. Landino in his old age, became secretary to the signory of Florence and died in 1504. He left several Latin poems, and has notes on Virgil, Horace and Dante which are much esteemed. His philosophical opinions appear in his *Disputationes Camaldulenses*, 1480 folio, and Strasburgh, 1506.—Trabocchi, *Boscos's Life of Lorenzo de' Medici*.

LANFRANC, an eminent prelate of the eleventh century distinguished by his learning and abilities, as well as by the firm though temperate opposition, which he made against the encroachments of the see of Rome. He was by birth an Italian born in 1005 at Pavia, and after having been for some time a professor of jurisprudence at Avranches, assumed the cowl and was elected prior of the abbey of Bec in 1044. In 1059 he entered into a dispute with Berengarius of Tours, at Rome respecting the doctrine of transubstantiation and maintained the controversy against him not only personally before the general council held in that city but continued it subsequently in his writings. Three years after he exchanged his priory for the abbey of St Stephen at Caen in Normandy, and on William the sovereign of that dutifully succeeding to the English throne by conquest, the interest of that prince procured his election in 1070 to the archbishopric of Canterbury then become vacant by the deposition of Stigand. In his superintendance of this diocese he was early involved, not only in a contest with Thomas archbishop of York respecting the primacy which was decided in his favour but even with the pope himself, whose citation to appear personally before him he positively refused to obey. Lanfranc was an able politician as well as a most magnificent prelate. In his latter capacity, he founded the hospitals of St John, and of Harbledown both in the immediate vicinity of Canterbury and liberally endowed them, superintending their progress himself with great interest till his death in 1089. His writings were printed in one volume folio 1647.—*Hume's Hist. of Eng.*

LANFRANC or LANFRANCO (Giovanni) There were two of this name the first was a Milanese who lived in the latter part of the thirteenth century. He practised physic in his native city with great success but exciting envy by some innovations in the profession a persecution was raised against him which forced him to take refuge in France. He was the author of a valuable treatise on surgery entitled *Chirurgia Magna et Parva*. This work first appeared at Venice in 1490 and went through another edition in folio at Lyons in 1553. His death took place in 1300.—The second and by far the more celebrated of the two, was an artist of Parma born in 1381. He was originally a domestic in the service of count Horatio Schotte, who discovering his talent for design, placed him first under Agostino Caccia, and on his de-

L A N

cease under his brother Arnolfo. His progress with the latter was so great, that in some of the designs which adorn the Farnese palace at Rome the difference between the master and the scholar is scarcely perceptible. Lanfranco was employed in painting the churches of St James and of St Peter in the same capital, in the latter edifice, at the express command of Urban VIII he executed the picture of Christ walking on the water with such success, that the pope his patron raised him to the rank of knighthood in reward for his services. The great excellencies of this artist are manifested in composition and foreshortening; his deficiencies consist in want of correctness and expression. In fresco painting on a large scale especially in domes &c. he has seldom been surpassed. He was also respectable as an engraver and died in 1647.—*Mauri. D'Argenville Vies de Peint.*

LANG (CHARLES NICHOLAS) a Swiss naturalist, who was born in 1670. After studying in Germany and Italy he went to Rome, and obtained the degree of MD. He afterwards went to France and in 1713 he was chosen a corresponding member of the Academy of Sciences at Paris. He settled at Lucerne, his native place as town physician, in 1709 and died in 1741, aged seventy. Among his works are *Idea Historiae naturalis Lapidum figurorum Helvetiorum*; *De Mire quodam Achatis qui Coloribus sua Imaginem Christi in cruce Monstrans representat*, a tract which shows that the author directed his researches rather to objects of curiosity than to the more solid and useful departments of the science which he cultivated. Many of his writings are preserved unpublished in the libraries of Lucerne and St Urban.—*Bog Univ.*

LANGALLERIE (FÉMIER DE GRINTEL marquis de) was born of a noble family in Saintonge. He much distinguished himself in the military service of his country in which he obtained the rank of lieutenant general in 1704. His great talents as an officer were however much obscured by the fickleness and eccentricity of his conduct, and having embroiled himself with the French ministry without waiting for the result of the good offices of his friends he entered the service of the emperor and was made general of cavalry. He soon disgusted the court of Vienna and after having quarrelled with prince Eugene he was employed by the king of Poland. He soon after suddenly turned religious, and formally renouncing the Roman Catholicism, wrote a book on the occasion, which he defied the Serboeans to answer. He finally repaired to the Hague and joined with another French adventurer who passed himself off for a German prince in a negociation with the Turkish ambassador to raise Christian troops for the Porte. The emperor being apprised of these negotiations, caused him to be arrested in 1716, and he died at Vienna the following year. A book of memoirs is extant bearing his name, but no credit is attached to them.—*Nouv. Dict. Hist.*

LANGBAINE (GRASSEND) an English dr.

wise and classical schools of the seventeenth century. He was a native of Westmoreland, and was educated at Queen's college, Oxford, where he received his degrees DD in 1646. He first distinguished himself by an edition of Longinus on the Sublime in Greek and Latin, with notes, after which he produced several works in history, theology, and criticism. He corresponded with Seldis, Usher, and other learned men, and Bishop Nicolson describes him as a person well acquainted with the laws and antiquities of England. He was made keeper of the archives to the university in 1644, and protonotary of his college in the following year. Though he obtained these places while Oxford was held by the royalists, he continued to retain them under the government of the opposite party. He died in 1656.—GERARD LANGHANS his son, was a commoner of University college and esquire beadle of law, who published a list of Oxford graduates and a catalogue of English plays the latter of which formed the basis of a work entitled

Lives and Characters of the English Dramatic Poets, and an exact account of all the Plays that were ever yet printed in the English Tongue, published about 1698, 8vo. Langhans died in 1693.—*Wood's Athene Oxon Edit.*

LANGDALE (or MARMADUKE) an English gentleman who distinguished himself as a royalist officer in the civil war between Charles I and the parliament. At the commencement of hostilities he raised a body of troops, with which he defeated the Scots at Corbridge in Northumberland. He subsequently repulsed general Fairfax, and obliged him to raise the siege of Pontefract castle. When the king had surrendered himself to the Scottish army Sir Marmaduke Langdale made himself master of Berwick and Carlisle, but, on the return of the royal cause, he withdrew to Fleet Street. Charles II, in 1658, created him a baron in reward of his services. He died in 1661.—*Clarendon. Cotton's Peerage.*

LANG, or LANG (JOHN MICHAEL), a learned Protestant divine and Oriental scholar, born in Germany in 1664. He studied under Wagenseil at Alton and after having procured MA in 1687 he removed to Jena, where he devoted himself to medicine and botany, and in 1690 became adjunct professor of philosophy. In 1692 he was appointed pastor of the church of Vohenstrauß, but not finding his situation convenient for study he went to Alton and having taken the degree of DB in 1697, he obtained the theological visit, with the rectory of the principal church. Having experienced some persecution on account of the supposed heterodoxy of his opinions, he resigned his offices, and went to Freiburg in Breisgau, where he was appointed inspector in 1710. He died in 1751, having been particularly skilled as a linguist, and especially acquainted with the Greek and Hebrew languages. A list of his works, relating to Biblical and Miscellaneous literature may be found in Jucker's German Biographical Dictionary, &c. See *Urie.*

LANGE (LAWRENCE) a捷克of the eighteenth century, who was a native of Stockholm. He became a lieutenant of engineers in the service of Russia, and was employed by Peter the Great in 1715 to superintend the erection of the palace of Peterhof, when Kang-hi, emperor of China, requested, through the governor of Siberia, to have a physician sent him from Russia. An English physician at Moscow having offered to go to Peter, Lange accompanied him by order of the czar to bring back cures from China. He returned to St Petersburg in 1717, and having executed his commission much to the satisfaction of his master, he was three times subsequently employed on embassies to China, for commercial purposes. On his return from his last mission in 1737 he was made governor of Irkutsk in Siberia. He wrote a journal of his first expedition to China, published in the second volume of the "New Memoirs of Russia," and accounts of his subsequent journeys are also extant, all which afford some curious information relative to the countries he visited.—*New Mem. of Lit v Beg Univ.*

LANGEBECK (JAMES) a learned and instructed Danish writer born in 1710. He studied theology under his father, who was Lutheran minister and also made great proficiency in other branches of literature displaying a particular taste for the northern languages. For some time he was employed as a schoolmaster till Gram the royal librarian procured him the means of indulging his inclination for study. He published a Danish magazine of history and archaeology and afterwards a Latin history of the Royal Society of Denmark. Frederic V employed him to travel in Sweden and the neighbouring countries to make collections illustrative of Danish history and antiquities. During his journey he was chosen a member of the Royal Academy of Sweden, and on his return a member of the Academy of Sciences of Copenhagen and of that of Gottingen. He was also made keeper of the archives of the realm, councillor of justice and lastly, councillor of state. He died in 1774. The most important of Langebeck's literary undertakings is the historical collection entitled "Scriptores Rerum Dano-carum mediæ aevi, partim hactenus inediti, partim emendati editi" of which the first three volumes only were published before his death.—*Bio. Uni.*

LANGFORD (AKRAMAN) a celebrated auctioneer who succeeded the equally famous Mr. Cooch whom Foote in one of his farces describes as one, who "had as much to lay upon a ribbon as a Raphael." Langford however was not content with the fame which attended his professional labour, as he exercised his pen in dramatic composition and produced an entertainment called "The Judgment of Paris" 1730, and "The Lover his own Rival" a ballad opera, acted at Goodman's-fields in 1736. His success as writer for the stage was by no means lasting. He died September 15, 1774.—*Thesp. Dict. Rivers.*

L A N

LANGHANS (CHARLES GOTTHARD) an architect of great eminence, born in 1733, at Lippstädten in Silesia. He travelled for improvement through various parts of Europe and after having given proofs of his professional talents at Breslau and other places, he was called to Berlin to fill the office of principal director of public buildings. He adorned the Prussian capital with many new structures, among which may be particularised the Brandenburg gate and the Salle de Spectacle Langhans, who was a member of the academy of fine arts at Berlin, of that of arts and sciences at Bologna and of the patriotic society of Silesia also distinguished himself as the author of several memoirs on architecture. He died in 1808 while on a journey in Silesia.—*Biog. Nouv. des Contemp.*

LANGHORNE (DANIEL) an English historian and antiquary of the seventeenth century. He was a native of London, and was educated at Trinity college Cambridge where he proceeded MA in 1657. He obtained a fellowship in the college of Corpus Christi not long after the Restoration and in 1664 he took the degree of BD. In 1670 he was presented to the living of Layton in Hertfordshire which he held till his death in 1681. Langhorne published a treatise, entitled *Eleschus Antiquitatis Albionensis* relating to the remote history of Britain, which was followed by his *Chronicon Regum Anglorum*, a sequel to the former.—*Chalmers's Biog. Dict.*

LANGHORNE (JOHN) an English divine poet, and critic of the last century. He was born in 1735 at Kirkby Stephen in Westmoreland, and was the son of a clergyman who held a living in Lincolnshire. His father dying while he was young, his early education devolved upon his mother, and he completed his studies at a grammar school at Appleby not having had the benefit of collegiate instruction. At the age of eighteen, he became domestic tutor in a family residing near Ripon in Yorkshire and while there, he wrote a poem to celebrate the beauties of Audley park in that neighbourhood. He next was assistant at a free-school at Wakefield and having taken orders in the established church he acquired some popularity as a preacher. In 1759 he engaged himself as tutor to the sons of Robert Cracroft, esq. of Hackthorpe in Lincolnshire. He then published a volume of poems, and in 1760 he entered his name at Clare-hall Cambridge, with a view to the degree of BD. He left Hackthorpe in consequence of being disappointed in an attachment to the daughter of his patron, to whom however he was subsequently married. In 1761 he officiated as a curate at Dagenham in Essex and he now began to be known in the literary world, by the publication of an Eastern tale called "Selimah and Almene," and other productions; and about this time he became a writer in the *Monthly Review*. In 1765 he published his most popular work "Letters suggested to have passed between Thiodorus and Constantia," founded on story related in

the *Spectator*. The next year he removed to London and obtained the curacy and lectureship of St John's, Clerkenwell, and his position after made assistant preacher at Langhorne's man by Dr Hurd. He also employed his pen in defence of the ministry of lord Bute, and published a poem, entitled "Gangs and Valour," designed to vindicate the Scots against the scatious abuse of Churchill and other party writers. For this piece of service the university of Edinburgh bestowed on him the diploma of DD in 1766. He married Miss Cracroft the following year, and went to reside at Blagdon in Somersetshire, where the rectory had been procured for him by her relations. She dying in childbed soon after, he went to pass some time at Folkestone in Kent, with his brother who was a clergyman at that place in conjunction with whom he executed a new translation of *Plutarch's Lives*, which made its appearance in 1770. In 1771 he published *Fables of Flora*, another poetical work entitled *The Origin of the Veil*. Having taken a second wife, he returned to his living of Blagdon, where he added to his clerical duties those of a magistrate. That office suggested the subject of a poem called *The Country Justice*, the first part of which was published in 1774 and two more were subsequently added. He was made a prebend of Wells in 1777 and died at Blagdon in April 1779. Besides the works noticed he published *Sermons*, *Letters*, &c. His poetical pieces, which are more distinguished by ease and elegance of style than by wit or gaiety, were edited by his son in 1804, and they have been admitted into Dr Anderson's and Chalmers's collections of British poets.—*Adins's G. Eng.*

LANGIUS (CHARLES) a learned scholar and critic of the sixteenth century. He was a native of Ghent and after his education was finished he adopted the profession of jurisprudence. Political disturbances induced him to remove to Liège where he obtained a canonry in the church and died there in 1573. Langius was intimately acquainted with the Latin and Greek languages, eminent as a poet and was one of the most judicious critics of his age. Scropius bestows high praise on his commentary on *The Offices* of Cato, and on his critical remarks on *Plautus*. He left an excellent library and many MSS. which were dispersed after his death. To his literary pursuits he added a taste for the culture of curious plants, of which he had a collection procured from the East Indies and from America, and he may be considered as one of the earliest practical botanists of modern times.—*Taurier Eleges des Savans*.

LANGHUS (JOHN) a learned physician who was a native of Loewenberg in Silesia, born in 1485. He studied in Germany and afterwards at Bologna and Pisa, where he became MD. He then settled at Heidelberg and was physician to four of the electors palatine, one of whom he accompanied in his travels through various parts of Europe. He wrote several works on professional subjects,

L A N

of which the most valuable is his "Miscellanea Hydrocarum Medicamentorum," containing many curious observations on natural history as well as medicine, and displaying to advantage the profound erudition of the author.—*Traité Elégant des H.S. Eleg. Dict. H. de la Med.*

LANGIUS (*Honorius*) canon of Münster in Germany in the beginning of the sixteenth century. He was carefully educated by his uncle Herman Langius, who was dean of the same church of Münster. Having travelled in Italy at the period of the revival of Greek and Latin literature, he contributed much on his return to excite a taste for study in Germany. He wrote a poem on the taking of Jerusalem which he dedicated to his uncle and others on sacred subjects. He died in 1519, aged eighty-one.—*Melchior Adam. Moreri*.

LANGLES (*Lewis Matthew*) a celebrated Oriental scholar born at Peronne, in the department of the Somme in France, in 1763. His father who was a knight of the order of St Lewis, destined him for his own profession, that of arms, but being partial to literature, he requested permission to study the Eastern languages that he might be qualified for service in India. His education was commenced at Montluçon, and finished at Paris, whither he was brought by his parents after having studied Arabic and Persian under M. Silvestre de Sacy and attended the lectures of MM. Buffon and Cauvain de Perceval, by the advice of the muniment Bertin and de Breze, engaged in the study of Manchu and published an alphabet of that language in 1787 with a dedication to the Academy of Inscriptions. This work was followed in 1788 by a "Dictionnaire Manchu Français," after which he printed various pieces translated from the Arabic and Persian. He had formed a design to go to the French transmarine settlements, but the political commotions at home induced him rather to remain at Paris, and devote himself to the cultivation of the living Oriental languages. In 1790 he presented to the Constituent assembly an address, developing the numerous advantages which would result from the protection and encouragement of the species of literature which he cultivated. The same year he published Indian Fables and Tales, newly translated, with a prehistoric discourse and notes on the religion, manners, and literature of the Hindoo, and also the second volume of his Manchu Dictionary. He was in 1792 nominated keeper of the Oriental MSS. in the royal library, and in 1793 he belonged to a temporary commission of arts, attached to the committee of public instruction. After the Revolution in July 1794, he became keeper of the Library itself, established in the old convent of the Capuchins, Rue St Honoré. To his zeal and influence was owing the creation and organization of a post-office school for the Oriental living languages, in which he was professor of Persian. He wrote notes for a new edition of the *Travels of Pallas*, translated by Lapeyrère, which

he published in 1795 8 vols. 8vo, with an atlas. He was also the author of valuable additions to the *Travels of Thunberg* *Nordens* &c. After the executive directory had suppressed the temporary commission of arts and dissolved, in various establishments, the objects which had been collected at the Capuchin convent, M. Langles devoted himself entirely to the duties of his professorship and to those which devolved on him as conservator of the Oriental MSS. in the national library. On the formation of the Institute he became a member and belonged to the commission of literature to which he presented many memoirs and notices of manuscripts. He also assisted in many periodical works. In 1796 in conjunction with M.M. Dauou and Baudin des Ardentes, he made an abortive attempt to re-establish the "Journal des Savans" and the *Magasin Encyclopédique* contains a great number of notices and dissertations from the pen of M. Langles. His death took place in January 1824. He had formed a most valuable collection of books, manuscripts, engravings &c. and his house was the general resort of travellers, cognoscenti, and students to whom he dispensed information from the stores of learning and intelligence which he had accumulated.—*Biog. Nœve. des Contemp. Lit. Gen. No. 368*

ANGLEY (BATTY) an English architect or rather builder who wrote some useful books on the mechanical departments of his art and on the expenses of masonry &c. But Angley is principally known at present as the author of an absurd attempt to re-model the Gothic style of architecture, and in imitation of the Doric, Ionic and Corinthian orders of Grecian architecture he invented different orders of the Gothic on principles wholly incompatible with that species of construction. He died in 1751.—*L'Empereur. Usse Bug*

LANGTOFT (PERCY) so named from his birth place in the county of York an Augustinian friar of the time of the first Edward who held a canonry belonging to his order in the priory of Bridlington. He is known as the author of a Chronicle of England in verse and as the translator of Boëcian's life of St Thomas of Canterbury from the Latin original. Thomas Hoccleve the antiquary published an edition of his works in two octavo volumes in 1725. The death of this historian took place soon after the commencement of the fourteenth century.—*Preface to Works* by T. Hersey.

LANGTON (STEVENS) a cardinal of the Romish church, and archbishop of Canterbury in the reign of John whose disputes with the papal see originated in his steady rejection of this prelate's appointment. By birth Langton was an Englishman being born in Lincolnshire or as some aver, in Devonshire but he received his education in the French metropolis. In the university belonging to that city he had risen gradually through various subordinate offices to the chancellorship when on going to Rome, the learning and abilities which had hitherto facilitated his advancement raised him so high in the favour of Innocent III, that

L A N

the position, in 1207 not only elevated him to the purple but presented him to the vacant primacy of England, respecting the disposal of which the king was then at variance with the monks of Canterbury. John refused to confirm the nomination, seized on the temporalities of the see and ordered the monks to depart the kingdom. A sentence of excommunication not only upon himself but upon his whole realm was the consequence nor was it removed till the weak monarch alarmed by the warlike preparations of France and the general disaffection of his subjects gave up that, and every other point in dispute and reconciled himself to the church. Langton now took undisputed possession of his diocese in 1213, but he does not appear to have acted towards the Romish court with that degree of subserviency which was in all probability expected from him. On the contrary he exhibited himself as a strenuous defender of the privileges of the English church and much annoyed his antagonists by the ability with which he carried on the contest. His death took place in 1228. Many of his works of which Bale and Tanner supply a list have been printed.—*Prince's Worthies. Caus War-ton's Hist of Eng Poetry*

LANGUET (HUNXER) the name of two eminent French ecclesiastics, brothers. Of these JEAN BAPTISTE JOSEPH LANGUET the elder and by far the more celebrated of the two though inferior to the other in rank and dignities, was born in June 1675 at Dijon and at the age of twenty three was received into the Sorbonne of which he became a doctor. De la Chetardie vicar of St Sulpice in Paris appointed him his curate, which subordinate situation he filled for nearly ten years, till on the death of the incumbent he succeeded to the benefice. The whole life of this pious and excellent divine was, from this moment, devoted entirely to deeds of benevolence and charity. Besides rebuilding his parochial church (which he effected by subscription) at an enormous expense and on a scale of almost unexampled magnificence, he also founded an institution, which does his memory still greater honour, thus was the "Maison de l'Enfant Jesus," an hospital consisting of two parts, one providing for the support of thirty five decayed gentlewomen, the other for more than four hundred women and children of inferior degree. The success with which this establishment was carried on procured him the marked esteem and approbation of cardinal Fleury who offered to place all the charitable foundations in France under his superintendance an honour which he thought it advisable to decline. In 1730 he not only disposed of all his own pecuniary resources to alleviate the distress occasioned by the general dearth but even sold his furniture for the same purpose, and during the ravages of the plague at Marseilles, sent all the money he could raise to the relief of the inhabitants. Although the highest dignities in the church were repeatedly offered to his acceptance M Languet refused them all, and in 1751 even resigned the em-

L A N

plements of his benefice although he still resided to perform his clerical duties and to superintend his charitable institutions till his death which happened in 1750. At this period his foundation, which had been considerably increased by benefactions is said to have contained fourteen hundred poor persons. In his disposition and address he was lively and facetious, and though thus devoted to pious acts had nothing about him of the ascetic. His brother, JEAN JOSEPH also a person of great benevolence was the author of a translation of the Psalms of David. He obtained the bishopric of Senlis, and was afterwards made archbishop of Sens where he died in 1753.—*New Hist Hist*

LANGUET (HUNXER) an able diplomatist and accomplished scholar of the sixteenth century. He was born in 1518 at Viseaux in Burgundy and received his education at Padua, where he took the degree of doctor of laws. Becoming known to Melancthon he renounced the Roman Catholic faith and embraced the tenets of his new friend at Wittenberg. He was afterwards for a short time in the service of the king of Sweden which he quitted for that of Augustus elector of Saxony. This prince held his talents in high estimation, and despatched him on various missions to several of the petty German states, as well as to the court of France. While engaged in this latter embassy he narrowly missed perishing in the massacre of St Bartholomew from which catastrophe however he not only escaped himself, but was fortunate enough to preserve his friends, De Mornay and Wechelius, the learned printer in whose house he was residing at the time. He was subsequently in 1574 sent ambassador to the empire but on his return lost the favour of his prince by the part he took in the controversy respecting the Eucharist then carried on in Saxony between the Lutherans and the disciples of Zwingli. On that occasion he was strongly suspected of assisting Gaspar Peucer in the publication of his "Exposition" &c and his retirement from the court followed. After a short time spent in the service of the count palatine he went to Antwerp, where he was well received by the prince of Orange in whose service he died in 1581. He was the friend of the two Camerarii, father and son, and of sir Philip Sidney, his correspondence with the latter in Latin appeared at Frankfurt in 1589 as did also that with the two former in the same language in 1646 and was reprinted, with a panegyrical preface in honour of the author in 1685. Besides the writings already alluded to, he was the author of "An Account of the Siege of Gotin" "Letters to the Elector of Saxony" Halle 4to, 1699 "Descriptio Suscepta a Casarea Majestate Executio Augusto Saxonico Duce contra Sancti Romanii Imperii Rebeller." The celebrated "Vindictio contra Tyrannos" is also generally ascribed to his pen. De Mornay is speaking of his good qualities, says, that "He was what most men wished to appear, and lived as good men would desire to do." His

L A N

rounding was honored with a public funeral at Avignon, the prince of Orange attending it in person.—*New's Diet. Hist.*

LANIER, or LANIERRE (NICHOLAS) the name of an Italian artist, born about the year 1568. He entered Montefeltro at an early age, and was much noticed for his talents by Charles I who employed him in collecting pictures for the royal gallery. In the execution of this commission he was in the habit of affixing a pencil mark to the paintings he procured which still distinguish them to the eye of the connoisseur. Lanier was also a good musician, as well as a painter and composed two masques one of which was performed at the lord Hay's the other at the marriage of the earl of Somerest. The time of his decease is unknown, but a portrait of him painted by his own hand is yet in existence in the music school at Oxford.—*Rev's Cyclop.*

LANGUINAIS (JOUES de) a native of Brittany who entered into the order of St. Benedict, and became professor of theology. Some disputes in his convent arising from his communion with D'Alembert and Diderot, and his supposed attachment to their philosophy induced him to relinquish his profession and leave his native country. He went to Languedoc in Switzerland where he embraced the reformed religion and became principal of the college of Moudon. He published several works which attracted much attention among which are, *Le Monarque accompli*, 1774, 3 vols. 8vo, prosecuted in France as a seditious publication; *Supplement à l'Expion Anglais, ou Lettres intérressantes sur le Rattachement de M. Necker &c.* 1781 8vo and *Essai du Pape Clement XIV*. He died about 1806.—*Bug. Ura.*

LANNES (Jean) duke of Montebello numbered under the French empire grand-cordon of the legion of honour, &c. &c. was born at Loches, in the department of Indre, in 1769. He studied at the college of his native place but the misfortunes of his father having interrupted his education, he was apprenticed to a dyer. In 1793 he entered into the army and served first as a sergeant-major. His zeal, intelligence, and bravery soon gained him promotion and in 1795 he had obtained the rank of chief of brigade. Having been displaced, with other officers, on the charge of incapacity by the conventional agent Aubry, Lannes attached himself to the army of Italy, as a volunteer. For his behaviour at the battle of Millesimo, in April 1796 he was made colonel of the 55th regiment, immediately after the engagement. He distinguished himself at the passage of the Po, at the bridge of Lodi, and especially at the battle of Bassano. After the signing of Paris, he was promoted to be a general of brigade, and the composed secretary of the French having obliged the Pope to make peace, Lannes was sent to Rome to receive and sign the conditions. He returned to Paris, after the treaty of Campo Formio, in October 1797; and he subsequently accompanied Bonaparte to Egypt, where he greatly distinguished himself on several occasions.

L A N

Returning to France with his commander he rendered important services to him in the course of the events which raised him to sovereign power. He served again in Italy and was rewarded with a sabre of honour for his conduct at the battle of Marengo. In 1803 he was sent plenipotentiary to Lisbon, but he was soon after recalled. In May 1804 he was made a marshal of the empire and subsequently duke of Montebello. He maintained his reputation in the campaign against the Austrians in 1805, and contributed much to the victory of Austerlitz, on which occasion he commanded the right wing of the army. In the Prussian campaign in 1807 he was again in the field and signified himself particularly at the battles of Jena, Eylau, and Friedland. He then served in Spain, and was at the battle of Tudela, and the siege of Saragossa. He at length lost his life in consequence of a wound which he received at the battle of Eslida, dying March 31, 1809 nine days after that engagement took place. The eldest son of the marshal was created a peer of France, August 17, 1815 under the title of duke of Montebello.—*Bug. Nouv des Contemp.*

LANSBERGHE, or LANSGERIUS (PHILIP) a mathematician and astronomer of the seventeenth century who was a native of Ghent in Flanders. He was for some time a Protestant minister at Antwerp, and as the taking of that city by the Spaniards in August 1621, he sought an asylum in the United Provinces. He became minister of Ter Geest in Zealand, and towards the close of his life removed to Middlebury where he died in 1652 aged 71. He published a work on sacred chronology and several astronomical treatises, among which are his *Commentationes in Motum Duruum et Anuum Terrae*, designed as a vindication of the Copernican system of the world, *Libertas Promotus* of Louvain having published a book against Lansbergh entitled *Anti-Aristarchus, sive Orbis terreni immobulus*. JAMES LANGRISH son of the author wrote a vindication of his father's opinions.—*Mores.* —*Martin's Blog Philos. Nov. Diet. Hist.*

LANZI (LOUIS) an able Italian antiquary was born in 1732 at Monte del Cielo near Macerata, and was educated in the schools of the jesuits, into which order he himself entered. He taught rhetoric at several of the Italian universities with great success, and when the jesuits were suppressed he was appointed sub-director of the gallery of Florence, which noble collection was much improved by his care. His first work was "A Guide" to this gallery which is very superior to the usual performances of the kind. He followed with an "Essay on the Tuscan Language," 1769 3 vols. 8vo a work that extended his reputation throughout Europe. His other works are a "History of Painting in Italy" the best edition of which is that of Bassano, 1809 6 vols. 8vo, "Dissertations on the Vases commonly called Etruscan," and a much-examined translation of Herodotus. He died at Florence in 1810.—*New's Diet. Hist.*

L A R

LAO-TSEU, one of the most eminent philosophers of the ancient parts of Asia, "born about 400 years BC. in the province of Chin, housing in China." The contemporary of Pythagoras, his history bears some resemblance to that of the Greek sage. He taught the doctrine of metempsychosis, and professed to recollect the different bodies through which he soul had migrated. He was the founder, or rather the reformer of the sect of Thao-tsee who divide with the Buddhists or followers of Fo, the spiritual dominions of China, and the ministers of these two religious sects are by Europeans called Bonzes. Lao-tsee must have lived to a great age, as he was visited by Confucius in 417 BC. But little is known concerning his personal history, and of the books attributed to him by the Chinese only a few fragments had appeared in Europe, till the publication of one of them in a French translation by M Abel Remusat, under the title of *Laure des récompenses et des peines* Paris 1816 8vo.—*Biblio. Univ.*

LAPO (JAMES or JACOPO) a famous Italian architect, who in 1218 built the church of the Virgin Mary at Assisi which brother Heiss, a disciple of St Francis had founded during the life of that ascetic. This undertaking procured for Lapo great reputation especially at Florence where he passed the greater part of his life, and died about 1262.—ARNOLFO LAPO his son became the most celebrated architect and sculptor of his time. He was one of the great restorers of a taste for a correct style of architecture in Italy and his works display genius and skill in his profession. He died in 1300 after having finished the church of St Maria della Fiore at Florence and other public buildings.—*Felizian Vies des Artistes*

LARCHER (PETER HENRY) an eminent French scholar and translator was born at Dieux October 12 1726. His family was related to that of Bosuet, and it was the intention of his father who was a counsellor of finance to bring him up to the magistracy. He was, however, decidedly attached to the belles lettres and having finished his studies, with an income of only five hundred livres a year, he became an intense student of Greek literature, and an assiduous collector of early editions. His first translation was the "Electra of Euripides," which attracted little attention, but he became a contributor to several literary journals and translated from the English the "Martinius Scriblerus from Pope's Miscellanies, and sur John Pringle's "Observations on the Diseases of the Army," he also wrote notes to the French version of Hudibras. He followed with a translation of the Greek romance of "Cheresa and Callirhoe" which was reprinted in the Bibliothèque des Romans. In 1767 a difference took place between him and Voltaire, on whose "Philosophy of History" he published remarks, under the title of a "Supplement;" to which the latter replied in his well known "Defense de mon Oeuvre." Larcher rejoined in a "Reponce à la Defense de mon Oeuvre," with which

the controversy ceased on his part. After the insurrection of his opponents he fled after midnight a translation of "Xenophon's sun Venus," to which the Academy of Inscriptions awarded their prize. He followed with a translation of Xenophon which woned to his being elected into the savannah academy. His *Historia* was published in 1786 of which, a new and very improved edition appeared in 1802. During the revolutionary crisis he lived in privacy and was only slightly molested, by being called once before the revolutionary committee. He was subsequently decreed a sum of three thousand livres, and received into the Institute. He was finally appointed professor of Greek in the imperial university but was too aged for active services. He died December 22 1812 and was regretted as an accomplished scholar and amiable man. His fine library was sold by auction in 1814 —*Life prefixed to Catalogue of Library*

LARDNER (NATHANIEL) a learned non conformist divine of the eighteenth century. He was a native of Hawkhurst in Kent, and became a student at a dissenting academy in London, whence in 1699 at the age of sixteen he removed to the university of Utrecht and afterwards to that of Leyden. He returned to England in 1703 and probably spent some years in study at home, previously to entering on the ministry as he commenced a preacher about the age of twenty five. In 1713 he went to reside in the family of lady Treby the widow of lord chief justice Treby as domestic chaplain and tutor to her son, whom he afterwards accompanied on a tour through part of France and the Netherlands. His connexion with the Treby family appears to have continued till the death of his pupil in 1723 an event which deeply affected his mind. About this time he was engaged in conjunction with other ministers, in carrying on a course of lectures at a chapel in the Old Jewry London. Here he delivered three sermons on the credibility of the gospel history which formed the basis of his great work on the evidences of Christianity the principal occupation of his life. The commencement of his literary undertaking was in 1727 when he published, in 2 vols. 8vo, the first part of "The Credibility of the Gospel History," or the Facts occasionally mentioned in the New Testament, confirmed by passages of ancient Authors who were contemporaries with our Saviour or his Apostles or lived near their time. The work was continued at intervals till the appearance of the twelfth and last part in 1755 which however was followed by three supplementary volumes, comprising a history of the Apostles and Evangelists, with observations on the books of the New Testament. In 1759 he was chosen assistant preacher to Dr W Harris minister of Crotched Friars London, which office he held till 1751 when he resigned it. The university of Aberdeen, in 1745, conferred on him the degree of DD. In the latter part of his life he retired to Hawkhurst his native place where he had a small

J. A. B.

state, and there he died July 24, 1766 at the age of eighty-four. "Bible," his principal work, was the author of—A large collection of Jewish and Christian Testaments in the English of the Christian Religion," 1764-67, 4 vols. 8vo; "The History of the Heretics of the two last Centuries after Christ," etc published posthumously in 1786. A Vindication of three of our Saviour's Miracles," against Winkton; "A Letter written in the year 1738, concerning the Question, whether the Logos assumed the place of a Human Soul in the person of Jesus Christ;" together with sermons and various other theological compositions. A collective edition of his works, with his life by Dr. Klipps, was published in 1788.—*Athenaeum*: G. Sieg.

LARIVÉY (PARIS DE) an old French dramatic poet of considerable merit. He was a native of Troyes in Champagne and is supposed to have died about 1612. He has the credit of having been the first among his countrymen who considered comedy as a representation of the manners of real life and the correction of vice and folly by ridicule as its legitimate object. Larivéy was acquainted with the Greek Latin and Italian dramatists whose works he freely imitated, and his own scenes have in turn been copied by Molière and others. His plays were printed at Paris in 1579 and at Troyes in 1611 2 vols 12mo. The second volume of the latter edition is extremely rare containing pieces not included in any other impression. Larivéy also translated from the Italian the Tales of Straparola and other works.—*Biblio. Univ.*

LA ROMANA (MARQUIS DE) a Spanish general, born of an illustrious family in the island of Majorca. He received a good education, and was acquainted with several languages. Under his uncle general Ventura Carrillo he made a campaign against the French in 1793; and in 1795 he assisted in the defense of Catalonia. On the occurrence of peace, he visited France and afterwards other parts of Europe. In 1807 the emperor Napoleon having obtained from the king of Spain a body of 15,000 men to second his ambitious projects in the north of Europe, the marquis La Romana commanded them, and they acted with great bravery on different occasions. The marquis was stationed with his forces in the island of Pioria, when he learnt what had taken place at Madrid in June 1808 and the designs of Napoleon against the liberties of Spain became sufficiently manifest. The Spanish commander resolved to return to his own country, and join the standard of independence. He entered into a secret treaty with the English who then had a fleet in the Baltic, through the means of which the Spanish army was conveyed home. La Romana displayed his talents and courage against the French invader on many occasions, particularly during the retreat of the English under Sir John Moore, previously to the battle of Corunna, and in the defense of the lines of Torres Vedras against Massena. The marquis La Romana died January 18, 1811.—*Biblio. Univ. de Chambéry*.

J. A. B.

LARREY (ISAAC) a minor French historian was born in 1638, of noble Provencal parents, at Montpellier. After pursuing studies as an attorney in his native country, he went to Holland where he was appointed historiographer to the states-general. He settled afterwards at Berlin, where he received a pension from the elector of Brandenburg. He died in 1719 aged eighty. His principal works are a "History of Augustus," 1690 12mo, "History of Eleanor, Queen of France, and afterwards of England" 1691, 8vo, "A History of England" 1697 to 1713 4 vols. folio, which is still much valued on account of the portraits. He was author also of the romance of the "Seven Sages" 2 vols 8vo, and was concerned in a "History of France under Louis XIV" which is not much esteemed.—*Bibl. Germanique Nouv. Diet. Hist.*

LARRIVEE (HENRY) a distinguished French actor and opera singer born at Lyons in 1733. He was originally a hair dresser but having been patronised by Rebel director of the opera at Paris he was introduced on the stage in 1755. Assisted by the counsels of Gluck, the musician he acquired the art of giving to recitative all the energy and expression of tragic declamation and speedily arrived at the highest eminence in his peculiar department of art. He retired from the metropolitan stage with a pension in 1779, but he afterwards travelled through the provinces giving concerts with the assistance of his wife and daughters, who possessed considerable musical talents. He died at Vincennes in 1802.—*Biblio. Univ.*

LARROQUE (MATTHEW DE) an eminent French Protestant minister was born near Agen in 1619. He lost his parents who were persons of rank and character in his youth but was enabled to study for the ministry and became one of the most eminent of the pastors of the reformed church in his native country. He died in charge of a congregation at Rouen in 1684. His principal works are a "History of the Eucharist," and various controversial treatises one of which in opposition to Beveridge and Pearson is to support the opinion that the spistles of St Ignatius are spurious, "Conformity of the Reformed Churches of France with the Ancients," "A Dissertation on the Thundering Legion," etc.—**DANIEL DE LARROQUE**, son of the above, was born at Vitry and retired in 1681, on the revocation of the edict of Nantes, to London, but returned to Paris and was imprisoned for five years in consequence of having written a preface to a satirical piece against Louis XIV. He was however ultimately released and employed in the office of the secretary of state. He left several works, the principal of which are "La Vie de l'Imposteur Mahomet," 12mo, translated from the English of Prud'homme, a satirical work, entitled "Les véritables Motifs de la Conversion de l'Abbé de la Trappe" 1683 12mo, "Nouvelles Accusations contre Varilhes," 8vo; a satirical romance, entitled "La Vie de François Endes de Matera." He also assisted in

LAS

the "Motivées de la République des Lettres," and the celebrated satire, entitled "Avis aux Belges," has been attributed to Larquey, instead of Bayle, but with very little probability.—*Nous. Dict. Hist.*

LASCARIS. The name of two noble Greeks of the fifteenth century descendants of the imperial family and both natives of Constantinople who on the taking of that capital by the Turks in 1453 fled from the ruin and destruction which menaced them in the subversion of the eastern empire and took refuge in Italy.—CONSTANTINE the elder settled first at Milan, where he was received into the grand duke's household in the capacity of tutor to his daughter. He afterwards visited Rome and Naples, in which latter city he opened a school of eloquence, and finally took up his abode at Messina whither the fame of his literary attainments, especially in the cultivation of the Greek language attracted many distinguished disciples, and among others the celebrated Pietro Bembo afterwards known as the cardinal of that name. He was the author of a Greek grammar and of some other tracts written in that language and in Latin, which were first printed at Milan in 1476 and again at Venice in 1495 at the Aldine press. He also published a treatise on the eminent scholars who had formerly flourished in Sicily and died about the close of the century bequeathing his valuable collection of books to the senate of Messina.—JOSEPH the younger of the two surnamed Rhinocerotes took up his residence at Padua, under the protection of Lorenzo de Medicis, who not only distinguished him by his favour but despatched him on a literary mission into Greece the object of which was the purchase of valuable manuscripts. Thus, by the permission of the sultan whose orders gained him access to the libraries, he accomplished much to the satisfaction of his employer and enriched the Florentine collection with the fruits of his researches. In 1494 he quitted Italy and entered the service of Louis XII of France who employed him as his envoy to the Venetian senate, but on the elevation of John de Medicis to the papacy, by the title of Leo X Lascaris went to Rome at the invitation of that pontiff, and on the foundation of his Greek college there on the Mons Quirinalis, Lascaris was appointed by him its first principal, and superintendent of the Greek press. In order to promote the ends proposed by this institution of which the ascertaining and preserving the true pronunciation of the language was one of the chief Lascaris made a second journey into Greece and brought back with him some youths of good families who were at once to communicate, and to receive instruction. The remainder of his life was divided between Paris where he assisted Francis I in forming the Royal Library and Rome, in which latter city he at length died of the gout at the age of ninety in 1555. Notwithstanding his acknowledged abilities, the natural infirmities of his disposition prevented his benefiting the world by the productions of his

LAS

pen, so much as his taste for literature induced his contemporaries to expect. He published however a translation of "Polybius," and of the "Argonautics" of Apollonius, together with a Greek Anthology 1494, folio Annotations on the works of Sophocles and Homeric fables of the plays of Euripides, and a collection of epigrams and apophthegmes in Greek and Latin. Paris, 4to 1557.—*Histoire de Grecs Illyriques. Nous. Dict. Hist.*

LASCY (count Peter de) a military officer, born in the county of Limousin in Ireland, in 1676. After the capture of that place by William III he went abroad with his uncle, who was in the French service, and was with the army commanded by Catinat in Italy. The regiment of Athlone, to which he belonged, having been disbanded after the peace of Hyswick he entered into the Austrian army and served against the Turks. He was next employed by the king of Poland and then by Peter the Great of Russia. In 1709 he was wounded at Pultowa, and he afterwards assisted in the taking of Riga, of which place he was made governor. For his various services he was made a lieutenant general in 1720. Catharine I appointed him governor of Livonia and on his estate in that province he died in 1751 having attained the rank of field marshal. The prince de Ligny published a collection of the works and a journal of the campaigns of Marshal Lascy.—*Bug. Univ.*

LASCY (JOSEPH FRANCIS MAURICE count de) son of the foregoing was born at Petersburgh in 1725. Having adopted the profession of arms, in 1744 he entered into the Austrian service and made a campaign in Italy. He gradually rose to the rank of general after having displayed his military talents at the battles of Lobositz Breslau and Hochkirchen, and in 1760 he penetrated to Berlin at the head of 15,000 men for which bold exploit he was made a commander of the order of Maria Theresa, and in 1763 he received the baton of marshal. Under Joseph II he was a member of the council of war at Vienna and was the author of the military regulations adopted by that prince. He was employed against the Turks in 1788 and again after the death of Laudon. His death took place at Vienna November 30 1801—*Bug. Univ. Bug. Ann. des Camps.*

LASERNA SANTANDER (CHARLES ANTHONY) a native of Biscay distinguished in the last century as a bibliographer. He studied among the jesuits at Villagarcia, and afterwards entered into the order on the suppression of which he went to Valladolid to study philosophy. He was about to settle in that city when he was invited to Brussels by his uncle who resided there as secretary to the king of Spain. Going thither he collected a noble library, which he opened to the public and having been obliged to dispose of it, he was in 1795 appointed keeper of the library of Brussels. He died in 1813. Among his works the most important is his "Dictionnaire Bibliographique choisi du quinzième Siècle, dédié à un Essai historique sur l'origine de

L'Institution, "—Mémoires, 1805, 2 vols. 8vo.—
Par Mme. de Staél " Mémoires, Mémoires sur la
Bibliothèque de la Bibliothèque," Paris, 1809
2 vols.—*See Note on Voltaire*

LADELLA (Milanese) an ecclesiastic of
Volterra in Tuscany, born in 1759. He entered
into the order of Scolastics, and was the author
of several works of merit. The principal of
these are his " Account of the Poets of Ca-
tania;" a translation of the works of Lekham,
the celebrated Oriental Fabius, into the He-
brew language, an " Essay on General His-
tory," a poem on the Homo, and some dramatic
compositions, written in Italian. He died in
1798 at Bolgiano.—*Neue Diet. Hist.*

LASSO (— si) the name of three emi-
nent musicians, father and sons. ORLANDO
the elder was born at Mons in Hainault, in
1530 and according to De Thoy, who ranks
him among the illustrious characters of the
age was forcibly taken from his parents in his
childhood by Ferdinand Gonzaga on account
of the excellence of his voice, and carried by
him to Milan Naples and Sicily. He sub-
sequently taught music at Rome Antwerp
&c till he at length settled at Munich on an
invitation from the Bavarian court, and re-
mained there till his death in 1593. His
reputation as a composer and performer was
so considerable that it was said of him by a
contemporary *Hic ille Orlandus Lassum qui
recreat orbem* " a pun upon his name which
will not bear translation.—His eldest son
RUDOLPH born at Munich, succeeded his
father as organist and composer to Maximilian
of Bavaria, in whose service FREDERICK the
youngest also appears to have continued till
his death. The two brothers besides a great
number of their own musical compositions
published in conjunction the Latin works of
their father under the title *Magnus Opus
Musicanum Orlandi de Lasso &c.* Munich
1604.—*Burney's Hist. of Mus. Res's Cyclop.*

LASSUS (Paris) a celebrated surgeon
professor of pathology at the school of medi-
cine and surgery at Paris, and member of the
French Institute. He was born at Paris in
1741 and studied under his father who was a
medical practitioner of eminence. He was
admitted a master of surgery in 1765, and in
1771 he obtained the office of surgeon in
ordinary to the daughters of Lewis XV. He
went to Italy with those princesses when they
fled from France at the commencement of the
Revolution. On his return to Paris he ob-
tained the erasure of his name from the list
of emigrants and on the re-organisation of
the academic institutions, he became suc-
cessively professor of the history of medicine
and of external pathology which offices he
held till his death in 1807. Among a number
of valuable professional works published by
M. Lassus, may be mentioned *Essai sur
l'Influence histologique et critique sur les dé-
couvertes faites en anatomie par les anciens et
modernes*, "Paris 1783, 8vo," *Traité élé-
mentaire de la médecine opératoire*, "1793, 8vo,"
"Pathologie chirurgicale," 1805, 1806, 2 vols.
8vo.—*See Notes on Lassus*

*by Curzon, in the Minutes of the Inter-
esting Asia.*

LATILLA (GATTANO) an eminent Neapolitan
composer, the friend of Pergolesi and
uncle of Piccini born in 1710. His first
opera, the "Orfeo," which he wrote almost
immediately on quitting the conservatory was
a serious one, but it was the great success of
his second, a comic opera, brought out by him
in competition with Galuppi, that stamped his
reputation as a first-rate composer in that
style. This piece was entitled "Madama
Ciana," to which succeeded nine others, the
last and best of which is his Buona Fig
Ercica. The time of his decease is uncertain
—*Burney's Hist. of Mus.*

LATIMER (Hussey) an eminent English
prelate and reformer in the sixteenth century
He was the son of a respectable yeoman at
Thurcaston in Leicestershire where he was
born about the year 1470. He received his
early education at a country school whence
he was removed to Cambridge in his fourteenth
year. He was brought up a zealous romanist,
but becoming acquainted with Thomas Bilney
at Cambridge, he gradually changed his opin-
ions and being of an ardent and sincere tem-
per became equally zealous in promulgating
the doctrines of the reformation. He first
came openly obnoxious to the enemies of in-
novation by a series of discourses in which
he dwelt upon the uncertainty of tradition
the vanity of works of supererogation, and the
pride and usurpation of the Romish hierarchy.
These sermons were warmly attacked by
Buckingham, prior of the Black Friars at Cam-
bridge whose reasoning was assailed with
great humour and acuteness by Latimer who
much advanced the Protestant party at Cam-
bridge of which himself and Bilney became
the leaders. At length the bishop of Ely in
derelict his preaching within the jurisdiction
of the university which order was defeated by
the good offices of Dr Barnes, prior of the Au-
gustines who being friendly to the reformation
boldly licensed Latimer to preach in his
chapel which was exempt from episcopal in-
terference. At length the progress of the new
opinions was represented to cardinal Wolsey who at the importunity of archbishop
Warham created a court of bishops and decan-
tors to put the laws in execution against her-
etics. Before this court Bilney and Latimer
were summoned, and the former who was
accused the principal being induced to re-
pent, the whole were set at liberty, and such
was the favour extended to Latimer that he
was licensed, by the bishop of London, to
preach throughout England. The remorse of
Bilney is well known and the manner in
which he disclaimed his abjuration and sought
the stake which martyrdom he finally endured
at Norwich. The fate of his friend by no
means intimidated Latimer who had with the
courage to write a letter of remonstrance to
Henry VIII, on the evil of prohibiting the use
of the Bible in English. Although this epistle
produced no effect, Henry, who loved genera-
tions, took it in good part, and preserved the

thence by the Privy-Council West-Kingsland's Will-saint. The secretary of Anne Boleyn and son of Thomas Cromwell, proved still unfeigned favorable to Latimer, and after encountering much unpopularity from the opposing party of divines, headed by Warham, St. Albans, and others, from which he was delivered by the king himself he was in 1535 appointed bishop of Worcester. Of the plain dealing of Latimer the following circumstance is a proof. It was then the custom for bishops to make presents on new-year's-day to the king, and among the rest Latimer walked at court with his gift, which instead of a purse of gold was a New Testament, having the leaf turned down to this passage "Wheremangers and adulterers God will judge." Henry was not however offended, and when the sturdy prelates was some time after called before him to answer for some passages in a sermon which he had preached at court, he defended himself so honestly that he was dismissed with a smile. The fall of Anne Boleyn and Cromwell prepared the way for great reverses, and the six articles being carried in parliament, Latimer resigned his bishopric rather than hold any office in a church which enforced such terms of communion and retired into the country. Here he remained in privacy until obliged to repair to London for medical advice in consequence of a hurt received from the falling of a tree. There he was discovered by the emissaries of Gardiner and imprisoned for the remainder of Henry's reign. On the accession of Edward he was released and became highly popular at court by his preaching during the whole of that short reign; but never could be induced to resume his episcopal functions. Having got rid of all anxiety on this subject he took up his abode with archbishop Cranmer at Lambeth where his chief employment was to hear complaints and procure redress for the poor. Soon after Mary ascended the throne and in pursuance of the measures taken to re-establish the opinions of the church of Rome Latimer was cited to appear before the council; in doing which an opportunity was afforded him to quit the kingdom. He however prepared himself with sincerity to obey the citation, and as he passed through Smithfield the courageous old man exclaimed, "This place has long groaned for me." About the same time Cranmer and bishop Ridley were also committed to the Tower which became so crowded, that the three prelates were confined in the same room. From the Tower they were conveyed to Oxford and confined in the common prison with every circumstance of degradation preparatory to a mock disputation in which Latimer behaved with his usual straightforwardness and simplicity, refusing to deliver any thing more than a free confession of his opinions. The three prelates although fully condemned, remained in prison sixteen months chiefly because the statutes under which they had been tried had been formally repealed in 1535; however, new and more stringent laws having been enacted in support of the Reformed religion a commission was issued by

cardinal Pole, the pope's legate, to Sir John Legh and Ridley for home. Much greater pains taken during this second trial to prove Latimer to be a schismatic, which they immediately wished, and were in consequence delivered over to the secular arm, April 1555, doomed to the flames. This sentence was put in execution about a fortnight after their condemnation, on the 16th October 1555. At the place of execution, having thrown off the old gown which was wrapped about him, Latimer appeared in a shroud prepared for the purpose, and with his fellow-sufferer was fastened to the stake with an iron chain. A faggot, ready kindled, was then placed at Latimer's feet, to whom Latimer exclaimed, "Be of good comfort master Ridley and play the man. We shall this day light such a candle by God's grace in England as I trust shall never be put out." He then recommended his soul to God and with firmness and composure expired amidst the flames. The character of bishop Latimer is sufficiently obvious from the tenor of his whole life. His talents as a preacher although adapted for popularity in his own times, in which his simplicity frankness and glibbing drollery were highly estimated, will not bear a critical examination in the present day. His manner of preaching says Gilpin was, however, highly affecting as he spoke immediately from the heart and no man was less influenced by sinister motives or durst with more freedom reprove vice however dignified by worldly distinctions. A collection of the sermons of bishop Latimer was first printed in 1570 and they have since been frequently republished. Several of his letters appear in Fox's *Acts and Monuments*.—*Gilpin's Life of Latimer* *Bug. Brit.*

LATIMER (WILLIAM) one of the revivers of classical learning in England was educated at Oxford and became fellow of All Souls college in 1489. After travelling in Italy and studying Greek at Padus, he returned to England and was graduated MA at Oxford in 1513. He subsequently became tutor to Reginald afterwards cardinal Pole, by whose interest he obtained two rectories in Gloucester shire and a prebend of Sabbury. He was also one who taught Erasmus Greek which great man he also assisted in his second edition of the New Testament. He died at a very advanced age in 1545. Latimer, in conjunction with Lily Colet, and Grocyn contributed much to establish a taste for the Greek language in England, and was one of the greatest scholars of the era in which he lived. Nothing remains of his writings, except a few letters to Erasmus.—*Athen. Oxon. Journals Life of Erasmus.*

LATINI (BAUSSERIO) an eminent grammarian of Florence in the thirteenth century. He was of a noble family in that city and of the party of the Guelphs, which obliged him to retreat into France when it was overpowered by that of the Ghibellines. He ultimately however returned and was appointed to some honourable offices. His greatest

homely and plain sort of Dostie, but he also cultivated, especially by a work, written in the French language, entitled "Tremor," which is a kind of exhortation of the Bible, of Flavy the ascetic, Solanus, and other writers, and may be found in the *encyclopedia* of the time. On his return to France he likewise published a collection of moral proverbs in verse under the title of "Tremotis," which proves him to have been very little of a poet. He died in 1294.—*Thibault. Cossatot.*

LATIMUS (*Lariscus*) a learned critic of the sixteenth century was born at Viterbo about 1515. He was chosen, in conjunction with other learned men to correct "Graeca's Decretal," he also left notes on Tertullian and was author of a very learned book, entitled "Bibliotheca Sacra et Profana, sive Observations Correctiones Conjecturae et variae Lecturees, 1567 folio." He died in 1593.—*Nouv. Dict. Hist.*

LAUD (WILLIAM) archbishop of Canterbury in the reign of Charles I. He was the son of a clothier at Reading in Berkshire, where he was born in the year 1573. He received his early education at the free-school of his native town, whence he was removed to St John's college Oxford of which he became a fellow in 1593. He graduated M.A. in 1596, and took priest's orders in 1601 and the following year preached a divinity lecture in which he maintained the perpetual visibility of the church of Rome until the reformation, which doctrine being disapproved by Dr Abbot, at that time master of University college, the foundation of that university was laid which ever after subsisted between them. He obtained the vicarage of Stanfold in Northamptonshire his first preferment in 1607 and in 1608 obtained the advowson of North Kilworth in Leicestershire. The same year he commenced DD and was made chaplain to Sir Neile bishop of Rochester who gave him the rectory of Cuckstone in Kent, and he soon after preached his first sermon before James I. In 1611 he became president of his college, and one of the king's chaplains, in which situation owing to the influence of archbishop Abbot, he attracted so little attention that he was about to retire from court until persuaded to remain a year longer by bishop Neile, who to keep up his spirits, gave him a pretend in the church of Lincoln and the archdeaconry of Huntington. His patience was at length rewarded, the king presenting him in 1616 to the deanery of Gloucester in the cathedral of which, he signalled himself by his scrupulous attention to the strictest letter of the ceremonial. In 1617 he accompanied James I to Scotland, to aid him in his abortive attempt to bring the church of Scotland to a uniformity with that of England. In 1620 he was installed a prebend of Westminster and the next year nominated to the see of St David's, chiefly through the friendly offices of Buckingham and the lordkeeper Williams. About this time James took upon himself his intended restoration in the people of the doctrine of predestination; election, the irresistibility

of free grace, or of any matter relating to the power, prerogative, and sovereignty of foreign princes. These measures being attributed to the council of bishop Laud the Calvinistic or puritan party were much annoyed at his conduct. He had now become closely connected with Buckingham who, on his foolish journey to Madrid with prince Charles, left him as his agent at court. On the accession of Charles I, his influence by the countenance of Buckingham, became very great, and it is recorded, that he was ordered to furnish the king with a list of all the divines in his kingdom, against whose names he marked O or P, to signify orthodox or puritan. In 1626 he was translated to the see of Bath and Wells, and in 1628 to that of London. On the sequestration of archbishop Abbot, in consequence of having accidentally shot a game-keeper Laud was appointed one of the commissioners for exercising the archiepiscopal jurisdiction, and being a zealous supporter of the hated administration of Buckingham, he became in the highest degree unpopular. On the assassination of that presumptuous favourite by Falton bishop Laud suspecting that some members of parliament might be privy to the deed prevailed on the king to send to the judges for their opinion, whether by law Falton might not be racked! to which inhuman query the crown lawyers returned their opinion That, according to the laws of England, Falton could not be racked. Bishop Laud was also the most active member of the high commission court, the arbitrary and severe proceedings of which were so justly odious to the nation. The treatment of Alexander Leighton (see article, *Leighton*.) a Scottish divine for the publication of a pamphlet, entitled "Zion's Plea against Prelacy," in particular created great disgust. On the delivery of the merciless sentence against that enthusiast, bishop Laud pulled off his cap and gave God thanks for it an action which is recorded in all the histories of the time, and which was very punctually remembered upon his own downfall. In 1630 he was elected chancellor of the university of Oxford to which he was a great benefactor, and which he enriched with an invaluable collection of MSS. in a great number of languages ancient modern and oriental. In 1631 he displayed great zeal and activity in repairing and beautifying St Paul's cathedral, the expense of which however it is said was supported by many oppressive and unscrupulous methods of raising money by exorbitant fines in the courts of high commission and star-chamber. In 1633 he attended Charles into Scotland who went there to be crowned, and on his return he was promoted to the see of Canterbury become vacant by the death of archbishop Abbot. On the same day an agent from the court of Rome came to him privately and offered him a cardinal's hat, a fact which shows how strongly he was suspected of a predilection for the church of Rome. He however despised the proposal feeling, as he expresses himself in his diary, That suspi-

more devout within him which would not suffer that, till there were other than it is." In 1634 he commenced a metropolitan visitation in which the rigour of his proceedings, to procure an impossible conformity was exceedingly unpopular and impopular. In 1635 he was appointed one of the commissioners of the treasury in which situation he remained a year and then procured the treasurer a staff for bishop Juxon (see article JUXON), a step much censured by Clarendon. The well known prosecution of Pryme Burton, and Bestwick, for libel took place in 1639; the odium of which and the severe sentences that followed rested principally upon him and being like that of Leighton cruel, illegal and tyrannical the feelings excited against him were proportionably embittered. He also proved an active prosecutor of his former friend Williams, bishop of Lincoln for a charge very insufficiently supported, of tampering with the king's witnesses for which the latter was fined 11 000*l.* and imprisoned in the Tower. Nor was that all, on that bishop's library being seized to pay the fine two or three letters, written to him by Osbaldeston master of Westminster school simply for containing some obscure expression which the archbishop interpreted against himself were made the foundation of a new bill by which the unfortunate bishop was condemned to a fine of 5000*l.* more and no compayment kept a close prisoner in the Tower. In his remarks on these proceedings bishop Warburton strongly observes, that "This prosecution must needs give every one a bad idea of Laud's heart and temper." A statesman of the temperament of this prelate could scarcely be a friend to the liberty of the press and in 1637 he procured a decree of the star chamber limiting the number of printers and forbidding the printing of any book not licensed by the bishop of London or archbishop of Canterbury for the time being or by the chancellor and vice-chancellor of the universities. Catalogues of all books from abroad were also to be furnished to the same authorities, and so arbitrary was the conduct of Charles's ministers at this period that numbers both of clergy and laity unanimously sought to quit the country. A proclamation to restrain them, unless certificated to be conformable to the order and discipline of the church carried this policy as far as it would go and exceeded even the tyranny of the revocation of the edict of Nantes. The measures advised and supported by archbishop Laud in respect to Scotland were equally arbitrary the result of which belongs rather to the province of history than of biography. When at length the bad consequences of these proceedings rendered a parliament necessary after a lapse of twelve years, one was convened in April 1640. The indignant resentment of the nation having again found an organ the Commons commenced by appointing committees of religion and grievances, on which it was once more suddenly dissolved after sitting only three weeks. "All sorts of means," says lord Clarendon, "some ridiculous, and others semi-

dangerous" were then put in force to split, separate, by law, benevolence, ship-money, and duodent-money for those who refused payment being fined and suspended, by the star-chamber or council-table, where accusations laid out as infamously, that a compass of popular indignation was again excited and a body of five hundred people were attacked his palace. On the strength of a single precedent, a clerical convention was also authorized by the king to sit, independent of the parliament. This body besides granting subsidies, prepared a collection of constitutions and canons ecclesiastical, which being approved by the privy council was made public, and gave such general disgust to the moderate of all parties and produced so great a number of petitions to the privy council that Charles was obliged to suspend them. On the calling of the celebrated long parliament, the new canons were very summarily disposed of as subversive both of the rights of parliament and of the liberties and property of the subject and the long gathering storm immediately burst over the head of the archbishop. The very next day, articles presented against him by the Scottish commissioners were read in the house of lords, which when referred to the Commons a motion was put and carried that he had been guilty of high treason. The celebrated Denys Holles was immediately sent to the house of lords, to impeach him in the name of all the Commons of England and he was forthwith delivered into the custody of the black rod. On the 26th of February 1641 fourteen articles of impeachment were brought up from the Commons and he was committed to the Tower. Soon after his commitment, the house of Commons ordered him jointly with those who had passed sentence against Pryme Bestwick and Burton to make them satisfaction for the damages which they had sustained by their sentence and imprisonment. He was also fined 20 000*l.* for his proceedings in the imposition of the canons and was otherwise treated with extreme and undignified severity especially in the seizure of his goods and books at Lambeth which were sold for less than a third of their value a proceeding which must have not very pleasantly reminded him of the late treatment of bishop Williams. He remained in prison three years before he was brought to trial, which at length on the production of ten additional articles, took place on the 19th March, 1643-4 and lasted twenty days. Many of the charges against him were insignificant and poorly supported, but it sufficiently appeared that he had unconstitutionally endeavoured to extend the prerogative and was guilty of many arbitrary, illegal, and cruel actions. His own defence of himself was exceedingly acute and able and his argument that he could not be justly made responsible for the actions of the whole council, if not absolutely a legal was a strong moral defence. The lords were still more staggered by his counsel showing that if even guilty of these acts, they amounted not to high treason. A case was made for the judges, who very much

questioned. If they were so, and the peers deferred giving judgment. On this day the house of Commons passed a bill of attainder, on the 4th January, 1646-8, in a very thin house, in which the archbishop was declared guilty of high treason, and condemned to suffer death, — an unjustifiable step in a constitutional point of view, no any of which he was accused. To stop this attainder he produced the king's pardon, under the great seal, but it was overruled by both houses, and all he could obtain by petitioning was to have his sentence altered from hanging to beheading. He accordingly met his death with great firmness on the 10th January 1648-9 on a scaffold erected on Tower-hill, being then in the seventy second year of his age. The policy and proceedings of archbishop Laud both as a prelate and statesman are given up by writers of all parties unless we except a few scat- lots of the passive obedient school whose theoretical notions of uniformity were like his own. His warmest admirers, including his biographer Heylin admit his extreme rashness and little is left which can be fairly pleaded for his severity and violence except the probability that he acted on principles which he deemed correct. This virtue un- happily too often renders a short sighted and narrow minded man additionally dangerous more especially if like archbishop Laud he be a warm vindictive and passionate. What judg- ment indeed can be formed of the understand- ing of a politician who formed the airy project of uniting three kingdoms in a uniformity of religion whose history was that of England, Ireland, and Scotland? Much praise has been bestowed upon his piety but his diary shows it to have been mingled with much puerility and superstition, his dreams being regularly recorded as well as the hopes and fears which they excited. Speaking of his learning and morals, Hume observes that he was virtuous, if severity of manners alone and abstinence from pleasure could deserve that name. He was learned if polemical knowledge could entitle him to that praise. His manhood to the university of Oxford has already been recorded, and it must be added that he founded therein an Arabic pro- fessorship, and it likewise owed to his ini- tiative a charter enlarging its privileges. He also founded a hospital in Reading, with a revenue of 200*l.* per annum. He was doubtless learned, and an encouager of scholastic learning, but he was occupied too much in active life to display much of it in his produc- tions, which are "Seven Sermons," preached and printed on several occasions; "Short Annotations upon the Life and Death of King James"; "Answer to the Remonstrance made by the House of Commons," his "Diary, edited by Wharton"; "The second Volume of the Remonstrance of Archbishop Laud, written by himself"; "Officium Quotidianum or a Manual of Daily Devotion"; and a "Summary of Devotion." Several of his letters are to be found in the *Vetus Epistles*, in Usher's biography by Dr. Paxt, and in Dr. Twiss's life of Po-

cock.—*Wharton's Troubles and Trials of Laud, Prynne's and Heylin's Lives. Hume's Hist. of England.*

LAUDER (WILLIAM) a literary impostor, who ruined his reputation by an attempt to prove Milton a plagiary. He was a native of Scotland, and received his education at the university of Edinburgh, where he afterwards acted as a private tutor. Being disappointed in his expectations of obtaining a professorship he removed to London and commenced author. In 1747 he published in the Gentle- man's Magazine an "Essay on Milton's Use and Imitation of the Moderns" the object of which was to prove that the great epic bard had made free with the works of certain Latin poets of modern date, in the composition of his *Paradise Lost*. Answers appeared in the magazine but they failed in vindicating the originality of Milton, whose calumniator flushed with success proceeded to republish his *Essay* with additions in a separate form. At length Mr. Douglas afterwards bishop of Salisbury produced ample proofs of the dupli- city of Lauder in a published letter to the earl of Bath entitled *Milton vindicated from the Charge of Plagiarism* brought against him by Mr. Lander. In this pamphlet the learned critic showed that the passages which had been cited by Lauder professedly from Massenus, Staphontius, Teubmannus and others, had been interpolated by Lauder him self who had foisted into his quotations entire lines from Alexander Hog's Latin translation of the *Paradise Lost*. This detection proved so injurious to the reputation of Lauder that his booksellers waited on him confessing the fraud unless he could as he asserted, fairly exculpate himself by producing the individual editions of the works from which he had taken his garbled quotations. The latter alternative was impossible and he was therefore forced to submit to the former. He consequently signed a letter acknowledging his fault, assign- ing the motives which prompted it, and expressing his contrition which was laid before the public and Lauder soon after quitted England for the West Indies, where he died in 1771.—*Nichol's Lat. Anecd. Month. Mag. vol. xxi.*

LAUDOHN OR LAUDON (GIDEON EX-EXER) a military officer of distinction in the Austrian service. He was descended from a Scotch family and was born at Totzen in Livonia, in 1716. After having received a good education he entered into the Russian army as a cadet, at the age of fifteen. He served against the Poles, and afterwards against the Turks but not meeting with the promotion he expected, he went to Vienna and was employed under baron Trenck in the war between Austria and Prussia in 1744. A quarrel which he had with Trenck induced him to give up his commission, and he resided subsequently for some years in retirement, on the frontiers of Croatia, where he had a military command. At the commencement of the seven years' war in 1756, he again entered on active service, during which he sig-

difficult himself on many occasions. He greatly contributed to the victory of Hochkirchen, for which he was made a baron of the empire, and received the grand cross of the order of Maria Theresa. In 1759 he beat the Prussians at Kummerendorff in 1760 he took the fortress of Glatz, and afterwards made himself master of Schwedtitz. On peace being concluded in 1763 baron Laudon returned to his estates in Bohemia. In 1766 he was made a member of the aulic council of war, and on the occurrence of the successor war of Bavaria in 1778 he was raised to the rank of field-marshals. He was again employed against the Turks in 1788, and in the following year he took Belgrade. After the death of Joseph II he was confirmed in all his appointments by the succeeding emperor Leopold. He died at Neu Tirschen, in June 1790 leaving the reputation of having been one of the most skilful generals of modern times.—*Akaz's G. Bug. Bug Units.*

LAUNOY (JOHN DE) a learned and voluminous French writer was born at Valdeus in Normandy in 1603. He studied with great diligence at the university of Paris and being ordained a priest, was admitted a doctor of divinity at the college of Navarre. He particularly distinguished himself in defending the rights of the Gallican church against the pretensions of the court of Rome and in exposing legendary fables and pretended concussions. The mission of St Dionysius the Areopagite into France the travels of St Lazarus and Mary Magdalene into Provence, and similar stories were all duly exposed by him, and it was humorously observed that he materially thinned the ranks of sanctitude by his merciless investigation. He suspected the whole martyrology says a lively French writer and examined all the saints as they do the nobility of France. Voltaire also quotes a curate of St Eustathius as saying

I always make a bow to M. Launoy lest he should deprive me of my Eustathius. This learned man, who was peculiarly benevolent disinterested, and kind hearted died in 1678, aged seventy-four. His works, the principal of which are, *De Vana Aristoteles fortuna*, and *'Histoire du Collège de Navarre* were published in 1731, in 10 vols. folio.—*Niceron. Sacra Oeconomia.*

LAURENT (FERD. JOSER.) an able French mechanist born in 1713. His ingenuity began to display itself at a very early age, and he is said to have even constructed the model of an apparatus for raising water when only in his ninth year. In 1736 his reputation was already matured, and several public works in the Pays Bas were committed to his management. Many of the canals, especially those by Valenciennes Liege &c. owe either their origin or improvement to his genius—but his great work was the junction of the canals of the Sambre and Escaut, by means of a tunnel about nine miles in extent. The king of France conferred on him the cross of St Michael for his services. His death took place in 1775.—*Note. Diet. Hist.*

LAUBI (Francois) the son of Mathurin Lauti, a Flemish artist, born himself at Bruges in 1655. He was instructed in the rudiments of painting by his father who encouraged a passion for the art, which developed itself in his son at a very early age. He afterwards studied under Angelo Caronchio, who was connected with his family by marriage, and soon made so considerable a progress as to excel his master as well in taste and colouring, as in composition and the general execution of his pictures. Several grand altar pieces of his painting are much esteemed, but his smaller historical pieces, with beautiful and highly finished landscapes introduced into the back ground, are considered his best performances and fetch a great price. His death took place in 1694.—*D'Argenville Vie des Peint.*

LAURIERE (EUSTAHIUS JACQUES DE) a French advocate eminent for his thorough acquaintance with the civil law of his country born in 1659 at Paris. He was the author of a great variety of professional writings, the principal of which are a treatise on Royal Ordinances a commentary on *Louïs's Institut des Coutumiers*, 2 vols., *De l'Origine du Droit d'Amortissement*, "Texts des Coutumes de la Prevôté et Vicomté de Paris, *Bibliothèque des Coutumes*, and "Le Glossaire du Droit Français." He died in 1728.—*Note. Diet. Hist.*

LAVALLEE (JOHN MARQUISE DE) a French dramatist, and miscellaneous writer born near Dieppe in 1747. He became a member of several literary societies and ancient chief of a division of the grand chancery of the legion of honour. He assisted in conducting various journals and periodical works and wrote many comic pieces, and three tragedies. Among his miscellaneous works may be noticed, *La Negre comme il y a peu des Blancs* 1789, and *Lettres d'un Mameluc* 1803 both which have been translated into English. He died a short time after the restoration of the royal family.—*Biog. Nouv. des Contemp.*

LAVATER (JOHN CASPAR) the celebrated physiognomist, was born at Zurich Nov 15, 1741. He exhibited something of a singular but gentle and amiable character at school and having gone through the usual studies was admitted into orders in May 1761. In 1763 he accompanied Henry Fuseli afterwards the painter, and two brothers of the name of Hess, into Prussia and after staying there some time returned, and became a much admired preacher at Zurich and minister of the church of St Peter. Here he remained intent on the duties of his profession and his medical studies, until the storming of Zurich in 1797 on which occasion he was wounded in the head by a Swiss soldier from the effects of which wound he never recovered, although he lived in the full possession of his faculties until January 2 1801 when he died in his ninetieth year. Lavater was the author of several works, but his enthusiastic treatise on physiognomy has procured him the most attention. He published the first part of his studies on

the subject in 1776, in a quarto volume entitled, "Fragments," in which work he took a wide range of literature, and clarified his ideas of physiognomy beyond the observation of those parts of the countenance which exhibit the impressions of mental qualities and affections to the common eye and maintained as a leading position "that the powers and faculties of the mind have representative signs in the solid parts of the countenance." Two more volumes appeared in succession which exhibited a curious mixture of shrewd observation refined feeling, plios sentiment, and mystic extravagance. The whole is illustrated with a variety of engravings, some of which possess great merit. His other works are "Swiss Lays" three collections of Spiritual Hymns "and two of 'Odes,' as blank verse. "Jesus Messias," a poetical history of Jesus Christ, 4 vols. "A Look into Eternity" and "The Secret History of a Self Observer" a very singular production. Lavater was so enthusiastic as to believe in the continuance of miracles and the power of casting out spirits which opinions he maintains with his characteristic ascertainty and enthusiasm.—Rees's Cyclop. Series Onom.

LAVICOMTERIE de St SAMPSON (Lewis) a French political writer and violent partisan of the Revolution. He published in 1791 a work entitled "Crimes des Rois de France" which from the circumstances of the times occasioned an extraordinary sensation. In 1792 he produced another called "République sans Impôts." He became a member of the Convention in September 1792 where he voted for the death of the king, and in September 1793 he entered into the Committee of Public Safety. In January 1794 he was ordered by the Jacobin club to draw up the "Act of Accusation against King." The fall of the terrorists put an end to his influence and he was prosecuted for being concerned in the insurrection of May 1793 but he escaped punishment and afterwards obtained some trifling offices. He died in 1809. Besides the pieces already mentioned he was the author of "Les Crimes des Empereurs" and "Les Crimes des Papes." —Dier des H M du 25me S. Big. Nouve des Contemp.

LAVINGHAM (RICHARD) prior of a Carmelite convent at Bristol towards the close of the fourteenth century. He produced numerous works relating to divinity and philosophy which procured him much reputation among his contemporaries. His abridgment of Bede's Ecclesiastical History was particularly celebrated. Among his philosophical productions are several which indicate a taste for speculative inquiry, comprising the abstract subjects of personal identity and the infinite divisibility of matter. Trittbach says that he flourished in the university of Oxford and that he wrote against the Lollards.—Tribute, de Script. Eccles. Brit. Beaus's Hist. of Bristol.

LAWINGTON (GEOFFREY) bishop of Exeter a prelate of great piety and learning. His birth has been stated to have taken place at the village of Heanton in Devonshire, but another and more probable opinion is, that

the place of his nativity was Mildenhall, Wiltshire, a parish of which his grandfather was the incumbent. Both accounts agree in fixing the time of this event in the year 1483. From Winchester school he removed on a scholarship to New college, Oxford, where he graduated in civil law in 1513. Four years afterwards he obtained the living of Hayford, Warwickshire, and subsequently a stall at Worcester which in 1533 he resigned for a residence at St Paul's. Soon after he was presented by the chapter of that cathedral to the livings of St Michael Bassishaw and St Mary Aldermanbury but vacated all his benefices in 1547 on being advanced to the see of Exeter. Over this diocese he continued to preside till his death in 1562. Bishop Lawington was the author of an able and well known treatise entitled, "The Enthusiasm of the Methodists and Papists compared" in two volumes, besides a tract against the Moravians and a variety of miscellaneous sermons.—Pollock's Description.

LAVOIRIER (ANTONY LAWRENCE) a celebrated French chemist, whose name has been connected with the encephalitic theory of chemistry to the reception of which he contributed by his writings and discoveries. He was born at Paris August 13 1743 and was the son of opulent parents, who gave him a good education. He acquired an intimate knowledge of the physical sciences and first distinguished himself by a prize memoir on the best method of lighting the streets for which he received a gold medal from the academy of Sciences. Two years after in 1765 he was chosen a member of the academy. About that time he published several tracts in periodical works, on the analysis of gypsum the crystallization of salt, the congelation of water on thunder the aurora borealis, &c. Journeys which he made to different parts of France with M Gestard furnished him with materials for a lithological and mineralogical chart of the kingdom, intended as the basis of a work on the revolutions of the globe and the formation of the strata of the earth outlines of which appeared in the memoirs of the academy for 1771 and 1787. The discoveries of Black Cavendish, Macbrida, and Priestley relative to the nature of elastic fluids or gases attracted the particular notice of Lavoisier who struck with the importance of their researches, entered on the same field of inquiry with all his characteristic ardour in the cause of science and possessing the advantage of a considerable fortune, he conducted his experiments on a large scale, and obtained highly interesting results. In 1774 appeared his

"Opuscules Chimiques," comprising a general view of what was then known relative to gaseous bodies, with several new experiments, remarkable for their ingenuity and accuracy. Dr Priestley's discovery of what he called dephlogisticated air, afterwards generally termed oxygen gas, furnished Lavoisier with a fresh subject of research, and in 1775 he published an essay on this substance, and its influence in the production of acids, develop-

L A V

over the grand principle of a new chemical theory. This was further illustrated by his experiments of the composition of water by fusing together the oxygen and hydrogen gases, and by its analysis affording the same principles, and the system was completed by his theories of combustion and oxidation the decomposition of atmospheric air his doctrine of caloric and its influence in causing the solid, liquid and gaseous states of bodies, and the whole theory was laid before the public in his *Elements of Chemistry* which appeared in 1789 and was speedily translated into English and other languages. M. Lavoisier rendered many services to the arts and sciences, both in a public and private capacity. He was appointed treasurer to the academy of Sciences and was a member of the board of consultation. When the new system of weights and measures was brought forward he contributed to its improvement by some novel experiments on the expansion of metals. He was consulted by the National Convention as to the best method of manufacturing armaments and securing them from being forged. Agriculture engaged much of his attention and he devoted a part of his estate in the Vendômois to the purpose of experimental farming. In 1791 the committee of the Constituent assembly applied to him for information preparatory to the adoption of an improved system of taxation in consequence of which he drew up a work which was published under the title of *Récherches territoriales de la France*, and which may be considered as one of the most valuable memoirs relating to the products and consumption of the country. About this time he was appointed one of the commissioners of the national treasury an office which afforded him an opportunity of exercising that spirit of systematic arrangement which was conspicuous in all his undertakings. A great part of his fortune was expended in the advancement of science and the improvement of chemistry in particular. His house became a vast laboratory the most skilful artists were employed to construct the necessary instruments and apparatus for his philosophical researches. He had conversations at his house twice a week frequented by the most eminent votaries of science and literature in France as well as by illustrious foreigners and at these meetings were discussed the theories opinions and discoveries of learned contemporaries new experiments were proposed and nothing was omitted that might tend to augment the stores of philosophical information. His services in the cause of science and of his country valuable as they were could not protect him against the destructive tyranny which dominated France under the government of Robespierre and his co-adjutors. Lavoisier had expected to be stripped of his wealth and he consoled himself with the idea that he could support himself by the practice of pharmacy, but a more rigorous fate than he had anticipated awaited him. In company with other fermans-general, he was condemned to death.

BROD. DICT.—VOL. II

L A W

by the revolutionary tribunal of Paris, on the charge of being a spy, and of having adulterated the tobacco with water and with ingredients dangerous to the health of the citizens; and on this ridiculous pretence protest was that illustrious individual beheaded by the guillotine, May 5 1794. It is said that when he found his fate was inevitable he petitioned for a few day's respite in order that he might make some peculiarity interesting and important experiments which he had in view but this favour was denied him. M. Lavoisier married in 1771 the daughter of a farmer-general a lady of agreeable manners and considerable talents, who not only participated in her husband's philosophical researches but also cultivated the arts with great success and engraved with her own hand the plates for one of his publications. She subsequently became the wife of count Rumford.—distr. G. Bigg. Dict. des H. M. des 18me. S. Hist. des Sci. Phys. Med. Phys. Univ.

LAW (EDMUND) a learned English prelate of the last century. He was born in 1703 at Cartmel in Lancashire where his father was a clergyman of the established church. He studied at St John's college Cambridge where he was admitted BA in 1723, and he was afterwards elected a fellow of Christ's college in the same university. He took the degree of MA in 1727 and in 1733 he made himself known by an English translation of archbishop King's "Essay upon the Origin of Evil with notes and observations." During the controversy occasioned by Dr Samuel Clarke's Demonstration of the Being and Attributes of God Law published a very ingenious "Enquiry into the Ideas of Space, Time &c in which he combats the opinions of Dr Clarke. While at college he also assisted in editing Stephens's *Thesaurus Linguae Latinae* 1733, 4 vols folio. In 1737 he was presented to the living of Graystock in Cumberland. In 1743 he obtained the archdeaconry of Carlisle with the annexed rectory of Saltield, where he took up his residence in 1746. There he wrote his Considerations on the Theory of Religion with "Reflections on the Life and Character of Christ," which may be considered as the most valuable production of his pen and have been frequently reprinted. In 1746 he proceeded DD and in his inaugural thesis he defended the doctrine of the natural mortality of the soul. In 1754 he was elected master of Peterhouse college, Cambridge when he resigned his archdeaconry and about 1760 he was appointed librarian to the university and in 1764 casuistical professor. He held several other benefices previously to his elevation to the bishopric of Carlisle which took place in 1769 through the influence of the duke of Grafton chancellor of the university. In 1774 he published a tract, entitled "Considerations on the propriety of requiring Subscription to Articles of Faith;" and he afterwards edited the works of Locke with a preface and life of the author 4 vols. &c. He died at the

L A W

principal seat of Rose Castle in Cumberland, August 14, 1787. Besides the works mentioned already, he was the author of several controversial treatises relating to metaphysics and divinity and "Observations occasioned by the Contest about Literary Property" 1776, 8vo.—*Athenae G. Bigg.*

LAW (EDWARD) lord Ellenborough, fourth son of the subject of the preceding article. He was born at Great Salkeld in Cumberland in 1749 and was educated at the university of Cambridge. He obtained a prize medal given by the chancellor in 1771 and after taking his first degree, became a student of the law at Lincoln's Inn. Having been called to the bar he travelled the northern circuit, but he established his reputation as a barrister at the trial of Mr Hastings for whom he was leading counsel. He was raised to the office of attorney-general in 1801 and the following year he succeeded to the station of chief justice on the death of lord Kenyon when he was made a baron. In 1806 he became not without much constitutional objection a member of the short lived cabinet of Mr Fox and lord Grenville. He held his post of chief justice till 1818 when he resigned it and died shortly after December 13th that year leaving a high character for legal abilities somewhat blemished by warmth of temper.—*Anns. Eng.*

LAW (JOHN) a celebrated financial projector was the son of a goldsmith of Edinburgh, in which city he was born in 1681. He was bred to no particular profession but became versed in accounts and was employed in those of the revenue which were in great disorder before the union of the two kingdoms. For the purpose of remedying the deficiency of a circulating medium, he projected the establishment of a bank with paper issues to the amount of the value of all the lands in the kingdom. This bold scheme was wisely rejected, but it seems to have formed the base of all his after projects. On the death of his father he succeeded to a small estate and commenced gamester and fine gentleman. In consequence of a duel, in which he killed his antagonist he fled from his country and as it is said with another person's wife. He visited Venice and Genoa from both which cities he was banished as a designing adventurer. At Turin he proposed his financial scheme to the duke of Savoy who was too wise to attend to it, but at length he secured the patronage of the regent duke of Orleans and established his bank in 1716 by royal authority. It was at first composed of 1200 shares of 3000 livres each which soon bore a premium. This bank became the office for all public receipts, and there was annexed to it a Mississippi company which had grants of land in Louisiana, and was expected to realize immense sums by planting and commerce. In 1720 it was declared a royal bank and such was the extent of its business and funds, that the shares rose to twenty times their original value. All France was seized with a rage for gambling and happy were they who could

L A W

acquire this enormous wealth by entirely stripping themselves of all their real property. In 1730 Law who underwent the fate of conversion to the Romish religion was made comptroller-general of the finances, and regarded as the *Picard of France*, saw counts of all ranks at his levees which rendered him proud and insolent in proportion. At length the baseless fabric of this prosperity began to give way and the shares sank in value as rapidly as they had risen. Law therefore, was obliged to resign his post after he had held it only five months, and to retire first to a seat in the country and then, for personal safety to quit the kingdom. He carried with him a small portion only of the vast fortune he at one time possessed and lived afterwards in great obscurity. After visiting England Holland Germany and other countries, he finally settled at Venice, where he died in 1729, still occupied in vast schemes and fully convinced of the solidity of his system, the failure of which he attributed entirely to envy and panic. Various opinions have been entertained of the merit of his project and by some it has been thought to have possessed feasibility had it been carried more moderately into practice. His small family estate of Lauriston is still in possession of his descendants one of whom, general Lauriston is known as the bearer of the ratification of the preliminaries of the short lived peace between Great Britain and France in 1802.—*Life of Law Duclos Mem du Regence Nouv. Dict. Hist.*

LAW (WILLIAM) a learned divine of the church of England was born at Kingcliffe in Northamptonshire in 1686. He received his academical education at Emmanuel college Cambridge where he took the degree of M.A in 1712 having previously entered into orders and been elected a fellow. On the accession of George I refusing to take the oaths he vacated his fellowship and left the university. It appears that he for some time officiated as a curate in London but afterwards as tutor to Edward Gibbon esq. of Putney father to the historian. He subsequently became the spiritual director to Mrs Hester Gibbon aunt to the same eminent individual and to Mrs Elizabeth Hutchinson which ladies formed a joint establishment of which he became a member at his native village of Kingcliffe and where after a secluded residence of twenty years in the society of the same pious and charitable ladies, he died on the 9th April 1761. The writings of Mr Law although in many respects excellent partake of a gloominess and severity which is seldom to be found in this age not untinged with a portion of mysticism and enthusiasm that a close study of the writings of Jacob Behmen (for which purpose he learned the German language) did not fail to increase. Some of his later productions are so injured by this tendency as to resemble effusions of a disordered intellect, but these salices of frenzy as Mr Gibbon observed, must not extinguish the praise which is due to Mr Law as a wit and a

L A W

writer, his pretensions in which character were of a very high order. He distinguished himself in the Bongeism controversy against Dr Hoadley with great skill and acumen in support of high church principles, and on the appearance of "The Fable of the Bees," drew his pen against that dangerous production with equal ability and spirit. "The Serious Call to a Devout and Holy Life" is deserved both by Dr Johnson and Mr Gibbon to be one of the most powerful works of devotion in the English language as is also his Practical Treatise on Christianity which production abounds with satire, spirit, and a striking knowledge of life. Besides these works, he wrote *The Unlawfulness of Stage Entertainments*, *The Case of Reason*, *Answer to Dr Trapp on being righteous over much*, *On Regeneration*, *Answer to Headley on the Sacrament*, *The Spirit of Prayer*, *The Spurts of Love*. He also published some translations of his favourite Behmen.—*Lays by Thomas Gibbon's Manuscr.*

LAWES The name of two brothers natives of Salisbury both musicians in the service of Charles I and both pupils of Coperario. Of these WILLIAM the elder was educated at the expense of the earl of Hereford, and was brought up in the choir of Chichester cathedral till 1602 when he obtained a situation in the chapel royal. On the breaking out of the Rebellion he took up arms in the royal cause and was killed at the siege of Chester in 1645. The king is said to have been much affected by his death and even to have worn mourning for him.—His brother HENRY born in 1600 was made a gentleman of the king's chapel in his twenty sixth year and afterwards obtained the appointments of clerk of the cheque and private musician. He is said to have been the first who introduced the Italian style of music into England on the authority of a composition entitled *The Complaint of Ariadne* published among his Ayres and Dialogues for one two and three Voices London 1653. He also set tunes to Sandys's Paraphrase on the Psalms, 1658 and 1676, for a single voice with a bass and composed the original music to Milton's *Comus*, in the first representation of which Masque at Ludlow castle in 1634. Lawes was himself the representative of one of the attendant spirits. This composition has never been printed. Nearly all the songs of Waller to be found in the *Treasury of Music*, 1669 were also set by him, and the poet has acknowledged the obligation in some lines addressed to him. He does not appear to have taken any active part in the troubles, but to have continued practising his profession of a singing master till his death in 1662.—*Hawkins's and Burney's Histories of Music*.

LAWRENCE, LL.D (FRANCIS) a learned civilian born at Bristol in the grammar-school of which he received the early part of his education. He was thence removed to Winchester and ultimately to Corpus Christi college, Oxford, where he obtained a fellowship.

L A Y

In 1751 he graduated M.A. and in 1767 LL.D. and soon rose to eminence as a civilian. In 1757 he was appointed regius professor of civil law in the university of Oxford, and through the friendship of Mr Burke and patronage of earl Fitzwilliam, he became a member of the house of Commons. He was also one of the executors of Mr Burke and joint-editor of his works. He had a concern in the protectionary codes for the laureateship, and wrote a volume of *Remarks on the Apocalypse*. He was also concerned in the Annual Register. He died of a decline in 1807.—*Gent Mag*

LAWRENCE (STRINGER) a military officer distinguished for his services in the East Indies. He was employed during a period of twenty years as commander of the forces of the East India company on the coast of Coromandel, and he was one of those who contributed to the extension of the British empire in that part of the world. He died at an advanced age in 1775. His statue has been placed in an apartment at the India house and a fine monument is erected for him in Westminster abbey.—*Orig*

LAWRENCE (THOMAS) an eminent physician who was a native of Westminster and studied at Trinity college, Oxford, where he took the degree of MD in 1740, and was appointed lecturer on anatomy in the university. He subsequently removed to the metropolis and in 1745 became a fellow of the royal college of Physicians of which he was chosen president in 1767 and held that office during the ensuing seven years. At length he returned to Canterbury where he died June 6 1783 aged seventy two. He wrote a life of Harvey for an edition of his works, published by the college which as well as his dissertation *De Hydrope* and other productions (all in Latin) are deservedly admired for the elegance of style which they exhibit, but like those of his master Dr Frank Nichols, they are too much tinged with the obsolete medical philosophy of Stahl. Dr Lawrence was an intimate friend of the celebrated Dr Johnson who entertained a high respect for his talents and character.—*Gent Mag Lond. Med. Journ*

LAYARD (CHARLES PETRE) an eminent English divine who was a native of Greenwich where his father was a physician. He was educated at Westminster school and St John's college Cambridge where he gained poetical prizes in 1773 and 1776. Having taken orders in the church of England, he became minister of Oxenden chapel in London, and keeper of archbishop Tenison's library, in the parish of St Martin in the Fields. In 1800 he obtained the deanship of Bristol which he held till his death in 1805. He was the author of a poem on duelling and another, entitled *Charity a poetical Essay*, and a volume of sermons. He was a fellow of the Royal and Antiquarian Societies.—**DANIEL PETRE LAYARD**, MD FRS, of London and Gottingen, father of the preceding published in 1783, "An Essay on the Bite of a Mad Dog," two, which went through three edi-

L E A

bons; 'Directions to prevent the Contagion of the Jaill Distemper,' 1775, &c. besides other tracts and papers in the Philosophical Transactions.—*Bibl. Nauv. des Comptes.* Ed.

LAZIUS, or LATEZ (WOLFGANG) a German writer on history and antiquities in the sixteenth century. He was a native of Vienna, where his father was a physician. He adopted the same profession, and obtained the medical chair in the university of the Austrian metropolis. The emperor Ferdinand I appointed him an auctor counsellor and conferred on him the order of knighthood. He died in 1565. The principal works of Lazarus are: *Commentaries on the Grecian and Roman Histories*; a treatise *De Gestibus Migrationibus Chorographia Pannonica*; *Alvernum Antiquitatis*, and *Commentaria in Genealogiam Auctriacum*. A collection of his letters was published at Frankfort, 2 vols folio 1698.—*Teissier's Mœurs.*

LEAKE (STEPHEN MARTIN) a writer on heraldry and numismatics, who was the nephew of sir John Leake a distinguished naval officer. He was appointed one of the esquires of the deputy earl marshal at the revival of the order of the Bath. In 1727 he was made Lancaster herald and successively Norroy Clarenceux and at length in 1754 garter king at arms. In 1750 he printed a life of his uncle admiral sir John Leake 8vo but the work was never published and the impression having been restricted to fifty copies the book is rarely to be procured. His other productions are: *Reasons for granting Commissions to the provincial Kings-at-Arms to visit their Provinces*; *A Historical Account of English Money*, and *The Statutes of the Order of the Garter*. He died in 1773.—*Noble's Hist. of the Coll. of Arms.*

LEAKE (JOHN) a physician and obstetrical practitioner of eminence in London in the latter part of the last century. He was born in the parish of Alnwick in Cumberland of which his father was the curate. After being educated at a grammar school at Bishop's Auckland he went to London with a view to a commission in the army. Being disappointed in his expectations he turned his attention to medicine became a student at the hospitals, and having visited Portugal, Italy and other parts of the south of Europe he returned home and settled as a surgeon and accoucheur in the metropolis. He now published *A Dissertation on the Properties and Efficacy of the Lisbon Diet Drink*, which he administered with success in scrofula, scurvy &c. Becoming a licentiate of the college of physicians, he removed to the neighbourhood of the Strand, and commenced a series of lectures on midwifery and published his introductory discourse which passed through several editions. In 1763 he purchased a piece of ground for the Westmunters lying in hospital, which he presented to the governors of that institution. He died August 8, 1792. He wrote observations on child-bed fever, on the disease of women and on complaints of the viscera. His works are characterised

L E B

by good sense and practical utility, but they display no novelties of theory nor any extraordinary depth of research.—*Hatchinson's Bibl. Med.*

LEAPOR (MARY) the name of an ingenious poetess in humble life the daughter of a gardener in the employ of judge Blencowe at Marston Northants, where she was born in 1732. Her diffidence prevented her talents from being known till upon her death bed, she is said to have presented her poems to her father. These consisting of "The Unhappy Father" a tragedy, "The Temple of Love" and other miscellaneous pieces, were afterwards printed by subscription in two octavo volumes. The measles proved fatal to her at Brackley in the November of 1746 a few days after the decease of her mother.—*Chandler's Bibl. Dict.*

LE BEUF (JEAN) the name of a French antiquary and Lutistman who flourished in the last century. He was a native of Auxerre born 1687 and became a member of the academy of Inscriptions. He published histories of the city of Paris and of his native place, the first in fifteen volumes 12mo, the second in two volumes 4to. He was also the author of a Dissertation on the Civil and Ecclesiastical History of Paris, 3 vols 12mo.

Traité Historique et pratique sur le Chant Chalcographique, and *Recueil de divers Ecrits servant à l'Éclaircissement de l'Histoire de France* 2 vols 12mo. His death took place in 1760.—*Arnot's Dict. Hist.*

LE BLANC (JOHN BERNARD) an able man of letters, was born at Dijon in 1707 of poor parents. He went early to Paris, where his abilities procured him notice and subsequently visited London where he met with the same attention. He died in 1781. The work by which he is best known consists of a collection of Letters on the English Nation 1753 3 vols. 12mo the merit of which is by no means very conspicuous. He also wrote a tragedy called *Abenside* which was well received.—*Newell's Dict. Hist.*

LEBLOND (abbé GASPARD MICHEL), surnamed, a learned antiquary born at Caen in 1738. After completing his studies he adopted the ecclesiastical profession and devoted his leisure to the study of antiquities and numismatics. He became librarian to the college of Mazarin and in 1773 a member of the academy of inscriptions. The Revolution having subverted the old literary institutions, Leblond was nominated a member of the commission of arts, and specially charged with the collection of what was valuable from the archives and libraries of religious houses. By his exertions, the Mazarin library was enriched with more than fifty thousand volumes, and in 1791 he was appointed librarian. He was afterwards made a member of the national institute. On the establishment of the imperial government some unknown motive induced him to quit Paris, and he retired to Langis where he died June 17 1809. In the delusion of a fever, a few days before his decease, he threw into the

L E C

for all his MSS. many of which are supposed to have been very valuable. Among his published works are "Observations sur quelques médailles de M. Puffens" 1774, 4to; "Description des principales pierres gravées du cabinet de M. le Duc d'Orléans" 1780-84, 2 vols. folio; and "Observations présentées au comité des Monnaies" 1790 2vo. He also assisted in other publications.—*Bug Urie.*

LEBRUN (PONCE D'KRIS ECOUCHEARD) a celebrated poet, who during his life received the appellation of the French Pindar. He was born in 1739 and while studying at college he manifested a talent for poetry. He became secretary to the prince of Conti (the grand prior) and preserved that place till the death of his protector. At the age of twenty six he had taken his place in the first rank of lyric poets and an ode which he addressed to Voltaire was the means of interesting him in the support of the cause of Corneille whom Voltaire adopted and portioned out of the profits of his edition of the works of the great dramatist. At the Revolution he became the poet of liberty and celebrated the birth of freedom in odes and epigrams but as the prospect darkened he changed his note and in 1793 he deplored, in harmonious verses, the fate of his country oppressed by tyrants and anarchists. On the restoration of order when the academical establishments were reorganized, Lebrun became a member of the Institute. He received from Buonaparte when consul a pension of six thousand francs which with other sources of revenue which he had acquired placed him in comparative affluence. He died September 2 1807.—*Bug Uri.* *Bug Nouv des Contemp.*

J ECCHEI (GIOVANNI ANTONIO) an Italian Jesuit born in 1705 at Milan where he was afterwards professor of mathematics, having previously taught that science at Pavia. In 1759 he went to Vienna, where he experienced a very favourable reception from the emperor who employed him in the mensuration of the bed of the Rhine a work in which he displayed great talent, as appears from the account he afterwards published of the operations need in the process. He was also the author of a variety of treatises on conic sections navigable canals geometry trigonometry hydrostatics, &c. An illustration of our Isaac Newton's Universal Arithmetic. The Theory of Light and a memoir entitled

Relazione della visita alle Terre danneggiate delle acque di Bologna, Ferrara e Ravenna, in 4to. His death took place in 1776.—*Nouv Diet. Hist.*

LE CLERC (NICHOLAS GABRIEL) a physician and man of letters who was born in France the Comte in 1726. Having adopted the medical profession he was in 1757 appointed first physician to the forces of the emperor of Germany. In 1759 he was invited to Russia by the empress Elizabeth, and returning to France in 1762 he became physician to the Duke of Orléans. He went again to Russia in 1769, with the title of first physician to the grand duke and director of the schools of the

L E D

imperial corps of cadets, and he was also made director of a hospital founded by the grand duke at Moscow. He resided in Russia till 1777, and during his residence there he collected charts medals documents and other materials of various kinds for a work which he subsequently published under the title of

"Histoire physique morale civile et politique de la Russie" 6 vols. 4to. He had been employed by the French government in this undertaking and was disappointed at his remuneration though he obtained the cordon of the order of St Michael a patent of nobility and a pension of six thousand livres. At this time he assumed the name of Le Clerc A commission being appointed to inspect the royal and military hospitals he was placed at the head of it. The Revolution deprived him of his pension and he died in retirement in 1798. His History of Russia, in preparing which for the press he was assisted by his son gave great offence to the empress Catherine II who ordered one of her officers general Bothin, to write animadversions on it. Le Clerc published many other works medical and historical among which was an "Atlas du Commerce" Paris 1786 4to.—*Bug Uri.*

LECOMTE (FÉLIX) an eminent French sculptor who was a native of Paris and became the pupil of Falconet and Vassé. He obtained a prize for his bas-relief of the massacre of the Innocents and was then sent to Rome as a pensionary of the French school of arts. On his return home he presented to the academy of painting and sculpture a model for a statue of Phorbas preserving G dupus which he afterwards executed in marble and which procured him admission into the academy in 1773. In 1789 and 1791 he made by order of the government statues of Rohan and Kerebon the latter of which ornamenting the hall of the National Institute is considered as his chef d'œuvre. During the Revolution he lived in retirement but in 1810 he was appointed by the emperor a member of the fourth class of the Institute and on the reform of that body under the regal government Lecomte was nominated professor in the academy of sculpture. He died in 1817 at the age of eighty.—*Bug Nouv des Contemp.*

LEDERLIN (JOHN HENRY) a learned critic of the last century. He was a native of Strasburgh at the university of which place he became professor of the Greek and Hebrew languages. He assisted Hemsterheys in his edition of the Onomasticon of Julius Pollux and published editions of Homer, Virgil, Ethan's various History &c. Lederlin died in 1737 aged sixty four.—*Histoire de l'Acad. Philolog. Zeph His. Univ.*

LEDRAIN (HENRY FRANCIS) a French surgeon, particularly eminent as a lithotomist. He was the son of Henry Ledrain a skilled surgical operator who had improved his knowledge of his art, by service as a surgeon in the army. The son became also distinguished for his manual dexterity as an operator. He was surgeon-major and anatomical demonstrator at

L F D

the hospital of La Charité at Paris member of the Royal Academy of Surgery and consulting surgeon of the royal army. He died at Paris, October 27th, 1770 aged eighty-five. His works, which were very popular, relate to the extraction of the stone from the bladder to surgical operations in general to anatomy &c.—*Bog Uri.*

LEDWICH LL.D FSA &c (EDWARD) a learned antiquary and topographer a native of Ireland born in 1739 and educated at Trinity college Dublin of which society he became a fellow and taking orders, obtained the vicarage of Aghaboe in Queen's county. The study of antiquities and more especially of those of his native country was his favourite pursuit in which he maintained the Scandinavian origin of the Irish in opposition to their national prejudices in favor of Partholoman and Milesian and called in question the legendary history of St Patrick which he pronounced a comparatively modern fiction. This latter assertion drew upon him some severe attacks from several antiquaries of the Roman Catholic church Dr Ledwich officiated for many years as secretary to the committee of antiquaries of the Royal Irish Academy and was also a member of a small society the object of which was the investigation of Irish antiquities and which had the right hon W B Conyngham teller of the Irish exchequer for its president. His death took place in York street Dublin in his eighty fourth year towards the close of the autumn of 1823. His works are a luminous essay On the Government of Ireland, from the earliest Times to the latest Revolution in it inserted in Gough's edition of Camden's Britannia 1789 A valuable volume on the Antiquities of Ireland published in numbers the next year which he followed up by two quarto volumes under the same title in 1794 and 1796 in continuation of his friend captain Grose's work illustrative of the antiquities of England Scotland and Wales. He also wrote a statistical account of the parish of Aghaboe 1796 and contributed various papers to the Archaeological Society.—*An Bog*

LEDYARD (JOHN) the name of an adventurous and persevering traveller of the last century born at Groton in the United States. He came to England, having previously acquired the rudiments of a useful education at Dartmouth, in the province of New Hampshire and embarked as a private manumit with Cook in the second expedition of that enterprising navigator. On the return of the discovery ships to Europe Ledyard set out with the view of reaching the polar regions alone and on foot, and arduous as the undertaking may be deemed succeeded in traversing great part of Russia and penetrated into Siberia. The jealousy of the government, however interfered with his project he was seized at Yekaterinburg, and conducted to the frontiers of Poland with a threat of being consigned to the hands of the executioner should he again be found in the Russian territories. On reaching England he soon after entered into an engagement with

L E E

the African Society and set out, under their auspices, on a mission which has since proved so fatal to many others having for its object the discovery of the source of the river Niger. His attempt however to penetrate into the interior of Africa failed almost in the outset, as he got no farther than Grand Garo, where he was carried off by a short but severe illness in the summer of 1788.—*Proceedings of the African Society*

LEE (CHARLES) a military officer distinguished during the American war. He was a native of Cheshire and entering into the army may be served in America, and afterwards in Portugal. Having offended the English ministry by his writings and prevented his promotion at home he engaged in the service of the insurgent English colonies in North America, and was the first who suggested the idea of a declaration of independence. He aspired to the post of commander in chief and finding himself superseded by Washington he conceived a jealousy of that officer which he manifested by his conduct at the battle of Monmouth and on other occasions. He was tried by a court-martial and suspended for a year from all his functions in 1778. He then retired from the service and died at Philadelphia October 2 1782 having directed in his will that his body should not be interred in any church church yard or near any place of worship. He wrote Essays political and military which with his letters were published at the end of Memoirs of his Life by Edward Langworthy London 1792 8vo—*Bog Uri.*

LEE (NATHANIEL) a dramatic poet, was the son of Dr Lee rector of Hatfield Hertfordshire. He was educated at Westminster school under Dr Busby whence he was removed to Trinity College Cambridge in 1668 and took the degree of BA the same year but not succeeding to a fellowship, he quitted the university and came to London musing it as said by the promises of Villiers duke of Buckingham. In the metropolis neglected by his patron he turned his attention to the drama, and in 1673 produced his tragedy of

Nero and from that time to 1681 produced a tragedy yearly. He also tried his abilities as an actor but although a most pathetic and impressive reader of his own compositions he failed in the other requisites of a performer and gave up the attempt. The warmth of his feelings, added probably to an hereditary taint of insanity fostered by dissipated and irregular habits produced in 1684 a crisis of that malady which rendered his confinement necessary and he was taken into Bethlem hospital. He remained in that receptacle of misery until 1688, when he was discharged, sufficiently cured to write two more tragedies, the Princess of Cleves, and the Massacre of Paris, which appeared in 1689 and 1690. He was still, however liable to fits of frenzy and was so reduced in circumstances, as to depend for subsistence on a weekly allowance of ten shillings from the theatre. He died in 1691

LEE

or 1692 in consequence of some injury received in a drunken night frolic, and was buried at St Clement Danes. He is the author of eleven plays, all of which were acted with applause and dedicated to the leading noble patrons of the day. Addison regards the genius of Lee as peculiarly adapted for tragedy but his natural fire and pathos was buried in a torrent of words, and clouded by a tendency to turgid and bombastic eloquence. He nevertheless possessed a high vein of poetry and is thought to have represented the passion of love with peculiar force and tenderness. Two of his pieces, *Theodosius or the Force of Love* and the *Rival Queens* have kept possession of the stage. Besides his own eleven tragedies he wrote *Oedipus* and the *Duke of Guise* in conjunction with Dryden.—*Biggs Drury Spence's Ante.*

LEE (SAMUEL) a nonconformist divine and learned antiquary of the seventeenth century. He was the only son of a London tradesman but is supposed by Wood to have been a descendant of the ancient Cheshire family of Lee or Leigh. Having entered as a commoner of Magdalen hall Oxford in 1647 in expectation of a fellowship from the favour of the parliamentarian visitors then about to sit at Oxford he was created B.A. in April 1648 and though disappointed as to his immediate object he was appointed fellow of Wadham college and proctor of the university in 1651. Under the protectorate he became successively minister of St Botolph's Bishopsgate street and lecturer of Great St Helen's London and after the Restoration he retired to an estate of his own near Bicester where says Wood he sometimes kept conventicles. He removed to Newington-green in 1678, and thence to New England 1686. After remaining there about five years he was invited to return to his native country, but in his passage hither with his family and property he was captured by a French privateer in November 1691 and conveyed to St Malo where he died shortly after. He was the author of numerous works on divinity and some historical ones, including a treatise on the antiquity of Oxford university, besides which he wrote the *Chronicon Cestrense* published in King's Vale Royal in 1656.—*Athen. Oxon. Ormerod's Hist. of Cheshire* vol. II.

LEE (SOPHIA). This able and ingenuous lady was born in the metropolis in the year 1750. Her father originally bred to the law was an actor of merit, whose conduct gained him admission into the best circles and who gave his children an excellent education. At an early age the subject of this article exercised her pen in composition and in 1780 produced the diverting comedy entitled *The Chapter of Accidents*, which met with considerable success. With the profits of this play on the death of her father which took place the following year she was enabled to open a school at Bath which aided by her talents, she conducted for several years with great reputation. Her next performance published in 1784 was the well known novel, entitled *'The Recess,*

LEE

or a Tale of other Times," the story of which is founded on the fate of two supposed daughters of Mary Queen of Scots, by a secret marriage with the Duke of Norfolk. It is ingeniously and pathetically wrought up but some severe casuists have condemned the unfair liberty which it takes with historical characters. This romance, which became very popular was followed in 1787 by a ballad called

A Hermit's Tale found in his Cell. In 1796 Miss Lee produced a tragedy called *Almeida, Queen of Grenada* but although aided by the great talents of Mrs Siddons, it did not realize the expectations which her power of moving the passions in *The Recess* had created. In the succeeding year Miss Harriet Lee published the first five volumes of her *Canterbury Tales*, three stories in which were from the pen of her sister and one of these three called *Krutzer* was selected for the subject of a tragedy by Lord Byron. In 1803 having secured a handsome competence she retired from teaching soon after which appeared her *Life of a Lover*, a novel written in early life. In 1807 a comedy by Miss Lee termed *The Assignation* was unsuccessfully produced at Drury lane which drama terminated her literary career. She died at Clifton near Bristol March 13 1824.—*Ann. Bur.*

LEE LEWES (HARLES) an eminent comic actor who was the son of a hosier in Bond street and was employed as a letter-carrier by the post office. He at length joined a company of strolling players, and after the usual vicissitudes of an itinerant life he obtained an engagement at Covent-garden. He first appeared as a harlequin but afterwards attempted higher characters and on the death of Woodward in 1776 he became one of the principal comedians of the company. In 1783 he left Covent-garden for Drury lane where however his stay was of short duration. He then travelled and delivered G. A. Stevens's lecture on heads after which he went to the East Indies and on his return visited Scotland and in 1792 and 1793 was at Dublin where he was a favourite performer. The latter part of his life was spent in embarrassed circumstances, and it was terminated on the 24th of June 1803, on the morning of which day he was found dead in his bed. He was buried at Pentonville near London. In 1805 was published an amusing miscellany entitled *Memoirs of C. Lee Lewes*, 4 vols. 12mo, written by himself.—*Thesp. Dict.* *Biggs Univ.*

LEECHMAN (WILLIAM) a learned Scotch divine, peculiarly celebrated for his lectures on theology. He was born at Dolphinstown in Lanarkshire in 1706, and received his academic education at the university of Edinburgh. He was licensed as a preacher in 1731 and was ordained minister of Breth in 1736. In 1746 he was elected moderator of the synod of Glasgow which he opened with a sermon "On the temper character and duty of a Minister of the Gospel," and in 1763 a much larger one "On the nature reasonableness,

L E F

and advantages of prayer both which became very popular. He was soon after elected professor of theology at the university of Glasgow but not without considerable opposition, owing to a suspicion of his orthodoxy founded on his sermon on Prayer in which he was thought to lay but little stress on the Atonement. A prosecution for heresy was the consequence, which terminated entirely in his favour, and he obtained the degree of DD and held his professorship for seventeen years, during which time he signified himself by his able exhortations against the reasonings of Hume, Bolingbroke and Voltaire. In 1761 he was raised to the office of principal of the university of Glasgow by a presentation from the king. He died in 1785 having committed nothing to the press himself except nine sermons which were republished after his death in two octavo volumes, with an account of the author by Dr Wodrow.—*Life as above*

LEEM or LEEMS (CANUTE) a native of Norway born in 1697. He studied at the university of Copenhagen and returning home in 1715 became a schoolmaster and afterwards a missionary. He was then pastor in the diocese of Christiansand and in 1738 was placed at the head of an institution of the Danish government at Drontheim, for the cultivation of the Lappo language. He died in 1774. Leem was the author of a description of the Laplanders of Finmark their manners and their ancient nobility, a Lappo Grammar &c &c —*Bug Usen.*

LEFEBVRE (FRANCIS JOSEPH) duke of Dantec was born at Ruisack in the department of the Upper Rhine October 25 1755. When young he entered into the French guards, and was first sergeant at the beginning of the Revolution. From being a captain he passed to the rank of adjutant-general in September 1795, and in the beginning of 1796 he was made general of a division. He then served under Jourdan and established his military reputation at the battle of Fleurus, in June 1794. He subsequently distinguished himself at Friedberg and on other occasions, and after the death of Hohenlohe he had the provisional command of the army of the Sambre and Meuse. He was badly wounded at the battle of Stockach in 1799 and was obliged for a while to retire to Paris. The directory gave him a military command which enabled him to afford important assistance to Buona parts in his contest for power. The latter when first consul, procured Lefebvre admission into the Conservative Senate, and he was afterwards made pretor of that body which office he held till the end of the imperial government. In 1804 he was created a marshal of the empire. At the battle of Jena he commanded the imperial guard but his greatest exploit was the taking of Dantec May 24th 1805 in recompence for which he was raised to the dignity of a duke. He subsequently commanded in Spain, and in Germany and he contributed greatly to the victories of the French at Eckmühl and Wagram. After the restoration of royalty he was made a peer of

L E I

France and confirmed in his office of marshal. He died at Paris, September 14th 1830.—*Bug Nous des Contemp.*

LEIBNITZ (GODFREY WILLIAM de) an eminent German mathematician and philosopher, was born at Leipzig in the year 1646. In his sixth year he lost his father who was secretary to the university of that city but he was educated by his mother with great care and assiduity. At fifteen he became a student in the university of Leipzig and distinguished himself as much by his classical acquirements, and taste for Latin poetry as by his attention to history law and mathematics. In 1663 on his return to Leipzig after visiting the university of Jena he graduated MA and began to pay particular attention to the writings of Plato and Aristotle. He however principally devoted himself to the study of law in which faculty he became a bachelor in 1665. Being refused the degree of doctor on the plea of youth although his disregard of Aristotle seems to have been the real reason he took offence and proceeding to Altdorf maintained a *Thesis de Cantibus perplexis*, in a public disputation with so much ability that the degree of doctor was instantly granted him. In the same year he published a work on universal arithmetic entitled *Arts Combinatoria* which he accompanied with *A Mathematical Demonstration of the Existence of God*. He soon after removed to Frankfort and in 1668 published his *Nova Alethodüs docendae consequæ Jurisprudentiae*, and by the interest of baron de Bourbouy obtained the office of counsellor of the chamber of review in the chancery of Meaux. Finding the vanity of all his attempts to reconcile the themes of different philosophers, he resolved to frame an hypothesis of his own and in 1671 produced a work entitled *Theoria Motus Concreti* which he dedicated to the royal society of London and he further explained his doctrine in a treatise called *Theoria Motus Abstracti* addressed to the French academy of Sciences. In 1673 he visited Paris, and was offered a pension and a seat in that academy if he would become a Catholic which he firmly declined. In 1673 he visited England where he became acquainted with Mr Collins, a distinguished member of the Royal Society from whom he received some hints of the method of fluxions which led him to the invention of the Calculus differentialis, being the same method of analysis under another name as that which had been invented in 1664 by Newton under the name of fluxions. The claim of these two great men to the priority of discovery has after much dispute been settled in favour of Newton, although it is still presumed that Leibnitz was no plagiarist. While in England the latter lost his patron the elector of Ments, and was invited into the service of the duke of Brunswick Lauenberg. He soon after made many discoveries in mechanics and chemistry most of which are recorded in the *Acta Eruditorum* of Leipzig, a work in which he had himself a considerable share. Having undertaken to write a history of the house of

Brockwick he travelled over Germany and Italy to collect materials, and on his return to Hanover pursued with extraordinary energy several studies of a different kind among the fruits of which was his treatise "De ipsa Natura, sive vi natura," written with a view of improving the philosophical notion of substance. He moreover conceived the idea of a new science of forces which he called Dynamics, and inserted a specimen of it in the "Acta Eruditorum." In the year 1693 he broached his celebrated theory of a pre-established harmony between the body and soul of man, and about the same time wrote his "Thoughts on Locke's Essay on the Human Understanding" in which he controverts that philosopher's opinion on innate ideas, substance and vacuum and other subjects. In 1700 he was admitted a member of the French academy of Sciences and under the auspices of the elector of Brandenburg completed the establishment of the academy of Sciences at Berlin of which institution he was appointed perpetual president. In the year 1707 he published the first volume of his collections for a history of the house of Brunswick of which a second and third volume followed in 1710 and 1711. His occupation by this work did not prevent him from publishing in the former year his *Theodicea* or a Dissertation on the Goodness of God the Liberty of Man and the Origin of Evil" 2 vols. 8vo in which the principles of his new system were now fully unfolded. The diversified writings of Leibnitz had by this time rendered him famous in every part of Europe and he had honours and rewards bestowed on him by various other princes besides of the electors of Hanover and Brandenburg. In 1711 he was made aulic counsellor to the emperor and invited to establish an academy of sciences at Vienna which was prevented it is said by the breaking out of the plague. He was however rewarded with a pension and invited to settle at Vienna but in the meantime the elector of Hanover having become king of Great Britain invited Leibnitz to England where he frequently appeared at court and at the instance of the princess of Wales afterwards queen Caroline engaged in a friendly controversy with the celebrated Dr Samuel Clarke on various metaphysical and philosophical topics. This controversy was continued after his return to Hanover where he died in November 1716 of a violent attack of the gout. The historian Gibbon has drawn the character of Leibnitz in a masterly manner as a man whose genius and powers of mind have ranked his name with those of the first philosophers of his age and country. He doubts, however, if his reputation would not have been more pure and permanent, had he not ambitiously grasped the whole circle of science. Such an example, he shrewdly adds, "may display the extent and powers of the human understanding, but even the powers of Leibnitz were disputed by the multitude of his pursuits. He attempted more than he could finish, and designed more than he could execute, as he

may be compared to those heroes whose amanuensis has been lost in the ambition of universal conquest." The theological philosophy of Leibnitz is principally distinguished by his doctrine of optimism, deeming the world the best that could possibly have been made a notion very prominently indicated by Voltaire, and by his theory of pre-established harmony which carries the power of mechanism as far as it could be carried since it presumes that the soul does not act upon the body nor the body on the soul but that both move by a pre-established system of machinery independently of each other. His various deductions from these and other assumptions, it is impossible to detail in a work of this nature nor can we find room for a complete list of his numerous productions in history jurisprudence physical science and philosophy all which however are enumerated in the first of our authorities. Of his collected works the best edition is that of Geneva, 6 vols. 4to 1768. This eminent man died unmarried and amassed property rather by economy than by interested accumulation as the chief of his fortune was found in his apartments at his death. So uneventful was his genius that he even left behind him poems epigrams and love letters. Leibnitz lived and died a Lutheran, and successively contended says Gibbon, with the sceptics who believed too little with the papists who believed too much, and with the heretics who believe otherwise than is inculcated by the confession of Augsburgh. He however ad vocated toleration and happily acted in the spirit of his profession.—Gen. Dict. *Eloge de Fontenelle* Gibbon's *Miscellaneous Works* Brucker *Samn. Onom.*

LEICESTER or LEYCESTER (Sir Peter) a learned antiquary and provincial topographer descended from the ancient family of Leycester of Tabley in Cheshire and born March 3d 1613. He was educated at Brasenose college Oxford and in 1647 he succeeded to his paternal estate. Being a royalist he was committed to prison by the agents of the protectoral government in 1655 and ultimately forced to pay a considerable sum as a composition for his landed property. Excluded by his principles from obtaining any civil employment he devoted his time to the investigation of the history antiquities and baronial genealogy of his native county. He was thus occupied till the Restoration shortly after which he was raised to a baronetcy. His literary pursuits were somewhat interrupted about this period, and were resumed in 1664 and about ten years after he published his "Historical Antiquities," the second part of which contains a variety of particulars relating to the early history of Cheshire and the last part, the parochial topography of the hundred of Beeklow. An opinion expressed in this work relative to the illegitimacy of an ancestor of sir Thomas Molyneux, occasioned a long controversy between sir Peter Leycester and that gentleman and the publication of a number of tracts by both parties. Sir P. Leycester died October 11th 1678. His ch-

L E I

racter is that of a most industrious and accurate investigator of our provincial history and antiquities.—*Oxenford's Hist. of Cheshire.*

LEIGH (John HENRY) a learned and industrious philological writer, born at Leipzig in 1720. He devoted himself with ardour to literary researches, and passed a great part of his time in the public library collecting ancient manuscripts, and collecting their various readings. In 1748 he was appointed professor extraordinary of philosophy and he was destined for the chair of Greek literature at the time of his death in 1750. He carried on an extensive correspondence with the literati of Italy and Germany and he had formed a valuable collection of paintings and engraved gems. Among his works are *Lab. mag. de Origine et incrementis Typographiae Lipsiensis*, 1740 4to and *Distributio de Duplicibus Veterum* 1743 4to and he edited the *Thesaurus of Basil Faber*.—*Bibl. Univ.*

LEIGH (CHARLES) a physician and writer on natural history in the seventeenth century. He was a native of Grange in Lancashire and studied at Brasenose college Oxford where he took his first degree and then removed to Cambridge. He subsequently pursued as a physician in London and in 1685 he was chosen a fellow of the Royal Society. He is principally distinguished as the author of

The Natural History of Lancashire Cheshire and the Peak in Derbyshire with an Account of British Phenician Armenian Greek and Roman Antiquities in those parts Oxford 1700 folio. How long Dr Leigh lived after the publication of this work is uncertain. His other works relate to medical subjects and are of little importance—*Gough's Brit. Topog.* *Aikin's G. Bibl.*

LEIGH (Sir EDWARD) a learned writer on history and divinity in the seventeenth century. He was born at Shawell in Leicestershire in 1602 and became a commoner of Magdalen hall Oxford in 1616 and after proceeding to the degree of MA he removed to the Middle Temple as a student of law. On the occurrence of the plague in London in 1625 he went to France whence returning after a short stay he devoted several years to professional and literary researches. Soon after the commencement of the civil war he was chosen MP for the borough of Stafford and he was one of the commons who were delegates to the assembly of divines at Westminster. He was also colonel of a regiment in the service of parliament but in 1648 he was, with other presbyterian members expelled from the house of Commons, and for some time after he was kept in confinement. After the Restoration he occupied himself chiefly in literary pursuits publishing various works which display profound erudition and an intimate knowledge of the learned languages. He died at his seat, called Rosshall hall in Staffordshire, in 1671. Most of his works relate to biblical literature and of these the most important is entitled *Critica Sacra* consisting of critical and philological observa-

L E I

tions on the words of the Old and New Testaments, arranged alphabetically.—*Wood. Aikin's G. Bibl.*

LEIGHTON (ALEXANDER) a Scotch divine, was born at Edinburgh in 1568 and educated in the university of that city. In 1603 he took the degree of MA and was appointed professor of moral philosophy in his own college. This appointment he enjoyed until 1613 when he came to London, and obtained a lectureship, which he held until 1629 when he wrote two books the one entitled *Zion's Plea*, and the other *The Looking Glass or History of the Holy War*. In the former of these he scattered much indecent invective against bishops whom he called 'men of blood' and styled the queen (Hearietta Maria) a daughter of hell. This brought upon him the vengeance of the star chamber and a more cruel sentence was probably never either pronounced or executed. Historians have recorded the manner of this shocking punishment, on the delivery of which bishop Laud openly exulted (see article *Laud*) in the following words—'He was severely whipped before he was put in the pillory being set in the pillory he had one of his ears cut off and one side of his nose slit. He was then branded on the cheek with a red hot iron Sb as a sover of sedition. On that day week the sores on his back ears nose and face not being cured he was whipped again at the pillory in Cheapside and had the remainder of his sentence executed by cutting off his other ear slitting the other side of his nose and branding his other cheek!!! This happened in 1630. Perpetual imprisonment was to follow all this endurance and he accordingly remained in the Fleet prison eleven years until released by the parliament in 1640 when he was appointed keeper of Lambeth palace then used as a state prison. Here he remained until 1644 when he became rather insane of mind from the effect of past suffering, in which state he died in 1644.—*Granger. Rushlow and Nelson's Collections House's Hist. of England.*

LEIGHTON (ROBERT) a pious and much beloved Scotch prelate was son to the subject of the preceding article. He was born in London in 1615 and educated at the university of Edinburgh. He was subsequently sent to France and on his return obtained presbyterian ordination and was settled at Newbottle near Edinburgh. Disapproved of by his presbyterian brethren as not sufficiently polemical in his discourses, he resigned his living and was soon after chosen principal of the university of Edinburgh. When Charles II resolved to re-establish episcopacy in Scotland Dr Leighton was induced to accept a bishopric, but chose the humblest of the whole Dumblane, and would not join in the pompous entry of his brethren into Edinburgh. He nevertheless became archbishop of Glasgow chiefly impelled it is believed, by a hope of furthering a scheme of reconciliation between the presbyterians and episcopalians. Disappointed in this hope as also in his wishes to moderate the acrimonious feelings of both parties, he

L E L

went to London and requested leave to resign his see but his resignation was not accepted. He never however returned to Scotland and died in London February 1684 in the seventy first year of his age. Archbishop Leighton was celebrated for his gentleness, moderation and disinterestedness, for although his bishopric produced only £200^l per annum he founded exhibitions both in the colleges of Edinburgh and Glasgow. As a preacher he was admired beyond all his contemporaries, and his works have not yet lost their popularity a complete edition of them being published in 1808 6 vols. 8vo with a life of the author from which this account is taken.—*Life as above Burnet's Own Times*

LELAND (John) a noted English antiquary born in London about the end of the reign of Henry VII. He was educated at St Paul's school and Christ's college Cambridge whence he removed to Oxford and then to Paris for further improvement. Returning home he took holy orders and obtained a rectory in the marches of Calais Henry VIII made him his chaplain and librarian and gave him the singular title of royal antiquary. In 1533 he was empowered by a commission under the great seal to search for objects of antiquity in the archives and libraries of all cathedrals, abbeys priories &c in consequence of which he spent six years in traveling over the kingdom visiting the remains of ancient buildings and monuments and collecting materials for the illustration of the history and archaeology of England and Wales. At the dissolution of monasteries he endeavoured to prevent the destruction of MSS by proposing them being conveyed to the king's library but his recommendation was neglected. Several benefices were conferred on him among which were a canonry at King's college now Christ-church Oxford, and a prebend at Salisbury. He retired to his house in London to arrange and methodise the stores of intelligence which he had collected, but the fatigue arising from intense study or some other cause rendered him insane and he died about two years after in 1552. Leland published several elegant Latin poems and some archaeological tracts and he composed a work entitled "Commentaria de Scropibus Britannicus," published at Oxford in 2 vols 8vo in 1709 but the great bulk of his collections after passing through various hands, was placed in the Bodleian library in an indigested state. Camden Burton Dugdale and other antiquaries availed themselves of his labours, and at length Hearne printed a considerable part of his papers forming "The Itinerary of John Leland" 9 vols, 8vo, and "Leiani Antiquae de Rebus Britannicus Commentaria," 6 vols, 8vo—*Bug Ent. Berksloue, Adres*

LELAND (John) a learned English dissenting divine was born at Wigton in Lancashire in 1691. When very young his family removed to Dublin, where he was privately educated for the ministry and in 1716 he became joint pastor of a dissenting congregation

L E L

in that capital with Mr Weld. In 1723 he first countenanced author by publishing an answer to Christianity as old as the Creation, and he engaged in a controversy with Dr Morgan against whom he wrote "The Divine Authority of the Old and New Testament asserted." To this work he subsequently added a second volume. These publications produced him much attention, both from the friends of the establishment and the dissenters and in 1739 he was favoured with the degree of DD by the university of Aberdeen. In 1742 he published a reply to the celebrated pamphlet, entitled "Christianity not founded on Argument" and in 1753 appeared his "Reflections on the late Lord Bolingbroke's Letters on the Study and Use of History." He next engaged in a summary review of the most noted books which had been published against revealed religion which in 1754 he committed to the press under the title of "A View of the principal Deistical Writers that have appeared in England in the last and present Century" 8vo. To this work he also added a second volume in which a more particular attention is paid to the works of Hume and Bolingbroke, and as his reflections on lord Bolingbroke's letters bore a close affinity to his labours in his view he was induced to include it with other matter in a third volume in a new edition of the whole. He next completed in two volumes 4to a work entitled "The Advantage and Necessity of the Christian Religion" which has since been reprinted in two volumes 8vo. Dr Leland died in his seventy fifth year on the 16th January 1760 highly respected for his learning and abilities. After his death his sermons were published in 4 vols. 8vo. Dr Leland's "View of the Deistical Writers" was republished in 1798 by Dr W L Brown of the Marshal college Aberdeen who added thereto "A View of the present Times in relation to Religion and Morals and other important Subjects"—*Weld's Preface to Funeral Sermon British Bug vol x.*

LELAND (Thomas) a learned divine and historian was the son of a citizen of Dublin in which metropolis he was born in 1722. He received his early education from the celebrated Dr Sheridan and in 1737 became a pensioner in Trinity college of which he became a fellow in 1746. In 1748 he entered into orders and was soon after in conjunction with Dr Stokes, induced to undertake an edition of the "Orations of Demosthenes" with a Latin version and notes, which appeared in 1754 in 2 vols. 12mo. in 1756 he published the first volume of his English translation of Demosthenes 4to with notes critical and historical the second volume of which appeared in 1761 and the third in 1770. His reputation being much extended by this publication he was induced to write the life of Philip of Macedon, which appeared in 1758 in 2 vols. 4to. He followed with a translation of Zeschane, and is supposed, although he never avowed it, to have written the historical romance of "Longsword, Earl

‘ L E L

of *Salisbury*” In 1763 he was appointed professor of oratory at Trinity college, and the following year combated some arguments of Bishop Warburton in his *Doctrine of Grace* relative to the language of the inspired writers, in a publication entitled ‘*A Dissertation on the Principles of Human Eloquence with particular regard to the Style and Composition of the New Testament, &c.*’ This work produced a rejoinder by Dr Hard without his name, composed in the usual turbulent style of the Warburtonian school. Dr Leland noticed these strictures with the calmness and dignity besetting literary disputation and the victory both in temper and argument, was decidedly his own. In 1766 he was appointed chaplain to the lord lieutenant, lord Townshend, but never obtained any other preferment than the prebend of Rathmichael in the cathedral of St Patrick’s and the vicarage of Bray, both of small value. In 1773 he gave to the press his *History of Ireland from the Invasion by Henry II*, which is but the more than an able sketch but very serviceable to the general reader. He died in 1785 and after his death there appeared a collection of his sermons in 3 vols. The fame of Dr Leland rests principally upon his *Life of Philip of Macedon* his *Demosthenes* and his “*Dissertation upon Eloquence* and the *Defence of it* which exhibits great solidity of judgment, accuracy of learning and perspicuity of style.—*L. s. prefixed to Sermons.* *Nichols’s Lit. Anec.* *Boswell’s Life of Johnson.*

LELLI (*Hieraculus*) an Italian painter and modeller in wax. He was born at Bologna about 1700 and studied drawing under Zanotti. He executed a great number of works in plaster wax, stucco, wood, marble &c but he chiefly distinguished himself by the anatomical figures in wax which he made for the institute of Bologna. For the instruction of his pupils Lelli wrote a small treatise entitled “*Compendio Anatomoico per uso de Pritoni e Scultori*” published after his death which happened in 1766.—*Elmag’s Dict. of the Fine Arts.* *Biog. Univ.*

LELY (Sir Peter) a celebrated portrait painter was born at Soest in Westphalia, in 1617. His father whose family name was Vander Vaas, a native of Holland was a captain in the garrison of that town but having acquired the nick name of captain la Lys or Lely his son obtained it as a proper name. He was first instructed by Peter Gribber at Haerlem and having attained considerable skill attracted by the encouragement afforded to the arts by Charles I he came over to England in 1641 and commenced portrait painter. He finished portraits both of that monarch and of Cromwell but it was not until the Restoration that he rose to the height of his fame and prosperity. He fell in with the voluptuous taste of the new court, in his representation of the beauties who adorned it, and by the delicacy and grace of his pencil, became the favourite lady’s painter. He has transmitted the features of most of the beauties of the court of Charles II, and is

‘ L E M

particularly admired for the grace and air of his heads, and the elegant disposal of his fancy drapery, but fell short of his model, Vanderveen in taste and expression. He was in great favour with Charles II who made him his principal painter and honoured him with knighthood. He married an English lady of beauty and family and acquired considerable wealth part of which he expended in collecting a gallery of pictures which sold at his death for £6 000. He was seized in 1680 with an apoplectic fit, while painting the duchess of Somerset and died at the age of sixty-three. The Beauties at Windsor castle by the pencil of Lely, are much admired.—*Walpole’s Anec Biog Brit Bryson’s Dict of Paint and Eng.*

LEMAIRE (JAMES) a Dutch navigator noted on account of the discovery of the straits which bear his name. He was the son of a merchant of Egmont, who formed an association for the discovery of a new passage to the South Sea, in consequence of the states general having interdicted the transit through the strait of Magellan to any vessels but those of the Dutch East India company. James Lemaire embarked on an expedition with Cornelius Schouten in June 1615 as director general of the association. The straits, which were the object of research were discovered in January 1616 and passing through them the adventurers arrived at Batavia where their vessel was seized and they returned to Holland on board a Dutch fleet, commanded by admiral Spilberg. Lemaire did not long survive his return dying December 31 1616.—*Biog Univ.*

LEMERY (Nicholas) an eminent French chemist who was a native of the city of Rouen. He was instructed in the profession of pharmacy at home and in 1666 went to Paris for improvement. After studying under Glaser he spent some time at Montpellier and in 1672 returned to the metropolis where he commenced giving chemical lectures at the hotel of the prince of Condé. In 1675 he published his “*Cours de Chymie*” a practical manual of the art, which acquired an almost unprecedented degree of popularity. Being a protestant, Lemery was restricted in 1681 from continuing his lectures, in consequence of the weak and liberal law of policy then pursued by the French government. In 1683 he went to England and was patronised by Charles II, but he soon returned to Paris having procured the diploma of MD from the university of Caen. His academic honours did not however afford him the protection he anticipated and after the revocation of the edict of Nantes, he thought proper to become a professed of the Catholic faith. He then readily obtained permission to continue his lectures and on the re-establishment of the academy of Sciences in 1699 he was appointed associate chemist, and soon after a pensioner. He died in 1715. Besides his chemistry he published a pharmacopoeia, a dictionary of drugs and a treatise on antimony.—*Lemire (Louviers)* son of Nicholas, was one of the phys-

L E M

sitions to the Hotel Dieu, and gave lectures on chemistry at the Jardin du Roi. He was admitted an associate of the academy of Sciences in 1712 and became a pensioner on the death of his father. He obtained by purchase the post of physician to the king and in 1731 he succeeded the elder Geoffroy as professor of chemistry. He died in 1743. Among his works are a treatise on aliments, a dissertation on the nourishment of the bodies and various academical memoirs.—*Elog. Diet. Hist. de la Med. Akin & G. Bag. Hutchinson.*

LEMIERRE (ANTOINE MARIN) a French dramatist born in 1733 at Paris, where his father was a cleric in a government office. He received a good education but being deprived of his parent while young he became assistant sacristan to the church of St Paul. At his leisure he composed sermons for sale in manuscript a circumstance which made him known to the abbé d'Olivet, who employed him to correct the proofs of his edition of Cicero. He then was made an under master of rhetoric at the college of Harcourt in which situation he wrote a tragedy rejected at the theatre. He afterwards gained six poetical prizes, offered by provincial academies. His tragedy of Hypermaestra was acted with success in 1756. He subsequently obtained a place in the office of a farmer general who perceiving that he was better qualified to make plays, than to keep financial accounts generously bestowed on him a pension that he might be enabled to devote himself to literature. In 1781 he was chosen a member of the French academy and he died in 1792. He produced several tragedies, among which the best and most successful was his Widow of Malabac and he published Les Fastes or les Usages de l'Année a poem in sixteen cantos and a collection entitled Pièces Fugitives, 1782 8vo.—*Biog. Univ. Biog. Nouv. des Contemp.*

LEMONNIER (PATER CHARLES) a celebrated astronomer born at Paris November 23 1715. His father PATER LEMONNIER was professor of philosophy at the college of Harcourt, a member of the academy of Sciences and the author of some estimable works. He died in 1757. The son displayed an early taste for the study of astronomy and having been admitted a member of the academy of Sciences he was sent by that learned body in 1736 together with Clairaut and Maupertuis towards the north pole to measure a degree of the meridian. On his return to France he employed himself in making solar tables and tables of the positions of the fixed stars. In 1748 he visited England and went thence to Scotland to observe a remarkable eclipse of the sun on the 25th of July that year. He was for a long period professor of natural philosophy at the college of France and he had for a pupil the celebrated Lalande. His life was entirely dedicated to the cultivation of science, till his labours were interrupted by an attack of palsy in November 1791. He died in consequence of a second seizure, April 2 1799. He was the author of 'Histoire Comptée, ou Recueil de toutes les Observations

L E M

Astronomiques faites par Ordre du Roi, 1741, 4to, and other valuable works relating to natural mathematics.—*Biog. Univ.*

LEMONNIER (LEWIS WILLIAM) younger brother of the preceding became a student of medicine, and having obtained the degree of doctor was in 1756 attached to the infirmary of St German on Laye. On the death of Dr Jusson the elder he succeeded to the professorship of botany at the Jardin du Roi and afterwards became physician in chief to the army during the Hanoverian war, and at length first physician to the king. After having narrowly escaped destruction during the Revolution he returned to Meauxvill near Paris, where he died September 7 1799. Lemonnier was the author of Observations d'Histoire Naturelle 1744, 4to, Lettre sur la Culture du Café 1773 12mo, besides several memoirs in the collection of the academy of Sciences and articles in the Encyclopédie.—*Biog. Nouv. des Contemp. Diet. des H. M. du 18me S.*

LEMOYNE (JEAN BAPTISTE) a French musician born at Lymet in 1751. He was sent to Berlin in his youth, for education in the science for which he early displayed a taste and studied there under Graun and Kirnberger. The prince royal of Prussia being much pleased with a chorus of his composition placed him at the head of the musical department in his private theatre in which situation he continued for a considerable period, giving lessons occasionally to Frederic the Great. He afterwards returned to Paris and was the only French composer of his time whose works could at all make head against the two rivals, between whom the musical world was then divided Gluck and Piccini. He produced eleven successful operas and was the first composer ever summoned on to the stage by a French audience, to receive their plaudits at the conclusion of his piece. This circumstance which has since grown into a custom took place at the first representation of his Néphéle, an opera in three acts 1789. His death took place at Paris in 1796.—*Biog. Diet. of Mus.*

LEMPRIERE DD (John) a native of Jersey educated at Winchester grammar-school whence he removed to Pembroke college Oxford and graduated in that university as AM. in 1792 BD 1801, DD. 1803. His reputation for scholastic and general learning procured him in 1792 the head mastership of Abingdon grammar-school which he conducted several years with great credit. On the death of the rev Robert Bartholomew he was chosen to succeed that gentleman as master of the free grammar school at Exeter where he remained, till in consequence of some disputes with the trustees of the school Dr Lempriere after petitioning parliament on the subject, was in the end obliged to resign. In the year 1811 he was presented by the rev L. Gunnaford to the rectory of Meeth, Devonshire, which having, together with that of Newton Petrock in the same county, he held till his death. Dr L. was an excellent classical scholar and his "Bibliotheca Chancera,"

L E N

originally published in octavo, 1788, and afterwards enlarged to a quarto is one of the most useful assistance in the study of the heathen mythology now extant. It is written on the same plan as the great work, the "Ædes Payens" of the abbé Balaïez de Castro, and is fraught with a great knowledge of his subject, illustrated by much sound and judicious criticism. The year following he published a sermon preached on the 12th of August in that summer at the parish church of St Hélier in his native island, the great object of which seems to be his own vindication from the aspersions thrown upon him by his antagonists. His other writings are the first volume of a translation of Herodotus, with notes, which appeared in 1792 and was intended to have been followed by two others but an entire and elegant translation of that historian being given to the world in the mean time by Mr Beloe Dr L. desisted from prosecuting his design. A compilation of "Universal Biography" first printed in quarto with an abridgment of the same in octavo both in 1806, was his last work. He died of apoplexy in South Hampton street, Strand February 1 1824.—*Dan. Biog.*

L ENCLOS (Anne or Nixon de) rendered remarkable at once by her beauty wit and accomplishments, and by the pleasurable system which she openly adopted was born at Paris in 1616. Her father the sieur L Enclou was a gentleman of Touraine who served in the army and was esteemed a man of wit her mother was a devotee. She lost both her parents at the age of fifteen and being left mistress of a good fortune with no one to control her she determined to adopt a mode of life which should strictly accord with her own inclinations. Nature had given her beauty and being amorous by inclination she sought to render the first more attractive by accomplishments and the graces and gave a free indulgence to her amatory passions, without suffering herself to be shackled by any serious engagement. She was not mortally but seems to have been prompted partly by personal attractions, and partly by vanity as her fugitive attachments chiefly included men qualified either for rank gallantry or striking qualities. Such was the ascendancy she acquired, that she was complimented and courted by some of the most eminent writers of that day and what was still more remarkable, her friendship was sought by some of the most respectable of her own sex. It is even said, that Madame Maintenon, whom she had visited when the wife and widow of Fouquet walked to engage Ninon to reform, and live with her at court, with a view of compelling the dreadful empress which formed the price of her elevation. The latter however consistently enough preferred her liberty to the splendid prison of Versailles, and resisted all the efforts of devotes and directives to bring her to refection. As her charms continued to a late period, she seemed to form more than one generation of young Parisian men of fashion. The power of her natural beauty

L E N

was indeed tragically illustrated by the often told adventure of one of her own sons, who, being brought up an ignoramus of his birth, fell desperately in love with his mother and when informed of the fact committed suicide—an adventure introduced by Le Sage in his celebrated *Gil Blas*. Ninon died at the age of eighty and it is instructive to remark that she was herself so conscious of having mistaken the road to genuine satisfaction, that she thus expresses herself in a letter to St Evremond

Every one tells me that I have less reason to complain of time than any one. However that be if such a life were again proposed to me I would rather have myself! Some letters have been published in her name addressed to Madame Sevigne which are for genes Her own to St Evremond are much superior to these inventions—*Mowat. New Doc. Hist.*

LENFANT (James) a French ecclesiastic of the reformed church born in 1661 at Bayeux Having distinguished himself by the progress he made in his studies, both classical and theological at Saumur and Geneva he was ordained in 1684 at Heidelberg, where he superintended the spiritual concerns of a protestant congregation of his countrymen and was made chaplain to the dowager electress palatine. In 1688 the invasion of the country by the French forced her to take refuge at Berlin, where the elector afterwards king of Prussia, gave him an honourable asylum, which he enjoyed nearly forty years as chaplain to the queen, Charlotte Sophie, and after her decease to the court. From 1707 to 1715 his time was much occupied in traveling through great part of Europe for the purpose of collecting manuscripts and rare publications and while in England preaching before Queen Anne that sovereign offered to make him one of her chaplains, if he would be persuaded to take up his abode in London. This however he declined and after visiting Helmstadt Leipzig Breslau, &c returned to Berlin, where he died of a paralytic attack in the autumn of 1728. The "Bibliothèque Germanique" was compiled by a literary society who used to assemble at his house and the original plan of the work has been attributed to him. This elaborate publication was first commenced in 1720. His other works consist of a

Life of Poggio, a *History of Pope Jean*, a *History of the Council of Pisa* 2 vols. 4to, another *Of the Council of Basel* 2 vols. 4to, and a third *Of the Council of Constance* 2 vols. 4to. He also in conjunction with Beaujouze, translated the New Testament into the French language with annotations, in two quarto volumes. His last production was a "History of the Wars with the Hussites"—*Bibl. Germanique. Novae*, vol. ix and x.

LENGLET DU FRESNAY (Nicholas) a French ecclesiastic and man of letters, born at Beauvais in 1674. He studied theology at Paris, but the freedom of his opinions having attracted the censure of the Sorbonne, he relinquished divinity for politics. In 1705 he was sent to the court of the elector of Cologne

L E N

at Lille, with the title of Latin secretary to the French embassy. After the peace of Utrecht, he returned to Paris, and employed himself in various literary undertakings. For some services, in developing an intrigue of cardinal Alberoni, he was afterwards rewarded by his government with a pension for life. In 1731 he went to Vienna and became librarian to prince Eugene; but he did not long retain that situation having neglected the duties of his post. He passed the remainder of his days in a state of literary independence and exercised a degree of freedom in his writings closely bordering on licentiousness, the consequence of which he was ten or twelve times committed to the Bastile and other places of confinement. His end was very unfortunate as he was burnt to death in consequence of falling asleep near the fire as he was reading. This accident happened in 1755. A list of his numerous publications may be seen in the first work referred to below. They include "Méthode pour étudier l' Histoire avec une Catalogue des Historiens," "Méthode pour étudier la Géographie," "Traité historique et dogmatique du Secret inviolable de la Confession," and "Histoire de la Philosophie Hermétique."—*Bug Unr Akten*: G. Bug.

LEGNICH (GODFREY), a learned Prussian writer on history and diplomacy. He was a native of Danzig and applied himself when young to the study of jurisprudence which he prosecuted at some of the German universities. He was at length nominated professor of history in the gymnasium of Danzig and ultimately arrived at the dignity of syndic of that city. He died at an advanced age in 1774. Among the works of Lengnich are a History of Polish Prussia from 1526 to the reign of Augustus II; the History of Poland from the origin of the monarchy; "Jus publicum Regni Poloniae"; besides editions of Kadlubko and other historians.—*Bug Unr Akten*

LEGNICH (CHARLES BENJAMIN), an antiquary and writer on numismatics of the same family with the foregoing, born in 1742. After finishing his studies he entered the church and obtained an archdeaconry. He was one of the conductors of the Literary Gazette of Jena, after its establishment in 1785, and he inserted in it a great number of excellent articles. He died November 5, 1791. He was the author of several esteemed works on numismatics, anecdotes of the astronomer Hevelius, and an account of his own life.—*Id.*

LENNEP (JOHN DANIEL VAN), an erudit critic and classical scholar who was a native of Leidenwarden in Friesland. In 1747 he commenced his literary career, by an edition of the Greek poem of Coluthus on the Rape of Helen. He became professor of Greek and Latin literature at Groningen about 1759, and in 1768 he succeeded Gisbert Koen as professor at Franeker. He died February 6, 1771 at Aix-la-Chapelle, whither he had gone on account of ill-health. He was the author of two treatises, "De Analogia Lingua Graeca," and "Etymologica Lingua Graeca," republished with the Notes of Boëtius, at

L E N

Leyden 1805, 1806, 2 vols. 8vo.—*Bug Unr.*

LENNOX (CHARLOTTE), a lady distinguished by a considerable portion of literary ingenuity, who was highly respected by Dr Johnson and Samuel Richardson. She was born in 1729 at New York of which her father colonel James Ramsey was governor, who sent her over to England to an opulent aunt for education. Her father died soon after leaving scarcely any provision for his family and little is known of the subsequent history of the subject of this article, except that she married a Mr Lennox and supported herself with her pen. She published in 1751 the *Memoirs of Harriet Stuart* and in 1752 *The Female Quixote*, a well known and very ingenious production to which a dedication was written by Dr Johnson. In the following year appeared two volumes of her *Shakspeare Illustrated* to which she afterwards added a third. In 1756 she published the *Countess de Berri* from the French and translated Sully's *Momona* with no small ability. Her next productions were

Philander, dramatic pastoral, and the pleasant novel of Henrietta, in two vols. in 1760 with the assistance of the earl of Cork and Dr Johnson she translated father Brumoy's Greek theatre and the next year started a kind of magazine under the title of

The Ladies' Museum. Her remaining works are Sophia, a novel 2 vols. The Sisters, a comedy which failed in representation; Old City Manners, which met with partial success, and Euphemia, a novel of merit in four vols., published so late as 1790. It is to be lamented that with so much literary aptitude united to great private worth and repectability she should be doomed to penury and sickness in her declining years. She was however relieved very effectually by the Literary Fund Society towards the close of her life which terminated at a very advanced age on the 4th June 1804.—*Victoria Lit Anecd. Boswell's Life of Johnson.*

LENOTRE (ANDREW), a French architect and ornamental gardener. He was born at Paris in 1613 and was the son of the superintendant of the gardens of the Tuilleries who wishing to make him an artist placed him as a pupil with Vouet the painter. He shewed a strong taste for design particularly in laying out gardens and arranging their scenery. He first displayed his talents at the chateau de Vaux but his plans for the decoration of the park of Versailles contributed principally to establish his reputation. He afterwards embellished the gardens of Clagny, Chantilly, St Cloud, Scenex, the Tuilleries, &c. Lewis XIV richly rewarded the labours of Lenotre and in 1675 bestowed on him letters of nobility and the cross of the order of St Michael. He took a journey to Italy in 1678 and at Rome he was honourably received by pope Innocent XI. He died at Paris in 1700. Diletti has celebrated the talents of Lenotre, whose style of ornamented planting was fashionable, not only in France but in England, till it

L E O

was superseded by the designs of Kent, Capability Brown, and the modern landscape garden.—*Biog. Univ.*

LENTHAL (WILLIAM) an English statesman of the seventeenth century. He was born in 1691 at Headley on Thames in Oxfordshire, and received his education at Allens Hall, in the university of Oxford. He became a student of law at Lincoln's Inn, and having been called to the bar he obtained distinction as an advocate. In 1699 he was elected MP for the borough of Woodstock, and the following year made speaker of the house of Commons, in preference to the recorder of London who was supported by the court party. Clarendon represents Lenthal as unequal to the station which he filled at the important period of the disputes between the king and his parliament, but he certainly displayed both firmness and moderation as a popular partisan not only in his memorable answer to Charles I when that misguided prince made his visit to the house of Commons to arrest certain members who had fallen under his displeasure but also on other occasions. He was unable however to resist the ascendancy of Cromwell who turned him out of his office in 1655. He was subsequently re-chosen, and continued speaker of the long parliament. At the Restoration he was excepted out of the bill of indemnity but he at length obtained a pardon from the king. He died in 1663. Some of his letters and parliamentary speeches have been published.—*Cleveland Laysprings*

LEO the first pope of that name by some surnamed the "Great," and after his decease canonised as St Leo. He was a native of Tuscany and succeeded Sixtus III in the papal chair in 440. Disputes occurring concerning the respective privileges of the bishops of Rome and Constantinople a synod was assembled at Chalcedon for the purpose of arranging them when the votes going in favour of an equality between the two sees Leo refused to confirm the proceedings. He took a very decided part against the Manichean heresy as well as against other schismatics, and condemned Eutyches in full synod, but his most material achievement was the stop which his personal interference put to the ravages of Attila in Italy whom he persuaded to withdraw his forces from the very gates of Rome. With Genseric he was afterwards in 455 scarcely less successful as although he could not prevent that barbarian from taking and plundering Rome, he yet so far prevailed as to divert him from his design of burning it. St Leo died in 461. He left ninety-six sermons, and one hundred and forty-one epistles. The best edition of his works is that of Pere Quenel, which appeared in 1700 in one volume folio. There are also two editions in three vols. folio. Migne has written a history of the pontificate of Leo.—*Caw. Midway's Ch. Hist.*

LEO X (Pope) was born at Florence in December 1475. His Christian name was Giovanni, and he was the second son of the celebrated Lorenzo de' Medici. Originally de-

L E O

signed for the church, he received the tonsure at the age of seven years; and so great was the interest of his family backed by that of Louis XI, king of France, that the prelates heaped upon him at an early age amounted to twenty-nine, and he was nominated to the cardinalate when he had scarcely completed his thirteenth year. He was not, however, formally invested with the purple until 1493 three years afterwards, which interval he spent in study at the university of Pisa. The death of Lorenzo followed soon after, and owing to the opposition of the young cardinal, to the election of the infamous Alexander VI it became expedient for him to quit Rome and take up his abode at Florence. About 1500 he again took up his residence at Rome where he resided during the remainder of the pontificate of Alexander and the early part of that of Julius II employing himself in the cultivation of polite literature and indulging his passion for elegant society music and the chase. It was not until 1503 that he acted in public affairs at which time he was made governor of Perugia by Julius whose unlimited confidence he acquired and he was entrusted with the supreme command of the papal army in the league against the French in 1511. He was made prisoner at the battle of Ravenna in 1512 and conveyed to Milan but he effected his escape and contributed much to the re-establishment of his family at Florence by the overthrow of the popular constitution. In 1513 on the death of Julius, he was elected pope being then in the thirty eighth year of his age. He assumed the name of Leo X and acquired the name with higher manifestations of good will both from Italians and foreigners, than most of his predecessors. He began his papacy with great clemency towards the opponents of his family in Florence, and displayed his love of literature by appointing Bembo and Sadolet two of the most elegant scholars of the age to the office of papal secretaries. He pursued the system of his predecessor in foreign politics by attempting to free Italy from foreign powers and received the submission of Louis XII who had incurred ecclesiastical censure and applied for absolution. Having secured external tranquility he applied himself with great zeal to the encouragement of learning. He restored the Roman university to its former splendour and paid particular attention to the revival of Greek literature a Greek college being founded at Rome, under the direction of Lascaris, and a Greek press established in that capital. Public notices were circulated throughout Europe, that all persons possessing ancient MSS. would be liberally rewarded, on bringing or sending them to the pope who also founded the first Italian professorship of the Syriac and Chaldaic languages at the university of Bologna. When Francis I ascended the throne of France, Leo found himself obliged to join the emperor and other sovereigns, against France and the republic of Venice, but on the rapid success of the French, he abandoned his allies, and

LEO

formed a union with the king of France, and after interview between them two sovereigns in 1515, the papalistic section was abolished and a concordat established in its stead. The policy of Leo was truly Italian in many respects, and especially in his practices against the duke of Urbino, whom he despoiled of his duchy without a shadow of justice, in order to aggrandize his own family by inventing therewith his nephew Lorenzo. His violation of a safe conduct, in order to seize the person of the duke's secretary with a view to extort his master's secrets by torture infests an indeleble stain upon the memory of Leo. In 1517 his life was endangered by a conspiracy at the head of which was cardinal Petrucci. The plot failed and the cardinal having been decoyed to Rome was put to death and his agents executed with horrid tortures. To secure himself for the future Leo by a great stretch of authority created thirty-one new cardinals in one day many of whom had no claim but that of being his relatives and friends, while others from their talents and virtues did honour to his selection. During the pontificate of Leo X the Reformation under Luther took its rise, the immediate cause of which was the shameful sale of indulgences, rendered necessary by his profusion. The energetic protest and opposition of the spirited reformer soon produced extraordinary effects but there is reason to believe that Leo who probably regarded theological quarrels with contempt, was very little affected in the first instance and was certainly inclined to lenient measures. In 1518 however he was induced to issue a bull, claiming his authority to grant indulgences, which would avail both in this life and in purgatory, on which Luther appealed to a general council and thus the war was formally declared which ended in consequences so extraordinary. The warlike disposition of the Turkish sultan Selim at this time excited great alarm throughout Europe and Leo in vain sought to unite the Christian princes in a crusade against that prince. On the contest for the empire between Francis I and Charles V he sided with neither but fruitlessly endeavoured to move the German princes to support a third candidate. About the same time the death of his nephew Lorenzo (who left an only daughter the celebrated, but iniquitous Catherine de Medicis) led to the annexation of the duchy of Urbino to the papacy. The issue of the contest with Luther will be read to more advantage in the life of the latter but it may not be amiss to observe that Leo conferred the title of defender of the faith on Henry VIII for his book against that reformer. The tranquil state of Italy at this time induced the pope to indulge himself in his taste for magnificence and enjoyment, but not so exclusively as to prevent his attending to the aggrandizement of his family and see. Having set his heart on the possession of Ferrara, he had recourse to treachery and is thought even to have mediated the assassination of the duke, but the plot being discovered, the plan failed. Another and more formidable object

LEO

was the expulsion of the French from Italy, to which he had made some progress, when he was seized with an illness, which terminated his life in a few days on the 1st of December, 1521 in the fifty sixth year of his age. The moral and political character of this celebrated pontiff may be gathered even from a brief sketch like the present. Upon this point, indeed modern and unprejudiced writers do not very greatly differ. It is as to his merit as a promoter of literature and the fine arts that opinions clearly vary. The popular denomination of "the age of Leo X" decides too much in his favour as it includes many years, both prior and subsequent to his pontificate and a great number of the brilliant points which distinguish that age must be sought for beyond the limits of his protection and influence. He was himself but moderately furnished with solid erudition and if he gave liberal encouragement to reputable studies he also patronized persons and productions of a very opposite character. The merit of a wise reign in promoting the ornamental arts is chiefly to be estimated by the good taste which he displays in his encouragement, and in this faculty Leo was certainly not wanting. He was however rather the inheritor than the creator of great talents in the arts, as Michael Angelo and Bramante had both risen to celebrity under his predecessor Julius who had planned the stupendous edifice of St Peter. The Vatican palace had also previously received some of its noblest ornaments. His attachment to Raphael speaks the most strongly for him as the patron of art yet he cared nothing for his celebrated cartoons after they had formed patterns for his tapestry. Leo X must not however be deprived of the merit which belongs to him. He certainly drew together the learned men of his time, formed eminent schools, and effectually promoted the valuable art of printing. On these accounts therefore and for his share in promoting the Reformation, his short pontificate of eight years and eight months forms one of the most interesting periods in papal history.—*Roscoe's Life of Leo X*
Dupper's Life of Michael Angelo.

LEO VI emperor of the East, surnamed the philosopher was son of Basil I whom he succeeded in 886. He reigned weakly and the ill success of his generals against the Bulgarians obliged him to submit to such terms of peace as those barbarians pleased to propose. A total defeat of his fleet by the Saracens also took place a short time before his death which happened in 911 after a reign of twenty five years. He was educated under the learned Photius, and gave his name to several works, the principal of which are a "Treatise on Tactics," "Novelis Constitutions," "Opus Basilicon" and a collection of laws begun by his father. He also addressed a letter to the caliph Omar on the truth of Christianity.—*Meyer's Gibbon.*

LEO of Modena, so called from the place of his birth, an Italian rabbi whose Jewish name was Judah Ari. He flourished during the first half of the seventeenth century at

LEO

Venice where he published in 1515 a Hebrew dictionary : this work was reprinted at Padua in 1540. He was also the author of a curious treatise on the rites and ceremonies of the Moors law, 1538, a French translation of which is in existence. His death took place in 1556, when he had nearly attained the age of eighty.—*Moreri.*

LEO (Joris) surrounded Africa, a traveller and geographer of the sixteenth century. He was born of Moorish parents at Granada in Spain and when that city was taken by the Spaniards in 1492 he retired to Africa. He studied at Fez and afterwards travelled through various parts of the north of Africa. Having been captured by pirates, he was taken to Italy, and presented to pope Leo X, who persuaded him to embrace Christianity and gave him his own name on his being baptised. At Rome he acquired a knowledge of the Italian language, into which he translated his Description of Africa, originally written in Arabic. This is a very curious and interesting work comprising accounts of several countries rarely visited by Europeans. Leo also composed a treatise on the lives of the Arabian philosophers. He is supposed to have died soon after 1526.—*Moreri Biog Univ.*

LEO (LEONARDO) one of the most laborious and brilliant composers that Italy ever produced born in 1596 at Naples, and educated under Alessandro Scarlatti, the instructor of the no less celebrated Durante. He became the founder of a school of singing in the capital of which he was a native and was the inventor of that species of music called by his countrymen *Aria d'ostinazione* or obbligato aria. He relieved the dignity of the church music of Durante but without impairing its effect by the flexibility which was the distinguishing characteristic of his own. Besides two oratorios his compositions on sacred subjects are numerous and valuable. He was also the author of nineteen operas some of which are now scarce of these latter his "Coer" an opera buffa, is the most celebrated. He died at Naples in 1745.—*Burney's Hist. of Mus.*

LEONE Y GAMA (ANTONIO de) a transatlantic antiquary who died in 1802 at Mexico where he was attached to the secretary of state's office. He had formed a most ample collection of Mexican monuments of every description as statues idols talismans manuscripts on deer-skin &c. He was remarkable for his minute acquaintance with the calendar the chronology the numismatics and gnomonics of the Mexicans, who appear to have made great advances in the knowledge of the arts and sciences. A Latin translation of the documents and memoirs collected by Gama was announced for publication in Italy not long after his death.—*Month Mag* vol xv.

LEONICENUS (NICOLAS) an Italian physician and philosopher of the fifteenth century. He was born in 1458 and while young acquired an acquaintance with Greek and Roman literature. He then studied medicine at Padua, after which, according to some he travelled to Fagland. In 1464 he settled at

LEO

Pavia, where he was professor of mechanics, and subsequently of moral philosophy, for a long period. His death took place in 1504, and notwithstanding his great age, he is said to have enjoyed his health and faculties to the last. He translated into Latin the aphorisms of Hippocrates, and some of the works of Galen and composed a treatise, *De Phis et plurimi phisorum nocturnis in Medicina Erivalibus.* But he did not confine himself to professional studies, as he made Italian versions of the History of Dion Cassius and the Dialogues of Lucian.—*Tribolleti Hutchison's Eng Med.*

LEONICENUS (OMNIBONUS) one of the most celebrated grammarians of the fifteenth century. He was born about 1428 at Longo, of a family named Ongubene. He frequented the school of Victorinus of Felte one of the revivers of letters in Italy and he afterwards studied under Emanuel Chrysoloras at Venice. He is said to have subsequently taught the belles lettres in that city, and Laure conjectures that he became director of the press to Nicholas Jesso the famous Venetian printer and that he died at the beginning of the sixteenth century. He was the author of Commentaries on Lucan Valerius Maximus some of the works of Cicero and Sallust and published editions of Quintilian Cicero's Rhetoric &c. &c.—*Biog Univ.*

LEONIDAS I king of Sparta celebrated in the records of Grecian heroism. He was the son of king Anaxandrides and succeeded his half brother Cleomenes BC 491. When Xerxes king of Persia invaded Greece the Athenians and Lacedemonians and their allies alone of the greater states resolved to oppose him and the latter gave the chief command of their forces to Leonidas who marched with 4 000 men to take possession of the straits of Thermopylae. He posted his small army so skilfully that on arriving at the straits, Xerxes found that it would be a difficult matter to force a passage and sought to gain over Leonidas, by a promise of making him master of Greece. When this proposal was rejected with disdain the despot sent a herald to order the Grecians to deliver up their arms. Let him come and take them was the incomparable reply. The Persians were then repulsed with great slaughter but in the mean time a treacherous Greek named Epialtes had led a chosen body of ten thousand Persians by a secret passage over the hills who thus gained the rear of Leonidas. The hero seeing that all was lost, found that nothing remained but to afford a memorable example of what Greeks could do when called upon to die for their country. In order to prevent unnecessary loss he retained only three hundred Spartans, seven hundred Thessalians, and four hundred Thebans the latter being rather kept as hostages, than as well affected to the cause of Greece. The Thessalians, on the other hand, would not forsake their allies the Spartans, and nobly devoted themselves to the same certain destruction. Xerxes, advised of the success of Epialtes, marched his whole army to

the valour of the winds, whose Leonidas accustomed to meet them. The effects of valour distinguished by despair were terrible, and the Spartan king fell amidst a heap of slaughtered enemies. His friends defended his body as long as possible until the approach of the foe in the rear induced the survivors to collect into one small band facing every way which at length after causing dreadful devastation were nearly all slain. Xerxes enraged at his loss, placed the body of Leonidas on a cross, but the memory of his valour and patriotism has rendered his name immortal. The gratitude of Greece raised a splendid monument to those who fell at Thermopylae, on the site of their glory and a funeral oration was long annually pronounced amidst the celebration of martial games, over their tombs.—*Hoved Dued Sic Justus.*

LEPAUTF (JOHN ANDREW) an eminent horologer born in 1709. He went to Paris when young and soon distinguished himself as an ingenious artist. In 1753 he made for the Luxembourg palace the first horizontal clock, which had been seen at Paris, and the same year he presented to the Academy of Sciences a pendulum of a single wheel invented by himself. After a life dedicated to the improvement of his art he died at St Cloud April 11 1789. He published *Traité d'Horlogerie* 1755 4to Supplement, 1760 and *Description des plaisirs Ouvrages d'Horlogerie* 1764 12mo.—**LAFAYE** (Madame) wife of the preceding distinguished herself by her attention to astronomy and mathematics, relative to which she published several works of research. She died December 6 1788 at the age of sixty five.—*Bugl. Univ.*

* * * **LEPAUTRE** or **LEPOTRE** (Anthony) a native of Paris who became first architect to the king. He erected the chateau of St Cloud and in 1671 he became a member of the Academy of Sculpture then established. Le Pantry's chief talent lay in the decoration of edifices, but his works exhibit too great a fondness for excessive ornament. The church of Port Royal in the Faubourg of St Jacques at Paris is the only one of his buildings now existing. He died in 1691 owing to chagrin at Mansard's having been preferred before him as the architect of the chateau of Cligny. A collection of the designs of Lepautre was published in 1751.—**JOHN LEPAUTRE**, his brother distinguished himself as an engraver. He died in 1682.—**PETER LEPAUTRE** the son of Anthony was eminent as a sculptor and became royal statuary and director of the academy of St Luke. He died in 1744 aged ninety-four.—*Bugl. Univ.*

LE PAYS (Rene) seur du Plessis Villeneuve, a French wit and poet of the seventeenth century. Though of a good family he was but little favoured by fortune and going to Paris when young, he obtained a financial appointment, and afterwards served in the army in Spain. He then travelled in England, Flanders, and Holland; and at length returning to France, he became comptroller of the na-

posts in Dauphiny and Provence; where he passed a great part of his life, and composed most of his works. He was admitted a member of the academy of Arles in 1668, and in 1670 the duke of Savoy conferred on him the order of St Maurice. He died April 20, 1690. He published ' Amis, Amours, et Amorettes, Grenoble, 1664, 12mo; ' Zelinde héroïque galante,' Paris, 1665, 12mo. Nouvelles Ouvres 1672 3 vols. 12mo and 'Le Démodé de l'Esprit et du Coeur' 1688, 12mo. Most of his works have been repeatedly printed and some of them translated into English. Belidor says the prose of Le Pays is better than his poetry.—*Bugl. Univ.*

LERMA (FRANCIS DE ROKAS DE SAWAN VAL duke de) first minister of Philip III of Spain one of the most striking examples of the inconstancy of fortune and the vanity of greatness. He was only marquis of Denia when he was appointed equerry to the infant don Philip over whom he acquired such influence that when the prince ascended the throne in 1598 he made him his favourite and prime minister. He concluded peace with England and Holland and endeavoured to relieve the embarrassed state of the finances by encouraging agriculture. But his measures were ill-contrived and his weakness and imprudence procured him a great many powerful enemies. After the death of his wife he took the ecclesiastical habit, and obtained a cardinal's hat which he conceived would protect him in the possession of his power. But he was deceived for his own son, the duke d'Uceda, contrived to supplant him in the king's favour and succeeded to his post on his being dismissed in 1618. He was accused without any probability of having employed his secretary Rodens Calderon to poison the queen. For this imaginary crime Calderon was executed in the next reign. The duke of Lerma died in retirement in 1625.—*Nouv. Diet. Hist. Bugl. Univ.*

LE SAGE (ALAIN RENÉ) a celebrated French novelist and dramatic writer. He was born May 8 1688, at Sarzeau a small town in Brittany and was the son of a lawyer who held an office in the royal court of Rhuys. His father dying in 1692 he was placed under the guardianship of an uncle, who dissipated the fortune of his ward. He studied at the college of the jesuits at Vannes, after which he appears to have been employed in his native province for five or six years. In 1698 he went to Paris to study philosophy and also to solicit some new employment. His talents and manners procured him admission into the best society where his wit and taste for elegant literature rendered his company very acceptable. In 1694 he married the daughter of a Parisian tradesman. His first literary undertaking was a translation from the Greek of the letters of Aristoteles published in 1699 12mo. Established as a resident in the capital, he was admitted an advocate of parliament, and some time after the abbd de Lyons gave him a pension of six hundred livres. He studied the Spanish language and produced a

magnitude of translations or imitations of Cervantes' dramas and romances. Two of his comedies were published in 1710, and a third was noted in 1702, but it was not till 1707 when his "Crispus, Rival de son Maître" appeared that he established his reputation as a theatrical writer. His success as a novelist has most contributed to make him known to foreigners. *Le Diable Boitier*, the title of which has been oddly translated, The Devil upon two Sticks, became extremely popular, and "Gil Bias de Santillane" which followed a few years after has furnished a model for numerous imitations in various countries and languages. Le Sage projected a translation of the Orlando of Ariosto and published in 1717—21 *Roland l'Amoureux*, from Bottino, as an introduction to the former which was never executed. He returned to romance-writing in which he succeeded better than in poetry. In 1722 he published *Les Aventures de Guzman d'Alfarache* 2 vols. 12mo and the following year *Les Aventures de Robert, dit le Chevalier de Beauchesne* 2 vols. 12mo containing the real history of a freebooter from papers furnished by his widow. In 1734 appeared *L'Histoire d'Istevanne Gonzales* 2 vols. 12mo and in 1735 an amusing dialogue entitled *Une Journée des Parques*, 12mo. The last of his novels was,

Le Bachetier de Salamanque which La Harpe considers as inferior to all the preceding. The author however did not cease writing as in 1740 he produced a collection of satirical letters, under the title of *La Valse trouvée* and in 1743 a volume of anecdotes. In the year last mentioned he retired to Boulogne, where he died November 17 1747. Le Sage produced a great number of comic pieces for the theatre seven of which he published in his *Théâtre Français*, 1739 3 vols. 12mo including *Crispus Rival de son Maître* and *Turcaret*, intended as a satire on the farmers-general who in vain endeavoured to prevent the author from getting it acted. Notwithstanding his talents, and the success of his numerous compositions, the author of *Gil Bias* was 'y no means rich owing to a carelessness and liberality of disposition which prevented him soliciting the great for employments or from steadily accumulating the products of his literary industry. Le Sage had by his wife three sons and a daughter. His oldest son, *RENE ANTHONY LE SAGE DE MONTHERLÉ* was bred to the bar, but to his father's great displeasure, he preferred the stage. Having however acquired much reputation as a comic man he was reconciled to his father who was greatly distressed by his death, which took place in 1742.—*FRANCIS ANTHONY LE SAGE* or *PITRE*, the third son of the novelist, adopted the same profession as his brother and produced some pieces for the theatre, acted at Paris in 1734.—*Bug Uva*.

LE SAGE (George Louis) a Genevese philosopher, born of a French family in 1754. He received his early education under his father, who was a teacher of mathematics

and natural philosophy. He afterwards studied under Calandrini and Gabriel Cramer, and became acquainted with J. A. DeLuc. He then went to Basle as a medical student, and thence to Paris, but this was done in compliance with the wishes of his father. Mathematics in the mean time chiefly engaged his attention, and on his return to Geneva he abandoned all thought of medical practice, not ceasing to comply with the requisite forms. He composed for an academic prize his "Essai sur l'Origine des Forces mortes," and in 1750 he adopted the occupation of a teacher of mathematics. In 1756 he published in the *Mercure de France*, a letter to an academican of Dijon, containing objections against the common method of explaining the phenomena of gravitation and in 1758 he obtained a prize from the academy of Rouen for a piece entitled,

Essai de Chimie mécanique. His attention to study seriously affected his health and in 1762 he became almost blind. He continued however to prosecute his researches till near the time of his death which took place in 1803. This very ingenious philosopher wrote a great deal but published little. Among his writings which have been printed, are *Fragments sur les Causes finales*

Extrait de la Correspondance de Le Sage and *Extrait de Phisique mécanique* the latter of which was edited by M. Prevost.—*Edinburgh Review*.—*Bug Uva*.

LESLEY (John) the celebrated bishop of Ross in Scotland so called, descended of the ancient family of that name was born in 1537, and educated at Aberdeen. He was a prominent actor in the reign of the unfortunate Mary Stuart whom he accompanied from Paris to her native country in 1561 after the decease of her husband Francis II. Three years after he was appointed abbot of Lindores but soon vacated his preferment, on being elevated to the see of Ross. In this situation he took an active part in the dissensions to which the progress of the reformed doctrines in Scotland gave rise and was concerned with fifteen colleagues in making the digest of the laws of the realm familiarly known as the Black Acts, from the type in which they were printed at Edinburgh in 1566. When Mary abandoned her kingdom to throw herself on the protection of Elizabeth bishop Lesley's seal in his sovereign's behalf carried him into England when he publicly defended his cause both at York and in London, but being detected by Elizabeth in an intrigue, the object of which was the union of Mary with the powerful duke of Norfolk, he was, notwithstanding his rank in the church, and his character of an ambassador, committed a close prisoner to the Tower whence he was in 1573 deported to the Low Countries. On the recovery of his liberty he renewed his exertions in his mistress' behalf, endeavouring to enlist several continental powers in her cause and soliciting the active interference of the Vatican itself. While engaged in these proceedings he was himself appointed vicar general to the see of Rouen but during a visitation to his

disorder, he narrowly escaped being delivered up to his enemy the queen of England, by some Burgundians, who saved his person and only released him on the payment of a large sum of money. Under Henry III he was again imprisoned but at length obtained his liberty by similar means, and in 1593 was advanced to the bishopric of Constance. The wealth and power which his elevation gave him, he employed in the foundation of three colleges for the instruction of his countrymen at Rome, Paris, and Douai, but at length growing weary, he resigned his see and expired in 1596, a simple monk in the monastery of Guntersberg in the Netherlands. His defence of queen Mary and an exposition of her title to the English crown, have been published as also his "Description of Scotland and the Scottish Isles," a treatise "On the Origin, Manners and Exploits of the Scotch."

Paracelsus ad Nobilissimam Populorumque Scotorum et Auctissimam Annua Consuetudinem, et tranquilli Annuu Conservatorem — Dodd's *Ca. Hist. Robertson's Hist. of Scotland.*

LESLIE (JOHN) whose life exceeded a hundred years, flourished in the sixteenth and seventeenth centuries. He was a native of Balquhaine in Scotland and received his education in the universities of Aberdeen and Oxford. He afterwards visited most parts of the continent of Europe and was present at the siege of Rochelle and at the *isle of Ré*. Availing himself however of the opportunities afforded him by mixing with the people of the countries he travelled through he acquired an extraordinary familiarity with their languages and literature. On his return to England after an absence of more than twenty two years Charles I made him bishop of the Orkney islands whence he was afterwards successively translated to the Irish sees of Raphoe and Clogher. While at Raphoe he defended his palace against Cromwell's troops, and was the last who held out against the Parliamentarians in Ireland. He died in 1671 having been a prelate for more than half a century.—*diten. Oxf. Biog. Brit.*

LESLIE (CHARLES) second son of the preceding was born in Ireland, but the date of his birth is unknown. He was educated at Trinity college Dublin where he graduated M.A. He afterwards became a student in the Temple but relinquished the law for divinity and entered into orders in 1680. In 1687 he was made chancellor of Connor and displayed great firmness in resisting the measures of the Popish party by disputation and otherwise and in particular withheld the admission of a sheriff of that religion, although nominated by James II himself. Notwithstanding this resistance to what he deemed an illegal mandate he held not with the principles of the Revolution, and declined taking the oaths to king William, which necessarily deprived him of all his preferments, and he withdrew with his family into England. Here he employed himself in supporting the cause to which he had adhered, and wrote many pieces in defence of it. Being an able disputant, he was

highly esteemed by the revolutionists, but his writing, and frequent excursions to St. Germains necessarily rendering him an object of suspicion, he was obliged to quit the kingdom. He then openly repaired to the pretender, whom he sought in vain to convert to the protestant religion. He was also very active in the production of schemes for the admission of that prince to the crown under certain guarantees in favour of the establishment. On the termination of the rebellion of 1715, he accompanied the pretender into Italy where he experienced the usual neglect and ingratitude with which that unfortunate family has almost uniformly treated its worthiest adherents. Settling on this account to return to his native country government on the application of his friends allowed him to do so without molestation and he died at his own house at Glaslough in the county of Monaghan April 13 1732. His theological works of which the most considerable are treatises against the deists and sceptics, have been printed in two volumes folio, one of these entitled "The Snake in the Grass," written in exposure of the fanaticism and absurdities of Antoinette Bourignon, is very highly spoken of by Bayle. He has been accused of borrowing his "Short and Easy Method with the Deists" from the abbé St. Real but Dr. Gisig thinks this coincidence of the two works accidental. He wrote during the reign of Anne a weekly paper called "The Rehearsal" which has been collected in four volumes octavo. A list of his poetical pieces, which are very numerous may be found in the first of our authorities. They are of course strongly jacobite and the most celebrated of them were written in opposition to Burnet, Locke and Hoadley on the principles of civil government and the Revolution.—*Biog. Brit. Encyc. Brit.*

LESSER (FREDERICK CHRISTIAN) a German divine and naturalist born at Nordhausen in 1692. He studied at the university of Halle after which he went to Leipzig and thence to Berlin. In 1715 he became assistant preacher at Frauenberg. He formed a fine collection of objects of natural history and a curious library of early printed books. After having held various ecclesiastical benefices he died September 17 1754. The writings of Lesser relate chiefly to natural history among which are "Lithology or the Theology of Stones" 1735, "The Theology of Insects," which has been translated into English [see LYONER], "Testaceous-Theology," and "Miscellanies on Natural History and Physico-Theology."—*Biog. Univ.*

LESSING (GOETHEOLD EPERAIN) an eminent German writer was born in 1729 at Kamenz in Pomerania, of which place his father was protestant minister. He received his early education at the free school of Meissen where he acquired a great proficiency in the Latin and Greek languages, and was then removed to the university of Leipzig. Here he distinguished himself by a tendency to scepticism by great originality of sentiment and conduct and, above all, by an enthusiasm

ment to the drama. Having completed these sessions at the university, he was urged by his father either to enter into service, or seek a medical degree; but he declined both, and took to writing for the stage. His literary connexion with the theatre in the first instance by no means improved either his morals or circumstances; but although he endured much privation and distress he was too much attached to the drama to seek any other employment. At Berlin, where he sometimes resided, he was introduced to Voltaire, and subsequently to the distinguished French philosopher Mendelssohn and to Nicolaus Hammer Selzer and other literary men by whom he was held in great estimation. It was about this time that he wrote his domestic tragedy of "Miss Sarah Sampson" soon after which he accompanied Mr. Winkler a man of fortune to Amsterdam. On his return, Lessing resumed his literary labours with great assiduity; he made several translations from the English, and also composed a volume of elegant original fables, and wrote ingenious essays on fable and epigram. In conjunction with Mendelssohn and Nisslein he also undertook a periodical work entitled the "Library of Belles Lettres." In 1766 he was elected a member of the academy of Berlin, and was soon after appointed secretary to general Tassonneau whom he accompanied to Breslau. On the return of peace he was introduced to the king of Prussia, and resumed his literary occupation at Berlin where he produced in 1766 his "Laocoon" a dissertation on the limits of poetry and painting. An invitation from the lovers of the drama at Hamburg induced him to visit that city in order to establish a theatre in addition to which he assumed the critical office in a weekly paper entitled the "Hamburg Dramaturgy." In 1769 he met very opportunely with a generous patron in Leopold heir-apparent to the duke of Brunswick, by whose means, when his circumstances were declining he was made librarian at Wolfenbuttel. One of the fruits of this appointment was a periodical publication entitled, "Contributions to Literary History." In 1771 he gave a new edition of his literary works and the next year his popular tragedy of

"Eunis Galotti" appeared on the stage. In 1775 he married a widow lady at Vienna and soon after accompanied his patron prince Leopold of Brunswick in a tour through Italy. He had now become a very distinguished character among the German literati, and several of the princes of that country made him offers of protection but nothing would induce him to quit the prince of Brunswick who, by his accession to the sovereignty in 1780, was enabled to augment his favours towards him. His publication of "Nathan the Wise," displayed his final sentiments upon the difference of religious opinions, and it is by some deemed his masterpiece, but it is more adapted for the closet than the stage although frequently acted, as translated by Schiller. A second part of this drama, entitled "The Monk of Lazarus," and a "Dissertation on the Education

of the Human Race," were the chief productions of the last years of his life, in which his health was rapidly declining. Lessing's opponents noticed his approaching end, which took place at Hamburg in 1781 in his fifty-second year.—*Lif's or Monthly Mag.* New. Diet. Hist.

LESSIUS (Léonard) a learned jesuit, born at Brechtan in the Low Countries, in 1554, afterwards professor of philosophy at the college of Douai. The theological chair at Louvain becoming vacant he resigned his professorship in order to fill it, which he did with great ability for a while, till becoming suspected of favouring the Socinian heresy in some of his propositions, the doctors of the university sat in judgment upon them and condemned thirty four as heterodox. Lessius appealed from this decision. The colleges at Treves Ingolstadt, and Mayence affirmed the orthodoxy of his tenets, and the pope himself ultimately decided in his favour. Of his writings which are numerous two only have been translated into English an essay "On the Existence of a God" and another "On the Immortality of the Soul." His other works are "Hygiasticon seu vera ratio valitudinis vita" "De Justitia et Jure" &c. and "De Potestate summi Pontificis." His death took place in 1683.—Mowr.

L ESTRANGE (Sir Roek) better known than esteemed as a political partisan and controversialist, was the youngest son of Sir Humble L'Estrange knight of Hunstanton-hall Norfolk where he was born in 1616. His father being a zealous royalist brought up his son whose education was probably completed at Cambridge in the same principles. At the age of twenty two he attended Charles I in his expedition into Scotland and had a plan for surprising Lynn but being betrayed by his associates, and detected with the king a commissary in his pocket, he was tried by a court martial as a spy and condemned to die. He was, however, respited from time to time until he had lain in prison four years, when by the connivance of his gaolers he made his escape to the continent. On the dissolution of the long parliament, he ventured to return home and was released by Cromwell on giving bail. On the Restoration he did not undervalue his sufferings and merits, and was after a while, made licenser of the press, a profitable post which was, however the only recompence he ever received except being put in the commission of the peace at that time a very unworthy source of emoluments in London. In 1663 he set up the "Public Intelligencer" which he discontinued as the design then concerted of publishing a London Gazette, the first number of which appeared on the 4th February 1665. In 1679 he set up a paper called the "Observer" in defence of the measures of the court, and in 1681 distinguished himself by his share in the expense of the papist plot, as also of the fiscal one the following year. In 1682 he was obliged to give up the "Observer" because he could not agree with James, who had knighted

L E T

him, in the doctrine of toleration, although he had written in favour of the dispensing power which consequences subjected him to the imputation of having become a member of the church of Rome but he refuted the charge on oath. After the Revolution, he was left out of the commission of the peace and met with some annoyance on account of his presumed disaffection. He died in 1704 at the advanced age of eighty-eight his faculties having become impaired some years before he died. He was the author of a great number of ephemeral political tracts, distinguished by occasional force and perspicuity but still more by their coarse and virulent abuse and by a style so rude and vulgar that he was regarded by Granger as one of the great corruptors of the English language. He is also held to be the first who regularly received newspaper pay for defending all sorts of measures, good and bad being a staunch up-tilted and unblushing controversialist. L'Estrange translated Josephus, his best work "Ciceron's Offices," "Seneca's Morals," "Erasmus's Colloquies," "Aesop's Fables," "Quedlinburg's Visions," &c.—He had a brother HAMOND L'ESTRANGE who wrote a work entitled

"The Alliance of the Divine Offices, and a Life of Charles I."—*Biog Brit.* Nichols
Lit. Amer. Granger

LETHIEUILLER (SMART) an ingenious antiquary and collector of ancient relics and natural curiosities. He was descended from an ancient family of French protestants, settled in England after the revocation of the edict of Nantes. In the prosecution of his favourite researches he visited various parts of England and the itineraries which he composed and the discoveries he made relative to the antiquities of the country together with the drawings which he collected afford ample evidence of his zeal and ability as a man of science. In these journeys he made a large collection of fossils of which he formed a classical arrangement, and had drawings made of the most curious to which he added his own observations. He visited Italy where he collected ancient marbles and procured drawings of others to which he subjoined his own remarks on the natural history and archaeology of Italy. He also formed a cabinet of medals and an assemblage of curious engravings. Mr Lethieuller died at Aldersbrooke near Ilford in Essex August 27 1760 and in consequence of a testamentary bequest his antiquities and other treasures were deposited in the British Museum. He was a fellow of the Society of Antiquaries and a contributor to the Archaeologia.—*Arch. Reg.*

LETTI (Graziano) a copious writer of history was born in 1630 at Milan of a family originally of some distinction at Bologna. He was educated at the jesuit's college and was intended for the church, but was induced to make open profession of the protestant religion at Lassanone in 1657. His conversion so pleased Guerin, a celebrated physician at Genoa, that he gave him his daughter in marriage, and such was his credit, that he gra-

L E T

tuitously obtained the right of citizenship in 1674. His quarrelsome and untiring bent, however, involved him in so many disputes, that in 1680 he deemed it advisable to visit England where he was favourably received by Charles II who gave him a pension. He was also presented the situation of royal historiographer, but in his work, "Teatra Epitomae," having exercised his pen with a freedom which displeased the court, he was commanded to quit the kingdom. He then repaired to Amsterdam, and obtained the title of Historiographer to that city where he died in 1701. He was a most indefatigable writer the catalogue of his productions amounting to nearly one hundred volumes on forty different subjects, principally historical and biographical. Among the best known of his productions are his lives of Pope Sixtus V of the emperor Charles V of queen Elizabeth of England, of Philip II, of Oliver Cromwell and of the duke of Ossuna. Some of his severest attacks on the church of Rome are his "Nepotismo di Roma," "Cardinalismo de Santa Chiesa" and "Itinerario della Corte di Roma." All his works are written in Italian in a lively diffuse style but cannot be quoted as authority his inaccuracy and even disposition to employ fiction in order to amuse being notorious. He has succeeded on his own plan particularly in his life of Sixtus V the most popular of all his productions.—*Morris' Novels.* Granger

LETOURNEUR (ARRONTE FRANCOIS Louis Honore) born at Graville in Normandy in 1751. After having studied mathematics he entered into the artillery service became a captain and obtained the cross of St Louis. He adopted with ardour the principles of the Revolution and in September 1791 he was chosen a member of the legislative assembly and in 1792 of the Convention. On the king's trial he voted with the majority. Being a member of the military committee he was much occupied with preparing reports on the organisation of the army. In January 1795 he was president of the Convention and he was afterwards commissary on board the Mediterranean fleet. On his return to Paris he became a member of the committee of public safety and then of the executive directory. He held the latter office only till May 1797 when he became inspector general of artillery. He was subsequently employed at Lille to treat of peace with the English government. Under the consulate he was prefect of a department and in 1804 he was made a counsellor of the court of accounts. He was deprived of this place in 1814 and being restored to it by Bonaparte he was again deprived and was obliged to quit France. He died near Brussels in 1817.—*Biog. Nouv. des Contemp.*

LETTSON (JOHN COAKLEY) an ingenious physician and medical writer born in the island of Little Vandyke near Tortola, in the West Indies. His relations were of the society of friends, and at an early age he was sent to England and placed under the tuition of a Dr

L E U

Thompson, near Warrington where Dr Fotherill, who had a summer residence in the neighbourhood, superintended his studies. He was then apprenticed to an apothecary at Settle in Yorkshire after which he attended for two years at St Thomas's hospital. His father having died while he was young and having also lost his elder brother, he returned to the West Indies, to take possession of some property which had devolved to him. It consisted in part of negro slaves, whom he liberated after which he settled as a medical practitioner at Tortola. Ere long he re-crossed the Atlantic visited the great medical schools of Paris Leyden and Edinburgh, and at Leyden he took the degree of M.D. He then settled in London as a physician, and having married a lady of considerable fortune he obtained a very lucrative share of medical practice. In 1769 he was admitted a member of the college of Physicians the next year elected FSA and the year succeeding FRS. His writings are numerous. Besides papers in the Philosophical Transactions and the collections of medical societies, he published *The Natural History of the Tea-tree* 1772, &c.

The Naturalist's and Traveller's Companion 1774 8vo 3rd edition 1800 *Medical Memoirs of the General Dispensary* 1774 8vo *Hints on Benevolence Temperance and Medical Science* 1801 3 vols. 8vo *Memoirs of Dr Fothergill* and several smaller pieces. He died at his house in Sambrook-court London November 1 1815 aged seventy one. A collection of his works was published with his Life by Mr Pettingrew.—*Unit. Mag. Annals of Medicine*.

LEUCIPPUS a philosopher of considerable eminence in the fifth century BC. The ancients are not agreed upon the place of his birth but according to Diogenes Laertius it took place at Elea. All accounts, however concur in attributing to him the first idea of the system of Atoms which was improved by his disciple Democritus, and adopted by Epicurus. He wrote a treatise concerning Nature now lost, and disseminated with the metaphysical subtleties of the Eleatic school resolved to examine the real constitution of the material world and inquire into the mechanical properties of bodies. His great object was to restore the alliance between reason and the senses, for which purpose he suggested the doctrine of indivisible atoms having within themselves a principle of motion. By the help of this principle a feeble and fanciful effort was made to account for the production of all natural bodies from physical causes, without the intervention of Deity although it is not certain that either he or his disciples intended to discard the notion of a divine nature from the universe. From the atomic system Descartes borrowed his hypothesis of the "Vortices, and possibly some basis of his grand mechanical principle that bodies in a circular motion remove from the centre as much as possible." Kepler was also much indebted to the theory of Leucippus.—Die-

gene Lovt. English Hist. of Philos. Society & Hist. of Philos. Engla.

LEUCLAVIUS (Jean) a native of Westphalia, born at Amelburg in that country, in 1533. After visiting various countries of the east, as well as great part of Europe he finally returned to Germany and settled at Vienna, where from the materials which he had collected during his travels he composed a *History of the Ottoman Empire*, in folio and *The Annals of the Sultans*. He also published Latin translations of the works of Zoroaster and Xenophon and abridged the *Babiliaca* into two folio volumes. A work, entitled *Commentatio de Moscorum &c.* has been ascribed to him. His death took place in 1593.—*Morer. Natura*.

LEUSDEN (Johann) a celebrated biblical critic and theologian, born in 1624 at Utrecht, where he afterwards obtained the professorship of Hebrew with the reputation of being one of the most erudite scholars and able divines of the age. He published a new edition of the Books of the Old Testament in the original Hebrew in 2 vols. 8vo and of those of the New Gr and Lat. in one thick 12mo a Hebrew and Latin Lexicon an edition of Poole's *Synopsia* 5 vols. folio *versio Septuaginta Interpretum* "Clavis Graeca Novi Testamenti Onomasticon sacrum Philologus Hebreus Philologus Hebreomixtus Clavis Hebræa et Philologus Veteris Testam. a Hebrew Psalter, and Commentaries on the Books of the Prophets Joel Hosea and Jonah. Leusden died at his native city about the close of the seventeenth century.—*Chapua. Sacra Ora*.

LHUWENHOECK (Anthony van) a celebrated natural philosopher born at Delft in Holland in 1632. His skill in grinding optical glasses led the way to the making microscopical observations, which procured him no small degree of fame. He began publishing an account of his discoveries in the Philosophical Transactions in 1673 and they are contained from No. xcvi to No. ccclxxv of that collection. In 1680 he was chosen a fellow of the Royal Society and in 1698 he had the honour to entertain the czar Peter the Great, then at Delft with an exhibition of his experiments. He appears to have passed the whole of his life at his native place devoting his time to microscopical researches chiefly relating to anatomy. He died in 1723. He published *Arctia Naturae opere Microscopiorum detecta* 4to *Letters &c.* A selection from his works was published in English, 1800 4to.—*Alden & C. Eng. Hutton*.

LEVEQUE (Pierre) an eminent French mathematician born at Nantes in 1746. He was educated at the jesuits' college at his native place, and at the age of eighteen he went to sea in a low capacity for the purpose of gaining a practical acquaintance with navigation. Returning in about two years, he taught mathematics at Marseilles, at Brest, and afterwards at Nantes, where he became professor royal of hydrography in 1773, and in 1786 naval examiner. After escaping from

L E V

the storms of the Revolution, he was in 1797 appointed a member of the council of the department. His silence exposed him to proscription, but at length he was freed from peril and was made examiner of the polytechnic school. In 1801 he was admitted a member of the Institute and of the legion of honour. He died at Havre in 1814. He published "Tables générales de la hauteur et de la longitude du Nouveau monde," Avignon 1776 2 vols 8vo; "Guide du Navigateur" Nantes 1779 8vo, and several other valuable works relating to nautical affairs and mathematics.—*Bug Ulysse. Bug Neue des Contemp.*

LEVER (Sir Astro) an English gentleman memorable as the collector of a museum of natural and artificial curiosities. He was the son of a Lancashire baronet, and was educated at Corpus Christi college Oxford. He resided at Alkington near Manchester where he formed an aviary and afterwards a musicalianous museum. Having insured his fortune by the indulgence of his taste as a virtuoso he obtained an act of parliament authorising him to dispose of his collection by way of lottery in 1783. By this means it became the property of Mr James Parkinson who after making an exhibition of the Leverian museum for some years sold the whole piece meal by auction. Sir A. Lever died at Manchester in 1788.—*Gent Mag.*

LEVERIDGE (RICHARD) an actor and singer at the old theatre in Lincoln-inn-fields, during the early part of the last century. He was celebrated for his convivial qualities and in 1726 published a collection of his songs in 2 vols 12mo. The music to the second act in Macbeth has been attributed to him but on insufficient grounds. Leveridge kept a coffee house in Fawstock-street, Covent-garden and is said to have challenged all England to sing a bass song with him for one hundred guineas. He died in 1758.—*Bug Diet of Mus.*

LEVESQUE (PETER CHARLES) a French writer on history and general literature. He was born at Paris in 1736, and when young apprenticed to an engraver. Displaying a strong inclination for learning he was removed to the college of Mazarin where he studied with great success. His family having retired into the country he for some time supported himself at Paris by working as an engraver. In 1773 he went to St Petersburg, with a recommendation from Diderot to the empress of Russia, who appointed him professor of belles lettres at the school of noble cadets. Here he formed the design of writing the history of Russia and having completed the work in 1780 he returned to Paris to publish it. He was admitted into the academy of inscriptions and some years after was appointed professor at the Royal college. He was subsequently made a member of the National Institute and in 1812 he closed a long life devoted to literary pursuits. Besides his Russian history he produced a translation of Thucydides, Histories of France under the five first kings of the house of Valois, of the Roman Republic of Greece; and various other works.—*Histoire de l'Académie des Inscriptions et Belles Lettres.*

L E W

daughter, Mademoiselle Rose Lavastine, married to M. Paligay de St Roman, has distinguished herself as a poetess. At the age of fifteen she composed a number of pieces, published at Paris in 1786 under the title of "Idylles et Contes champêtres," 12mo, which were warmly praised by Flora and Gessner.
Bug Ulysse. Bug Neue des Contemp.

LEVESQUE DE LA RAVALLIERE (PERRA ALEXANDRE) a learned writer born at Troyes in France in 1697. He studied law at Orleans, with a view to an official situation at home, but preferring the cultivation of letters, he settled at Paris about 1726 and published an essay on dramatic poetry, which attracted little notice. He then devoted himself to the study of history, and in 1743 he became a member of the academy of inscriptions. He died in 1762. Most of his productions relate to the history antiquities, and literature of France including "Recueil des Révolutions de Langue Française" which involved him in a controversy with the Benedictine author of "Histoire littéraire de France." He also published an excellent edition of the poems of Thibault count of Champagne king of Navarre Paris 1742 2 vols. 12mo and he left in manuscript, a history of the counts of Champagne.—*Mémoires de l'Acad. des Inscrps. Bug Ulysse.*

LEVI (DAVID) an English mechanician of the Jewish persuasion, born in the metropolis in 1740. Though of an humble rank in life he became possessed of considerable information and some learning especially with regard to the antiquities of his nation. In 1787 he entered into a polemical controversy with Dr Priestley whose "Letters to the Jews," he answered in two series of essays written in the same epistolary form. He also published a Hebrew and English Lexicon in 3 vols., a translation of the Pentateuch and another of the Hebrew Liturgy in 6 vols., and was the author of dissertations on the Mosaic Rites and Ceremonies, On the Prophesies, &c. His death took place in 1799.—*Gent. Mag. 1801.*

LEVIZAC (JOHN PONS VICTOR LACOUTS de) a French writer descended of a noble family and born at Albi in Languedoc. He became an ecclesiastic when young and obtained a canonry at Valence. He consecrated all his leisure to poetry and in 1776 he commenced his literary career by an idyl called, "Le Bœuf rendu" which gained the prize at the floral games of Toulouse. At the Revolution he quitted France for Holland and afterwards settled in England as a French teacher. He died in London in 1813. The abbé de Levizac is known advantageously as the author of "Bibliothèque portative des écrivains Français ou Choix des meilleurs morceaux Extraits de leurs Ouvrages," "Dictionnaire des Synonymes" and other works designed to facilitate an acquaintance with the language and literature of France.—*Bug Ulysse.*

LEWENHAUPT (ANNA LEWIS, count) a Swedish officer who distinguished himself in the wars of Charles XII. He was born in

2459, of a good family, and was educated at Upsal and in some of the universities of Germany. He then entered into the Austrian army and served against the Turks, and he afterwards belonged to a corps of Swedish troops employed by William III in Holland. On the accession of Charles XII, he was made a general and after serving against the Russians in Courland he was in 1705 appointed governor of Riga. In the war with Peter the Great, he commanded a Swedish army with which he beat the Russians at Lesnoe in September 1708. He then joined the king of Sweden and was present at the disastrous battle of Poltava soon after which he was obliged to surrender with the remains of his forces to the Russians. He was sent into the interior of Russia, where he died about ten years after, in 1719 Count Lewen haupt employed the period of his captivity in writing memoirs which were published at Stockholm in 1757 and are said to contain much curious information.—*Bug Univ.*

LEWIS (JAMES) a learned antiquary and historian born in 1675 at Bristol, and educated at the grammar-school of Poole in the county of Dorset. From this summary he proceeded to Exeter college Oxford, where he took his bachelor's degree in arts and was soon after admitted into the church. About the close of the century he was presented to the small living of Acryce Kent to which the archbishop of Canterbury added that of Hawkinge near Folkestone both which places of preferment he resigned for the perpetual curacy of Margate and the vicarage of Minster in the Isle of Thanet, 1708. Having graduated as A.M. at Cambridge he obtained in 1717 the mastership of Eastbridge hospital in Canterbury a sinecure, with which he continued to hold his other benefices. Mr Lewis devoted much of his leisure time to the study of the antiquities of Kent, more especially of that portion of the eastern part of the county where he resided, and which, from its historical associations both with the Roman and Saxon empire in Britain affords a wide and interesting field for the researches of the curious scholar. His "History of the Isle of Thanet," a second edition of which appeared in one 4to vol. 1236 has long been considered a standard work both for the learning and the industry which it displays, this book is now become scarce. His other productions are, "The History and Antiquities of Beverley Abbey" etc., "A Dissertation on the use of Seals in England," "The lives of Wycliffe of Carton the printer, and of Bishop Peacock each in one volume, see an 'Exposition of the Catechism of the Church of England';" an edition of Wycliffe's Translation of the New Testament, with an account of the various translations of the Scriptures into English (also printed separately) prefaced one volume, folio, and "Specimens of Errors in Collier's Ecclesiastical History." Mr Lewis died at Margate in 1744.—*Chalmers's Biog. Dict.*

LEWIS (MATTHEW GASKINS) an English writer, whose attempts both in the depart-

ments of the drama and of romance, obtained at one period a very considerable share of popularity in this country, though but too frequently disfigured by bad taste and degraded by licentiousness. He was the son of a gentleman of good property consisting principally of estates in the island of Jamaica, and who possessed sufficient influence with government to obtain for himself the lucrative and responsible post of under secretary at war. His son the subject of this article, was born in the metropolis in 1773, and was educated at Westminster school on quitting which foundation he travelled for improvement, especially into Germany the literature of which country produced a strong impression upon him, and gave that peculiar turn to his compositions which placed him in the foremost rank among the delineators of the marvellous and terrific and has since loaded the shelves of circulating libraries with hosts of imitators most of whom however exhibit all the extravagances without the genius of their model. Of his writings the first and most celebrated was "The Monk" a romance in 3 vols. 1796, which although much derided for its licentiousness ran through a great number of editions. "Feudal Tyrants" ditto 4 vols., "Romantic Tales" 4 vols. "Tales of Wonder" in verse one vol. 8vo "Tales of Terror" one vol 8vo "The Castle Spectre" a romantic drama. "Adelmore the Outlaw" ditto "Venom" a tragedy a volume of miscellaneous poetry and "The Bravo of Venice" a translation from the German one vol 8vo. Mr Lewis had a seat in Parliament, but seldom took part in the business of the house. His death took place in 1818 at sea, while on his voyage home from a visit to his West Indian possessions. An idle story has been circulated that it was occasioned by poison administered to him by a negro whom he had inadvertently acquainted that he had ordered the emancipation of all his slaves at his decease.—*Ann. Biog.*

LEWIS (WILLIAM) an ingenious physician and writer on chemistry and pharmacy. He had obtained the degree of bachelor of medicine was a fellow of the Royal Society of London and a member of the Royal Academy of Stockholm and he was engaged in professional practice at Kingston in Surrey where he died after a lingering illness Jan 21 1781. His reputation as a practical and theoretical chemist occasioned his being engaged to read a course of lectures on chemistry to his late majesty when prince of Wales, at Kew a manuscript copy of which, together with a course of lectures read before the duke and duchess of Gloucester at Kangaroo was sold after the decease of Dr Lewis, when his whole library comprising several valuable manuscripts, was disposed of by auction in London. He was the author of "An Experimental History of the Materia Medica, or of the natural and artificial substances made use of in medicine of which an improved edition was published by Dr Aikin, 1784, 4to. His other works are "Compendium philosophico-technicum;" or

LEY

"Philosophical Controversies of the Arts," 1705; "A Course of Practical Chemistry," 1706, and an abridgment of the medical writings of Frederic Hoffman.—Orgy.

LEY (JAMES) Earl of Marlborough an English judge, who flourished during the early part of the seventeenth century. He was the sixth son of Henry Ley esq. of Tewfent in Wiltshire born in 1602. From Brasenose college Oxford he removed to the metropolis and entered himself of Lincoln's-inn, by which society he was in due course called to the bar. In 1606 he was promoted to the office of chief justice of the King's Bench in Ireland which he held for sixteen years, and was then transferred to the corresponding post on the English bench with a baronetcy. In 1625 James I with whom he was a great favourite placed him at the head of the council board, conferring on him the high office of lord treasurer and the earldom of Marlborough. He was a good antiquarian as well as a sound lawyer as is evinced by a few disquisitions of his which Thomas Hearne a hundred years ago has rescued from oblivion. Of his professional writings the principal are his *Reports* folio 1639 and a dissertation *On Wards and the Law of Guardianship*, 12mo. His death took place in 1628.—*Lloyd's State Worthies*.

LEYDECKER (MICHAEL) a native of Middlebury born 1582 eminent as a sound scholar and able theologian. He became divinity professor in the university of Utrecht, where he published a continuation of the *Ecclæsiastical History* of Horatius. A History of the rise and progress of Jansenism an other of The Church of Africa. *Synopsis Controversiarum de fidei* an Analysis of Scripture and a very curious work in two folio volumes, *On the Republic of the Hebrews*. He died at Utrecht in 1721.—*Nova Diet Hyst.*

LEYSER or LEYSERUS (POLYCARP) a Lutheran divine born in Wurtemberg in 1502. He was educated at Tübingen and in 1533 became minister at Göllingen. In 1576 he took the degree of DD at Wittenberg where he obtained the theological chair and afterwards was superintendent of the university. In 1579 he was employed in drawing up the

Formula Concordia between the Lutherans and Calvinists, of which he became the most zealous defender. After holding various offices, he was appointed first preacher to the court of Dresden in 1594 and preceptor to the young prince of Saxony. He died at Wittenberg in 1601. The works of Leyser on divinity and ecclesiastical history are numerous. Most of them may be found in the dictation of Moret and Joscher.—JOHN LYTTLE grandson of the preceding a German divine, wrote in favour of polygamy. His works attracted a great deal of notice in the latter part of the seventeenth century and subjected him to persecution. The most important of his pieces is his *"Discourse politiques de Polygamie"* published under the name of *Theophrastus Althaea*, 1676 8vo, and reprinted at Lund in 1682, with an ample com-

LHO

munity entitled, "*Polygamia theophrastica*."—POLYCAST LITTA a dissident of the first-named, was a doctor of medicine and professor of history of Helmstadt, where he died in 1728. He was the author of several works relating to the history of literature.—*Bog Uan*.

LEZAY MARNEA (CLAUDE FRANÇIS ADRIEN marquis de) born at Metz in 1735. He entered young into the French army which he soon quitted in consequence of his dissatisfaction at some new regulations. He then retired to his estate of St Julian near Longeville and employed himself in literary studies. At the Revolution he was one of the noblesse who declared in favour of an equality of taxation and the abolition of feudal impositions. He was chosen a deputy from the states general, and sat in the constituent assembly, but alarmed at the prospect of affairs in France he emigrated to North America in 1790 taking with him artists labourers &c. to form a colony on a large tract of land which he had purchased of the Scoto company. But this scheme was frustrated and he returned to France in 1792. He settled again at St Julian and during the reign of terror he was arrested and confined in prison at Besançon. The fall of Robespierre set him at liberty and he returned home to his usual pursuits but in 1797 he thought it prudent again to leave France and he remained for some time in the Pays de Vaud and at Lausanne. At length he settled at Besançon, where he died November 9 1800. He was the author of "*Essai sur la Minéralogie du Boulage d'Or gelet au Franche Comté*" 1778 8vo, *Le Boeufay dans les Campagnes*, 1778 8vo.

Les Payages, ou Essais sur la Nature a poem. *Lettres scrites des Rives de l'Ohio* 1792 8vo, and other works.—LEZAY MARNEA (ADRIEN count de) son of the preceding, distinguished himself as a diplomatist and man of letters. After finishing his education he was for a short time in the army. He then studied diplomacy at the school of Brunswick, the only institution of the kind in Europe. At the Revolution he travelled in Germany and England, and then returning to France became a contributor to the *Journal de Paris*. Having proclaimed the approaching destruction of the directional government he was forced to leave France. He returned under the consulate and was employed on diplomatic missions. In 1806 he was made prefect of the department of the Rhine and Moselle, and in 1810 of that of the Lower Rhine in which office he was continued on the restoration of royalty. He died at Strasburgh in 1814, owing to a fall from his carriage. He translated into French Schiller's tragedy *Don Carlos*, and wrote several political tracts, which excited much attention.—*Bog Uan*.

L HOMOND (CHARLES FRANCIS) emeritus professor at the university of Paris, born in 1727. He studied at the college of Limeville as a bursar and afterwards became principal of that institution. He devoted himself to the instruction of youth, and composed for the use

of his abilities a number of valuable classical literary works. In August 1793 he was arrested, and committed to prison; but was liberated in a few days, through the good offices of Tallien, who had been his pupil. He died in 1794. Among his publications are a treatise ' De Viris illustribus Urbe Romae ' ' Epi- tome Historiae Sacre ' and grammars of the French and Latin languages.—*Biog. Univ.*

LHUYD (EDWARD) an eminent antiquary and naturalist who was a native of Wales. He was born about 1670 and at the age of seventeen he became a student of Jesus college, Oxford, where he took the degree of MA. On the resignation of Dr Plot, he succeeded him as keeper of the Ashmolean museum. He directed his researches to the illustration of the languages, religion, customs and manners of the early inhabitants of the British islands and made a large collection of extracts from documents in public and private libraries, in the course of various journeys which he made into Cornwall, Ireland, Scotland, and the French province of Brittany. The result of his studies was the publication of his ' Archæologia Britannica ' vol. 1. Oxford 1707 folio comprising grammars and a vocabulary of the ancient British, Irish and Armorican dialects. He gained a high reputation by this work for the continuation of which he had accumulated ample materials but was prevented from using them by his death which took place in 1709. He was the author of a methodical catalogue of the figured fossils in the Ashmolean museum entitled ' Lethophylax Britannicus Ichnographia ', 1699 8vo and several papers relating to natural history in the Philosophical Transactions.—*Actas i G. Biog.*

LHWYD (HUMPHREY) a learned Cambrian antiquary and historian, who was a native of Denbigh. In 1547 he was a commoner of Brasenose college, Oxford where he proceeded MA in 1551 and studied medicine. He was highly esteemed by Camden and he corresponded with the geographer Ortelius, to whom he addressed a tract entitled ' Commentarij Britannicus Descriptione Fragmentum ', and a letter ' De Monstris Drudus'. In sole antiquitati suis Resoluti ' which lost with another piece of Lhwyd's ' De Armaria-mento Romano ' was published with sir John Fane's ' Histories Britannicas Defensio '. Lhwyd also translated from the Welsh ' The History of Cambria ' of Caradoc of Llancarvan edited by Dr David Powel 1584 4to. He likewise translated some medical tracts according to some he practised physic at Denbigh, where he died about 1570.—*Wood's Antq. Oxon. Biog. Brit.*

LIBANIUS, a celebrated Greek sophist or rhetorician, was born of an ancient family at Antioch in the year 314. From his youth he devoted himself to literature and pursued his studies at Athens. After he had finished his education, he collected disciples, and made himself known by various rhetorical compositions. His reputation was high both at Constantinople and Nicomedia, in which latter city he attracted the attention of Julian who be-

came acquainted with his writings, and imitated his style and manner. The jealousy of his rivals pursued him from place to place, until he finally returned to Antioch, where, about the year 360 he became preceptor to Basil and John Chrysostom, afterwards so celebrated in the Christian church. On the accession of Julian, he was invited by that emperor to a station near his person which with true philosophic dignity he declined but necessarily became warmly attached to a prince who paid him so much attention. Julian admitted him to the equality of a literary friend and is thought to have had his assistance in some of his own compositions. The death of that emperor was therefore, a severe stroke upon Libanius, who had flattered himself with the restoration of the heathen worship and philosophy from his exertions. He survived to an advanced age, endangered by supposed disaffection to the succeeding emperor and annoyed by the jealousy of rivals. The exact time of his death is not known but he mentions 390 as his seventy sixth year. The writings of Libanius are numerous, and many of them have reached posterity. They are characterized by Gibbon as for the most part ' the vain and idle compositions of an orator who cultivated the science of words the production of a recuse student, whose mind regardless of his contemporaries, was incessantly fixed on the Trojan war and the Athenian commonwealth'. Of the works of Libanius, two volumes folio Gr and Lat. were published at Paris 1605—1627. These contain his declaimations orations and dissertations with his life a van and prolix narrative written by himself. The best collection of his epistles is that of Wolf Amsterdam, folio, 1738.—*Moresi. Gibbon*

LIBAVIUS (ANDREW) a physician and chemist of the seventeenth century who was a native of Halle in Saxonie. He was professor of history and poetry at Jena in 1583 whence he removed to Rothenburg and in 1605 he was nominated rector of the gymnasium of Coburg in Franconia, where he died in 1616. Libavius was the author of a number of works on chemistry which have been rendered obsolete by the progress of science. There is a chemical compound formerly denominated, from him, the fuming liquor of Libavius which is an oxyminate or rather chloride of tin. In a treatise entitled ' Examen Philosophum Novum ' this writer recommends the transfusion of blood from one animal to another.—*Elog. Diet. H. de la Med. Biog. Univ.*

LICETUS (VOTVITUS) a physician and natural philosopher of the seventeenth century. He was a native of Rapallo in the territory of Genoa and having studied at Bologna, he became professor of philosophy at Pisa. In 1609 he removed to Padua, and in 1636 to Bologna, having held professorships in both those cities. He returned to Padua in 1645 and occupied the medical chair in that university till his death in 1657. Licetus was a voluminous writer on medicine, philosophy, history and

LIDDELL. He is best known as the author of a treatise, "De Molitorum Causis, Naturae, et Diffinientia," of which there is an edition by Blaauw, Amsterdam, 1665 4to. In a treatise "De Lucernis Antiquorum recordatio," he treats of the supposed everlasting lamps, and to have been found in ancient sepulchres and relates many presumed instances of their having been discovered.—*Mauri. Tavellochi. Hutchinson's Eng. Med.*

LICHTENBERG (GRONOBUS CHRISTOPHERUS) an eminent philosopher and moralist born near Darmstadt in 1742. He studied at Gottingen where in 1770 he was appointed professor extraordinary of the physical sciences. From 1772 to 1775 he was employed by order of the king of England in determining the latitudes of the principal places in Hanover. In 1777 he succeeded Erzleben in the chair of experimental philosophy which station he held till his death February 24, 1799. The works of M. Lichtenberg were published at Gottingen 1800—1806 9 vols. 8vo. They comprise an account of M. Delus's ideas concerning the formation of rain; an autobiographical journal; and various pieces which had been published in the almanacks and the magazine of Gottingen. He wrote a satire on Lavater entitled "The Phrymognomy of Tails" and an explanation of the plates of Hogarth.—*Eng. Brit.*

LICHENSTEIN (JOSEPH WENCESLAUS, prince of) was born at Vienna in 1696 and having finished his studies at the age of eighteen he entered into the Austrian army. In 1723 he was made colonel of a regiment of dragoons and for his services in the campaign of 1733 and 1734 he was raised to the rank of lieutenant-general. In 1738 he was sent ambassador to France where he remained till 1741. He had the chief command of the Austrian army in Italy with the title of field marshal, in 1746, when he gained the victory of Plasencia. From that time he was employed in diplomatic affairs and the duties of his office, as director general of the artillery to the improvement of which he greatly contributed. He died at Vienna in 1772. The prince of Lichtenstein was an enlightened patron of the arts and letters and was the founder of a fine gallery of paintings at Vienna, which bears his name.—*Nouv. Dict. Hist. Eng. Univ.*

LICHTWEBER (MAGNUS GODFREY) a German poet born at Wurzen, in Brandenburg, in 1719. He studied at Leipzig and in 1744 took the degree of doctor of law at Wittenberg, where he became professor of logic, moral philosophy, and civil law. The weak state of his health induced him to remove to Quedlinburg and afterwards to Halberstadt, at which place he obtained a canonicate and the office of counsellor to the regency. He died in 1788. Lichtewer was the author of fables, which, in the opinion of the German critics, entitle him to rank with Gellert and Lessing, and he also produced a poem on the "Law of Manuse," Leipzig, 1756, 4to.—*Eng. Univ.*

LIDDEL (DUNCAN) a Scottish physician

born in 1581 at Aberdeen in which city he received his education. In 1599 he quitted his native country for Germany where he applied himself with much diligence to the study of mathematics taking pupils in the same science both at Frankfurt and Rostock, to which latter city he was driven by a pestilence which was raging at the former. In 1591 he again removed to Helmstadt, where he graduated in medicine in 1596 and obtained the professorships of that faculty and of mathematics. This situation was equally beneficial to him in a pecuniary point of view, as in repetition, and after some time spent in a tour through Italy he at length returned in 1607 to his native country where he evinced his gratitude to the university in which he had been born and nourished by founding and endowing six scholarships and a professorship of mathematics. The remainder of his life was passed on a private estate which he possessed in the neighbourhood. Of his professional writings, there are extant "Disputationes Medicinales," 4to, Helmstadt, 1603, "Ar. Medicis per specie Explanata," 8vo, Hamburg 1607; and "Universae Medicinae Compendium;" Helmstadt 1620. His death took place in 1613.—*Eng. Brit.*

LIDEN (JOHN HENRY) a Swedish writer of the last century. Possessing a considerable fortune he was enabled to indulge himself in travelling through Germany, France, England, and Italy. He had returned to Sweden when in the prime of life he was seized with a palsy which reduced him to a state of continual suffering. He nevertheless employed himself in collecting books and dictated several works the result of researches which he superintended. Among these are a history of the Swedish poets and of the writers of Latin poetry born in Sweden; several historical and literary memoirs and an edition of the Journal of the Diet of 1682 with an introduction. He died at Nordkoping the place of his birth in 1793, and left his library to the university of Upsal.—*Eng. Univ.*

LIEBE (CHRISTIAN SIGISMUND) a learned writer on numismatics born in Mainz in 1687. He studied at Freyberg and afterwards at Leipzig, and having taken his degree in theology in 1717 he became preacher at the church of St Paul and adjunct librarian to the academy. In 1723 he was employed by the duke of Saxe Gotha to travel in the Netherlands, England, and France to purchase rare books and medals and on his return he was appointed keeper of the cabinet of antiquities. He died in 1736 leaving several works the most important of which is his "Gotha nummaria sistens Thesauum Fredericii numismata antiqua, &c." Amsterdam, 1730, folio. Liebe was for thirty years one of the conductors of the *Acta Eruditorum* Leipzig.—*Eng. Univ.*

LIEBERKUHN (JOHN NATHANIEL) an eminent German anatomist, who was a native of Berlin. He took the degree of MD at Leyden, and settling at Berlin became a member of the college of physicians in that city. He principally distinguished himself by his

anatomical researches and microscopical observations, of which he published an account in two dimensions, "De Valvulae coll et arterie Processus venosularis," 1739, 4to; and "De Fabrica et actione Villorum Intestinorum testiculum," 1745, 4to, and is memoir communicated to the academy of sciences at Berlin, and other learned societies to which he belonged. He died in 1756.—*Elog. Diet. Hist. de la Med. Belg. Univ.*

LIESGANIG (Jozsef) an astronomer, who was a native of Gruz in Styria. Having finished his studies, he entered among the jesuits and was employed to teach mathematics in different colleges. On the suppression of his order his talents procured him employment from the court of Austria. He was nominated director of building and navigation in the province of Gallicia and he died at Lemberg in 1799 aged eighty. He published a good map of eastern Gallicia, and a work containing an account of the measurement of a degree of the meridian on the frontiers of Hungary and Austria, besides astronomical observations in the *Journal of Baron von Zach*.—*Bug. Univ.*

LIEUTAUD (Joseph) an eminent French physician who distinguished himself by his writings on morbid anatomy. He was born at Aix in Provence June 21 1703. He was educated under M. Gandel his maternal uncle who was professor of medicine at Aix and after taking his doctor's degree, he spent some years at Montpellier. Returning to his native city he became physician to a hospital and gave lectures on anatomy. At this period he communicated to the Academy of Sciences many anatomical observations, which extended inputation as a medical philosopher. In 1731 he was invited to Versailles to become physician to the royal infirmary, in 1734 he was admitted into the Academy of Sciences and in 1755 he was appointed physician to the royal family. He was subsequently made physician to the princes of France and in 1774 first physician to the King Louis XVI, a post, the emoluments of which amounted to more than 3000£ a year. He died at Versailles in 1780. His principal works are *Essais Anatomiques contenant l'histoire exacte de toutes les Parties qui composent le Corps Humain* 1745, 4vo *Elementa Physiologica* 1749 8vo and *Histoire Anatomico-medica systema nomen romanae Cadaverum humanorum extempora*, 1767 2 vols. 4to.—*London Med. Journ. Actas e G. Bug.*

LIEVEENS (John) a Flemish artist of the seventeenth century born at Leyden in 1607. Charles I invited him to London, where he resided about three years, and painted the portraits of several of the principal nobility about the court. Portrait painting was indeed the branch of the art, in which he principally excelled, though some fine specimens still in existence, attest his skill as an historical designer. Of these latter productions his *Scipio, Lazarus, &c.* are the chief. His decess took place at Antwerp, but in what year is uncertain.—*Byron's Diet. of Paint. and Eng.*

LIGHTFOOT (John) a learned English divine, was born in March 1606 at Shropshire-Trot in Staffordshire, his father being vicar of Uttoxeter in the same county. He received his early education at a private school in Cheshire whence he was removed to Christ church, Cambridge, where he made extraordinary advances in the Greek and Latin languages. On receiving the degree of BA he became assistant to his former tutor who then kept a school at Roston in Derbyshire and continuing his orders, he was appointed curate of Norton under-Hales in Shropshire. This village being in the neighbourhood of sir Rowland Cotton that gentleman made Mr Lightfoot his chaplain and took him into his house, where following the taste of his patron, an excellent Hebrew scholar, he applied himself to the study of the same language with singular assiduity and success. In 1628 he was appointed minister of Stone in Staffordshire which place he soon left to reside near London where in 1629 he printed his first work entitled *Erubbin or Miscellanea Christiana et Judaica* which he dedicated to sir Rowland Cotton who presented him to the vicarage of Ashley in Staffordshire. Here he resided until his appointment as one of the parliamentary assembly of divines rendered it necessary for him to remove to London when he resigned his rectory to a younger brother and became minister of St Bartholomew beyond the Royal Exchange. In 1643 he was made master of Catherine hall Cambridge with which preferment he held the living of Much Munden in Hertfordshire. In the mean time he took his turn with the other favourite divines of the parliament, and warmly pressed the speedy settlement of the church in the presbyterian form. In 1655 he entered upon the office of vice-chancellor of Cambridge and distinguished himself as a zealous promoter of the polyglot Bible. At the Restoration he offered to resign the mastership of Catherine-hall but archbishop Sheldon who admired his temper and talents, procured him a confirmation both of his place and living. He was soon after appointed one of the assistants at the Savoy conference where he however attended but once or twice giving all his attention to the compilation of his *Harmony*. He died December 6 1675. The works of Dr Lightfoot who, for rabbinical learning had few equals, were printed in 1684 in 2 vols. folio, and again with additions, at Amsterdam in 1686, and by Leenders at Utrecht, 1699 in 3 vols. An octavo volume of his remains was also published by Strype which contains some curious particulars of his private life.—*Syriac Preface to Remains. Bug. Brit.*

LIGHTFOOT (John) a distinguished botanist, was born at Newent Gloucestershire, December 9 1735 being the son of a respectable gentleman farmer. He was educated at Crypt school at Gloucester whence he became exhibitioner at Pembroke college Cambridge where he took his master's degree in 1766. On taking orders he was first appointed curate at Colnbrook and afterwards of

Hastings. He was subsequently presented by lord chancellor Northampton, to the rectory of Shipton in Hampshire, which he resigned on taking possession of that of Gothic in Nottinghamshire. He was also much patronised by the duchess of Portland, and drew up the catalogue of her museum. His abilities as a botanist induced Mr Pemant to make him the companion of his second tour to Scotland, and by the advice of that gentleman he undertook his "Flora Scotica," published in 2 vols 8vo. Mr Lightfoot was a member of the Royal and Linnean Societies. He died at Uxbridge in 1788. His excellent Herbarium, which he had collected in his botanical researches, was sold by his executors to George III for one hundred guineas.—*Life by Pemant Gent Mag*

LIGNE (CHARLES JOSEPH prince de) born at Brussels, of an ancient Flemish family in 1735. He entered the army in 1752 and made his first campaign in 1757 when he had obtained the rank of captain. For his gallantry at Hochkirchen he was made a colonel and he had reached the post of major general at the accession of Joseph II. In 1771 he became a lieutenant-general and proprietor of a regiment of infantry. In the war relating to the succession of Bavaria in 1778, when he commanded the advanced guard of Landshut he added to his military reputation. In 1783 he was sent on a mission to Russia, where he became a great favourite with Catherine II who nominated him field marshal, and gave him an estate in the Crimea where he was present at the interview between that princess and Joseph II. The latter in 1788 made the prince de Ligne general of artillery and sent him to assist prince Potemkin at the siege of Ochakov and he subsequently divided with Landshut the glory of taking Belgrade. The death of Joseph II terminated his military career as he was entirely neglected by the succeeding emperor Francis II in 1806 made him a field-marshall and he was consulted on public affairs though no longer engaged in active service. He died in 1814. Much of his time was devoted to literature. He published a collection of his writings, forming thirty volumes, 1820 in 1807 and subsequently

Vie du Prince Eugène de Savoie écrite par lui-même and Lettres et Pensées du Maréchal Pr de Ligne both which were translated into English. The posthumous works of the prince de Ligne were published in 1817 6 vols. 8vo.—*Bug. Nors. des Contemp.*

LIGORIO (Flaminio) a noble Neapolitan distinguished as a painter architect and antiquary at the sixteenth century. He was employed by the popes Paul IV, and Pius IV and was the rival and enemy of Bombarrotti, whom he succeeded as architect of St Peter's; but on his proposing to deviate from the plan of his predecessor he was removed from his office. He then went into the service of Alfonso II duke of Ferrara, who gave him the title of his antiquary with an ample salary; and employed him as an engineer. He made very extensive antiquarian collections, a part

of which only was published, relating to the churches, theatres, and amphitheatres of the Romans, and to ancient vestments. He died in 1583.—*Orbigny. Testehead.*

LILBURNE (John) a remarkable character in the republican party during the time of Charles I and Cromwell was born in 1614, being the younger son of a branch of an ancient family in the county of Durham. Having little patrimony he was placed at an early age and after receiving little education with an eminent wholesale clothier in London. Of a bold, unquiet, and forward temper one of his first exploits was to seduce his master before the city chamberlain for ill usage. Having carried this point, he employed his increased leisure in studying the religion, systems, and controversies of the time, and the Book of Martyrs in particular inspired him with an enthusiastic passion for countenancing all sorts of danger in the cause of what he deemed truth. In 1636 he was introduced to the famous Dr Basswick then under star chamber prosecution who employed him to get anti-episcopal structures printed in Holland. On his return he employed himself in similar occupations, but being betrayed by an associate he was tried before the star-chamber where his deportment was so sturdy refusing to answer interrogations and standing up so firmly for his privileges as an Englishman that he acquired the appellation of free-born John. He was doomed to receive five hundred lashes, and stand in the pillory which sentence was executed in April 1638 with great severity. So little however was his spirit subdued by it that he uttered invectives from the pillory, and threw pamphlets from his pockets among the crowd for which conspiracy he was remanded to prison and kept doubly ironed; yet even in this situation he contrived to get another libel printed and published. On the meeting of the long parliament, a vote passed the house of Commons pronouncing the sentence against Mr Lilburne barbarous and illegal and that reparation should be made to him for his sufferings and losses. When an army was raised by parliament, Lilburne entered as a volunteer and acted as a captain of infantry at the battle of Edge Hill. He was taken prisoner by the king's party in the affair at Brentford, where he fought with great bravery. He served also with great gallantry at the battle of Marston Moor, in the capacity of lieutenant-colonel to the earl of Manchester. His dislike to the measures of Fairfax and Cromwell induced him soon after to lay down his sword, but it was only to take up the pen, which he employed very fiercely against all whose political conduct offended him. Being committed to Newgate for contempt, when brought before the house of lords for a libel on the earl of Manchester he contrived, while thus imprisoned to publish pamphlets in rapid succession in which he virulently assailed his enemies, and even made a charge of high treason against Cromwell and Ireton. For this last piece of daring he was ordered to be tried for sedition and scandalous practices; but as

active and numerous were his friends among the people, that in 1648 the house of Commons thought fit to discharge him, and make an order for reparation for his sufferings. At the time of the king's death he bade himself in drawing up a new constitution and boldly maintained the rights of the people against the army. So dangerous did he appear to Cromwell and his council that he was again committed for high treason but being tried before a special committee, the jury boldly acquitted him. A new offence which he gave the parliament, induced that body to pass a heavy fine on him, with an order to quit the country on which he retired to Holland until it was dissolved when he used all his interest to gain a passport, but not succeeding so ventured home without one. Being apprehended he was again committed to Newgate and once more tried at the Old Bailey where he defended himself so ably that he was once more acquitted. He was, however ordered to leave the country but giving security for his future good behaviour he was finally suffered to remain. He then settled at Eltham in Kent and in a singular spirit of opposition to his past contentious spirit, but with all his pristine enthusiasm became a Quaker and preached at the meetings of that body at Woolwich until his death in 1657 at the early age of thirty nine. Liberne had a wife with a spirit as undaunted as his own who was his faithful helpmate in all his sufferings. Thus intrepid damage, with more composure and self-government, would have been a far higher character than he is now esteemed. What he deemed the public good, he supported against all parties indiscriminately and that with invincible spirit, and through a life of prosecution. As a writer he was very vulgar and violent, although occasionally acute and forcible. His predictions such as they are too numerous for enumeration, but a host of them will be found in our authority.—*Bug Bry.*

LILLO (George) an English tragic poet of the last century born 1653 in the metropolis. He was by trade a jeweller and of much respectability as a tradesman but notwithstanding his attention to business he contrived to dedicate no inconsiderable portion of his time to the cultivation of the drama. Fielding, the author of *Tom Jones* himself a dramatist, and the contemporary and personal friend of Lillo bears strong testimony to the integrity of his heart, as well as to the excellency of his social qualities. In figure Lillo was short and ungainly while his countenance was disfigured by the loss of an eye, but the strong moral lessons afforded in his writings, evince that his mind was better constituted than his exterior. An edition of his plays was published in 1775 by Davies, in 2 vols. 12mo. The principal are "George Barnwell" or the London Doctor, "a tragedy founded on an incident in domestic life, which tradition affirms to have taken place at Camberwell. This play, till within these few years, it was always customary to represent on Lord Mayor's day; "Poor Cottager," also said to be founded

in fact, "Aiden of Feverhouse," which was evidently so; and "Elinore," written rather than suddenly and the exhibition of lesser feelings vainly struggling against the force of temptation in private life constitute the field in which the genius of Lillo loved to luxuriate. Lillo, who was a Dissenter, died in the autumn of 1739 aged forty-seven.—*Life prefaced to Works.*
Big Bry.

LILLY (John) a dramatic writer was born in the wealds of Kent, according to Anthony Wood about 1553. He became a student at Magdalene College Oxford, in 1563, where he took the degree of MA in 1575. On some disgust, he removed to Cambridge whence he proceeded to court where he was noticed by Queen Elizabeth and sought to obtain the post of master of the revels in which he never succeeded, but after many years of fruitless court attendance was obliged to address the queen for support in his old age. In what year he died is unknown but, according to Wood he was alive in 1597. He was the author of some dramatic pieces none of which are now extant. Besides the drama, he was celebrated for his attempt to reform and purify the English language in a couple of fantastic productions entitled *Euphues* and his *England* 1580 and *Euphues* and his *Anatomy of Wit* 1581 which works met with a strange degree of success considering the ridiculous affectation which they inculcated a specimen of which may be seen in the character of Sir Pierce Shafton in the *Monastery* of Sir Walter Scott. Lilly was also the author of a famous pamphlet against Martin Marprelate and his party entitled *Fappe with a Hatchet*, published about 1589 and improperly attributed to Nashe.—*Athen. Oxon. Warton's Hist. of Eng. Poet. Eliot's Specimens.*

LILLY (William) a famous English astrologer not to say impostor was born at Dunsorth in Leicestershire in 1602. He was put to school at Ashby-de-la-Zouch in the same county but learned little beyond writing and arithmetic. He came early to London where his necessities obliged him to attire himself as servant to a mantua maker in St Clement Danes. In 1624 he became book keeper to a tradesman who could not write on whose death he married his widow a woman much older than himself with a fortune of 1000/. In 1632 he turned his attention to astrology and to use the cast of that pretended science was soon able "to cast a figure" and he ventured to give the public a specimen of his skill by an assurance in 1633 that the king had chosen an unlucky horoscope for his coronation in Scotland. In the following year he buried his wife and married a second, with 500/, but with all his foresight did not anticipate that she would prove a媒agent and keep him needy by her extravagance. About this time he procured a MS. copy of a book by Cornelius Agrippa, entitled "Ars Notoria" from which he eagerly imbibed the doctrine of the magic circle, and invocation of demons. In the same year, 1634, he was allowed by the dean of Westmister to

about David Ramsey the king a clock-maker in search of a hidden treasure in Westminster abbey another associate being found in one John Scot, who pretended to understand the mystery of nature's divining rods. These three worthies accordingly made the experiment on the night appointed, and after digging up a coffin to no purpose, they were frightened from the place by a violent storm, which Lilly in the sequel attributed to demons, whom he had found means to dismiss. In 1637 he retired to Horsham in Surrey where he resided until 1641 when perceiving a prospect of advantage from the growing confusion of the times he removed to London and in 1644 published his *Mercurius Anglicus*, which he continued annually until his death and several other astrological works. Having acquired the friendship of Bulstrode Whitlock he soon after devoted himself entirely to the interests of the parliament, although he occasionally varied his predictions, in order the more easily to impose on the credulity of the age. In 1647 recourse was had to this wily adventurer for advice and assistance on the part of the king. One Mrs Wharwood as Lilly himself relates waited upon him by the king's command to know where if he escaped from Hampton he could most effectually conceal himself. He cast a figure and answered in Essex but before his advice could reach the unhappy monarch he had escaped and placed himself in the custody of colonel Hammond in the Isle of Wight. The same lady applied again to Lilly who says that he supplied her with the saw and aqua fortis by which the king might have escaped if he had pleased. He also attributes to himself another piece of advice in a third application by which the king would have been saved had he pursued it. In the year 1648 Lilly and Booker another astrologer were sent to the camp at Colchester to encourage the soldiers by their predictions, and such was his reputation that he was rewarded for his various services (one of which was obtaining secret intelligence from France) with a pension of 100*l.* per annum. About this time he read public lectures on astrology and succeeded so well that he was enabled to lay out 200*l.* in fee farm rents at Horsham. Having in the year 1650 predicted that the parliament should not continue but a new government arose he was summoned to attend the committee of plundered marchants but saved himself by pretending that the objectionable books were spurious copies of his own work. In the same year he made a scurrilous attack upon the learned Gataker who pointed out the absurdity of his pretended science. In 1651, such was the spirit of the age he received the present of a golden chain from the king of Sweden whom he had mentioned with great respect in his almanack. On the Restoration Lilly was taken into custody by order of parliament, as one of the repositories of the secrets of the republicans, and examined concerning the persons who behaved the king when he declared that he had been informed that lieutenant-colonel Joyce was the execu-

tioner. He soon after fled out his postern under the great seal and retired to Horsham. In 1666, some of the members, suspecting from the hieroglyphic in his almanack, that he might know something of the causes of the great fire which followed its publication had him sent for to a committee of enquiry when he tamely asserted that he had certainly foreseen the event, but could say nothing as to the cause. He was civilly dismissed, and from this time little is known of him except that he adopted one Henry Coley for his successor, under the name of Merlin junior an obligation which did not prevent the latter from exposing some of his various modes of imposture after his death. Thus extraordinary man was author of many works one of which, his *Observations on the Life and Death of Charles, King of England* overlooking the astrological nonsense mixed up in it is able and impartial. His own life recently included in a new series of autobiography now under publication is also a very entertaining production steering as he does between truth and falsehood and seldom indulging in more of the latter than was necessary to support his character as an astrologer. The other works of this singular impostor being all astrological trash need not be enumerated here, but the curious in such matters may see a complete list of them in the *Biographia Britannica*. — *Lily by Himself* *Biog Brit*

LILY or LILYE (WILLIAM) a learned grammarian born at Odilham in Hampshire in 1468. He became a student of Magdalen college Oxford in 1484 and having taken the degree of BA he quitted the university and made a pilgrimage to Jerusalem. He went thence to Rhodes where he remained five years, studying the Greek language and after visiting Rome he returned to his native country and settled as a private schoolmaster in London being the first person who taught Greek in the metropolis. On the foundation of St Paul's school in London by dean Colet, in 1510 Lily was appointed the master, and he presided over that institution till 1543, in which year he died of the plague. Erasmus, and others among his learned contemporaries, have bestowed on Lily high encomiums as a classical tutor. He was the author of Latin poems and tracts, but he is chiefly memorable on account of the Latin grammar which bears his name, the first edition of which appeared in 1513 under the title of *Brevissima Instructio in Rato Grammatices cognoscenda*.

— *Biog Brit* *Barkhouse's Biog Lit*

LIMBORCH (PHILIP) a celebrated Dutch professor of divinity was born of respectable parents at Amsterdam, in 1633. After attending the inferior schools of his native city, he commenced his academical studies under the care of several eminent instructors, and subsequently attended the lectures of Vossius and other divines at Utrecht. In 1654 he entered the ministry and soon after became pastor of a remonstrant congregation at Gorin, in 1660, having found among the papers of Episcopius who was his maternal uncle,

good letters relating to ecclesiastical affairs, he arranged a conference with Huetiusius, entitled, "Equitale protestatione et emendatione Virorum," 8vo, of which a new and enlarged edition appeared in 1684, and a third in 1704, folio. In 1661 he wrote an able treatise in favour of toleration and having required a high reputation among the followers of Arminius was in 1668 chosen professor of divinity by that body at Amsterdam. He had previously published his system of the principles of the remonstrants under the title of "Theologia Christiana ac Praeia Pietatis, ac Promotio Pacis Christianae unice directa" 4to 1686 which quickly ran through 5vp editions the last being that of 1713. In the same year he published the substance of his controversy with the learned Jew Orobo in a treatise which bore the title of "Collatio Aenca de Veritate Religionis Christianae cum eruditissimo Judaeo" 4to. His celebrated History of the Inquisition followed which was translated into English by Dr Chandler in 1731. The last publication of this able divine was his Commentary on the Acts of the Apostles and Epistles to the Romans and Hebrews folio 1711. He died in possession of a high character for pietty moderation ability and candour in April 1712 in the seventy ninth year of his age.—Chandler's Preface to the *History of the Inquisition*.

LINACRE (Thomas) an eminent physician and philologist, was born at Canterbury about 1460. He received his school education in that city and thence removed to All Souls college Oxford of which he became a fellow in 1484. With a view to further improvement, he accompanied his tutor William de Bellamy on a mission to the court of Rome. He subsequently visited Bologna and Florence where he was courteously received by Lorenzo de Medici who permitted him to attend the preceptors of his own sons, and he had the advantage of learning the Greek language from Demetrius Chalcondylas. On his return to England he took the degree of MD at Oxford and read lectures on physic and also on Greek in that university. His reputation at length induced Henry VII to call him to court and make him his own physician. He exercised his influence with cardinal Wolsey to obtain letters patent in 1510 for the royal college of Physicians of which he became the first president. He also founded lectureships in physic at the two universities and farther benefited his profession by translating several of the most valuable pieces of Galen his Latin style in which versans is peculiarly pure and elegant. One of his earliest writings was a translation of Proclus on the Spheres" dedicated to prince Arthur and he also drew up "Studiments of the Latin Grammer in English for the use of the princess Mary which production was preparatory to a larger work of the grammatical kind entitled, "De Elementar structure Latini Sermonis ibm sex which publication appears to have been the labor of several years of his life. He consumed the subject in its full extent, but too logically

and metaphysically for general use. It was not printed until after his death, and went through several editions. Towards the latter end of his life he entered into orders. He died of the stone in 1554, at the age of sixty-four and was buried in St Paul's cathedral. The character of Linacre seems to have been very amiable, and he enjoyed the friendship and esteem of Erasmus, Melanchthon, and most of the eminent persons of the time.—*Bug Brit. Aduin's Biog. Mem. of Medicine.*

LIND (Janus) an ingenious English physician, who distinguished himself by several professional works which have been translated into foreign languages. The most important of these are a treatise on the scurvy 1749 8vo an essay on the means of preserving the health of seamen 1757 8vo, an essay on the diseases incidental to Europeans in hot climates 1768 8vo, besides which he published several medical papers in periodical works. He died at Gosport in Hampshire July 18 1794.—*Bug Univ.*

LINDANUS (WILLIAM) a native of Dordt in Flanders who about the middle of the sixteenth century officiated under the Spanish government as a member of the Dutch inquisition. He displayed so much bigotry and impiscability in the execution of this office that he grew into high favour with Philip II, and in 1562 was advanced by that monarch to the see of Ruremonde. After presiding over this diocese for six and twenty years he quitted it for Ghent. Lindanus was the author of several theological tracts in which his zeal is manifested at the expense of his charity. Of these (all written in the Latin language) the principal are The Gospel Canopy in folio A Catalogue of the various Heresies of the Age On the best Method of interpreting Scripture 8vo an edition of the mass said to have been composed by St Peter which appeared in one volume octavo in the year after his decease, and another of the Psalms of David. His death took place at Ghent in 1585.—*Mores.*

LINDBLOM (AXEL) a native of the province of Ostrogothia in Sweden who studied at Upsal and afterwards became a private tutor in Livonia. Returning home he was appointed professor of belles lettres and politics at Upsal where he published a Latin and Swedish dictionary. In 1789 he took orders in the church and was made bishop of Linkoping and subsequently archbishop of Upsal. In 1816 he was sent by the king Charles XIII to Elmeur to receive the Lutheran profession of faith of Bernadotte on his becoming prince royal of Sweden; and Lindblom performed the coronation of the prince in 1818. He died at the commencement of the year following. While he resided at Linkoping he published a theological journal distinguished for liberality of sentiment.—*Bug Univ.*

LINDSAY or LYNDSDAY (Sir David) an ancient Scottish poet, descended from a noble family was born at Germiston in Midlothian, in 1590. He was sent to the university

of Bradstreet's in 1546, and in 1549 became chaplain to John V, then at court. In 1550 he presented his "Drama;" and in the following year presented his "Complaynt" to the king. In 1550 he was incorporated Lyon king-at-arms, and knighted, and in 1551 sent on a mission to Charles V on his return from which he married. He soon after composed himself on a drama of a singular kind, entitled "A Satyre of the Three Estates," which was followed in 1556 by his "Answer to the King's Flyting," and his "Complaynt of Scocia." On the death of Margaret of France two months after her marriage with James V Lindsay's name produced his "Declaration of the Death of Queen Magdalene." During the succeeding regency he espoused the cause of the reformers, and in 1548 was sent in his capacity of Lyon herald on a mission to Christian king of Denmark. On his return, he published the most pleasing of all his poems entitled, "The History and Testament of Squire Meldrum." His last and greatest work, "The Monarchie" was finished in 1553. The date of his death is unknown but the latest authority seems inclined to place it in 1557. Lindsay entered with great zeal into religious disputes, and his satire powerfully assisted to expose the vices of the clergy. As a poet he is inferior to Dunbar and Gavin Douglas. His "Drama" is deemed his most poetical composition. An accurate edition of the works of Lindsay was published by Mr George Chalmers in 1806—*Life by Chalmers. Ellis's Specimens.*

LINDSAY (John) a learned divine of St Mary hall Oxford who officiated for many years as minister of a concurring society at Trinity chapel Altergate street. He was born in 1586 and finished a long and laborious life to 1656 part of which time he was corrector of the press to Mr Bowyer. He was author of a "Short History of the Royal Succession," "Remarks on Wotton's Scripture Politics" 1720 3vo, and of a translation of Mason's "Vindication of the Church of England" 1726—1728 the preface to which work can teach a sense of the successors of the bishops from the Reformation. In 1747 he published two sermons preached at court by Francis Masses in 1693.—Nichols's *Lat. Antec.*

LINDESEY (TAXONIUS) a celebrated divine of the Unitarian persuasion was born at Middlewich in Cheshire June 20 1723. His father was an eminent salt proprietor and Theophilus, the second of his three children took that name from his godfather Theophilus son of Hastings. He received his grammar education at Middlewich and Lichfield, and at the age of eighteen was admitted a scholar at St John's college Cambridge. Having taken orders, by the recommendation of the earl of Huntingdon, he was appointed domestic chaplain to the duke of Somerset, and in 1754 he succeeded east Piercy as the confessor. On account he became acquainted with and married the daughter of Mr Frederick Blackwood, and was presented to a living in Dorsetshire which he exchanged in 1764 for the

vicarage of Catterick in Yorkshire. In 1771 he毅然 co-operated with Archdeacon Blackstone, Dr John Jebb, Mr Wyvill, and others, to obtain relief in matters of subscription to the thirty-nine articles. Having fully entertained a doubt of the doctrine of the Trinity, in 1773 he reluctantly resigned his living, and came to London, where in April 1776 he performed divine service in a room in Essex-street, Strand which was conducted according to the plan of a liturgy altered from that of the establishment by the celebrated Dr Samuel Clarke. About the same time he published his "Apology" of which several editions were called for in a few years. This was followed by a larger volume, entitled, "A Sequel to the Apology" in which he replies to the various answers given to his first work. In 1778 he was enabled, by the assistance of friends, to build a regular chapel in Essex street the service of which he conducted in conjunction with Dr Dussey until 1783, when he resigned the pulpit, but continued as active as ever with the pen. In 1802 he published his last work entitled "Considerations on the Divine Government." He died Nov 3 1803 in his eightieth year. Besides the works already mentioned he wrote 'On the Preface to St John's Gospel' 'On praying to Christ' 'An historical View of the State of the Unitarian Doctrine and Worship from the Reformation' and several other pieces. Two volumes of his sermons have also been published since his death.—*Athenaeum*, vol. v Revd. Cyclop.

LINGUET (SIMON NICHOLAS HENRY) an advocate of the parliament of Paris, born at Rheims in 1736. He was for a time in the army and served as aide-de-camp to the prince de Beauvau in Portugal. He then became a lawyer and in 1762 was admitted an advocate but in consequence of disputes with his brethren his name was struck from the list of counsellors. Thus prevented from practising, he turned political writer and having offended the count de Mesureps he was sent to the Bassac. On obtaining his liberty he published an account of his imprisonment, a work which produced a strong sensation, and is said to have prepared the way for subsequent events. Having retired to Brussels in 1787, Linguet there published his "Annales Politiques," in which he praised the policy of the emperor Joseph II, and advocated his scheme for opening the navigation of the Scheldt. His zeal was rewarded with a present of a thousand ducats, notwithstanding which he changed sides, and wrote in favour of Vander Noet and the anti-Austrian party. Among other pieces he published a pamphlet, entitled "Observations d'un Républicain en réponse au Mémoir de Léopold." At the Revolution he returned to Paris, and on the 31st of March and the 5th of April, 1791 he appeared at the bar of the National Assembly and read a justification statement in favour of the colonial assembly of St. Maix, for undertaking the defence of which he had been well paid; and which afforded him an opportunity of pithing the ranks of

LIN

the negroes, and declining against the tyranny of the whites. In June 1794 he was arrested, and being tried before the revolutionary tribunal of Paris, he was condemned to death, and suffered by the guillotine the twenty-seventh of that month. Besides the works mentioned, he wrote several relative to history, law, and politics, in which he displays more eloquence than learning, and a partiality for paradox inconsistent with truth and reason.—*Dictionnaire de l'Academie Francaise. 3. Biog. Universelle.*

LINIÈRE (François PAYOT de) a French poet equally noted for his talents, his irregularities, and his dissipated character. He was born at Paris in 1628, of a family connected with the bar, but he entered into the army when young. On his return to Paris he became generally known and alternately admired and hated for his wit, profanity and satirical spirit. He resided at a country house near Sevres, whence he has been termed the "Athenaeum of Sevres." His irregularities reduced him to want in the latter part of his life which was terminated in 1704. The songs and epigrams of Linière are dispersed in the fugitive publications of his time. The title of one of his productions is *Poesies Divises, ou Dialogues en forme de Saincte de Docteur Mophraste et du Seigneur Albert sur le fait de Mariage à Rome*.—*Biog. Universelle.*

LINIER BREMONT (don SANTIAGO) a Spanish naval officer born at Niort about 1760. He was at first in the Maltese service and then in that of Spain, in which he became captain of a ship previously to the French Revolution. His first service of importance was against the English under Whitehocke in South America, from whom he took Buenos Ayres the capture of which he had not been able to prevent. He remained master of the place and was appointed captain general of Rio de la Plata. On the invasion of Spain by Buonaparte he endeavoured to engage Liniers in his interests, but in vain. His temporising policy, however excited suspicions against him both in America and in Spain and don Cisneros was sent out, with the title of viceroy by the central junta to supersede him. Liniers resigned his authority and retired to Cordova, one hundred and sixty leagues from the capital. The inhabitants of Buenos Ayres being disposed to expel the viceroy Liniers formed a body of troops, and declared for the royal authority but his soldiers dispersed on the approach of the independents and he was taken prisoner, condemned to death and shot August 26 1809.—*Biog. Universelle.*

LINLEY (THOMAS) There were two distinguished English musicians of this name, father and son. The elder Linley received his musical education under Chilcott, the organist of the abbey church at Bath and composed it under signor Paradies, an eminent composer of Venice. In the city already mentioned he continued to reside for many years, directing the oratorios and concerts performed there; and to his taste and exertions, while showing in that situation, may be mainly attri-

LIN

buted the renewed popularity of the Works of Handel. As his family grew up around him, several of his members displayed great musical talent, especially his two eldest daughters, one of whom became the object of a most romantic attachment to, and subsequently married, the celebrated Richard Brinsley Sheridan, whose duel with captain Mathews respecting her excited so great a sensation in their day. The second, Mary was afterwards Mrs Tickell. On Sheridan's completing the purchase of Drury lane theatre his father in law became joint-partners with him, and coming to London, took an active part in the management of the concern the musical department of which he conducted for many years. During this period, he composed the air to numerous operas and minor musical pieces, having previously in conjunction with his son Thomas, arranged those of the *Dusennes* for Covent garden. The untimely death of this son the eldest of his boys, who after displaying extraordinary powers as a musician during the whole of his short but brilliant career was unfortunately drowned at the age of twenty two, was a severe blow to his father. The melancholy circumstance alluded to took place on the 7th of August 1773 while on a visit with his sisters at Grimsthorpe in Lincolnshire the seat of the duke of Lancaster. In company with three other young men of his own age he had embarked on board a pleasure boat in the canal which being through some mismanagement, overset Linley though an excellent swimmer sank in his endeavours to reach the shore while the others saved themselves by clinging to the keel. A brain-fever seized his father on the communication of the intelligence from which though he slowly recovered to a certain extent, yet he never again attained his former health. He survived the defeat of his fondest hopes, however till the year 1795 when he died in Southampton street Covent-garden. His remains were conveyed to Wells cathedral for interment, where they were deposited in the same vault with his daughters, Mrs Sheridan and Mrs Tickell both of whom had also preceded him to the grave. There are few compositions in English music which surpass those of Linley in simplicity of construction combined with pathos spont and originality. His celebrated *Singalong to Cowley a waltz*—

"Let me careless and unthoughtful lying" still usually performed at the ancient concerts, is especially considered a fine specimen of that species of composition. A handsome monument has been erected near the place of their burial, to the memory of himself and daughters, by a surviving member of the family.—*Biog. Dict. of Mus.*

LINN (John Blair) a North American poet, born at Slippery-pond in Pennsylvania, in 1777. He was educated at the college of New York, and afterwards at Columbia; and he then engaged in the study of law. But polite literature clearly attracted his attention, and he composed a play which was acted with success. He then quitted his legal pursuits

L. I. M.

for theology, and having obtained a license, he became a preacher among the presbyterians at Philadelphia, and in 1799 assistant to Dr Ewing. He wrote with great warmth against Dr Priestley's Comparison between Jesus Christ and Socrates, which produced a controversy between them. His death took place in 1804 and in the following year was published a fragment of a poem, entitled *Valeman*, relating to the early persecution of the Christians, to which was prefixed an account of his life. He was also the author of a poem on the death of Washington, and another entitled *The Powers of Genius* which has been reprinted in England.—*Bog. Nieuw. der Confess.*

LINNE (CHARLES von) more generally designated by his Latinized name LINNÆUS, the most celebrated naturalist of his age, and the founder of modern botany was a native of Sweden. He was the son of a clergyman and was born May 13 O.S. 1707 at Råshult, in the province of Småland. His father was fond of gardening and his little domain was stocked with plants not commonly cultivated a circumstance to which the prevailing taste of the son may be fairly attributed. He was sent to the grammar-school and afterwards to the gymnasium of Wexio to be educated for the ministry; but as he displayed a much stronger predilection for the study of nature than for divinity or the classics, his destination was changed to the medical profession. In 1727 he entered at the university of Lund in Scania, whence he removed the following year to Upsal. During his early residence there the narrowness of his father's circumstances exposed him to great difficulties, from which he was relieved by the patronage of Celsius the theological professor an eminent naturalist, through whose recommendation Linné obtained some private pupils. He also formed a friendship with Åretz a medical student like himself devoted to the cultivation of natural history. He now conceived the idea of a new arrangement of plants, or sexual system of botany relative to which he wrote a memoir which was shown to Radbeck, the botanical professor who was so struck with its ingenuity that he received the author into his house, as tutor to his sons, and made him his assistant in the office of delivering lectures. In 1732 he was sent by the Academy of Sciences at Upsal to make a tour through Lapland from which he returned towards the close of the year. In 1733 he visited the mining district around Falun, and he gave lectures on mineralogy having formed a system of that science afterwards published in his *Systema Naturae*. While he was thus adding to his reputation at Upsal, he became involved in a violent quarrel with the medical professor, Nicolaus Rossm, who seems to have acted with a great deal of illiberality and found means to prevent Linné from continuing his private lectures. He therefore engaged in a solitario tour through the provinces of Dalecarlia, and remained for some time at Falun lecturing and practising

L. I. N.

medicine with considerable success. In 1735 he went to the university of Hartecamp in Holland and took the degree of MD. He then visited Leyden where the first sketch of his "Systema Naturae" was printed in the form of tables filling twelve folio pages. He became acquainted with John Frederic Gronovius, Boerhaave, and John Burcham of Amsterdam, and he then published a work entitled "Fundamenta Botanica" exhibiting the basis of his botanical system. Mr Chifford an opulent merchant of Amsterdam, made him superintendent of his garden at Hartecamp near Haerlem, rich in curious species, of which Linné drew up a systematic catalogue. In 1736 he made a visit to England and formed an acquaintance with Dillenius at Oxford with Dr Shaw the traveller Martyn Philip Miller, and Peter Collinson. He returned to Holland with many new plants for Mr Chifford's garden his description of which entitled *Hortus Cliffortianus* was now published in a more splendid form. He also published the first edition of his *Genera Plantarum*. In 1738 he made an excursion to Paris, and towards the end of that year returned to his native country and settled as a physician at Stockholm. At first he experienced neglect, but through the influence of count Tessin he was appointed physician to the navy and had a salary for giving public lectures on botany in the summer and on mineralogy in the winter. The establishment of the Royal Academy of Stockholm, of which he was one of the first members contributed to the advancement of his reputation by the opportunity which it afforded for the display of his abilities. In 1741 he succeeded Robeg in the professorship of medicine at Upsal to which was added the superintendance of the botanic garden to the new arrangement and augmentation of which he devoted much of his time and attention. In 1745 appeared his *Flora Scandinavica*, and the next year his catalogue of Swedish annals, entitled *Fauna Suecia*. He was elected to the post of secretary of the academy of Sciences at Upsal; in 1746 an honorary medal of him was struck at the expense of some noblemen and in 1747 he was nominated royal archistar. Through his influence many young naturalists were sent to explore various countries and to his zeal in the cause of science we owe the discoveries in natural history made by Kalm, Osbeck, Hasselquist, and Lichtenberg. He was employed by the queen of Sweden to describe her museum at Drottningholm when he made a new scientific arrangement of the shells contained in it. About 1751 he published his *Philosophia Botanica*, and in 1753 his *Species Plantarum*, containing a description of every known plant, arranged according to the sexual system. This work of Linné which Haller terms his "Maximum Opus et Aeternum" appeared originally in 2 vols. 8vo, but the edition published by Willdesow at Berlin, 1799-1810, is extended to ten volumes. In 1753 this great naturalist was created a knight of the polar star "ex honore severo before his intituled on 8 No-

tasty man. In 1750, he was elevated to the rank of nobility by the king's sign manual and from that time he wrote his name in the aristocratic form, C. von Linné. Literary honours were also conferred on him by scientific societies in foreign countries. He belonged to the royal societies of Berlin and London, the imperial academy of Petersberg, and the Academy of Sciences at Paris, and other learned associations. In 1766 he completed the plan of his "Systema Naturae" which, through successive editions, had been enlarged to three octavo volumes. Notwithstanding his celebrity Linnaeus acquired but a moderate degree of opulence, yet it was sufficient to enable him to purchase an estate and mansion at Hammarby near Upsal where he chiefly resided during the last fifteen years of his life. There he had a museum of natural history on which he gave lectures and to which he was constantly making additions, from the contributions of travellers and men of science in various parts of the world. His health, during a great part of his life, was such as enabled him to pursue his researches with vigour and activity, but in May 1774, he had an apoplectic attack, which obliged him to relinquish the most laborious part of his professional duties, and close his literary labours. A second seizure occurred in 1776, and he afterwards experienced a third, but his death did not take place till January 11, 1778. Besides his works on natural history he published a classified "Materia Medica," and a systematic treatise on nosology entitled "Genera Morborum." It is, however, as a botanist, and the founder of a system of botanical science that Linnaeus takes his station among the great men who are entitled to the praise of original genius. By his wife, the daughter of a physician at Falun, he had a son and four daughters.—The former, CHARLES von LINNÉ, was joint-professor of botany and afterwards professor of medicine at Upsal. He was well acquainted with science, but distinguished himself by no discoveries of importance. On his death, without issue, in 1783, the family became extinct.—ELIZABETH CHRISTINA von LINNÉ, one of the daughters of the great naturalist, studied botany and became known by her discovery of the luminous property of the flower of the tropaeolum of which an account was communicated to the academy of Stockholm.—*Life of Linnaeus* by Dr. FREDERIC HUTCHINSON; Eng. Med. dict. G. Ross.

LINGUETTI (GIOVANNI MARIA) director of the royal asylum for the Insane at Avessa, in the kingdom of Naples. He was born in 1774, and when young was distinguished for his application to literature. He studied with a view to the profession of jurisprudence, but instead of engaging in practice he entered into the religious order of the Serravese, Pugliese convent, having obliged him to quit his country by finding an asylum in the house of the secretary of State, whom literary afforded him the means of extending his knowledge, particularly in relation to the physical and moral

constitution of the human body. His investigations enabled him to project some important improvements in the management of the insane, the principles of which are developed in a work which he published, under the title of "Recherches sur l'Allemagne Méridionale." He was at length appointed manager of the Asylum for Insanity at Avessa, which he conducted with great success. His health became debilitated in 1815, and he continued in a declining state till his death, which took place September 17, 1825.—Miles Genetics.

LINSCHOTEN (JOHN HOOG VAN) a Dutch voyageur born in 1553. He went in 1575 to Seville in Spain to visit his two brothers, who were there settled, and afterwards proceeding to Lisbon, he entered into the service of the archbishop of Goa, with whom he sailed to that Portuguese settlement in the East Indies, where he remained some years, and had many opportunities for making observations on the country and its inhabitants. He returned to Europe in 1589, and published a curious account of his voyage. He was afterwards engaged in the attempt of the Dutch to find a passage through the North sea, to Japan and China, of which he also wrote a narrative. He died at Enkhuizen in 1633. The East Indian voyages of Linschoten have been translated into Latin, French, and English. He also wrote a description of the coasts of Guineo, Congo, and Angola, besides other works.—*Eng. Univ.*

LINUS. The name of a celebrated manician of antiquity to whom Diodorus Siculus, quoting Diogenes of Byzantium attributes the introduction of verse and music into Greece. He was a native of Chalcis and to him are ascribed a poem on the exploits of Bacchus in India, a treatise on mythology, the addition of a string to the lyre then in use, and the invention of melody and rhythm. Sudre also gives him credit for the last-named improvement, and calls him the first true poet. A few fragments of poetry, under his name are to be found in Stobaeus.—Burke's Hist. of Mus.

LIONARD (PIERRE) a French botanist, distinguished for his practical knowledge of the plants of Dauphiny. He was born in 1729, of a peasant family, a few leagues from Grenoble. Having enlisted as a company soldier, he was wounded at the taking of Port-Mahon in Minorca, in 1756, and again in Coromandel in 1764 on which he was discharged with a pension. He then married with an noble, who was a botanist at Grenoble, when he acquired such a taste for botanical researches, that notwithstanding his want of education, he was enabled to read the works of Linnæus, and become the correspondent of Rommeus. In 1783 a botanic garden was established at Grenoble, of which Lionard was appointed superintendent. He was killed by accident in April 1795. He discovered many new species, in Dauphiny and the Alps, with which he described the species under his care; and in the winter his time was occupied in preparing and describing them.—*Eng. Univ.*

LIP

MARINUS (Maurice) a learned German Bibliographer, who was native of Marburg. In 1652 he went to Wittenberg to study Theology; and having taken his degrees he became corrector of the gymnasium of Halle. He afterwards was rector and professor at the Caroline college at Stettin and ultimately rector of the academy of Lebec where he died in 1692, aged sixty-two. He was the author of a catalogue of works on various sciences, entitled "Bibliotheca realis," 6 vols. folio; of a curious dissertation on new year's gifts, and another on the navigation of Solomon's ships to Uphar.—*Mercer. Biog. Univ.*

LIPPERT (PARIS DANIEL) an ingenious artist born of poor parents, at Dredes in 1703. He was originally a glass-blower but having studied drawing and made himself acquainted with the Latin and Greek languages he was appointed drawing master to the pages of the elector of Saxony. His situation made him known to many persons of distinction and afforded him facilities for augmenting a collection of antiquities which he had employed himself in forming. He contrived a method of taking impressions in glass of ancient engraved gems a number of which he offered for sale and of which he published a catalogue in 1753, with the following title "Gemmarium anaglyphicarum et draygylphicarum ex praeterea Europa Museis selectarum ectypia. M. ex vitro obduculo et masso quadam studio P. D. Lippert fusa et afficta Dred. 4to." He published an account of a second collection in 1756 and of a third in 1763 besides other works. He died in 1783.—*Bieg. Univ.*

LIPPI There were three Florentine artists of this name. Of these the eldest FRANCESCO FILIPPO, born in 1401 and nicknamed "The Old" had taken the vows as a Carmelite monk but afterwards abandoned the church which step from the debauchery manifested in his life and manners, it may be concluded other motives beside a love of the fine arts were instrumental in producing Lippi underwent many vicissitudes of fortune after leaving his convent, and was, on one occasion unfortunate enough to fall into the hands of a Barbary corsair who carried him into Africa and sold him to slavery. On this occasion his pencil stood him in the stead of a ransom, and the successful exertion of his talents upon the portrait of his purchaser, was rewarded by his restoration to liberty. On his return to Italy he was received into the service of the grand duke of Florence who much admired his style of painting which bore a strong resemblance to that of his old master Masaccio. His death took place in 1469; and, although he had at that period attained the age of sixty years, it is said to have been the result of an intrigue, carried on with a female of a respectable family to the vengeance of whose relatives he had a victim; poison being employed for its destruction.—He left one son PIETRO also a painter of considerable talent and reputation born in 1430; many of his works are

LIP

yet to be found in the city of which he was a native. He died in 1506.—LEONARDUS the third of the name, descended of the same family, visited to considerable skill as an historical and portrait painter the arts of poetry and music. He was born in 1686 and is advantageously known as the author of a burlesque poem entitled "Malmaneile Bacchante." Of this work there have been three editions, two printed at Florence in 1688 and 1731 the other in 1768 at Paris. His modesty prevented his giving this production to the world under his own name and it consequently appeared originally under the fictitious one of Zeph. His death took place in 1664.—*D'Argenville. Vie de Peint.*

LIPSIUS (Jurrus) an acute critic and erudit scholar of the sixteenth century born at Iach in Brabant a village situated between Brussels and Louvain in October 1547. He was of a family in which talent may be said to have been hereditary. Martina Lipsius the intimate friend of Erasmus being his uncle. His genius developed itself at a very early period of life the strength of his memory being considered wonderful and before he had completed his ninth year he was already the author of some miscellaneous poetry much above mediocrity. In the rudiments of education he was instructed at Brussels and subsequently followed up his literary pursuits in the colleges of Aesth Cologne and Louvain. From the jesuit college, where he continued his studies he removed to Rome in his twentieth year and having been fortunate enough to secure the patronage of cardinal Granville by dedicating to him his treatise "Variarum Lectiorum" was received into his eminence's household in the nominal capacity of secretary. With this distinguished prelate he remained till 1569 availing himself sedulously of the opportunities offered him to consult the treasures contained in the vaticans and other principal libraries; especially employing himself in the collation of rare and ancient manuscripts. On his return to the Netherlands after a short time spent at Louvain he visited the capital of the German empire whence declining to reside in his native country on account of its unsettled state he returned to Jena and accepted a professorship in that university. Here it was that the fickleness of his disposition, and the vacillating state of his opinions respecting religious matters which eventually fixed the imputation of imbecility on a character in other respects estimable first became apparent. He renounced the Romish church, and became a Letherian, but quitting Jena, at length, with an avowed intention of spending the remainder of his life in retirement in his native country he repaired to Iach and soon after recanted his supposed error, and became reconciled to the see of Rome. In 1577 however he again removed to Leyden, when he embraced the doctrines of Calvin; and during the thirteen years which he spent in that university gave to the world the most consummate of his works.

In 1590, he returned, finally, to Louvain; and, as if the change of climate produced a corresponding alteration in his theological sentiments, once more became a Catholic; and that, as is not uncommonly the case with persons so versatile, of the most bigoted description. In his determination of leaving his days in the neighbourhood in which they had begun, he was, however, more constant, and, although many tempting and honourable offers were made him by various potentates anxious to engage so celebrated a scholar in their service he refused them all; and at length died at Louvaine in the spring of 1606. Extremes, it is well known are apt to beget the contrary extremes and to this circumstance as well as to the operation of disease in his latter days upon a mind whose principles appear to have been never very firmly established, may be attributed the peculiar superstition which a short time before his death led him to dedicate a silver pen, and his fur gown to the service of the virgin Mary. As a scholar and a critic the name of Lipsius will be remembered with different feelings, from those produced by his conduct as a private individual, although even in his writings, traces are but too plainly to be discovered of an intolerance little becoming one who had himself so often and so freely exercised the liberty of conscience. His principal works, which altogether occupy six folio volumes are the 'Variae Lectiones' above mentioned, an excellent Commentary on the Works of Tacitus treated 'De Constantia' 'De Militia Romana' 'De Amphitheatris' 'De Pronuntiatione recta Linguae Latine' 'De Cruce' 'De una Religione' 'De Bibliothecis' 'Sacra Menneppea' 'Sarmatia' and 'An Oration on the Death of the Duke of Saxony'. The best edition of them is that printed at Antwerp in 1637.—*Morer. Nov. Dict. Hist.*

LISLE (de) the name of a French family many of the members of which distinguished themselves in succession from the middle of the seventeenth to that of the eighteenth century by their proficiency in geography, astronomy, and the cognate sciences.—Of these the first was CLAUDE DE LISLE, born in 1644, at Vaucouleurs, in Lorraine, he was originally intended for the French bar, but quitted the professorate of the law in order to devote himself to studies more congenial to his taste. He was a good geographer and taught that science in Paris with great reputation. His lectures were afterwards printed in two duodecimo volumes under the title of 'An Introduction to Geography with a Treatise on the Sphere'. His other works are, a 'History of the Kingdom of Spain' (1700), 'A Genealogical and Historical Atlas,' and an 'Abridgment of Universal History.' The celebrated regent duke of Orleans was the most illustrious of his pupils. He died at Paris, in 1720 leaving three sons, all of whom afterwards attained to eminence.—Maurice, the eldest, born in the French capital, in 1673, early rose to celebrity by his

progress in the sciences. A copy of his work entitled by him, in his twenty-third year, raised him at once into notice, and caused his name to be enrolled among the members of the French Academy in whose transactions several of his productions are to be found. Louis XV took lessons of him and appointed him geographer royal, in which capacity he furnished maps to a great variety of the publications of the day. In 1726 he was engaged in executing a map of Malta to accompany the history of that island by Verot, but died suddenly before the completion of his task in the course of the same year.—Yo Louis, the second son who eagerly devoted himself to the prosecution of the same course of study has countrymen are indebted for the accurate determination of the longitude and latitude of a variety of places in the countries lying nearest to the north pole. In order to effect this object he travelled into Siberia and Kamtschatka. His death took place in 1741.—JOSEPH NICHOLAS the youngest and most celebrated of the three was born like his brothers in Paris in 1688. To the hereditary talent of his family he joined habits of even deeper research and closer application. He accepted an invitation from the court of Russia to take charge of the Royal Observatory at St Petersburg and in discharging the duties of that situation during a period of more than twenty years, contributed much to the advancement of geographical as well as astronomical knowledge in that country. In 1747 he resigned his office and returned to Paris, where he obtained a mathematical professorship in the university which he held till his death in 1768.—*Hutton's Math. Dict. Navy. Dict. Hist.*

LISLE (Sta. GONZAC) a gallant but unfortunate royalist officer during the English civil wars of the seventeenth century. He was born in London where his father was a book seller but embracing a military life served several campaigns in the low countries, after which he returned to England and distinguished himself so much by his courage at the battle of Newbury under the very eye of Charles I that the latter dubbed him a knight banneret on the field. In 1648 he held Colchester for the king and defended it bravely but being at length compelled to yield the town, was shot by the parliamentarian leaders on the 28th of August in that year. He exhibited at his execution the same constancy of mind which had throughout distinguished his short but brilliant career.—*Hume's Hist. of Eng. Clergy.*

LISLE (JOHN BAPTISTE ISABE DE) also known under the name of Delisle de Sales, one of the most fertile authors of the eighteenth century. He was born in 1743, at Lyons, and entered young into the congregation of the oratory, but left that society after a few years, and went to Paris, where he devoted himself to the cultivation of literature. He was but little noticed, till he published a tract entitled, "La Philosophie de la Nature," which having been denounced as immoral and

iniquities; he was persecuted and imprisoned, where circumstances procured him great temporary celebrity. Having appealed against the sentence, he obtained his freedom, and employed himself, during the remainder of his life, in writing Platonic dreams, romances, histories, and dramas, to which he in vain endeavoured to attract attention, by adopting odd titles, and advertising them as the compositions of the author of "Philosophie de la Nature." He was imprisoned during the government of Robespierre, and subsequently became a member of the institute. He married, at the age of seventy-two, a second wife—the daughter of Badia or Ali Bey the Spanish traveller. His death took place at Paris, in 1816.—*Bugl. Litt.*

LISTER (MARIUS) a physician and naturalist, was born about 1638 of a Yorkshire family settled in the county of Buckingham. He was educated at St John's college Cambridge of which he became a fellow in 1660. Having embraced the medical profession, he travelled to the continent, and in 1670 settled in York as a practitioner. To his professional employment, he added the diligent pursuit of natural history and antiquities, and communicated many papers to the Royal Society of which he was elected a fellow. In 1683 he removed to the metropolis, and in the same year was created a doctor of physic by diploma at Oxford and was also elected a fellow of the royal college of physicians. In 1698 he attended the earl of Dorset in his embassy to France and on his return published an account of his journey which in consequence of his minute observations as a naturalist was ridiculed by Dr William King in a parody entitled "A Journey to London." In 1709 Dr Lister was made physician in ordinary to queen Anne which post he occupied only two years his death taking place in February 1712. The medical writings of this physician are marked by too great an attachment to hypothesis but are not without merit. The principal are *De Fontibus Medicinalibus Angliae* 1682 1684, *Octo Exercitationes Medicinales Disertatio de Humoribus*. As a naturalist besides his numerous papers in the Philosophical Transactions, he published the following works—*Histona Anatomica* 1678 &c. "Exercitatio Anatomica de Cochlear maxilla, Terrestribus et Luminibus," 1694 8vo "Exercitatio Anatomica altera de Eucrinis Flavistibus et Marinis," 1695 8vo "Exercitatio Anatomica terza Conchilarum Bivalvium," 1696 &c. In all these works he exhibits great accuracy of research into the minutest parts of the animal economy. His "Journey to Paris" was also well received, and was much esteemed, notwithstanding the satire which a few peculiarities elicited.—*Bugl. Brit. Alkis's G. Bugl. Haller's Hist. Anatom. et Med.*

LITHGOW (WILLIAM) a Scottish traveller who in the early part of the seventeenth century proceeded on foot through various countries in Europe, Asia, and America, over a distance, according to his own assertions,

of more than thirty-six thousand miles. In the course of these prodigious exertions he met with many strange adventures, and underwent many hardships, the most serious of which was his falling during his journey through Spain into the hands of the inquisition at Malaga. On this occasion he underwent the torture, both ordinary and extraordinary, and though he afterwards succeeded in reaching England, he was so much crippled by the injuries he had received, as to be forced to be carried to court in a litter when he went there for the purpose of presenting his book to James I. A squabble with the ambassador Gondi afterward caused him nearly a year's confinement in the marshalsea prison Lithgow died in 1640. The original account of his wanderings is now difficult to be met with, as is also his account of the siege of Breda, but the leading incidents of the former are to be found in the *Phœnix Britannicus* — Granger.

LITTLETON (ADAM) an erudit scholar, and lexicographer of the seventeenth century born November 8, 1637 at Hale Owen, Salop. He received his education at West minister grammar school of which the celebrated Babby was then head master. Thence he was elected off in due course to a studentship of Christ church Oxford, in 1647 but scarcely retained his situation a twelvemonth, being deprived by the parliamentarian visitors. On that occasion he returned to Westminster and obtained the situation of usher to the foundation in which he had been brought up. In 1658 he succeeded to the second mastership and two years after graduated as DD having been previously made a king's chaplain. In 1674 he obtained a stall at West minister together with the rectory of Chelsea, where he opened a school. The king had further designed to place him at the head of West minister school but the appointment did not take place although he afterwards succeeded to the sub-deanery of the abbey. De Littleton was an acute critic and an excellent grammarian. Besides upwards of sixty sermons, he was the author of a Latin treatise entitled "Elementa Religiosa" and a translation of the "Jani Anglicana Facies altera," of Selden. He also compiled a valuable Latin dictionary by which he is now principally known. His death took place at Chelsea, in June 1694.—*Bugl. Brit.*

LITTLETON LLD (EDWARD) an English poet of the last century. Having passed with much credit through Eton college he was elected off to a fellowship at king's college, Cambridge where the reputation he had already acquired, by the procreacy of his talents at school was increased by the result of humatter studies. In 1760 he returned to Eton in the capacity of a junior master and in 1786 became a fellow of the college, of which occasion he graduated as a doctor of laws. Dr Littleton afterwards obtained a king's chaplaincy and the vicarage of Maple Durham, in Oxfordshire but enjoyed his benefice little more than five years. Most of his poetical works are to

he found in Doddridge's collection, especially "The Spy;" and two volumes of his sermons appeared after his decease, which took place in 1724.—*Big Art.*

LITTLETON or LYTTELTON (THOMAS) a celebrated English judge and law authority. He was the eldest son of Thomas Wriothesley of the county of Dorset, esq. by Elizabeth, daughter and sole heir of Thomas Littleton of Frankley in Worcestershire, in consequence of whose will the eldest son of the marriage took the surname and name of Littleton. He was born at the beginning of the fifteenth century at Frankley and having been educated at one of the universities, he was removed to the Inns of Temple where he studied the law and became very eminent in his profession. He first distinguished himself by his learned lectures on the statute of Westminster "De donis conditionalibus," and was afterwards made by Henry VI judge of the Marshalsea court, and king's serjeant. In 1455 he went the Northern circuit as judge of assize and was continued in the same post by Edward IV who also in 1466 appointed him one of the judges of the common pleas. In 1475 he was created among others, a knight of the bath, and continued to enjoy the esteem of his sovereign and the nation until his death at an advanced age in 1481. The memory of judge Littleton is preserved by his work on "Tenures" which has passed through a very great number of editions, those from 1539 to 1639 alone amounting to twenty-four. This work is esteemed the principal authority for the law of real property in this kingdom while the "Commentary of sir E. Coke" is deemed the repository of all his learning on the subjects thereto treated. Of this work a re-edition took place in 1788 enriched with the annotations of sir M. Hale and lord Chancellor Nottingham, and greatly improved by the learning and industry of Mr Hargrave and Mr Butler.—*Big Art. Roman's Hist. of Royal Law.*

LITTLETON (Graeme) see LYTTELTON

LIVINGSTON (John) a Scotch presbyterian divine, who was educated at Glasgow where he took the degree of M.A. in 1621. He was a zealous covenanter and having opposed the episcopal government of the church after the Restoration, he was twice suspended from his pastoral office, and in 1665 he was banished the kingdom. He retired to Holland and officiated as minister of the Scots chapel at Rotterdam till his death in 1681. He wrote farewell letters to his parishioners at Amanor, 1663, and other works but he deserves notice chiefly as the author of a Latin translation of the Old Testament, which has never been published.—*Longfellow's Hist. of His. Art.*

LIVINGSTON (William) an American oratorian and author, born at New York, in 1795. During the contest between Great Britain and her colonies, he declared himself openly in favor of independence, and exerted his pen in defending his opinions. After having filled several important situations

at New York, he became one of the delegates of the congress for New Jersey; and after the establishment of the constitution, he was made governor of the state. He died in 1790, at his estate in Elizabeth-town, after having held the government twelve years. He was the author of a poem entitled, "Philosophical Soliloquy," "A Review of the Military Operations in North America, from 1755 to 1758," besides several other works which have been praised as advantageous specimens of transatlantic literature.—*Big Art. de Contemp.*

LIVIUS (TITUS) a very eminent Roman historian was a native either of the city or territory of Patavium or Padua and sprung from a family which had given several consuls to the Roman republic. He came to Rome in the reign of Augustus, and appears to have shone in the society of several persons of rank including the emperor himself. He first made himself known by some literary dialogues but his reputation is principally built upon his history of Rome from the foundation of the city to the death of Drusus in one hundred and forty two books. It was received with extreme applause and so great was the fame of the author during his life time that Pliny the younger mentions the journey of a Spaniard from Cadiz to Rome in order to see Livy and who having gratified his curiosity immediately departed. On the death of Augustus, he returned to Padua, where he was received with every testimony of honor and respect, and where he died in the fourth year of the reign of Tiberius at the age of seventy-six. Of Livy's history unfortunately only thirty five books are extant consisting of the first, third, fourth and half of the fifth decades, but an epitome of the whole with the exception of two books is preserved which however gives no more than the heads of the matter. The history of Livy is highly praised by all the posterior Roman writers, and especially by Seneca, Pliny the elder and Quintilian. His descriptions are singularly lively and picturesque and there are few specimens of oratory superior to the speeches with which in conformity with ancient practice he interlarded his narration. He possesses not the philosophic spirit of Tacitus, and has been charged with credulity in recording the vulgar prodigies of every year which however there is reason to believe, was merely a compliment to a prevailing custom. His style has been censured by Asinus Pollio, as not entirely free from patininity by which phrase the preserved was meant the proverbiales of his native country, and some indistinct modern critics have laboured in vain to detect the vanities of this defect. The deep regret of men of letters, for the loss of so great a portion of his history has induced to much importunity in the way of pretended discovery, all of which has been ultimately detected. The best editions of his remains are that of Gessnerina, causa non variorum, 3-vols. 8vo, Lond. Ed. 1679. of Leclerc. Amer. 10-vols. 12mo, 1709. of Eustachius, Amer. 1726, 7 vols. 12mo of Rydellius, Ed. 1751. 4 vols. 12mo, of Masson, London, 1752.

Spain, 1691; of Oxford, 1800, 6 vols. These, and of Elizalde, Lips., 1802-4, 6 vols. 1691. Hay has been repeatedly translated into the various modern languages; the best English version being that of Baker.—*Vest. Hist. Lat. Spans. Epoc. Quatuor Inst.* Dibdin's edition of *Messene's Classics*.

LLORENTE (DON JUAN ANTONIO) a modern Spanish historian, chancellor of the university of Toledo, and a member of the inquisition, a "Complete History" of which count, "from the period of its establishment by Ferdinand V to the present time," was published by him, and translated into English in 1827. Having accepted a situation under the government of Joseph Bonaparte, he was driven into exile on the return of Ferdinand and fled to France whence, being again exiled by the inquisition of the court of Rome he returned secretly to Spain, but died shortly after his arrival at Madrid, in the spring of 1828.—*Biog. Univ.*

LLOYD (DAVIS) an English historian and biographer, of the seventeenth century. He was a student of Oriel college, Oxford where he took his degree, and afterwards, having entered the church, he obtained a rectory in the country. Thence he resigned for the office of reader at the charter-house, in London. He subsequently became a prebend of St Asaph, and held other performances in North Wales, where he died in 1691. The best known of his works is his memoirs of the statesmen and favourites in England, since the Restoration—reprised, with an account of the author by Sir Charles Whitworth, in 1766. He also published the lives of persons who suffered for their loyalty, a life of general Monk, and a history of plots and conspiracies.—*Chalmers's Biog. Dict.*

LLOYD (HARRY) a military officer and eminent writer on tactics. He was born in Wales, in 1729, and was the son of a clergy man, who instructed him in the mathematics, and classical literature. At the age of seven teen he went abroad, and he was present at the battle of Fontenoy. He afterwards travelled in Germany and having resided some years in Austria, he was appointed aide-de-camp to Marshal Lacy. He was gradually promoted till in 1760 he was intrusted with the command of a large detachment of cavalry and infantry destined to observe the movements of the Prussians. Lloyd executed this service with great success, but soon after resigned his commission in disgust. He was then employed by the king of Prussia and, during two campaigns he acted as aide-de-camp to General Ferdinand of Brunswick. After the peace of Hubertshausen he travelled till the commencement of hostilities between Russia and Turkey, when he offered his services to Catherine II. who made him a major-general. He distinguished himself in 1774, at the siege of Silistria, and subsequently he had the command of thirty thousand men in the war with Sweden. At length, he left Russia, and travelled in Italy, Spain, and Portugal. He visited general Elliot, at Gibraltar, whence he

proceeded to England. During his stay of the coast of the country he described the same, on the invasion and defence of Great Britain, which was published in 1798. He retired, at length, to Hay in the Netherlands, whence he died June 19, 1793. Besides the former, he was the author of an introduction to the history of the war in Germany between the king of Prussia, and the empress-queen, London, 1781, 2 vols. 4to; and a treatise on the composition of different armes, ancient, and modern.—*Biog. Univ.*

LLOYD (Neville) an episcopal divine and philological writer who was a native of Finsbury. He was educated at Winchester school and Wadham college, Oxford where he obtained a fellowship. The bishop of Worcester to whom he was chaplain gave him the living of Newington Butts near London which he held till his death, in 1660, at the age of forty-six. He published an historical and geographical dictionary in Latin which was founded on that of Charles Stephenson, and has served as the basis of many subsequent compilations.—*Wood's Athene Oxon.*

LLOYD (ROBERT) an ingenious English poet, was the son of the rev Dr Lloyd, second master of Westminster school, and was born in 1733. After finishing his juvenile studies, under the tuition of his father he went to the university and having taken his degree in arts he returned to Westminster to become an usher in the school. Well qualified by his classical attainments for that situation he appears to have been dissatisfied with the restraints which it imposed on him and having formed an acquaintance with Churchill Bonet Thornton, and other dissipated men of letters he relinquished his ushership and commenced author. His first production which attracted notice was a poem entitled *The Actor* which gave rise to the famous anecdote of his friend Churchill. He afterwards wrote several smaller poems some of which possess much merit and he was employed in writing for the St James's magazine and other periodical publications. Extravagance and intemperance involved him in embarrassments which occasioned his being arrested and confined in the Fleet prison, where he died in 1762. He wrote a comic opera, called *The Shepherd's Wedding* and other dramatic pieces long since forgotten but his poems have been re-published.—*Chalmers's Biog. Dict.*

LLOYD (WILLIAM) a learned English prelate, born in 1627 at Tilgham, in Hertfordshire where his father was rector of the parish. At the age of twelve he became a student of Oriel college, Oxford, whence he removed to a scholarship in Jesus college, in 1640. He took the degree of BA in 1642 was afterwards chosen a fellow of his college and in 1646 commenced MA. He was ordained deacon in 1648 and took priest's orders in 1650. After having resided at the university for several years, he obtained a prebend at the collegiate church of Ripon soon after the Restoration, and in 1665 he was appointed chaplain to the king. The following year he was

collated to a prebend at Salisbury, and he also took the degree of D.D. after holding various other ecclesiastical preferments, among which was the deanship of Bangor he in 1676 was instituted to the vicarage of St Martin a.m the Fields, Westminster, and, in 1680 he was raised to the bishopric of St Asaph. While he held this benefice, he joined archbishop Sancroft, and other prelates in presenting a petition to king James II despatching his assumed power of suspending the laws against popery. The prosecution and acquittal of the persecutors is a well known, and important fact in English history. On the Revolution taking place, bishop Lloyd was made almoner to king William III, and in 1692 he was translated to the see of Lichfield. Thence he was promoted to that of Worcester where he sat till his death in 1717. The writings of this prelate display much learning and acuteness. They relate to history and divinity including

A Chronological Account of the Life of Pythagoras and of other famous Men, his Contemporaries. The History of the Government of the Church as it was in Great Britain and Ireland when they first received the Christian Religion. A Dissertation upon Daniel's Prophecy of the Seventy Weeks, and a number of sermons on various occasions.—*Bug Bry Adua's G Big*

LLYWARCH AP LLYWELYN a Welsh bard who flourished between the years 1160 and 1230. Some of his poetical effusions have been published in the Welsh Archaeology whence they are accompanied by learned annotations.—LLYWARCH BEN was one of the earlier Cambrian poets or bards, whose compositions are preserved, and whose personal history is not a little romantic. He lived in the early part of the seventh century when the Saxons were contesting with the Britons the possession of the North of England. Llywarch is said to have lost twenty sons in battle against the invaders, and to have afterwards retired to a cell at Llanvor near Bala, in Merionethshire, where he lived to the age of a hundred and fifty. His martial elegies and other poems have been collected and published by Mr William Owen.—*Lampas.* *Duct. Hist.*

LLYWELYN AP JORWERTH a king of North Wales in the beginning of the thirteenth century, called by Matthew Paris Lleid the Great. His uncle David having usurped the government in 1194 Llywelyn raised an army and recovered his hereditary dominions which he defended against an attempt of David to dispossess him in 1204. He married the daughter of John, king of England with whom however he was repeatedly engaged in hostility, as he was subsequently with Henry III. In his old age he concluded a treaty of alliance with the latter and died after a peaceful reign in 1240.—*Warrington's Hist. of Wales.*

LLYWELYN AP GRYFYDD the last sovereign prince of Wales, and the grandson of the foregoing. He reigned at first over North Wales only, leaving South Wales to his brother Owain who making war upon him,

won those provinces, and deprived of his territories. This possessed of the whole country, he sought to secure his power by fomenting disturbances in England. This conduct involved him in war with Henry III, and afterwards with Edward I. He at length fell beneath the power of the latter and being killed in battle in 1282 the independence of Wales perished with him.—*Id.*

LOBEIRA (Vasco) author of the celebrated romance of *Amadis de Gaul* was born at Porta in Portugal, in the fourteenth century. In 1386 he was knighted on the field of battle at Aljubarrota, by king John I and he died at Elvas where he possessed an estate, in 1403. The original of his celebrated romance was preserved in the library of the duke of Aveiro who suffered for the conspiracy against Joseph I, but whether still in existence or not is doubtful. The oldest version known to be extant, is that of Garcilasmo de Mendoza which was published at Salamanca, in 1510. This romance has been claimed for France it having been asserted that Lobeira was only a translator but Dr Southey has succeeded in refuting that pretension and nothing seems to reasonably impeach the claim of Portugal to the production of this best work of its kind which also enjoys the merit of giving rise to the admirable Don Quixote in which its superiority is adequately appreciated. Amadis may be considered as the genuine model of a knight in legendary history, and in an age when chivalry and a lofty spirit of adventure still prevailed, this romantic pattern was not absolutely lost upon the warm imaginations of the youth of Europe.

Truly says sir Philip Sidney I have known men that even with reading *Amadis de Gaul* have found their hearts moved to the exercise of courtesy liberality and especially, courage.—*Art. Lobeira by Dr Southey in Adua's G Big*

LOBELIUS or de LOBEL (MATTERAS) a Flemish physician and botanical writer of the sixteenth century. He studied at Montpellier and having travelled over the South of France, Switzerland Italy and Germany he returned to his native country and settled at Antwerp, whence he removed to Delft and was made physician to the prince of Orange and to the states of Holland. The latter part of his life was spent in England whether he was invited by James I who gave him the title of royal botanist. He was also patronised by William lord Zoucha, whose garden at Hackney he superintended. He died in 1616 aged seventy eight. Lobel published a work entitled,

"Nova Stirpium Adversaria," which exhibits one of the earliest attempts at a systematic arrangement of plants also "Observationes, sive Stirpium Historia" and other treatises. The term *Lobelia* has been applied to a genus of plants in commemoration of this botanist.—*Pulley's Sketches of Botany* *Allie's Ed. Big*

LOBINEAU (Guy ALEXIS) a French historical writer born at Rennes in 1666. In the seventeenth year he entered into the Benedictine

L O C

the congregation of St Maix, in the theory of St Domingo et Roanne. His life was devoted to study, and the fruits of his researches were, " L Histoire de Bretagne " 1707 2 vols. folio, which he defended against the criticisms of the aged Verot, and others. " L Histoire des Silens de Bretagne " 1724, folio, the continuation of L Histoire de Paris 1723 5 vols. folio, begun by Michael Feblius, besides some translations from the Spanish and Greek. The history of Britain is still valuable as a work of reference. Lobmeau died at an abbey near St Malo in 1737.—*Le Cerf Biblio des Aut de Cong de St Maix Morer. Duct. His.*

LOBO There were two Portuguese authors of this name JACOSS, born in 1593 at Lisbon became a member of the college of jesuits, and was despatched by his order on a mission into the interior of Africa. On his return to Portugal he published an interesting account of his travels especially through Abyssinia. Le Grand translated this work into French from which Dr Johnson published an English abridgment, (his first production,) and drew much of the information as to the customs and manners of the Ethiopians which he afterwards made use of in his *Rasselas*. Father Jerome Lobo died in 1678 rector of the college of Coimbra.—RODRIGUES FRASCIANO Lobo born in the province of Estremadura was the author of a variety of miscellaneous poems and also of a comedy still popular among his countrymen, entitled *Escurcione*. His works were collected in 1721 and printed together in one folio volume.—*Nova Diet. Hist.*

LOCHER (JANUS) surnamed Philomathus a learned writer born in Swabia in 1470 He studied in Italy and taught poetry and rhetoric at Fribourg at Basel and at Ingolstadt. From the latter place he was expelled on account of some opinions which he had advanced but he was afterwards restored to his professorial chair. The emperor Maximilian I made him his poet laureate. He died at Ingolstadt in 1528. He translated into Latin Sebastian Brandt's " Ship of Fools," and published many other works, poetical, dramatic and critical.—*Eug. Urs.*

LOCK (MATTREW) an eminent English poetaster composed in ordinary to Charles II for whose public entry into London at the Restoration he furnished the music. He is known as the first who ever published rules on the subject of thorough bass in this kingdom a collection of which is to be found in a work entitled *Melotheca*. Lock, whose principal forte was the composition of airs for dramatic performances, has acquired considerable reputation by the beautiful music to Shakspeare's tragedy of Macbeth; an attempt, however, has recently been made but on insufficient grounds, to deprive him of the credit due in this case, and to transfer it to his contemporay John Eccles. He was also author of the music to Davenant's alteration of the " Ten Days," and, in conjunction with Drury, set Dryden's opera of " Psyche." In 1677 an

L O C

attack, made by him on Thomas Salter's Essay towards the advancement of Method, by casting away the popularity of Child, and &c. involved him in a controversy with that writer in which both parties displayed at least as much acrimony as argument. The date of his decease is uncertain.—*Burke's Hist. of Mus.*

LOCKE (John) one of the most eminent philosophers, and valuable writers of his age and country was born at Wrington in Somersetshire on the 29th August 1632. His father who had been bred to the law acted in the capacity of steward, or court-keeper to colonel Alexander Popham by whose interest, on the breaking out of the civil war he became a captain in the service of parliament. The subject of this article was sent at a proper age to Westminster school whence he was elected in 1651 to Christ church college, Oxford. Here he much distinguished himself for his application and proficiency and having taken the degree of BA in 1655 and of MA in 1658 he applied himself to the study of physic. In the year 1664 he accepted of an offer to go abroad in the capacity of secretary to sir William Swan, appointed envoy from Charles II to the elector of Brandenburg and other German princes but he returned in the course of a year and resumed his studies with renewed ardour. In 1666 he was introduced to Lord Ashley afterwards the celebrated political earl of Shaftesbury to whom he became essentially serviceable in his medical capacity and who was led to form so high an opinion of his general powers, that he prevailed upon him to take up his residence in his house and urged him to apply his studies to politics and philosophy. By his acquaintance with this nobleman Mr Locke was introduced to the duke of Buckingham the earl of Halifax and others of the most eminent persons of their day. In 1668 at the request of the earl and countess of Northumberland he accompanied them in a tour to France and on his return was employed by lord Ashley then chancellor of the exchequer, in drawing up the fundamental constitutions of the American state of Carolina. He also inspected the education of that nobleman's son and was much consulted on the marriage of the latter the eldest son by which was the celebrated author of the *Characteristics*. In 1670 he began to form the plan of his essay on the human understanding, and about the same time was made a fellow of the royal society. In 1672 lord Ashley having been created earl of Shaftesbury and raised to the dignity of chancellor, he appointed Mr Locke to the office of secretary of presentations, which however he lost the following year when the earl was obliged to resign the seals. Being still president of the board of trade that nobleman then made Mr Locke secretary to the same but the commission being dissolved in 1674, he lost that appointment also. In the following year he graduated as a bachelor of physic and being apprehensive of a consumption, travelled into France;

and finding some time at Maastricht. In 1672 he removed to England, at the request of the Earl of Shaftesbury, then again restored to power, and in 1682, when that nobleman was obliged to retire to Holland, he accompanied him into exile. On the death of his patron in that country, overw^h how much he was disliked by the predominant arbitrary faction at home, he chose to return abroad; and was in consequence accused of being the author of certain tracts against the English government, and although these were afterwards discovered to be the work of another person he was arbitrarily ejected from his studentship of Christ Church, by the king's command. Thus banished, he continued abroad nobly refusing to accept a pardon, which the celebrated William Penn undertook to procure for him, exposing himself like the chancellor L'Hopital, in similar circumstances, spectator of the crimes of which he had been declared guilty. In 1684, when Monmouth undertook his ill-concerted enterprise the English envoy at the Hague demanded the person of Mr Locke and several others, which demand obliged him to conceal himself for nearly a year but in 1685 he again appeared in public, and formed a literary society at Amsterdam in conjunction with Lumbrich, Le Clerc and others. During the time of his concealment, he also wrote his first Letter concerning Toleration which was printed at Goeda, in 1689, under the title of "Epistola de Toleratione," and was rapidly translated into Dutch French and English. At the Revolution this eminent person returned to England, in the fleet which conveyed the princess of Orange and being deemed a sufferer for the principles on which it was established, he was made a commoner of appeal, and was soon after gratified by the establishment of toleration by law. In 1690 he published his celebrated Essay concerning Human Understanding, which was instantly attacked by various writers among the studies of learning most of whose names are now forgotten. It was soon proposed, at a meeting of the heads of houses of the university of Oxford to formally censure and discourage it but nothing was finally resolved upon, but that each master should endeavour to prevent its being read in his college. Neither this however nor any other opposition availed the reputation both of the work and of the author increased throughout Europe, and besides being translated into French and Latin it had reached a fourth English edition in 1700. In 1690 Mr Locke published his second letter on Toleration and in the same year appeared his two "Treatises on Government," in opposition to the principles of Mr Robert Filmer and of the whole passive obedient school. He next wrote a pamphlet entitled, Some Considerations of the Consequences of lowering the Interest and Value of Money 1691 etc, which was followed by other smaller pieces on the same subject. In 1692 he published a third. "Letter on Toleration;" and the following year his "Thoughts concerning

"Education." In 1695 in the same year published a treatise on trade and plantations, and in the same year published his "Reasons for Christianity, as delivered in the Sermons" which being warmly attacked by Dr Edwards, in his "Sectarianism Unmasked," Mr Locke followed with a first and second "Vindication," in which he defended himself with great mastery. The two works by Toland, and other Unitarian writers, of the premises laid down in the "Essay on the Human Understanding" at length procured an opponent in the celebrated bishop Stillingfleet, who, in his "Defence of the Doctrine of the Trinity," commented some passages in Mr Locke's essay; and a controversy arose, in which the great reading and proficiency in ecclesiastical antiquities of the prelate necessarily yielded in an argumentative contest to the reasoning powers of the philosopher. With his publications in this controversy which were distinguished by peculiar mildness and urbanity Mr Locke retired from the press, and his asthmatic complaint increasing with the rectitude which distinguished the whole of his conduct, he resigned his post of commissioner of trade and plantations although king William was very unwilling to receive it, observing that he could not in conscience hold a situation to which a considerable salary was attached, without performing the duties of it. From this time he lived wholly in retirement, where he applied himself to the study of scripture while the sufferings incidental to his disorders were materially alleviated by the kind attentions and agreeable conversation of lady Masham, who was the daughter of the learned Dr Cudworth and for many years his intimate friend. Mr Locke existed nearly two years in a very declining state and at length expired in a manner correspondent with his great piety equanimity and rectitude on the 26th of October 1704. He was buried at Oates where there is a neat monument erected to his memory with a modest Latin inscription added by himself. The moral social and political character of this eminent and valuable man, is sufficiently illustrated by the foregoing brief account of his life and labours, and the effect of his writings upon the opinions and even fortunes of mankind, will form the most forcible eulogium on his mental superiority. Of his "Essay on the Human Understanding" it may be said that no book of the metaphysical class has ever been more generally read, or looking to its overthrow of the doctrine of innate ideas, none has produced greater consequences. In the opinion of Dr Reed he gave the first example to the English language of writing on abstract subjects with simplicity and perspicuity. No author has more successfully pointed out the danger of ambiguous words, and of having distinct notions on subjects of judgment and reasoning while his observations on the various powers of the human understanding, on the use and abuse of words, and on the extent and limits of human knowledge, are drawn from an attentive reflection on the operations of his own mind the only

L O D

source of genuine knowledge on those subjects. Historical topics, no doubt, are introduced into his political productions, which do not strictly belong to it, and some of its opinions have been justly controverted. In some instances too its author is verbose, and wasting in his characteristic perspicuity but with all these exceptions, and even amidst the improvements in metaphysical studies, to which this work itself has mainly conducted, it will ever prove a valuable guide in the acquisition of the sciences of the human mind. His next great work was *Two Treatises on Government* although necessarily opposed by the theorists of divine right and passive obedience, and by writers of jacobitical tendencies generally espoused the principles which by placing the house of Brunswick on the throne of Great Britain may be deemed the constitutional doctrine of the country and as such it has been ably and unanswerably defended. Besides the works already mentioned, Mr. Locke left several MSS. behind him from which his executors, Mr. Peter King and Mr. Anthony Collins, published in 1706 his paraphrase and notes upon St. Paul's Epistles to the Galatians, Corinthians, Romans and Ephesians, with an essay prefixed for the understanding of St. Paul's Epistles by a reference to St. Paul himself. In 1706 the same parties published *Poimelotus Works of Mr. Locke* 8vo comprising a treatise *On the Conduct of the Understanding*, *An Examination of Malebranche's Opinion of seeing all Things in God &c* but all his works have been collected together and frequently printed in three volumes folio and four volumes quarto.—*Biog. Brit.* *L's pref'red to Works.* *Towers's vindication* *Eyefeld's Hist. of Philos.* *Aikin's G. Biog.*

LOCKMAN (John) a dramatic and miscellaneous author of the last century born about the year 1698. His principal works are a musical drama entitled *Rosalinda*, 1740 (to which he has prefixed an ingenious treatise on the origin and progress of operatic performances) and *The Lamentations of David* an oratorio. He also assisted in compiling the *General Historical Dictionary*.

Bianville's Travels and produced a few miscellaneous poems of no great merit. He acted for some time in the capacity of secretary to the British herring fishery and died February 2 1771.—*Biog. Dram.*

LODGE (Thomas) an ingenious physician and dramatic writer who flourished during the close of the sixteenth and the commencement of the following century. Wood assigns Trinity college Oxford as the place where he received his education, but it is certain that he took his degree in physic at Avignon, owing, perhaps, to his religious tenets, which were those of the Romish church. On his return to England however he was admitted to an art studies degree at Cambridge and afterwards enjoyed an extensive practice in the metropolis. In 1595 appeared his first tragedy *"The Wounds of Civil War"* printed in folio, which was followed four years afterwards by a

L O F

tragi-comedy, entitled *"A Lodging-guest for London and for England."* *Grovius* of Ghent, the author of *"A Great Master of Wit"* &c. is said to have mostly contributed both to these and to some other of his performances. His other works are *"England's Golden Legacy,"* *"A Translation of Josephus' Jewish Antiquities,"* *"The Countess of Lancast's Nursery,"* *A Defense of the Drama* *Tribonian and Priscilla,"* *"A Translation of Seneca's Moralis,"* and *"An Alarm against Usurpation."* His death took place in 1625.—*Biog. Dram.*

LOEFLING (Peter) a Swedish botanist one of the pupils of Linnaeus. In 1749 he sustained a thesis *De Gemmis Arborum* at the university of Upsal. In 1751 he went to Spain where he was made botanist to the king, and during two years he continued making observations on the plants of that country. In 1754 he embarked on a scientific expedition to South America. He explored the districts around Cumana New Barcelona, and St. Thomas de Guyana, and was preparing to make farther discoveries when he was attacked by fever and died in 1756 aged twenty seven. Some communications from Loedding appeared in the transactions of the academies of Upsal and Stockholm and his treatise entitled *Iter Hispanicum*, has been published in Swedish German and English.—*Biog. Univ.*

LOFFT (CAPEL) was the son of Christopher Loft esq; a barrister at law who, in 1751 resided in Boswell-court, Carey street, where Capel, his second son was born in the November of that year. The delicacy of his health rendering him backward in his education it was not till 1759 that his father ventured to place him at Eton having in consequence of his own appointment to the rectorship of Windsor removed his residence to the latter town. He distinguished himself at school by the liveliness of his parts and the elegance of his compositions, and quitted at in 1769 for Peterhouse Cambridge. At the university he maintained the reputation of a sound classical scholar although his comparative deficiency in mathematical knowledge lost him the Craven scholarship for which he was a candidate. A Latin poem of his in hexameters, published as a trophy, March 1 1770 also did him much credit, and his way of handling his subject, which was the praise of Shakespeare, raised him so great an interest with Garrick that to the exertions of that great actor in consequence may mainly be attributed the healing of some family differences which eventually secured his succession to the estate of his uncle Mr. Edward Capel of Suffolk. In 1770 quitting college without taking a degree, he entered himself of Lincoln's-inn and, under the superintendance of his father proceeded to qualify himself for the English bar to which he was called, in Michaelmas term 1775 having, in the meantime occasionally relieved his severer studies by the composition of an irregular poem, entitled, the *'Praeas of Poetry'*, and *Timoleon* a tragedy; both of which appeared in 1775. About the same

L O Y

period, too, he commenced the study of the Hebrew and Saxon languages, in both of which he made considerable progress. In 1776 he published a collection of "Casus chiefly in the King's Bench, from 1772 to 1774," with a Latin list of law maxims included in the volume. The maxims, he afterwards in 1779 printed in an enlarged shape in two volumes under the title of "Principia cum Jure Universalis seu praeceptis Anglicani;" with a partial translation called "Elements of Universal Law," about the same period too, he composed several political tracts on the subject of the American war and several books of an epic in blank verse entitled "Davident." Succeeding in 1781 to the Capel estates, he changed his residence to Troston in Suffolk and, two years after took out his degrees as a magistrate for the county in which capacity he evinced considerable activity till the year 1800, when having exerted himself with the under-sheriff to delay the execution of a young woman who had received sentence of death under circumstances of an extraordinary nature in order that time might be granted for an application to government, the petition sent in was not only unsuccessful but Mr Loft himself removed from the commission. Dismissed from his magisterial duties, he resumed his practice as a barrister and in 1810 became deputy recorder of Aldborough. Considering at length that greater facilities were afforded for the education of his family on the continent than in England, he in 1816 proceeded to Brussels, and thence successively to Lausanne, Turin and Montcalieri, at which latter place he died May 26 1824 of a protracted illness arising from a cold caught the preceding winter. Besides a great variety of political pamphlets on different occasions Mr Loft was the author of "Eudoxus" a poem in blank verse 1780 & a translation of the two first Georgics of Virgil 1784 an

Essay on the Law of Libel 1785 an edition of Gilbert's Law of Evidence with considerable additions, 2 vols. 8vo, 1795, "Laura, or an Anthology of Sonnets," in 5 vols. 1814, and a volume of "Aphorisms from Shakespeare." He was besides, a very considerable contributor to most of the magazines, and periodical publications of his day nor is it his least merit, that to his zealous and distinguishing patronage the public in a great measure indebted for the publication of the "Farmer's Boy" by Robert Bloomfield. To this work he wrote a preface, with an account of the author and to his unwearied efforts in bringing it before the public no small portion of the attention excited by the justly popular poem, was unquestionably attributable. Mr Loft was twice married and left a son and daughter by his first wife.—*Anec. Biog.*

LOFTUS (DUDLEY) the younger son of an Irish baronet, born at Rathfarnham in the neighbourhood of Dublin in 1618. He was educated for the Irish bar at Trinity college Dublin, whence he removed to Oxford and there distinguished himself, not only in the

L O H

common track of classical literature, but by his great proficiency in the eastern languages. The fruits of his learned labour, however, appeared in Latin translations of the Armenian psalter and the Coptic version of the New Testament, which latter work is to be found in Weston's Polyglott. He also compiled a history of Christ, from Syriac and other Oriental authorities and published an account of the early history of The Eastern and Western Churches. These compositions were however only the amusement of hours, stolen from the laborious duties of his profession in which he rose through family interest, and his own abilities to be vicar general, and eventually chief judge of the prerogative court. His death took place in 1695.—*Chalmers's Biog. Duct*

LOGAN (John) an ingenious poet and miscellaneous writer of the last century. He was born at Fala, in the south of Scotland in 1745 and was educated for the church in the university of Edinburgh. Having been ordained he became minister of South Leith in 1773 previously to which he had published a collection of poems, including some of his own compositions and those of his deceased friend Michael Bruce. He offered himself as a candidate for the professorship of history at Edinburgh but the office was bestowed on Mr Tytler afterwards lord Woodhouselee. Logan published, in 1781 a treatise on the philosophy of history on which subject he had delivered a course of lectures displaying considerable learning and ability. He subsequently wrote a tragedy entitled "Romane-mede," the representation of which was at first prohibited though it was afterwards acted at Edinburgh and was also published. In 1786 he removed to London and became a writer in the English Review. He died in 1788. Besides the works mentioned, he was the author of a volume of poems of a pamphlet in defence of Mr Hastings, for which the publisher was prosecuted a Dissertation on the Manners and Spirit of Asia and sermons. His poems are included in Dr Anderson's collection and they were published separately with an account of his life in 1805 12mo.—*Campbell's Specimen of British Poets.*

LOGAU (FREDERIC BARON von) a German poet, born in Salzburg, in 1604. He passed the latter part of his life in the service of a duke of Lagnitz, and died in that city in 1655. He published at Breslau, in 1638, a collection of epigrams, under the name of Solomon of Gelsu, and a more ample collection in 1654. Lessing and Ramler published a select number of these compositions in 1755, 12mo with a life of the author by the former, in which his poems are compared with those of Martial and Catullus.—*Bioog. Universalis*

LOHENSTEIN (DANIEL GASPAR von) a German author born in 1635. He studied at Breslau, Leipzig, and Tübingen, and afterwards travelled in Germany and other parts of Europe. In 1666 he was nominated imperial councillor and first syndic of the city of Breslau, which station he occupied till his

L O M

death in 1683. Lohenstein was one of the chief dramatic writers in Germany and was the author of several tragedies. He also wrote poems and a romance, entitled "Arminius und Thusnelda," published at Leipzig 1689 1690, 2 vols. 4to.—*Stall. Int. in Hist. Lit. Belg. Uss.*

LOKMAN surnamed Al Hakim or the Wise a philosopher of high repute among the Eastern nations, to whom is attributed a collection of maxims and fables which convey no inelegant specimens of the moral doctrine of the ancient Arabians. Alabomet gave his name to the thirty first chapter of the Koran in which he introduces God as thus speaking "I have given wisdom to Lokman." According to some writers he was the nephew of Job to others a grand-nephew of Abraham while certain Mahometan doctors make him contemporary with David and Solomon. The latter all agree that he was a native of Edissops or Nubia, and of a servile condition being either a tailor carpenter or shepherd. His wisdom they describe as the gift of Divine inspiration in the same manner as that of Solomon. A vast number of anecdotes and records of the wisdom and sayings of Lokman are scattered in the writings of the Orientals an entertaining selection from which will be found in D'Herbelot. Some writers assert, that he embraced the Jewish religion and entered into the service of king David, and that he died at an advanced age in Judea. The relias of his fable were published by Erpenius, in Arabic and Latin with his Arabic grammar at Leyden 1636 and 1656, 4to. Galland translated them into French together with those of Pilpay. Marcal, who gave a new edition in 1803 observes that the remains of these ancient fabulists may be regarded as the only original pieces of composition of this species and that the fables of Esop most of those of Phaedrus and even many of La Fontaine are only translations and copies. Some critics are of opinion that Lokman and Esop were the same person but the Oriental writers place Lokman five hundred years before the period assigned by Plutarch Suidas and Pausanias, to Esop.—D'Herbelot *Bibl. Orient. Brucker.*

LOMBARD (Paris) a celebrated bishop of Paris in the twelfth century known among the schoolmen by the title of the "master of the sentences." He was born at Novara in Lombardy whence he took his name and was educated at Bologna and Rheims under St Bernard. He afterwards removed to Paris in 1160, of which he became bishop, through the friendship of Philip son of king Louis le Gros, to whom he had been tutor. His long celebrity in the schools, and the title by which he was thence distinguished are derived from a work entitled "Sententiarum, lib. IV." in which, after the method of Augustinus he has endeavoured to illustrate the doctrines of the church, by a collection of passages and sentences from the fathers, whose manifold contradictions he endeavours to reconcile. It may be considered as a complete body of divinity

Bible Dict. Vol. II

L O N

in the scholastic spirit, and was so popular with the taste of the age, that, according to the abbe Fleury the number of commentaries on it amounted to two hundred and forty-four. This work was first printed at Venice in 1677. Peter Lombard was also author of *Glossa, seu Commentarius in Psalmis Davidis,* Paris, 1351 folio, and *Collectanea in omnes Divi Pauli Epistolas,* ibid Paris, 1355, folio, in which works he has adopted the same method as in his book of sentences. He died in 1164.—*Cave Musaeum. Depin.*

LOMLAER (Joh.) a learned protestant divine of the seventeenth century. He was minister of the church of Dokkum in the province of Zutphen in Holland, and he is known as the author of a curious work containing historical and critical notices of the most famous ancient and modern libraries. It first appeared in 1669 under the title of *Liber singularis de Bibliothecis Zutphen* &c; and it was republished with additions, at Utrecht in 1683. Lomlaer also wrote some tracts on archaeology. He died in 1699.—*Comment Hist Crit des Journ. Belg. Unit.*

LOMMIUS (Jobocus) or Van Lom an eminent Dutch physician and writer on medicine. He was a native of Buren in Gelderland and studied chiefly at Paris, but it is not known where he took his doctor's degree. In 1537 he became supernumerary physician to the city of Utrecht and in 1560 he removed to Brussels where he was living at an advanced age in 1562. His works, which are held in estimation consist of commentaries on the first book of Celsius de Medicina medical observations and a treatise on contused fevers. There are several editions of these pieces and they were published collectively at Amsterdam in 1745.—*Elog. Duct. H de la Med. Akadem.*

LOMONOSOF (MICHAEL WASHLOWITS) a Russian poet, historian and miscellaneous writer of the last century. He was the son of a dealer in fish at Kolmogori where he was born in 1711. His attachment to learning induced him to enter into a monastery at Moscow where he studied Greek and Latin. His proficiency attracted notice and he was sent, at the expense of the academy of St Petersburg to finish his studies at the university of Marburg and he afterwards went to Breyberg to obtain a knowledge of chemistry. Returning to Russia, he became a member of the academy and professor of chemistry. In 1766 he was made a counsellor of state and died in the course of the same year. Lomonosof was chiefly distinguished as a lyrical and dramatic poet, but he also wrote idyls, epistles, and other compositions in verse and in prose he produced a treatise on the history of Russia, and other works original and translated.—*Atlas à G. B. Bourrin's Russ. Archol.*

LOND (Jacques le) a French priest of the oratory eminent as a classical and mathematical scholar was born in the capital in 1663, and filled more than one professorship in the university together with the office of librarian of St. Honoré. He was the author of an erudi-

L O N

dite " Historical Essay on the Polyglot Versions of the Scriptures," printed in one volume octavo. " Méthode Hébraïque," " Biblio-
thèque Historique de la France folio, 5 vols., and " Bibliotheca Sacra, folio 2 vols. published two years after the author's decease which took place in 1721.—Mowri. *Avous Diet Hist.*

LONG (ROGER) an English divine, eminent as a mathematician and astronomer. He was born about 1679 in the county of Norfolk, and was educated at Cambridge. He took the degree of DD in 1726, in 1753 he was made master of Pembroke hall and in 1749 he was chosen Lowndes's professor of astronomy and geometry in the university of Cambridge. Confined to his college his life was distinguished by no incidents of importance. He possessed a talent for humour and in the early part of his academical career he displayed his wit as a traps-orator at the expense of his superiors. Dr Long was a fellow of the Royal Society and he held an ecclesiastical benefice in Huntingdonshire and another in Essex. His death took place December 16 1770. He is known as the author of a valuable treatise on Astronomy in two quarto volumes the first of which he published in 1742 a part of the second appeared in 1764 and the work being left in perfect at the decease of the author was completed by Mr Wales and the last part printed in 1784. Dr Long constructed at Pembroke hall a hollow sphere eighteen feet in diameter on the interior surface of which were represented the stars and constellations with the zodiac meridians &c and it had an axis parallel to that of the world, on which it easily moved by means of machinery.—*Aikin's Gen. Big. Month. Rev.* vol lxxv.

LONG (EDWARD) author of an esteemed history of Jamaica, was born at St Blaize in Cornwall in 1734 being the son of a gentle man who possessed estates both in that country and in Jamaica. He was brought up to the law and on the death of his father in 1757 proceeded to Jamaica, where he became secretary to his brother in law Mr Henry Moore then lieutenant governor of that island and was afterwards appointed judge of the Vice Admiralty court. In 1769 he was obliged to return to England for the restoration of his health, where he devoted the remainder of his life to literary pursuits and particularly to the completion of his History of Jamaica which was published in 1774 in three volumes quarto. In 1797 he resigned his office and died March 13 1813 at the house of his son in-law Henry Howard Molyneux esq. of Arundel-park Sussex. Besides the History of Jamaica, Mr Long wrote a collection of essays entitled *The Pater* a novel called "The Antiguan" Letters on the Colonies, and various minor miscellaneous pieces, both grave and humorous.—*Gent Mag.* vol xxxii.

LONG (THOMAS) an English conjuring master, was born at Exeter in 1651. He was educated at Exeter college, Oxford and now

L O N

ing taken orders, obtained the living of St Lawrence, in his native city. After the Restoration he was made prebendary of Exeter, which preferment he lost at the Revolution, in consequence of refusing to take the oaths to the new government. He was very active in the theological controversies of his day and is author of various works, the principal of which are "Calvinus redivivus" "History of the Donatists" "Vindication of the primitive Christians in point of Obedience" History of Popish and Fanatical Plots "A Vindication of King Charles's Claim to the Elector Bamrike" —*Wood*

LONGCHAMPS (PETER de) a French writer on polite literature in the last century. He was a member of the academy of Rochelle and probably a native of that city. He adopted the ecclesiastical profession and during the scenes of the Revolution he took no part in public affairs. His death took place at Paris in 1812. His principal production is a prose version of the *Elegies of Propertius*, reckoned the best in the French language. He also translated in the same manner the *Elegies of Tibullus* and he published an abridgment of the *Histoire littéraire de la France* a tragedy and other works.—*Bieg Univ.*

LONGINUS (Dionysius) a celebrated Greek critic and philosopher of the third century is supposed by some to have been an Athenian and by others a Syrian. The name of his father is unknown but by his mother Frontane he was allied to Plutarch. In his youth he travelled for improvement to Rome Athens Alexandria and other cities distinguished for literature and attended all the eminent masters in eloquence and philosophy. He chiefly followed the system of Ammonius Saccas, and was likewise a great admirer of Plato whose memory he honoured with an annual festival. He appears to have taught philosophy at Athens, where Porphyry his one of his disciples and where he also published his celebrated *Treatise on the Sublime* which raised him at once to the summit of reputation. Such was the extent of his erudition that he was called the living library and his fame having reached the ears of the celebrated Zenobia queen of Palmyra she invited him to her court entrusted him with the education of her sons, and even made use of his counsels on political occasions. This distinction proved fatal to him for when Zenobia was defeated and made captive by the emperor Aurelian she attempted to avert the resentment of the latter by imputing her resistance to the advice of her ministers and counsellors, among whom Longinus, being deemed the author of her spirited answer to the Roman summons was ordered for instant execution. His philosophy nobly supported him in the hour of trial and he calmly submitted to his fate with expressions of pity for his mistress and of consolation for his afflicted friends. The world is but a prison he exclaimed, with his expiring breath, happy therefore is he who gets scarce out of it, and gamma has liberty. His death took place in 273.

LON

Among the numerous writings of Longinus, some are on philosophical but the greater part on critical subjects, of which his "Treatise on the Sublime" is the only one remaining and that is a mutilated state. It has always been greatly admired for its elevation of language and of sentiment, and Pope characterizes its author as being himself the great sublime he draws." More modern judges, on the contrary regard him as rather exhibiting sensibility to literary beauties than accuracy of investigation into their nature and causes. Longinus was one of the few ancients who appear to have been acquainted with the Jewish scriptures quoting an example of the sublime the passage from Genesis And God said, Let there be light and there was light. The best editions of Longinus are those of Tolius Utrecht, 1694 4to Hudson Oxon 1730 8vo Pearce London 1724, 4to and Toup Oxon 1770 4to and 1778 8vo—More Brucker Gabon Herwod's Classics.

LONGLAND (John) an English divine born at Henley on Thames in 1476. He was educated at Oxford where he became a fellow of Magdalene college. In 1514 he was made dean of Salisbury and he became confessor to Henry VIII whom he prompted to divorce his wife Catharine of Aragon. In 1521 he was raised to the see of Lincoln and in 1532 elected chancellor of the university of Oxford, which office he held till his death in 1547. He published several volumes of sermons and augmented by his donations some of the college libraries at Oxford.—Burke's *Hist. Lit.*

LONGLAND or LANGLANDE (Rouquer) a secular priest, and fellow of Oriel college, Oxford in the fourteenth century who is supposed to have been the author of the curious poetical compositions entitled

The Vision of Pierce Plowman and Pierce Plowman's Crede. He is said to have been a disciple of Wycliffe and his poems are satires on the vice and luxury of the monastic orders and Romish clergy in general. He has harboured prophecies of an impending reformation in the church so extraordinary that Warton declares he should have supposed them to have been foisted into the epistles since the suppression of monasteries in England, if he had not seen them in MSS. as old as the beginning of the fifteenth century. Editions of these works were published a few years since by Dr T D Whistler.—*Warton's Hist. of Eng. Poetry*

LONGOMONTANUS (CHRISTIAN) a celebrated astronomer the son of a labourer in Jutland, born in 1462. Having lost his father he left his native village where he had been ill-treated by his brothers and went to Wykburg in 1577. He remained there eleven years working for his support during a part of the night, and attending academical lectures in the day. He then went to Copenhagen where he was recommended by the professors of the university to Tycho Brahe, with whom he remained eight years, assisting that philosopher in his astronomical researches. At

LON

length he returned to Denmark, and was in 1603 appointed rector of the grammar school of Wykburg and two years after professor of mathematics at Copenhagen where he died in 1647. Longomontanus published many works, which evince his intimate acquaintance with mathematics and astronomy among which the most important is his "Astronomia Danica," containing an account of the great discoveries of Regiomontanus Purbach and Tycho Brahe, and proposing some alterations in the system of the latter. One of his tracts relates to the quadrature of the circle which he imagined he had discovered — *dicitur s. Gen. Biog. Biog. Uni.*

LONGUERUE (Lewis Duroux de) a native of Charleville in France one of those comparatively rare instances in which precocity of talent bears fruit in proportion to its early promise. He was born in 1652 and before he had attained his fifth year his proficiency was considered so extraordinary, that he had the honour of a presentation to Louis XIV while on a royal progress and was distinguished by his personal notice. As he grew in years his application and perseverance in literary pursuits were conspicuous and entering the church in process of time he obtained two abbey. In Eastern literature especially he was considered one of the most profound scholars of the age and in his annals of the race of the Arsecides printed in 1738 in 4to displayed great antiquarian as well as classical research. His other works are, "A Dissertation on Tatian" 8vo 1700 written in the Latin language A Treatise on the Eucharist Remarks on the Life of Cardinal Wolsey and an Historical Description of the Kingdom of France folio 1719. He died in 1732.—*New Dict. Hist.*

LONGUFFVAL (Jacques) a French jesuit born in 1680 at Saumur or as others say at Poitou. He is principally known as the author of an elaborate history of the French church in eight folio volumes. His other works are two dissertations On Miracles, and On the Sun of Separation from the Church. His death took place in 1735 at Paris.—*New Dict. Hist.*

LONGUS the author of a pastoral tale in the Greek language which is probably the earliest specimen extant of a prose romance or novel. It is entitled *Pompeus, i.e. Pastoral* and relates to the loves of a young shepherd and shepherdess, Daphnis and Chloe. It is exceedingly curious, for the picture it affords of rural manners in ancient Greece, and it exhibits many interesting scenes, described in elegant language but the want of decentmness which runs through it detracts greatly from its merit. The history of Longus is a blank, since he is mentioned by no ancient writer. From the purity of his style it may be concluded that he did not live later than the first century of the Christian era, though some writers place him as low as the age of Theodosius the Great. Numerous editions of the work have been published, among which is one by Villemain with a bulky note

L O P

mentary, Paris, 1778, 2 vols. 8vo. There are also French and English translations.—*Orig.*

LONICERUS (ADAM) a physician and naturalist of the sixteenth century. He was a native of Marburg in Germany, and in 1547 he became professor of the belles-lettres at Freyberg. He afterwards studied medicine at Mayence and returned to Marburg to occupy the mathematical chair. Thence he removed to Frankfurt, where he held the office of apothecary physician to the senate during thirty two years and died there in 1586. He was the author of "Methodus Rei herbariae" 1550 4to, "Naturals Historia opus novum" 1551 55 2 vols folio and other works. The name of this botanist has been preserved in the Linnaean appellation of the *Leskeas*, a beautiful genus of plants.—*Bug. Univ.*

LOOS (*CORNELIUS*) a Dutch divine of the sixteenth century. He studied at Louvain and Mayence and afterwards obtained a canonry at Gouda. Having removed to Treves in consequence of the religious commotions in Holland he wrote a treatise "De vere et falso Magia" against the then prevailing notions of witchcraft. His temerity subjected him to prosecution, and he was obliged to make a recantation of his supposed error. Loos then obtained a benefice at Brussels where he incurred fresh dangers of the same kind and was about to be impunished for the third time when he died in 1595. He was the author of

Catalogus illustrum Germaniae utriusque Scriptorum, 1581 8vo, and other learned works.—*Bug. Univ.*

LOOSJES (ADRIAN) a Dutch novelist, poet, and dramatic writer born at Haerlem about 1761. He was a bookseller at his native place where he died in 1818. When the French emperor determined to change the Dutch government to a monarchy Loosjes addressed to the legislature of Holland a petition which he had drawn up and procured to be signed by the principal inhabitants of Haerlem, to excite the public authorities to resistance against foreign despotism. Unsuccessful in this attempt, he interferred no farther in politics. In one of his novels the history of Susanna Bronkhorst he imitated, with some success, the writings of Richardson.—*Bug. Nov. des Contemp.*

LOPES (*FERNAN*) the oldest of the Portuguese chroniclers the most valuable of whose writings is his chronicle of Joan, which is the history of the great struggle between Portugal and Castile, towards the close of the fourteenth century. It was first published in 1644, shortly after the Braganza revolution and was well calculated to rouse the Portuguese into a resistance of the same national enemies whom their ancestors had formerly subdued. Dr. Southey regards this chronicle as exhibiting all the manners, painting and dramatic reality of *Frontenac*.—*Art. Lopes by Dr. Southey in Allib's C. Bug.*

LÓPEZ DE RUEDA a native of Seville who may be denominated the Spanish *Theophrast*. He was born about 1500, and exercised the occupation of a gold-beater. Before the time

L O R

of Lope, the Spaniards had no national theatre and their only dramatic exhibitions were the *Autos Sacrae* or *Mysteries*, acted in churches; and the scenes entertainments, in the palaces of the king and the grandees. This dramatist, having a taste for poetry composed pastoral eclogues and humorous dialogues, and collecting a few companions, travelled through the cities and towns to exhibit his rude scenes to his countrymen. He died at Cordova in 1564.—*Bug. Univ.*

LORENTZ (*JOSEPH ADAM*) an eminent French physician, who was a native of Alsace. He studied at Montpellier and afterwards at Paris, and in 1757 he became a surgeon in the army and served during the seven years' war in Westphalia. After a retreat of several years, the hostilities consequent to the French Revolution, occasioned his being appointed principal physician to the armies of the Rhine. His attention to the duties of this station so exasperated his death which took place at Salzburg in 1801. He was the author of some valuable works on dysenteric fever and other diseases incident to military men.—*Bug. Univ. Bug. Nouv. des Contemp.*

LORENZ (*JOHN MICHAEL*) a writer on history and philology born at Strasburg in 1723. He became professor of history at his native place and in 1763 he obtained a canonry in the Lutheran chapter of St Thomas and the following year was made librarian of the university. In 1784 he was appointed to the chair of rhetoric which he filled with high reputation till his death in 1801. He was the author of a great number of theses historical dissertations and works composed for the use of his pupils including "Elementa Historiae Universae" 1773 8vo "Elementa Historiae Germanicae" 1776 8vo "Summa Historiae Gallo-Francie, civilis et sacrae" 1793 4 vols. 8vo.—*Dact. Hist. Bug. Univ.*

LORENZINI There were two ingenious Italians of this name LORENZO born at Florence in 1652 studied mathematics under Viviani and became distinguished for his knowledge of the sciences. He was for a while in the service of Ferdinand son of Cosmo III but falling into disgrace was ordered into confinement at Volterra, where he solaced the hours of a wearisome imprisonment of nearly twenty years' duration by writing a work on comic sections. His death took place in 1721.—**FRANCESCO MARIA LORENZINI** whose surname is also sometimes written Laurentini, was a native of Rome born in that capital in 1680. Cardinal Borghese pleased with his literary talents, settled a pension on him and gave him apartments in his palace, where he composed most of his works. These consist principally of dramas on sacred subjects, written in the Latin language, and some miscellaneous poetry. At the time of his death, which took place in 1743 he filled the post of president of the academy of the Arcadi.—*Tivoli.*

LORGNA (*AVRONI, MARIS*) an eminent mathematician born of a noble family at Veroia, about 1730. He applied himself while he was young to the study of the exact sciences; and

L O R

having entered into the corps of engineers, he obtained the rank of colonel, and afterwards the mathematical chair in the military school of Verona. He died in June 1796 leaving the reputation of having been one of the best geometers of modern Italy. His works relating to mathematical and physical science are numerous and valuable.—*Bug Uso*.

LORIOT (AUXENOY JOSPER) an ingenious French artist born in 1716. After having been employed, in attempting some mechanical improvements in the country he settled at Paris where he continued his researches. In 1753 he presented to the Academy of Sciences a machine by means of which a child might raise a weight of several thousand pounds. He was afterwards sent to Brittany where he constructed machines for the naval service and for working the mines of Pons-pear. Among his various inventions that which attracted most attention was the discovery of a kind of cement to be used in building, called Mortier Loriot but his claim as a discoverer was contested by D'Etienne and Morand an architect of Lyons disputed with him the invention of a hydraulie machine for raising water. He died at Paris in 1782.—*Bug Uso*

LORIT (HENRY) see GLARMANUS.

LORME (PUISSANT de) a distinguished French architect who was a native of Lyons. He went to Italy at the age of fourteen to study the remains of ancient art and returning to France in 1536 he contributed much to the introduction of a taste for classical architecture. He was employed by Henry II after whose death Catherine de Medicis made him intendant of her buildings. His services were rewarded with two abbacies, and he was appointed counsellor and almoner to the king. He died in 1577. De Lorme published *Dix livres d'Architecture*, 1567 folio and *Nouvelles Inventions pour bien bâtre et à petits frais* 1576 folio.—*D'Argenville* *Bug Uso*

LORRAINE (ROBERT le) a celebrated French sculptor president of the academy of that art at Paris. He was born in the French metropolis in November 1665. After studying for some time under Girardon whom he assisted in the completion of that eminent artist's chef-d'œuvre the mausoleum of cardinal Richelieu he went to Italy in order to improve himself by a familiarity with the works of the best artists, ancient and modern. On his return, he produced in 1701 the most beautiful of his works, the Galatea, which at once procured his admission into the society of which he became eventually the president. Lorraine, beside his merit as an artist, possessed considerable literary, as well as general information and was acquainted with most of the French wits of his time. Various specimens from his chisel are to be found in the royal galleries at Versailles. His death took place at Paris, June 1, 1743.—*Nous Diet Hist. Bug Uso*

LORRIES (WILLIAM de) an early French poet, who was a native of Lorme near Mion

targia. He was the first author of the "Roman de la Rose," a composition famous in the history of letters during the middle ages, and which for two centuries had a great influence on the literature of France and England. Little is known of this poet, who died young about 1240 and leaving his work imperfect, it was continued by John de Meung. The romance of the Rose is in part an imitation of Ovid's *Art of Love*, illustrated by allegorical personification. The best edition is that of M. Meun Paris 1814 6 vols. 8vo.—*Bug Uso*

LORRY (PAUL CHARLES) a counsellor of the parliament of Paris and professor of law in the university of that city died in 1766 at the age of forty seven. He published a Latin commentary on the institutes of Justinian from his father's MSS. 1757 &c. an essay on the marriage contract and other professional works.—**Lorry (Anne Charles)** brother of the preceding was distinguished as a physician. He was born in 1726 and was instructed in classical literature under the celebrated Rollin. Having embraced the profession of medicine he became one of the most eminent practitioners of the French metropolis and he attended Louis XV during his last illness. He died in 1785. He was the author of a treatise on ulcers *Tractatus de Morbis cutaneis*, *De Melancholia et Morbus melancholicus* and he edited the Aphorisms of Hippocrates.—*Bug Uso*

LOSSIUS (Lucas) a German ecclesiastic, born at Bacha in Hesse in 1508. He became rector of Luneburg which situation he filled for more than half a century till his death in 1589. Lossius collected a complete protestant Psalmody by far the most classical work of its kind to which he prefixed Melanchthon's encomium on music as adapted to the service of religion. Of his works, the principal are the one already alluded to entitled *Pauli modia, hoc est Cantica sacra veteris ecclesiae selecta*, folio Nuremberg 1553 reprinted at Wittenberg in 4 vols. 1569 and *Erotemata Musicae practicae*, &c. Nuremberg 1563-1570 1579 and 1590.—*Burau's Hist of Mus.* *Bug Diet of Mus.*

LOTICHIUS SECUNDUS (Peter) a distinguished Latin poet of the sixteenth century. He was a native of the county of Hanau in Germany, and he studied at Frankfurt, Marburg and Wittenberg. At the last-mentioned university he became intimate with Melanchthon and in the war in Saxony he served in the Protestant army. He afterwards visited France and Italy and having taken his degree in medicine at Padua, he became professor in that faculty at Heidelberg in 1557. His death took place in 1560. The poems of Lotichius were first published in 1561, and they were reprinted at Amsterdam in 1754, 2 vols. 4to. In this edition are included the Latin poems of CHRISTIAN LOTICHIUS, the brother, and those of JOHN Peter Lotichius the grand-nephew of the subject of this article.—*Tatton's Hist. G. Bug*

LOUBERE (Simo de la) a native of Theissoue born 1644 principally known as

the author of a "Voyage to the Kingdom of Siam," which he was despatched on a diplomatic mission by the French court in 1657. There is an English translation of this work which contains many curious and interesting particulars. Louvois appears to have possessed some fancy, as well as solid acquirements. He was a good mathematician and wrote a treatise on equations, together with some miscellaneous poetry. On one occasion being arrested by the government at Madrid on suspicion of being a spy he continued for some time confined in the state prisons of that capital, but at length procuring his liberty returned to Thoulouse and died there in 1729.

—*Nova. Diet. Hist.*

LOUIS IX, king of France, canonised unto St Louis by the church of Rome, was the son of Louis VIII and Blanche of Castile. He was born in 1215 and succeeded his father in 1226 when being only in his twelfth year he was placed under the guardianship of his mother who was made regent of the kingdom. It was her great object to keep her morals untainted and to inculcate in him a strong attachment to religion with which view she married him early to a daughter of the count of Provence and surrounded him with ecclesiastics. It was to the honour of Louis, that although exceedingly devout, he knew the limits between secular and ecclesiastical jurisdiction and was very jealous of usurpation in the latter. He also rejected the invitation of pope Gregory IX to unite in a crusade against the emperor Frederick II, and showed his talent for government by making a number of useful and salutary regulations for the improvement of the internal administration of France. Being attacked with a dangerous disease he made a vow in the event of recovering to march an army against the infidels and no remonstrance from his council and nobles, on the dangerous impolicy of such an expedition could prevent him from undertaking it. After a preparation of three years, he accordingly embarked in 1248 at Arques-Mortes, accompanied by his queen his brothers, and almost all the cavalry of France his force amounting to 50,000 men. The particulars of his eventful campaign in Egypt, until the surrender of himself and the remains of his army is a subject rather for history than biography. It is sufficient to observe here that with so much mistaken gallantry and superstition history affords no example of a greater union of fortitude, punctilious honour and humanity in a royal personage, than was displayed by Louis IX during this unfortunate expedition. The surrender of Damietta, still in possession of the French, was at length made the price of the monarch's freedom, a vast ransom being also claimed for his followers. These terms and a ten years' truce being agreed upon Louis, who punctually fulfilled all the conditions of the treaty, embarked with about 6000 men, the sole remains of his army for Acre and spent four years more in fortifying the strong places in Palestine. On his return to France he displayed a consciousness approaching to me-

lancholy but applied to the government of his kingdom with exemplary diligence; and by his impartial administration of justice and wise regulations much advanced the happiness of his people. His devout attachment to the mendicant orders however, rendered him too favourable to their usurpations, and it was with great difficulty that he could be prevented from becoming a jansenist himself. His delicacy in matters of conscience was extreme in somuch that he yielded to all demands from his feudatories and neighbours, which he deemed correctly founded even to the great injury of the French crown and by this scrupulous equity so raised his character among foreigners that he was generally chosen arbiter of their differences. The dominion of Naples to his brother Charles of Anjou was rather acquiesced in than favoured by him and he continued to reign with great respectability until once more excited by the papal legate, to engage in a new crusade. This fanatical resolution was again encouraged by most of the leading nobility although many who recollect the disasters of the previous expedition were wise enough to deprecate it. The preparations for this new enterprise were long and expensive the conquest both of Egypt and Palestine being contemplated Its first object however proved to be Tunis the siege of which was undertaken by Louis who disembarked with a powerful army on the African coast, in August 1270. He had lain but a few days before Tunis when the heat of the climate and bad provisions produced a pestilence in his camp and after seeing one of his sons perish he was himself carried off on the 25th of the same month being then in the fifty sixth year of his age and forty fourth of his reign. The written instructions which the king left to his successor are equally honourable to his head and heart, and he deservedly ranks among the greatest and best of his race. A too superstitious feeling of devotion was his leading fault both as a man and a king but it did not prevent his showing considerable abilities, both as a warrior and ruler while the purity of his morals and the equity and benevolence of his nature were in the highest degree estimable. The Catholic church held his memory in great estimation and he was canonised by pope Boniface VIII in 1297 for precisely his greatest defects. His descendant, Louis XIII also proclamed the day dedicated to his honour to be declared a general feast of the church.—*Milit. Nova. Diet. Hist.*

LOUIS XIV, king of France, son of Louis XIII by Anne of Austria, was born 5th September 1638. He succeeded to the crown under the regency of his mother in 1643 who unfortunately allowed his education to be much neglected. The chief lesson inculcated was a high sense of his own importance, which however, being corrected by strong natural good sense, he was led by it to adopt a dignified propriety of demeanour, which always inspired respect, even in the midst of weaknesses and vices. His operation

L O U

In a more important point of view was, however, unequivocally injurious, and led to those selfish concerns of the good of his subjects to the gratification of his own desire or glory which characterized the whole of his splendid, rather than fortunate reign. In 1659 the peace of the Pyrenees having concluded the long quarrel with Spain, the marriage of the young king with the infanta, Maria Theresa, followed in 1660 and the death of Mazarin taking place the ensuing year Louis resolved in future to govern by himself. Fortunately for this resolution able men in all departments had been formed under the preceding administration and among the rest Colbert, to whose genius he was indebted for the revival of commerce and the marine as well as for the splendid establishments of arts and manufactures which adorned the early period of his reign. The same excellent statesman although not learned himself also suggested to his sovereign the plan of persecuting the most eminent men of letters throughout Europe a scheme which at a very small expense procured him learned panegyrists in every quarter. The leading object of Louis was his own personal grandeur and a quarrel between the French and Spanish ambassadors in London gave him an opportunity so proudly to assert the superiority of his crown that it was never afterwards contested. A similar haughty resentment of a correction given to the insolence of the retainers of the French embassy at Rome was displayed and when the pope's nephew a cardinal was obliged to come to Paris to apologise the loftiness of his pretensions began to inspire a much higher notion of his power than of his moderation. War being renewed with Spain in 1667 the king took the field in person under the guidance of the great Turenne and almost all Flanders was reduced in a single campaign. A triple alliance between England Holland and Sweden, formed with a view to check the alarming progress of the French arms produced in 1668 the peace of Aix la Chapelle by which Franche Comté which had been occupied was restored and the conquests in Flanders retained. Magnificent plans of domestic improvement and a few years of peace followed until the riches of Holland tempted Louis, who had engaged on his side the venal and unprincipled Charles II of England to attempt its entire subjugation. Accordingly in 1672 with a vast army thoroughly disciplined he burst into the almost defenceless provinces and Amsterdam was only saved by laying the surrounding country under water. At this juncture William prince of Orange being raised to the stadholdership, revived the drooping spirits of his countrymen and while the principal potentates of Europe alarmed at the designs of France were induced to league against her Charles II was obliged by his parliament to desert her alliance. By these means Holland was evacuated as rapidly as it had been overrun, but Franche Comté was inseparably annexed to the French crown. The war which continued some years longer and chiefly to the advantage of France, being

L O U

terminated in 1678 by the treaty of Nijmegen. During this war Louis, attended by nobles, ladies, and all the pomp and luxury of a court, undertaken several sieges in person. As he was never allowed to appear but when success was tolerably certain and was accompanied by historians to record his exploits, nothing that the art of flattery could devise was omitted to exalt him in his own estimation and that of Europe and it was at this time that he received from his subjects the surname of Great the application of which he may be said to have outlived both at home and abroad. The treaty of Nijmegen did not long terminate his plans of aggrandizement but the bombardment of Algiers, Tunis, and Tripoli which first followed was a very honourable application of the renewed maritime strength of France. His treatment of Genoa, the doge of which was obliged to repair in person and ask his pardon was a less excusable display of haughtiness. He was more foiled in his differences with pope Innocent XI a man of a proud and inflexible character who although he could not absolutely control the insolence of the retainers of the French embassy at Rome so annoyed it with ecclesiastical censures and otherwise acted with so much determination that Louis during the whole of his reign gained little by his unreasonable arrogance in this quarter which at the same time thwarted all his schemes in favour of the Stuarts. But if he was a refractory son of the church in points of personal punctilio he acquired the title of Most Christian by his endeavours to root out Calvinism from France which had now for some years existed in peaceful separation from the national church. The privileges of the Protestants were gradually infringed missionaries supported by dragoons, were employed for their conversion and severities were practised which excited horror throughout Protestant Europe. The stern and unfeeling Louvois declared in his letters to the officers— It was his Majesty's will that the extreme of rigour should be employed against those who refused to become of his religion. In 1685 this barbarous impolicy was consummated in the revocation of the edict of Nantes, which act deprived the Protestants of all exercise of their religion and even tore from them their children to be educated Catholics. Protestants were at the same time issued against emigration which did not prevent the escape of vast numbers of moral and conscientious people who carried their arts and industry to hostile nations. The religious zeal of Louis in this direction was not found incompatible with great self indulgence in regard to sexual intercourse and the histories of his amours and attachments are recorded by pens of all descriptions. With one mistress a married woman madame de Montespan he long lived in the most open manner bringing up his children by her with even royal expectations, and redigging her haughty and capricious humour to the extreme annoyances of every one except himself. This

L O U

idence at length gave way to a singular attachment for the widow Scaron afterwards the celebrated madame Maintenon (see art. *Maintenon*) whom, in 1666, at the age of fifty having been some years a widower, he privately married, but never acknowledged as queen. The league of Augsburg against France was formed in the same year the soul of which was the prince of Orange whose acquisition of the crown of England, at the Revolution in 1688 added that kingdom to the continental confederacy. The forces of France being yet entire snatched Luxembourg and other eminent generals, renewed the successes of the former war, and the king in person took Namur. The naval defeat at La Hogue however proved a fatal blow to the renovated French marine, and the finances being exhausted by the numerous armies kept on foot, Louis was obliged in 1697 to sign the general peace of Ryswick which nearly restored Europe to its state before the war. Charles II king of Spain having been persuaded on his death bed, in 1700 to make a will in which he declared Philip duke of Anjou second grandson to Louis his sole heir the bequest was accepted with a view of uniting the two monarchies. This family accession soon produced another league against France the jealousy of England and Holland being converted into open hostility by the imprudence of Louis in declaring the son of James II king of England on the demise of his father in 1701. The new confederacy against France was between the emperor and the maritime powers, and the death of William during the preparations for war did not prevent it being waged under his successor queen Anne. Two great generals prince Eugene of Savoy and the duke of Marlborough in the hostilities which followed obtained victory after victory. The battle of Blenheim in 1704 proved more fatal to the French arms than any event for a century before, and being followed by that of Ramillies France began to tremble for her own safety. The great ministers, who had guided the destinies of that country during the early and splendid part of the reign of Louis were now no more and being succeeded by the mere personal favourites of the monarch and madame Maintenon, the usual results followed. Louis, however amidst all these misfortunes preserved a degree of fortitude and equanimity which merited and obtained the respect of his subjects, however they might suffer from the consequences of his ambition. While propositions of peace were made even including the recognition of the archduke Charles as king of Spain, to the exclusion of his grandson, new levies were made and thus continued till the pride of success being us strengthened the war was renewed in Spain, where the generalship of Vendome who gained some decided advantages. The overthrow of the whig administration in England which deprived Marlborough of his influence and introduced pacific counsels, was a still more important event for Louis and a suspension of hostilities with Great Britain quickly

L O U

followed. Some advantages gained by Villars over the remaining confederates in the Low Countries following the treaty of Utrecht was concluded in 1713. The result of these protracted and bloody hostilities left the crown of Spain in the possession of Philip, who renounced his succession to that of France, Louis agreed to the demolition of Dunkirk and abandoned several of his former conquests in the Netherlands while England kept Minorca, Gibraltar and some barren tracts in North America, and Holland retained some frontier towns. Thus France suffered little in point of territory although prodigiously in reputation and internal prosperity. The latter part of the reign of Louis was also marked by much domestic calamity. The dauphin, his eldest son the duke of Burgundy, his grand son with his duchess, and one of their infant offspring all died within a short period, domestic losses, however appear to have very slightly affected Louis, who was a cold and distant parent and little moved by the sympathies of relationship. His latter years were farther disquieted by religious quarrels, and the spirit of superstitious devotion which so frequently marks the eve of life of a declining sensualist threw him into the power of his confessors, who were usually seconded by the bigoted seal of madame Maintenon. One of these priests Le Tellier a jesuit of a fiery and intolerant character urged Louis to violent measures against the Jansenists and incited him to procure from Rome a formal condemnation of their doctrine by the famous bull Unigenitus the reception of which decree was forced upon the Gallican church but not without opposition from many of its most respectable members. In the midst of these disputes the king's health rapidly declined but he surveyed the approach of death with calmness and resolution. He gave some excellent advice to the dauphin his great grandson in which he freely confessed the principal faults of his past reign intolerance excepted and expired on the 1st September 1715 in the seventy fifth year of his age and seventy second of his reign. He had the misfortune to outlive his popularity and some very natural if not very decorous joy was manifested by the people at his funeral. The age of Louis XIV will always be a memorable period in history and it cannot be denied that his personal character gave it some of its predominant features. However selfish the mere love of personal glory in a monarch in many ways it may tend to advance that of the nation which he governs. Such proved to be the case with France under the more prosperous portion of the reign of Louis XIV who while he possessed few of the qualities which create a nation or an era by his natural oratoriness, good sense, and even good taste, would have been respectable in any estimation. In alleviation of his faults, too, it must be admitted that no man was ever more exposed to moral perversion by a bad education and extravagant flattery. He was perpetually told that he was the greatest man upon earth;

LOU

that his subjects, and all which they possessed were his property , and that his will ought to be universal law . That under such a course of stimulus, he should become ambitious, selfish and miserable was scarcely avoidable ; and had there not been something good in his disposition he must have merged into an unfeeling tyrant, which, setting religious prejudices aside he was not. For the rest if the age of Louis XIV was that in which the reputation of France for arms, arts and literature stood highest, it was also that of her wrench edness and humiliation and certainly the reign of this perverted monarch vastly increased the national grievances, which another half century rendered unendurable. One of the most able panegyrists of Louis has summed up his character by saying that if he was not a great king he was at least an able actor of royalty. Of late some great efforts have been made to revive French respect for this monarch but probably the preceding sentence will remain the most favourable one that will ever be pronounced by impartial posterity.—*Seecte de Louis XIV Mem. de St Simon Miser Element.*

LOUIS XV king of France great grand son and successor of the foregoing being the son of the duke of Burgundy and of Mary Adelaide of Savoy. He was born in 1710 and succeeded to the crown in 1715 soon after which the sole regency was claimed by Philip duke of Orleans as first prince of the blood whose right was acknowledged by the parliament in opposition to the testament of the late king. The young prince was placed under the tutelage of Fleury bishop of Frejus (afterwards cardinal) under whom he discovered an understanding of the common order with moderate good sense and nothing brilliant while a propensity to indolence and sensuality too plainly indicated the self abandonment and debauchery which subsequently ensued. He was crowned in 1722 and declared major the following year but the regent retained the chief power as prime minister until his death which however took place in a few months afterwards. His successor in the ministry was the duke of Bourbon who negotiated a marriage between the king and Maria Leszinska daughter of Stanislaus, king of Poland which marriage took place in 1725. Not long after Fleury became prime-minister which post, notwithstanding his great age he held until his death in 1743. The spirit of the government of this prelate was happily peaceful a war with the emperor in 1733 which annexed the duchies of Lorraine and Bar to the crown of France being the principal foreign occurrence of it. For a few years Louis lived with his queen by whom he had one son and several daughters with some regard to appearances, but after a while, he was captivated by the studied allurements of the court ladies and entertained three mistresses successively one of whom was installed his mistress with all the distinction attending that office in the former court of France. From this time he indulged his propensities in this direc-

LOU

tion without moderation or delicacy, and his whole court assumed the immoral hue of his master. The death of the emperor Charles VI, in 1740 brought on a new continental war when France joined with Prussia and Poland in an attempt to raise the elector of Bavaria to the empire in opposition to the house of Austria, whose interests were espoused by England, Holland and Sardinia. In 1744 Louis took the field in person and was present at the reduction of several places. At Metz he was attacked by a dangerous illness, which spread consternation through all France and obtained for him the name of " well beloved " and not to discredit human nature he himself showed some sensibility on being informed of his people's affection. In the next year he viewed (at a safe distance) the victory obtained by marshal Saxe over the English at Fontenoy and the French took most of the strong towns in the Austrian and Dutch Netherlands, but were unsuccessful in Italy and their marine was once more totally ruined by the English. The treaty of Aix la-Chapelle in 1748 again restored peace to Europe and the French ministry turned its attention to domestic improvements and the most splendid establishment of the reign the royal military school of Paris was established in 1751. Disputes between the clergy and the magistracy at this time produced considerable agitation throughout France and in consequence of the ferment occasioned by these quarrels, a fanatic named Damiens, was induced in 1757 to attempt to kill the king in the midst of his guards. He received a stab which was not dangerous and although the assassin was evidently insane and without accomplices, to the disgrace both of the government and the nation he was put to death with the most diabolical tortures. Before this time the unsettled state of affairs in America and the East Indies had occasioned a renewal of the war between France and England attended with continental hostilities, in which France became allied with her old rival, the house of Austria and England with Prussia. Although the events were at first favourable to the French arms the final result was most glorious to the English, and the interference of Spain, by virtue of the family compact, only added to the triumph and acquisitions of Great Britain. The weakness of Louis, whose mistresses and favourites were chiefly selected by his favourite mistress Pompadour was greatly instrumental in producing these disasters which terminated in the treaty of Paris in 1763 by which France endured a considerable loss of territory. The death of madame Pompadour did not free Louis from female influence of the most degrading nature. He immediately gave her a successor in the more dissolute mademoiselle Barry and moreover indulged himself in debaucheries which were altogether unprecedented. At the same time his government became more severe and arbitrary. The tyrannical conduct of the duke d'Aiguillon having involved him with the parliament of Brittany he was accused in that of Paris but was

LOU

snatched from punishment by royal intercession. All the parlements then made a common cause, which ended by the king in 1771, overthrowing the whole existing system of judicial administration in France and establishing a new one in its place. The exhausted state of the finances at the same time led to new and burthensome imposts, which augmented public discontent, in the midst of which Louis being attacked by the small pox died unlamented on the 10th of May 1774, in the sixty fifth year of his age and sixteenth of his reign. During this reign the arts and sciences made a great progress in France and the voyages of the French mathematicians to the equatorial and polar regions in order to measure a degree of the meridian were equally honourable to the government and persons employed. Louis himself possessed much more information than his predecessor being well versed in history and geography. He was also polite affable and naturally humane, but want of strength of character and sensual indulgence which destroy both physical and moral sensibility degraded him equally as a monarch and a man, nor would he have claimed a place in this volume to the exclusion of better monarchs of France had not at been deemed of moment to show the personal character of the sovereigns who almost immediately preceded the French Revolution. So satisfied was Louis XV himself of some coming storm that he selfishly congratulated himself that, bad as things were they would last his time which barely proved the case while the consequence of so much miserable profligacy and misrule burst with double force over the head of his devoted successor.—*New Diet Hist. Milt. Vie privée de Louis XV.*

LOUIS XVI king of France grandson of the preceding and son of the dauphin Louis, and Maria Josepha of Saxony was born in August 1754. His father a prince of much strictness of character carefully superintended the education of his three sons the youngest of whom is now king of France and placed them under preceptors who paid a guarded attention to their morals. Their care in this respect perfectly succeeded with Louis the eldest, who without displaying any brilliancy of parts, was humane, averse to flattery, simple in his tastes, and fond of retirement. He was married in 1770 to Maria Antoinette of Austria, daughter of the empress Maria Theresa, and sister to the emperor Joseph II and ascended the throne in May 1774 being then in his twenty-first year. His first prime minister was M. de Maurepas, who had occupied the same station in the late reign but who had been exiled. By the influence of that statesman the ancient parlements were restored which was a popular measure but too late and insufficient to materially mitigate the public. It was the lot of Louis XVI like Charles I, to come to the crown when great changes were taking place in the minds of men, and while the despotism and extravagance of the last two reigns had operated to open the eyes of

LOU

the people to the evil of arbitrary sway a set of able and eloquent writers rose up, who, by the naked power of argument and ridicule, exposed all the weaknesses of ancient institutions, and endeavoured to re-model the whole fabric of public opinion. The finances were also in a state of great derangement, and although Louis himself was very moderate in his expenses his economical plans were all thwarted by the profusion of his consort and the princesses of the blood. A suspicion of bias on the part of the queen, in favour of her own family was also prevalent, while the mixture of haughtiness and levity in her character and her imprudences of conduct, deprived her of the esteem and affection of all but the few courtiers who profited by her fashions. The situation of France in the quarrel between Great Britain and her revolted colonies unfortunately for Louis also afforded a temptation for interference too accordant with the standard policy of France to be neglected by his then minister the count de Vergennes, who supported by the queen's party prevailed against the king's opinion not to show any partiality to the colonies. The complaints of England at this conduct being disregarded open war took place in 1778 and although France and her allies succeeded in detaching America from the British crown that event and the manner in which it was brought about evidently hastened the revolution. Previously to affairs reaching this crisis, various ministers were employed some of which had enlarged views although little in accordance with the anomalous state of the country until at length the finances were entrusted to the famous Necker whose dismissal in 1781 in consequence of the enmity which his economical plans excited in the courtiers and the queen made room for the appointment of M. de Calonne. By some specious operations this last minister restored an apparent prosperity for a short time and gave free vent to the profusion of the court but the result, at no distant period was a derangement of the finances to so alarming an extent that it was necessary to lay the state of affairs before a national assembly. An inferior kind of body to the States General termed the Notables selected by the king a nomination, from the different orders of the state was collected for this purpose to whom the enormous deficit, which had hitherto been kept secret, was disclosed. Extensive taxation was proposed to make good the deficiency which the parliament of Paris refusing to register it was banished together with the duke of Orleans who, under the mask of patriotism was endeavouring to work the ruin of the king. After various abortive expedients, Necker was recalled and the dressed alternative of an assembly of the States General resorted to which critical measure took place in May 1789. As it is simply intended in this article to touch upon a few points of this eventful crisis, which exhibit the course of events which led to the destruction of the king, it is not necessary to dwell upon the proceedings, which terminated

LOU

in the Ottomans declaring themselves " the National Assembly " During these violent contests, the king vacillated between opposite counsels, until at length perceiving the obvious tendency of the measures pursued to the subversion of monarchical power and being urged by the queen and the princes of the blood he was induced to give orders for assembling the troops round the capital, and for the dismissals and exile of Necker Paris burst into a flame on this event, commotions took place in which the soldiers refused to act against the citizens The Bastile was attacked and taken and resistance being in vain the king recalled Necker Schemes for a new constitution, and new measures of finance, were then discussed with tolerable composure until a scarcity of provisions following the people were roused into fury and a dreadful insurrection took place in which a numerous armed mob marched to Versailles broke into the palace, massacred some of the guards, and compelled the king, queen and family to accompany them to Paris A great emigration of the most zealous friends of royalty now took place and the endeavours of these partisans to produce hostile interference from without, only served to hasten the destruction of the king and his queen The National Assembly in the mean time formed a new constitution on the basis of limited monarchy which the king solemnly swore to observe but the increasing emigration of the clergy nobles and members of the royal family while troops were collected and openly formed into an army on the frontiers, naturally awakened public suspicion and popular ferment took place both in the capital and the provinces These suspicions Louis endeavoured to allay by formally announcing to foreign courts his acceptance of the constitution but his character for sincerity received an indebt stamp by his attempt to escape in June 1791 This step when the royal party were stopped on the frontiers, and brought back prisoners to Paris he endeavoured to defend on the ground of the danger and insults to which himself and still more the queen was exposed, from the Parisian mob but as our flight was at the same time evidently connected with the plans of the emperor Leopold and the congress, the confidence of the people could never be restored In the mean time the National Assembly proceeded to complete their labours, and in September 1791 presented to the king the constitutional act which he solemnly accepted and swore to maintain inviolable They soon after dissolved themselves, and were succeeded by a legislative assembly appointed by internal election The schemes of interposition and conquest becoming still more and more obvious, in the following April war was declared against the emperor and a decree passed the Convention for forming a camp of twenty thousand men round Paris This last measure the king, who regarded it as intended to overawe the moderate party and strengthen the jacobins, refused to sanction, as he likewise did a severe decree against the refractory clergy He also

LOU

dissolved some of the popular ministers, who had been forced upon him, and by all these proceedings excited so much discontent, that a furious populace made their way into the Tuilleries, and treated the king with gross personal insults The approach of the duke of Brunswick preceded by an insulting and threatening manifesto in which the acceptance of the constitution by Louis was treated as an involuntary compliance, completed the exasperation of the people and at length Petion the mayor of Paris appeared at the head of the sections at the bar of the National Convention and demanded the deposition of the king The determination of this point was fixed for the 10th of August on which fatal day a numerous body of insurgents attacked the Tuilleries in the defence of which nearly the whole of the Swiss guards were massacred The king and family had previously taken shelter in the hall of the National Convention which immediately proceeded to declare the suspension of the royal authority in the person of Louis XVI and to decree the convocation of a National Assembly for the ensuing month The king and his family were then imprisoned in the Temple while various massacres and enormities succeeded of the most appalling description All of these were however surpassed by the horrid murder of upwards of one thousand state prisoners on the 2d and 3d September; among whom was the beautiful princess of Lamballe whose bleeding head stuck upon a pike to the stern infamy of the perpetrators, was shown to the queen whose intimate and favourite she had been Under the influence of a spirit so baneful the result of many generations of misgovernment the final fall of the most unhappy victim of it could not be distant After royalty had been abolished in the new convention by acclamation no intention was soon avowed of bringing the king to trial in breach of the constitution which declared his person inviolable On the 11th December 1792, he was accordingly brought to the bar to answer to the heads of accusation drawn up against him for the crimes of tyranny and treason towards the nation He defended himself with judgment and presence of mind and received the assistance of three eminent advocates, who generously took upon themselves the hazard of so unpopular an act He was found guilty by a small majority and the punishment of death was decreed against him He employed the short interval allowed him, in the preparations for death enjoined by his religion to which he was sincerely devoted and on the 21st January 1793 was led to the scaffold, where his behaviour partook of the calm fortitude which had distinguished him through all the scenes of suffering to which he had been so mercilessly exposed He declared his innocence to the surrounding crowd, but was rudely interrupted by the noise of drums and the hands of the executioner His body was thrown into a pit, filled with lime, and no vestige left of the place of his interment Such was the tragical end of Louis XVI

L O U

a victim to the thoughtlessness and meanness of his ancestors, himself being possibly one of the most moral and best-intentioned sovereigns of France. In vigour of mind and firmness of resolution he was certainly deficient, but perhaps few princes, more possessed of these characters, would have been able to extricate themselves with honour from the perils which surrounded him. His subervience to the queen, and the weak and profuse party who availed themselves of her influence proved undoubtedly his most fatal political failing. In point of acquirement, Louis XVI was by no means deficient, he wrote well and excelled in clearness of expression and methodical arrangement. Of the possession of these talents and no small extent of information, the instructions to the navigator Perouse drawn up by his own hand form an unequivocal proof. This unhappy monarch left a son and a daughter the latter of whom married her cousin the present dauphin of France and still survives. The unhappy son regarded by the mockery of etiquette as Louis XVII died miserably in 1795 at the early age of eight, in the brutal custody to which after the death of his father he was committed.—*Hist. of the French Rev. Memoirs by Le Tressan de Malville. Memoirs by Stourac.*

LOUIS XVIII (STANISLAUS XAVIER de France) second son of the dauphin the son of Louis XV and brother of Louis XVI born at Versailles, Nov 17 1755. As a boy he is said to have manifested a disposition tinged with much timidity and reserve but to have exhibited a far more decided turn for literary pursuits than either his elder or his younger brother (now Charles X) with whom he was educated, and he early acquired the character of a good classical scholar. His debut in public life was made soon after the accession of his elder brother to the throne when he presented the new monarch with a pamphlet of his own writing entitled *Mes Pensées*, which, however appears to have given but little satisfaction to the unfortunate prince to whom it was addressed and who is reported, at a subsequent interview to have requested the royal author to keep hence forward his thoughts to himself. On the breaking out of the Revolution the count de Provence, as he was then styled fled from Paris to Coblenz on the 20th June 1791 and then took a principal share in the organisation of the system of emigration. The progress of the republican arms afterwards compelled him to abandon this asylum for Turin where he was received by his father in law the king of Sardinia, but subsequently again removed to Vienna, under the name of the count de Lille, a title which he retained till his accession to the French throne. In 1796 he joined the army of the prince de Condé, then at Regal, and two years afterwards was formally acknowledged king of France by the emperor Paul of Russia, at whose invitation he took up his residence for awhile in the distant castle of Mittau in Courland. The weakness of his new ally however soon put

L O U

an end to his continuance in this abode. He received peremptory orders to quit the Russian territories in a week, and took refuge at Warsaw, whence the king of Prussia, on his refusing to renounce his throne in favour of Bonaparte compelled him to retire as a last resource to England. Here he was hospitably received at Hartwell, a seat belonging to the marquis of Buckingham, engaged for his residence where he remained till the fall of Napoleon in 1814 drew him from his retreat to reascend the throne of his ancestors. From that he was again driven by the return of Bonaparte from Elba, and he retired into the Netherlands till the battle of Waterloo, by completely breaking the power of his opponent restored him to his crown. He survived this second elevation nine years dying in his sixty ninth year on the 16th of September 1824. For a considerable time previously to his decease a dry grypnopelis in his legs had deprived him of the power of walking while his attachment to the pleasures of the table assisted a natural tendency to corpulence and aided materially to produce the calamitous state, which terminating in a paralyse of the lower extremities was the more immediate cause of his dissolution. As the restored monarch of France Louis XVIII acted with great temper and policy, at least on his second return to his capital after the battle of Waterloo when it required no mean degree of skill to render the intrusion of the foreign armies, which made him king of France palatable to the people over whom he was called to reign. He soon also adopted the ancient maxims of his family in regard to neighbours, as was evinced by the manner in which the invasion of Spain was prepared for under the pretext of a sanitary cordon. Besides the pamphlet already mentioned Louis XVIII was the author of *Le Mariage Secret* a comedy in three acts in which he is reported to have been assisted by his secretary Ducus, the imitator of Shakespeare. This piece which is not devoid of merit, was brought out under the name of Desfaucherure. Two operas also were the offspring of his pen, "Panurge" and the "Caravane du Caire" to which Gretry composed the music. His other writings are an account of his journey or rather flight to Coblenz, which M de Talleyrand is said to have characterized as the "Journey of Harlequin who is always afraid and always hungry", and a few political articles exhibiting no great force or talent in the *Journal de Paris* during the year 1814.—*Ann. Eng.*

LOUIS (Aurivory) an eminent French surgeon born in 1725 at Metz, where his father was a surgeon major in the military hospital. After finishing his studies at home he went to Paris, where he became surgeon to the Salpêtrière. He afterwards served professionally some years in the wars in Germany; and in 1764 he succeeded Morand as secretary to the Parisian academy of Surgery. He died in 1792 leaving besides several surgical and anatomical publications, a tract, entitled "Observations sur l'Electromé, et ses effets

L O U

new "Economic animal" 1771 anno.—*Dict. Hist. Belg. Univ.*

LOUREIRO (Jorn de) a Portuguese botanist, born at Lisboa about 1715. Having entered into the ecclesiastical state, his zeal led him to go as a missionary to Cochinchina. To his religious duties he joined the practice of medicine which was the means of his obtaining permission to remain in the country. Not being sufficiently provided with European remedies he was induced to collect and examine the plants of Cochinchina by means of which he gained a practical knowledge of botany. He afterwards visited China, Bengal Malabar and the island of Mozambique whence he procured a large and valuable store of dried plants. Having returned to Portugal after thirty six years absence he arranged the materials he had obtained and published them under the title of *Fiora Cochinchinensis* Lisbon 1790 2 vols. 4to of which a second edition with notes by professor Wildenow appeared at Berlin 1798 2 vols. 8vo. Loureiro died at Lisbon in 1796.—*Bug. Univ.*

LOUTHERBOURG or LUTHIERSBURG (Philippe James) a landscape painter of eminence born at Strasburg in 1740. He studied under Tischbein and afterwards under Cassanova, and displayed great talents in the delineation of battle hunting pieces &c. After having been admitted a member of the academy of Painting at Paris where he was first settled he removed in 1771 to London where he was employed in the decorations of the opera house and also at Drury lane theatre. He subsequently contrived an exhibition called the Eidophonium somewhat on the plan of the Diorama, which however did not prove a very profitable speculation. In 1782 he was nominated a royal academician and as a landscape painter he possessed de served celebrity. His character was several respects eccentric and he was so far infatuated with the reveries of animal magnetism as to have accompanied the impostor Cagliostro to Switzerland where he intended to remain. He however returned to England and died at Hammersmith near London in 1812.—*Bug. Univ. Elmes's Dict. of the Fine Arts.*

LOUVERTURE (Toussaint) a famous negro chief who by his courage intelligence and activity obtained an almost unbounded influence over his comrades during the commotions which preceded the independence of Hayti or St Domingo. In 1795 general Boisracheau confided to Toussaint the command of a division of the French army destined to oppose the English, and his services were rewarded by the directory. From the period of his first taking arms he appears to have conceived the project of becoming an independent sovereign. He expelled from the island the French commissioner Santonax and with the utmost vigilance proceeded towards the execution of his designs. In 1799 the colony became the prey of intestine divisions, and a civil war took place between Toussaint and the mulatto general Ragaud, in which the for

L O U

mer proved triumphant, and remained without a rival at home. On the accession of Bonaparte to power the negro chief by threats of submission and measures of defiance, endeavoured to secure his authority. At length, the arrival of general Leclerc with a French fleet and army in February 1801 put an end to his temporising policy and after a short but brave resistance he was compelled to submit. After a time he was transported to France, and confined first in the temple at Paris and then in the fortress of Joux, where he died in 1803. *Bug. Nouv. des Contemp.*

LOUVET DE COUVRAY (Jules Hartier) a French advocate and man of letters, distinguished as an actor in the troubled scenes of the Revolution. At the commencement of political commotions, he joined the popular party and displayed a decided aversion to royalty and nobility. He published a romance or novel entitled *Emilie de Varmont, ou le Divorce nécessaire* 1791 in support of the then prevalent opinions relative to marriage and on the 25th of December 1791 he spoke at the bar of the National Assembly in favour of a decree of accusation against the emigrant princes. In September 1792 he was chosen a deputy to the Convention when he attached himself to the party of the Girondists and he voted for the trial of Louis XVI and also for the death of that prince with a proviso that execution should be delayed till after the acceptance of the constitution by the people. He attacked with great energy Robespierre and the Jacobins and connected himself intimately with Roland and other persons of similar principles. In consequence of this conduct he was denounced by the Terrorists, and included in an order of arrest issued on the 2d of June 1794. He does not appear to have taken any part in the spirited efforts made by Lanjuinais, Vergnaud and Guadet in the Convention to reassert their prosecutors. Having escaped from the capital he retired to Cass with several of his colleagues and employed himself in writing against the Jacobins. He was declared an outlaw on which he fled to Brittany and thence to the department of the Garonne. At length he separated from his companions and returned to Paris where he kept himself concealed till after the fall of Robespierre. He subsequently published an account of his adventures during the time of his proscription entitled *Notices sur l'Historie et le Récit de mes Perils* a work written in a romantic style which has been translated into English and other languages. Louvet recovered his seat in the Convention in March 1795 and he occupied the presidency in June following. He was afterwards a member of the Council of Five Hundred, which he quitted in May 1797, and died at Paris, the 25th of August, that year. After having, for a short time in 1798 edited the *Journal des Débats* he published another called *La Sentinel*, but he is chiefly known in literature as the author of a licentious novel *la Vie de Chevalier Faublas*. —*Dictionnaire H. M. de 18me. S. Dict. Hist.*

LOV

LOVE (*Christopher*) an eminent presbyterian divine, was born at Cardiff in 1618. He was at first apprenticed in London but he subsequently prevailed upon his father to allow him to go to the university and he became a servitor of New Inn Oxford in 1635. After graduating as BA he entered into orders and soon after obtained his master's degree but refusing to subscribe to the canons, or joined by archbishop Laud he was expelled the congregation of masters, and repaired to London. When the presbyterian government was established he was ordained to preach at St Mary's Aldermanbury. He was one of the commissioners appointed by parliament at the treaty of Uxbridge where he behaved so impetuously as to draw upon himself the censure even of his own party. He was appointed one of the assembly of divines, and was also one of the London ministers who signed a declaration against the king's death. He subsequently engaged in a plot to assist the Scots before whom Charles II had taken the covenant, to advance that prince to the throne of England which conspiracy being detected by the vigilance of Cromwell Mr Love and Mr Gibbons were tried and executed by beheading on Tower Hill August 22 1651. Mr Love was accompanied at his death by three eminent nonconformist divines Asaph Calamy and Manton and the whole of the presbytery ran party deemed him a martyr to their cause. His works consist of sermons and various tracts on various subjects in 3 vols. 8vo.—*Heale's Puritan Aylesbury's Catalogus Brit. Min.*

LOVE (*James*) a dramatic writer and performer whose family name was Dance having been the son of the city architect who built the Mansion house. The subject of this article was educated at Westminster school and Cambridge university. His first literary production was a defence of sir Robert Walpole. A severe poetical satire against that minister having appeared entitled 'Are these things so?' Mr Dance wrote a reply called

'Yes they are what then?' which procured him a handsome present from the premier and rendered him for a while a dangler at levees in hopes of political preferment. Disappointed in his expectations and involved in difficulties he went on the stage under the assumed name of Love. His first essays were made in a strolling company after which he performed at Dublin and then at Edinburgh where he was manager for some years. In 1762 he removed to Drury lane theatre and continued there till his death in the beginning of the year 1774. As an actor he excelled in the character of Falstaff. The dramatic productions of his pen are *Pamela*, a comedy acted at Goodman's fields in 1742. *The Village Wedding* a pastoral entertainment 1767, and *The Lady's Frolic* a comic opera, acted at Drury lane in 1760.—*Theatrical Dict.*

LOVELACE (*Richard*) an elegant poet of the seventeenth century was the eldest son of sir William Lovelace of Woolwich Kent whence he was born about 1618. He received his grammatical education at the Charter-

LOW

house and in 1634 became a gentleman commoner of Gloucester-hall, Oxford, where he graduated MA in 1636. On leaving Oxford he repaired to court, and being taken into favour by lord Goring he entered the army and became a captain. On the pacification at Berwick he took possession of his estate and was deputed by the county to deliver the Kentish petition to the house of Commons which giving offence he was imprisoned in the Gate-house, from which he was released on giving security not to quit the country without permission. He expended the whole of his estate in the support of the royal cause and after entering into the French service in 1648 returned to England and was again imprisoned until the king's death when he was once more set at liberty. His condition was at this time very destitute, and strongly contrasted with Anthony Wood's gay description of his handsome person and splendid appearance in the outset of life. He died in great poverty in an obscure alley near Shoe-lane in 1658. His poems which are light and elegant but occasionally involved and fantastic are published under the title of *Lectaea*, under which name he complimented Miss Lucy Sacheverell a young lady of beauty and fortune who on a false report of his death married another person. Colossal Lovelace who for spirit and gallantry has been compared to sir Philip Sidney also wrote two plays *The Scholar* a comedy and *The Soldier* a tragedy.—*Bioog. Dram. Ellis's Specimens.*

LOWIBOVD (*EDWARD*) a modern minor poet, was the son of a merchant's gentleman who became a director of the East India Company and who died in 1737 and left him an independent fortune. The date of his birth is unknown but he died at his house at Hampton on the 27th of September 1775. He wrote several papers in the *World*, and his poems consisting of 2 vols 12mo published after his death display some originality of manner with considerable sprightliness and ingenuity.—*Chalmers's Poets.*

LOW (*George*) the name of a Scottish clergyman of the last century born in 1746 at Edsa' in Fife-shire. He studied both at Aberdeen and Edinburgh and distinguished himself by his proficiency in the various branches of natural history. In 1813 nearly twenty years after the decease of the author a treatise of his entitled *Fauna Orcadensis*, appeared in one vol. 4to. He is said to have left behind him other works in manuscript, containing a translation of *Torfinus* with many interesting particulars respecting the Orkney islands in one of which he enjoyed a small benefice till his death in 1795.—*Ains. Biog.*

LOWERDAHL (*Ulric Frederic Werdemar count von*) a celebrated military officer and engineer born at Hamburg in 1700. His father was grand-marshal and minister of the king of Poland. The son entered young into the army and after having served in Hungary Naples, Sicily, and else-

LOW

whose, he returned to Poland in 1731 and was made colonel of infantry and commander of the royal home guards. He then studied gunnery and fortification, and in 1733 he was appointed field-marshal and inspector-general of the Saxon infantry. In 1734 and 1735 he was in the Austrian service and he subsequently entered into that of Russia. He accepted the commandant of lieutenant general in the French army in 1743 and distinguished himself at the sieges of several towns in Flanders, and at the battle of Fontenoy. In 1747 he increased his reputation by the taking of Bergen op-Zoom and other places in consequence of which he was created a marshal of France. His death took place after some years of retirement, in 1755.—*Morat. Bug. Urn.*

LOWER (Richard) a physician and anatomist of considerable eminence in the latter part of the seventeenth century. He was a native of Cornwall and was educated at Westminster school and Christchurch college Oxford where he took the degree of M.A. in 1653. He assisted Dr Willis, in his anatomical researches and in his professional practice and in 1665 he published a work entitled *Distributio Thome Williae, MD et Prof. Oxon de Febribus Vindictae adversus L. de Mearne MD Svo.* About the same time he engaged in experiments on the transfusion of blood from one animal to another of which an account was published in the Philosophical Transactions. He now took his doctor's degree and having removed to London he was chosen FRS in 1667 and he also became a fellow of the college of physicians. In 1669 he published his *Tractatus de Cordis item de motu et colore Sanguinis, et Chylis in sanguine Transtus* a valuable production to which he owes his reputation as a man of science. He died in January 1690/91 and was buried at St Tudy near Bodmin in Cornwall.—*Blog. Brit.*

LOWMAN (Moses) a learned dissenting divine was born at London in 1680. He studied at Utrecht and Leyden and being admitted a minister was in 1710 chosen preacher to a dissenting congregation at Clapham where he remained during the rest of his life. He particularly distinguished himself in metaphysics and divinity and was extremely conversant in Jewish literature and antiquities the result of which appeared in a learned Dissertation on the Civil Government of the Hebrews in answer to Morgan's Moral Philosopher. He had also a share in a periodical work called *Occasional Papers* and was author of *An Argument from Prophecy to prove that Jesus is the Messiah*, *An Argument to prove a priori, the Unity and Perfections of God*, *A Paraphrase and Notes upon the Revelations*, and three tracts on the Shechinah, the Logos &c.—*Chandler's Funeral Sermon for Lowman.*

LOWRY FRS. (WILSON) a modern engraver of great skill and eminence in his profession and celebrated for his intimate acquaintance with many of the sciences in particular with those of anatomy and geology

LOW

He was the son of Mr Sowickhead Lowry a portrait painter of Whitehaven where he was born January 24, 1762. He is said to have reached the age of fifteen before he displayed any decided partiality for the profession in which he afterwards so prominently distinguished himself at which period of his life the accidental inspection of a portfolio containing a selection of Woollett's best prints, produced so strong an impression on him as to decide the nature of his future pursuits, although circumstances prevented his immediately acting upon the determination he then formed. A youthful freak induced him to quit his paternal roof and in company with a friend whose years and experience did not exceed his own to wander up to London supporting themselves on the road by acting occasionally in the humble capacity of house painters. A return to his friends however soon took place and he re-established himself with them in the neighbourhood of Worcester in which city an acquaintance commenced between him and Mr Ross an engraver of some ingenuity from whom he received his first instructions in the art. In his eighteenth year he again visited the metropolis where he was fortunate enough to obtain patronage and encouragement from the late alderman Boydell by whom he was not only employed but introduced to several valuable acquaintances especially to Mr (afterwards sir William) Blizard. This eminent surgeon finding in his young friend a strong predilection for medical studies procured him gratuitous access to the best anatomical lectures with a view of assisting him in making surgery his profession but after several years attendance at the hospitals, dec. Mr Lowry abandoning from some unknown cause a sudden distaste for this line of life returned with renewed ardour to engraving in which pursuit however the knowledge he had now acquired of anatomy was of considerable advantage to him. Having obtained a ticket as a student in the Royal Academy he soon distinguished himself for his skill in drawing the human figure and made a rapid progress in his art to the improvement of which he afterwards contributed by a variety of useful inventions. Among these may be reckoned a new ruling machine possessing the property of ruling successive lines, either equidistant or in just gradation from the greatest required width to the nearest possible approximation. Upon this instrument, originally invented in 1790, he some years after made a considerable improvement and constructed a new one capable of drawing lines to a point and of forming concentric circles. In 1798 he first introduced the use of diamond points for etching an invention highly important on account of the equality of tone produced by them, as well as of their durability. Many other useful improvements in engraving were also discovered by him and he was the first person who succeeded in what is technically termed biting steel in well, the secret of which was eventually purchased from him by Mr Heath. Mr Lowry having

L O W

now attained to the highest rank of the peculiar walk of art which he had adopted, was employed on a great variety of first-rate productions, among which our limits will only allow us to particularise Messrs Longman's edition of Dr Bass's Cyclopaedia, commenced in 1800 which for nearly twenty years occupied a considerable portion of his time and attention. Wilkins's "Vitravers" and "Magnæ Græcas," Nicholson's "Architectural Dictionary," and lastly "The Encyclopædia Metropolitana," on which he was employed till his last illness deprived the world of art of one of its brightest ornaments, June 23, 1824. His chief œuvre is considered to be an engraving "From the Dore Portico at Athens in Nicholson's Architecture." Of his engravings of machinery one of Ramsden's Sextant never exposed to sale but given gratuitously with the instrument, is decidedly his masterpiece. Mr Lowry who was elected a fellow of the Royal Society in 1812 was a favourer of the Barkleyan system, and published an ingenious letter on the Moyses account of the Deluge in the Imperial Magazine January 1820.—*Ann. Biog.*

LOWTH (WILLIAM) a distinguished divine was the son of William Lowth an apothecary and citizen of London where he was born in 1681. He was educated at the Merchant Taylors school whence he was elected in 1675 into St John's college Oxford where in 1683 he graduated M.A. and proceeded bachelor of divinity in 1688. Being recommended by his worth and learning to Dr Mew bishop of Winchester that prelate made him his chaplain and gave him a prebend in the cathedral of Winchester and in 1699 presented him to the rectory of Bunton. His studies were strictly confined within his own province, but having been in the habit of making marginal notes relating to criticism and philology he communicated them freely. He furnished Dr Potter with notes to his edition of Clemens Alexandrinus and Dr Hudson with remarks for his edition of Josephus and similar assistance was received by several other distinguished editors. The professional works of this learned divine whose private character was exceedingly excellent, are "A Vindication of the Divine Authority of the Old and New Testament" "Directions for the profitable reading of the Holy Scriptures" "A Commentary on the Prophetic Books of the Old Testament" and several sermons and tracts.—*Heg. Brit.*

LOWTH (ROBERT) second son of the preceding and a distinguished English prelate was born at Bunton 27th November 1710. He received his education at Winchester school, whence he was elected in 1730 to New college Oxford of which he was chosen a fellow in 1734. In 1737 he graduated M.A., and in 1741 was elected professor of poetry in the university of Oxford. The first preferment which he obtained in the church was the rectory of Ovington in Hampshire in 1744, and in 1748 he accompanied Mr Legge afterwards chancellor of the Exchequer to Berlin, and the following year attended the

L O W

sons of the duke of Devonshire as tutor, during their travels on the continent. On his return he was appointed archdeacon of Winchester by bishop Headly, and three years afterwards presented with the rectory of East Woodhay. In 1752 he married Mary, the daughter of Lawrence Jackson, esq., and the next year gave the public his "De sacra Poesi Hebreorum, Praelectiones Academicæ, &c." Of this work, to which the duties of the author's professorship gave occasion all the best critics speak in unqualified praise. In 1754 he received the degree of DD from the university of Oxford by diploma, and in 1755 went to Ireland, as chaplain to the marquis of Hartington appointed lord lieutenant who nominated him bishop of Limerick which preferment he exchanged for a prebend of Durham and the rectory of Sedgefield. In the year 1758 at the visitation of the bishop he preached a sermon in favour of free inquiry in matters of religion which has been often reprinted and is much admired and the same year published his "Life of William of Wykeham," &c., which work in 1762 was followed by "A short Introduction to the English Grammar." The latter production has gone through a great number of editions, and may be deemed the precursor of that attention to grammatical accuracy and precision which has since distinguished the best writers of English prose. In 1756 a misunderstanding took place between Doctors Lowth and Warburton the latter of whom took offence at certain passages in the "Praelectiones concerning the book of Job which he believed to be aimed at the theory of his Divine Legislation of Moses." A private correspondence took place and the difference seemed to be amicably composed until renewed by Warburton in an "Appendix concerning the Book of Job" added to the second edition of his Divine Legislation. In this production he indulged freely in the acumen and affected contempt, by which his controvercy was so unfavourably distinguished and thereby produced a reply from Dr Lowth in "A Letter to the Right Rev the Author of the Divine Legislation of Moses," which has become memorable at once for the shiftness and severity of its criticism. The dispute was carried on for some time by assistant pens on both sides, but the ultimate silence of the Warburtonians gave the victory to their antagonist. In 1766 Dr Lowth was appointed bishop of St David's, whence in a few months afterwards he was translated to the see of Oxford. In 1777 he succeeded Dr Tavick in the diocese of London, and the next year published the last of his literary labours, "Israhel: a New Translation" with a preliminary dissertation and notes, which version is very highly esteemed. On the death of archbishop Cornwallis, the primacy was offered to Dr Lowth, but he declined that dignity in consequence of his advanced age and family afflictions. In 1788 he lost his eldest daughter and in 1793 his second daughter suddenly expired, while presiding at the tea-table his

L O Y

L U B

which was suddenly cut off in the prime of life. He died on the 3rd November 1767 at his palace of Fulham, in the seventy seventh year of his age. Besides the works already mentioned, this highly respectable prelate printed some sermons and poems, particularly as "Ode to the People of Great Britain" and "The Judgment of Hercules." *Dodley's Ann. Reg for 1768.* *Brit. Piastor.*

LOYOLA (IGNATIUS) founder of the order of the jesuits, was descended from a noble family and born in the year 1491 at the castle of Loyola, in the Spanish province of Guipuscoa. At an early age he was sent to court, where he became page to king Ferdinand but inhabiting a love for arms, he subsequently embraced the military profession. He was an able and active officer and particularly distinguished himself against the French at the siege of Pamplona, where he received a severe wound in his left leg and had his right thigh broken by a cannon shot. During the progress of a lingering cure he occupied him self chiefly in perusing the lives of the saints which religious romance operated upon his heated mind as much as reading of a kindred class did upon that of Don Quixote. Envied of rivaling the fame of the saintly founders Francis and Dominic he made a vow to go on a pilgrimage to Jerusalem, and on his return very hung up his arms in the church of Montserrat and dedicated himself to the blessed Virgin. He then proceeded to Manresa where he lived chiefly among the poor of the hospital begging his bread from door to door and enduring the most extreme humilitation. He left Manresa in 1523 and repaired to Rome where he received the benediction of Adrian VI and then found his way to Venice from which city he obtained a passage to Joppa, and soon after reached Jerusalem. Some wild schemes for converting the natives induced the representatives of papal authority in Palestine who feared the consequences to send him speedily back again to Europe. *On account of his deficiency in learning on reaching Spain* he entered himself in 1526 a student of the university of Alcala where he learned to read Latin and in the course of two years study was admitted to the lectures of philosophy. He however profited little by these and acquired nothing, by attempting every thing and all at the same time. At length having gained four proselytes as companions he assumed a particular habit, and took to preaching. A report of these proceedings reaching the Inquisition he was prohibited from preaching until he had studied divinity for four years and being thus repeatedly silenced, he determined to visit Paris, where he arrived in 1529. He resumed his studies in the university of that capital and in 1533 was at length admitted MA. Although warmly opposed, he also contrived to make a number of converts in his college, whom he induced to take the vows which he dictated in the chapel of Montmartre on the 15th August, 1534. The number of these associates was seven, and afterwards ten, all of whom

engaged to meet at Venice and proceed to Jerusalem when Loyola could return from a visit to his native country. After preaching warmly against the licentiousness of the priests and monks in Spain, he joined his companions at Venice where they first assumed to themselves the name of "The company of Jesus." In 1537 Loyola again visited Rome where he summoned his companions, and laid the plan of the Order which became afterwards so celebrated both for good and evil the leading distinction of which besides the two vows of poverty and chastity was a third, of implicit obedience to its chief. This scheme being submitted to pope Paul III, in the first instance he demurred to sanction it, but the proffer of a fourth vow of submissio to Paul himself removed his scruples and he issued a bull in 1540 for its establishment under the name of The Society of Jesus. Loyola was soon after created general of the order and fixing his head-quarters at Rome he sent out his companions on missions to every part of the world. He retained the generalship until his death which took place in 1556 which interval he employed in strenuously seeking the conversion of sinners and more especially of Jews and prostitutes, but he wisely declined assuming the spiritual directorship of an order of women on a similar plan to his own. Before his death this extraordinary man witnessed the diffusion of his order over the greatest part of the old and new worlds and in the short space of sixteen years it included twelve large provinces possessed of a hundred colleges. Loyola was in person of a middle stature of an olive complexion with a bald head eyes full of fire a large forehead, and an aquiline nose. His fanaticism and enthusiasm were certainly dignified by sanctity and he doubtless believed as he taught that the Society of Jesus was the result of an immediate inspiration from Heaven. The gross fictions and pretended miracles which have been fabricated concerning him may be seen in his life by Bouhours. They are of course unworthy of notice otherwise than as proofs of gross fraud in those who invented and of credulity in such as credited them. He was canonized in 1622 by pope Gregory XV, and in the year 1710 the number of jesuits amounted to 19 998 of which formidable body the curious reader may obtain an excellent general notion from Robertson's History of Charles V. The first great shock which this formidable society endured in general opinion was owing to the admirable "Provincial Letters" of Pascal from the consequences of which exposure it never wholly recovered, until the attempted assassination of the king of Portugal which was attributed to its intrigues, and the powerful enmity of the house of Bourbons produced its extinction by pope Clement XIV in a bull dated 1st July 1773.—*Life by Bouhours. Dupin. Mabillon. Robertson's Life of Charles V.*

LUBIENCKSKI (STANISLAV) a celebrated superior minister descended of a noble family at Cracow in Poland, in which kingdom he

L U B

was born in 1623. On his return from a tour through France and Holland he acquired the favor of the king of Sweden, then a visitor in his native country, and made use of his interest with him, though in vain, to procure toleration for the sect of which he was a member. Failing in his endeavour he went into Denmark where he met at first with a favourable reception, but the influence of the Lutherans being exerted against him he was compelled to remove to Hamburg in 1662. A second attempt which he made to settle at Copenhagen met with no better success, and he again returned to his former asylum where in 1675 the whole of his family had nearly fallen victims to the malice of a vindictive domestic who on some slight occasion mixed poison with their food. His two daughters expired from its effects on the 16th of May but himself followed on the 18th and the life of his wife who had also partaken largely of the deleterious compound was with great difficulty saved. At the time of his decease he was engaged in writing an account of the Rise and Progress of the Reformation in Poland which this event prevented him from completing. He was also the author of the *Theatrum Comiticum*, folio Amsterdam 1667 and of several other treatises still in manuscript.—There were also two brothers of the name THIBODEAU and CHRISTOPHER natives of the same place. Of these the former excelled both as a portrait and an historical painter. He was born in 1643 and died about the year 1716. The latter was also a painter of some reputation.—Morel, *Nova, Dicit Hist.*

LUBIN (AVARUS) a native of Paris born about the commencement of the year 1624. He entered the church as an Augustine monk and rose to be general of his order in his native country. Directing his attention to the study of ancient as well as modern geography the reputation which his proficiency in that science gained him caused him being appointed geographer to the king. The fruits of his studies in this branch of learning now extant, are Geographical tables to Plutarch, *The Geographical Mercury* to Plutarch,

Description of Lapland *Orbis Augas timius* and *The Geography of the Bible*. His other works consist of an Ecclesiastical History of the Religious Houses of France and Italy and some annotations on the Lives of the early Christian Martyrs. Father Lubin during the latter part of his life resided for some time at Rome, but died at Paris in the spring of 1695.—*Nova, Dicit Hist.*

LUBIN (ECKMUND) a German professor poet, mathematician and divine born in the spring of 1556 at Westerstedt in the duchy of Oldenburg. The earlier part of his life was spent in the prosecution of liberal studies at Cologne, Leipzig, and other German universities, till, in his fortieth year he accepted the professorship of poetry at Rostock. In 1605 he obtained, in addition, that of theology. The work by which he was principally known was a curious treatise entitled, *Phosphorus de primi causâ et naturâ Mih, tractatus hyper-*

L U C

mataphysicus," printed at Rostock the year after he had obtained his first appointment there. In it he maintains the singular hypothesis of the existence of two coeternal principles which he calls *Dens'* and *Achilum*, the former the good principle the latter the bad or *Drage Mih*, which he defines to be *Nothing*. These opinions drew upon him a host of assailants with Grauer the chief of whom he carried on for some time an animated controversy on the subject. He also published a translation of the Greek Anthology a *Key to the Greek Language*, *Commentaries on the Writings of St Paul Juvenal Persius and Anacreon* *Monostichos sive Historia Evangelica*, being a compression of the four gospels into one continuous narrative. Antiquarian, sive praeiorum et manus vestitorum vocabulorum brevis et fiducias interpretatio and a volume of miscellaneous Latin poetry. His death took place in 1621.—*Nova, Dicit Hist.*

LUCAN (MARCUS ANNUS LUCANUS) a celebrated Roman poet was born at Corduba, in Spain, in the year 37. His father Annus Mela, a Roman knight was the youngest brother of the philosopher Seneca and his mother Achia the daughter of Lucanus an eminent orator from whom he took his name. He was taken to Rome in his infancy and was early committed to the ablest masters. He was introduced into public life by his uncle Seneca then tutor to Nero and he obtained the office of questor before he was of the legal age to exercise it. He was also admitted into the college of Augurs and was deemed in the full career of honour and opulence. He gave proof of his poetical talents at a very early age and thereby excited the jealousy of Nero whose passion it was to be regarded as the first poet and musician of the age. On one occasion Lucan was so imprudent as to recite one of his compositions in competition with Nero at a public assembly and the judges very honestly awarded to him the prize. The angry emperor immediately forbade him to recite any more verses in public and otherwise treated him with so much indignity that he took part in the conspiracy of Piso and other persons against that execrable tyrant. On the discovery of the plot he was arrested with the other conspirators and according to Tacitus was no base as on a promise of pardon to accuse his accomplices, and among others his own mother. This last charge however as she was passed over with out either absolution or punishment, is thought to have originated in the calumny and malice of Nero. Be this as it may his confessions were of no avail he was condemned to die and being allowed to make choice of the manner of his death, he chose that which terminated the life of his uncle Seneca. His veins were accordingly opened in a hot bath and when he found himself growing faint and cold with the loss of blood he repeated some of his own verses, describing a wounded soldier making in a similar manner. He died in the year 65, being then only of the age of twenty-

L U C

serve. Of the various poems of Lucan the "Phoenicia" alone has reached modern times. This is an unfinished piece relating the causes and events of the civil war between Pompey and Caesar. Its title to be reckoned an epic has been disputed by some critics, who deem a supernatural agency essential to that species of composition. Be it what it may, and notwithstanding its occasional faults of harshness, perplexity of style, extravagant description and turgid sentiment and expression, it will ever rank among the leading productions of the Latin muse by its moral sublimity, noble spirit of freedom and frequent instances of genuine poetry. The best editions of Lucan are the "Variorum" Leyden 1658 8vo that of Oudendorp Leyden 1728 4to and that by Dadot Paris, 1795. The most popular English version of Lucan is that of Rowe.—*Warton's Essay Crassus's Lives of the Poets. Horace's Classics.*

LUCAS (CHARLES) a famous Irish patriot who was a physician at Dublin. He was born in 1713 and died November 4 1771. Dr Lucas was a member of the Irish house of Commons, and a distinguished opponent of the court party in the corporation of the metropolis as well as in the senate. His popularity in the sister island was equal at one time to that of Wilkes in England and his funeral was honoured by the attendance of the corporation of Dublin many members of both houses of parliament besides a vast assemblage of other persons. He was the author of a few medical tracts and some political pamphlets.—*Jones's Biog Dict.*

LUCAS (FRANCIS) armoured of Bruges from his having been born in that city in 1552. He studied at Louvain where he graduated and acquired a great reputation for his familiar acquaintance with Biblical and Oriental literature. He published Commentaries on the Old and New Testaments, the former in 3 vols. 4to the latter in 3 vols folio, and also a Concordance. Some time previously to his decease he obtained the deanery of St Omers where he died in 1619.—*New's Dict Hist.*

LUCAS (PAUL) a French traveller of considerable note in the early part of the eighteenth century. He was born in 1664 at Rouen in Normandy. In 1699 and 1704 he visited the Levant Greece Asia Minor and Africa and having brought home medals and other curiosities for the king's cabinet, he was made one of the royal antiquaries. He travelled in the East again in 1714 and 1725, and at length having made a journey to Spain he died at Madrid in 1737. His travels, which form 7 vols. 12mo are entertaining but romantic and improbable. (For a curious account of his adventure with a cabalistic device while travelling see article FLAMEL.)—*Moreri's Biog Univ.*

LUCAS BURGENSIS PACIOLUS, or LUCA DI BORGO a Minorite friar who has been regarded as the author of a great improvement in mathematical science by his invention or introduction of the mode of notation by means of algebraic symbols to mark

L U C

known or unknown quantities. He is said to have taught his system of algebra at Venice about 1494, and whencesoever he may have derived it, he appears to have been the first European mathematician by whom it was used.—*Prestley's Ed.*

LUCAS DD (RICHARD) a native of Prestige Bedfordsire, born 1648 and educated at Jesus college Oxford where he graduated. He was for a short time head master of Abingdon school but resigned his situation, and coming to the metropolis obtained, in 1683 the lectureship of St Olave's Southwark and the vicarage of St Stephen's Coleman-street, to both which preferments he was elected by the parishioners. Dr Lucas subsequently obtained a stall at Westminster and held it nineteen years several of which were passed by him in blindness a weakness which from his youth had affected his eyes terminating at length in total deprivation of sight. He was a good classical scholar as well as a pious divine. His principal writings consist of five octavo volumes of Sermons, An Enquiry after Happiness 2 vols. 8vo The Morality of the Gospel Christian Thoughts, Practical Christianity 8vo and a Latin translation of the Whole Duty of Man His death took place in 1715.—*Hog's Brit.*

LUCIAN a distinguished Greek writer was a native of Samosata the capital of Commagene on the banks of the Euphrates. He was born in the reign of Trajan or as some think early in that of Adrian. His birth was lowly and his father not being able to educate him placed him under his brother in law to be brought up a sculptor. Having contracted a disgust for this employment, he withdrew from his master and went to Antioch where he engaged in literary studies, and embraced the profession of a pleader. Weaned however with the contention of the bar he threw off the gown and confined himself to the profession of rhetor. In this character he settled first at Antioch but subsequently visited Greece Italy Spain and Gaul. At an advanced age he was appointed procurator of Egypt by the emperor Marcus Antoninus; and he is supposed to have died in the reign of Commodus at the age of eighty or ninety. The works of Lucian of which a large number have reached modern times consist of a great variety of writings, narrative rhetorical, and satirical partly in the historical and dialectical form but chiefly in that of dialogue. Of these the most popular and those which chiefly distinguish him as a writer are such as are distinguished by a rich vein of humour unmatched that he may be deemed the Swift or Voltaire of the ancients. He turns much of his malice on the absurdities of the pagan mythology and the follies of the various sects of philosophers more especially scouring the various quacks and ignorants of the latter class who preceded the mendicant orders of Christianity in their gross experiments upon human credulity. As the Epicureans concurred with him in this respect he treats them with more favour than the rest and fre-

L U C

quently assumes the condensed sense and acuteness of the Socratics. He did not altogether spurn the Christian religion but seems to have witnessed it only under the garb of mystery or fanaticism. Like most sceptics, he occasionally exaggerates the absurdities he would decry, and sometimes indulges a little licentiousness although a supporter of morality upon the whole. The best editions of Lucan are those of Baudouin, Paris 1615 folio of Gravis Amst. 2 vols. 4to., of Hemsterhuys, Amst. 1743 4 vols. 4to. Lucan has found several English translators, Spence Mayne Hickes Carr and Franklin.—*Vossius. Brucker. Sacra Oration.*

LUCIFER bishop of Cagliari in Sardinia lived in the fourth century and is known in ecclesiastical history as the author of a schism choosing rather to separate from his brethren than allow the decree of the council of Alexandria, for receiving the postulate Anna bishops. Being honoured by the church of Rome as a saint, it is supposed that he subsequently reconciled himself to the orthodox communion which his friend Ruslus, however denies. He died in 370. His works, which consist of treatises on the controversial topics in which he was so deeply interested were collected together and published at Paris in 1568 and with additions, at Venice in 1780. *Mosheim. Lardner.*

LUCILIUS (*Carus*) a Roman satirist, the friend of Scipio and Lelius who flourished in the second century before the Christian era. He was a native of Suessa in Italy born of an equestrian family and served with some reputation in the Numantine war. Of his works which originally occupied thirty books and were remarkable for their causticity but few specimens, and those merely fragments, have reached posterity much of them as are extant were however collected and published at Leyden in 1599 with a commentary by Douay. Lucilius has by some been considered the inventor of satiric poetry but the probability rather is, that he only refined upon a style which Ennius and Pacuvius had practised before him. His death took place AC 103, at Naples. *Voss. Poet. Lat. Boyle.*

LUCKNER (*Nicholas*) a baron of the German empire born at Campen in Bavaria, who became a general in the French army. In the seven years war he held that rank in the Prussian service and having displayed considerable talents as a commander of light troops he was, on the occurrence of peace invited to enter into the service of France in which he obtained the rank of *heutenant-général*. In 1789 he sided with the revolutionairy party and from the beginning of 1791 he held various military employments. His age, experience and reputation occasioned his being placed in situations to which his abilities were unequal. In December 1791 he received the bribe of marshal and a few months after he was appointed generalissimo of the French armies. After having made his appearance at Paris, where, with La Fayette he enjoyed a short-lived popularity and

L U C

showed a disposition to support the king's constitutional authority he went to take the command of his army at Strasbourg. He was supplanted by Dumouriez, who, on his separation from the command, succeeded him. He went to Paris to justify himself before the National Convention, in January 1793, and was ordered to retire wherever he thought proper. Having some time after demanded payment of a pension due to him, he was arrested, and put to death.—*Duc de P. M. de la Roche. S.*

LUCRETIA a Roman lady of distinguished virtue whose ill-treatment by Sextus Tarquinius led to the destruction of the kingdom and the formation of the republic of Rome. She was the wife of Collatinus a near relation of Tarquinius king of Rome. Sextus Tarquinius who contrived to become a guest in the absence of her husband whose absence he was found means to reach her chamber in the middle of the night but was rebuffed in a manner worthy of her character. Finding her resolute he threatened to stab her kill a slave and place him by her side and then swear that he had slain them both in the act of adultery. The fear of infamy succeeded and he triumphantly quitted her on which she summoed her husband, father and kindred and after acquainting them with the whole transaction in spite of their soothing remonstrances drew a dagger and stabbed herself to the heart. Such is the story as related by Livy, and although some of the circumstances are narrated differently all agree in the catastrophe which was the immediate cause of the conspiracy against the Tarquinius, headed by Junius Brutus which produced a change to republican government in Rome BC 509.—*Livy. Dionysius Halicarnassus.*

LUCRETIUS CARUS (*Titrus*) an eminent Latin poet and philosopher was a Roman, but whether of the ancient Lucanian family is uncertain. He was born about BC. 96 and being sent early to Athens studied under Zeno, a noted Epicurean. His celebrated poem "De rerum Natura," was written during the intervals of reason, which alleviated an insanity to which he was subjected by the administration of an amatory philtre by his wife. It forms the first account of the Epicurean philosophy in the Latin language and affords a striking example of the great freedom with which opinions contradictory to the established religion were at that time maintained, as no writer has more pointedly controverted the popular notions of heathenism, or even the fundamental points of all other religions such as the existence of a creator a Providence, and an immortal state. His language and versification partake of the rudeness of an early period of literature but when the subject admits of elevated sentiment, or descriptive beauty no Latin poet has taken loftier flights, or exhibited greater sublimity. His morality is also generally pure, although he is sometimes decorously hot-headed. The inconsistency of his system being now no longer impious, the gravest characters in modern times have not scrupled to become his editors

L U D

and commentaries. He is said to have died by his own hand, at the age of forty-four. The first editions of his poems, are those of Creech, 1695, 8vo., Harveycamp Leyden 1725 &c.; Gilbert Wakefield, London, 3 vols. &c. It has been translated into English, by Creech Good and Bushy, the second of which translation is accompanied by the text of Wakefield, and very elaborate annotations.—From *Past Let. Brucker* (Grot's Translation).

LUDEWIG (JOHN PETER VON) chancellor of the university of Halle in Saxony and counsellor to the king of Prussia, eminent for his acquaintance with international jurisprudence. He published several collections of the historical writers of the middle ages, a commentary on the golden bull, an imperial decree forming a fundamental law of the German empire and other works of research. He died in 1743.—*Diet. Hist.*

LUDLOW (Essex) a distinguished leader of the republican party in the civil wars of Charles I. He was the eldest son of Sir Henry Ludlow knight, and born about 1602 at Mardon Bradley in the county of Wilts. He received his academical education at Trinity college Oxford, whence he removed to the Temple in order to study the law. Sir Henry Ludlow who was chosen knight of the shire for Wiltshire in the long parliament, having joined the opposing party his son who warmly adopted the same principles entered into a military association formed among the students of the law with most of whom he subsequently entered the army in the life guards of the earl of Essex. He served at Edgehill raised a troop of horse and being made governor of Wardour castle held it for ten months against the king's party until battered to ruins when he was made prisoner but soon afterwards exchanged. He was also present at the second battle of Newbury and many other warm actions. When the famous self-denying ordinance took place he remained out of any estimable situation until chosen member for Wiltshire in the place of his father. At this time the machinations of Cromwell becoming visible he was opposed by Ludlow with firmness and openness. With a view of establishing a republic his favourite form of government, he however joined the army against the parliament, when the latter voted the king's concessions a base for treaty and was also one of the unhappy Charles's judges. With a view of removing him Cromwell caused him to be nominated general of horse in Ireland where he joined the army under Ireton and acted with great vigour and ability. When Cromwell was declared protector Ludlow used all his influence with the army against him, on which account he was recalled, and was put under arrest at Beaumaris. Although he refused to enter into any engagement not to act against the government, he was at length allowed to come to London where, in a conversation with Cromwell himself, he openly avowed the republican principles upon which he acted, and refusing all security of engagement for submission, he returned into

L U D

Essex, where he remained until the death of the Protector. When Richard Cromwell succeeded, he joined the army party at Wallingford-house, and was instrumental in the restoration of the long parliament, in which he took his seat. Too honest for the views of the army faction they contrived to send him again to Ireland, as commander-in-chief, where his efforts in favour of the parliament were thwarted by the council of officers at Dublin who at length accused him of high treason and he was compelled to return to London. The Restoration was now rapidly approaching and finding the republicans unable to resist it, he quitted the country and proceeded to Geneva, whence he afterwards, with many more fugitives of the party took refuge at Lausanne where Lisle was assassinated by some English royalists. Similar attempts were made on the lives of Ludlow and others, but his caution, and the vigilance of the magistracy of Bern, protected him and he passed the remainder of his life at Vevey, with the exception of a brief visit to England after the Revolution from which he was driven by a motion in parliament for his apprehension by sir Edward Seymour the leader of the Tory party. He closed his life in exile in 1693, being then in his seventy third year. A monument is erected to his memory by his widow who was a faithful and courageous partaker of all his vicissitudes, in the principal church of Vevey. Ludlow was one of the purest and most honourable characters on the republican side and doubtless acted upon principle being generally equitable humane, and disinterested. He was also morally strict, without any display of the odious fanaticism and hypocrisy which disgraced the conduct of so many of his associates. He left posteriorly a valuable legacy in his *Memoirs*, which contain not only the acts of his own life but many particulars in relation to the general history of the times they are written in a manly unaffected style and although not entirely free from party prejudice are replete with curious and authentic matter.—*Ludlow's Mem.* *Biog. Brit.*

LUDOLF (GEORGIUS MILCHIONI) a German jurist of the eighteenth century. He was a native of Erfurt, and became assessor of the imperial chamber of Wetzlar. Among the works which he published are *Introductio Juris Primogeniture*, " *De Jure Fonsium illustrata*," and " *Corpus iuris cameralis*." He died in 1740.—*Diet. Hist. Zeyf.*

LUDOLF or LUITHOLF (Joh.) a learned Oriental scholar born at Erfurt in Germany, in 1694. He studied jurisprudence at the university of his native place and afterwards travelled as a tutor in several parts of Europe. Returning to Erfurt he practised as a counsellor in the Saxon courts, and exercised other public functions. In the journeys which he made to Paris, in the service of the elector palatine, and during a previous visit to Rome, he acquired from written documents and oral communication a fund of knowledge relative to the history and literature of the an-

L U G

tions of Asia and Africa. He spent the latter part of his life at Frankfort, in the prosecution of his literary researches, and died there in 1704. His productions are, 'Historia *Aethiopica*' with a commentary and appendix from the writings of father Tellus a Portu gesuit justit, and the intelligence supplied by Abyssinian priest Grammaticus *Aethiopica* folio, 'Lexicon Amharico-Latinum,' folio, 'Lexicon *Aethiopico-Latinum*, 2 vols. folio; 'Grammatica Lingua *Aethiopica*', 'Pasti Ecclesiae Alexandrinae' folio, &c.—*Morari. Biog. Univ.*

LUDOLF (HENRY WILLIAM) nephew of the preceding was born in 1655. He was educated by his uncle and became secretary to the Danish envoy at the court of St James's and afterwards to prince George of Denmark. He reengaged the latter situation on account of ill health and having travelled to Moscow he made himself acquainted with the Russian language and on his returning to England he published a Russian grammar at Oxford in 1696. He afterwards went to the Levant, and thence to the Holy Land and Egypt. He died in London in 1710 having published an edition of the New Testament in modern Greek and other works chiefly of a religious nature.—*Askan. Gen. Biog.*

LUDWIG (CHRISTIAN GOTTLIEB) a German physician and naturalist, born in Silesia in 1709. He travelled in Africa and on his return to Germany became medical professor at Leipzig where he died in 1773. He was the author of 'Institutiones Physiologiae' 1732 8vo 'Institutiones Pathologiae' 1767 8vo and 'Institutiones Therapae generales' 1771 8vo and he invented a system of taxonomy in opposition to the sexual system of Linnaeus.—CHRISTIAN FREDERICO LUDWIC MD son of the former obtained a medical professorship at Leipzig in 1782 and died February 3rd 1784 at the age of thirty. He published an inaugural dissertation 'De Suffusione per acum curature' Lupa. 1783 4to.—*Ross. Cyclop. Lond. Med. Journ.*

LUGGO There were two Spanish Jesuits of this name brothers natives of Madrid FRANCISCO the elder born 1580 was educated in the university of Salamanca, and entered into the order in his twentieth year. He was soon after despatched on a mission into the Spanish dominions in the New World, and became professor of divinity at Mexico and Santa Fe. He was the author of some annotations on the works of Thomas Aquinas printed in two folio volumes a treatise on the sacraments of the Romish church with other theological tracts and died in 1652.—JUAN DE LUGO, his brother born in November 1583 after prosecuting his studies with great success at Salamanca and Seville obtained the divinity professorship at Valladolid which he held five years, and then resigned for a similar appointment at Rome which he filled upwards of twenty years with great reputation. Although a learned and even a laborious scholar such was the native modesty and lack of ambition implanted in his disposition

L U L

that it was only at the positive command of the reigning pope, Urban VIII, that he was induced to publish the works he had composed. These, consisting entirely of controversial treatises, fill seven folio volumes, and are dedicated to the pontiff at whose command they saw the light. Urban gratified by his compliance, took the first opportunity to raise him to the purple, but he declined the dignity and only yielded as before to the absolute commands of his spiritual superior. As a scholar his knowledge was by no means confined to classical or theological literature he was also a good natural philosopher and to his exertions was owing the first introduction into France of Quinquina, called from him at the time De Lugo's powder and Jesuit's bark. This invaluable medicine though at that period (1650) sold from its rarity at its own weight in gold, he freely dispensed to all afflicted with agues. Cardinal de Lugo died at Rome in August 1660 bequeathing all his property to his order and being buried at his own request at the feet of Ignatius Loyola its founder.—*Morari. Nov. Diet. Hist.*

LUITPRANDUS an ecclesiastic of Lombardy who flourished as a statesman and historian about the middle of the tenth century. He was born at Pavia and became secretary to Berengarius the second king of Italy who despatched him on a diplomatic mission to Constantine Porphyrogenitus in 948. In quitting himself of this commission he had the misfortune to displease his employer and was compelled to throw himself on the escape of Otto for protection against his anger. The interference of that potentate in his favour was most effectual ending in the dethronement of his royal persecutor and his own elevation in 963 to the see of Cremona. Otto now took him into his own service and sent him out as his ambassador to Nicephorus Phocas but on this occasion in avoiding the Scylla on which he had before been wrecked he ran into the opposite whirlpool. His strict adherence to his new master's instructions gave deep offence to the other party who, incensed at his refusing to acknowledge their title to undivided empire, threw him into prison. Luitprandus at length obtained his freedom and on his return to Italy employed the latter part of his life in composing the 'History of our Times,' a work coarsely written but valuable, as throwing considerable light on the transactions and manners of the middle ages. It consists of six books and was published first at Antwerp in one folio volume 1640. L. A. Muratori reprinted it afterwards in his 'Rerum Italicarum Scriptores,' 25 vols. folio.

The time of this author a death is uncertain.—There was also a king of Lombardy of this name who succeeded to the throne in the early part of the eighth century. He was a wise, as well as a victorious prince, and compiled a legislative code for the use of his subjects. His death took place in 744.—*Morari. Nov. Diet. Hist.*

ULLY (JEAN BAPTISTE) a native of Florence was born of obscure parentage

L U L

In 1734. As a child he exhibited a peasant's fondness for music, which induced a confidante, who was acquainted with his parents, to give him some lessons on the guitar. Soon after the chevalier Guise, who had been commissioned by Mlle. de Montpensier to send her an Italian page struck with his talent, engaged him, and despatched him to Paris in his tenth year. The lady however was so little pleased by his appearance that she sent him into her kitchen, where he remained some time in the humble capacity of an under scullion. His musical talent becoming accidentally known to a gentleman about the court, his representations procured him to be taken from the scene of his degradation, and to be placed under a master through whose instructions he rose rapidly till he obtained the appointment of musician to the court. What can accident have given him another lost, he was dismissed, but still contrived to get admitted into the royal band where his performance soon attracted the notice of the king himself. By the monarch's direction a new band called "Les Petits Violons" was formed and Lully placed at the head of it, in 1660 about which period he composed the music to the then favourite amusements of the court called ballets, consisting of dancing intermixed with singing and recitative. In 1670 Lully was made joint director of the French opera established the preceding year on the plan of that at Venice which situation he filled till his decease in 1687. His death was caused by mortification arising from a blow on the foot which he gave himself with a cane while in the act of beating time in the orchestra to his own "Le Deum" written on the occasion of the king's recovery from a severe illness. A curious story is told of a conversation held by him with his confessor a short time before his death. The priest refused to grant him absolution unless he would destroy any of his profane musical compositions which he had not yet made public. Lully complied and a rough draught of his "Achille et Polixene," a new opera, was thrown into the fire. Soon after he grew apparently better and on being blamed by a friend for what he had done. It is of no great consequence, he replied, for I have another copy. A relapse taking place his fears returned and he was, by his own directions placed upon a bed of ashes with a cord round his neck, in which position he expired. Lully contributed much to the improvement of French music and is said to have been the inventor of the overture.—*Biog. Diet. of Mex.*

LULLY (RAYMOND) a famous philosopher of the thirteenth century. He was a native of Majorca, and in his youth a soldier but on experiencing a disappointment in love which disgusted him with the world he devoted himself to a life of alternate study and mortification as a religious ascetic and mystic. He travelled into Africa and the East, for the purpose of converting the Mahometans to Christianity because a friar of the order of St Francis, and after having ended

L U S

vowed to excite the Christian princes to a crusade against the infidels, he made a second visit to Africa, in hopes to obtain the crown of martyrdom. He suffered tortures and imprisonment but having been released through the influence of some Genoese merchants, died at sea, as they were conveying him home, in 1313. He wrote on divinity medicines, chemistry metaphysics, &c. One of his treatises is entitled, *Ars magna generalis et ultima, quatuorunque a. t. s. et scientiarum accessoria et clavigera*. It contains the plan of a machine for manufacturing scientific propositions mechanically which, limited to proper objects might be found not destitute of utility. Boerhaave speaks highly of Lully's writings on chemistry, and Naudé has bestowed some labour in justifying him from the charge of being a magician.—*Trithemius de Script. Eccles. Naudé Apol. pour la Gr H Soupe, de Magie Brucher Akademie*

LUNIG (JOHN CHRISTIAN) a learned German diplomatist born in 1662. After studying at Helmstadt and Jena, he travelled in various parts of Europe as a tutor to some young noblemen. He afterwards made a campaign against the French in the service of Austria, and at length became secretary to the city of Leipzig where he died in 1740. Lunig was the author of *Codex Germanicus diplomaticus* 2 vols. folio. *Codex Italicus diplomaticus* 4 vols. folio and several other collections of importance relating to European history and diplomacy.—*Biog. Uni.*

LUPTON There were two English authors of this name DANIEL who wrote about the middle of the seventeenth century and of whom little more is known than that he published in 1637 some memoirs entitled "Modern Protestant Divines the Glory of their times 4to 1640," London and the Country carbonadoed 1638. "Objectionum Reductio 1634 England's Command of the Seas and Emblems of Ranties," 1653.—The other Dr WILLIAM LUPTON was fellow of Lincoln college Oxford and afterwards rose to a golden prebend in the cathedral of Durham having previously officiated as lecturer of St Dunstan's Fleet street, in the city of London and preacher to the society of Lincoln's inn. There is extant a volume of his sermons among which is one combating the opinions of Tillotson with respect to the punishments in a future state. These did not appear till after his decease, which took place in 1726.—*Biog. Brit.*

LUSSAN (MARIEZET de) a French authoress of considerable genius, whose father was one of cardinal Fleury's coachmen. She was born in 1682 and having the good fortune early in life to attract the notice of bishop Huet, by the accidental display of her literary talent, the encouragement afforded her by that prelate induced her to commence authoress by profession. She exercised her pen principally in the departments of history and romance; in the former her most esteemed productions are memoirs of the courts of Philip Augustus, of Francis I and of Charles VI the first

L U T

mer in six, the second in three, and the last in nine volumes 17m; a life of Crillon, &c. Among her works of fancy are, 'Les Veillées de la Féeuse,' 4 vols., 'La Comtesse de Godes' 2 vols. &c. In all these productions she was assisted by De la Serre, who shared in the profits. She died in 1758.—
New. Diet. Hist.

LUTHER (Maurer) the famous ecclesiastical reformer was the son of a German miner and was born at Eisleben in Saxony November 10, 1483. He was educated at the university of Erfurt, and was intended for the legal profession when a melancholy accident which he witnessed gave him a distaste for the world, and induced him to enter into a convent of Augustinian friars. Here he was at first distinguished by his zeal for the established faith, and he is said to have declared that he would have brought the first faggot to burn Erasmus who had written against the mass ecclesiastical celibacy and the invocation of saints. But Luther was destined to become a much more obstinate opposer of the doctrines in question, and a far more daring innovator than the man whom he viewed as a heretic worthy of the flames. A journey which he made to Rome as a delegate from the friars of his order in 1510 is stated to have impressed his mind with a strong sense of the prevailing corruptions in the church and thus appears to have been increased by perusing the works of John Huss. In 1512 he was made professor of divinity in the then newly established university of Wittenberg. Thus armed with the authority of a public teacher he began to propagate the opinions he had conceived, whence resulted one of the greatest revolutions which ever took place in the religious sentiments and practices of mankind. Though numerous independent circumstances concurred to the production of that great event, termed the Reformation yet the personal character of Luther had no slight influence. He was of a bold and impetuous temper possessed an ardent imagination natural eloquence a command of language an unwearied pen and to crown all an obstinacy of disposition which completely set opposition at defiance. Thus qualified for a pestiferous accident soon called him forth to the field of controversy Leo X finding the papal treasury exhausted by the magnificent projects of his predecessors and his own profusion, found it necessary to raise money by the sale of indulgences and Albert, archbishop of Meissen and Magdeburg farmed the produce of the ecclesiastical tax in Saxony. The Augustinian friars had usually been employed in the office of publishing and distributing these licenses and exemptions from spiritual penalties and inflictions, and they derived both honour and profit from the trust but Albert now gave the commission to the Dominicans, who appear to have exerted it with extreme indifference and by their scandalous lives and practices exposed the indulgences to contempt. Luther, as an Augustinian friar resented the affront put upon his order, and availing him-

L U T

self of the unpopularity of his rivals, began to preach against their abuses in the sale of the indulgences, whence he proceeded to denounce against the practice of granting them, and to dispute the authority whence they originated. These sentiments he supported in a thesis which he published at Wittenberg, and this production was publicly burnt at Frankfort, by John Tösel, a Dominican friar who was the principal agent of archbishop Albert. Luther at first treated the pope himself with respect, and while he maintained his opinions, he affected submission to the authority of the church. Leo summoned the contumacious friar to answer for his conduct at Rossa but he wisely refused to put himself so much in the power of his adversaries and instead of having his cause tried in Germany where he was strongly protected by the elector of Saxony and other princes. The pope at length sent cardinal Cajetan to settle the controversy before whom Luther made his appearance to defend himself at Augsburg. Finding that he could obtain no terms but an entire submission to the authority of his judge, he withdrew from the place under apprehension of dangers, and a decree being issued against him he appealed from the pope to a general council. In the mean time repeated conferences took place between the partisans of papacy and Luther and his disciples, which served to exasperate both parties, and which necessarily proved advantageous to the advocates for reformation. The tenets of the reformer became widely diffused and he proceeded to greater lengths in his opposition to the Romish church. In 1519 occurred a memorable dispute at Leipzig between Luther and Eckies a learned Catholic divine after which the former took the decisive step of abolishing an established usage of the papists by no longer withholding the sacramental cup from the laity. The pope then issued a bull of excommunication against Luther as a confirmed heretic and he displayed his contempt for the holy see by burning the instrument of damnation in the presence of the assembled students and professors of Wittenberg. At the beginning of 1521 Luther showed his courage by making his appearance at the diet of Worms, whether he had been summoned to attend under the protection of the imperial safe conduct, the violation of which his friends apprehended, and dissuaded him from trusting to it. He was, however allowed to depart in safety but as he was returning home, he was surrounded by a body of horsemen, and conveyed to the castle of Wartemberg. This was a friendly stranglehold of the elector of Saxony adopted as a precaution against the threatened vengeance of the hierarchy. Luther remained in his retreat nine months, employing his pen in the defence of his principles, and in strengthening the faith of his followers. Here it was that he wrote an answer to the treatise which our Henry VIII had published against him, in which he treated the king with as little ceremony as any of his other antagonists. In 1534 Luther cast aside his monastic

L U T

matic trials, and the next year he added Catherine Grey, or De Bohun, a nun, who had escaped from her convent, and relinquished her vows. In 1529 the emperor Charles V assembled a diet at Speier, to concert measures against the advocates for the new opinions, and some severe resolutions being passed against them, a protest was signed by many of the persons present at the assembly whence they acquired the distinctive appellation of Protestants. The schism in the church was now become incurable, and from this period Luther could contemplate with satisfaction the important and apparently durable effect of his extraordinary exertions, of the efficacy of which he could originally have entertained but a faint conception. The remainder of his life was chiefly spent in exhorting universities and princes, and states, to uphold the reformation of religion and in publishing from time to time such writings as might aid and encourage them in the arduous undertaking. He died at Eisleben Feb. 18 1546 and was interred in the cathedral of Wittenberg with a more extraordinary degree of pomp and magnificence than was ever displayed at the obsequies of any other private individual. Luther was a man who in no situation would have sunk into insignificance. In another age and under different circumstances, he might have become the powerful champion of ecclesiastical usages consecrated by time and rendered venerable by prescriptive authority; and that courage, skill and learning with which he assailed the tenets and practices of his ancestors might have been exulted with equal splendour in their defence; he might have emulated St Athanasius or St Dunstan as a defender of the faith and practice of the church, but in no age or nation would he have been numbered among the heroes consummate. Nati a class of beings who have peopled the monasteries of Christendom ever since their first establishment. The writings of Luther fill seven folio volumes. Among them may be noticed his translation of the Bible into German and his Table Talk, *Tisch Reden* Eisleben 1565, 8vo which has been translated into Latin and English.—Robertson's *Hist of Charles V* Askin's *G Eng*.

LUTTI (BENEDETTO) a Florentine artist of considerable eminence born in 1666. His was the pupil of Domenico Gabbiani, whose style of painting he imitated and whence extraction he is considered to have fully equalled. Several of his most esteemed pictures are still to be found at the place of his residence Rome especially in the *Album pauperum*. There is also an admirable Magdalene by him at Naples. Lutti had many illustrious patrons among the founders of the fine arts in particular the emperor of Germany and the elector of Meissen, the former of whom raised him to the rank of knighthood while the latter presented him with a brilliant cross of considerable value. He was a man of an irritable disposition and his death, which took place in 1724, is said to have been partly accelerated by a dispute re-

specting one of his portraits. In his profession he was singularly laborious, and bestowed unwearyed pains and industry in the finishing of his pictures, which are principally easel pieces.—D' Argenville *Vies de Peint.*

LUXEMBOURG (FRANCIS HENRY DE MONTMORANCY) duke of (maréchal of France, was born in 1663. He was the posthumous son of the count de Bouteville who was beheaded in the reign of Louis XIV for fighting a duel. He served when young under the prince of Condé, and in 1666 he was made a duke and peer of France, and in 1667 a lieutenant-general. In 1672 he commanded during the invasion of Holland and having gained the battle of Seneff in 1674, he was created a marshal of France. He subsequently distinguished himself at the battles of Fleurus, Leuze and Steinkirk and on other occasions. Marshal Luxembourg died in 1695 —Fayreheit, *Mores.*

LYCOPHRON a Greek poet of the age of Ptolemy Philadelphus. He was a native of Chalcis in Eubœa and lived at Alexandria in Egypt having been one of the seven poets termed the Pleiades at the court of the Greek kings of Egypt. He wrote tragedies the titles of twenty of which have been preserved by Suidas but the only work of Lycophron extant is, 'Alexandra', relating to the production of Cassandra, the daughter of Priam, king of Troy. This poem is noted chiefly for its obscurity. The best edition is that of archbishop Potter's *Oxon 1702 folio*; and one of the latest is that of Reinhard Lips. 1788 8vo. Some light is cast on this production in 'Re marks on the Cassandra,' by the rev H Meiss. —Aiken's *C Biog* Elton's *Spectres of the Classic Poets*.

LYCURGUS the celebrated legislator of Sparta is reckoned by the best chronologists to have been born about BC 996. Plutarch seems to think that he was the tenth in descent from Hercules. He was the son of Eumenes, king of Sparta, who was succeeded by Polydectes, his eldest son. When the sceptre descended to Lycurgus on the death of his brother finding that his widow was pregnant, he forbore assuming the office of king and publicly declared that he would resign it to the forthcoming child should it prove a son. In due time his sister-in-law was delivered of a boy which was brought to him while he was sitting with the magistrates, to whom he immediately presented it as their king. He continued to conduct the administration as guardian to his nephew until induced to travel by the machinations of a party headed by the queen-mother whose hand he had refused. He made the study of legislation his principal object, and more especially attended to the celebrated laws of Crete, instituted by Minos and Rhadamanthus. From Crete he passed over to Asia, and visited the Ionian cities where he collected and transcribed the poems of Homer and was the first who made these fully known to Greece. In the mean time Sparta became a prey to civil dissensions, and he was invited home, to resume the reign

L Y C

LYD

of government; which call he obeyed, and induced the Spartans to adopt that extraordinary system, which rendered them so distinguished in the history of Greece and of human nature. Having engaged the king, senate and people, by a solemn oath not to alter any thing until his return, he left Sparta with the avowed object of visiting the oracle of Delphi, whose approbation he received and conveyed to Sparta, but resolutely forbore to return home in order to keep his countrymen true to their oath. Different accounts are given of the manner of his death. Plutarch affirms that he put himself voluntarily to death by abstinence, while Lycan asserts, that he died naturally at the age of eighty-five. The general spirit of the ordinances of Lycurgus was to form a people in whom public principle should predominate over all private interests and affections, who should be hardy in body, courageous in mind and devoted to the defence of their country to their last breath. In pursuit of this, he scrupled not to sacrifice equally the freedom of savage and the decencies of civilised life. With riches he excluded the fine arts and all the studies which tend to soften and humanise mankind. He destroyed the modesty of the female sex and violated the parental and conjugal relations. But what he aimed at he attained. Sparta under his laws became a nursery of invincible warriors, who for a series of ages bore the greatest sway in the affairs of Greece and proved the bulwark of their friends and the dread of their foes. The memory of Lycurgus was honoured by his countrymen with an anniversary at which his praises were recited and which lasted to a very late period.—There was also an Athenian orator of the name of Lycurgus who was one of the thirty whom his countrymen would not deliver up to Alexander. Some of his orations are preserved which are printed in the collections of the Greek orators.—*Plutarch Mervi. Univ Hist.*

LYDGATE (John) a Benedictine monk of Bury St Edmunds in the fifteenth century. He was the scholar and professed imitator of Chaucer and though far inferior to the great father of English poetry in original genius and inventive fancy he exceeds him in smoothness of language and harmony of versification. He was educated at Oxford travelled in France and Italy and having made himself acquainted with all the learning of his age he on his return home opened a school for the tuition of the young nobility. He died after 1446. Of the numerous works of Lydgates catalogue may be found in Bishop Tanner's *Bibliotheca Britannico-Hibernica* and Ritson's *Bibliotheca Poetica*.—*Burke Hist. Atkis's G. Bigg.*

LYDIAT (Thomas) a learned English divine mathematician and chronologer of the seventeenth century. He was a native of Oxfordshire and received his education at New College, Oxford, where he graduated as M.A. in 1606, previously to which he had obtained a fellowship. This he resigned in 1603 and

retired to a small pensioned estate near Banbury where he devoted himself to literary studies, and at length published his *Excerpta Temporum ab initio Mundi usque Compendio facta, contra Scaligerum et alios*, 1606. He afterwards went to Ireland with archbishop Usher who procured him a situation in the university of Dublin. Returning to England, he became rector of Osterton, Oxfordshire and entered with zeal and assiduity on the duties of his station as a parish priest. He also composed several learned works some of which he was prevented from publishing by his pecuniary embarrassments occasioned by his having become security for another person's debts. His imprudence in this respect subjected him to imprisonment, and he afterwards suffered greatly for his attachment to the royal cause in the civil war. Thus indigent and unfortunate scholar died in obscurity and indigence in 1646. Besides his printed works, he left behind him a great many MSS. *Wood's Athene Oxon. Atkis's G. Bigg.*

LYE (EDWARD) a learned English antiquary of the last century a native of Totnes Devon born 1704. He received his education at Hart-hall Oxford where he graduated and applied himself with great success to the study of the language and history of our Anglo Saxon ancestors. Whilst engaged in this pursuit he published from a manuscript in the Bodleian library the work of F. Junius entitled *Etymologicum Anglicanum* with notes, and a grammar of the Anglo Saxon tongue. His next work was a grammar of the Gothic with a translation of the four gospels into that language. But the production by which he is most advantageously known is an Anglo-Saxon and Gothic Dictionary in two folio volumes. This eruditè and most laborious compilation which had occupied many years of his life he did not survive to see printed. In 1772 however five years after his death it appeared, with a grammar of both tongues prefixed by Owen Manning and with some account of the author. Mr Lye was in the church and held in succession the livings of Houghton Parva, Northants and Yardley Hastings for the latter of which he was in debt to the earl of Northampton.—*Memoirs by Manning*.

LYNCKER (NICHOLAS CHRISTOPHER de) an eminent German lawyer born in 1643. He became professor extraordinary of jurisprudence at Giessen in 1670 and first professor at Jena in 1680 which office he resigned in 1695. He was next created a baron of the empire and in 1703 made president of the secret council of Weimar. He died in 1726 at Vienna, where he held the post of aulic counsellor to the emperor. A list of his very numerous publications may be found in the annexed authentism.—*Joscher's Gesich. der Bigg. Ust.*

LYNDWODE or LINDWOOD (WILLIAM) an eminent ecclesiastical lawyer of the fifteenth century. He was a native of Lincolnshire, and was probably educated at Oxford where he proceeded LL.D. though he was

LYN

LYR

long a member of Gervil-hall, Cambridge. He was chancellor to the archbishop of Canterbury, keeper of the privy seal in the reign of Henry VI., and was sent repeatedly on missions to Spain and Portugal. He formed a collection of the Provincial Constitutions of the archbishops of Canterbury from the reign of king John, of which work there are several editions. His labours were rewarded with the bishopric of St David's, where he died in 1446.—*Fuller's Worthies*. *Gough's Sepulch.* *Mov. vol. ii.*

LYONNET (Pierre) a celebrated naturalist, born in 1707 at Maastricht, of a family originally from Lorraine. He was destined for the church among the French Protestants, but he preferred the practice of law in which he graduated at Utrecht, and was for some time a counsellor at the Hague. He afterwards became secretary and Latin and French interpreter to the States of Holland. This situation occupying but little of his time he employed himself in researches into the natural history of insects and other animals particularly such as were to be found in the vicinity of his residence. He formed a valuable collection of shells and obtained admission into many of the principal scientific societies in Europe. His death took place January 10 1789. He published Leesaer's Insecto-Theology with notes, and additional plates from his own designs but his most important production is entitled *Traité anatomique de la Chenille qui roule le bon de Saufé* 1766 4to a work no less remarkable for originality of design than for splendour of execution. Lyonnet was distinguished for his skill as a painter and engraver and he displayed much ingenuity in improving microscopes and other instruments used in making his observations.—*Biog. Univ.*

LYONS (ISRAEL) the son of a Polish Jew of the same name who was a Hebrew teacher at Cambridge and the author of some grammatical and critical works. The son was born in 1739 and when young he discovered a particular predilection for the study of mathematics. In 1758 he published a Treatise on Fluxions and he was for some years employed as one of the calculators of the Nautical Almanac. In 1773 he accompanied commodore Phipps afterwards lord Mungrave in his voyage towards the North Pole in the capacity of astronomer. He had engaged in preparing for the press an edition of the works of Dr Halley when his death put a period to the undertaking in 1775. He was the author of other works relating to mathematical science, and he also wrote on botany on which subject he delivered a course of lectures at Oxford.—*Hutton's Mat. Diet.* *Aikin's Gen. Biog.*

LYRA (NICHOLAS de) so called from the place of his birth, Lyre in Normandy. He was a converted Jew of the fourteenth century whose overstrained and wrong headed zeal in defence of the communion he had embraced, as many of the Catholic writers do not hesitate to assert contributed not a

LYS

little to the progress of the Reformation, “if this Lyre had not played” say they, “Luther would never have danced.” Of his works, which consist principally of annotations on the Old and New Testament, there are two editions except that of Rome five volumes folio, and that of Antwerp in six volumes. De Lys, on renouncing Judaism assumed the surname, and died in 1340 at Paris, where he had for some time lectured on theology.—*Mauri. Novis. Diet. Hist.*

LYSIAS. An ancient Greek orator. He was born at Syracuse, about the year BC 469. He was educated at Athens, where he became a teacher of rhetoric but of his orations, amounting to three or four hundred only thirty four remain. He died in the eighty first year of his age. The oratory of Lysias was of the pure, elegant and subtle kind, in which according to Cicero he nearly attained perfection. His orations have been several times edited, the best modern editions are those of Taylor London 1739 4to of Renke Leipzig 1772 8vo; and of Auger Paris, 1782.—*Ciceron Brusus. Mauri. Blair's Lysis.*

LYSIPPUS, a celebrated statuary among the ancients was a native of Sicyon and flourished in the time of Alexander the Great. He worked with extraordinary diligence and fertility so that he is said to have left behind him fifteen hundred pieces any one of which might have given celebrity to the artist who formed it. He received from Alexander the singular privilege of exclusively making his effigy in cast metal and he accordingly executed a series of figures of that prince, from childhood to maturity all which were brought to Rome by Metellus after the conquest of Macedonia. Lysippus improved the art of statuary by a nicer study of symmetry and of the appearance of the human figure to the eye in preference to its exact proportions. A chariot of the sun, at Rhodes was one of his greatest works which however was surpassed by a colossus at Tarentum forty cubits high. This celebrated artist also practised encaustic painting.—*Plini Nat. Hist. lib. xi cap. viii.*

LYSONS (SAMUEL) an eminent writer on British topography and antiquities. He was born in 1763 at Rodmariot in Gloucestershire of which parish his father was minister. After finishing his early studies he became a student of the Middle Temple and in due course was called to the bar. In 1804 he succeeded Mr Astle as keeper of the records in the Tower of London, which office he held till his death in 1819. The works of Mr Lysons relate principally to the Roman antiquities of Britain including Figures and Descriptions of Mosaic Pavements discovered at Horncastle in Lincolnshire, 1801 folio, Remains of two Temples and other Roman Antiquities discovered at Bath 1802 folio, Roman Remains discovered at Woodchester in Gloucestershire folio. He also published a volume of miscellaneous antiquities of Gloucestershire and in conjunction with his brother, the rev Daniel Lysons, the earlier volumes of

LYT

the "Magna Britannia." All these productions are embellished with plates, designed, and many of them etched, by the subject of this article.—*An. Biog. Ed.*

LYTE (Haway) an English botanist and natural philosopher of the sixteenth century a native of the county of Somerset, born 1589 Having received a liberal education at Oxford he travelled in order to extend his knowledge of his favourite study, and on his return to England brought with him many rare plants, which he cultivated in a botanical garden constructed on his own plan with great skill and arrangement. He is known as the translator of "Dodone's Herbal" printed at Antwerp in 4to 1578 of which a reprint, without the plates has since appeared in this country His death took place in 1607.—*Putteney's Sketches*

LYTTELTON (GORDON lord) an elegant writer and historian was the eldest son of sir Thomas Lyttelton, baronet, of Hagley in Worcestershire where he was born in January 1709 He received his classical education at Eton, whence he was removed to Christchurch college Oxon At both places he was distinguished for his proficiency and several of his poems were the fruit of his earliest studies In his nineteenth year he set out upon a tour to the continent and on his return in 1730 was chosen member of parliament for Okehampton Although his father was then a lord of the admiralty under the administration of sir Robert Walpole, in every important debate his own name appeared in the minority and he zealously concurred in the measures of the opposition led by Pitt and Pulteney In 1735 he published his Persian Letters, in imitation of those of Montesquieu which work he afterwards properly deemed unworthy of him, and wished to eject from any collection of his works When Frederick prince of Wales, formed a separate court in 1737, he was appointed his secretary and is supposed to have stimulated the prince to the patronage of Mallet Thomson, and other men of letters In 1741 he married Lucy the daughter of Hugh Fortescue, the lady on whose death in child bed after living some years in great misery he wrote a monody which was much admired On the expulsion of Walpole he was appointed one of the lords of the treasury, but although he spoke with eloquence and fluency his oratory wanted force and he never attained the rank of a political leader In early life he had imbibed sceptical opinions but being subsequently led into a conviction of the divine origin of Christianity he composed his well known Dissertation on the Conversion of St Paul first printed in 1747 About this time he lost his first wife and in 1749 married a lady of family, from whom, in consequence of do-

LYT

mestic strife after a few years' residence together he separated by mutual consent In 1751 he succeeded his father in his title and ample estate, and by his elegance and taste rendered Hagley one of the most delightful residences in the kingdom He successively enjoyed the posts of usher of the household and chancellor of the exchequer which latter office, requiring talents of a very different kind he resigned in less than a year to Mr Legge At the dissolution of this ministry he went out of employment, but was raised to the peerage by the title of baron Lyttelton, of Frankley in the county of Worcester From this time he lived chiefly in literary retirement, and being easily imposed upon by the appearance of religious zeal unfortunately became the dupe of Bower the author of the lives of the popes and other impostors In 1760 he published his Dialogues of the Dead which although deficient in vivacity and discrimination were very well received The latter years of his life were chiefly occupied in his "History of Henry II" which is an able and perspicuous work and the result of very assiduous research but its prolixity has materially impeded its popularity This amiable nobleman died in August 1773, in the sixty fourth year of his age leaving one son and a daughter the former of whom succeeded him in his titles and unfortunately, with great talents became conspicuous for a conduct the exact reverse of that of his father The poems of lord Lyttelton maintain a place among the collection of British poets for their correct versification, and delicacy of sentiment, rather than for higher qualities His musical laureas in prose also display good taste and a cultivated mind His works were first collected and printed in 1774, 4to and since in 8vo—*Johnson's Lives of the Poets*—*Audubon's Brit. Poets*.

LYTTELTON (CHARLES) third son of sir Thomas Lyttelton and brother of the preceding was born in 1714, and educated at Eton whence he was removed to University college Oxford He subsequently studied at the Inner Temple and was admitted a barrister, but afterwards entered into orders, and was collated by bishop Hough to the rectory of Alvechurch in Worcestershire In 1745 he took the degree of LL D and was appointed king's chaplain; in 1747 dean of Exeter and in 1748 bishop of Carlisle In 1765 he was chosen president of the society of Antiquaries in which station he contributed some excellent papers to the collection entitled *Archaeologia*. He is also author of a memoir on the authenticity of a copy of magna charta, in his own possession, which question was answered by judge Blackstone Both the memoir and reply are to be found in Gush's *Collectanea Curiosa*. —*Nichols's Lit. Ann.*

MABILLON (Jouy) a learned French Benedictine of the congregation of St Maur noted as a writer on ecclesiastical antiquities and diplomacy. He was born in 1628, in Champagne and studied at the college of Rheims. He took the monastic vows in 1654, and in 1660 he was ordained a priest. After having assisted father D'Acherl, in his "Spectulum" he finished an edition of the works of St Bernard and in 1669 published the first volume of the "Acta Sanctorum Ordinis S. Benedicti" of which the ninth and last volume appeared in 1708. One of his most important productions is his treatise

De Re Diplomatica, lib. vi, 1681 folio. This procured him the patronage of the minister Colbert, who employed him in some genealogical and antiquarian researches. He was next sent into Italy with a commission from the king to make a literary collection, and returning to France with a store of books and MSS. for the royal library he published an account of his journey etc under the title of Missions Italicae 1687 2 vols. 4to. In 1701 he was chosen a member of the academy of Inscriptions and that year he began publishing his Annales Ordinis S. Benedicti" four volumes of which appeared previously to his death which happened in 1707. Father Mabillon was the author of many other works of research distinguished for liberality of sentiment and freedom of opinion as well as for profound learning.—*Le Cerf Bib. Hist. et Crit. des Act. de la Congr. de St Maur Mor.*

MABLY (Général Bonnot abbé de) a celebrated French political and miscellaneous writer and brother to the abbé Condillac was born at Grenoble, in March 1709. He never rose higher than sub-deacon although he was related to cardinal Tencin and was admitted to the parties of madame Tencin so celebrated for her satiriques and talents. He was much employed by the cardinal and drew up the treaty with Prussia which Voltaire took privately to Berlin. He subsequently broke with this patron on account of the illiberality of the latter in regard to Protestant marriage, and from that time led the life of an independent man of letters. All the writings of this author display deep thinking and a regard for the good of mankind but he was too great an admirer of the ancients, and prone to apply their political maxims to the very different circumstances of modern states. He also offended by a dictatorial manner and an unqualified censure of modern historians. His last work on the American constitution displays many sentiments adverse to civil liberty and religious toleration which appear more consonant with his previously delivered opinions. His rules for writing history are better calculated for an epic poem information being sacrificed to effect. His death took place in 1785. The principal works of the abbé Mably are "Parallèle des Romains et des François," "Le Droit public de l'Europe," "Observa-

tions sur les Grecs;" "Observations sur les Romains;" "Des principes des Nécessaires;" "Entretiens de Phocion;" "Observations sur l'histoire de la France;" "Entretiens sur l'histoire;" and "Sur les Constitutions des Etats-unis de l'Amérique;" all of which productions are collected in 15 vols. 8vo. 1794.—*Nous Diet Hist.*

MABUSE or **MAUBUEZE** (John de) an able artist, was born at Maubuse a village of Hainault, in 1492. Having previously obtained considerable reputation he visited England and resided some time at the court of Henry VIII, who employed him to paint the portraits of some of his children. Several excellent works of his are at Middleburgh, the best of which is an altar piece, representing the descent from the cross. He is censured by all writers for his love of drinking and having received a piece of rich brocade in order to appear before the emperor Charles V he sold it at a tavern and painted a paper suit so exceedingly like it, that the emperor could not be convinced of the deception until he examined it with his own hands. He died in 1563.—*Pilkington Wal. pols à Ang.*

MACABER an early German poet, only known as the author of a work, entitled "The Dance of Death" or "The Dance of Macabre" consisting of a series of dialogues between Death and a number of personages belonging to various ranks of society. An English translation of these mortuary dialogues was published by Dugdale and Dodsworth in the third volume of the Monasticon Anglicanum and French and Latin versions have been repeatedly printed. The Dance of the Dead, painted by Holbein in the cloister of the Augustinian convent at Basel has contributed much to the fame of Macaber.—*Bug. Univ.*

MACARIUS (St) the elder a celebrated hermit of the fourth century said to be a disciple of St Antony, was born of poor parents in 301. He passed sixty years in a monastery on mount Sceta, and died about the year 391. His homilies were printed at Paris in 1586, folio and at Lepasie, 1698.—He is to be distinguished from St Macarius the younger a monk of Alexandria, who was persecuted by the Arabs, and banished into an island, the inhabitants of which he converted to Christianity. He died in the year 394 or 395. The Rules of the Monks" in thirty chapters are attributed to him, as also a Discourse on the Death of the Just. —*Cass. Sacri Onom.*

MACARTHY (or CHARLES) an active but unfortunate Irish officer. He entered early into the military service and in 1796 became an officer in the Irish brigades and in 1801 a Lieutenant-colonel in the royal Artillery corps. He went the same year to Cape Coast, and whilst making preparations to repel the Ashantees, the king sent his compliments to him and said he hoped to have his head as an ornament to his great war drum. This

M A C

message made a considerable impression on the mind of the person to whom it was sent, and he frequently noticed it in conversation. At length, in 1823, hostilities commenced, and sir Charles marched against the Ashantees with a mixed force of Europeans and blacks, the latter of whom ran away and the whites being defeated, their commander was captured by the victor who ferociously reduced his manœuvres, January 21 1824. It is gratifying to add that in a subsequent battle, in which the Ashantees were entirely defeated, this barbarous trophy was recovered and conveyed to his relatives.—*Gent. Mag. Publ. its Journals.*

MACARTNEY (George) earl Macartney was the son of a gentleman of Scotch descent, but was born in Ireland in 1737. He was educated at Trinity college Dublin after which he became a student of the Temple and then travelled on the continent. In 1764 he was appointed envoy extraordinary to Russia, through the recommendation of lord Holland, and he afterwards became secretary to the lord-lieutenant of Ireland. He relinquished that post in 1772 about which time he was created KB., and in 1775 he was nominated captain general and governor of the Caribbean islands Grenada, the Grenadines and Tobago. Grenada was invaded and taken by the French and the governor was sent a prisoner to France. On his return to England he was appointed to the presidency of Madras having previously obtained an Irish peerage. But the most memorable of his employments was his embassy to China in 1798 on which occasion he conducted himself with great address and succeeded in the chief object of his mission. His only subsequent public situation was that of governor of the Cape of Good Hope whence he returned on account of ill health in 1797. He died March 31 1806. His English earldom was bestowed on him for his services in China. Lord Macartney was the author of a *Journal of his Chinese embassy* and other publications.—*Lyt's of Lord M by Barrow.*

MACAULEY (CATHERINE) or GRAHAM the name of her second husband was born at Ollingston in Kent the seat of her father John Sewbridge esq. She was educated more strongly than is usual with her sex and became early attached to the pursuit of history. In 1760 she married Dr George Macaulay a physician and soon after she commenced her career in literature and in 1763 published the first volume 4to of her *History of England from the Accession of James I to that of the Brunswick Line*. This was continued in successive volumes to the eighth which completed the work in 1783. The spirit of this history is almost purely republican which, while in conjunction with an ardent disposition, it elicits a noble zeal for civil liberty, and the general rights of mankind has almost unavoidably warped the representation of persons and events. The style is nervous and animated, although sometimes loose and inaccurate, and the reflections of the au-

M A C

thor are often acute and cogent; but although much read at the time, its party aspect has impeded its advancement to a standard work. While Mrs Macaulay was in the height of her fame, Dr Wilson, rector of St Stephen's, Walbrook, confounded upon her the unprecedented honour of erecting a statue to her while living in the chancel of his church, which his successor deemed it proper to remove. The other works of Mrs Macaulay are,

Remarks on Hobbes's Rudiments of Government and Society 1767, enlarged in 1769 to *Loose Remarks on some of Mr Hobbes's Positions*, "Observations on a Pamphlet entitled "Thoughts on the Causes of the present Discontents" being a protest against some of the aristocratic actions of Mr Burke

An Address to the People of England on the present Important Crisis 1775. A *Treatise on the Immutability of Moral Truth* afterwards republished with much additional matter under the title of *Lectures on Education* 1790. Her last publication was a

Letter to Earl Stanhope in opposition to the opinions of Mr Burke on the French Revolution, 1791. In 1785 Mrs Macaulay having been left a widow entered into a matrimonial connexion with Mr Graham which owing to the disparity of their ages subjected her to some ridicule. She retired with her second husband to a small house in Leicester-square where (in the mean time having paid a visit to general Washington in America in 1785) she died in 1791.—*Gent. Mag. vol xi. Bonnell's Life of Johnson. Wilkes's Life and Letters.*

MACBRIDE (DAVID) a distinguished physician was born at Ballymoney in the county of Antrim in 1737. He served as a surgeon in the navy until 1759 when he settled in Dublin and published his *Experimental Essays* in 1764, which work immediately attracted the attention of the faculty and procured the author a doctor's degree from the university of Glasgow. He subsequently delivered lectures at his own house which were published in 1772 in one volume 4to under the title of *An Introduction to the Theory and Practice of Medicine*. This work which was highly appreciated by Dr Cullen was translated into Latin, and published at Utrecht, in 2 vols. 4to in 1774. Dr Macbride who ultimately obtained considerable celebrity and practice died in December 1778 in the fifty third year of his age.—*Ross's Cyclop.*

MACDIARMID (JOHN) an ingenious writer was born in 1779 at Weem in Perthshire of which parish his father was minister. He studied at the universities of Edinburgh and St Andrews, and was designed for the Scottish church, but relinquished that view to try his fortune in London where he became editor of the *St James's Chronicle*. In 1805 he published *An Inquiry into the System of Military Defence of Great Britain* in which he asserts the superiority of a regular army to militia and volunteers. He followed this work with a kindred one, entitled *An Inquiry into the Nature of Civil and Military Subordination*.

M A C

His last production was "Lives of British Statesmen," 4 vols., which was received very favourably; but the author was destined to enjoy the approbation which it elicited but a very short time, falling a victim to paralysis, April 7, 1807.—*Athenaeum. D'Israeli's Catalogue of Authors.*

MACE (Frances) a learned French priest, was born at Paris about 1640 and became canon and rector of the church of St Opportune in that capital. He was a diligent student in both sacred and profane literature and a very popular preacher. He died in 1781. His principal works are, "A Chronological Historical and Moral Abridgment of the Old and New Testament," 3 vols. 8vo; "Scriptural Knowledge reduced to four Tables"; a French Translation of the Apocryphal Testaments of the Twelve Patriarchs; and the History of the four Caesars" in which he attempts to prove that the sons of Caesar were as illustrious as their father.—*Moreri. Annales Des Hommes Illustres.*

MACE (Thomas) a practitioner on the lute in the seventeenth century distinguished among lovers of music by a work entitled

"Music a Monument, or a Remembrancer of the best Practical Music both Divine and Civil that has ever been known to have been in the World." 1676 folio. This work which discovers extreme simplicity and entertaining egotism proves him to have been an excellent judge of the instrument which he practised, and also contains excellent instructions for its management. It appears from the engraving, prefixed to his book that he was aged sixty three in 1671 but when he died is not known.—*Burney's Hist. of Music.*

MACEUDO (Francisco) a singular member of the Franciscan order was born at Coimbra in Portugal in 1596. He espoused the patriotic side in the Braganza revolution and became professor of ecclesiastical history in the college de Propaganda Fide at Rome. He obtains a place here chiefly as an extraordinary instance of elaborate literary fecundity being the author of 137 formal works, 53 panegyrics, 60 Latin orations, 32 funeral poems, 48 epic poems (short pieces so called by himself), 123 elegies, 115 epitaphs, 912 dedicatory epistles, 700 familiar epistles, 2600 heroic poems, 110 odes, 3000 epigrams, four Latin comedies and one Spanish satire. He himself estimated the number of his verses at a million and a half of which vast mass no one reads a single line.—*Art by Southey in Aukens G Reg.*

MACEDONIUS, a prelate of Constantinople whom the Arians made bishop of that see in the year 342 in opposition to Paul the chosen of their orthodox opponents. After a fierce contest, the emperor Constantine gave his decision in favour of Macedonius but owing to his turbulence and pertinacity to the semi-Arian, he was afterwards deposed. He then maintained a new notion concerning the Holy Ghost, which he regarded as a divine energy diffused throughout the universe, and not a person. This doctrine being agreeable

to the large party of semi-Arians, was warmly embraced, although severely persecuted by the orthodoxy on one side, and the Arians on the other until finally crushed by Theodosius in 381. The ultimate fate of Macedonius himself is unknown.—*Moretz. Servet. H. C. Zosius.*

MCAFARLANE (Robert) a political and miscellaneous writer was born in Scotland in 1734 and educated at Edinburgh. He came to London at an early period of his age and kept a school of considerable reputation at Waltham stow. He wrote a "History of George III" the first volume of which appeared in 1770 and the second and third in 1772 and 1774, the two latter of which he subsequently disclaimed. He was also author of an "Essay on the Authenticity of Ossian" the affirmative of which question he warmly espoused. An Address to the People of the British Empire; a translation of Buchanan's Dissertation on the Right of the Crown of Scotland with two dissertations, one on the Goths and Scots and the other vindicating the character of Buchanan as a historian. He fell under a carriage in the tumult of a Brentford election, on the 8th of August, 1804 and survived only half an hour.—*Ent. Mag. vol. lxv.*

MACHAM or MACHIN (Robert) an English gentleman who lived in the fourteenth century and who appears to have first discovered the island of Madiera. He had once served a passion for a lady of a rank superior to his own and her friends opposing their union he eloped with her and embarked for France. The vessel was driven by contrary winds to Madiera, where Macham lost his mistress by death in a few days and dying shortly after was buried with her by his crew who escaped to the coast of Africa. The sailors were made slaves by the people of Morocco and having related their adventures to a Spanish pilot who had experienced the same misfortune as on his return to Spain made publick the discovery in consequence of which an expedition was sent out and in 1421 the island was rediscovered and the grave of the unfortunate lover visited. The catastrophe of Macham and his mistress has been made the subject of a poetical composition by the rev. W. L. Bowles.—*Hackney. Eng. Univ.*

MACHAUT (JAKYE de) a French Jesuit, was born at Paris in 1599. He taught ethics and philosophy and was afterwards rector at Orleans, Alençon and Caen. He died at Paris in 1680. Besides some practical and devotional tracts he was author of "An Account in Latin of the Missions to Paraguay and other Parts of South America" 1656 8vo; "A Relation of the State of Affium in Japan" 1646 8vo; "Account of the Provinces of Goo Malabar &c. 1651; "Account of the Kingdom of Cochinchina" 1652 8vo; "A Relation of the Travels of Twenty-five Members of the Society on the Indian Missions, &c.—Moreri.

MACHAULT (John de) a jesuit, born

MAC

at Paris in 1651, who became rector of the college de Clermont. He published, under the name of Gellée or Le Coq, "Io. Galli Juncosius. Notitia in Historiam Thessap." 1654, a work which is scarce because suppressed at solicitation of Richelieu.—There was another jesuit named JOHN BAPTIST DE MACHAULX who died May 23 1640, aged twenty-nine. He was author of 'Gesta i Soc. Jes. in regno Siciliae, Ethiopia et Subetano' and other historical works of little reputation.—Mover.

MACHIAVEL (Nicolaus) a celebrated political writer and historian was born of a patrician family at Florence in 1469. He was suspected of being engaged in the conspiracy of the Soderini family against the Medici, and being put to the question had the fortune to endure the torture without confession. He afterwards became secretary to the Florentine republic and was employed in embassies to the king of France, the emperor and the pope, and other Italian princes. Notwithstanding the emoluments presumed to be at command on these important employments, he died in great poverty in June 1527 leaving a large family in indigent circumstances, which fact is a great presumption in favour of his disinterestedness and integrity. The freedom of his opinions caused him to be represented as irreligious by his contemporaries but as this imputation was then usually employed in bar of all freedom of opinion, it merits little attention. He was an author both in prose and verse, but it is chiefly upon his historical and political works that his reputation is founded. His Discourses upon the first Decade of Levy exhibit him as a warm friend of liberty and are replete with just and profound reflections on the principles of popular government. It was succeeded by the famous treatise "Del Principe," the prince, the hero of which Cesar Borga, is the model of the perfect prince which he describes. This extraordinary production has been generally regarded as the tyrant's manual all its maxims and counsels being directed to the maintenance of power however acquired. Formed as it was upon the actual practice of Italian politicians, both before and after it was written, being dedicated to a nephew of Leo X and long current without producing a reply it is difficult to regard it merely as an ingenious method of exposing the detestable maxims which it ostentiously inculcates although an opinion of that kind has been very widely embraced. On the other hand it seems next to impossible that Machiavelli himself the secretary of a republic who wrote with so much spirit on the history of Levy and in conversation always spoke with admiration of Brutus and Camillus should have compiled a book of such odious maxims with a view of propagating them. Whatever the truth his Prince has sternly stamped his name, the appellation of Machiavellian being adopted as significant of all that is crooked and perfidious in politics. The other works of Machiavelli are, his History of Florence from 1490 to 1504, which is deemed a val-

MAC

able performance, and the earliest of the good Italian histories; a "Life of Costanzo Castrense of Lucca," regarded as marking an romance; "A Treatise on the Art Military," able but theoretical; two comedies of inferior pretensions, entitled 'Mandragola,' and

China, 'The Golden Ass,' in imitation of Lucan, 'A Treatise on the Empress of the Northern Nations,' and many others. The whole of the works of Machiavelli have been ably translated by Harlowe.—Meyer. Tivoliensis. Rosso's Leo X.

MACK (CHARLES baron von) an Austrian general born in Francia in 1752. Though destitute of fortune he was well educated, but on leaving college his inexperience led him to enlist as a private in a regiment of dragoons and his good conduct soon obtained him the rank of a petty officer. In the war with Turkey he was noticed by marshal Lancy who gave him a captain's commission. The spirit of enterprise which he subsequently displayed, procured him the favour of Lenck, who made him his aide-de-camp, and strongly recommended him to the emperor. On the occurrence of war with France Mack was appointed quarter-master-general of the army of the prince of Coburg and in that station he directed the operations of the campaign of 1793. He was afterwards employed in negotiating with Dumouriez and in 1794 he was sent on a military embassy to England. He again served under the prince of Coburg in the Netherlands and in 1797 he succeeded the archduke Charles in the command of the army of the Rhine. The following year he was sent to Naples then invaded by the French under generals Macdonald and Championnet. Mack boasted that he would soon drive the enemy out of Italy but being beaten in the field and suspected of treason by the Neapolitan he fled to the French camp and was sent as a prisoner to Dijon. Under the consulship of Bonaparte he was removed to Paris on parole and in April 1800 he made his escape to Vienna. He found means to justify his conduct in the opinion of the emperor who in 1804 constituted general Mack commander-in-chief in the Tyrol, Dalmatia, and Italy and the year following a member of the general council of war. In 1805 he was opposed to Bonaparte who forced him to retreat beyond the Danube and to submit to the famous capitulation of Ulm by which 28,000 of the Austrians became prisoners. Mack was permitted to go to Vienna where he was tried before a military tribunal, and received the sentence of death as a traitor to his country. His doom, however, was commuted by the emperor for imprisonment and he was, after a time, released, and died in obscurity. The failures of the subject of this article excited great surprise at the period when they occurred, but at present nothing appears so extraordinary as that a man with so moderate a portion of ability should have been thus trusted and employed.—Bog. Nouv. des Consuls.

MACKENZIE (Sir George) an eminent

Scottish lawyer and miscellaneous writer, was a branch of the noble family of Beaufort, and born at Dundee in 1636. He studied at the universities of Aberdeen and St. Andrew's, whence he was removed to Bourges, where he passed three years in the study of the civil law. On his return to Scotland he was admitted to the bar, and soon became a distinguished pleader. In 1661 he was advocate for the marquis of Argyle, impeached of high-treason, and was not long after raised to a seat on the bench of the criminal court. He employed his leisure in literary composition and in 1660 appeared his *Arctaeus*, a serious romance. "Religio Scotticæ," a "Moral Essay on Solitude." Moral Gallantry and a play and poems, which productions gave him the reputation of being an elegant writer and sound moralist. In 1674 he was knighted and made king's advocate for Scotland. The contest then existing between fanatics on the one side and oppression and tyranny on the other rendered this post as arduous one; but having embraced the court doctrine of passive obedience he was well inclined to put the laws enforcing submission, into strict execution and thereby obtained from the covenanter the title of "The blood-thirsty Advocate." He however introduced several alterations into the form of criminal trials, favourable to the accused and although he is thought to have stretched the law of treason in the cases of Baillie of Jerviswood and the earl of Argyle his vindication of himself by a large party at least has been deemed satisfactory. Even during the press of business he found time to compose several able professional works upon the laws and customs of Scotland. He also wrote *Jus Regium* London 1684 in defence of monarchy, and farther served the royal party by a "Vindication of the Government of Scotland during the Reign of Charles II." As an antiquary he composed "Observations on the Laws and Customs of Nations as to Precedency" a "Defence of the Royal Laws and Antiquities of Scotland" which work involved him in a controversy with Lloyd and Shadwell, "Reflections upon the Advantages and Disadvantages of a Union between England and Scotland" and several moral and miscellaneous treatises, which demonstrated great fertility if little of accuracy or profundity. It is to the honour of sir George Mackenzie that he withdrew from his post when the measures of James II disagreed with his conscience although he subsequently resumed it, and held it until the Revolution when he warmly opposed the declared vacancy of the throne and the election of William and resuming his employments, retired to Oxford where he was admitted a student in June 1690. He died in London in May 1691 and his body being taken to Scotland, was buried with great funeral honours in the church yard of the Greyfriars in Edinburgh. The political opinions of this eminent lawyer will be judged of differently by opposite parties but his integrity and private worth seem unquestionable. He was founder of the

Advocates' Library in Edinburgh.—See, also, Lord Whithorn's *Life of Lord Kenmure*.

MACKENZIE (GEORGE) Viscount Tolbot and first earl of Cromarty a member of the same family as the preceding was born in 1694. Having adhered to the fortunes of the Stuarts in their adversity he was, at the Restoration made a senator of the college of justice clerk of the privy council and justice-general James II also made him a baron and viscount, and queen Anne secretary of state and earl of Cromarty. He died in 1714, at the age of eighty-eight. This nobleman, who possessed much learning and varied accomplishments, was author of a "Vindication of Robert III King of Scotland from the Charge of Bastardy," "Synopsis Apocalyptic," an explication of the Revelations; "A Historical Account of the Conspiracies by the earl of Gowrie and Robert Logan, against James VI." "A Vindication of the Reformation of the Church of Scotland" and several papers in the *Philosophical Transactions*.—*Lord Oxford, Royal and Noble Authors.*

MACKLIN (CHARLES) an actor and dramatist of some celebrity for talent and more for longevity was born in the county of Westmeath in Ireland May 11 1690. His real name was M. Laughlin which on his coming to London he changed to Macklin. He was employed at Trinity college Dublin, as a beggar boy until his twenty first year when he came to England, and joined a company of strolling comedians, but was induced to return to his situation at Trinity college. In 1716 he again repaired to England and appeared as an actor in the theatre Lincoln's Inn fields. It was not, however until 1744 that he established his fame as an actor by his admirable performance of Shylock that being indeed the only character in which he stood pre-eminent. He continued on the stage until 1759 which long interval was marked by the usual vicissitudes of theatrical life, rendered still greater by the spirit and strong temper of the individual. By his firmness and resolution in supporting the rights of his theatrical brethren they were long relieved from a species of capricious oppression to which the profession of an actor is peculiarly open, from party opposition or private enmity. During the last years of his life his understanding became impaired and in this state he died July 11 1797 at the great age of a hundred and seven. Macklin appears to much advantage in his "Man of the World," a comedy which discovers a keen and perceiving knowledge of life and manners, and especially meanness, sycophancy and political servility with considerable skill. His *Lover à la mode* also possessed kindred but more farcical merit. While his memory remained, Macklin was a most entertaining companion although dictatorial and very irascible. He is however said to have been in his best days, a tender husband, a good father and a steady friend.—*Bigs Drama.*

MACKNIGHT (JAMES) a learned Scotch divine, was born at Irvine in Ayrshire

M A C

In 1731. He was ordained at Glasgow, after which he went to Leyden, and at his return was ordained minister of Marygate where he remained sixteen years. Here he composed his two celebrated works, "The Harmony of the Gospels," and his "New Translation of the Epistles," both of which much advanced his theological reputation. In 1763 he published another esteemed work entitled, "The Truth of the Gospel History." On account of these publications, the university of Edinburgh conferred upon him the degree of DD. In 1769 he was promoted to the living of Jedburgh, and three years afterwards became one of the ministers of Edinburgh where he employed nearly thirty years of his life in the execution of his last and greatest work on the apostolical epistles which appeared in 1795 in four large quarto volumes under the title of "A new literal Translation from the Greek of all the Apostolical Epistles, with Commentaries and Notes Philological Critical Explanatory and Practical." Dr Macknight survived the compilation of this laborious proof of extensive reading, genuine learning and critical skill about four years, dying much lamented, in the month of January 1800.—*Lys by his Son*

MAGLAINE (ARCRISALN) a learned divine was born at Monaghan in Ireland in 1722. He was educated at Glasgow and about the time of the rebellion in 1745 succeeded his uncle Dr Mulling as English pastor at the Hague, in which situation he remained fifty years when he was obliged to quit it owing to the French invasion of Holland in 1794. On his arrival at England he fixed his residence at Bath where he died November 25 1804, aged eighty two. Dr Macglaine is principally known by an excellent translation of Macaulay's Ecclesiastical History; and by his popular letters to Soame Jenyns, in opposition to his "View of the Internal Evidence of the Christian Religion." He also published a volume of sermons—*Chalmers's Biog. Brit.*

MACLAULIN (COURT) a celebrated mathematician and philosopher born near Inverary in Scotland, in 1698. He studied at Glasgow where he took the degree of MA at the age of fifteen and defended a thesis "On the Power of Gravitation." In 1717 he obtained the mathematical chair in the Mathematical college at Aberdeen, and two years after on making a visit to London he was chosen a fellow of the Royal Society. He subsequently travelled on the continent as tutor to the hon. Mr Hume, the son of lord Polwarth and after residing for some time in Lorraine his pupil died at Montpellier and he returned to Scotland. In 1735 he was elected professor of mathematics at Edinburgh where his lectures contributed much to raise the character of that university as a school of science. A controversy in which he engaged with Sir John Hartley led to the publication of Macaulain's great work, his "Treatise on Fluxions," printed at Edinburgh 1742, 2 vols. 4to. Mr George Gordon of Scotland in 1745, Mr

M A C

Macaulain was very active in promoting the fortification of Edinburgh against the adherents of the house of Stuart, and on their taking possession of the city he fled to York, where he was hospitably received and maintained by archbishop Haweis. On the march of the invaders to England, he retraced his steps, and died soon after June 14, 1746. He was the author of a "Treatise on Algebra;" an

Account of Sir Isaac Newton's Philosophical Discoveries, papers in the Transactions of the Royal Society and other works.—MACCAURAN (JOHN) son of the preceding, was bred to the law and after practising as an advocate at Edinburgh, was in 1787 made a judge when he took the title of Lord Dryhope. In 1774 he published "Arguments and Decisions in remarkable Causes before the High Court of Justiciary and other Superior Courts in Scotland" 4to and he was also the author of various tracts on legal and miscellaneous literature. His death took place in 1796 at the age of sixty two.—*Martin's Biog. Philos. Hutton's Mat. Diet. Chalmers's Biog. Diet.*

MACPHERSON (JAMES) a Scottish writer distinguished in literary history for his translations or imitations of Gaelic poems said to have been composed in the third century. He was born in the county of Inverness, in 1736 and studied at Aberdeen and Edinburgh. In 1758 he published an original poem entitled "The Highlander" and this was followed two years after by "Fragments of Ancient Poetry collected in the Highlands of Scotland and translated from the Gaelic or Erse Language." The popularity of the public was excited by these pieces, and a subscription was raised to enable Macpherson to visit the Highlands and collect additional specimens of national poetry. He produced as the fruit of his researches "Fingal an ancient Epic Poem translated from the Gaelic 1767 4to" "Lenora and other poems 1763 4to" and some smaller compositions all professedly translated from originals by Ossian the son of Fingal a Gaelic prince of the third century and his contemporaries. It would be impossible within the limits of this article to give even an outline of the warm and angry controversy concerning the authenticity of these productions which long agitated the republic of letters, and has hardly yet subsided. From the evidence of the contending parties it may be concluded that Macpherson's prose epic were founded on traditional narratives current among the Highlanders but the date of the oldest of their lays is comparatively modern and it is now difficult, if not impossible to ascertain the precise extent of his obligations to the Gaelic bards of former ages. Mr Macpherson went to Florida in 1764, as secretary to governor Johnston, and he subsequently obtained, at home, the lucrative appointment of agent to the Nabob of Arcot, in consequence of which he had a seat in the house of Commons from 1790 to 1792. He died near Liverpool, in February 1796, and was interred in West-

M & C

master citizen. Besides the works noticed before, he published a prose translation of the *Book of Homer*; "An Introduction to the History of Great Britain and Ireland"; "The History of Great Britain from the Restoration to the Accession of the House of Hanover"; historical collections, and political pamphlets.—*After's G. Eng.*

MACQUER (Pierre Jean) an eminent French chemist, born at Paris in 1718. He adopted the medical profession and devoted himself to the study of the physical sciences. In 1746 he was chosen an member of the academy of Sciences, in 1768 a associate and in 1772 a pensionary of that society. He wrote in the *Journal des Savans* from 1755 to 1779, the articles relating to natural philosophy, medicine, surgery, pharmacy, chemistry, anatomy and natural history, and he published "Éléments de Chymie théorique et pratique" and a chemical dictionary besides other works. His death took place in 1784. Macquer did not live to witness the splendid improvements made in chemistry in the latter part of the last century and which have contributed to render his writings partially obsolete though they comprise some important facts and discoveries which entitle the author to a place among the first chemists of his time.—His brother PHILIP MACQUER a counsellor of the parliament of Paris, was the author of "Abrégé Chronologique d'1 Histoire Ecclesiastique" 2 vols. 8vo. and other useful historical compilations. He died in 1770.—*Eng. Univ.*

MACQUITIV (Anne ANSE DENIS) of Scotch ancestry born in 1756 at Meaux en Brie in the college of which town he was afterwards professor of rhetoric. Driven from his country by the Revolution, his taste as an antiquary and his skill as a draughtsman procured him an ample subsistence by the exercise of both in the Herald's college. While thus employed it fell to his lot to design the car &c. which bore the remains of Nelson to St Paul's cathedral in which he displayed much taste. Although a foreigner so complete was his acquaintance with the English tongue that he edited several works in that language besides publishing occasionally original essays &c. His Latin poem, *Tabeila Cobara*, or "The Bell of Fare," has been much admired for the classic elegance of its Latinity and the learning and ingenuity it exhibits. After the conclusion of the war in 1814, he revisited France for a short time but his habitual affections having now become exclusively English, he soon returned, and died in South work in 1823.—*See Eng.*

MACROBIUS (AVERULUS Ammarius Trismegistus) a Latin author in the reign of the emperor Theodosius, to whom he officiated as an officer of the wardrobe and enjoyed a considerable share of the imperial favour. The country which gave his birth, as well as the religion which he professed, are both uncertain, the former, however, is generally supposed to have been Gaul. He was the author of a philosophical work entitled "Se-

M & D

bastilla," bearing for its titlepage, and the right & left side the names of and emblem of antiquity a commentary on Cicero's "Meditationes Scriptorum." In two books, valuable for the exposition it affords of the doctrine of Pythagoras, with respect to the immortality of the spirits, and a treatise "De Divinitatibus et Secretis Graecorum Latitudo Verbi." There are several editions of this author's writings, the best of which are those of 1694, 8vo, and 1777 Leipzig. The date of his death is supposed to be about the year 450.—*Mozart.*

MADAN There were two English divines of that name, brothers, of these SAMUEL died bishop of Peterborough in 1713.—MANNING originally educated with a view to his practising at the English bar was induced by the influence of some leading members of the Calvinistic persuasion to quit that profession and enter into the ministry in their connexion. In 1761 having for some time previously officiated as chaplain to the Lock hospital, he succeeded in procuring the situation of a chaplain attached to that institution where his reputation as a popular preacher attracted numerous hearers. The fame which he acquired by his eloquence was however somewhat diminished, by the part he took in dissuading a clerical friend from giving up a benefice which he had accepted under a solemn promise of eventual resignation. This circumstance took place in 1767, and in 1781 a work from his pen in defence of a plurality of wives, entitled "Thelyphthora" drew upon him still further obloquy. The professed object of this singular treatise, which fills three octavo volumes, is the prevention of seduction by constituting it a virtual marriage. His other works are an edition of the satires of Juvenal and Persius with a literal English translation and notes, in two octavo volumes.

A Commentary on the Articles of the Church of England, Thoughts on Executive Justice, Letters to Dr Priestley and a few sermons. His death took place during the spring of 1790 in his sixty fifth year.—*Chambers's Biog. Dict.*

MADDEN DD (SAMUEL) an Irish clergyman descended from a French family born in 1687. He received his education at Trinity college, Dublin and afterwards became a liberal benefactor to that society, by instituting, in 1731 prizes for such of the students as more especially distinguished themselves in the college examinations. The year following he published the first volume of a work calculated to excite considerable attention, under the title of *Memoirs of the Twentieth Century or Original Letters of State under George the Sixth*. This singular book was originally intended to occupy six octavo volumes, and extraordinary despatch was used in striking off a thousand copies of it; but the rapidity with which it was bought up by the author, equalled the diligence used in bringing it out. Nearly nine hundred of the impressions being reculed and destroyed within a week after its first issuing from the press. His other productions are "Hawke's

M A D

Monument." a poem of considerable length printed in 1764; and a tragedy founded on the history of Thessalus. Dr. Madden, of whom the English biographer, Johnson, speaks in terms of the highest commendation, was further beneficial to his country and to the cause of education in general, by first establishing, in 1746, a society at Dublin for the encouragement of the arts, the plan of which has since been followed up and enlarged upon with great success in the British metropolis. For the furtherance of this praiseworthy object, he himself liberally contributed a hundred pounds a year from his own private resources which were large independently of the rectory of Drumshanbo, and other valuable church preferment. His death took place on the last day of the year 1765.—*Nichols's Lit. Anec.*

MADDOX (LVAAC) bishop of Worcester an active and learned prelate born of humble parentage at London in July 1697. Becoming an orphan at an early age his friends placed him with a pastry-cook that he might learn the business, but his fondness for perusing every book that came in his way rendered his continuance in this situation equally irksome to himself and his employer. His dismissal was the consequence on which he was sent to Scotland by some of his relations who observing his passion for literature placed him at Aberdeen with a view to his obtaining a cheap but solid education and eventually becoming a minister among the dissenters. The times and discipline of presbyterianism however not coinciding with his opinions he after having continued his studies at thus university for some time with great credit to himself, returned to England and became through the assistance of Gibson bishop of Llandaff a member of Queen's college Cambridge. He now took orders in the established church and became soon after domestic chaplain and nephew by marriage to Bradford bishop of Chichester through whose patronage he rose speedily to considerable pre-eminence. His first benefice was the living of St Vedast Foster-lane in the city of London when having obtained the degree of DD from the archbishop of Canterbury he was in 1729 appointed a king's chaplain and clerk of the closet to queen Caroline. Four years after he obtained the deanship of Wells whence in 1736 he was raised to the see of St Asaph and subsequently translated to that of Worcester in 1743. Bishop Maddox is known as the warm advocate and liberal benefactor of many public charitable institutions, especially of the small-pox hospital in the metropolis for which in 1750 he presented a sermon afterwards printed, remarkable for its eloquence and the untold beauty of the composition. The library at Worcester also is mainly indebted to his exertions for its existence. As we author he is principally known by his *Advocate of the Doctrines and Disciplines of the Church of England* written in reply to *Wode's History of the Puritans.* There are also portions of his miscellaneous sermons extant. His death took place at Wor-

M A C

ester, September 27, 1759.—*Nichols's Lit. Anec.*

MADOX (TROXAS) a learned and laborious antiquary, author of several valuable works connected with the earlier periods of English history. The first of these, *Anaphorica Formularium* being a complete collection of ancient charters and legal instruments from the Norman conquest down to the reign of Henry VIII inclusive, taken from the original records, appeared under the auspices of lord chancellor Somers in 1702, and is considered highly valuable. Nine years afterwards he printed his *History of the Exchequer* "embracing a period from the conquest to the close of Edward II's reign in 1307, with a dedication to the queen." A quarto edition of this work likewise appeared afterwards in 1769. He also published subsequently an historical account of all the cities and borough towns of England under the title of *Firma Burgi*, and was employed on several other works of a similar description the completion of which was prevented by his decease. A collection of his manuscripts occupying more than ninety volumes of various sizes is to be found in the British Museum to which they were presented after his death by his widow.—*Nichols's Lit. Anec.*

MÆCENAS (CAIUS CILVIUS) the friend and minister of the emperor Augustus, and a distinguished patron of letters was a Roman knight who traced his origin to the ancient kings of Etruria. Of his early life nothing is recorded previously to his appearing as counsellor to Octavius after the death of Julius Caesar. He fought at the battle of Pharsippa, but chiefly acted in a civil capacity. During a long period he held the important post of prefect of Rome to which his political talents were peculiarly adapted and in his ministerial capacity he was not chargeable with any acts of oppression but exercised his great influence with prudence and moderation. No statesman seems to have been more the personal friend of his sovereign than Mæcenas, but he was partly indebted for the emperor's favour to the charms of his wife Terentia, at which attachment like an obsequious courtier he silently connived. He is described by Velleius Paterculus as vigilant and active in business, but luxuriant and effeminate in his hours of relaxation. He was at the same time learned, and a lover of learning and his name is rendered immortal by Virgil and Horace as their munificent friend and intimate associate. Horace in particular lived with him upon terms of the utmost freedom, and familiarity and Virgil dedicated to him his *"Georgics,"* which admirable productions appear to have been written at his request. He introduced both these great poets to Augustus, and so signal were his good offices towards literary genius, that the name of Mæcenas has been ever since applied to liberal patrons. Of his own writings several pieces existed in the time of Silius, of which a few verses only are now extant. He is also said to have invented a species of short-hand. He died BC. 8, May.

ing Augustus his general hair and countenance by Schleisinger. *Sicci Orient. Camer.*

MICHAELIS LINUS (Michaelis), a celebrated German astronomer was born about 1542 in the duchy of Württemberg, and spent his youth in Italy where he made a public oration in favour of Copernicus, which converted Galileo from the opinions of Aristotle and Ptolemy. On his return to Germany he became professor of mathematics at Tübingen, where he had the great Kepler among his pupils, who has praised several of his master's inventions in his *Astronomia Optica*. He died in 1590 after having published many works in mathematics and astronomy, among which were his treatises 'De Stella Nova Cassiopeia' Ephemerae, according to the Prutenic tables, 'Thesis de Eclipsibus' an epitome of astronomy &c.—*Martini Biog. Philos. Novi Dict. Hist.*

MAFFEL There were several learned and ingenious Italians of this name.—**BARTOLOMEU MAFFEI** born 1514 was a dignified ecclesiastic, well versed in the belles lettres as well as distinguished for his antiquarian research. He rose to the purple and is known as the author of a valuable treatise on ancient coins medals and inscriptions and some annotations on the letters of Cicero. His death took place in 1558 at Rome. **MAFFEI VIZZIO** a native of Lodi, born 1407 was professor of law at Pavia and afterwards chancellor to pope Martin V. He is however more advantageously known as a poet than a lawyer several of his compositions consisting of epigrams and other miscellaneous productions in verse evincing much genius. There is an English translation of his additional book to the *Æneid* of Virgil by Ellis. His prose writings consist of essays on education on happiness and misery on religious constancy &c. The time of his decease is fixed in the year 1459.—**JOHNS PETER MAFFESI** known by his Latin denomination Mafensis was an eminent scholar of Bergamo born 1556 who from being rhetorical professor at Genoa, became a pupil in 1565, and wrote the life of Ignatius Loyola, the founder of the order. He was held in high estimation for his learning and talents by several successive occupiers of the papal chair one of whom is said to have granted him a dispensation for reading his breviary in the Greek language that his Latin of the purity of which he was remarkably tenacious, might not become deteriorated. Besides a translation of various letters connected with the proceedings of the jesuit missionaires in India he wrote a history of that country entitled, "Historia Indorum, &c. at the instance of the Portuguese Government, whose conquests in those regions the work is more particularly designed to commemorate and describe. The best edition of this book is that of 1747 4to 2 vols. Mafensis was afterwards employed in the Vatican library and died at Livoli in 1603.—**FRANCESCO SOTTO MARQUIS MAFFESI** a notary of Verona, was equally celebrated as a soldier and a poet. He was born

in 1673, and his first attempt in literature carried off the prize for an essay on the subject of love. Illustrating the army, he received considerable reputation by the gallantry which he exhibited at the battle of Dantzig. In 1704, but on the termination of the campaign he quitted the service and devoted himself wholly to the cultivation of elegant literature. In 1732 he set out on a tour over great part of Europe and in the course of his progress received every where those marked attentions which his reputation as a scholar merited. Of his works, the principal are, "On Dostling" an essay, "Merope, a tragedy; " *Ceramis* a comedy, "A History of the Art of Diplomacy," *Verona Illustrata*, folio; *Museum Veronense*, folio, &c. He also translated a part of the works of Homer into his own language and published three octavo volumes of tragedies selected from the best Italian dramatists. On the decease of their accomplished townsmen in 1753 the citizens of Verona honoured his remains by a public funeral in the cathedral of that city when an oration was pronounced to his memory.—*Maffei. Novi Dict. Hist.*

MAGALHAENS or MAGELLAN (Ferdinand de) a famous Portuguese navigator who discovered the straits at the extremity of South America, and conducted the first expedition round the world. He served under Albuquerque in the East Indies, and distinguished himself especially at the taking of Malacca in 1510. He afterwards entered into the service of Spain and was entrusted by Charles V with the command of a fleet destined to explore a passage to the Molucca islands, by sailing westward. The voyage was commenced September 20 1519 about the end of October he entered the straits, since called after his name, and on the 27th of November discovered the Pacific ocean. Continuing his course he arrived at the Ladrones Islands, and subsequently at the Philippines on one of which he lost his life in a skirmish with the natives, in 1521 (See *Cano J. S. del.*)—*Askin's C. Biog.*

MAGALHAENS (João Macânta de) an ingenious natural philosopher of the last century. He was born in 1723 at Lisbon and is said to have been descended from the subject of the last article. He entered into the order of the Augustine friars but becoming a convert to the Protestant faith he fled from his convent, and took refuge in England, where he passed the remainder of his life. He distinguished himself by his experiments and researches in chemistry and mechanics, and particularly by his invention of a mode of impregnating water with fixed air relatively to which he published a small tract. A translation of Cronstedt's Mineralogy and other works also proceeded from his pen. He was a fellow of the Royal Society and of several foreign academies, and was much esteemed among men of science. His death took place in February 1790.—*Rox's Cyclop.*

MAGALOTTI (Lorenzo) a noble Italian, born in 1637 at Rome or according to others,

of Florence. He received his education at Padua, but distinguished himself in his study in the schools of law and natural philosophy at Florence. After his graduation he became a member of the Delphic Academy, and exhibited an eloquent oratorical style and various poetical talents. He wrote, in addition, composed some musical pieces, and wrote, published at the time, a collection of "Canticorum Amoenissimorum." To this latter work however, he did not add his name, but subscribed the fictitious one of Plano. He was also the author of some devotional pieces.—Fabretti.

MAGGI. There were three distinguished Italians of this name. **JACOBI**, more commonly known by the name of Magius, added to his works, was a native of Anguillar in the Flezzina district and flourished in the sixteenth century. He applied himself early in life with great assiduity to the study of the sciences, and by his proficiency in mathematics became an able engineer. A work of his on fortification added greatly to his reputation, and, together with his general character for talent and integrity obtained for him from the Venetian government, to which he was recommended, the appointment of admiral judge in their island of Cyprus. The siege of the capital of that country by the Turkish forces in 1571, gave him an opportunity of reducing his theoretical studies in the art of defence, to practice. Certain ruses and other destructive contrivances and engines of destruction were, constructed by him, repeatedly baffled the attacks of the Ottoman forces and laid their works in ruins. Forced at length to surrender, the conquerors vented on his head the protraction of their success. The haughty Mahomet threw him into prison and loaded him with chains. In this distressing situation he remained more than a twelvemonth soothsaying his captivity by calling into action his mental resources, which enabled him deprived as he was of all books of reference, to compile from memory a "History of Belli," and a treatise on "The Wooden Horse," both abounding in classical and other quotations. These productions were the fruits of his leisure hours by night—his days being wholly spent in manual labour as a slave—and when completed were secretly transmitted by him to the Imperial and French ambassadors, with dedicatory epistles, and a supplication for their intercession in his behalf. His appeal to these companions was but too successful, for, on their making a united and urgent application for his release the Turkish commander, as the shortest way of ridding himself of their importance without putting himself to the trouble of a refusal, strangled the object of their solicitation in his prison about the beginning of the year 1573. Besides the writings already mentioned, he was the author of a tragedy "On the Final Destruction of the Greeks by Fire," in five books, folio, 1568, "Compendium on the Civil Institutes," two,

"The Lives of Illustrious Men, with Annotations, etc." and some other minor works. His brother, **FRANCESCO MAGGI**, was a physician of Bologna, where he died in 1606, and is known as the author of a useful treatise on the management and care of gentle women.—**CARLO MAGGI MAGGI**, a poet of some reputation was born in the Marches in 1620, and, according to his biographer Marini, veryearly he manifested the restorers of a pure and elegant taste in literature among his contemporaries. The last mentioned author published an excellent edition of his works, in 4 vols. 1690, at Milan, where Maggi died the year preceding, filling at that time the situation of secretary to the state. There is an English translation of his sonnets, which have been much admired.—Fabretti. Nicotra.

MAGINI or **MAGINUS** (*John Antonius*) professor of mathematics in the university of Bologna, was born at Padua in 1550. He became so celebrated for his astronomical skill that, in conformity with the notions of the age, he was regarded with favour by most of the princes of his time. He is said to have accurately predicted his own death which took place in 1618. His mathematical and astronomical writings, which are honourable to his memory, consist of *Epiphany*, in 3 vols. *Tables of Secondary Motions*, *Astronomical Geometrical and Geographical Problems*, *Theory of Planets*, a *Conclusion of Scaligen's Dissertation on the recession of the Equinoxes*, *Fratrum Mobile*, in 12 books. *Treatise on Planes and Spherical Geometry*. He also wrote *A Commentary on Ptolomy's Geography*, and a *Chorographical description of the Regions and Cities of Italy*.—Nicotra. Hutton's Math. Dict.

MAGLIA BECCHEI (*Antonio*) a learned critic who was librarian to the duke of Tuscany celebrated alike for the variety of his knowledge and the strength of his memory. He was born at Florence in 1633, and in the early part of his life was engaged in a mercantile employment which he relinquished to devote himself to literary pursuits. He was admitted in his studies by Michael Erasmus librarius to cardinal Leopold de Medici, and other literati residing at Florence, but it was chiefly through his own extraordinary application that he acquired a multifarious stock of erudition which made him the wonder of his age. Duke Cosmo III made Maglia Becchei keeper of the library which he had collected, and gave him free access to the Laurentian library, and the Oratian MSS., in the latter collection he published a catalogue. His habits were in the highest degree eccentric. His attention was wholly absorbed by his books; among which he took his rest and his meals, dividing his time between the ducal library and his private collection, interrupted only by the visits of persons of rank or learning, attracted towards him by the report of his extraordinary endowments. The acquisition of knowledge seemed to have been his sole de-

light, for he left no history work deserving of particular notice; and he freely afforded information to those authors who sought his assistance in their own undertakings. Notwithstanding his sedentary mode of life, he was far advanced in years at the time of his death which took place in July 1714.—*Timbuktu Star, della Lett. Ital. Spener's Paradiſo* between R. Hilt and Magdeburg.

MAGNOL. There were two French physicians of this name father and son, both natives of Montpellier where they resided and enjoyed considerable practice. PIERRE the elder born 1638 was a member of the French academy and distinguished himself especially by his love of botany. He was the author of a catalogue of all the plants in the South of France under the title of *Botanicum Monspeliense*. His other works are *Hortus Regius Mohapensis* and *Prodromus*. His treatise *Genera Plantarum* and *Novus Character Plantarum* which latter treatise was published after his death with additions by his son ANTOINE MAGNOL.—*Ross's Cyclop.*

MAGNON (JEAN) a French dramatist of no great reputation born at Lyons and the friend of Molire. Magnon was bred a member of the French bar but the study of the law not being congenial to his disposition he forsook it and commenced author by profession. In this capacity he produced several tragedies few or none of which met with any success except one entitled *Artauxeres*. In 1669 while returning to his lodgings in one of the bye streets of the French metropolis he was set upon by robbers from whom he received a mortal wound and soon after expired. This event precluded his finishing a dictionary in rhyme a whimsical work which he had projected and made some progress in, that part of it, however which he had completed appeared in 1663 in one volume folio.—*Mores:*

MAGNUS There were two Romish prelates of this name in the sixteenth century brothers and in succession archbishops of Upsal in Sweden both born at Lincepig in that kingdom. JOHN the elder of the two is known as the author of a History of the Archbishops of Upsal and another Of the Kingdom of Sweden, both printed in folio. The progress of the Reformation to which he was strongly opposed drove him from his native country to Rome where he died in 1544 in his fifty sixth year.—OLAVUS who succeeded him in the diocese, was not more successful in struggling against the influence of the rising church, and at length followed the example of excommunication set him by his brother whom he survived sixteen years. Olavus Magnus assisted at the council of Trent, and wrote a curious account of "The Manners, Customs, and Wars, of the People of the North," folio, 1555. His death, also took place at Rome.—*Nizzen:*

MAHOMET or MOHAMMED one of those leading characters who give some of its strongest features to the history of the world, and the founder of a system of religion which

has dominion over a considerable portion of the globe. He was born at Mecca in 570 A.D. son of the wife of Hamza, a member of the tribe of Hamza, *Abu Qaizar*, a descendant of prophet of the same name and of Ghata. Being left an orphan at an early age he was wholly brought up by his uncle Abu Taleb, died in his 63rd year being recommended to God by his widow as her factor, considered Mahomet as much to her satisfaction, since she had lost her husband. He continued to sit for some time as a merchant but a disposition to religious contemplation seems to have attended him from his early youth which it is suspected was turned to practical views by his communications with the Nestorian monks in his journeys to Syria added to a contemplation of the progress of Christianity. Be this as it may, he was inspired with the notion of forming a new religion and began to put on the appearance of sanctity by retiring every morning to a cave called Hira where he contended in meditation all the day. It was in 609 and in the fortieth year of his age that he opened the pretended mission and his first convert was his wife to whom he communicated an interview with the angel Gabriel declaring him the prophet of God. His proselytes in the first instance were few but they included his faithful servant Sond, the ardent and courageous Ali and the respectable Abubeker. All these were privately instructed in the tenets of Islamism the fundamental doctrine of which was There is but one God and Mahomet is his Prophet. Its precepts were pretended to be successive communications of the Divine will by the means of Gabriel, and of these collected and written by his disciples were composed the celebrated "Koran" or Book. In the fourth year of his mission assembling his kinsmen of the race of Hashem at a banquet he openly announced to them his prophetic errand, and asked who would be his vicer. No answer was returned until the young Ali with all the fire of enthusiasm accepted the office. He made, however but little farther progress in the first instance and was even protected with some difficulty against his enemies by the influence of his uncle. In the tenth year of his mission, he lost both Abu Taleb and his faithful wife Cadigha, which so exposed him to the enmity of the Korenites, that he found it necessary to make a temporary retreat and seek the protection of another uncle at Tayif. The contagious nature of enthusiasm was strikingly exemplified by his success in gaining proselytes among the numerous pilgrims to the Caaba. About this time, he pretended journey to Heaven on his beast Al-borak under the protection of the angel Gabriel as dated. This excursion although but obscurely hinted at in the Koran is admitted by all orthodox believers who however and not quite agreed as to whether it was corporeal or merely spiritual. The twelfth year of his mission was signalised by the conversion of the inhabitants of Madina, which so exasperated his

expelled at Mecca, that his compatriots were persecuted again. Arrived at Medina, he remained with some difficulty in Medina, upon which, under the name of the Hegira, or Flight, he had removed himself to the city where he had been compelled to flee. In the year it corresponds with the year of Jesus 623. He was received with all possible respect at Medina, and soon after married Ayisha, the daughter of Abu Bakr, the first and most favoured of his several wives, after the death of Cadigha. His followers now rapidly increased, and finding his strength he openly declared his resolution to destroy idolatry and propagate his religion by the sword. He employed the love of plunder and the promise of a voluptuous paradise as incentives to adventurers and to gather, they became irresistibly attractive. Several contests with the Koreishites followed, in one of which Mahomet was wounded but in the end he baffled all the attempts against him and having defeated a tribe of Jews, (a people whom he much detested) who had joined his enemies, he treated them with unceasal cruelty. Instances of the private assassination of powerful enemies by enthusiastic devotees also became prevalent, while the strict mask of sanctity being no longer so absolutely necessary the triumphant impostor indulged his ardent passion for women without scruple or decorum. His views began now to extend and in the seventh year of the Hegira, he summoned the surrounding sovereigns, including Heraclius the Grecian emperor to embrace the new revelation. The same year was signified by an agreement with some circumstance of humiliation on his own part, with the people of Mecca, which led to a solemn personal pilgrimage there the fruits of which was the conversion of the subsequently called Meidan leaders Caled Amru and Othman. An impudent breach of the truce by the Koreish soon after led to the absolute conquest of Mecca, and the idols of the Caaba were destroyed but the sacred black stone being politically retained having been rendered a renewed object of veneration by the prophet's holy touch. The conquest of the other independent and idolatrous tribes of Arabia followed and in the confidence of power Mahomet now at the head of a numerous and enthusiastic host determined to anticipate the hostile designs of the emperor Heraclius. He accordingly declared war against that sovereign; but after leading a large army to the Syrian frontier finding no place meditated by the Greeks he returned and instructed himself with the mystery of all Arabic. In which he would not tolerate idolatry but suffered his Christian subjects to continue their worship on the payment of tribute. In the tenth year of the Hegira, he performed a valedictory pilgrimage to Mecca, on which occasion he was accompanied with sixty thousand fellow pilgrims, and the ceremony which he observed at the sacred city has served as a model to the pilgrimages of succeeding ages. Mahomet did not long survive

his return to Medina; his health had been gradually declining, in consequence of pains administered to him by a Jewess, in his favorite dish, a shoulder of mutton, with a view of trying his prophetic character, but a fever proved the immediate cause of his death. He expired in the arms of his favorite Ayisha, in the eleventh year of the Hegira, (Jesus 632) at the age of sixty three, and at the dying moment seemed to display a real faith in his mission and to be comforted by the consciousness of great benefits conferred on mankind. Of all his wives, the first alone bore him children and of these his daughter Fatima, married to Ali, alone survived him. Mahomet was a man of good stature and comely aspect he also possessed a piercing and sagacious wit, and was extremely well versed in the arts which at once lead and command mankind. He seems indebted to Judaism and Christianity for most that was systematic in his religion but his civil polity was rude and barbarous, and being rendered immutable by its alliance with his creed and doctrines, it has proved a complete bar to progressive improvement in all the countries which have received his law. His moral character may be estimated by the preceding sketch brief as it necessarily is and from the fact, that the assassination of a rival prophet in Yemen was one of his last actions. As the promulgator of a new faith, gross imposture was possibly mingled with some strong conviction of the unity and spiritual nature of the Deity and as to the sensual indulgences permitted by the Mahometan law they were rather restrictions than encouragements to the idolators of Arabia. His obligations of prayer purification and alms, were also strict and burthensome and the absolute prohibition of wine may be deemed a more severe test of obedience than almost any other legislator has ventured upon. To conclude while the characters of usurper and impostor are abundantly evident, it is not quite impossible that a wish to exalt and improve his countrymen may not have been partially mingled up with the policy and ambition by which this extraordinary founder of the faith of succeeding myriads was so memorably distinguished.—Frederick's *Life of Mahomet* Gibbon, *Mos. Univ. Hist.*

MAHOMET II the eleventh sultan of the Turks, called the great and victorious was born at Adrianople the 24th March, 1450. He was the son of Amurath II and received an education superior to that of Ottoman princes in general. On the death of his father in 1451 his first professions were entirely pacific and he renewed a treaty of peace with the Greek emperor Constantine. The possession of Constantinople was however his great object, and after a successful expedition into Asia, he soon found a pretext for war and the siege of that capital commenced in the spring of 1453. The details of this memorable event will not be required here, whence it will be sufficient to remark, that the general assault took place on the 29th May, on which

by Constantinople was earned; the last Great emperor, after a gallant resistance, with a few devoted followers, losing his life in the struggle. Mahomet first appeared to regard the vanquished with sentiments of humanity but, as asserted by some authors, on the discovery of a conspiracy against him he gave way to his natural ferocity and executed a number of men of the first rank among the Greeks. At length on the payment of tribute he allowed the latter the free exercise of their religion, although he transformed the great church of Sancta Sophia and other Christian edifices, into Mahometan mosques. After firmly fixing the capital of his increasing empire at Constantinople he unrelentingly proceeded with his martial projects, which proving upon the whole successful he became the pride of the Mahometan and the terror of the Christian world. His contests with Husseines and Scanderbeg, his conquest of Albania Servia the Morea, and Negropont and his attempt upon Rhodes and capture of Otranto form a series of facts which belong to history. Thus able and ambitious sultan was at length carried off by a fit of the gout in May 1451 in his fifty first year whilst preparing for a campaign against Perse. The moral qualities of Mahomet II have been painted in the darkest colours by Christian writers and while the terror which he inspired may have led to exaggeration enough remains to show that with vigour of mind and body and great loftiness of enterprise he was exceedingly peridious, brutally licentious and inexorably cruel. The news of his death was received at Rome with extreme joy and not without reason looking to his epitaph which may be thus translated I proposed to myself the conquest of Rhodes and proud Italy. Mahomet II is said to have been the first sultan who loved the arts and it is even recorded that he perused with pleasure the lives of the great men in Greek and Roman history.—*Mod Univ Hist. Gibbon*

MAIGNAN (EMANUEL) a French ecclesiastic of the seventeenth century highly distinguished as one of the greatest mathematicians and philosophers of the age in which he lived. He was born of a noble family at Toulouse in 1601 and received his education at the jesuit college after which while only in his eighteenth year he became a member of the order of Friars Minims. His fame as an enlightened scholar travelling to Rome he received an invitation to that capital which he accepted in 1636 and filled a professor's chair there upwards of thirteen years. During this period the patronage and liberality of cardinal Spada enabled him to publish his treatise "De Perspective Horaria," which first appeared in 1646, two years after he returned to France and obtained the provostship of his order in his native city Carcassonne who had a high opinion of his talents, would gladly have raised him still higher in the scale of promotion, but the nomination of Mazarin was destined to interrupt and science, and though the king himself pleased

with Migne his continual talk of his schemes induced him to draw him into his service, perhaps with a view to remove the obstacles which stood between him and his interest. Migne indeed with his usual impatience in the study of the greatest science, that he is said to have written, that he not unfrequently solved a problem in his sleep. In 1652 appeared his "Course of Philosophy" in four octavo volumes, reprinted in 1673 in folio, to which latter edition are added an attack on the Cartesian theory and a treatise on the Stenotrophic Tube or Speaking Trumpet then newly invented by Mr Samuel Morland an Englishman. This able scholar and excellent man died in his cloister at Toulouse in 1676. A biographical memoir of him with a detailed account of his writings was published by Sauguet twenty years after his decease.—*New Dict. Hist.*

MAILLA (JOSEPH ANNA MARIA DE MOLIACUS) a native of Bugey in Savoy born 1670. He was brought up in the jesuit's college and having acquired a considerable familiarity with Oriental languages was despatched by his order in 1703, on a mission into the interior of China. In this country he remained forty five years during which period having ingratiated himself with the reigning emperor that potentate employed him to construct a map of his dominions. A copy of this laborious undertaking together with a voluminous history of the celestial empire, he contrived to transmit to Europe. The former including a complete survey of Chinese Tartary was engraved in 1772 at Paris. The latter entitled "Histoire générale de la Chine ou Annales de cet Empire traduits du Tong Kien Kang Mou," was published by the abbé Gruner five years afterwards in thirteen quarto volumes. It is a curious work, and contains, among other matter an interesting account of the state of music in China and the musical instruments in use there. Father de Mailla died in 1748 at Pekin.—*Big Univ New Dict. Hist.*

MAILLARD (OLIVER) an eccentric French cordelier of the fifteenth century. He was a native of Paris and a doctor of theology who was employed in various benevolent missions by pope Innocent VIII, Charles VIII king of France and Ferdinand the Catholic, for which last prince he is thought to have betrayed the interests of his own sovereign. He died in 1502. Maillard, who was celebrated as a preacher left many serious heresies behind him which are distinguished by their gross and ridiculous buffoonery as he scrupled to send his auditors in plain terms to the devil when it suited his inclination. Having glanced in his sermons at some traits in the conduct of Louis XI that king, who had just established the post in France sent him word that he would have him thrown into the same. The king is master, he replied, "but tell him that I shall get to Heaven by water sooner than he will by his post-horse." This repartee was allowed to pass. His sermons were printed in 1611. *One of those*

contains the name of *Antoine de la Roche*, in the year 1600, physician attending in the state-prayer, when the plague was rampant.—*Nouv. Diet. Hist.*

MAILLET (*Bastard de*) a learned, but impudent astrologer, native of Lorraine. He was born in 1590, died about 1630, residing successively in the capacity of French consul in Egypt. His opponents obtained a similar appointment at Leghorn, and held it till 1710, when, returning from public life, he devoted a considerable portion of the remainder of his time to the arrangement of his papers, and the enjoyment of literary leisure. Five years after his decease which took place in 1738 at Marseilles some of these were published. They consist of a curious dialogue on Cosmogony in one octavo volume printed under the name of *Tellusius* (the anagram of his own) and a Description of Egypt in 1 vol. 4to, registered in 2 vols. 17mo.—*Nouv. Diet. Hist.*

MAIMBOURG (LEWIS) a celebrated French ecclesiastical historian was descended of a noble and wealthy family and born at Nancy in the year 1510. He entered into the society of *jesuits* at sixteen years of age and when he had finished the usual course of study became classical teacher for six years. He was subsequently appointed a preacher and signalized himself by strange descriptions and burlesque salutes of honour in the pulpit. The sermons which he published are of the controversial kind, and attack the *Jansenists* and Protestants. In the year 1638 having written a treatise in defence of the rights of the Gallican church against the pretensions of the see of Reims he was expelled from the society of Jesus, by order of pope Urban VIII for which disgrace, however, he was amply compensated by a pension from Louis XIV on the acquisition of which he retired to the abbey of St. Victor, where he died in 1656 at the age of seventy-six. By the Protestants he is justly accused of great sneers and partiality in his histories of *Lutheranism* and *Calvinism* but the judgment of Bayle is favorable to his historical talent in other respects. His productions of this class are: 'The History of the Crusades,' 4 vols.; 'The History of the League,' 2 vols.; 'The History of the Decades of the Empire after Charlemagne' 2 vols.; 'The History of the Pontificates of St. Gregory and St. Leo,' 4 vols.; 'The History of the Schools of the Greeks,' 2 vols.; 'The History of the Grand Schism in the East,' 4 vols.; 'The History of Armenia,' 3 vols.; 'The History of the Heresy of the Armenians,' 2 vols.; 'The History of Languedoc, and The History of Calvinism,' all in 12mo.—*Histoire des Ecrivains de l'Academie Francaise*.—*Nouv. Diet. Hist.*

MAIMONIDES, or BEN MAIMON (*Mosès*) a Jewish rabbi, born at Cordova in Spain in 1135. He was of illustrious descent, several of his immediate ancestors having been national judges; but he derived much more celebrity from his own genius and acquirements. He was not only profoundly skilled

in Hebrew and Arabic, but was also acquainted with the Greek and most of the Oriental languages; and he was skilled in theology, philosophy, mathematics, and medicine, to which he added much knowledge of the healing art as qualified him to practice as a physician. He quitted Spain at the age of thirty and went to Egypt, where he became chief physician to the sultan Saladin, who held him in high estimation. He died in 1204, or 1205. His works are a commentary on the Mischna, an abridgment of the Talmud, an exposition of "the Mosaic law," and his *Messie Nevochim*, designed as an explanation of the obscure words and passages of the Jewish Scriptures besides other productions of less importance.—*Aikin's Gen. Biog. Huskisson's Eng. Med.*

MAINTENON (FRANCES D'AUVERgne Marchioness de) a lady celebrated for her accomplishments and singularities of fortune, was born in 1635 in a prison at Niort, in which her father Constantine D'Asagné (son of Theodore Agricola D'Aubigné gentleman of the bedchamber to Henry IV) was confined on a political account. On his release he went to Martignac with his wife and daughter where she received from her mother a solid and excellent education. On the death of her father she returned with the widow to France and was protected by her Protestant relation Madame de Villette who brought her up in that persuasion from which owing to the influence of her mother a strict Catholic she was afterwards converted. Subsequently left in very narrow circumstances she was induced for protection to marry the comic poet and novelist, Scarron although in a state of decrepitude and disease. Here she encountered much well informed if not very moral society among whom may be included the celebrated Ninon de L'Enclos but her own reputation was never thereby injured. In 1660 the death of Scarron left her once more in a state of indigence but having by her wit and address, secured the favour of madame de Montespan then the reigning mistress of Louis XIV the latter obtained for her a pension which she had been long soliciting and placed her infant children by the king under her care. For some time she was very made quarterly rewarded and had also the mortification of being personally offensive to Louis who was led, by his own narrow education to rather dislike those who possessed a reputation for mental superiority. As she became better known to him, this prejudice abated and her success in opening the mind of his son, the young duke of Maine was rewarded with a large increase of pension and a pecuniary gift which enabled her to purchase the lands of Maintenon, from which she afterwards took her name. Her severe and equal temper also began to gain upon the king who was becoming weary of the caprice and impulsive disposition of madame de Montespan whom she gradually superseded and it is for causes to determine in what degree, ambition or a desire to wean the king from a

monkish asceticism, might chose in a confidant, where Voltaire and others have called ungrateful to her benefactions. Her situation was for some years singular. "A strange conversion," says Voltaire, "of tenderness and scruple" on the part of the king and of suspicion and devotion on that of the new minister, seems to have lasted from 1681 to 1690 which was the epoch of their marriage. This extraordinary union, which is in favour of the previous innocence of the parties, was never openly acknowledged and madame Maintenon preserved that name whilst regarded and honoured as a queen. The tedious life imposed on her by this honour is most emphatically depicted in some of her own letters and "the punishment of being obliged to abuse a man who was no longer amiable" dwelt upon with singular feeling. She was however by no means insensible to the pleasure of ruling and in the choice of ministers and measures often exerted a very impious influence. Though without spent to incur hazards for her friends, she favoured many whom she had known in early life and expended much of her income in charity. Her establishment at St Cyr for the gratuitous education of three hundred young ladies of quality and small for tuns for which she drew up rules which did great honour to her good sense was her most splendid work and her happiest hours seem to have been spent at this retreat, to which on the death of the king she finally retired and died there in 1719 at the age of eighty four. She was generally regarded with much respect, and was certainly a superior woman although her prudence approached to selfishness, and her religion to bigotry; the severe measures against the Protestants being rather promoted than otherwise by her opinions and influence. In 1756 a collection of Letters of madame de Maintenon, appeared in 9 vols. 1790 which are well written and contain many things worthy of notice.—*Socie de Louis XIV. Mem. de St Simon.*

MARIN (JEAN JACQUES D'OUVROUR DE), a philosopher and man of letters a native of Bernay, born in 1678. He became a member of the Academy of Sciences at Paris, and was the author of several ingenious papers to be found among the transactions of that learned body especially two written in 1737. Sur la Preparation des Sois dans les Différentes Tons qui se manifestent. On the retirement of Fontenelle from the secretaryship of the society in 1741 Marin was elected his successor in the office which he continued to discharge with great ability till his death in 1771. Besides the treatises already mentioned he published several others. On the Variations of the Barometers. On the Aurora Borealis.

On the Causes of Phosphorescent Light. On Ice and other philosophical subjects, as well as a series of "Letters on the Chinese Empire."—*Memoirs, Panegyrics, &c. &c.*—*New Dict. Hist.*

MAIRET (JESS), a French poet, was born at Beauvais in 1694, and was gentleman in waiting to the duke of Montmorency from

when he received a pension, till he was also delivered by cardinal Richelieu and was employed by the cardinal of a commission for a suspension of arms for Franco Comte. He died in 1698 at the age of eighty-two. He was the author of twelve tragedies, and a poem of some merit, entitled, "Le Courroux Sénateur." He disgraced himself by some illiberal attacks on Corneille, possibly encouraged by the preference given to his own tragedy of Sophonisba, before that of the great man in question. The tragedies of Miret contain some fine passages, but are upon the whole faulty and inelegant.—*Nouv. Dict. Hist.*

MAISTRE (LE). There were two brothers of this name natives of Paris, and both members of the Port Royal Society.—AMBERT the elder, born 1608 was bred an advocate, and published a volume of pleadings before he relinquished the profession. His theological works are a life of St Bernard, a translation of St Chrysostom's work De Sacerdotio and a "Life of Bertholdine of the Martyrs." His death took place in 1664.—His brother LOUIS ISAAC LE MAISTRE, better known by the anagram of his Christian name Saci which he assumed was born in 1613. He suffered an imprisonment of two years duration on the suppression of the society to which he belonged; but at length obtained his liberation and died in 1654 at Fumelais. He completed a new translation of the Scriptures, during his confinement, in 32 vols. 8vo and was the author of several miscellaneous works, the principal of which are *Heures de Port Royal*, Letters of Piety 2 vols 8vo; an attack on the Jesuits entitled *Les Enluminures de l'Almanach des Jeunes* and translations of the treatise *De Imitatione* of a Kempis, of Chrysostom's homilies on St Matthew's gospel, of the fables of Phaedrus, and of part of the works of Terence.—*New. Dict. Hist.*

MAITLAND (SR RICHARD) an early Scottish poet distinguished also as a lawyer and a statesman. He held the office of a lord of the sessions and in that capacity he took the title of lord Lethington from his estate. He was appointed keeper of the privy seal in the reign of queen Mary which office he resigned in 1567 and he afterwards retired from the judicial bench. He died at a very advanced age in 1586. Some of his poetical productions were published by Allan Ramsay.—WILLIAM MAITLAND of Lethington the eldest son of sr Richard was secretary of state to Mary queen of Scots, and his name frequently appears in the history of that unfortunate princess.—His brother JOHN MAITLAND succeeded his father in the office of lord privy seal and lost it through his attachment to the interests of the queen. He was afterwards secretary to James VI and at length chancellor of Scotland. In 1590 he was raised to the peerage, with the title of lord Thirlestane. He died in 1595. He published Latin epigrams; a satire against slander and an admonition to the neglect the east of Mar.—JOHN MAITLAND, son of the second lord Thirlestane was

+ M A I

and earl of Lauderdale, was a favorite minister of Charles II, who contributed to form the famous cabal. See *BROWNE* (*Hannay*). He for a long time held the post of secretary of state, and was also appointed high commissioner for Scotland. He was created marquess of March, and duke of Lauderdale which title became extinct on his dying without male issue in 1679. The cardinal descended to his brother CHARLES, whose eldest son, RICHARD earl of Lauderdale, maintained the literary reputation of his family by his translation of the *Eneas* of Virgil. This work while it remained in manuscript, was read and praised by Dryden in his preface to his own version. It was published in 1737 in 2 vols. 12mo.—*Nichol's Heraldry* *Machiavelli's Lives of Sage Writers*. *Edit.*

MAITLAND (WILLIAM) a writer of history topography and antiquities, born at Brechin in Scotland, about 1693. He was, probably of low extraction as his original occupation was that of a fair merchant in the portug of which he travelled in Sweden Denmark, and Germany and at length settled in London. Prompted by inclination or accident, he turned his attention to literature and produced several compilations which were well received by the public and proved profitable to the compiler. He is said to have gained a handsome fortune with which he returned to Montrose in his native country where he died in 1757. The best known of his works is the *History of London* 1739 folio enlarged to two volumes in a subsequent edition. Maitland was a fellow of the Royal and Antiquarian societies.—*Gent Mag Nov 1801's 1st Ann*

MAITTAIRE (MICHAEL) a learned critic and bibliographer who was a native of Louvain though apparently of French extraction. He was born in 1668 and was educated at Westminster school and Christchurch college Oxford where he took the degree of MA in 1696. The preceding year he had been made second master of Westminster school, which office he relinquished in 1699, and from that period devoted his time to private tuition and the study of literature. He was patronised by the first earl of Oxford and his son and he had among his pupils Mr Stanhope the natural son of lord Chesterfield. His publications are extremely numerous. He is chiefly known as a classical editor and his editions of various Greek and Latin authors are esteemed for their accuracy but his most important literary production is his "Annales Typographici ab artis inventione" Hag Com et Lond 1719 1741 5 vols 4to since augmented by Drury and Panzer—*Aukin's G Big Dict. of Eng. Books. Decou.*

MAIUS or MAY (JOHN HENRY) a learned ecclesiastic of the reformed church born in 1653 at Flortshausen in Baden Durlach. He devoted his attention principally to the cultivation of Oriental literature, and was an honorary member of several universities, as well as other literary societies, and died in 1719, at Glonsen, of which place he was minister.

M A J

Among his works are, a "History of the Ambrosians mentioned in Holy Writ;" "A History of the Reformation under Martin Luther," 4to "A Life of John Eckelius," mentioned Caprio; "Synopsis Judaeorum," "Synopsis Theologica Symbolica," "Examen Historie Canticorum Ricardii Scamoni" "Dissertationes Philologicae et Elogiae," 4to, 2 vols; "Ecclesiastica temporum Veterum et Novi Testamenti"; An Introduction to the Study of Philology;" and a commentary on the Hebrew lexicon of Coconis.—*New Dict. Hist.*

MAJO (FRANCESCO or CACCIO 1671) an Italian composer of great eminence, born in the Neapolitan territories about the year 1740. He studied under Padre Martin at Bologna, but first attracted notice by his opera of "Demofonte" at Rome whether he had proceeded upon invitation from the managers of the opera there. His "Montezuma" confirmed the favourable impression which his previous work had produced and is said to have constantly drawn tears from the spectators. Majo afterwards went to Naples where he composed his "Iperanassa," in 1762 the "Artaserse" of Metastasio and six other operas. His death took place in 1773.—*Big Dict. of Mus.*

MAJOR (John) a Scottish historian born at Gleghorn near North Berwick in 1669. He studied at the universities of Oxford Cambridge Paris and St Andrews, of which latter after failing for some years the chair of theological professor he at length became provost. The divided state of the society to which he belonged proved however so great a source of mortification to him that he went back for a while to France but the circumstances which caused his disgust being at length removed he returned to Scotland where he died in 1750. He was the author of a commentary on the physics of Aristotle an exposition of St Matthew's Gospel and a history of the Scotch from the earliest periods of antiquity all written in very rude Latin.—*Macaulay's Scottish Writers*.

MAJOR (JOSH DANIEL) a native of Breslau born 1634. He was celebrated as a botanist and founded a garden for the cultivation of his favourite science at Kiel where he practised with great reputation as a physician and filled the chair of medical professor. He was the author of a treatise on fossil plants and animals, entitled "Lithologia Curiosa" in 4to, another "On Petrified Crabs and Serpents," 4to and a "History of Anatomy" in folio. Professor Major afterwards travelled into Sweden in the capital of which country he died in 1693.—*Mauri*

MAJORAGIO (Marco Arrivano) an Italian author so named from the place of his birth a village in the Milanese. He was born in 1514, and was a professor of the belles-lettres in the capital of his native country whether his reputation attracted many pupils from all parts of Italy. Majoragio published some valuable observations on the rhetoric of Aristotle and of Cicero, and on the poetry of Virgil in one volume folio. His

other works are, "On the proper Names of the Ancient Romans;" "On the Roman Senate," 4to, &c. His death took place about the year 1555.—*Nicerl. Thesaurus.*

MALAGRIDA (GARCIA). An Italian or else a Spaniard, notorious for his intriguing and unorthodox disposition about the middle of the last century. He was born in 1666 and having become a member of the jesuit's college was despatched by that fraternity to their novitiate to Lisbon. Here he acquired considerable popularity especially among the lower orders by his eloquence and his pretensions to extraordinary sanctity till becoming involved in the designs which the duke d'Avranches entertained upon the crown of Portugal he was thrown into prison by the government. The extravagance of his language and conduct soon after became a subject of cognizance to the Inquisition before whom he was charged with having pretended to work miracles and with having given himself out as consecrated upon by the immediate inspiration of the Holy Spirit. For these offences coupled with a prophecy which he had vented to deliver respecting the death of the reigning monarch he was sentenced to the stake and executed September 21 1761. He published some works which savoured strongly of insanity under which affliction he must likely labour.—*New Dict. Hist.*

MALCOLM (JAMES PELLER). An artist and antiquary was a native of the United States when he repaired in his youth to London to study painting. Failing with the pencil he took to the graver and executed a number of topographical plates, chiefly for the works of Gough and Nichols and also became a member of the Society of Antiquaries. He published *Londonium Redivivum or an Ancient and Modern Description of London* 4 vols. 4to. Letters between the Rev James Granger and many eminent Men 8vo. First Impressions or Sketches from Art and Nature 8vo. Anecdotes of the Manners and Customs of London 4to.

Miscellaneous Anecdotes, 8vo. "An Historical Sketch of the Art of Caricaturing" 4to. He died in 1815.—*Gent Mag.*

MALDONAT (JOSÉ). A learned Spaniard born in 1536 at Fuente del Maestre, in the province of Extremadura. He received his education in the universities of Salamanca, Rome and Paris, in which latter he was afterwards professor of philosophy. Becoming a member of the society of jesuits, pope Gregory XIII called him from the college belonging to that order at Bruges to Rome where he employed him in the publication of the Septuagint version of the Bible. De Thou speaks in the highest terms of his learning, piety, and strict morality. His reputation for these qualities, however did not prevent him from being accused, though falsely, at one period of his life both of heresy and forgery. The works of father Maldonat are, "A Commentary on the Gospels" "another on the Books of Jeremiah, Daniel, Esther, and Ezekiel" together with several treatises on grace original

and other theological subjects, many of which are considered valuable by divines, and display great erudition as well as extensive biblical research. His death took place at Rome in 1583.—*New. Dict. No.*

MALEBRANCHE (NICHOLAS). French priest of the congregation of the oratory, and a celebrated philosopher was born at Paris in 1638. His health being delicate he was charitably instructed by a domestic tutor but afterwards went through courses of philosophy and divinity at the colleges of la Marche, and of the Sorbonne. At the age of twenty two he determined to embrace the monastic life and was admitted into the congregation of the oratory. He applied himself first to ecclesiastical history and afterwards to Oriental learning and biblical criticism. But having accidentally met with Descartes's treatise "On Man" he determined to make himself master of that author's system of philosophy. The result of this study was his famous treatise

On the Search after Truth" first printed in 1673, but of which the best edition is that published by himself in 1712 in 2 vols. 4to, and 4 vols. 12mo. The doctrine of this celebrated work which is now only read for its fine thoughts and uncommon reflections, rendered still more striking by his elegant manner of conveying them is raised upon Cartesian principles, and is in some particulars Platonic. It is principally distinguished by the maintenance of a mysterious union between God and the soul of man and the assertion that the human mind immediately perceives God and sees all things in him. The next publication which he sent into the world appeared in 1676 and was entitled "Christian Conventions." This work was followed in 1680 by a Treatise on Nature and Grace which originated in a conversation between the author and the celebrated Arnauld that led to several controversial pieces from both writers. Father Malebranche also wrote A Treatise on Physical Promotion and Reflections on Light and Colours, and On the Nature of Fire and composed several papers for the Academy of Sciences, of which he was admitted an honorary member in 1699. Notwithstanding the delicacy of his constitution, he was enabled by care and temperance to reach the age of seventy seven his death taking place in 1715. Malebranche was highly venerated for his elevated genius, being visited by all persons of eminence who came to Paris, and nothing could be more amiable and simple than his conversation and manners. As a philosopher although he agreed with the whole tribe who preceded him in conceiving ideas to be the immediate objects of perception, he distinguished more than any previous metaphysician, the object from the sensation which it creates, and thereby laid the way to a right understanding both of our external senses and other powers of mind.—*Nicerl. English*

MALESHERBES (CHRISTIAN WILLIAM DE). An eminent French statesman, descended from a family of distinguished

M A L

worth and talents. He was the son of William de Malherbes, minister of Finance, and was born at Paris in 1731. After studying at the jesuit's college he qualified himself for the legal profession, and became a counsellor of the parliament of Paris. In 1750 he succeeded his father as president of the court of aids, and was also made superintendant of the press, in both which offices he displayed a liberal and enlightened policy highly honourable to his talents and character. On the establishment of the parliament, and the suppression of the court of aids in 1771 Malherbes was exiled to his country seat where he devoted his leisure to the study of statistics and agriculture, and the improvement of his estate and of the country around it. After the accession of Louis XVI, he resumed his presidency over the revived tribunal, and in 1775 he was appointed minister of state. Finding his place for the benefit of the nation constricted by the influence of others, he resigned his post in May 1776 and went to reside in Switzerland. He was recalled to the king's council in 1786, when he drew up two memoirs, "On the calamities of France and the means of repairing them," but his advice was rejected, and he therefore took a final leave of the court. Returning to the country he continued his patriotic labours, and in 1790 published "An Essay on the Means of accelerating the Progress of Rural Economy in France." He took no part in the proceedings which led to the overthrow of the monarchical government, but on the decree of the National Convention for the trial of the king, he emerged from his retreat to become the voluntary advocate of his unfortunate sovereign. His generous attachment to his fallen master excited the jealousy of the French rulers, and caused his destruction. Shortly after his return home his daughter madame Lepellier Rosemonde, and her husband were arrested and conducted to Paris and his own arrest with that of his grand-child too, soon followed. Almost his whole family were extirpated by the merciless proscription of his persecutors. Malherbes was beheaded April 2nd, 1794, and he bore his sufferings with a spirit worthy of the best ages of the Roman republic. On the reaction of public opinion, his bust was ordered to be placed with those of other great men who have reflected honour upon their country. Besides his various tracts on political economy and rural affairs, he was the author of "Observations sur l'Industrie Naturelle de Buffon," 2 vols. 8vo. published after his death.—*Athenæum C. Libr. Eng. Univ.*

MALET (Sir CHARLES WARRE) the son of Alexander Malet, MA prebendary of Gloucester and Wells. He was born in 1752 and at the age of eighteen he obtained a writership in the East India Company's service at Bombay. Having served with reputation in several situations of trust and respectability he was, in 1785, appointed president plenipotentiary at the court of the prince of Mahratta prince. Below he proceeded to that station

M A L

He visited the great saint Shah Abdul; who instructed him the secret of the mystic empire. In 1791 he was made a baronet. During his ministry at the peacock's court, he was visited by the English director a seat in the council of Bombay, which he declined. But on his return to Europe, arriving at the presidency he was induced to fill the chair of government for the space of nine months, till the arrival of governor Dacres in January 1793. Soon after he embarked for England, and having purchased the estate of Wibsey in the south of Westmoreland he made it his residence till his death which took place January 23, 1815. See C. W. Malet published, in the sixth volume of the Asiatic Researches an account of the famous excavated temples of Ellora near Aurangabad in the East Indies which he visited and explored in 1794.—*Sir R. C. Hoare's Hist. of Mod. Wiltshire*

MALHERBE (FRANCIS de) a celebrated French poet, was born in 1556 at Caen of an ancient but decayed family. His father was a Calvinist, but having adopted as a principle that a gentleman should be of the religion of his prince he himself adhered to the church of Rome. He entered into the service of Henry d'Angouleme natural son of Henry II, and married the widow of a comte seignior by whom he had several children. He did not visit court until his fiftieth year when Henry IV received him into his service and gave him a liberal pension chiefly in consequence of the recommendation of cardinal Ferrer who mentioned him as one who outshone all the French poets who had preceded him. He died at Paris in 1628. Although the recorded incidents of his life bear few numerous testimonies abounding of his caustic wit mean greediness of presents and litigious temper being generally at war with some or other of his relations. He was also lax and licentious in respect both to morals and religion. Such was his seal for the purity of the French language that when near expiring he reproved his nurse for using a word not duly authorised. With all these defects of character he may be deemed the father of cultivated French poetry being not only an excellent versifier but possessed of many of the qualities of a real poet not indeed of the highest class but he was ingenious, elegant and sometimes even elevated. His poetry consists of odes, stanzas, sonnets, epigrams, and other short pieces with a few of a devotional cast. He also published translations of Seneca "De Beneficiis," and of a portion of Livy with some letters. The best editions of his works are those of Paris, 1728 3 vols. 12mo, and 1737 8vo.—*Mauri's Nov. Diet. Hist.*

MALINGRE (CLAUDE) sieur of St. Lante, a little esteemed French historian who died in 1655. His best work is said to be " Histoire des Empereurs honoraires de France " 8vo. Of his other works "The Annales and Antiquities of Paris" 2 vols. folio, although much exceeded by that of father du Breuil, is still consulted as a testimony of the state of Paris in the time of the author.—*Nou. Diet. Hist.*

MAL

MALLETT (DANIEL), a poor and obscure newspaper-writer, was born at Colli in the duchy of Franche-Comté, about 1700. Little is known of his parents and education, but in 1720 he acted in the situation of tutor in the family of Mr Home of Edinburgh. In 1725 he gladly accepted the offer of accompanying the two younger sons of the Duke of Monmouth to Winchester school and so the same year he admired himself of William and Margaret appeared in the Plain Dealer of Aaron Hill. He subsequently made the tour of Europe with his pupils, and on his return settled in London and dropped the name of Malloch which was that of his parents for Mallett. In 1728 he published a poem entitled *The Excursion* and in 1731 a tragedy called *Eurydice* which met with temporary success. A poem on *Verbal Crucifixion* followed in 1733, and he was soon after made under-secretary to Frederick, prince of Wales. In 1736 he accompanied the prince of Orange to Oxford and in recompence for some verses written on the occasion was honoured with the degree of MA. His tragedy of *Mustapha* was produced with success in 1739 and the following year his principal prose performance a well written but inadequate life of lord Bacon appeared prefixed to a new edition of the works of that great man. He was about the same time associated with Thomson in the composition of the *Masque of Alfred* and in 1747 he published his largest poem entitled *'Amyntor and Theodora'*. On the death of Pope Mallett lent himself to the resentment of lord Bolingbroke against the deceased poet, for having clandestinely printed his "Idea of a Patriot King". In an advertisement to a publication of that and some other tracts of the same noble man he stigmatised the conduct of Pope with much severity as to draw forth an apologetical tract from Warburton to which Mallett rejoined by *A Letter to the most impudent man living*. For this service he was rewarded by Bolingbroke with a bequest of his works, the publication of which produced a prosecution instead of the gain which he expected. The duchess of Marlborough having left 1800, between him and Glover to write the life of her husband, the latter declined the task and it was undertaken by Mallett alone who received more or less of the recompence without leaving on his death a line towards the work. On the prosecution of admiral Byng he was employed by the ministry to assist in making that unfortunate officer their scape goat, which conduct has loaded his memory with great and justifiable odium while his immediate reward was a considerable pension. On the accession of lord Bute to the helm, he wrote his "*Truth in Rhyme*" and tragedy of "*Elvird*," to which a political tendency was given to serve the politics of that nobleman and obtained a place in the customs for his recompence. This venal writer after having amassed a handsome income, still more enlarged by a second marriage, died of a decline for 1755. The religious scepticism, which he

MAL

freely avowed, may have assisted to induce the partiality notably given of Mallett; but it is quite obvious that no partiality could have rendered it possible.—Johnson's and Anderson's *Lives of the Poets*.

MALLET (EDOUARD) a writer of some valuable articles in the French *Encyclopédie*, was born at Melun in 1713, and was educated at the college of the Barnabites at Meudon. He became tutor to the family of a flanier-general in 1742, and being admitted to orders, he received a cure near Melun where he remained until 1751 when he was invited to be professor of divinity in the college of Navarre. He was the subject of many charges of Jansenism from which however he gradually cleared himself and Boyer then bishop of Mirepoix presented him to a canonry of Verdun. He died at Paris in 1755. He was the author of a translation of Darnac's history of the civil wars of France under the reigns of Francis II, Charles IX &c 3 vols. &c and of several works on the principles of poetry and eloquence. His style is easy and unaffected and his precepts illustrated by the most appropriate passages from the best writers.—Moreri's *Nouv. Dict. Hist.*

MAILET (PAUL HENRY) a learned historian and antiquary was born at Geneva in 1730. He was professor of history in his native city and became afterwards professor royal of the belles lettres at Copenhagen a member of the academies of Upsal Lyons l'assel and of the Celtic academy at Paris. Being deprived of his fortune during the troubles of Geneva in the first revolutionary war for some time he received pensions from the landgrave of Hesse and the duke of Brunswick, of which he was deprived by the late war. The French government was about to make him a recompence but this was prevented by his death in 1807. Mallet's name as an antiquary is displayed in the late Dr Percy's translation entitled *Northern antiquities with a translation of the Edda, or system of Runic mythology translated from M. Mallett's Introduction à l'Histoire de Danemark*. His other works are *Histoire de Hesse* to the seventeenth century 3 vols. Svo., *Histoire de Danemark* " Translation of the Acts and Forms of the Swedish Government" "A Translation of Core's Travels with remarks and additions and a relation of his own travels in Sweden 2 vols. &c *Histoire de la Maison de Brunswick* to its accession to the throne of Great Britain 3 vols. Svo., *Histoire des Suisses*, 4 vols. Svo. *Histoire de la Ligue Anseautique* " from its origin to its decline 2 vols. Svo. He had discovered at Roma the chronological series of Icelandic bishops, which had been lost in Denmark it is published in the third volume of Langebeck's collection of Danish Writers. *Nouv. Dict. Hist. Athénée*, vol. II.

MALLEF DU PAN (JACQUES) a writer on politics and general literature, who was the son of a clergyman of Geneva, where he was born in 1745. After having completed

M. A. L.

his education at college, he entered on the study of law, which he deserted for literature. In 1778 he was invited to sit at the chair of history and French literature at Cassel. He left that situation and went into Switzerland, where he published a political and literary journal, and other works, which procured him so much reputation that he was employed to conduct the political department of the *Mercure de France*. His residence and occupation at Paris contributed to correct his taste and improve his style and he continued during the years 1789-1790 and 1791, to advertise with freedom on the state of public affairs. His sentiments relative to the Revolution having offended the popular party he found it necessary to quit Paris in May 1792. He retired to Geneva and afterwards to Berne where he published several tracts on the French Revolution which added much to his reputation. His apprehensions from the displeasure of the Directory induced him to take refuge in England where under the patronage of the government, he published a journal entitled *Mercure Britannicus* from 1796 till the 15th of March 1800. He died the 10th of May the same year at Richmond in Surrey.—*Dicit. Hist. Dict. Biog des H. M. du 18me. S.*

MALLINKROTT (BERNARD) dean of the cathedral of Munster a turbulent ambitious man who raised himself in his endeavours to become bishop of that see. He was appointed by the emperor Ferdinand I to the bishopric of Ratzeburg, and a few days after he was elected to that of Minden but this not satisfying his ambition in 1650 he attempted and raised seditions against the bishop of Munster which ended in his being degraded from his dignity of dean and finally in his being arrested and confined in the castle of Oettingheim, where he died suddenly March 7 1664. He was a learned man and the author of the following works in Latin *De ortu et Progressu artis Typographicae* Cologne 1639 4to since reprinted in Wolf's collection of *Monumenta Typographica*.

De Natura et usu Literarum Munster 1638 4to, *De Archicancellaria S. R. im parn.* Munster 1640, *Paraphrasmon de Historia Graeca*, Cologen 1656, 4to.—*Natura, Life by Struvius*, prefixed to his edition of the *De Archicancellaria*.

MALMESBURY (WILLIAM) an ancient English historian of the twelfth century was born in Somersetshire on which account he was sometimes called *Somersetanus*. He relates, that when he was a child he had a great inclination for learning which was encouraged by his parents, and it is supposed that he was educated at Oxford. He became a monk of Malmesbury and was elected bursar of the monastery. He studied all the sciences of his time, but attached himself particularly to history, and finding that a satisfactory account of his own country was wanting, he determined to write one; "not," as he himself says, "to display his learning, which is no great merit, but to bring to light things that are covered with the rubbish of antiquity."

He wrote also a history of England, in two books, which was written in the second in the year 1120, or the twenty sixth Henry I. in 1136; a regional history, in two books, from that year to the death of the emperor Henry II. of Oxford in 1145, with a church history of England, in four books, published in Sir H. Savile's collection, 1596. He aspired rather to the character of an oratorian, than of an eloquent historian, and discourses great eloquence and good sense with unassuming modesty. His *Antiquities of Glastonbury* was printed by Gale and in his *Life of St Aldhelm*, by Wharton. He was also the author of several pieces of Latin poetry. William of Malmesbury died in that abbey in 1146. *Bala et Psa. Wherton's Anglia Sacra. Henry's Hist. of Great Britain. Leland.*

MALMESBURY (JAMES HARRIS earl of) privy counsellor and KB was the son of the author of *Hermes*, and other philosophical works. He was born at Salisbury in 1746 and was educated at Merton college Oxford where he was created doctor of civil law. In 1768 he was sent as secretary of embassy to Madrid, he was afterwards minister at Brussels and in 1772 went as envoy extraordinary to Berlin. He was appointed to the same post at St Petersburg in 1776, and in 1784 was sent as ambassador to the Hague. In the quality of plenipotentiary he signed the treaty with Prussia and Holland in 1794 and he was next employed to negotiate the marriage of his present majesty with the late queen Caroline. In October 1796 he was nominated minister plenipotentiary to the French republic, but his mission in that character to Paris, and his subsequent negotiations at Lask, were equally fruitless. He was created earl of Malmesbury in 1800 and appointed governor of the Isle of Wight and lord lieutenant of Hampshire in 1807. His death took place in 1820. He was the author of *An Introduction to the History of the Dutch Republic* and a memoir of the life of his father accompanying an edition of his works in 2 vols 4to.—*Gent Mag. Dict. des H. M. du 18me. S.*

MALONE (EDWARD) a dramatic critic and commentator known in literature as one of the editors of Shakespeare. He was the son of an Irish judge and was born at Dublin in 1731. After completing his studies at Trinity college he entered at the Inner Temple London, and was called to the bar in 1757. Possessing a competent fortune he gave up his profession and employed himself in literary pursuits. After having been the conductor of *Stowiana*, in his edition of Shakespeare's plays, Mr Malone quarrelled with their publisher, and published an edition of his own, in 11 vols. 1790. Besides this undertaking, he published an "Inquiry into certain Papers, attributed to Shakespeare" (see *IRLAND, S.*) biographical memoirs of Sir Joshua Reynolds, Dryden, W. Gerard Hamilton, &c. and various minor productions. He died May 20th, 1812.—*Chambers's Biog. Dict. Theop. Dict.*

M A N

MALOUIN (ANTOINE) a French physician and naturalist born in 1701. He practised physic in Paris, and in 1704 became professor of medicine in the Royal college physician to the queen and member both of the Royal Society of London and the French Academy of Sciences. As a physician, he was an enthusiast for his art, which he affirmed was honoured by all great men, Molire being mentioned as an exception.

See how he died was the reply. On another occasion delighted with the exactness with which a celebrated man of letters followed his directions. You are worthy of being sick he exclaimed warmly saluting him. He was frugal yet disinterested and after a lucrative practice went to a small employment at Versailles, which he called retiring to court. He died of an apoplexy in 1778. He possessed a great fund of chemical knowledge and published "Traité de Chymie," 1734 12mo; "Pharmacopee Chymique" 1750 and 1755 2 vols. 12mo and several papers in the memoirs of the Academy of Sciences. He also left by his will a legacy to the faculty of medicine in Paris on condition that it should annually hold a public assembly and give an account of its discoveries.

Nouv. Dict. Hist.

MALPIGHI (MARCELLO) an eminent Italian physician and anatomist of the seventeenth century. He was born in 1628 near Bologna, and studied in the university of that city. He was a learned MD in 1653 and three years after was appointed to the medical chair. The grand duke of Tuscany invited him to become professor of medicine at Pisa, where he staid three years, and in 1660 returned to occupy his former office at Bologna. He was tempted by a high stipend to accept the professorship of medicine at Messina in Sicily but the jealousy of his colleagues rendered him uneasy and he again settled at Bologna in 1666. He was elected a fellow of the Royal Society of London in 1669 and he communicated to that association various anatomical discoveries relative to the minute structure of animal bodies the results of microscopical observations. Pope Innocent XII in 1691 called him to Rome and appointed him as physician chancery and domestic prelate which post he held till his death in 1694. His works, relating to anatomy physiology and vegetable anatomy comprise much curious and important information and have been repeatedly published.—*Hutchinson's Biog. Med. Fabroni's Ital.*

MALTON (THOMAS) an ingenious artist and mathematician born in 1795, and died at Dublin February 18 1801. He delivered lectures on perspective, and on theoretical and practical geometry, and he published "A Royal Road to Geometry or an easy and familiar introduction to the Mathematics" 1775 8vo; "A complete treatise on Perspective, in theory and practice, on the true principles of Dr Brook Taylor 1776, folio; and a collection of aquatint engravings, with descriptions, entitled "A Picturesque Tour

Biog. Dict.—Vol. II

M A N

"through London and Westminster," 1798, 8vo.—*Roux, Jones's Biog. Dict.* *Edu.*

MALUS (GEORGES LOUIS) a mathematician and military engineer in the French service was born at Paris in 1775. At seventeen years of age he produced a tragedy entitled, "The Death of Cato" but devoted himself chiefly to the mathematics, and was admitted into the school of engineers, which he was about to quit with a commission when some political objection intervened, and he joined the army as a private soldier. His abilities being observed by his commanding officer he was recalled and sent to the Polytechnic school of which he became a professor, and subsequently accompanied the expedition of Buonaparte to Egypt where he much distinguished himself as an officer of engineers. Malus was the author of a work which gained him great reputation on the optical questions relating to geometry in which he calculated all the phenomena of reflection and refraction. This called the attention of the Institute of France to the phenomenon of double refraction and they made it the subject of a prize which Malus gained and by his experiments he discovered previously unknown property of light namely the resemblance between the lodestone and a particle of light, the latter of which he found acquired polarity and a determined direction. This discovery the greatest since that of the achromatic telescope gained him admission into the Institute. He also wrote a memoir on a discovery he made of a branch of the Nile which forms part of the first volume of "La Decade Egyptienne." Malus died in 1812 overwhelmed with honours.—*Annales Historiques par M. le Chevalier Delambre.*

MILVEZI (VIRGILIO) a nobleman of Bologna in Italy who distinguished himself in the seventeenth century as a general scholar. He was also engaged in the military service of Spain and employed as a diplomatist by the king Philip IV. He died at his native place in 1634 leaving behind him several learned works the most important of which is his "Discorsi sopra Coriolano lacto" 1633 4to.—*Moreri, Nouv. Dict. Hist.*

MAMBRUN (PATER) a learned French jesuit and Latin poet, was born in the diocese of Clermont in 1581. He was an imitator of Virgil and was the author of "Eclogues," "Georgics" or Four Books upon the Culture of the Soil and the Understanding and of heroic poems, in twelve books, entitled "Constantine, or Idolatry overthrown." Ménage has called him "a great poet, as well as a great critic" and not without reason, he had undoubted talents for poetry but it would have been as well had he not so openly professed himself an imitator of Virgil whose genius and judgment he could not copy though he might imitate his style. Besides the above he was the author of a Latin pantomimic dissertation upon an epic poem which proves Ménage's opinion of his critical talent well founded. He died in 1661.—*Moreri, Nouv. Dict. Hist.*

MANCINELLI (ANTONIO) an Italian

E

MAN

grammian, poet, and orator was born in 1495. Little of his life is known, except that he taught in several parts of Italy with success; the story related by Flaccus Blynca, of his having his hands cut off and his tongue cut out, for an impious speech made to pope Alexander VI., seems without foundation. He was the author of a poem, entitled "Salva vita mea" or an account of his own life reprinted by Meuschein in 1735 in his collection of "Vite summorum dignitatis et eruditissimorum virorum." De Floribus, de Figura, de Poetica virtute, "Epigrams" published at Venice in 1501 4to, and Notes upon some of the Classic Authors. The time of his death is uncertain, but it must have been some time after 1506.—*Moreri, Gen. Dict. Noviss.*

MANCINI (FRANCESCO) an eminent musical composer of Naples, in which capital he was born in 1691. Mancini, who was more remarkable for the excellence than the number of his compositions, was a pupil of Leonardo da Vinci (not the painter of that name) and is reckoned by Haase among the first masters of his art. He met with equal success, both in the serious and comic opera being as grand, pathetic, and sublime in the one, as he is light, brilliant, and gay in the other. Among the best of his works are "Il Cava di Breteche" and "Maurizio." The time of his decease is uncertain.—*Sieg. Diet. of Mus.*

MANCO CAPAC legislator and first Inca of the Peruvians, was the twelfth in ascent from the Inca who reigned at the time of the Spanish invasion in 1532 an interval computed by the natives at about four hundred years. Their tradition was that this person with Mama Ocelia his wife and sister appeared suddenly in an island of the lake Titicaca and declared themselves to be children of the sun, sent down to civilize and instruct them. Manco accordingly taught the men agriculture and other useful arts whilst his wife instructed the women to spin and weave. Stripped of the supernatural it may be presumed that some stranger from a civilised land appeared in Peru, and employed the association of religion to procure an ascendancy which enabled him to form a regular government. Manco Capac died after a long and prosperous reign, and, as far as tradition may be relied upon, seems justly to have been entitled to rank among the benefactors of mankind by the perseverance of his institutions. —*Robertson's Hist. of America.*

MANDEVILLE (BERNARD) a writer and physician of considerable temporary celebrity was born in Holland about 1670. He was probably of English extraction as he fixed his residence in England and wrote his works in the English language. His first publication was "The Virgin Unmasked, or a Dialogue on Love and Marriage," 1709 which can scarcely be pitied for its moral tendency. This work was followed, in 1711, by "A Treatise on the Hygienic and Hysteric Passions," a work of considerable shrewdness. In 1714 he published a poem, entitled "The Grounding

MAN

"Hive, or Husband-hunting Honey," which formed the ground of his celebrated publication, "The Fable of the Bees, or Private Virtue made Public Benefit," first printed in 1708. The reasoning in this piece, is founded on the opinion that the luxury and avarice which marks the advanced stages of society and the vices which they engender, are often the causes of national prosperity and hence the necessary prevalence of vicious principles in human nature. Consistently with this doctrine, his general views of mankind are of the most disparaging tendency and he declares against all attempts to exalt the humble classes by education. This work was deemed so immoral that it was presented by the grand jury of Middlesex an absurd practice of the day which only tended to increase the publicity of the writings thus censured. Many answerers also appeared among whom was bishop Berkeley to whom he replied in 1723 in his Letter to Dion. Besides the foregoing works, Dr Mandeville was author of a tract, entitled Free Thoughts on Religion, 1730 which, without sufficient reason was deemed Detestable and of An Inquiry into the Origin of Honour and Usefulness of Christianity in War. He died in 1733.—*Mandeville's Works.*

MANDEVILLE (MR JOHN) a celebrated English traveller of the fourteenth century was born at St Albans. He was of a respectable family and bred a physician but a desire to visit foreign countries induced him in 1338 to set out upon a course of travels in which he is said to have spent thirty four years. During this period he visited the greater part of Asia Egypt and Libya, making himself acquainted with many languages, and collecting a great mass of information true and false which he committed to writing in Latin, French and English. He died at Lege in 1372 where a monument is erected to his memory the inscription on which denominates him John de Mandeville alias de Barba, lord of Campoli. The only genuine edition of his travels entitled The Voyage and Travails of Sir John Mandeville Knight, was printed from an original MS. in the Cotton library 1727 8vo. The extreme credulity of this early traveller in the collection of absurd and fabulous stories has much impeached his character for veracity, but more attention is due to what he himself observed, and he makes many remarks which show talents and scientific information.—*Tanner Med. Unit. Hist.*

MANES or MANICHÆUS. The founder of a famous Christian sect, called after him Manichæans. He was born about the year 239 in Persia, Babylon, or Chaldea, and is said to have been adopted by a rich widow who made him her heir. According to the Eastern writers, he subsequently became a painter and is also said to have been skilled in the healing art. Having become a convert to Christianity he sought to connect with the doctrine of the magi, in which he had been educated and first appeared as a public

MAN

teacher in 277. He obtained the notice of Shapur, king of Persia, who was at first inclined to favour him, but subsequently determined to put him to death, on which he privately withdrew to Turkistan and composed his "Gospel," of which nothing but a few fragments remain. On the death of Shapur he returned to Persia relying with reason on the protection of his successor Hormisdas. The death of the last mentioned monarch again exposed him to danger and his son Varanes II, succeeded by the magi put him to a cruel death; some authors asserting that he was crucified and others that he was flayed alive. His death is supposed to have taken place about 277. Besides his "Gospel" he was the author of "The Mysterious Chapters,"

The Treasures of Life," "The Organic Book," "On Astrology," and Letters all which are particularly by Lardner as well as the authors in which extracts from them may be found. The principal feature of the doctrines of Manes is the magical one of two original independent principles the one numerical and good the other material and evil and his followers admitted or rejected parts of the Old and New Testament as best agreed with this fundamental distinction. This sect of which St. Augustine was once a member spread rapidly in Persia and the different provinces of the Roman empire and notwithstanding the merciless persecutions which it endured it existed in considerable numbers even at the close of the fifteenth century.—*Augustus Huet Eccl. Modern.* *Lardner.*

MANETHO an ancient Egyptian historian who was high priest of Memphis in the reign of Ptolemy Philadelphus about BC 306. He wrote in Greek a history of Egypt from the earliest times to the last years of Nechosinus, and pretended that he had taken it from the sacred pillars of the first Hermes Trismegistus; the inscriptions on which after the flood were translated into Greek but written in the sacred characters, and deposited in the sacred recesses of Egypt. The manifest absurdity of this pretension induces several writers to think that some mistake or corruption has taken place in the passage of Eusebius which relates it. The work of Manetho which is lost, consisted of three parts, the first of which contained the history of the gods or heroes, and the second and third that of twenty dynasties of kings which having been epitomized by Julius Africanus are recorded by Eusebius. Several fragments of Manetho are preserved by Josephus, in his work against Apion.—*Vest. Hist. Orie. Univ. His.*

MANETTI (GIANNONZO or SARAVUS) a learned scholar was born at Florence in 1396 of an illustrious family that had fallen into decay. After a course of study he became the pupil of Camaldoli, in the Greek language and then lectured on philosophy at Florence. He was afterwards employed by the state in several negotiations, and became successively governor of Picchio, Picchio, and Scarpia; and

MAN

commander of the army, in conjunction with Bernardo de' Medici. The favour which he enjoyed with the prince, of whose courts he had been employed as ambassador having excited the envy of some families of Florence, he repaired to Rome where pope Nicholas V made him one of his secretaries, with a handsome salary, and on the accession of Pius II, he was made librarian of the Vatican. He subsequently left Rome to reside with Alfonso, king of Naples, who allowed him an annuity of nine hundred golden crowns. He was the author of several works, most of which remain in MS. in the Laurentian library. Those published are "De dignitate et arcella humana" "Vita Petrarca" inserted in Tommasini's "Petrarcha rediviva" "Oratio ad regem Alphonsum in nuptiis filii sui." Other works have been attributed to him as a History of Pistoria, and the lives of Dante Boccaccio and Nicholas V, but there is no particular account of them.—*Chauvigne Nicorov. Thibault.*

MANFREDI (EUSTACIO) an eminent mathematician and astronomer born in 1674 at Bologna in Italy where his father was a notary. After studying jurisprudence, and obtaining the degree of LL.D. he applied himself to the cultivation of mathematical science with such success, that in 1698 he was appointed professor of mathematics in the university of Bologna. In conjunction with Victor Stanca, he commenced a series of astronomical observations of which he afterwards published an account in his "Scholae Mathematicae." In 1703 appeared his treatise on the solar maculae and the following year he was chosen rector of the college of Montalto, and also surveyor general of the rivers and waters of the Bolognese territories. In 1705 he published a work on the reformation of the calendar, and he afterwards began the composition of his "Ephemerides novissima calendarum" which he carried on from 1713 to 1725. The whole work in four volumes quarti, comprises observations at the hours, extending to the year 1750. On the foundation of the institute of Bologna in 1718 Manfredi was appointed astronomer to that establishment on which he resigned the rectorate of the college of Montalto. In 1726 he was admitted as associate of the Royal Academy of Sciences at Paris, and in 1729 a foreign member of our Royal Society. He died in 1739. Besides the works already noticed, he was the author of a treatise on the transit of Mercury over the Sun, and another on the aberration of the fixed stars, and other mathematical and astronomical productions and, after his death appeared a volume of his compositions in Italian verse.—*Giovanni Martini* his brother was professor of mathematics, and chancellor of the university of Bologna, where he died in 1761.—*Mauri. Fiduci. Vt. Ital. Altho. Gen. Biog.*

MANGBERT (THOMAS) a learned Benedictine, who became librarian and counsellor of James Charles of Lorraine. He published "Sarmata" and a "Treatise on Phys-

M A N

gentry" in his life-time, and at his death which took place in 1703, he had nearly prepared for the press a valuable work edited and published the same year by the abbé Jaquin, entitled, "Introduction à la Science des Médailles," folio, which serves as a supplement to the "Antiquité expliquée de Montfaucon."—*New Dict Hist.*

MANGET (John James) a learned physician, was born at Geneva in 1631 where his father was an eminent merchant. In 1678 he took his doctor's degree at Valence with the famous Hartmann and was appointed first physician to the elector of Brandenburg and dean of the faculty of Geneva. He died in 1702. His works were very numerous they are "Méssis Medico-spagyrica &c 1683, folio; Bibliotheca Anatomica" 2 vols. fol in conjunction with Daniel le Clerc. "Bibl. Hothaea Medico Practica" 4 vols. folio

"Bibliotheca Chymica Curiosa," 2 vols. folio
"Bibliotheca Pharmacaceutico-Medica," 3 vols. folio; "Theatrum Anatomicum cum Eustachii Tabulis Anatomicis," 2 vols. folio. "Traité de la Peste recueilli des meilleurs Auteurs" 2 vols. 12mo. "Nouvelles Réflexions sur l'Origine de la Cause la Propagation les Pro servatifs et la Cure de la Peste" 12mo.

Observations sur la Maladie qui a commencé depuis quelques Années à attaquer le Gros Bécati. His great work "Bibliotheca Scriptorum Medicorum veterum et recentiorum" was the most important of his productions, being a useful collection of catalogues of medical writings. He also edited the "Compendium Medicorum Practicorum" of J. And Schmitz. Paul Barbetti Opera omnia Medica et Chirurgica the "Pharmacopoeia Schroderi-Hoffmanniana" the "Tractatus de Fabricis," of Franc. Pius and the "Sepulchretum" of Bonetus to which he added several histories and remarks.—*Lys by Manley* in his Bibl. Script. Med. Eloy Dict de la Med. Mœvri.

MANGEY (Thomas) an English divine was born at Leeds in 1684, and educated at St John's college Cambridge, where he went through all his degrees. After receiving various preferments, he was advanced to the first stall of Durham, in 1722, and appointed treasurer of the chapter. He died in 1755. His works are, "Practical Discourses upon the Lord's Prayer preached before the honourable Society of Lincoln's Inn" published by the special order of the bench 1716 8vo. "Remarks upon Nazarenes, wherein the fancies of Mr Toland a Mahometan Gospel and his misrepresentations of Mahometan Sectaries in respect of Christianity are set forth. The History of the old Nazarenes cleared up, and the whole conduct of the first Christians in respect to the Jewish Laws, explained and described besides a great number of sermons, published under various titles. He was one of the seven doctors indirectly created July 6, 1725 when Dr Bentley delivered the famous oration prefixed to his Discourse. In 1726 Dr Mangey circulated proposals for an edition of "Philo Judaeus,

M A N

which he completed in 1742, with the title of "Philo Judæus Opera Omnia quæ ex ipsius postuum," 2 vols. folio.—*Nichols's Lit. Hist. Manning's Survey. Hutchinson's Durham.*

MANILIUS (Marcus) a Latin poet and astrologer supposed to have lived in the first century of the Christian era. Nothing is known with certainty of his family or country but it is probable that he was a native of Roma. He wrote a poem, entitled *Astronomicon* of which five books are extant, treating of the fixed stars and there appears to have been a sixth relating to the planets. Among the best editions of that work are that of Joseph Scaliger Leyden 1600, 4to; of Bentley London 1739 4to, and that of Pigre, Paris, 1786 2 vols. 8vo. There is an English translation of Manilius by Creech.—*Voxus de Poet. Lat.*

MANLEY (DE LA RIVIERE) a female writer of some celebrity in her day was the daughter of sir Roger Manley governor of Guernsey a gentleman who suffered much for his adherence to Charles I and who wrote Latin commentaries on the civil war and published a "History of the late Wars in Denmark." His daughter the subject of this article received an education suitable to her birth but her parents dying early she was left in the care of a male cousin who basely seduced her by means of a fictitious marriage and subsequently deserted her. She afterwards acquired the temporary and no-way respectable protection of the duchess of Cleveland and when that resource was withdrawn wrote a tragedy entitled, "The Royal Mistress." The success of this production brought around her the men of wit and pleasure of the day and she commenced the unhappy life of a woman of intrigue. At her leisure hours she composed her four volumes of "The New Atlantis" in which under feigned names, and with much warmth and freedom she relates the amours and adventures, real and supposed of many distinguished persons of the day and more especially among the confessors of the favourers of the Revolution of 1688. A warrant being granted by the secretary of state to seize the printer and publisher of this work which was deemed a libel she honourably stepped forward, and acknowledged herself the authoress. She was, in the first instance committed to the custody of a messenger but was afterwards admitted to bail. At length after repeated appearances in court, she was discharged and a Tory administration succeeding she lived in high reputation and gaiety. About this time she wrote another tragedy entitled "Lucane," which she dedicated to sir Richard Steele and a comedy called "The Lost Lover or the Jealous Husband," which was acted in 1696. She was also employed in writing for queen Anne's nursery and when Swift relinquished The Examiner she continued it for a considerable time with great spirit, assisted by friends which that great writer afforded her. At this season she formed a connexion with alderman Barker at whose house she died,

M A N

July 11, 1794. Besides the works already mentioned, Miss Manley wrote " Letters from a supposed Nun in Portugal," 1696 8vo; " Mémoires of Europe towards the close of the Eighteenth Century " 1710, 2 vols. 8vo; " Court Intrigues," 1714 8vo. " The Power of Love " 1720 8vo, &c.—*Child's* *Latin Notes* to *Poetarum et Guardianum*.

MANNI (Dominic MANNA) an eminent Italian writer was born at Florence in 1690. He was early distinguished for capacity and great strength of memory and was regularly admitted into every class of literature. His particular bias however was history and in 1722 he accordingly produced his *Senses of Florentine Senators* 2 vols. folio a work abounding with curious and authentic information. In 1731 he gave the world a work of still greater interest *De Florentinis Inventis Commerciorum* in which he gave an instructive account of the manufactures which were either invented or improved at Florence. His *History of Spectacles* followed in 1738 the invention of which he attributed to Salvino Armati. In 1748 he published *Historical Illustrations of the Decameron of Boccaccio* 4to in which work he proves that most of the stories in that production were founded on real events. A more elaborate work succeeded entitled *Observations on the Seals of the Lower Age* 50 vols. 4to which work is esteemed a highly valuable compilation of records and notices of the persons who acted a great part in the history of Florence and other leading cities in Italy. His other principal works are *Method of Studying the History of Florence* *Historical Notices concerning the Amphitheatre at Florence* *Inquiries into the ancient Therme of Florence* *A History of the Jubilee* a very curious and interesting performance Agreeable Evangels being the lives of the most jocose and eccentric Tuscan *Life of the well deserving Prelate Nicholas Steno*, of Denmark *Lectures on Italian Eloquence* &c. His able and meritorious writer the catalogue of whose productions extended to 104 died at Florence November 30 1788 in his ninety-eighth year—*Athenaeum*. *New Diet Hist.*

MANNING (Owen) an English antiquary and topographer who was a native of Northamptonshire and educated at Queen's college Cambridge where he obtained a fellowship. He took the degree of BD in 1753 and having entered into orders he became a prebendary of Lincoln. He afterwards was vicar of Godalming, and rector of Pepperhillarow in the county of Surrey, and he was also a fellow of the Royal society. His death took place in 1801 at the age of eighty. His principal literary labours are *Dictionarium Sacrum et Gothico-Latinum sectore Edw. vato Lye, editum et auctit O. M.* 1773 2 vols. folio; and the *History and Antiquities of Surrey* published posthumously by Mr Bray in 2 vols. folio.—*Child's Big Diet.*

MANSARD (FRANÇOIS) a celebrated French architect, was born in 1598, and died in 1666.

M A N

He was the author of several magnificent buildings at Paris, the principal of which are the gate of the church of the Feuillants, in the rue St Honoré the church of the Siles St Martin, in the rue St Antoine the gate of the Minimes in the place Royale, the hôtel de Bouillon Toulouse and Jany, besides several buildings in the provinces for which he formed designs. On his presenting his plan for the facade of the Louvre to Colbert, the minister was so pleased with them that he engaged him to make him promise not to alter them in any way, but Mansard refused to undertake the work on that condition being determined as he said to preserve the right of doing better than he had undertaken to do.—His nephew JULIUS HARDOUIN MANSARD, was first architect and conductor of the royal buildings, and designer of many celebrated edifices.—*D'Argenville*. *Perrault* *les Hommes Illustres*. *New Diet Hist.*

MANSI (John DOMINI) a voluminous editor and prelate was born at Lucca in 1692. He was many years professor of theology at Naples. His first situation in the church was that of a clerk regular in the congregation of the Mother of God and in 1765 he was promoted by pope Clement XIII to the archbishopric of Lucca. He died in 1769. His first publication was entitled *Tractatus de casibus et excommunicationibus episcopacis reservatis confectus ad normam tabularum Luccanensium*. He then published a Latin translation of

Calmel's *Dictionary of the Bible* with additions, an edition of Thomasius *De lectori et nova ecclesiasticis Disciplinis* 3 vols. fol., a Latin translation of Calmet's *Commentaries on the Bible* 1751 17 vols. an edition of Baronius's *Annals* in 30 vols. with additions a new edition of the *Councils* 30 vols. folio a new edition of *Enæas Syrius* (pope Pius II) *Orations* with many hitherto unpublished 1755 2 vols. 4to &c. &c. But the work by which he is best known here is his excellent edition of Fabricius's *Bibliotheca Latina media et inferioris* 1754 and thus alone is sufficient to stamp his character as a first rate antiquary.—*Fab. Vitæ Ital.*

MANTTEV (CHRISTOPHER HESKETH de) a celebrated Russian officer and writer was born at Petersburgh in 1711 and was first a lieutenant in the Prussian service and then a captain of grenadiers in the Russian regiment of Petersburgh. On the death of the czarina Anna he took the part of the young prince, Iwan III and was employed to arrest the tyrannic Biron and for this, and other services, he received the rank of colonel, and some estates in Ingria but these he lost when the throne was seized by the empress Elisabeth. He again entered the Prussian service, and in 1754 he was appointed major-general of infantry. He died in the war of 1762. He was the author of *Memoirs of Russia*, which are much esteemed and are at the same time historical military and political they commence in 1737 with the reign of Peter II, and finish with the first year of the empress Elisabeth.—*New Diet. Hist.*

M A N

MANTEGNA (Andrea) an eminent painter, was born at Padua, St. Egidio, or in its district. He was the pupil of Squarcione. He excelled himself highly in the art of perspective; and, Lorenzo writes, 'that Mantegna was the first who opened the eyes of artists in that branch.' His chief abode, and school, was at Mantua, and he worked a great deal at Rome, where he painted a chapel in the Vatican for Innocent VIII. which existed at the accession of Pius VI. His master piece, the picture della Virtute, afterwards in the cappella de Padre de S. Filippo is now at Paris. It is a votive picture dedicated, for a victory obtained, to the Madonna seated on her throne, with the infant standing in her lap. Mantegna was too much occupied by large works to be a cabinet painter, and pieces are too often attributed to him in which he had no hand. He was also the first engraver of his time and one of the earliest; all gravures on metal. Mantegna had great influence on the style of his age and was much imitated. He began some fine frescos in the castle of Mantua, which were finished by Francesco, and another of his sons, who added a beautiful coloring which shewed great proficiency in foreshortening and what the Italians call, 'Del sotto in su.' Andrea Mantegna died in 1505.—Strutt's *Fauns &c Picturesque Antiquities*

MANTON (Thomas) an eminent nonconformist, was born at Lawrence Lyppard, in Somersetshire in 1660 and received his university education at Wadham college Oxford. He was admitted to deacon's orders by Dr Hall and adopting the principles of the non conformists with these he was content, not thinking those of the priest necessary. In 1643 he was presented to the living of Stoke Newington by colonel Popham and here preached those lectures on the epistles of St James and St Jude which he afterwards published. In 1650 he was removed to the living of St Paul's, Covent-garden, and although he had made no secret of his opinions in two of his sermons, one on the murder of the king and the other at the funeral of Mr Love Cromwell sent for him, when he assumed the protectorate and desiring him to pray at his installation made him one of his chaplains. He was also nominated by parliament one of a committee of divines to draw up a scheme of fundamental doctrines, and also member of the committee for the trial and approbation of ministers. However, in 1650, Mr Manton co-operated openly in the restoration of Charles, was one of the ministers appointed to wait upon the king at Breda who made him one of his chaplains. In the same year he was, by mandamus, created DD at Oxford being satisfied with the king's declaration Dr Manton remained in his living, and subscribing to the doctrinal articles of the church of England, he received episcopal induction from Dr Sheldon bishop of London and al most the Common Prayer to be read in his church. He was then offered the deanship of Bath, which he refused. In 1661 he was one of the commissioners at the Savoy

M A N

conference, and concluded, punishing well Dr Bonhomiery's day, 1662, when he was called to purge his goods. On the promotion of the prebendary of the recompensement, he was impeded, and after experiencing numerous vicissitudes, his constitution gave way and he died in 1677. His 'Works' were published in five large volumes, 1681 1691 folio.—Colley's *Paritane Ath. Or. Mem. of Dr Manton*, by Herrn.

MANTUAN (BAPTIST) an Italian poet, was born at Mantua, whence he took his name in 1443 and was the natural son of Peter Spagnolo. He applied himself early to literature and to the study of Latin poetry in which language he always wrote. He entered among the Carmelites, of which order he became general but upon some disgust, he with drew himself in 1515 and died the year after. He was very much admired in his time and his countrymen even went so far as to place him in rank next to Virgil but few now will be of this opinion. There are several editions of his works, but the most complete was published at Antwerp, 1570 4 vols. 8vo, under the title of J. Baptista Mantuanus Carmelita theologia philosophia poeta et oratoria clarissimus, operis omnia pluribus libris sucto et restituto. They consist of eclogues, seven poems in honour of the Virgin, inscribed on the calendar beginning with the virgin Mary these he calls Parthenissa I Parthenissa II &c., four books of *Silva* or poems on different subjects, elegies, epistles &c.—*Nova. Giugne Hest Lat d Italia.* Rosso's *Lat X*

MANUEL (PIERRE) a native of Montargis in France who made himself conspicuous during the progress of the Revolution. Though born in low life he was tolerably well educated, and going to Paris when young, he commenced his career as an author by publishing *Essai historique et politique sur la Vie de St Louis.* He then became tutor to the son of a banker from which office he resided with a small pension, and resuming his pen he produced several pamphlets, among which was one called "Le Police dévouée," for which he was put into the Bastile. He was soon released, and on the occurrence of political commotions he became a partizan of revolutionary principles. In 1789 he had an office under the municipality of Paris, and in November 1791 he obtained the place of attorney of the commune of Paris. He joined the jacobins, and was for a time one of the most active and dangerous enemies of royalty, to the overthrow of which he contributed. He appears to have been deeply implicated in the massacres which took place in the prison of Paris in the beginning of September 1792. Immediately after he was nominated a deputy from the department of Paris, to the national convention, when he detached himself from the party with which he had acted, and on the trial of the king, he voted for his imprisonment during the commencement of war, and banishment afterwards. Some other unpopular measures which he advanced obliged him to resign his seat in January 1793. He

MAN

wished to Mantua, where he narrowly escaped being assassinated, and a few months after he was excommunicated, and sent to the scaffold by his former associates. His execution took place November 14, 1793.—*Dictionnaire H. M.* &c. 1804. 3.

MANUZIO (ALDO) or ALDUS MANUTIUS, an Italian printer of the fifteenth and sixteenth centuries, celebrated as an artist and a man of letters. He was born at Bassano in the Roman territory about 1447, and was educated at Rome and at Ferrara, where he learned Greek under Baptista Guarino. He became tutor to Alberto Pio prince of Carpi, and in 1483 he quitted Ferrara, to reside with John Pico prince of Mirandola. In 1488, he established himself as a printer at Venice but the first work which he finished was not published till 1494. In the course of the ensuing twenty years he printed the works of most of the ancient Latin and Greek authors extant, as well as many productions of his contemporaries, and some tracts of his own composition. Among the latter are a Latin Grammar a tract on the Metres of Horace and a Greek Dictionary. He was the inventor of the italic or curvate character hence called Aldine for the exclusive use of which for a term of years he obtained a patent from the pope and the senate of Venice. He established a kind of academy at his own house and delivered lectures on classical literature to the general study and improvement of which he greatly contributed. He died in April 1513 leaving four children by his wife who was the daughter of Andrea d'Asola, a Venetian, in partnership with whom he carried on his typographical labours.—**MANUZIO (PAOLO)** son of the foregoing was distinguished as a classic scholar no less than as a printer. He was born at Venice in 1512 and was brought up under the care of his maternal grandfather. He received a learned education, and in 1533 he re-opened the printing-office, which had for some time been closed but he did not carry on the establishment entirely on his own account till 1540. He opened an academy for the instruction of young persons in polite literature and he afterwards made a tour through the cities of Italy for the purpose of examining the various libraries. After receiving several offers of professorships at Bologna and elsewhere he was appointed to superintend the printing-office attached to a newly founded academy at Venice, where he continued till 1561 when he settled at Rome on the invitation of pope Pius IV. He was employed to conduct a press for printing the works of the fathers, and other ecclesiastical authors, and at the same time he kept up his establishment at Venice whether he returned in 1570. Pope Gregory XIII induced him by means of a pension to take up his abode again at Rome where he died in April 1576. He was the author of commentaries on the writings of Cicero; a treatise *De Canticis Romanae*; "Proverbs"; "Letters"; &c.—**MASANZO (ALDO)** the younger the son of the preceding, was also a printer. He was born

MAN

in 1507 and was educated by his father, under whom he made an extraordinary progress in literature. In his eleventh year he produced a "Collection of elegant Poems in the Tuscan and Latin Languages;" and other juvenile publications attest his classical acquirements. On his father's removal to Rome he carried on the printing establishment at Venice, where, in 1537 he was appointed professor of Belles Lettres at the school of the Venetian chancery. In 1585 he succeeded Signorini, in the chair of rhetoric, at Bologna, whence he removed to Pisa, to become professor of poeta literature in 1587 and during his stay there he received the diploma of doctor of laws and was admitted a member of the Florentine Academy. In 1588 he went to Rome and accepted a professorship which had been held by Marutio. He was much favoured by pope Sixtus V; and Clement VIII bestowed on him the office of superintendent of the Vatican press. He died in October 1597 and with him expired the glory of the Aldine press and the valuable library collected by himself and his predecessor, was sold pacesmeal to liquidate his debts. He was the author of many works, including commentaries on Cicero, and *Familiar Letters*.—*Remember Amedeo de l'Imprimerie des Aldes. Tirsbachi. Biog. Universale.*

MANWOOD (JOHN) an eminent law writer in the reigns of Elizabeth and James I. He printed a small tract entitled *A Brief Collection of the Laws of the Forest*, afterwards enlarged and published under the title of *A Treatise and Discourse of the Laws of the Forest, &c.* 1598 &c. still further augmented in the editions of 1615 and 1665. He was also the author of a Project for Improving the Land Revenue by inclosing Wastes for Sir Julius Caesar 27 April 1609. Fuller ascribes the book on the Forest Laws to Sir ROGER MANWOOD who was justice of the Common Pleas and chief baron of the Exchequer under queen Elizabeth. He was also much employed in political affairs, and sat as a commissioner on the trial of Mary queen of Scots. Sir R. Manwood was a native of Sandwich in Kent, where he founded a free-school, and his death took place in 1593. He was probably the father of John Manwood.—*Bridgeman's Legal Bibliography. Bayle's Hist. of Scandals. Fuller's Worthies.*

MANZOLLINI (GIOVANNI) a native of Bologna in Italy celebrated as an artist in corn plasters or wax-work. He studied under Hercules Lelli whom he assisted in the preparation of models of anatomical subjects in wax and wood. He afterwards was employed in wax-work compositions for the king of Sardinia, and others, and some of his productions were sent to London. He died in 1726 at the age of fifty-five.—His wife ANNA MANZOLLINI received instructions in the same art from her husband and from Lelli and her talents were much improved by study. She executed many anatomical preparations in wax, for the Institute of Bologna, and several of her works were sent to Turin and St Petersburg.

bump. She survived her husband, and continued to cultivate the art in which he excelled.—*Hanes's Diet. of the Fine Arts.*

MAPER (WALTER) chaplain to Henry II of England, about the year 1190 and a poet of some celebrity for his time. He was also canon of Salisbury, preceptor of Lancast. and archdeacon of Oxford. He wrote in Latin and some of his verses, which are in the light and amorous style, are still extant. There is also a work of his in the Bodleian library under the assumed name of Valerius, entitled, "Valerius ad Radulfum de non ducenda uxori." Maper who was a man of facetious manners, and very free in conversation, also wrote a "Compendium Topographiae" and "Epitome Cambriæ." —*Warton's Hist. of Poetry.*

MAPLETOFT MD (JOHN) a skilful physician, elegant scholar and exemplary divine of the seventeenth century born of an ancient Huntingdonshire family at Margaret Lave in that county in 1631. From Westminster school he proceeded on the foundation to Trinity College Cambridge where he became fellow and was selected by the earl of Northumberland to travel in the capacity of tutor to his eldest son. On his return to England he graduated as MD and commenced the practice of physic in the metropolis, where in 1675 he was elected professor and lecturer at Gresham college and three of his lectures on the rise and progress of the art of medicine written in elegant Latin are to be found in the appendix to the "Lives of the Gresham Professors" by Ward. The year following he went to France in the suit of the British ambassador and about this time translated the "Observationes Medicæ circa morborum acutiorum Historiarum et curacionum" of his friend Dr Sydenham who had dedicated them to him into the Latin language. On his marriage in 1679 he was induced to quit the medical profession for the church which he entered after three years close application to the study of divinity and obtained in succession the rectory of Braybrook Northants and the vicarage of St Lawrence Old Jewry in the city of London. In 1689 on the occasion of the king's visit to Cambridge he farther graduated as DD and in 1707 became in his turn as a city incumbent, president of Gresham college to the library of which institution he was a liberal benefactor. Dr Mapletoft continued to officiate in the performance of his clerical duties till after he had passed his eightieth year and on his retirement, in 1710 from active life, sent round to every house in his parish a copy of a work which he at that period produced, entitled "The Principles and Duties of the Christian Religion" 8vo. He survived this event nearly eleven years dying at the advanced age of ninety one in 1751.—There was also a Dr Horner MAPLETOFT, a native of Lincolnshire his contemporary who died in 1677 master of Pembroke college, Cambridge, and dean of Ely Aug 1700.

MARACCI (LEONIS) a learned Orientalist

of the seventeenth century. He was a native of Lucca in Italy and became a member of the congregation of regular clerks of the Holy Virgin. He devoted himself to the study of the Eastern languages, and particularly the Arabic on which account he was appointed professor of that tongue in the college of Wisdom at Rome. Pope Innocent XI to whom he was confessor would have made him a cardinal, but his humility induced him to decline the proffered dignity. He died in 1700 aged eighty-eight. Maracci is chiefly known as the publisher of the Koran of Mahomet in Arabic, with a Latin translation and notes, Padua 1698 2 vols. folio. He also assisted in the Roman edition of the Arabic Bible 1672 3 vols. folio and he was the author of many other works.—*Niceron Biog Univ.*

MARALDI (JAMES PHILIP) a mathematician of Perrinaldo near Nice the nephew of Cassini with whom he was afterwards associated in continuing the meridian through France. He was born in 1665 and died in 1729. While at Rome he constructed the meridian of the Carthusian church there and assisted in the reformation of the calendar. There are several curious and interesting papers from the pen of Maraldi especially a list of the fixed stars, and other tracts, connected with various branches of science and natural philosophy to be found in the transactions of the Academy of Sciences at Paris of which society he was an active and distinguished member.—*Hutton's Math. Diet.*

MARANA (JOHN PAUL) a Genoese writer of the seventeenth century born about the year 1642. He became implicated in the plot for giving up his native city into the hands of the duke of Savoy and was thrown into prison in consequence. Of this conspiracy he has left an account written after his liberation but the work by which he is principally known is his "Turkish Spy" a production once considered as a genuine detail and highly popular. His curious book first appeared at Paris in six duodecimo volumes. It has since gone through several editions, and has been translated into most of the European languages. A seventh volume was added in 1742. Marana died at Genoa in 1693.—*Moreri.*

MARA (JOHN PAUL) a demagogue whose conduct during the progress of the French Revolution has exposed his memory to general execration. He was born in 1744 of Calvinist parents at Beaudry in the country of Neufchâtel. Having studied medicine he settled at Paris where his practice is said to have been distinguished by a spirit of quackery though he manifested both taste and talents for scientific research. Thus appears from several works which he published, including a treatise "De l'Homme ou des Principes et des lois de l'Influence de l'Amé sur le Corps," 2 vols. 1780. "Découvertes sur le Feu l'Électricité et la Lumière" 8vo. "Recherches physiques sur le Feu" 8vo. "Découvertes sur la Lumière" 8vo. "Recherches Physiques sur l'Électricité," 8vo. "Notices élémentaires d'Optique," &c. He

M A R

obtained the post of physician to the bodyguards of the *clerc d'Artals*, but at the commencement of revolutionary commotions, he deserted his professional pursuits for politics; and in a journal which he conducted, entitled "L'Am du Peuple," he reviled the nobility, the king, and the government, and prompted and encouraged the utmost excesses of popular fury. He was an actor in the riots of the 10th of August 1792, and becoming a member of the municipality of Paris and president of the terrible committee of the Commune, he greatly contributed to the excitement of party rage which caused the massacres in the prisons, in the beginning of September. Having escaped the consequences of two degrees of accusation, he was appointed deputy from Paris to the National Convention. In that assembly his conduct and behaviour corresponded with his previous character exhibiting a strange mixture of absurdity, violence and cruelty. On the 21st of March 1793 he denounced all the generals as traitors and all the French armies as incapable of resisting the enemy when Leconfin Puravaux demanded that *Marat* should be declared in a state of insanity. In fact, it appears probable that like *Mameli* and other persons suddenly exalted to uncontrolled power, he had actually experienced an access of frenzy to which the exaggeration of his manners, principles, and actions may in a great degree be attributed. Accused by the party of the *Girondins*, he was tried and acquitted, when he triumphantly resumed his place in the Convention and soon after he assisted in the destruction of his antagonists though he did not live to witness the success of his machinations against them. On the 14th of July 1793 he was stabbed in his own house by Charlotte Corday and instantly expired, enthusiasm of disposition excited by a deep sense of the miseries of her native country having prompted a young female thus to deliver the world from one of the most sanguinary monsters that ever persecuted the human race.—*Dict. des H. M. du 18me S. Biog. Univ.*

MARATTI (CARLO) an admired painter of the Italian school was born at Camerino, in the march of Ancona in 1625. His extraordinary talent for painting induced his parents to send him, at the age of eleven, to Rome where he became the pupil of Andrea Sacchi. He excelled in painting Madonnas and female saints, for which reason he was satirically named by Salvator Rosa, *Carcuccio della Madonna* and he was so far from being ashamed of the title that in the inscription which he himself placed upon his monument (nine years before his death) he calls it, *Giornos cognomen*. Pope Clement XI gave him a pension, and the title of Cavaliere di Cristo, and he was appointed painter in ordinary to Louis XIV. He died at Rome in 1713. His pictures are in the style of his master but more elaborate and with less freedom and grandeur. His masterpiece is the *Bathsheba viewed by David*, a work which precludes all hope of success in any other pic-

M A R

ture on the same subject. Maratti had a daughter, MARIA whom he instructed in her art; her portrait, painted by herself, is in the gallery Corso in Rome.—Argenville. PH Augsby Fust.

MARBECK (JOHN) a musician of the sixteenth century supposed to have been the first composer of the cathedral service of the church of England, since it is certain, notwithstanding the vulgar opinion to the contrary that he preceded Tallis in that species of composition. His history is somewhat remarkable as, according to Fox he together with three other persons all residents of Windsor (where Marbeck was organist at St George's Chapel) had formed themselves into a society which attracting the suspicion of the bishop of Winchester caused themselves and their papers to be seized. Among their papers were found a collection of notes on the Bible and an English concordance in Marbeck's handwriting. On his examination by the commissioners under the statute of the six articles, he accounted for the possession of these papers, by declaring that he was in the habit of noting down any explanation he might meet with of difficult passages with the name of the author annexed, while with regard to the concordance being too poor to purchase a copy of the English translation of the Scriptures then recently published by Matthew he had commenced transcribing one and had actually proceeded as far as the Book of Joshua when at the suggestion of a friend he also undertook the task of making an English concordance and by the assistance of a Latin book of the same description had proceeded as far as the letter L. The commissioners doubting his story he in order to convince them, actually filled in a single day three sheets of paper with a continuation of his work in the letter M and by his ingenuity and industry at length succeeded in converting his enemies from enemies to friends. A charge of having copied an epistle of Calvin still remained against him, and on this he was tried together with his associates. All were found guilty and condemned to the stake which sentence was carried into execution as far as regarded the other three on the following day, but Marbeck was reprieved and at length, through the intercession of Sir Humphrey Fawcett obtained his pardon. After the decease of Henry VIII he openly avowed his attachment to the reformed doctrines, and soon after completed and published his Concordance. His other writings are "The Lives of the Holy Saints, Prophets, Patriarchs, and others" printed in 1574, "A Book of Notes and Common Places, &c"; and a tract entitled "The Ripping up of the Pope's Fardels." His musical service written on the model of the ritual of the church of Rome first appeared in quarto in 1550 and is entitled, "A Boke of Common Praier Notes." In this work, the Lord's Prayer Creed &c are adapted to a kind of recitative, while some other parts of the service are set to melodies much resembling the old Gregorian chant.—Biog. Brit.

MERCIER (Pierre de) a French prelate of the seventeenth century, more justly celebrated for his acquirements and abilities, than for the firmness of his principles, or the consistency of his political conduct. He was a native of Bourg, being born of a good family at Gant, in that province, in 1594 and following the law rose to be president of the local parliament. In 1629 he quitted the country for the metropolis, and was made a counsellor of state. The following year he published his "History of Bourg" in one volume folio. This work raised his reputation with the court, both as a sound politician and an able and elegant writer; he was shortly after engaged at the express command of the sovereign in replying to an attack on the liberties of the Gallican church contained in a work entitled "Galilus Optatus." By this treatise which he gave to the world in 1641, under the name of "De Concordia Sacrae Scripturae et Imperii, sive de libertatibus Gallicana ecclesie," he caused as much offence at the Vatican as satisfaction to the ecclesiastical party of France. The latter rewarded him with the bishopric of Concarneau, but the pope refused his confirmation of the appointment, until he had recanted, by a treatise entitled "De Singulari Primitu Petri" and he exhibits considerable ingenuity in explaining away and reconciling his former opinions with those which he afterwards thought fit to adopt. All opposition being thus removed he was installed at Concarneau in 1648 and presided over that diocese till 1656, when he was translated to the archiepiscopal see of Thoulouse. De Meric continued to take a prominent part in the transactions, as well civil as ecclesiastical, which at that period occupied the attention of the Christian world and especially distinguished himself by the energy with which he combated against Jansenism and its adherents, while his abilities as a diplomatist, were afforded more ample scope for their display by his promotion in 1668 to the office of a minister of state. The favor of the court was compensated with his exertions and in 1663 the metropolitan see of Paris becoming vacant, he was elected to fill the primacy, but scarcely survived the arrival of the confirmatory bull from Rome, dying in the June of the same year on the very day it is said that the documents in question reached Paris. Besides the treatises already alluded to he was the author of a work in one volume folio, entitled "Marca Hispanica," and of some other writings, a collection of which was published after his decease with a preface and notes, critical and explanatory, from the pen of M. de Baluze.—*Dictionnaire des Ecclésiastiques*.

MARCELLO (Benedetto) a noble Venetian, youngest son of the senator Agostino Marcello. He was born in 1636 and while a youth, became a great proficient in the science of music in consequence it is said of a religious theory upon his deficiency in that respect, at a concert given by his brother Alexander, which hurt his pride, and stimulated him to exertion. He afterwards studied under

Gesualdi, and receiving a liberal education, distinguished himself as a poet, as well as a musician. In 1716, a service of his own composition was performed at the celebration of the birth of the first son of the emperor Charles VI, and excited great applause. Eight years after appeared the first four volumes of his adaptation to music of Giacchino's "Paraphrase of the Psalms," which he afterwards completed in eight more, the whole being published in 1736. Garth of Durham has adopted suitable words from our own translation of the Psalms to Marcello's music with a view to their being performed as anthems in our cathedrals, with great success. This elaborate work was printed by subscription, and occupies eight folio volumes. Marcello rose to several offices of dignity in the Venetian state being successively appointed a member of the council of Forty provost of Poles and eventually chamberlain of Brescia in which city he died in 1739 and was buried in the church of St Joseph.—*Bug. Dict. of Mus.*

MARCHAND (Prosper) a French writer on bibliography and the history of literature. He was a native of Picardy and settled as a bookseller at Paris where he exercised that profession some years. Being a Protestant he was induced partly by religious motives, to remove to Holland, and after a while relinquished his trade and gave his attention entirely to literary researches. He died at the Hague in 1756 far advanced in years. Marchand published "L'Historie de l'Imprimerie" 1740 4to to which Mercier abbé de St Léger published a supplement, an edition of Bayle's Dictionary and Letters, and left "Dictionnaire Historique ou Mémoires critiques et littéraires" which appeared after his death in 2 vols. folio.—*Dictionnaire des Ecclésiastiques*.

MARCHE (Oliver de la) a Flemish historian of the fifteenth century. He was brought up at the court of Philip the Good duke of Burgundy and was master of the household and captain of the guards to his successor Charles the Bold who knighted De la Marche at the battle of Montilien in 1465. He was also present at the fatal battle of Nancy in 1477 where he was taken prisoner. He afterwards became master of the household to Maximilian of Austria, and his son the archduke Philip, by whom he was sent on an embassy to the French court. He died at Brussels in 1501. His works comprise memoirs of the two last dukes of Burgundy and a treatise on duels.—*Mores. Bug. Univ.*

MARCHETTI (Alexander) an Italian poet and mathematician, was born in 1630, at Pontremoli, in the territory of Florence. He studied chiefly at Pisa, where after taking the degree of doctor he was, in 1659 appointed professor of logic and teacher of the mathematics under Borrelli. In 1669 he published a mathematical work, by which he obtained much reparation, entitled "De Harmonia Solidorum." Some time after he visited

very elegant translation of the poem "De Thessalos Nostros" of Lucretius, which he intended to dedicate to Cosmo III, grand duke of Tuscany; but the piety of that prince was so shocked at the Epicurean philosophy that he not only refused the dedication, but interdicted the publication and it did not appear in print until an edition was produced in 1717 in London. Marchetti also translated part of the *Aeneid* and the *Wiles* of Anacreon his version of the latter not appearing till 1736. An edition of his poems was published in 1735 to which his life is prefixed. Marchetti, who died in 1714 is to be distinguished from *Petrus de Marchetti* professor of anatomy who died in 1673 and has some *Dominic* and *Anthony* also professors of the same university all of whom wrote some esteemed works of surgery.—*Fabreti Vita Italorum*

MARCIUS (THEODORE) a native of Arnhem in Germany born in 1546. He was an elegant, as well as an erudit scholar and a learned grammarian. After having taught with great reputation at Toulouse and other principal cities in the south of France he at length took up his abode at Paris being appointed professor royal of Latin and the belles lettres. Marcius was the author of

Historia Strumaria &c and a commentary on the Golden Verses of Pythagoras which latter work appeared in 1602. His death took place in 1617 at Paris.—*Mores*

MARCION a heretic who lived in the second century of the church was a native of Sinope a city of Paphlagonia, of which his father was bishop. He is called by Tertullian *Punicus Naucratus*. In his youth he embraced an ascetic life but forgetting him self so far as to seduce a young female his father excommunicated him nor could he be induced to readmit him into the church. Marcion then went to Rome but admittance being also refused him there he became so irritated that he embraced the opinions of the heretic Cerdo, and began to propagate them publicly about the year 130. His doctrines were much the same as those afterwards professed by Manes, that of two co-eternal and independent principles one the author of all good the other of all evil also that the God of the Old Testament was the evil principle and that having unjustly forbidden Adam's eating of the best tree in Paradise the serpent was the nobler being for encouraging him to eat the fruit, on which account the Marcionites are said to have worshipped a brass serpent. He rejected the Old Testament, and all the Gospels except that of St Luke out of which and some of St Paul's Epistles he composed two books entitled *Evangelium* and *Apostolicon* which he persuaded his followers were of Divine origin. He repented of his errors, and begged to be readmitted into the church, which was granted, on condition that he would bring back all who had been seduced from it but before he could effect this he died, the time of his death is unknown. His last apology for the Christians was presented to Antoninus Pius about the year 140, and

Justin Martyr tells us that "Marcion grew thin living, and taught his disciples at Rome."—*Ciceri Marchio. Minors Ch. His. Lardner.*

MARCOLPHUS, a monk, known in the history of the feudal law for his work, entitled the *Formulary* consisting of a collection of formulæ, or forms of forensic proceedings and legal instruments including charters &c for the kings of France. He lived about the middle of the seventh century. Jerome Sagron published the *Formulary* of Marcolphus, with learned annotations, in 1613 reprinted in 1666 but the most complete edition is that of Baise in the second volume of his *Capitularies*, 1677.—*Mores*.

MARE (Nicolas de la) a principal magistrate of the Châtelet under Louis XIV who reposed great confidence in him, and gave him several pensions. He was employed during the scarcity of corn in 1693, 1696, 1699 and 1710 and received a free gift of three hundred thousand livres, arising from the ninth part of the increased price of admission to the public amusement exhibited at the Hôtel Dieu. He however employed his fortune in the expenses attendant on the gratuitous functions of his office. He wrote an elaborate treatise on the police in three volumes folio to which M. le Clerc du Bullet has added a fourth. De la Mare died in 1723. Another *Purissant de la Mare* was counsellor in the parliament of Dijon and considered equal to the president De Thou in the elegance of his Latin writings. He died in 1687. He was the author of several works the principal of which is his *Commentaries de Bello Burgundico*, forming a part of his *Historiarum Burgundie conspectus*, etc 1669 and his *Holoxi Laegedi Vita*.—*Mores Diet Huc*

MARECHAL (*Petrus Sylvanus*) a miscellaneous writer was born at Paris in 1750 and was brought up to the bar which he quitted for the pursuit of literature. He was librarian to the Massarre college but towards the close of his life he retired into the country and died at Montrouge in 1805. His principal works are *Livre schéppé au Diable* a collection of psalms of which the moral is pure but which served as a pretence for his dismissal from his office of librarian to the Massarre college. *Prophetie d Arameek*, "Fragments d un Poème Moral sur Dieu, ou la nouvelle Lucrece," *Tophieu de J J Rousseau* "De Bergeries," "Le Temple des Hymen," "Bibliothèque des Amans,"

"Le Lave de tous les Ages," "L'Age d'Or," "Paris, et la Province en Chœur des plus beaux Monumens d Architecture en France," "Le Pantheon ou les Figures de la Faïe avec leurs Histoires," "Almanac des honnêtes Gens," a publication containing some imprecations, for which he was imprisoned. *Dictionnaire d Amour*, "Tableau de la Faïe," "Costumes civils actuels de tous les Peuples," "Recueil des Poëtes moralistes François," "Catéchisme du Curé Moeiller," "Dictionnaire des Athées," "Voyage de

Pythagore, " " Dictionnaire du Cultivateur ; " died
—*Died Nov.*

MARECHAL (Gervais) an eminent French surgeon born at Calais in 1656. He studied at Paris, became surgeon to the hospital of La Charité, and was admitted a master of surgery in 1688. He greatly distinguished himself by his skill as an operator particularly in cases of stone in the bladder. In 1693 he was consulted on account of a disease under which the king at that time laboured and on the death of M. Félix in 1703, he succeeded him as chief surgeon to his majesty who in 1707 bestowed on him a patent of nobility. He retained his office under Louis XV and closed a long and useful life at his castle of Bayvre in 1736. Marechal was a member of the academy of Surgery at Paris, to which he presented several surgical memoirs, and many of his observations have been given to the world in the works of other authors.—Hutchinson's *Hist. Med.*

MARETS (SAMUEL DES) surnamed ¹ The Little Preacher from his diminutive stature an eminent controversialist of the reformed church who by his erudition and shrewdness made a distinguished figure among the polemics of the seventeenth century. He was a native of Ossenmond in the province of Picardy where he was born in 1599 and received a sound classical as well as theological education at the universities of Paris, Saumur and Geneva. In his twenty first year he entered on the ministry at Leon from which place he was induced to return to France in consequence of his life being endangered by a wound received from an enthusiast who resented his remonstrating with a female about to reconcile herself to the church of Rome. From France he removed in 1624, to Sedan where he continued to officiate as pastor till 1646 when he accepted the divinity professorship in the university of Groningen. Here he read his theological lectures for upwards of twenty years with great reputation. He died in May 1663. Besides an able exposition of the fallacy of judicial astrology contained in his disputations with Serrarius, and other writers of the same class, he was the author of an animated attack on the opinions of Hugo Grotius respecting the appearance of Antichrist, as well as of a great variety of other productions all evincing deep erudition, and great powers of argument. A chronological list of these is to be found attached to his *System of Divinity* an excellent work the method observed in the arrangement of which caused it to be almost universally adopted as a class book in the Dutch academies.—More:

MARGARET OF VALOIS, queen of Navarre, sister to Francis I was born at Angouleme in 1492. She was brought up at the court of Louis XII, and married the duke of Alençon in 1509 of whom she became widow in 1526, and in 1527 was espoused to Henry d'Albret, king of Navarre. She joined with her husband in every effort to make their

small kingdom flourish, by encouraging agriculture and the useful arts, and by improving knowledge and civilization. She was hence fond of reading, and had been led by literary curiosity to make herself acquainted with the principles of the Reformation, to which she became partially a convert, and not only afforded protection to several reformed divines, but used her influence with her brother Francis to the same purpose. She also read the Bible in the French translation, and herself formed mysticisms for representation from the New Testament, which she caused to be performed at court. She even wrote a work on divinity entitled, *Le Miroir de l'Amé Peccatrice* printed in 1533 which incurred the censure of the Sorbonne. She underwent some ill treatment from her husband on this account, and might have suffered more but for the intercession of her brother Francis I who, was much attached to her, and in compliance to whom she externally at least became more strict in her attention to the ceremonial of the ancient religion. It will appear extraordinary in the present day that a princess so contemplative and pious as Margaret of Valois should be author of a book of tales as free in their tendency as those of Buccaccio. Such however is *L'Heptameron ou sept Journées de la Reynes de Navarre* which work was written during the gaiety of youth but not printed until after her death. It does not, however appear that she wished to suppress it, or was unwilling to be deemed its author. Of these tales, which have been often printed both separately and in different collections, the style is lively and the stories arch and well invented. She died in 1549, leaving one child Joan d'Albret mother of Henry IV in 1547 a collection of her poems, and other pieces, was printed under the title of *Marguerite de la Marguerite des Princes*.—*Nouv. Diet. Hist. Bayle.*

MARGON (WILLIAM PLANTAVIT DE LA PAUDE) a French author and journalist, was a native of Languedoc. He appeared at Paris about 1715 and exposed the cause of the jesuits against the Jansenists with so much bitterness, that the court banished him and he subsequently retired into a monastery of Bernardines, where he died in 1768. He was concerned in several works, including

The Memoirs of Marshal Villars 3 vols. 12mo The Memoirs of the Duke of Berwick 2 vols. 12mo Memoirs of Tourville 3 vols. 12mo Letters of Fitzmoritz and some minor poetry.—*Nouv. Diet. Hist.*

MARGRAF or MARGGRAAF (ANDREW SICISMUS) a distinguished German chemist of the last century. He was born in 1709 at Berlin where his father was apothecary to the court, and successor of the college of the dome. After studying under his father and Casper Neumann at Berlin he passed some time at Strasburg, became a student at Halle in 1733 and in 1734 at Freyburg. In the year following he visited the mines of the Harz mountains, and returning to Berlin, applied himself with industry to experimental

sophistic in chemistry. He was admitted into the academy of Sciences in 1728; and in 1744 he was entrusted with the care of the laboratory of that establishment. He was chosen director of the class of natural philosophy in the academy in 1760 which post he held till his death in 1782. Mangraf, who was a member of the academy of Sciences at Paris contributed greatly by his discoveries to the improvement of chemical science though he did not live to witness the great revolution effected by his own labours and those of contemporary philosophers. His works consist of papers first published in the memoirs of the academy of Berlin, since collected and printed together in Germany and also given to the world in a French translation.—*Encyclop. Gen. Biog. Diet. Hist.*

MARIANA (JOHN OR JUAN DE) a celebrated Spanish historian born at Talavera in 1536. He was the natural son of an ecclesiastic and was educated at the university of Alcala. Having entered into the then recently founded order of the jesuits he was, at the age of twenty four appointed professor of theology in their college at Rome and he afterwards held the same office at Paris. Having returned to Toledo on account of ill health he was employed by the archbishop D Gaspar de Quiroga to prepare the *Index Expurgatorio* published in 1584 but the greatest of his literary labours is his history of Spain which appeared under the title of *Historia de Rebus Hispaniae ab yr 1592* and was afterwards extended to thirty books. Mariana himself translated the work into the Castilian language and there is an English translation by Captain Stephens the commentator of *Dugdale's Monasticon*. In 1599 he published his treatise "De Rege et Regni Institutione" condemned to be burnt by the parliament of Paris on account of the freedom of opinion displayed by the author on the reverence due to royal authority. By a subsequent publication Mariana gave offence to his own order and he was prosecuted and imprisoned for a year in a convent at Madrid. He afterwards held no official situation and died at Toledo February 16 1623 leaving behind him annotations on the Old and New Testament and various other works besides those already mentioned.—*Southern Men in Action's Gen. Biog.*

MARIE ANTOINETTE Josephine Jeanne as Lorraine archduchess of Austria and queen of France. She was born November 2 1755, the day on which the dreadful earth quake desolated the city of Lisbon and, at the age of fifteen she was married to the dauphin afterwards Louis XVI. The day of her nuptials was marked by a shocking accident, the deaths of a multitude of persons, in consequence of a fire in the Place de Louis XV which event strongly excited the compassionate feelings of both the bride and her husband. Notwithstanding her youth and beauty she was at first an object of indifference to Louis, whose passions appear to have been by no means of an ardent description. While

neglected by him, however, she was surrounded by a multitude of persons, court pages to win her favour, and others regarding her with jealousy and hatred. Among the latter was the duke of Orleans, then duc de Chartres to whom, with apparent probability, has been ascribed a systematic scheme to destroy the repose and ruin the reputation of his amiable relative. She became queen in 1774 and on the 19th of December 1778, she gave birth to her first child, the present dauphin. In the mean time France became involved in the contest between Great Britain and her revolted colonies in North America, an event, to the occurrence of which, the influence of the queen is supposed to have contributed though this opinion is controverted. A recently published memoir of her life by one of her attendants madame Campan. On the same authority it is asserted that she exercised no direct influence over state affairs till after the deaths of the ministers De Maurepas and De Vergennes and the retreat of M. de Calonne and that she frequently regretted the necessity for her interference as a misfortune which she could not avoid. In the midst of the American war October 28 1781 took place the birth of a dauphin afterwards the unfortunate Louis XVII. The queen at the head of a splendid and dissipated court, continued to be attacked by the calumnies of a party actuated by private as well as political motives, in endeavouring to bring the royal authority into contempt and excite disturbances in the state. That many of the charges of levity and misconduct brought against her were unfounded is now generally acknowledged but we live too near the period of the momentous events in which she was involved to obtain such a just and distinct estimate of her character as may be looked for in the pages of impartial history in future ages. The Revolution approached with rapid strides, and the queen had daily reason to lament that she had ever interfered in politics, and to perceive that her ostensible influence and management had only contributed to render her unpopular among all parties and all classes of society. After various preliminary proceedings, took place the assembly of the states-general in May 1789. The deputies of the tiers état visited Versailles and it may be mentioned, as a proof of the current prejudices against the queen that a report prevailed that she had been so extravagant as to have fitted up at her retreat of Little Trianon a room wholly ornamented with diamonds and with wretched columns studded with sapphires and rubies and the deputies on viewing the place, insisted on examining the smallest closets, and could hardly be persuaded that the room they sought for had no existence. When the fury of an oppressed people suddenly liberated from bondage burst forth into open acts of blood and violence the queen was the particular object of the indignation of the mob. The insurrection of the 14th of July 1789 and the subsequent events of the 4th and 5th of October afforded ample proofs that the

characteristic loyalty and gallantry of the French nation were for the present, at least, extinguished among the lower orders. The consciousness that outward master of history and it will be enough to remark, that in the various trials and dangers to which Louis XVI was exposed, previously to his detronement in August 1792, Marie Antoinette constantly accompanied him, and deeply participated. They were, together with all the royal family remaining in France, impressed in the Temple the 18th of August and the trial and execution of the king were, ere long followed by that of her unfortunate relish. She suffered by the guillotine, October 16 1793 having manifested on that awful occasion as well as on her arraignment, a degree of courage and serenity of mind which showed that she knew how to profit by the stern lessons of adversity.—Mad. Campan's *Memoirs* of the private Life of the Queen. *Biog. Novo. des Cont.*

MARIN (MICHAEL ANTONIO) a French monk of the order of Minims, celebrated as a writer of spiritual novels, was born at Marseilles in 1697. After acquiring great reputation as a preacher and as an ascetic writer he was employed by pope Clement XIII to collect and methodize in a single work *The Acts of the Saints*; of which he had completed only two volumes, when he was carried off by a dyspepsy in his seventeenth year. The titles of several of his pious romances in the composition of which he took for his model the famous Camus, bishop of Bellay, may be seen in our authority—*New. Diet. Hist.*

MARINI (JOHN BAPTIST) an Italian poet of the seventeenth century. He was the son of a censor of Naples, and was expelled from the paternal roof, because he preferred literature to law, which however probably was not his only offence, as he was shortly after imprisoned for some irregularity of conduct. On regaining his liberty he went to Rome and resided some years with cardinal Peter Aldobrandini whom he accompanied to Ravenna and Turia. At the latter city he signalled himself by his poetical performances and by his quarrels with Martola, a literary rival against whom he levelled a satire entitled the "Martoloids." In 1615 he went to France where he published his principal work the *Adonis*, an heroic poem. He returned to Rome in 1622 on the invitation of cardinal Ludovisi, and was chosen president of the Accademia degli Umoristi. He afterwards went to Naples, where he died in 1625, aged fifty-six. Besides the works mentioned he wrote a poem on the *Murder of the Innocents* by Herod; Letters &c.—Miceri, *Italorum Poetarum*.

MARIUS (CAES) a famous Roman demagogue and military commander in the declining period of the republic. He was born in the district of Arpinum, of an obscure family and passed his early youth in rustic employments. Entering into the army at the usual age, he distinguished himself at the siege of Numantia. Returning to Rome he became a tribune of the people and afterwards praetor. He then went to Africa, 109 B.C., to heate-

ment to the name of Metellus. By his intrigues he superseded his commander, and obtained the censorship himself, when he triumphed over Jugurtha, king of Numidia, and terminated the war in Africa. He was next employed against the Cimbri and Teutones, who had invaded Gaul, and whom he repelled with great slaughter. Having delivered Rome from foreign enemies his ambition led him to aspire to supreme authority. He had been six times consul when he was disturbed by the rivalry of Sulla, with whom he disputed the command of an army destined to act against Mithridates, king of Pontus. The battle took place in the city and Sulla marching thither with his troops Marius sought for safety in flight, and with difficulty escaped to Africa. He was recalled by Cinna and Servilius and making themselves masters of Rome a terrible proscription took place. Marius having satisfied his vengeance, was chosen consul for the seventh time 86 B.C. but he died shortly after aged about seventy.—*Plutarch's Lives; Pharsal.*

MARIVALUX (PETER CARLET DE CHAMBLAIN de) a celebrated French dramatist and novelist, was born at Paris in 1638. His father had an office in the mint at Lyons in Auvergne, and he not only received a good education but inherited a handsome fortune. The drama first attracted his attention, and at the age of eighteen he produced a one act piece entitled *Le Père prudent*. Although he subsequently attempted tragedy a species of sentimental comedy in prose in which he wrote no fewer than thirty pieces, forms his principal dramatic distinction, and some of them still retain the stage. It is by his novels however that he is chiefly known in foreign countries of which *Le Payen Parvenu* and *Mariannes* are accounted the principal the latter in particular has obtained great approbation although the author is more distinguished for satiric than force. Marivaux obtained admission into the French Academy in his fifty fifth year. His private character was very amiable being liberal and disinterested in the extreme. He died in 1713 at the age of seventy five. Besides the works already mentioned, he wrote *"Le Spectateur François"* *La Philosophie indigente* *Pharamond* and *Homer's Travestie*. His dramatic works are collected into 5 vols. 12mo.—*New Diet. Hist.*

MARSHHAM (GRAVASE) an English author who lived in the reigns of James I and Charles I. He was the son of Robert Marshham, esq. of Godman in the county of Nottingham, and born a captain a commission under Charles I in the civil war. He wrote a tragedy called, *Herod and Antipater* published in 1628 and numerous poems, specimens of which may be seen in England's *Parnassus*. He was also author of several treatises on husbandry, *Lawsomeness*, *Fowling* and the diseases of cattle, which were much esteemed in their day. Neither the exact time of the birth or death of this author is recorded.—*See Biog. Dens.*

M A R

MARKELAND (JEROME) an eminent critic and cultivator of classical literature. He was the son of a clergyman of Chidwell, in Lancashire, where he was born in 1693. He received his education at Christ's hospital, and Peterhouse Cambridge, and in 1717 he obtained a fellowship in that university which he held until his death in 1776. Having declined taking orders in the church his time was devoted entirely to his favourite studies, uninterrupted by any avocations but those of a college and travelling tutor. The latter part of his life was spent at a farm-house near Dorking in Surrey, and his scanty income was materially increased by a law suit in which he became involved, by exposing the cause of a widow with whom he lodged. His principal works are an edition of the *Sylva Statuae Notes on Maxima Lyra*; Remarks on the Epistles of Cicero to Brutus and of Brutus to Cicero with a Dissertation upon four Orations ascribed to Cicero; an edition of the *Sophistes Muliheris* of Euclidis to which was annexed a tract *De Gramorum quinta declinatione imparsyllabica et inde formata Latinorum tercii*, and he also contributed towards the annotations on the Greek Testament, published by Bowyer and other philological works.—*Nichols's Lit. Anecd.*—**ABRAHAM MARKELAND** a relative of the preceding was the author of a poem on *The Art of Shooting Flying*. He was an episcopal clergyman and held the valuable mastership of the hospital of St. Cross near Winchester in the early part of the last century.—*Wood's Athen. Oxon.*

MARLOE or MARLOWF (CHRISTOPHER) an eminent English poet and dramatist of the Elizabethan age. He was educated at Cambridge where he proceeded MA in 1587. He afterwards settled in London and became an actor as well as a writer for the stage. Besides six tragedies of his own composition and one written in conjunction with Thomas Nashe he left a translation of *The Rape of Helen* by Coluthus; some of Ovid's "Elegies"; the first book of Lucretius' *Pharmacia*; and the *Hero and Leander* of Musaeus completed by George Chapman. The exact time of his death is not known but according to Anthony Wood it took place previously to 1593 and was owing to a wound received from the hand of a servant-maid whom he had attacked on suspicion of being rivalled by him in the favours of a mistress.—*Warton's Hist. of Eng. Poetry* *Birkbeck's Eng. Lit.*

MARMION (SMACKY) a dramatic writer was born of an ancient family at Aythorpe in Northamptonshire in 1603. He was educated at Wadham college Oxford where he graduated MA in 1624. He rapidly amassed a handsome fortune, and afterwards went to serve in the Netherlands, and on his return in 1639 was admitted into a troop raised by Sir John Sackville for Charles I but died the same year. He was the author of four comedies, called "Holland's League," "A Fair Companion;" "The Antiquary;" and "The Crafty Merchant;" which are

M A R

occurred among the best of the time. He was also author of a poem, entitled "Cupid and Psyche;" and several minor pieces, which are to be met with in different collections.—*Bury Athen. Oxon.*

MARMOL CARVAJAL (LEWIS de) a native of Grenada in Spain who wrote on the history and geography of Africa in the sixteenth century. Having been taken prisoner by the Moors and conveyed to Morocco he turned his misfortune to account, by collecting information relative to the state of the country and on his return to Spain he published the result of his researches, in two volumes folio entitled a *General Description of Africa* of which there is a French translation by D'Ablancourt. Marmol was also the author of a history of the rebellion of the Moors of Grenada and he is said to have translated the revelations of St. Bridget.—*4th edn. O. Bigg*

MARMONTEL (JOHN FRANCIS) a distinguished French writer was born in 1723, at Bort a small town in the Limousin. He was the eldest son of a large family the offspring of parents in a humble situation of life but his mother being a woman of sense and at attainments much superior to her rank she favoured his ardour for mental cultivation and by her influence had him sent to the jesuits' college of Mauriac. At the age of fifteen his father placed him with a merchant at Clermont but having expressed his dislike of this occupation he was enabled to obtain admission into the college of Clermont where he gradually acquired pupils and his father soon after dying he showed the goodness of his heart, by taking upon himself the care of the family. He subsequently engaged as a teacher of philosophy in a seminary of Bernardines, at Toulouse and became a distinguished candidate for the prizes at the *Floreal* games, which secured him the notice of Voltaire who recommended him to try his fortune at Paris. He accordingly arrived there in 1745 and after experiencing some vicissitudes, brought out a tragedy in 1748 which at once raised him into competence and celebrity. Becoming the fashion he distinguished himself by several of the amours so prevalent in that capital, the celebrated actress mademoiselle Claron, being the heroine of one of these attachments. Some years passed in this course of life, with much success as a dramatist, and having been recommended to the king's mistress, madame Pompadour he was appointed secretary of the royal buildings under her brother, the marquis de Marigny. The fire of the passions being now abated he from this time conducted himself with much sense and propriety. Having distinguished himself by writing some of his well known tales, to assist his friend Boissy then entrusted with the *Mercure de France* on the death of the latter it was given to himself who then gave up his post of secretary and took up his abode with madame Geoffrin, a literary man at that time forming an almost regular part of the establishment of a fashionable *bel-esprit*. He subsequently lost the

M A R

cou de France, by merely repeating in 1769, a joke upon the date d'Autmont, and was even committed to the bastile for some days, because he would not give up the real author. His literary faculty, however, amply supported him, and in 1763 after much vexatious opposition he succeeded Marivaux as a member of the French academy. His next literary production was *Belisaire* which in consequence of its liberal sentiments in favour of toleration was censured by the Sorbonne and widely read in every country in Europe. In order to benefit Gretry he worked up several little stories into comic operas, which were all acted with great success, and he was now so far restored to favour that on the death of Duclos, without any solicitation on his own part he was appointed to succeed him as historiographer of France. He also took part in the celebrated musical dispute between Gluck and Piccini as a partisan of the latter. At the age of fifty four he wedded a young lady of eighteen a marriage which however was no way infelicitous. In 1783 on the death of D'Alembert he was elected secretary to the French academy in his place. On the breaking out of the Revolution he was chosen by one of the sections of Paris as member of the electoral assembly, but lost the confidence of his constituents by the opposition which he made to a proposal for demanding the universal liberty of the press. His income being greatly diminished he retired to a cottage in Normandy where he passed his time in the education of his children and the composition of a series of tales of a more serious cast than his former ones together with his amusing *Memoirs* of his own life which have been perused with general avidity. In April 1797 he was chosen representative to the National Assembly for the department of the Eure in which capacity he was instructed to defend the Catholic religion. His election being subsequently declared null he again retired to his cottage where he died of an apoplexy in December 1799 in the seventy seventh year of his age. Marmontel holds a high place among modern French authors warm and eloquent on elevated subjects; easy lively inventive and ingenious on light ones, he addresses himself with equal success to the imagination the judgment, and the heart. His *Contes Moraux* should rather be translated fashionable than Moral Tales for although they are generally full of useful and valuable lessons their morality is sometimes questionable and they often betray a tinge of the company kept by the author in his days of gaiety. Notwithstanding their temporary popularity the dramas and poetry of Marmontel are thought much less of than his prose, some of the didactic works in which continue to be highly esteemed, and more especially his course of literature inserted in the "Encyclopédie." Since his death besides his own memoirs there have appeared "Memoirs of the Regency of the Duke of Orleans" printed from his MS. in 2 vols. 12mo. The works of Marmontel have been collected into

M A R

an edition of 32 vols. 8vo.—146 by Hennig Biggs Univ.

MARINEX (FREDERICK) seigneur du Mont Sainte Adelgunde was born at Brussels in 1538 and was a disciple of Calvin at Geneva. He was appointed ecclesiastical counsellor to Charles Louis, elector palatine, and William I, prince of Orange afterwards employed him in some affairs of importance. He was then counsel at Antwerp, which he defended against the duke of Parma. He died at Leyden in 1598 whilst employed in a Flemish version of the Bible. Sainte Adelgunde was the author of *Controversial Theses Circular Epistles to the Protestants Apologies and a Portrait of different Religions* in which he ridicules the church of Rome. He also drew up the form of the celebrated confederacy by which several lords of the Netherlands engaged to oppose the inquisition.—*Gen. Diet. in Art Adelgunde Morris*

MAROLLES (MICHAEL DE) a French translator was the son of Claude de Marolles, an officer in the army and was born in 1600. He obtained two abbeyes, by the interest of his father and applying himself to the study of the Latin writers he made translations of Plautus Terence Lucretius, Caecilius Virgil Horace Juvenal Persius, Lucan Martial (at the head of which Menage wrote Epigrammes contre Martial) Status Aurelius Victor Ammianus Marcellinus, Athanasius &c These translations are neither correct nor elegant. He also composed *Mémoirs of his own Life* published by the abbé Goujet in 1775 in 3 vols. 12mo. Speaking of his poetry one lay to Lucrez he said My verses cost me very little meaning little trouble They cost you quite as much as they are worth replied Liniers.—*Niceron Biog Gallica Nowe Diet. Hist.*

MAROT (CLLEMENT) a celebrated French poet was the son of John Marot valet-de-chambre to Francis I and was born at Labors in 1495. He was placed in the family of the duchess of Alençon the king's sister afterwards queen of Navarre and having accompanied the duke into Italy he was wounded and taken prisoner at the battle of Pavia. After his return to Paris he was accused of heresy by Bouchard, a Catholic zealot, on which he thought it prudent to retire to the court of Navarre and then to Ferrara. He obtained permission to return again to Paris but his attachment to Calvinism exposed him to so much hazard that he finally left France and went to Geneva, where he was received with open arms by the reformation. Marot however though a protestant was not a saint and having given offence by the levity or licentiousness of his maxims, he quitted Geneva. The last place of his residence was Tuns at which city he died in 1546. He is considered as one of the great improvers of French poetry and as superior to all preceding bards of his nation, in variety of language and manner insomuch that he was worthy to become the model of La Fontaine who was one of his professed

inventor. He made a version of some of the Psalms, which was very popular among his contemporaries; but his lighter compositions have most contributed to his fame. His works have been often printed. In the edition of the Hague, 1731 are included the poetical productions of John Marot, the father and Michael Marot, the son of the subject of this article.—*Browne. Moore.*

MARPURG (FREDERIC WILLIAM) a German musician of great eminence born at Seehausen in the Prussian dominions in 1718. Of his early history little more is known than that he passed some portion of his youthful years in the French metropolis, and on his return to his native country acted in the capacity of secretary to one of the ministers at Berlin, in which capital he was afterwards placed by the government at the head of the lottery department. He was the author of many valuable works connected with the science of music especially of a most interesting history of the organ from the earliest antiquity a treatise replete with information and evincing much reading and antiquarian research but which he unfortunately did not live entirely to complete. Among his other writings are "The Critical Musician of the Spree" published in fifty numbers, in 1749.

The Art of Playing on the Harpsichord 1750—1755 there was a French translation of this book which soon ran through three editions. A Treatise on Fugue Berlin 1753—4 considered by Kolzman to be the most profound and masterly work of the kind in the German language. Historical and Critical Memoirs to promote the Study of Musical History a periodical work published between 1754 and 1760 and filling five octavo volumes. A Manual of Thorough Bass and Composition 1755 Elements of the Theory of Music 1757 a translation of "D'Alembert's System of Composition according to Rameau" 1758 Introduction to the Art of Singing 1759. In introduction to the History and Principles of Ancient and Modern Music Critical Letters on Music 3 vols. Berlin 1760 and 1763. Essay on Musical Temperament Breslau 1776. Legends of several Saints in Music "Cologne" 1786 besides a vast number of single songs odes &c. His death took place at Berlin from a consumption in 1793.—*Biog. Diet. of Mus.*

MARRYAT (Joseph) a merchant of eminence, was the son of Dr Thomas Maryat an eccentric physician of Bristol in which city he was born in 1777. His father left two sons, the eldest of whom was the subject of the present article and the second a king's counsel still living. Joseph was bred to the mercantile profession and passed the early part of his life in the West Indies. In 1789 he returned to England and became leading member of the society at Lloyd's coffee house a banker and colonial agent for the islands of Guiana and Trinidad which requiring his presence in parliament, he obtained a seat for Sandwich in Kent. He was an acute and able

speaker on commercial affairs, and also published some forcible notes on the African slave-trade, the state of the West Indies, and the expediency of a new chartered bank. He died suddenly, on the 12th of January, 1833.—*Anz. Biog.*

MARSAILIS (CREA CHENNAUD DU) an eminent French writer on various branches of the belles lettres. He was born at Marseilles in 1676 and when young he entered into the congregation of the Oratory. This society however he soon quitted, and went to Paris, where he married, and became an advocate. Not succeeding in his profession he undertook the office of tutor to the son of the president Des Maisons, and was afterward similarly employed in other families. He then opened a school and failing in that undertaking he gave lectures in private and employed his pen for his support. In his declining years he was assisted by a pension from the count de Lauraguais, which he enjoyed till his death in 1756. His works are "Exposition d'une Méthode Raisonnée pour apprendre la Langue Latine" 1722 12mo. "Traité des Trophes" 1730. "Logique ou Réflexions sur les Opérations de l'Esprit" and "Exposition de la Doctrine de l'Esprit Génitif par rapport aux Intentions de la Cour de Rome" "Beautés artificielles de la grammaire et some other subjects in the Encyclopédie.—*Dier Hist. Advers & Biog.*

MARSH (VARCIASSE) archbishop of Armagh in Ireland was born at Hinstone Wiltshire in 1618. He received his education at Magdalen hall Oxford which he quitted in the fifth year of his matriculation on being elected to a fellowship at Exeter college in 1648. In 1673 he obtained the headship of Allian hall having previously graduated as doctor in divinity but five years afterwards quitted the university altogether on being appointed through the influence of his patron the duke of Ormond provost of Trinity college Dublin. In 1683 the same interest raised him to the Irish episcopal bench as bishop of Leighlin and Fermoy and after filling successively the sees of Cashel and Dublin he was at length elevated to the primacy in 1703. Archbishop Marsh is celebrated as a prelate who to much learning and piety added the greatest munificence and private charity. To Trinity college he was a liberal benefactor presenting it among other marks of his bounty with a large and valuable library and a provision for two bursaries. He also founded and endowed an almshouse at Drogheda for clergymen's widows and much increased the funds of several similar institutions. As a scholar he was well read in Oriental as well as in classical literature. Besides a well written charge to the clergy of the diocese of Dublin he was the author of two treatises on logic entitled, "Manuductio ad Logicam" and "Institutiones Logicae in Usum Juventutis Academie" Dublin 1681 also a small work on acoustics. He died in 1712, and lies buried in the churchyard of St Patrick's Dublin.—*Biog. Brit.*

MARSHAL (ANDREW) an eminent physician, was born in Fifeshire in 1746. After studying at Glasgow and Edinburgh he became a regimental surgeon and at the conclusion of the peace obtained a doctor's degree, and considerable eminence in his profession. He died in London in 1813. After his death, appeared a treatise by him "On the Medical Anatomy of the Brain" with his life prefixed which was much read by the faculty.—*Life* &c.

MARSHALL. There were two eminent English divines of this name of whom Thomas the first in point of time was a native of Basby in Leicestershire born about the year 1661. He received his education at Lincoln college Oxford of which society he eventually became the rector but during the interval having taken arms against the parliament, he found it advisable on the run of the Royal cause to withdraw to the continent in Holland where he had taken refuge he continued till the Restoration officiating as minister to a congregation at Rotterdam but on the news of that event having taken place he returned to England and was fortunate enough not only to get reinstated in his former preferment but to rise to additional dignities. As a scholar Dr Marshall was distinguished by his familiar acquaintance with early English history and antiquities as well as by his knowledge of the Saxon Gothic and other ancient northern dialects. He was also a good Orator. He published a commentary on the Gothic and Anglo-Saxon versions of the Gospels an exposition of the Church Catechism a prefatory epistle to Hyde's translation of the Gospels into the Malay tongue and a conclusion to Parr's Life of Archibishop Usher. In 1681 he obtained the deanery of Gloucester but did not survive his elevation more than four years.—Dr NATHANIEL MARSHALL, chaplain to King George II rector of St Vedast Foster lane London and one of the canons of Windsor was educated at Emmanuel college Cambridge and is known as the author of "A Defence of the Constitution as by Law established in Church and State" 8vo 1717 a treatise On the Discipline of the Primitive Church and of a translation of St Cyprian's works printed in folio in 1717. After his decease which took place in 1729 his widow published four octavo volumes of his posthumous sermons with a dedication to the queen.—*Nichols's Lit. Ance.*

MARSHALL (STEPHEN) a presbyterian divine of great eminence in the middle of the seventeenth century. He was a native of Godmanchester in Huntingdonshire and was educated at Emmanuel college Cambridge where he took the degrees of BA and subsequently proceeded BD. He became minister of Finchfield in Essex; but on the triumph of the puritan party in the church he settled in London. Fuller says, In the late long lasting parliament, no man was more gracious with the principal members thereof he was their trumpet, by whom they sounded their solemn fife, preaching more publick sermons

on that occasion than any some of his friends. In their sickness he was their confessor, in their assemblies their counsellor, in their troubles their chaplain, in their dispensations their champion." He died in 1665, and was buried in Westminster abbey. He was one of the authors of the famous *Spectator*, (see CALAMY) and wrote a treatise on justification, &c.—*Fuller's Worthies*.

MARSHALL (WILLIAM) a distinguished modern writer on agricultural and rural economy. His first production was entitled Minutes of Agriculture made on a Farm of Three Hundred Acres of various Soils near Croydon Surrey 1778, 4to, a work displaying much singularity of manner and abundance of practical information. This was followed by Experiments and Observations concerning Agriculture and the Weather 1779 4to. He then commenced a series of journeys through various parts of the kingdom, to procure intelligence concerning the modes of cultivation and management among the farmers in different districts and counties, of which an account was communicated to the public in the "Rural Economy of the County of Norfolk" 1787 2 vols. 8vo and similar works relating to Yorkshire Gloucestershire the midland counties &c. Mr Marshall aided in the formation of the Board of Agriculture and made an abstract or review of the Reports published under the sanction of that establishment. He died at Pickering in Yorkshire in 1818 at the age of seventy three.—*Watts's Bibl. Brit. Gent Mag*

MARSHAM (Sir JOHN) a learned writer on ancient history and chronology. He was born in 1602 in London of which city his father was an alderman. He was educated at Westminster school and Jesus college Oxford where he proceeded MA in 1625 and after having travelled on the continent, he returned to London and entered as a student of the law at the Middle Temple. In 1638 he was made one of the six clerks in Chancery which place he lost and suffered greatly in his private estate for his attachment to the cause of royalty during the civil wars. At the restoration of Charles II he recovered his office was knighted and became MP for Rochester three years after he obtained a bartemcy. He died in 1685 at his seat at Bushy hall, in Hertfordshire. The literary reputation of sir John Marsham depends on his *Canae Chronica Aegyptiacae, Eberiacus, Gracae et Damascinianae* Lond. 1672 folio. The object of this work is to reconcile the dynasties of Egyptian kings, preserved by Eusebius and Syncellus, with the Scriptural chronology and Greek history; and he has displayed abundance of erudition and some ingenuity in his critical investigations. He also published a work on the difficulties in the chronology of the Old Testament, and wrote the preface to the first volume of *Dugdale's Monasticon*—*Bog. Brit.*

MARSIGLI (LEWIS FABRIZIO, 1694) an ingenious Italian naturalist and philosopher of the eighteenth century. He was born of

M A R

the Montfalcon family at Bologna, and after having received a good education he went to Constantinople in 1679 with the Venetian ambassador. On his return he entered into the imperial service, and was employed as an engineer in the war with Turkey. He was taken prisoner at the passage of the Rank, and sent as a slave to Bosnia. On obtaining his liberty he was again employed and having been made a colonel of infantry, he was sent with his regiment to garnison the fortress of Brzeg and that place being taken by the French in 1702, he was accused of misconduct and ignominiously dismissed from the Austrian service. Retiring to Switzerland he published a justificatory memoir and afterwards took up his residence at Casale, near Marseilles where he occupied himself with the study of marine botany and other scientific pursuits. In 1709 pope Clement XI made him commander of his troops but he soon relinquished this office and returned to his native place where in 1718 he founded the Institute of Bologna. He afterwards travelled in England and Holland and in 1725 he published at Amsterdam his *Histoire Physique de la Mer* folio and in 1736 his most valuable work the *Danubius Pannonicus-Mysicus* 6 vols. folio containing the natural history of the Danube in its course through Hungary and Turkey. Some disputes with his relatives induced him to seek a retreat in Provence in 1728 but he soon returned to Bologna and died there November 1 1730 at the age of seventy two — *Aitum a G. Biog. Novi Dict. Hist. Sacra*.

MARSOLLIER (JAMES) a French historian was born at Paris in 1647. On taking the habit of a canon regular of St Genevieve he was sent to regulate the chapter of Uzes of which he was made provost and soon after archdeacon. He died there in 1724. His style is easy and flowing but sometimes debased by low familiar expressions. His works are, *A History of Henry VII king of England*, 8 vols. 12mo. *A History of Cardinal Ximenes* 2 vols. 12mo. *The History of the Inquisition and its Origin*. *Life of St Francis de Sales*. *Life of Madame de Chantal*. *Life of Dom Rance Abbé*, and Reformer of La Trappe. *Dialogues on many Duties of Life*. *An Apology for Erasmus*.

The History of Henry de la Four d'Avranches Duke of Bouillon. *A History of Tithes, and other Temporal Goods of the Church*, the most curious and scarce of his works.— *Mosseus. Novi. Dict. Hist.*

MARSTON (John) an English dramatic author who lived in the reign of James I. He was educated at Corpus Christi college, Oxford, and was entered at the Middle Temple of which society he became lecturer but little more of his personal history is known except that he was at one time upon terms of friendship with Ben Jonson. He was the author of eight plays, which were all acted at the Blackfriars, with appliances. Six of these were printed in one volume, in 1633, and dedicated to the vanquished Falkland. He

M A R

also wrote three books of satire, entitled "The Scourge of Villainy," 1592, reprinted in 1764. A specimen of Marston's dramatic manner may be seen in "The Kickstart a Tragedy" reprinted in Dudley's and Miller's collections of Old English Plays.— *Longinus. Biog. Brit.*

MARSBY (FRANCIS MARIA de) a Latin poet and miscellaneous writer was a native of Perugia. He entered the society of jesuits, but his religious opinions being too free he was obliged to quit it and in 1734, having published an *Analysis of Bayle* in 4 vols. 12mo his books were proscribed by Parliament and he was imprisoned in the Bastile. On regaining his liberty he was proceeding with his modern history when he died in 1763. His works are *The History of Mary Stuart* an elegant work in which he was assisted by Freron. *Mémoires de Melville* translated from the English. *Abridged Dictionary of Painting and Architecture* 3 vols. 12mo. *Le Rabelais Moderne* or the works of Rabelais made intelligible to readers in general in which some of the obscurities are cleared, but all the indecencies left. *The Prince* translated from father Paul. *The Modern History* intended as a continuation of Rollin's *Ancient History* as he died before this was finished it was continued by Ruther;

Pictura a poem on painting which though written more elegantly is not so instructive as that of Du Frescoy also another Latin poem on Tragedy and the opinion of the French is, that his fame rests upon his Latin poems.— *Narvalo pour au 1768. Dict. Hist.*

MARIBELLI (LEWIS) a Florentine poet born about 1500 was an esteemed dramatic writer and wrote also serious and grotesque verses, the former of which were published at Florence in 1540 and the latter in the second volume of *Poetas Bernaschi*. He died in 1527.—His brother VINCENT also a poet, was the author of some Rime lyric verses which were much esteemed. He died in 1567.

MARTELLI (PETER JAMES) an eminent Italian poet was born at Bologna in 1665 and was educated at the jesuit school and at the university of his native city. He became one of the secretaries to the senate of Bologna, and in 1707 he was appointed professor of the belles lettres in that university and soon after made secretary to Aldrovandi who was named delegate to pope Clement XI. His works are a dialogue *Del Volo* on flying in which he endeavours to prove, that man and heavy bodies might be supported in the air, *Dialogues on Ancient and Modern Tragedy*— *Tragedies*, in 3 vols. and several discourses on the art of poetry. He also began a poem upon the arrival of Charlemagne in Italy and his Accession to the Western Empire. He died in 1727 and his principal works, *Versi & Prose* were printed at Bologna in 1739, 7 vols. 8vo.— *Fathers Vitae Literariae.*

MARTENNE or MARTHEINE (Eustache) a learned French beneficent of the congregation

M A R

tion of St Maur. He was born in 1654 and took the monastic vows at the age of eighteen. His life was dedicated to the study of ecclesiastical history and his voluminous publications afford ample evidence of his industry and talents. In 1680 appeared his commentary on the Rule of St Benedict, which was followed by treatises on the ancient rites of the church, and other learned works. In 1706 he was sent by his superiors on a tour through the provinces of France to collect materials for improving the Gallic Christians of father S. Marcellus and the result of his researches was his *Thesaurus novus Anecdotorum*, 1717 5 vols. folio and 'Voyage littéraire de deux Bénédictins de S Maur' 4to. He had been accompanied in his mission by father Durand with whom he engaged in a similar undertaking two years after. Of the latter journey an account was published in 1724 and also the first portion of an immense mass of documents which they had collected and which extended to many volumes in folio. Martene died in 1739 leaving many other works published and unpublished.—*Moreri Biog Univ Le Cerf*.

MARTIAL or **MARCUS VALERIUS MARTIALIS** a Latin poet highly distinguished as a writer of epigrams. He was probably of Roman descent but was a native of Spain where he was educated and in his twenty first year he went to Rome to study the law. He appears to have neglected his profession to cultivate his talent for poetry which procured him the patronage of the emperors of the Flavian family especially Domitian on whose death he returned to Spain after an absence of thirty four years. He is supposed to have died there about AD 100 His twelve books of epigrams comprise many elegant compositions not a few which are dull and uninteresting and some debased by coarseness and obscenity. The editions of the works of Martial are extremely numerous. Among the best are that of Schrevelius L. Bat. 1670 8vo and that of Smida, Amst. 1701 8vo.—*Vestas. Lempiere*

MARTIAL D AUVERGNE a French poet, celebrated for the elegance and ease of his writings was procurator in parliament and notary of the châtelet at Paris where he died in 1508. His works are "Arrests d'Amour Love Causes the idea of which he took from the Troubadours of Provence and treated it with great eloquence" *L'Amant rendu Cordelier de l'Observance d'Amour* a poem ridiculing the extravagances produced by love. *Vi giles de la Mort de Rois*, an historical poem on the death of Charles VII and *Devotés louanges à la Vierge Marie* an historical poem on the life of the Virgin Mary but ill written, and filled with the fables of the time.—*Moreri Diet. Hist.*

MARTIANAY (JON) a learned French benedictine monk, was born at St Sever in Gascany in 1647. He entered into orders in 1668 and applied with great diligence to the study of the Greek and Hebrew languages and to obtain a general knowledge of the

M A R

Scriptures. He was engaged with father Pouget, in the publication of a new edition of the works of St Jerome, ix 5 vols. folio, 1693 to 1706. He also wrote "The Life of St Jerome" 1706 4to, and two learned but not clearly written treatises, in which he defended the authority of the chronology of the Hebrew text of the Bible against that of the Septuagint. His other works are "The Ancient Latin Version of the Gospel of St Matthew with Notes On the Manner of explaining the Sacred Scriptures An Analytical Harmony of the New Testament Essays on Translation or Remarks on the French Version of the New Testament The New Testament, with Notes taken entirely from the Scriptures, and A Commentary on the Whole of the Sacred Scriptures" in which work he was engaged at the time of his death which took place in 1717.—*New Dict Hist*.

MARTIN (BENJAMIN) an ingenious English mathematician and natural philosopher in the last century. He was a native of Worpleton in Surrey and is said in early life to have worked as a farmer's labourer from which situation he appears to have raised himself by his own exertions to that of a schoolmaster at Chichester in Sussex. He then commenced lecturer on experimental philosophy and after having travelled in that character through different parts of England he settled in London. There he continued his lectures for many years with great reputation also carrying on the business of an optician and globe maker together with that of a publisher of works chiefly written and compiled by himself. In the latter part of his life having confined the management of his commercial affairs to his son embarrassements occurred and he was made a bankrupt though his estate was sufficient to satisfy all his creditors. This misfortune had such an effect on his mind that he attempted to commit suicide and though the injury he inflicted on himself did not directly prove fatal yet it hastened his death which happened February 9th 1782 at the age of seventy-eight. His publications relate to almost all the branches of mathematical science and natural philosophy and a list of the most important may be found in the annexed authority. He conducted for some years a scientific magazine in which appeared lives of eminent persons published also separately under the title of *Biographia Philo sophica*. —*Aikin's G Biog*

MARTIN (CLAUDE) a native of Lyons in France who raised himself to eminence by his talents. He went to the East Indies as a common soldier about the middle of the last century and having quitted the French service for that of the English, he obtained the rank of colonel and through the patronage of the nabob of Oude, he amassed a vast fortune. Part of his riches he expended in the advancement of science, having formed a botanical garden a museum and an observatory at Lucknow where he also erected for himself a splendid residence. He died in 1799, aged sixty-seven.

M A R

MARTIN (DAVID) a French Calvinist divine, who was a native of Revel in the diocese of Lavaur in Languedoc. After completing his studies he became pastor of a congregation in the diocese of Castres, whence he removed to another where he remained till the revocation of the edict of Nantes in 1685. He then took refuge in Holland, and exercised the pastoral function at Utrecht, till his death in 1721 in the eighty second year of his age. He was the author of *Histoire de Vieux et de Nouveau Testament*, published at Amsterdam 1700 2 vols. folio, with a multitude of engravings termed Mortier's Bible from the name of the printer. Among his other works, are a commentary on the Biblical sermons, and controversial dissertations.

—*Moresi Adissi's G Bag*

MARTIN (JAMES) a Benedictine of the congregation of St Maur who was born at Fanjeux in Upper Languedoc in 1694. He entered into the order in 1709 and after being employed as a classical teacher in his native province he removed to Paris in 1727. He published *Traité de la Religion des anciens Gaulois* 2 vols. 4to which was followed by *Explication de divers monumens singuliers qui ont rapport à la Religion des plus anciens peuples avec l'Examen de la dernière édition des ouvrages de S. Jérôme et un i note sur l'Astrologie judiciaire* 4to besides other works. He died in 1751. A posthumous work entitled *Histoire des Gaules* 2 vols. 4to was published with additions by Dom de Breuillac nephew of the author or in 1754.—*Diet Hist Eng Univ*

MARTIN (RAYMOND) a Spanish Dominican friar distinguished for his attention to Oriental literature in the thirteenth century. He was a native of Saburra in Catalonia, and was present at a chapter of his order held at Toledo in 1250 to concert means for converting the Jews and Mahometans to Christianity. For that purpose he studied the Hebrew and Arabic languages in which he is said to have composed several works one of which entitled *Pugio Fidei Christianae* was published in the seventeenth century. Martin went as a missionary to Tunis in 1268 and was living in 1286 but the time of his death is uncertain.—*Moresi Adissi's G Bag*

MARTIN (WILLIAM) a naturalist was born in 1767 at Mansfield in Nottinghamshire. His father a hosiery abandoned his family and joined a company of players under the name of Booth and although he subsequently obtained a fortune as the inventor of polygraphic painting and of a new mode of manufacturing cloth he never sought after his family nor left them a shilling at his death. Mrs Martin on being forsaken likewise took to the stage as did also at a very early age the subject of this article. His education had in the mean time been attended to, and by the instruction of his writing master James Bolton the author of some works on natural history he became a proficient in drawing and acquired a taste for numismatic pursuits. In 1793 he published the first number of *Figures and*

M A R

Descriptions of Petrifications in Derbyshire, the figures of which were all etched drawn and coloured by himself and in 1796 he went to the Linnean society "An Account of some Species of Fossil Anomalia found in Derbyshire" which paper led to his being elected a member of that society. Having married, he quitted the stage and established himself as a drawing master at Burton upon Trent, whence he removed in succession to Burton and to Macclesfield. In 1809 he published

Outlines of an Attempt to establish a Knowledge of Extraneous Fossils on Scientific Principles. He was subsequently chosen a member of the Literary and Philosophical Society of Manchester and of the Geological Society of London and soon after published *Petrifications Derbyensis or Figures and Description of Petrifications collected in Derbyshire*. He died of a gradual decline May 31 1810.—*Memoirs by Hale*

MARIANI (JOHN BAPTISTE) a skilful composer and musician was born at Bologna in 1706. He entered early into the order of Trinitatis Minimi and travelled for some time in Italy and it was not until his return that he entirely devoted himself to music. His progress was so rapid that at the age of seventeen he was appointed chapel master to a branch of his order in Bologna, which situation he filled until his death in 1784 exercising at the same time the functions of professor and from the school of Martini issued some of the most eminent composers in Italy. He wrote a history of France in 5 vols. folio as also an essay on Counterpoint and a tract entitled *Compendio della Teoria de Numeri per uso del Musico* —*Burney Biog Dict of Mus.*

MARIANI (MARTIN) a jesuit and missionary of the seventeenth century was a native of Trent he was sent by his society to China, whence after a long residence he returned to Europe in 1654. He published the result of his observations in the following works *De Bello Tartarorum inter et sinense* 1654 *Sinica Historiae Decas prima à gentis origine ad Christum natum* 1658 *China Illustrata* a geographical description of the country *A Relation of the Number and Quality of the Christians in China*.—*Moresi Novi Diet Hist*

MARINIERE (ANTHONY AUGUSTIN BRUNEAU de la) a celebrated French author was born at Dieppe in 1684 and studied at Paris under the instruction of his grand uncle Richard Simon who resided in the college of Forlet. In 1709 he visited Mecklenburg; but on the death of the duke, in the troubles that followed he went to Parma, where in 1722 by order of the duke Philip Francesco was published *Dissertation historique sur les Duchés de Parme et de Plaisance* 4to. The king of Sicily appointed him his secretary with a salary of 1200 crowns and the marquis de Beretti Landi the Spanish minister at the Hague advised him to dedicate his geographical dictionary to the king of Spain and procured for him the title

M A R

of royal geographer. He died in 1749. His works are, " Dictionnaire Géographique, Historique, et Critique," 10 vols. took a work of great importance to geography and the foundation of many subsequent ones. *Essais sur l'Origine et les Progrès de la Géographie* printed in Cambrai; a " Mémoires Historiques;" "Traité géographique et historique pour faciliter l'Intelligence de l'Ecriture Sainte, par divers Autheurs, célébres M. M. Huet, et Le Grand D'Alainet, &c. &c." *Entretiens des Ombres aux Champs Elysées* taken from a German work of the same title, " Essai d'une traduction d'Horace in verse. In traduction générale à l'étude des Sciences et des Belles Lettres en faveur des Personnes qui ne savent que le Français," Nouveau Recueil des Epigrammistes Français anciens et modernes" Lettres choisies de M. Simon, with a life of the author. Nouvelles politiques et littéraires, Vie de Molière, Continuation de l'Histoire de France sous la Régne de Louis XIV commencée par M. de Larrey." A collection entitled "Nouveau Portefeuille historique et littéraire" was published after his death under his name.—*Mériti.* *Dicit. Hist. in Art. Bruen.*

MARTINUS POLONUS, a Dominican friar of the thirteenth century of a Polish family named Stempf. After having distinguished himself by his learning he went to Rome where he held the offices of apostolical chaplain and penitentiary under popes John XXI and Nicholas III. The latter nominated him archbishop of Gnesen in Poland in 1278 but Martin died at Bologna shortly after. He is known as the author of a history of the popes and emperors, called " Chronicon Martinianum" extending from the birth of Christ to AD 1271.—*Cave Hist. Lit. Martini.*

MARTYN (HILARY) an able missionary was born at Truro in Cornwall in 1781. He was educated at the grammar school of Truro and in 1797 was removed to St. John's college Cambridge of which society he was chosen fellow in 1802. The following year he took orders and in 1805 went to India, as a chaplain to the East India Company. In the East he distinguished himself by his rapid acquirement of the native languages. He not only became master of Sanscrit but translated the Common Prayer into Hindostane and performed divine service publicly in that language. From India he proceeded to Suria in Persia and translated the Psalms and New Testament into the Persian tongue. He also held conferences with the learned Mahometans, and converted some of them to Christianity. His health failing he died of a decline in Persia October 16 1812.—*Gent. Mag.*

MARTYN (John) a skilful botanist and learned writer was born at London in 1699. He was intended for the mercantile profession but quitted it in consequence of an unconquerable passion for botany and literary pursuits. In 1720 he published a translation of Tournefort's "History of Plants growing about Paris, and constituted a similar work on those pro-

M A R

duced in the vicinity of London. In 1734 he was chosen a fellow of the Royal Society, and about the same time began to give lectures in his favourite science. In 1730 he entered himself of Emmanuel college Cambridge, and, on the death of Dr. Bradley was chosen professor of botany in that university which place he resigned in 1761 in favour of his son. (See THOMAS MARTYN.) He died at Chelsea in 1768. Besides the works already mentioned he is author of *Tabula Synapta folio Methodus Plantarum circa Cantabrigiam Nascentium Historia Plantarum variorum folio The Great Street Journal 2 vols. an edition of Virgil's Georgics, with translations and notes, &c.* He was also engaged in the abridgment of the Philosophical Transactions and some translations from the French. After his death appeared *Dissertations and Remarks on the Aeneid of Virgil with a biographical memoir prefixed.*—*Petterson's Sketches of Botany*

MARYLIN BD FRS (THOMAS) an English divine more especially celebrated as an antiquarian and natural philosopher for a period of sixty four years professor of botany in the university of Cambridge. This eminent naturalist was the eldest son of Dr. John Martyn a physician of Chelsea, who had also enjoyed the same professorship, and was the author of a Critical Dissertation on the *Aeneid*. He was born at Chelsea in 1736, and having received the rudiments of a classical education became a pensioner of Emmanuel college Cambridge where he graduated as AB in 1756. On the filling up of those fellowships belonging to Sidney Sussex college which had been for awhile sequestered in order to repair the dilapidations of the edifice Mr. Martyn was elected to one of them and in 1761 succeeded on his father's resignation to the professor's chair already mentioned. In 1771 he was presented to the family living of Ludgershall in Bedfordshire on which he resigned his fellowship and married and five years afterwards succeeded to the vicarage of Little Marlow in Buckinghamshire on the presentation of his pupil Mr. John Bowles Warren. In 1778 he accompanied another of his pupils, Mr. Hartopp Wrigley through France, Switzerland and Italy an account of which tour he published in 1787. On his return to England he accepted the honorary office of secretary to the Society for the Improvement of Naval Architecture and continued to live in the metropolis till 1818, when being presented to another living in Berkshire he removed to his new rectory where he died in the June of 1825. In addition to the tour already mentioned he was the author of another through Italy in 1791. His philosophical writings and those by which he is most advantageously known are, " Plantae Cantabrigenses, a catalogue of plants arranged according to the Linnaean System Herbarium Cantabrigense," &c. " Description and Account of the Botanical Garden, &c. &c. &c. off in 1766 The English Connoisseur" 1766 2 vols. 1766, Sermons for Addington's Hospital,

M A R

1769; "A Complete Edition of the Works of John Martyr, M.D. with a Life of the Author" 12mo, 1770, Catalogus Novi Cantabrigiensis, &c. 1771 reprinted with his lectures in 1772. *The Antiquines of Heronaeum*, 4to 1773. This laborious work of which the first volume only appeared, was however discontinued, for want of public encouragement. "Elements of Natural History" 8vo, 1775 a translation of Rousseau's Letters on the Elements of Botany 1785, reprinted 1787. "Flora Rustica" 4 vols. 1792—4. "The Language of Botany a Dictionary with familiar Explanations &c." 1793, "A Description of Hammans Materia Medica," 8vo and lastly a new edition of

Milner's Gardner's and Bonatius's Dictionary to which he added "A Complete Examination and Description of all Plants hitherto known, with their generic and specific Characters, Places of Growth &c" 4 vols. folio. In private life Mr Martyr was distinguished by the mildness of his manners and the benevolence of his disposition.—*Ann. Reg.*

MARTYN (WILLIAM) recorder of Exeter was born in that city in 1562. He was educated at the grammar school of his native city whence he was sent to Pembroke college, Oxford and afterwards to some of the inns of court of London. In 1605 he was elected recorder of Exeter where he died in 1617. He is noticed here as the author of a abromous entitled *The History and Lives of the Kings of England from William the Conqueror to King Henry VIII*. London 1616 folio. It is an interesting and not ill-written work to which an appendix was published after the author's death, including the history of Edward VI Mary and Elizabeth. He also wrote a work called *Youth's Instructions* London 1612 folio.—*Princes' Worthies of Devon.*

MARTYR (PATER) whose family name was Vernalio, one of the earliest Protestant divines, distinguished for learning and abilities. He was born at Florence in the year 1500 and after receiving a good education he entered at the age of sixteen into the order of the regular canons of St Augustine at the monastery of Fiesole. In 1519 he removed to another at Padua, where he studied Greek and philosophy. In 1526 he commenced preacher and attracted great applause in several cities of Italy. He was next chosen abbot of Sigoli, three years after principal of the college of St Peter at the altar in Naples and at length prior of St Fridian at Lucca, one of the richest abbeys belonging to his order. Here his religious sentiments having undergone a change and having in a great measure adopted the opinions of the German reformers, which he displayed too blasphemously in his public discourses, he was cited before a general assembly of his order at Genoa, to answer for his conduct. He did not think it prudent to obey the summons, but hastily retired to Pisa, and at length to Zurich in Switzerland, where he was received in a friendly manner by the Protestant clergy in 1542. Soon after he be-

M A R

came professor of divinity at Strasburgh, where he remained till 1547 when he accompanied Doctor Fugae, and other learned reformers, who, on the invitation of archbishop Cranmer, settled in England. Martyr had previously followed the example of Luther in marrying a nun who had fled from her convent, and renounced her vows. He was appointed to the theological chair at Oxford in 1549, and he became a very efficient assistant to the English reformed clergy in carrying on their plan of innovation in the church. On the accession of queen Mary he was commanded to quit the country and was furnished with passport for that purpose. He then returned to Strasburgh and resumed his former situation whence he removed in 1556 to Zurich, to occupy the office of theological professor. In 1561 he assisted at the famous conference between the Catholics and Protestants held at Fessey in France and he died at Zurich in the following year. Peter Martyr was the author of many works on divinity including commentaries on some parts of the Old and New Testament, which exhibit a superiority of learned illustration and a multitude of digressions relating to points of controversy often little connected with the subject before him. He is said to have excelled Calvin in erudition and the knowledge of languages, and his personal character has been represented as extremely amiable.—*Martyr. Tauri Elegie de H. S.—MARTYR AN ANGELIA (PETER)* born at the town of Angeliere, near Milan about the middle of the fifteenth century was an ecclesiastic much trusted and employed in diplomatic affairs by Ferdinand, king of Castle. He was the author of a treatise on the discoveries of Columbus entitled *De Rebus oceaniis at Orbe novo* and other works on history and geography. He died prior of Grenada, after 1525.—*Tauri. Trobachi.*

MARULLUS (MICHAEL TANCHEIOTUS) a native of Constantinople which he abandoned on its capture by the Turks in 1453 and returned into Italy. He was patronised by Lorenzo de Medicis and married the celebrated Alessandra Scala of Florence which marriage involved him in a quarrel with Politian, who was also an admirer of hers. He was drowned in 1500 while attempting to cross the river Cetina in Tuscany. He was the author of some Latin poems consisting of four books of epigrams and four of hymns with a fragment of a poem on the *Education of Princes*. He was considered a happy imitator of Lucretius, but, though not devoid of elegance his productions cannot claim a place among the best of the kind.—*Lal. Gyrald. Tivoliachii.*

MARVELL (ANDREW) This able and witty writer and incorruptible patriot was born at Kingston upon Hull in 1621 being the son of the rev. Andrew Marvell master of the public grammar-school and lecturer of Trinity church, in that town. He was sent to Trinity college, Cambridge at the expense of the corporation whence he was impelled away by some of the jesuitical eminences which then infested the university, and was found by

M A R

his father in a bookseller's shop in London, and induced to return to college. On the death of his father in 1640 he succeeded to a small estate, and soon after made the tour of Europe, and distinguished himself by some humorous but carelessly written satires against Richard Flecknoe an English poet and postmaster, then resident at Rome which circumstance induced Dryden to give the name of Mac Flecknoe to his satire against Shadwell. Little more is recorded of him for several years, except that he acted as secretary to the English legation at Constantinople. On his return he was engaged by Oliver Cromwell to superintend the education of a Mr Dutton and after a while appointed assistant to Milton in his office of Latin secretary and he seems like many other able men of that day to have been strongly impressed by the vigorous character of the protector and the honour obtained by the nation under his government. In 1650 he was chosen member of parliament for his native place which he represented to the end of his life and was possibly one of the last who received pay from their constituents. Although his income was very slender he was enabled by a philosophical limitation of his wants and desires to resist every corrupt temptation in the way either of honour or emolument and he obtained so high a character for diligence ability and integrity that he has generally been regarded as one of the finest examples of a disinterested senator recorded in English history. After the specimen afforded by a few of the early years of the reign of Charles II a man of Marvell's character was necessarily thrown into the opposition and his whole efforts both in and out of parliament were directed to the preservation of civil and religious liberty. Although he rarely spoke his influence was very great the spirited earl of Devonshire was very intimate with him and prince Rupert often privately visited him and followed his advice. He also obtained the character of the wisest man of his time, and from time to time threw out a number of poetical effusions of the humorous and satirical kind which although careless in composition and unceremonious in application were very effective and popular as party pieces. In 1672 Dr Samuel Parker afterwards rendered so conspicuous by the affair of Magdalen college published a work of bishop Bramhall's with a preface asserting the most extravagant doctrine in regard to the rights of sovereigns over the consciences of their subjects. This piece Marvell attacked in the same year by a work which he entitled

The Rehearsal Transposed which is one of the most witty and sarcastic exposures of the tyrannous and impracticable theory which it assails, that ever was written. Parker wrote an answer to which Marvell rejoined and the former did not think fit to carry the controversy any farther the whole party having meantime suffered under the exposure and ridicule. Marvell was the author of several other controversial publications, one of which entitled An Account of the Growth of Popery and Arbi-

M A R

tary Power in England, gave so much offence that a reward was offered for the printer and publisher which seems to have led to no consequences. Notwithstanding the earnestness with which he opposed the court and its plans, his wit made him a sort of favourite with Charles II who deputed the lord treasurer Danby to wait upon him at his lodgings, up two pair of stairs, in a court in the Strand, on implied conditions to make him the offer of 1000L and a promise of future favour. The honest senator rejected the bribe without hesitation and as it is said was obliged on the departure of the courtier to send to a friend for the loss of a guinea. The life of Marvell was more than once threatened by his irritated enemies and his death which happened in August 1678 without much previous illness, has been attributed with no support from direct evidence to poison. He was buried at St Giles's in the Fields, at the expense of his constituents, who also voted a sum to erect a monument to his memory with a laudatory inscription but although devoid of party allusion, neither the one nor the other was admitted by a rector belonging to a class of zealots who occasionally impeach the intellectual character of the church of England. Marvell is said to have been silent and reserved among strangers, but very lively and facetious with his intimates. His character as a writer in prose will be gathered from what has been already stated his early poems display much fondness for rural nature and are often very ingenuous and fanciful in the manner of Cowley and his contemporaries. The most complete edition of his works is that by captain Edward Thompson three volumes, 4to 1776. —Cooke's and Thompson's *Lives of Marvell*.

MARY I queen of England daughter of Henry VIII by Catharine of Arragon was born in 1516. In her infancy she was betrothed first to the dauphin of France afterwards to the emperor Charles V and lastly to the duke of Orleans none of which matches took place. After her mother's death she was even declared illegitimate but was restored to her rights when the succession was finally settled in 1544. She was bred up by her mother in a zealous adherence to the Roman Catholic faith on which account, as intolerance was no less a feature of the new than of the ancient religion she was treated with some rigour under Edward VI. This severity doubtless operated upon her own temper and practice when she herself ascended the throne in 1553, after the abortive attempt to set her aside in favour of Lady Jane Grey. One of her first measures was the reinstatement of the prelates who had been superseded in the late reign while Cranmer was prosecuted for high treason and several other protestant bishops impaled. The marriage of the queen now of the mature age of thirty-seven formed a subject of grave disreputation in the first instance and the acceptance of the proposals of the archduke Philip, son of the emperor Charles V afterwards Philip II, united as it was with a complete restoration

M A R

of the Catholic worship, produced much discontent. Insurrections broke out under Cope in Devonshire, and Wyatt, in Kent, which although suppressed formed sufficient excuse for imprisoning the princess Elizabeth in the Tower and dooming the youthful and unfortunate Jane Grey and her husband Guildford Dudley who had been hitherto spared to immediate execution. Philip arrived in England in 1554 when the baptisms were celebrated but the attempts of Mary to introduce him to a paramount authority in England were by no means completely successful. She succeeded better in a formal reconciliation of the kingdom to the pope which was effected in great form by the legate cardinal Pole. The sanguinary laws against heretics were now revived and the council having resolved to put them into full execution those shocking scenes of cruelty followed which have fixed upon that unhappy educated princess the hateful epithet of bloody queen Mary. It ought however in justice to be observed that the legate Pole disapproved of this severity but the arguments of Gardiner and others were more congenial to the gloomy bigotry of the sovereign and no fewer than two hundred and seventy seven persons were committed to the flames including prelates private clergymen, laymen of all ranks women and even children. Sanctity in her opinions is the only mitigating plea for the unhappy Mary who was even prepared to sacrifice the revenues of the crown in restitution of the goods of the church the deficiency of which however she had no scruple in replacing by arbitrary extactions from her subjects with quite as much despotism as her father Henry. Her union with Philip II was equally inappropriate to herself and the nation. Eleven years younger than the queen he treated her with great neglect and to prevent the fulfilment of his threat of desertion England was unpolitically forced into a war with France and the mustering of English troops facilitated the Spanish victory over the French at St Quentin. This result which was of no service to England was quickly counterbalanced at her expense by the loss of Calais which was taken in 1558 by the duke of Guise after it had been in English keeping for two hundred years. This misgrace sank deep in the heart of Mary who was already in a declining way from a drooping compliant, manfully preyed upon by anxieties of various kinds aggravated by a consciousness of the hatred of her subjects, and the indifference or aversion of her husband. She terminated her short and darkened reign of little more than five years, in November 1558, in the forty second year of her age. Mary was not wholly destitute of the characteristic vigour and ability of her family had her natural capacity been less clouded by bigotry and the prejudices fostered by the conversion of her mother's divorce and ill treatment, with the separation from the see of Rome. Nor must it be concealed, that hateful as was the severity really displayed, it has not unfrequently been highly exaggerated.

M A R

and compassed with too little adventure to the benefit of intolerance which in this age disengaged religious ascendancy on all sides. With Mary I ended the dominion of papacy in Great Britain, and the faculty with which the great body of the English people, and especially the nobility and wealthy classes, veered about with the inclinations of their rulers in these various changes has not been unmarked by the watchful satirist of the church of Rome.—Hume. Ropes.

MARY II queen of England. This princess, who was born in 1662 was the daughter of James, duke of York, afterwards James II by his wife Anne Hyde, daughter of lord Clarendon. She was married in 1677 to William, prince of Orange and when the Revolution was effected which dethroned her father, Mary was declared joint-possessor of the throne with her husband, king William, on whom all the administration of the government devolved. By this arrangement cost Mary no sacrifice her strong regard to, and profound respect for her consort, being always conspicuous. She was also strongly attached to the Protestant religion and the Church of England and was evidently led to deem its preservation a paramount duty even when opposed to the conflicting claims of filial obedience. During the absence of William in Ireland in 1690 Mary managed parties at home with extreme prudence and acted with equal ability during his various visits to the continent. The unfriendly terms on which she lived with her sister Anne have been alledged to as a blemish in her character, but political jealousies and the weak attachment of the latter to overbearing favourites may sufficiently account for it. Mary died of the small pox at Kensington in the year 1695 being then in her thirty third year to the deep affliction of her husband and the general regret of the nation.—Burnet. Smollett.

MARY (Stuart) queen of Scots, celebrated for her beauty her accomplishments, her errors and her misfortunes. She was born December 8th 1542 and was the daughter of James V of Scotland by his queen Mary of Lorraine a French princess of the family of Guise. Her father dying when she was about eight days old violent disputes arose among the nobility about the guardianship of the infant sovereign and the conduct of public affairs. The regency was at length vested in the earl of Arran and Henry VIII of England having demanded the hand of Mary in marriage for his son Edward, the regent's rejection of the proposed occasioned a war in which the Scots were defeated at the battle of Mouselburgh. At the age of six the young queen was sent by her mother to France where she was educated in a convent, and appears to have been instructed in every branch of learning and polite accomplishment, which was fashionable at that period. On the 26th of April 1558 she was married to the Dauphin, afterwards Francis II. He died about six months after his accession to the crown, in December 1560, and the widowed queen re-

M A R

tated to Scotland. The future incidents of her life are matter of well-known history and remarkable as they are, a very slight notice of the most important can alone be introduced into this article. The queen having received overtures of marriage from various quarters, gratified her inclination by uniting herself with her cousin, the young and handsome Henry Stuart, Lord Darnley, by whom she became the mother of James VI. Darnley proved a profligate and ungrateful husband and a weak and worthless man. Excited by jealousy he caused his wife's secretary David Riccio to be murdered in her presence and offered her many other indignities, which produced an open quarrel between them. An apparent reconciliation took place when Darnley who had conducted to reside separately from the queen was assassinated and the house he had inhabited was blown up with gunpowder in February 1567. This barbarous transaction was but very imperfectly investigated and in the month of May following the impudent Mary wedded the earl of Bothwell who was openly accused as the murderer of the late king. Scotland soon became a scene of confusion and civil discord. The people rebelled against the authority of the queen. Bothwell a fugitive and an outlaw took refuge in Denmark and Mary was made a captive treated with insult and contempt, and committed to custody in the castle of Loch Leven. After some months confinement she effected her escape and assisted by the few friends who still remained attached to her she made an effort for the recovery of her power. She was opposed by the earl of Murray the natural son of James V who had obtained the regency in the minority of her son. The battle of Langside insured the triumph of her enemies and to avoid falling again into their power she fled to England and sought the protection of queen Elizabeth. That princess treated her with all the jealousy of a personal and political rival and after keeping her a prisoner during eighteen years she caused her unfortunate captive to be tried and executed for a conspiracy against her government. Mary received the news of her destined fate with great serenity, wrote her will and having prepared herself for death, by practising the ceremonies enjoined by the Catholic faith, to which she was devoutly attached she suffered decapitation on the 8th of February 1587 in the castle of Fotheringay where she had been long confined and on the 1st of August, she was interred with great pomp in the cathedral of Peterborough. Her body was subsequently removed, by her son to Henry VIIth's chapel Westminster where a magnificent monument was erected to her memory. She wrote with elegance in the Latin and French languages, and many of her compositions have been preserved consisting of poems, letters and a discourse of royal advice to her son. The character and conduct of Mary, queen of Scots, have been made the subject of much angry controversy among literary men. In the list of her partisans may be

M A S

mentioned, Walter Scott, William Tytler, and the rev. John Whitaker who have drawn abundant soul to her defence; while the greatest historians, Dr Robinson and Melville Leing have, with more apparent impartiality exhibited the weighty evidence against her, which demonstrates, if not her guilt, at least the impossibility of a perfectly satisfactory exculpation. The treatment of this unfortunate princess by Elizabeth, is scarcely to be justified even by that class of state reasons, which accord better with expediency than with morality. Too much attention in the condemnation of it is however usually paid to the personal feelings of Elizabeth as a woman and too little to the fact, that Mary was regarded as their legitimate sovereign by a powerful active and sternly conspiring party in England while the predominant one had every thing to fear from the civil and religious changes which her survival or succession might have created.—*Bullard's Miscellany of Learned Letters. Berkshires Blog Lit.*

MASACCIO or TOMMASO DA S. GIOVANNI DI VALDARNO a painter was born at Valdarno in 1402 and was the disciple of Massaccio da Pisanico to whom he was greatly superior. He was well skilled in perspective of which he gave some fine examples. Annibal Caro composed an epitaph for him in which he says that Bonarroti taught all other painters, and learnt from Masaccio alone.—*Tedeschi. Pilkington*

MASCAGNI (PAUL) a celebrated anatomist born in Tuscany in 1752. After having studied at the university of Siena he took the degree of MD in 1771 and soon after became professor of anatomy. He filled that office with high reputation till 1800, when he removed to Paris and the following year he was invited to Florence to occupy the chair of anatomy and physiology at the hospital of S. Maria Nuova. In 1805 he was made also professor of chemistry and he held those offices till his death October 19th 1814. Mascagni applied himself with great industry and success to the cultivation of the various sciences connected with natural history but his principal object was the study of human anatomy in which he made some important discoveries which entitle him to rank with the first anatomists of modern times. His principal work is entitled *Historia et anatome corporis humani Vasorum Lymphaticorum corporis humani*, 1787 large folio, besides which he left unfinished a general treatise on anatomy part of which has been published by his pupil M. Antonomarchi.—*Bug Nero, des Contemp.*

MASCARDI (AOUERIN) an Italian historian and writer on polite literature born in 1591 in the territory of Genoa. He entered when young into the society of the jesuits, which he quitted to become chamberlain to pope Urban VIII, who in 1628 made him professor of rhetoric at the college of Wisdom at Rome. He died in 1640. He composed many works in Italian and Latin. Among the former are a treatise *Dell' Arte Histrica*; and an account of the conspiracy of Fiesco

M A S

against the *Genoese government*.—*Traductio.
Non. 191.*

MASCARON (Jules) a French priest, was born at Mireilles in 1634. He entered among the priests of the oratory and at the age of twenty-two he taught rhetoric at Marse. He afterwards preached with so much applause at Saumur and Paris, that the court engaged him for Advent 1666 and Lent 1667, and in 1671 he was appointed bishop of Tulle, whence he was translated to the see of Agen. In 1694 he returned, to preach before the king on which occasion Louis XIV said to him "Your eloquence alone neither wears out nor grows old." On his return to Agen he founded an hospital and died in 1703. A collection of his Funeral Orations was published among which those of marshal Turenne and the chancellor Segur are most admired. A doubt arises as to the validity of the ordination of the bishop of Marse by whom Mascarons had been ordained the question was referred to the Sorbonne which decided in the affirmative. Mascarons however chose to be reordained.—*Vicimus Gen. Dict. Dict. Hist de L'Academie.*

MASCHERONI (LAURENCE) a distinguished Italian poet and mathematician. He was born at Bergamo in 1740 and at the age of eighteen he taught Latin and Greek at the college of his native place. In 1786 he became professor of mathematics at Pavia previously to a hub he published *New Researches on the Equilibrium of Vaults* Bergamo 1785 4to but he is principally known as the author of *The Geometry of the Compass* Milan 1793 8vo a very ingenious work which attracted the attention of Buonaparte during his campaign in Italy. Mascheroni though an ecclesiastic, was an advocate for the political changes occasioned in Italy through the influence of the French and in concert with Gregory Fontana he drew up the constitution of the Cisalpine republic. Being sent by the government to Paris on a mission connected with science he died in that metropolis July 14 1800.—*Biog. Neuve des Comtemp.*

MASCLEF (FRANCIS) a French theologian was rector in the diocese of Amiens and being much esteemed by the bishop he was by him placed at the head of the seminary of that district he also created him a canon of Amiens but when that prelate died in 1706 he was not in favour with his successor, and on some dispute on the subject of Jansenism Masclef was removed from all his public offices. He died in 1728. He was very learned in languages particularly the Oriental. His works are "A Hebrew Grammar,

Ecclesiastical Conferences of the Diocese of Amiens The *Catechism of Amiens*. He also left in MS a system of philosophy and of theology which would have been published but for the seeds of Jansenism they contained.—*Mauri. Dict. Hist.*

MASCRIER (JOHN BAPTIST) a French soldier, was born at Caen in Normandy in 1697 and died at Paris in 1760. His works are

M A S

principally compilations and translations; they are "A Translation of Cicero's *Compendium*, " "A Description of Egypt" "Lemmire's Table of Distances" "Christian Reflections on the great Truths of Faith;" "An Idea of the ancient and modern Government of Egypt," "History of the Revolution in the East Indies" "A Translation of Martin" 2 vols. He also published editions of several other works.—*Aeneas. Dict. Hist.*

MASDEU (DON JUAN FRANCISCO) an historical writer who was a native of Barcelona, and a member of the order of the jesuits. He collected copious materials for a general history of Spain, and on the suppression of the society to which he belonged he retired to Polignano in Italy and composed his history in Italian. His success not answering his expectations he re-wrote the work in his own language and it was published at Madrid in 30 vols. 4to 1783—1800 under the title of *Historia critica de Espana, y de la Cultura Espanola en todo genero*. On the re-establishment of the jesuits by pope Paul VII. Masdeu entered into the college at Rome but he afterwards returned to Spain, and died at Valencia in 1817.—*Biog. Neuve des Contemp.*

MASENIUS or MASEN (JAMES) a jesuit, and Latin writer was born at Dales in the dutchy of Juliers in 1606. He was professor of eloquence and poetry at Cologne and was the author of a long Latin poem entitled "Sarcoc" or "Sarcophagi" which Lauder brought into notice by pretending that Milton borrowed from it. He also produced two treatises, entitled "Palaestra etloquentum ligata" and "Palaestra styl Roman." *Anima Historiae seu vita Caroli V et Ferdinandi I* *Apollonis Anatinum brevirostrum* and Notes and Additions to the *Antiquitates et Annales Irenaeorum* now by Brower. He died in 1681.—*Mauri. Dict. Hist.*

MASERES (FRANCIS) curitor baron of the Exchequer a sound lawyer and a scholar of considerable attainments born in the year 1731. He was descended of a French refugee family and received the earlier part of his education under Dr Woodeson of Kingston upon Thames whence he removed to Clare hall Cambridge of which society he afterwards became fellow. In 1758 he and Dr Porteus, afterwards bishop of London, obtained the two chancellor's prize medals. Entering afterwards at the Temple he applied himself to the study of jurisprudence and being called to the bar obtained the appointment of attorney-general of Quebec from which situation he was some years after on his return to England raised to the dignity of curitor baron of the Exchequer. He was an excellent mathematician and published, in 1759 a treatise on the negative sign, in which he argues against the doctrine of negative quantities. He also printed a collection of "Scriptores Logarithmici" a work in 6 vols. 4to a "Treatise on Life Assurances" with several historical tracts and by his benevolence induced the reverend Mr Helles to undertake his edition of Cotes's translation of Agnesi's "Institutiones Analyticas," which

MAS

Not far his exertions, would have been lost to the world. This valuable work appeared in 1804. Baron Maseres, who was distinguished for strong sense and liberality died at Rodez in May 1824 aged 93.—*Ann. Biog.*

MASHAM (ANNE) the favourite of Queen Anne, noted in English history for her political intrigues. She was the daughter of Mr Hill a rich merchant of London who married the sister of Mr Jennings, the father of the duchess of Marlborough. The bankruptcy of her father obliged her to become the attendant of a baronet's lady whence she removed into the service of her relative, then lady Churchill who procured her the place of waiting maid to the princess Anne. She retained her situation after her mistress ascended the throne, and by her amiability and complaisance she acquired a great degree of influence over her. The high church principles in which she had been educated contributed to increase her credit with the queen who was secretly attached to the tory party though obliged in the beginning of her reign to favour the whigs. The marriage of Miss Hill with Mr Masham, in 1707 occasioned an open quarrel with lady Marlborough who was in consequence of it deprived of her majesty's confidence. Harley afterwards earl of Oxford connected himself with the new favourite, a change of ministry took place and in 1711 Mr Masham was raised to the peerage. He and his wife appear to have been actively engaged in the intrigues of the times in favour of the exiled house of Stuart. Lady Masham lived a long time in retirement after the death of the queen and died herself at an advanced age. The title of baron bestowed on her husband became extinct on the death of her only son June 14 1776.—*Saxl's Hist. of England.* *Biog. Univ.*

MASIIUS or DUMAS (ANDREW) born in 1516 at Lenninch near Brussels. He was one of the most learned men of the sixteenth century and was appointed counsellor to William duke of Cleves. He was particularly conversant with the Oriental languages and produced A Collection of various Pieces Ancient and Modern translated from the Syriac Antwerp 1569 Syrortex pcculum 1571 Grammatica Linguae Syriæ and Commentaries on the Books of Joshua and Deuteronomy.—*Moxon's Sam. Onom.*

MASKELYNE (Nevil) an amateur mathematician and astronomer who was descended from a Wiltshire family of respectability but was born in London, in 1732. He was educated at Westminster school and Catherine hall Cambridge whence he removed to Trinity college of which he became a fellow. He took the degree of M.A. in 1757 and that of DD in 1777. He was chosen a fellow of the Royal Society and in 1761 he was deputed to proceed to the island of St. Helena, to observe the transit of Venus and during the voyage he employed himself in making lunar observations, with a view to ascertaining the longitude. In 1765 he went to Barbadoes to try the accuracy of Harrison's time-keeper. On the death

MAS

of Mr Blaauw, he succeeded to the office of royal astronomer, and in 1767 commenced the publication of The Nautical Almanack, for which he published a volume of accompanying tables. (See CHARLES MASON.) In 1774, Dr Maskelyne was employed in making observations on the eclipses of Jupiter's satellites at Greenwich and the same year he went to Scotland to ascertain the gravitative attraction of the mountain Schehallien in Perthshire of which he published an account in the Philosophical Transactions. His death took place February 9 1811. He was the author of

The British Mariner's Guide containing complete and easy instructions for the discovery of the longitude at sea and land 1763 &c and Astronomical Observations made at the Royal Observatory at Greenwich 1784—88 3 vols. folio besides many papers in the Philosophical Transactions.—*Eccles's Cyclopaedia Biog. Univ.*

MASON (CHARLES) an English astronomer who was an assistant of Dr Bradley at the royal observatory at Greenwich. He was employed to examine the lunar tables of Mayer and the result of his labour appeared in Mayer's Lunar Tables improved by C. Mason published by order of the Commissioners of the Board of Longitude London 1787 Mr Mason was sent to America with a grand sector to determine the limits of the provinces of Maryland and Pennsylvania. He was accompanied by Mr Dixon in conjunction with whom he measured a degree of the meridian, and an account of their operations was published by Dr Maskelyne in the Philosophical Transactions for 1768. Mason died at Pennsylvania in February 1787. He communicated to the Royal Society an account of observations on the transit of Venus June 3 1769 made at Cavan in Ireland and other papers which may be found in the Philosophical Transactions.—*Biog. Univ.*

MASON (JOHN) a dissenting minister and theological writer of the last century. His father was also a minister and he was educated at an academy at Kibworth in Leicestershire. After being private tutor in the family of governor Feeks he became pastor of a congregation at Dorking in 1730 and in 1746 he removed to Cheshunt in Hertfordshire to fill a similar situation. He died in February 1763. He was the author of a treatise on Self Knowledge and four volumes of sermons, published under the title of Lord's Day Evening Entertainment both which became very popular. He also produced other religious works, and some tracts relating to Elocution.—*Adams's G. Biog.*

MASON (WILLIAM) a distinguished English poet, was the son of a clergyman in Yorkshire in which county he was born in 1725. He became a student of St John's college Cambridge, and subsequently a fellow of Pembroke-hall in the same university. He made his debut in the literary world by the publication of *Lies*, a poem, in 1748 in which he assumed the Jacobite and high church principles which prevailed in the university of

Oxford This piece provoked a reply from the pen of Thomas Warton, entitled *The Triumph of Issa*. In 1752 he published his "Elinda" a tragedy with choral odes on the ancient Greek model. Having taken orders in the church he obtained the living of Astor in Yorkshire and he was appointed one of the royal chaplains. In 1756 he published four

Odes," which were parodied in a ludicrous style by Messrs. Colman and Lloyd. In 1759 appeared his *Caractacus* a drama, on a kindred plan with the former. Both these pieces were subsequently introduced on the stage but with little success. In 1762 Mr Mason was made preceptor of York with a canonry annexed to that preferment. One of his principal works, *The English Garden* a poem in four books, appeared in 1772 77 79 and 81 4to, and a second edition with a commentary and notes, by W. Burgh was printed in 1785 8vo. This work was translated into French and German. In 1775 he published the poems of his friend Gray with memoirs of his life. His principal subsequent publications are *Ode to the Naval Officers of Great Britain* 1779 4to *Ode to the Hon William Pitt* 1782 4to a translation of Du Fresnoy's *Art of Painting* published with Sir Joshua Reynolds's notes 1783 4to the *Life of William Whitehead* with his poems 1788 3 vols 8vo *A Secular Ode in Commemoration of the Glorious Revolution of 1688* 4to and an "Essay on Church Music." Besides his acknowledged works Mason is supposed to have been the author of the *Hercule Epistle* to Sir William Chambers and other satirical pieces, which were published under the signature of M. Gregor. At the beginning of the American war Mr. Mason became so active an advocate for freedom as to give offence at court, and he was consequently dismissed from his chaplainship but alarmed by the French Revolution his zeal cooled in the latter part of his life. He died April 7 1797.—*Arch. G. Biog. Biog. Mus.*

MASSANIELLO see ANELIO.

MASSENA (ANDREA) prince of Essling duke of Rivoli and marshal of France distinguished for his services in the wars of the French republic and of Bonaparte. He was born at Nice in 1763. When young he made two voyages with a relation who was captain of a merchant ship but preferring the army he enlisted as a common soldier in 1775 in the royal Italian regiment, in which one of his uncles was a captain. Having only attained to the rank of sergeant and adjutant after fourteen years service he returned to his own country and to a private life. The Revolution again excited him to action, and afforded a field for the display of his military talents. The soldiers then choosing their own officers he was nominated an adjutant-major and in August 1792 made chief of a battalion. He became successively general of a brigade and of a division in the army of Italy. He contributed much to the success of the campaigns of 1796 and 1797 which led to the treaty of

Leoben when his bold and determined courage procured him the appellation of "the favorite child of victory." He had the chief command in Switzerland in 1799, when he finished the campaign, by completely routing the Austro-Russian army under the archduke Charles and general Kornakow. He was less fortunate in Italy in 1800, when he was beaten at Volti by the Austrians under Melas, and afterwards besieged in Genoa, and obliged to capitulate. But the inferiority of his forces sufficiently accounts for these disasters without any impeachment of his military renown. In 1805 he was again employed in Italy when he beat the archduke Charles on the 16th of October near Verona, subsequently gained other advantages over him, and forced him to retreat into Hungary. He then commanded the army which took possession of Naples and again distinguished himself in the campaign in Poland in 1806 terminated by the treaty of Tilsit. He was employed in Germany in 1809 and on the 3rd of May he defeated the Austrians under the archduke John at the battle of Hohenberg and shortly after signalized himself in the memorable engagements of Leining and Wagram in which his services were so conspicuous that he was decorated by Bonaparte with the title of prince of Essling. He was afterwards opposed to lord Wellington in Spain and Portugal in 1810 and 1811 when he maintained his former reputation but was prevented by the skill and prudence of his adversary from gaining any new laurels. His Spanish campaign terminated his military career but he survived the Restoration of the Bourbon family dying at his seat at Rueil near Paris April 4th 1817.—*Biog. Nouv. des Contemp.*

MASSIEU (WILLIAM) professor of Greek in the college royal of Paris and member of the French academy and of the academy of inscriptions and belles lettres, was born at Caen in 1665 and died in 1722. In the latter part of his life he had the misfortune to lose the sight of both his eyes one of which he recovered by an operation. He was the author of several dissertations in the Memoirs of the Academy of Inscriptions a preface to a new edition of the works of Tourneur. A Translation of Six Odes of Pindar with Notes *Histoire de la Poésie Française* much esteemed for its elegant simplicity, and a Poem on Coffee inserted by the abbé d'Olivet in his collection of the works of some modern Latin poets.—*Morer: Annales Dot. Hist.*

MASSILLON (JOHN BAPTIST) an eminent French preacher was born in 1663 being the son of a notary at Hiersac in Provence. At the age of eighteen he entered into the congregation of the Oratory where his agreeable manners and address exciting the envy of some of his brethren, they hinted suspicions of a display of too much gallantry towards the females, and he was sent to one of the houses of the society at Meaux. He was afterwards appointed to teach divinity at Vienne, and produced so great an effect, by a funeral oration

M A S

that of the deceased archbishop, that his services were addressed to send for him back to Paris. In that capital he quickly distinguished himself, both by the purity and originality of his pulpit oratory until at length the concordat of the king was effected, and he was appointed to preach a course of Advent sermons at Versailles. His success was as conspicuous at court, as elsewhere, and Louis XIV who knew how to pay a fine compliment thus addressed him: "My father I have often had my pulpit filled with celebrated orators with whom I have been greatly pleased but whenever I hear you, I am displeased with myself." In 1717 the regent nominated him to the vacant see of Clermont; but before his departure he was appointed to preach a course of Lent sermons before Louis XV which collection, ten in number is known by the name of *Le Petit Carré* and according to D'Alembert forms a model of true pulpit eloquence. In 1729 he was admitted a member of the French Academy and two years afterwards was presented to the abbey of Savigny. The remainder of his life he spent almost entirely in his diocese耕耘ing all hours by his mildness, amiability and pastoral benevolence. He died in 1742 at the age of sixty nine. The only genuine edition of the works of Massillon is that published by his nephew at Paris, in 1745-6 in 16 vols. 8vo. His most striking passages and beauties have been collected in a single volume by the abbé de la Porte which selection has been since added as a last volume to the various editions of his works.—*D'Alembert Elogie de Massillon Nouv. Dict. Hist.*

MASSINGER (PHILIP) a distinguished English dramatist, in the beginning of the seventeenth century. He was the son of a retainer of the earl of Pembroke, and was born at Salisbury in 1585. He entered as a commoner at Alban-hall Oxford but quitted the university without taking a degree in consequence perhaps, of his having become a Roman Catholic. But little is known of his personal history yet he appears to have been intimately connected with the wits and poets of his time in conjunction with some of whom as Fletcher, Middleton, Rowley and Dekker he composed some of his dramas. He is supposed to have resided in the neighbourhood of the theatre Bankside Southwest and to have died there in 1639 as he was buried in the adjacent church of St. Saviour. As a dramatist Massinger is deemed more natural in his character, and poetical in his diction, than Jonson or Cartwright, and some recent critics rank him next to Shakespeare. In tragedy however he is rather eloquent and forcible than pathetic, and in richness and variety of humour his comedy can by no means vie with that of his great master. His plays were published collectively by Mr J. M. Masses and Mr T. Davies, in 1779 4 vols. 8vo., but the best edition is that of Mr W. Gifford, with notes, and a life of Massinger 4 vols. 8vo, 1806.—*Adams's G. Eng. Life by Gifford.*

MASSEON (FRANCIS) a grammarian and on theocratical historian, was born at Abbeville, in

M A S

1745. He was sent in 1771 to the Cape of Good Hope, to collect plants for the royal gardens and roamed with that object over a vast extent of country. He afterwards visited the Canaries and the West Indian islands, with the same object, and returned to the Cape in 1786, where he remained until 1795. He then undertaken a voyage to North America, and thus spent a great portion of his life in solitary rambling in furtherance of the branch of natural history to which he was so zealously attached. He thought himself repaid for all his labours by the attachment of the name Massonia to a specimen in the herbarium of Linnaeus with whom he corresponded. He published in 1796, a splendid folio volume on the genus *staphelia*.—*Fleiss's Cyclop.*

MASSON (JOHN) a minister of the reformed church who was a native of France whence he emigrated to England after the revocation of the edict of Nantes. He then settled in Holland and assisted in a critical journal entitled *Histoire Critique de la République des Lettres* from 1712 to 1721. He also wrote the lives of Horace, Ovid and Pliny the younger in Latin and *Histoire de Pierre Bayle et de ses Ouvrages* 12mo. He died in England about 1750.—**SANTEL MASSON** brother of the preceding, was pastor of the English church at Dordrecht, and was the co-doctor of the *Histoire Critique* just mentioned.—**PHILIP MASSON** a relative of the two former appears to have been a coadjutor in the same work. He was the author of a Critical Dissertation designed to shew the utility of the Chinese language in explaining various passages of the Old Testament.—*Compton's Hist. Crit. des Jours Brug. Univ.*

MASSEON (JOHN PAPIRIUS) a French historical writer born in 1544 and died in 1611. He entered into the society of the jesuits whom he left to become a counsellor of the parliament of Paris. His principal work is entitled *Eulogia Virorum Clarissimorum*. He also wrote *Annals of France* an Account of the Bishop's Seats a Description of the French Rivers and other works.—*Dict. Hist. Brug. Univ.*

MASSEUET (IRENE) a learned benedictine of the congregation of St. Maur was born at St. Ouen de Macellis in 1605. He published an edition of the works of St. Irenaeus more full and complete than any that had hitherto appeared and to this he prefixed three dissertations, which prove his judgment and erudition. He was engaged by his superiors on a continuation of the *Lives of the Saints* and the

Annals of the Benedictine Order to the fifth volume of which the life of Melchior was prefaced in Latin. Massuet was about to commence another volume, when he was seized by a paralytic stroke of which he died in 1710. Besides the above, he published a small piece in defence of the benedictine edition of *The Works of St. Augustine* and in 1706 he published a larger piece, addressed to the bishop of Bayeux in answer to his censure of several propositions selected from the writings of the benedictine professors at Caen. Five of his

M A T

Latin letter to D. Bernard Fox, a German benedictine, are inserted in the thirteenth volume of Schellhorn's *Anatomie Literaturae — Dapni. Moveri. Novis. Diss. Hist.*

MASTERS (Thomas) a poet, was born at Cotes in Gloucestershire and was educated at Worcester school, whence he removed to New College Oxford where he obtained a fellowship. He wrote *Mensa Lubrica* a poem in Latin and English, describing the game of shovel board. A Greek Poem on the Passions of Christ, translated into English by Cowley and three odes. *Carthus Redux*.

Ad Regem Carolum Iter Borale. He gave lord Herbert of Cherbury great assistance in his *Life of Henry VIII*, and also had a share in the translation of his lordship's work

De Veritate. He died in 1643. *Ath. Ox.*

MASHER (Rougar) a divine and antiquary was born at London in 1713 and was educated at Corpus Christi college Cambridge where he obtained a fellowship. In 1756 he was presented to the rectory of Landbeach in Cambridgeshire which he afterwards resigned to one of his sons-in-law though he continued to reside in the place and died there in 1798. He also had the vicarage of Linton which he exchanged for that of Waterbeach. He was the author of a most complete History of the College of Corpus Christi: A Section and Ichneumony of Pythagoras's School at Cambridge with the Seal of Merton college Oxford to which it belongs. "Memoirs of Thomas Baker: Account of the Parish of Waterbeach. Papers in the Archaeologia: A Catalogue of the Pictures in the University of Cambridge — Archæol. Lit. disc. Gough's Topography."

MATHER (Cotton) a North American nonconformist divine and ecclesiastical historian. He was the son of the rev. Increase Mather and was born at Boston in New England in 1663. He was educated at Harvard college Cambridge in the province of Massachusetts and in 1684 he entered on the ministry at Boston. He not only distinguished himself by attention to the duties of his profession, and by his literary labours but also by his public spirit and philanthropy which he manifested in the establishment of several useful institutions, and particularly of a society of peacemakers, whose professed object was the settling of differences and the preventing of lawsuits. He likewise published proposals for the establishment of an evangelical treasury for the erection of churches the distribution of good books, the relief of necessities, ministers for His merit procured him the diploma of DD from the university of Glasgow and he was also chosen a fellow of the Royal society. He died in 1728. His publications amount to more than three hundred and eighty in number many of them indeed to only single sermons and short tracts but others are of considerable size. Among these the most important is the Ecclesiastical History of New England, from its first Planting in 1690 to 1698." London, 1702 folio. His

Wonders of the Invisible World, being an

M A T

Account of the Trials of several Witches lately executed in New England," is a curious monument of the folly and prejudice of the age and country in which the author lived and in which he largely participated.—His father, INCREASE MATHER was also a native of New England but received part of his education at the university of Dublin and was for a time settled as a minister in Devonshire. He returned to his native country after the Restoration of Charles II and became pastor of a church at Boston, and afterwards president of Harvard college. He died in 1723, aged eighty-seven. He was the author of a Discourse on Comets reprinted a few years ago and other works.—*Biog. Brit. Life of C. Mather by Dr. Jennings.*

MATISSE (Quintin) a painter who was originally a blacksmith born at Antwerp in 1460. Different accounts are given of the occasion of his quitting the forge for the pen but most of his biographers agree that it was in consequence of becoming enamoured of the daughter of a painter whose hand was to be obtained only by a master of the same profession. He chiefly painted portraits and half figures in common life but sometimes undertook great works of which a descent from the cross in the cathedral of Antwerp, is a favourable specimen. His picture of the two sisters at Windsor is also much admired. He died in 1529.—*Petheram. De Pictis.*

MATHIAS OF WESTMINSTER as ancestor English chronicler was a Benedictine monk of the abbey of Westminster who lived in the fourteenth century. He compiled a chronicle commencing from the creation and extending to the year 1307 which he entitled,

Flores Historiarum whence he had the name of Florilegus. This work which chiefly relates to English history very freely transcribed from Matthew Paris is much esteemed for veracity and accuracy by some writers, but bishop Nicolson thinks very lightly of it. The *Flores Historiarum* was published at London 1567 and at Frankfurt, 1601 at both places in folio.—*Vassil. Hist. Lat. Nisi soni Hist. Latr.*

MATHIEU (Pierre) historiographer of France was born in 1563 at Parayre. He studied among the jesuits, and became principal of the college of Vercell. He was introduced to Henry IV by the president Jeannin, and on the death of Du Haillan was made historiographer of France. He died at Toulouse in 1611. His works are 'The History of France from Francis I to Louis XIII' 2 vols folio. "History of Henry IV" folio. "History of St. Louis" "History of Louis XI" "La Guise" a tragedy, and some moral verses, entitled "Quatrains sur la Vie et la Mort" — *Moveri. Novis. Diss. Hist.*

MATHIGLUS or MATHOLI (Petrus Andreev) an eminent physician was born at Serava in 1501 and educated at Venice and Padua. He practised at Anssia, at Rome, and at Gossia. He was extremely sensible, and of this the following is a proof. His sensors being consumed by fire at Anssia, the

M A T

people flocked to him the next day with presents of goods and money so that he soon became richer than before. In 1554 he accepted an invitation from Ferdinand king of the Romans, to become physician to his second son the archduke Ferdinand. In 1562 he was created sole counsellor to the emperor Ferdinand. Maximilian II prevailing upon his brother to part with him made him his first physician. He died at Treist, in 1577. His works are "A Commentary upon Dioclesius," the best edition of which was published at Venice in 1565. "Dialogus de Morbi Galli curature," "Epistola Medicinalis," "Opuscula de Simplicium Medicamentorum Facultatibus." — *Ross's Cyclop.*

MATIHEI (CHRISTIAN FREDERIC) a learned Hellenist, born at Gross in Thuringia in 1744. After studying under Ernesti he was invited by the empress of Russia to occupy the chair of belles lettres in the university of Moscow. He returned to Germany in 1785 to search for ancient MSS. in the public and private libraries. In 1789 he accepted the professorship of philosophy at Wittenberg but having finished his researches he returned to Russia laden with the stores of learning which he had collected. In 1805 he was nominated sole counsellor and professor in ordinary of classical literature at Moscow where he died in September 1811. He distinguished himself by the discovery of the

Hymn to Ceres attributed to Homer and part of the Clytemnestra of Sophocles which however has been rejected by most critics as spurious. Besides an edition of the New Testament in Greek and Latin 18 vols. 8vo 1788 Matthei published a vast number of editions of ancient authors and other works, the most important of which are enumerated in our authority. — *Bug. U. S.*

MATTI (DON EMANUEL) a Spanish poet was born at Oropesa in New Castle in 1663. In 1689 he published a volume of poetical essays, which gained him the affections of a lady of high rank and beauty but being an ecclesiastic, to avoid the temptation he went to Rome and Innocent XII made him dean of Alicant, at which place he died in 1737. His letters and Latin poetry were published at Madrid in two volumes 12mo, in 1735 and prove that he possessed much imagination and facility of writing. — *Am. Dict. Hist.*

MATUBIN (CHARLES) an ingenuous but eccentric clergyman of the established church curate of St Peter's, Dublin, and author of several popular romances, &c. many of which especially his "Family of Montoro," evince great powers of imagination with a happy fecundity of language but exhibit an almost equal degree of carelessness in the application of both. Bertram, a tragedy performed at Drury Lane Theatre, with Kean as the representative of the principal character was the first production which by its singular success, brought him into notice as an author. This effort is said to have produced him 1000*l.* In a subsequent dramatic attempt he was not so fortunate, while having, it is to be

M A U

feared, anticipated his resources, without contemplating the possibility of a failure he contracted embarrassments, from which he was seldom entirely free till his death in the October of 1823. He published in 1821 a poem in blank verse entitled "The Universe" which brought him more of profit than reputation and in 1824 appeared six of his "Controversial Sermons" preached at St Peter's, during the Lent of that year. These exhibit him as a well read scholar and an acute reasoner and are perhaps the best foundation on which to rest his claims to the notice of posterity. He is said to have been remarkably felicitous in their delivery and to have attracted by his eloquence unprecedented congregations. — *Genl Mag.*

MATY (MATTHEW) a learned and ingenious writer of the last century. He was the son of a clergyman and was born in Holland in 1718. Having finished his studies at Leyden where he took the degree of MD he came to England in 1740 and about ten years after he commenced a review of English books published in the French language under the title of "Journal Britannique." On the foundation of the British Museum Dr Maty was appointed one of the librarians, and on the death of Dr Knight in 1771, he obtained the office of principal librarian. In 1758 he was chosen a fellow of the Royal society and he succeeded Dr Birch as secretary to that institution. He died in 1776. He wrote

"Memoirs of the Earl of Chesterfield" prefixed to the miscellaneous works of that nobleman published in 1777 2 vols. 4to. —

MATY (PAUL HENRY) son of the preceding was born in 1745. He received his education at Westminster school and Trinity college Cambridge where he took the degree of MA and obtained a travelling fellowship. He took orders in the church but afterwards resigned the clerical office and dedicated his time to literary pursuits. He was assistant librarian at the British Museum and for a time foreign secretary to the Royal society but he relinquished that situation in consequence of a dispute with sir Joseph Banks. In January 1782 he commenced the publication of a monthly critical journal, called "The New Review" which he conducted with great spirit and ability unassisted for four years but his unremitting application injured his health and eventually caused his death which took place in 1787. He translated Baron Rennbeck's travels into English and a posthumous volume of his sermons was published in 1799. — *Nichols's Lit. Ance. Hutchinson's Bug. Med. Genl Mag.*

MAUBERT or GOUVEST (JOHN HENRY) a public writer less known on account of his works than for the singularity of his adventures. He was born at Rouen in 1781 and having finished his studies, he entered into the order of the capuchins. In 1793 he fled from his convent, and took refuge in Holland. He next entered into the Saxon army and served at the battle of Dresden, and afterwards became tutor to the son of his general. Having

M A U

by his writings, offended the King of Poland, he was arrested, and confined in the castle of Koszalintz till 1755. He obtained his liberation on condition of renouncing the habit of a capuchin but instead of confining himself to the cloister, he again made his escape and after a series of varied wanderings and projects he died at Altona in 1767. Among a number of works which he published on politics and contemporary history may be mentioned "Le Testament Politique du Cardinal Alberoni" 1720. "Histoire Politique du Siècle" 2 vols. 4to, "Le testament Politique de Walpole," and Ephraim Jusoff. —*Bug. Usq.*

MAUCROIX (FRANCIS) a French translator was born at Noyon in 1619. He followed the profession of an advocate but being disgusted with the law he entered the church and became canon of the cathedral of Rheims when he died in 1708. He translated The Philippics of Demosthenes, The Euthydemus and the greater Hippas of Plato, Some Gratulations of Cicero, The Homilies of St Chrysostom addressed to the people of Antioch, "Sanderus's History of the English Schism," The Lives of Cardinals Pole and Camppeggio, "the Rationarium Temporum of Father Petrus. In conjunction with Boileau he published a volume of their miscellaneous works and in 1726 were published Les Nouvelles Œuvres de Maucroix. —*Moresq. Hist. Dict. Hist.*

MAUDUIT (ISAAC) a political writer of some celebrity in his day was born in 1708 at Bermondsey in which parish his father was a dissenting minister. He was educated for the dissenting ministry himself but became a very prosperous merchant. He first appeared as an author in 1760 when he published a pamphlet entitled Considerations on the present German War which excited great attention. In 1763 he was appointed to the customs of Southampton and some time after agent for the province of Massachusetts and in consequence of the rising disputes with the Colonies he published in 1769 his Short View of the History of the New England Colonies. In 1774 he took up the cause of the dissenting clergy in a pamphlet entitled The case of the Dissenting Ministers, and subsequently wrote several able pamphlets in reference to the American war in which he was particularly severe on Viscount and Sir William Howe. He died in June 1787. —*Manning and Brey's Hist. of Survey*

MAUPERTUIS (PETER LOUIS MOREAU de) a celebrated French mathematician and philosopher was born at St. Malo in 1698 and studied at the college of La Marche in Paris where he discovered a strong predilection for the mathematics. At the age of twenty he entered the army in which he served four years. In 1723 he was received into the Academy of Sciences and soon after visited England and Switzerland where he became a pupil and admirer of Newton and formed a lasting friendship with the celebrated John Bernoulli and his family. On his return to Paris he applied himself to his favourite stu-

Bug. Dict. — Vol. II

M A U

ties, with greater ardour than ever; and the memoirs of the academy contain the most favourable testimonies of his soul and proficiency. In 1740, he formed one of the eminent scientific party appointed to measure a degree of the meridian at the polar circle; and so distinguished himself on the occasion that he was admitted a member of almost every academy in Europe. In 1740 he received an invitation from the king of Prussia to settle at Berlin where he did not remain long in the first instance and on his return to Paris was, in 1746 chosen director of the Academy of Sciences and the following year received into the French Academy. He returned to Berlin in 1744, and contracted an alliance with a young lady who was nearly related to M. Bork at that time minister of state. In 1746, he was declared by the king of Prussia president of the Academy of Sciences at Berlin and the same month soon after bestowed upon him the order of Merit. Fortune however as he was deemed by others an unhappy restlessness of temper and a dark ambitious humour proved a source of continued disquiet and a controversy with Keen which also subjected him to the ludicrous and overwhelming satire of Voltaire completed his unsuccess. At this time his health injured, it is said both by his northern expedition and incessant application began to give way and he sought relief by repeated visits to his native country. His disorder however seems to have uniformly revolved with his return to Berlin and he at length died on his return from one of these excursions at the house of his friend Bernoulli at Basle in 1759 in the sixty first year of his age. Maupertuis was a man of prolixity and of very considerable abilities as a mathematician and man of science but his acquaintance with general literature was far from extensive and his vanity and gloomy temperament materially interfered with his pretensions as a philosopher. His works which are collected in four 8vo volumes published at Lyons in 1756 and reprinted in 1768 consist of *Essay on Cosmology*, *Discourse on the different Figures of the Stars*, *Philosophical Reflections on the Origin of Languages*, *Animal Physics*, *Essay on Moral Philosophy*, *System of Nature*, *Letters on various Subjects*, *On the Progress of the Sciences*, *Elements of Geography*, *Expedition to the Polar Circle*, *Journey to Lapland*, in search of an ancient Monument

On the Comet of 1744, *Dissertation upon Languages*, *Academical Discourses*, Upon the Laws of Motion, Upon the Laws of Rest, *Agreement of the Laws of Nature* which have appeared incompatible, *Operations for determining the Figure of the Earth*, &c. Besides these works he was the author of a great number of interesting papers in the memoirs of the academies of Paris and Berlin. —*Hutton's Math. Dict.*

MAURICE (THOMAS) a learned Oriental scholar and historian descended of a respectable Welch family. On the death of his father who had for twenty six years held the

n. 1

M A U

as...200 of head-master in the Hereford department of Christ's hospital Thomas, the eldest of six children was admitted upon the foundation of that establishment but the air of London not agreeing with the delicacy of his constitution, he was soon after removed and went through a course of education at various private seminaries, the last of which was that of the celebrated Dr Parr then recently established at Stanmore hill. At the age of nineteen he entered at St John's Oxford but quitted that college in about a year after for University college where he was under the immediate tutorage of the present lord Stowell. About this period he commenced his career as an author by the publication of a translation of the *Edipus Tyrannus* of Sophocles (which gained him great credit)

'The School Boy' The Oxonian 'Leibnitz' and 'Hagley' poems A Monody to the Memory of the Duchess of Northumberland and a satire entitled Warley which last appeared in 1778. On taking his degree of AB he was ordained to the curacy of Woodford Essex but about two years after obtaining an unexpected bequest of 600/- he laid it out in the purchase of the chaplaincy of the 97th regiment the half pay of which he continued to receive till the day of his decease In 1785 he began the arduous undertaking of writing a history of India from the era of Alexander's invasion down to that period at which Mr Orme's work commences After seven years labour he was however induced to defer his original intention and to prepare for the press a separate work introductory to his grand design the first volume of which he printed in 1791 under the title of Indian Antiquities This treatise contains among other learned enquiries a learned dissertation on the Indian theology in which he endeavours to strengthen the doctrine of the trinity from that of the Divine triads as acknowledged by the Asiatics. In 1793 he brought out the first volume of his History of Hindostan The second followed in 1798 and the third and final part, in 1799. At this period earl Spencer presented him to the vicarage of Wormleighton Warwickshire and the appointment of assistant librarian to the British museum was also conferred upon him. In 1802 appeared his Modern History of Hindostan, incorporating the accounts given by Arrian Venetian Portuguese and British writers, to the close of the eighteenth century. The concluding volume of this work was not published till 1804 in which year the author was presented by the lord chancellor with the living of Cudham in Kent. He died at his rooms in the British museum, March 30 1824. Mr Maurice was intimately acquainted with most of the distinguished scholars of his time and in addition to the labours already recorded published during his life time a great variety of miscellaneous works the principal of which are "Irene Rediviva" an ode 1783; "Westminster Abbey" an elegiac poem, 1784, republished in 1813 in a more splendid form with other occasional poems,

M A U

'Plathaea or the Captive Bride' a tragedy and an "Elegy on the Duke of Northumberland" 1799 Elegiac Poem on the Death of Sir W Jones "S漫cer Fragments, and the Crisis, a poem 1798 Grove Hill" a poem, and an Ode to Minerva, "1799 Extracts from his Indian Antiquities" printed in a separate form, under the title of A Dissertation on the Oriental Tributes 1800 The Fall of the Mogul a tragedy 1806 Richmond Hill; a poem 1807 Supplement to the History of India 4to 1810 Brahminical Fraud detected in a series of Letters to the Episcopal Bench 1812 In this work he examines the attempts of the Indian priesthood to invest their deity Krishna with the attributes of the Christian Messiah known to them through the Fванge lium Infantiae Observations connected with Astronomy and Ancient History on the Ruins of Babylon as recently visited and described by Claudius James Rich Esq 4to and lastly an appendix to the latter treatise entitled Observations on the Remains of Ancient Egyptian Grandeur and Superstition as connected with those of Assyria —*Ann Big*

MAUROLICO or MALROLICUS (FRANCIS) a celebrated Italian mathematician was born at Messina in 1494. He was abbot of Santa Maria del Porto in Sicily and for a long time professor of mathematics in his native city. He made many important discoveries in geometry and optics on which he wrote the following works The Sphærica of Theodosius Emendatio et Restituto Conicorum Apollonii Perge Archimedis Monuments omnia Euclidis Phenomena Martyrologium Sicanarum Rerum Compendium Rime Arithmeticorum Libri duo Photinus de Lumine et Umbra Opuscula Mathematica Cosmographia De Lunea horaria" and Problematum mechanica ad Magnetem et ad Pyxidem natum pertinentia" Maurolico also restored the fifth book of Apollonius which had been lost —*Nicetas Neos. Diet. Huius Moveri*

MAURY (JOHN SIFFREIN) a modern French statesman and ecclesiastic. He was born at Valence in 1746 of a respectable family and having studied at Lyons he entered into holy orders. He settled in the metropolis where he became distinguished as an eloquent preacher and his talents were rewarded with church preferment and a place in the French academy. Previously to the Revolution he was also preacher to the king and on the occurrence of that event he was elected a deputy from the clerical order to the States general. He displayed his gratitude to his benefactors, and consecrated his eloquence to the defence of the monarchy. He opposed the re-union of the three orders, and that measure being effected he absented himself for some time from Versailles and was arrested at Périgueux but afterwards set at liberty by command of the legislative body. In the National Assembly he strongly advocated the rights and privileges of the king and of the clergy and endeavoured to prevent the pro-

M A Y

party of the latter from being declared national property. On the dissolution of the Assembly he went to Rome where the pope bestowed on him the title of bishop, and sent him, in 1792 as apostolic nuncio to Frankfort, to assist at the coronation of the emperor of Germany. Some time after he was made archbishop of Nimes, and in 1794 he received a cardinal's hat. When Bonaparte had established himself on the imperial throne of France the abbé Maury tendered submission to his authority and the archbishopric of Paris was bestowed on this eloquent churchman as the reward of his obedience. On the Restoration of the royal family he removed from his native country and died at Rome in 1817. He obtained distinction by his writings, as well as by his public discourses and among several works which he published his *Essai sur l' Eloquence* may be mentioned as highly creditable to his talents.—*Dicit de H M du 12me S. Biog. Marq. des Contemp.*

MAXIMUS TYRULS a celebrated philosopher of the second century was a native of Tyre in Phenicia, whence he took his name. It is generally supposed that he flourished under Antoninus. He appears to have adopted the principles of the Platonic school with an inclination to scepticism. He left forty-one

Dissertations on various philosophical topics still extant and written with extreme elegance. They were published in Greek by Stephenus in 1557 and in Greek and Latin, by Hermann in 1607.

MAY (Thomas) a poet and historian was the eldest son of sir Thomas May knt of Mayfield in Sussex where he was born about 1593. He entered a fellow commoner at Sidney Sussex college Cambridge and was afterwards admitted a member of Gray's Inn but he never seems to have followed the law as a profession. His father having spent nearly all the family estate he enjoyed but a scanty inheritance which misfortune he bore with great equanimity and consoled himself by an ardent attention to literature. He was much noticed by Charles I and the more refined wits of his early courts and first sought distinction in the drama, being the author of three tragedies and two comedies which were highly esteemed in their time. He also composed several poetical translations as Virgil's *Georgics* with annotations, Lucan's *Pharsalia* to the latter of which he supplied a continuation of his own both in Latin hexameters and in English. He likewise translated Barclay's *Icon Animorum* and had a share in the version of his *Argonautica*. Of the original poems of May the principal are his *Reign of Henry II*, and

The victorious Reign of Edward III each in seven books. The bounty of Charles I was not sufficient to secure the attachment of the poet for according to lord Clarendon, it was disgust at being denied a small pension which induced him, on the breaking out of the civil war to enter into the service of Parliament, to which he was appointed strategus and the result was his well known History of the

M A Y

Parliament of England, which began November 3, 1650 " a work which became extremely obnoxious to the royal party who vilified both the author and his production without measure. Granger however asserts, that with little elegance of composition there is much more candour than the royalists were willing to allow and the opinion of Warburton is still more favourable. He afterwards made an abstract of this history under the title of *A Briefary of the History of the Parliament of England 1650 &c.* He died a few months after the publication of his Briefary at the age of fifty five on the 13th November 1650 and his death which happened suddenly was attributed by Andrew Marvell to a little too much previous indulgence in wine. He was buried in Westminster abbey by the order of Parliament, which also erected a monument to his memory. This was taken away at the Restoration and the body of May with an dignified anomaly disinterred and tumbed with many others, into a pit, dug for that purpose in St Margaret's church yard.—*Biog. Drem Biog. Brit. Granger Warburton's Letters to Hurd*

MAYER (JOHN FREDRICK) a learned German Lutheran divine was born at Leipzig in 1630. He was very deeply read in the Latin Greek and Hebrew languages and being admitted to the degree of D.D. he became professor successively at Wittenberg Hamburg and Stettin in Pomerania and was appointed superintendent general of the churches in the district of that city. He died in 1712. His works are *The History of Martin Luther's German Version of the Bible, with a short Account of the Translations of the sacred Books before his Time &c.* *An Account of the Moderns who have written against the sacred Scriptures* 'An Exposition of the two first Paulus' *Bibliotheca Biblica*, "to which treats of the most celebrated Jewish Christian Catholic Calvinist and Lutheran authors who have illustrated the sacred Scriptures, *Enquiries Dissertations*; &c.—*Mores Novi Duci Huf*

MAYER (TOBIAS) an eminent astronomer and mechanician was born at Massbach in the duchy of Wurtemberg in 1723. He taught himself mathematics and at a very early age he employed himself in designing machines and instruments which was his father's profession. At the same time he applied to the study of the classics and wrote Latin with elegance. At the age of eight-and-twenty he was appointed mathematical professor at the university of Gottingen. He made many considerable discoveries in geometry and astronomy and invented several useful instruments for the more exact measurement of angles on a plane. He died at the early age of thirty nine exhausted by his labours. His table of refractions deduced from his astronomical observations agrees very nearly with that of Dr Bradley and his theory of the moon and astronomical tables and preceps were rewarded by the English board of Longitude with 3000*N.* which were paid to his

M A Y

widow. He was also the author of "An Answering of a Larger Globe constructed by the Chronographical Society of Nuremberg from new Observations," "A Mathematical Aise;" "A new and general Method of resolving all Geometrical Problems by Geometrical Lines, &c with many very exact maps.—Now. Dict Hist. Hutton's Math. Diet.

MAYERNE (Troxdown Tunquer de) baron d'Assoeuse an eminent physician, the son of Louis de Mayerne author of a "General History of Spain" and of the Monarchs Aristocrate-démocratiques, was born at Geneva in 1573. He studied physic at Montpellier, where he took his doctor's degree in 1597. In 1600 he was appointed physician in ordinary to Henry IV who sent him to attend Henry duke of Rohan, departed ambassador to the diet at Spire. On his return he lectured publicly on pharmacy and anatomy and applying himself to the study of chemistry he incurred the anger of the faculty by his recommendation of chemical remedies. In 1607 he came over to England but returning to France he remained there until the assassination of Henry IV when he was formally invited by James I to come and take the office of first physician with which he was clothed. He continued in that post during the reign of Charles I, and died at Chelsea in 1655. His works were all published in folio in 1701 by Dr Joseph Brown. Lord Oxford says, in his Anecdotes of Painting that the famous Peitot owed the perfection of his colouring in enamel to some chemical secret communicated to him by Mayerne. He was also well acquainted with natural history and was the editor of Mouffet's posthumous *Theatrum Insectorum*.—Haller's Bibl. Med. Prac. Asiat. & Bieg. Mon. of Med. Morer.

MAYNARD (Sir John) an English statesman and lawyer born at Tavistock in Devonshire in the early part of the seventeenth century. After having studied at Exeter college Oxford, he entered at the Middle Temple and was in due course called to the bar. He was a member of the Long Parliament, and was actively engaged in the prosecution of the earl of Strafford and archbishop Laud. He afterwards showed that he was influenced by principle as he opposed the tyranny of Cromwell with as much firmness, that he was estimated to the Tower. He attained the rank of sergeant-at law and after the Restoration received the honour of knighthood and might have been raised to the bench but he declined the promotion. In the parliamentary debates which took place previously to the restoration of James II he warmly advocated that measure. His bon-spot, an reply to an observation addressed to him by William III, though well known may be mentioned as expressive of his character and sentiments. That prince, in allusion to sergeant Maynard's great age having remarked that he must have outlived almost all the lawyers of his time—"Yes," replied sir John, "and if your highness had not come over to our country now, I should have outlived the law too."

M A Y

He was appointed one of the commissioners of the Great Seal in 1689, and he died in the following year.—Bog. Brit.

MAYNARD (Francis) a French poet and member of the Royal academy born at Toulouse in 1589. His poems obtained less considerable reputation in his day but they are now little known. He was secretary to two queens of France, a situation probably of more honour than profit, as the poet having neglected the most certain road to independence by the undutiful exertion of his talents, and being disappointed in his hopes of preferment from the patronage of cardinal Richelieu, retired in disgust to his native province, where he died in 1646.—Morris' Diet. Hist.

MAYNE (Jasper) a dramatic writer of the seventeenth century. He was a native of Hatherleigh in Devonshire and was educated at Westminster school and Christchurch, Oxford where he took the degree of DD and he also entered into holy orders. His attachment to the royal cause exposed him to suffering during the civil war but after the Restoration he was made a canon of Christchurch and archdeacon of Chichester. He wrote a comedy called *The City Match* and *The Amorous War* a tragic-comedy and translated some of the dialogues of Lucian besides which he published some sermons. His theatrical productions display a good deal of humour but of the broadest kind though he has the merit of not being chargeable with the want of decency so common in the dramatic works of his contemporaries.—Bog. Brit.

MAYNWARING (Arthur) a political and miscellaneous writer was born of a good family at Iglesfield in Shropshire, in 1668. He was educated at the grammar school of Shrewsbury and in due time removed to Christchurch Oxford. He commenced under the auspices of an uncle who was a dedicated Jacobite and one of his first literary attempts was a satire on William and Mary entitled *Tarquin and Fulvia*. He subsequently however fell into company with the Whig leaders, and changing his political sentiments altogether became first commissioner of customs, and afterwards auditor of the mint. In 1705 he was chosen burgess in parliament for Preston in Lancashire. He died in 1712 leaving the celebrated Mrs Oldfield the actress by whom he had a son his executor. He published many miscellaneous productions in verse and prose which were much esteemed in their day. All these were collected by Oldmixon into an octavo volume entitled *The Life and Posthumous Works of Arthur Maynwaring, Esq.* which contains many curious particulars in relation to the political history of the times.—Life by Oldmixon.

MAYOW (John) a learned physician, was born in Cogswell in 1645, and studied at Oxford. He graduated in civil law but studied and practised physic at Bath. He died at the house of an apothecary in York-street, Covent-garden in 1679. He wrote *De Salo Nitro-nitico*, " De Rumpi-

M A Z

riations," " De Reptiles," " De Respiracione Foetus in Utero et Ovo," " De Motu Musorum et Spiritibus Animalium," " Tractatus quinque Medico-physicus." From these treatises he may be at least considered as a precursor to some of the most remarkable discoveries in pneumatic chemistry and had he been living in the present day would have been among the first of classical physiophysics.—*Haller's Bibl. Gen. Ency. Diet.*

MAZARIN (JULIUS) a celebrated statesman of the seventeenth century. He was born at Picina in the territory of Abruzzo in Italy July 14 1602. He received his education at the Spanish university of Alcalá, and afterwards going to Rome he entered into the service of cardinal Sacchetti with whom he went into Lombardy. Though he had embraced the ecclesiastical profession he made politics his chief study and having been instrumental in arranging the contested points between the French and Spaniards, and thus contributed to the treaty of Querbes he obtained the patronage of cardinal Richelieu through whose influence and the recommendation of cardinal Barberini he was sent by the pope as nuncio extraordinary to the court of Versailles, towards the close of the reign of Louis XIII. That prince in 1641 procured him a cardinal's hat and on the death of Richelieu in the following year Mazarin became prime minister. A few months after the king died and the new premier by his influence with the queen regent Anne of Austria in the minority of her son Louis XIV arrived at the possession of supreme power. At first his administration was popular but discontent arising from various causes France became the scene of intestine commotions and the cardinal found himself obliged to give way to the power of his enemies and quit the helm of the state. He was forced to flee to save his life as a price was set upon his head and his valuable library was confiscated and sold. But the king shortly after coming of age recalled Mazarin to his council and he soon resumed his former ascendancy. He made peace with the government of Spain by which the malcontents had been supported and he negotiated a treaty of marriage between the king his master and the Spanish infants. Having thus secured his power he maintained his station till his death which took place at Vincennes March 9 1661. Cardinal Mazarin was an able politician but a profigate character both as a statesman and an ecclesiastic. It is somewhat remarkable that notwithstanding his worldly profligacy he was a believer in astrology and the like of juggling impostors. His correspondence has been published.—*Voltaire Histoire de Louis XIV. Moreri.*

MAZEPPE (JOHN) hetman of the Cossacks, the hero of lord Byron's poem, which takes its title from his name. He was born in the principality of Podolia, of a noble but depressed Polish family and became page to the king John Casimir in whose service he acquired a good education. Engaging in an intrigue with a married lady which was discovered by her

M A Z

husband, Mazeppe was banished to the back of a wild horse, and left to die alone. The animal having been lost in the deserts of the Ukraine directed his course thither, and expiring at length with fatigue, dropped beneath his miserable rider who was found by the peasants of the country half dead. Their hospitable care recovered him, and he took up his residence with them. His talents and knowledge soon raised him to eminence among a people where all power was elective. The hetman of the Cossacks having been deposed in 1687 Mazeppe was substituted in his place. He displayed great ability in maintaining his authority and acquired the confidence of the czar Peter the Great, who bestowed on him the cordon of St Andrew and the title of privy counsellor. Created prince of the Ukraine he became tired of his dependence on the czar and entered into a secret league with Charles XII. His scheme being prematurely discovered and his capital Batoum having been taken by the Russians he was obliged to flee and join the Swedish king who was advancing towards the Ukraine with his army. The battle of Poltava was the result of his counsels and after that disastrous engagement he took refuge at Bender and died there in 1709.—*Bog Univ.*

MA/OCHI (ALEXIO SYMACHO) a learned antiquary was born in 1684 at St Marie a village near Capua. He was ordained priest in 1709 and became professor of the Greek and Hebrew languages in the Neapolitan seminary. In 1711 he was made a canon of Capua, and afterwards theological professor at Naples, and royal interpreter of the Holy Scriptures. He died in 1771. His works are *Commentarium in multum Campanie Amphitheatri tuolum clasique manusculae Inscriptiones*, "Ad Bernardum Tancrecum Epistola—de Dedicacione sub usci, Commentarium in vasis marmoreis S. Neap-Eccles. Calendarium Notes on the New Testament Dissertations on the Poetry of the Hebrews Antiquities of the Campagna of Rome." He also left a work in MS. on the Origin of the City of Capua, &c.—*Fabretti Vite Italorum.*

MAZZA (AVOLIO) an eminent Italian poet, born at Parma November 8th, 1740. After having finished his studies at the college of Reggio where he published some verses which attracted much notice, he went to Padua, whence he removed to Venice. At the latter city he produced a translation of Aleksander's *Pleasures of Imagination*, and in 1768 he was recalled to Parma to take the chair of Greek literature. Circumstances induced him to go to Bologna, and take the religious habit, which, however, he quitted after a few years. He then engaged in translating the odes of Plautus and having attained a high degree of literary reputation, he was admitted into the Accademia at Rome. He died in 1817.—*Bog. Nouv. des Contemp.*

MAZZUCHELLI (GIAMMARIA count) a nobleman of Brescia, who flourished in the early part of the eighteenth century. He was

MEA

the author of "Notizie Ierarchiche e Cattoliche intorno alla Vita, alle Invigilazioni ed agli Sacerdoti di Arcivescovo Bergamo;" "La Vita di Papez Antone." He also commenced a large biographical work, "Gli Sacerdoti d'Italia," of which he only finished the two first letters. He left his sons a large collection of materials for the subsequent parts, which J. Bapt. Redolfi gave some expectations of publishing. Masserelli died in 1765. During his life there was published "Missa pro Massereili habens esse Numismata virorum Doctrinae praestantissima quae apud Soc. Mar. Comites Massachelliensium Eiusmodi servatur" 1761, fol.—Sartorius Tivoli.

MEAD (RICHARD) a celebrated English physician born at Stepney near London August 11th 1673. He was the son of the rev Matthew Mead, a dissenting minister, and author of some religious publications. After some preliminary education he went to the university of Utrecht in 1689 and in 1692 he removed to Leyden where he more particularly applied himself to the study of medicine and during the three years he remained there he formed an intimate acquaintance with his fellow pupil Boerhaave. He afterwards travelled into Italy and having taken the degree of doctor of medicine and philosophy at Padua, in August 1695 he visited Rome and Naples. Returning to England in the following year he settled as a physician at Stepney and continued to practise his profession there for several years with increasing reputation. In 1703 he made himself known in the literary world by his "Mechanical Account of Fevers" which he long after republished in an improved form. In 1703 he was chosen physician to St Thomas's hospital, and in 1706 he became a fellow of the Royal Society of which he was afterwards a vice president. He was admitted a fellow of the college of Physicians in 1716 and filled the office of censor in the years 1716, 1719 and 1724. Such was the opinion entertained of his professional knowledge that on the alarm occasioned by the plague at Marseilles, in 1719 he was consulted by the secretary of state as to the best methods of preventing infection when regulations for the performance of quarantine were adopted according to his advice and he published a "Discourse concerning Pestilential Contagion," which passed through many editions. He interested himself much in the introduction of inoculation for the small pox, and assumed in the pulmonary experiments made on condemned criminals. In 1757 he was appointed physician to king George II, and he had the singular fortune to have by his associates two sons in law Dr Wilkes and Dr F Nichols. In 1754 he declined the presidency of the college of physicians, being unwilling to add to the number of his avocations. Among his later writings, are his treatises "De Imperio Solis ac Lunae in corpora humana et mortis inde oriundis," 1746, "De Mortis Biblicis," 1749 and "Monita Medicorum" 1750. He died 17th February 1755 and was interred in the

MED

Temple church, and a monument, with a commemorative inscription, has been erected in Westminster Abbey. Dr Mead collected a noble library consisting of more than ten thousand volumes, a valuable cabinet of medals and a gallery of paintings, all which were sold by auction after his death.—*Histoire des Biog. Med.* Adors & G. Baug

MECHAIN (PETER FRANCIS ANDREW) an able French mathematician and astronomer was born at Lecon in 1744 where his father was an architect. At an early age he discovered a strong predilection for mathematical pursuits, and became a correspondent of Laplace even while under the instruction of his tutor. In 1772 he was invited to Paris, and employed in the dépôt of the marine and subsequently at Versailles where he acquired great reputation as an astronomer. He calculated the orbit of the comet of 1774 and discovered that of 1781. In 1782 he was admitted a member of the academy of Sciences, and in 1790 discovered his eighth comet the orbit of which he calculated. In 1792 in conjunction with M. Delambre he undertook the labour of measuring the degrees of the meridian for the purpose of more accurately determining the magnitude of the earth, and in 1793 completed the measurement of the triangles between Perpignan and Barcelona. He died in September 1805, and is spoken of by Laplace as one of the ablest astronomers of France.—*Ross's Cyclop.*

MECKEL (JOHN FREDERICK) a distinguished German anatomist, born at Wetzlar in 1714. He studied at Gottingen and then at Berlin and returned to the former university to receive the degree of MD. He was appointed demonstrator of the school of female accoucheurs in 1751 and professor of midwifery in 1753. His great reputation as an anatomist, attracted a multitude of strangers to his lectures especially from Strasburg and Paris. He quitted the chair in 1755 and died surgeon to the king of Prussia, September 18th 1774. He published an inaugural thesis, "De quato parte Cerebrum 4to, Diss. epist. de Vis in Lymphaticis glandulisque conglobatis, 1757 4to and other works.—His son **PHILIP FRANCIS THEODORE MECKEL** was brought up to the father's profession. He was born at Berlin in 1756, and was educated at Gottingen and Strasburg. After having been professor of anatomy and surgery at Halle and at Strasburg he was in 1795 invited by Paul I to Petersberg and was nominated physician to the empress, privy-councillor and inspector of the hospitals of that city. He died March 18th, 1803. He was the author of a great number of anatomical dissertations, and he published a translation of Haller's "Elements of Physiology" and other works.—*Bog. Unit.*

MEDE (JOSEPH) a learned divine of the seventeenth century, was born of a good family at Berden in Essex, in 1636. He became a canon of Christchurch, Cambridge where he took the degree of MA in 1656 and obtained a fellowship. He was also ap-

M E D

painted Greek lecture on sir Walter Ralegh's foundation, and particularly employed Massell in studying the history and antiquities of the Chaldeans and Egyptians. In 1618 he took the degree of BD and in 1627 published at Cambridge in 4to his *Chavis Apocalyptic* which work was reprinted at London and in English in 1650. It is esteemed by biblical critics as the ablest explanation of the obscure prophecies to which it refers. He died in 1658 and a collection of the whole of his works was published in 1677 in 2 vols. folio by Dr Worlton who added thereto a life of the author.—*Bug Brt.*

MEDICI (Cosimo de') an illustrious Florentine memorable alike for his personal abilities and for the rank and power of his descendants. He was the son of John de Medici a merchant of Florence and was born in 1389. His father died in 1428 and the vast wealth which he inherited afforded him the means of displaying his liberality and thus acquiring great influence in the republic. His ambition was gratified by the acquisition of the highest honours which his fellow citizens could bestow, but the splendour and magnificence in which he lived excited jealousy and alarm and procured him also a multitude of enemies. The Stromi the Albizi and many of the first Tuscan families combined against him he was imprisoned on a frivolous pretext and was in the utmost hazard of being poisoned by one of his political antagonists. By the most consummate art and prudent management Cosimo extricated himself from the toils of his enemies and transporting his vast capital to Venice he made the Florentines severely feel the decay of their country's opulence in consequence of his migration. After about a year's absence, he was recalled with honour and his son Rinoldo d' Albizi and others, were obliged in turn to become exiles. He restored the commercial prosperity of his native city where he reigned without a rival employing his treasures in the encouragement of literature and its cultivators. The learned Greeks who left their country on the capture of Constantinople found an asylum at Florence where Cosimo founded an academy and collected a noble library of MSS. He died in 1464 and such was the general estimation in which he was held that the Florentines inscribed on his tomb the title of "Father of his country"—His son, Piero de' Medici inherited neither the good fortune abilities nor popularity of his father to whose station he succeeded as head of the republic of Florence. Though he was educated by the learned Poggio he made no progress in literature tormented with the gout and other diseases he became at an early age a melancholy and peevish cripple and envy at the wealth and power which he possessed having excited the enemies of his family to contrive perpetual plots against him he lingered out a miserable life in superintending affairs beyond his comprehension, and in guarding a painful existence from being terminated by assassination of which he was continually apprehensive. He died in 1492.—The splendour of this family of

M E D

aristocratic merchants was dissipated in Lorenzo de' Medici, the son of Piero who was born in 1449. Some of the fine Heresi of the age were engaged as his tutes, and Pius, prince of Mirandola and the celebrated Foliati were his fellow pupils. His proficiency under such circumstances was creditable to his abilities, and he became distinguished, both as a patron and a cultivator of literature. At the age of 21 he succeeded his father. In his political capacity he acquired the respect of foreign potentates, and particularly of the Turkish sultan Bayazet, but his disputes with pope Sixtus IV exposed him to great personal hazard. A conspiracy was formed by the hereditary enemies of his family the Pazzi, in which the pope and the archbishop of Pisa were confederated the object of which was to assassinate Lorenzo and his brother John de Medici. The attempt was made during the celebration of divine service at church April 26 1478. John fell a victim to this horrible plot but Lorenzo defended himself with such spirit and vigour that he escaped assassination the ruffians who had attempted his life were taken some of his foes were punished with death and others banished from Florence. He subsequently subdued Volterra and having adjusted his disputes with the pope he was at leisure to indulge his taste in schemes for the advancement of learning and the arts, which he prosecuted with a degree of energy and success which have deservedly procured him the title of "Lorenzo the Magnificent." He revived the Academy of Pisa established another at Florence collected a vast treasure of literature and founded a gallery of art where Michael Angelo under his patronage pursued his youthful studies, and improved his taste and skill. He sent John Lascaris to Greece to gather MSS. wherewithal to enrich his library; and by his princely generosity to the learned and his exertions for the improvement of literature he showed himself an emulator of the glory of his grandfather. He died in the zenith of his renown much lamented by the votaries of learning and the arts as well as by his countrymen in 1492. The poetical productions of Lorenzo de' Medici have been repeatedly published the most complete edition being that of the abbe Serassi entitled "Poese del magnifica Lorenz de' Medici," Bergamo 1763, 8vo. These pieces have been translated into English.—*Bug Unit. Rossetti. Life of L. de' Medici.*

MEDINA (Sir JOHN) a portrait painter was the son of a Spanish officer who settled at Brussels, where he was born in 1659 and instructed in painting by Du Chatel. He married young and came to England in 1686 where he obtained much reputation as a portrait painter and then accepted an invitation to settle in Scotland. He was knighted by the duke of Queensberry lord high commissioner, being the last instance of that honour conferred in Scotland as a separate kingdom. He died in 1711 aged fifty-two. Walpole describes his talents as very respectable but although he painted the portraits of most of the Scottish

nobility, he possessed an impediment to riches in a family of twenty children.—His grandson JOHN MEEHAN, also a painter, the last of this name, died in 1796.—Walpole's *Anecdotes*.

MEERMAN (GERARD) a Dutch writer on jurisprudence and literary history. He was born at Leyden in 1722, and at the age of 17 he became an author. Between 1744 and 1747 he made several voyages, on his return from which in 1748, he was appointed pensionary counsellor of the city of Rotterdam, which office he resigned in 1767. In the preceding year he had been made counsellor of the high tribunal of the chancery of Holland and West Friesland and he died at Aix la Chapelle December 15 1771. The emperor of Germany created him a baron of the empire and Louis XV to whom he presented some valuable MSS invested him with the order of St Michael. Meerman possessed an immense and precious collection of printed books and manuscripts which he used in the composition of several valuable works among which may be specified ' Novus Thesaurus Juris civis et canonici,' 1751—54, 7 vols. folio, and " Origines Typographicae," 1765 4to. In the latter production he advocates the claims of Laurence Coster of Haarlem to the invention of printing.—JOHN MEERMAN son of the preceding born in 1753 was early distinguished by a predilection for learning. He studied under Erasmus at Leipsic, afterwards travelled in Saxony and Prussia and completed his education at Leyden where he took the degree of LLD in 1774. He then visited France, Italy, Germany, Great Britain and Ireland, and on his return home he was chosen burgomaster of Leyden. His love of knowledge induced him to resign this situation that he might spend his time at travelling. Under the reign of Louis Buonaparte he was director of the fine arts and of public instruction in the kingdom of Holland and on the union of the country to France, he was made a count of the empire and senator. He died August 19 1815 generally leaving to the city of the Hague the rich library of his father which he had greatly augmented. His published works are numerous including a supplementary volume to his father's ' Thesaurus'; ' The History of William, earl of Holland, and king of the Romans' 5 vols. 8vo ' The Relations of Great Britain and Ireland of Austria, of Prussia and of Sicily,' 1787—94, 5 vols. 8vo ' The Relations of the North and North West of Europe 1800—6 6 vols. 8vo, comprising observations made by the author in his travels.—Burg Unit.

MEHEGAN (WILLIAM ALEXANDER de) a miscellaneous French writer was born at Sallé in the Cevennes, in 1721 of a family of Irish extraction. The delicate state of his health prevented him from adopting the military profession; in which his family distinguished themselves, and he applied himself to the cultivation of literature. He was the author of " Considerations sur les Révoltes des Arts" " L'Origine des Guebres, ou la Religion Na-

tuelle mise en action," " Mémoires de la Marquise de Terville;" " Lettres d'Aspres;" " L'Origine des Progrès et la Décadence de l'Humanité." Berthe's principal work was not published until some time after his death, and was entitled, " Tableau de l' Histoire Moderne," 3 vols. 12mo. It is divided into seven epochs, beginning from the year 1767 and concluding with the peace of Westphalia in 1648. This work is full of pictures, which are sometimes coloured too highly, but it is written in an eloquent and animated style and is commendable on account of its generally philosophical and impartial spirit. Another posthumous work of Méhegan's is entitled " L'Histoire Considérée vis-à-vis la Religion, les Beaux Arts, et l'Etat" 3 vols. 12mo. Méhegan died in January 1766.—Naufrage Frans Now Det. Hist.

MEHUL (STEPHEN HENRY) a celebrated musical composer and member of the Institute of France born at Grive in 1763. He received his first lessons from a blind organist at his native place and became such a proficient that, at the age of 12 he was appointed joint-organist to the abbey of Valdieu. The desire of improving his talents attracted him to Paris in 1779. He there studied with great advantage under Edelmann and afterwards under Gluck and after the departure of the latter for Vienna Mehul presented to the Royal Academy of Music the opera of " Cora et Alonso" but his " Esphrose et Coradis" was first performed at the comic opera, in 1790. This was followed at different periods by " Stratouc," " Irato Joseph" and many other operas besides the ballets of " The Judgment of Paris" " Danomanie" and " Perseus and Andromeda." Mehul was one of the three inspectors of instruction at the Conservatory of Music from its creation in 1795 till its suppression in 1815. He was then appointed superintendent of music at the king's chapel and professor of composition at the Royal School of Music. He was chosen a member of the Institute in 1796 and of the Academy of Fine Arts in 1816, and he was also a knight of the legion of honour. He died at Paris October 18 1817. Mehul read before the Institute two reports " Sur l'Etat Actuel de la Musique en France et sur les 1^{re} vaux des Élèves du Conservatoire à Rome. The Danomanie and other productions of this composer have been performed on the English stage and have deservedly attracted the admiration of our dilettanti.—Eng. Univ Mag. Nous des Contours.

MEIBOM (JOHN HEWY) in Latin Mervinus) a celebrated physician was a native of Helmstadt where he was born in 1590. After travelling for improvement into Italy and taking his doctor's degree at Bazel, he returned home and occupied a medical chair at the university of Helmstadt. In 1656 he was appointed physician of Lubeck where he died in 1655. His works are " Arctii Cassiodori Formulae Comitis Architectorum cum Commentariis," 1650, 4to; " De sua sagittaria in re medica et veterina;" " Supradictum Hippo-

treis, Gr. et Lat." with commendations relative to the history of Hippocrates, his diseases, &c. After his death appeared his treatise "De Corvinae, pathologia et inservientia extra Viaria alia."—His son HENRY MANNER also a physician was born at Lübeck in 1638. After travelling for improvement he took his degree of MD and became professor of medicine in the university of Helmstadt. In 1678 he was made professor of poetry and history. He was the author of numerous medical and anatomical dissertations, in which last science he greatly distinguished himself by his investigation of the sebaceous glands and ducts in the eyelids, the valves of the veins, and the papillae of the tongue. He is best known by his historical publications, the principal of which, *Rotum Germanicum tomus tres*, is a collection of writers on German history. He also wrote many pieces concerning the dukes of Brunswick and Lüneburg and in 1687 he published *Ad Saxoniae universitatis primum Historianum Introductio* treating of the works which have been composed on the history of Saxony. Henry Manner died in 1700.—*Haller Bibl. Med. et Antiqu. Mavri.*

MEIBOMIUS (MARCUS) a learned philologist born at Tønning in the duchy of Holstein in 1611. Setting at Stockholm, he acquired the favour of queen Christina whom he inspired with much of the same enthusiasm with respect to the accents which possessed himself. Having prevailed upon his royal mistress to be present at a concert which he proposed to conduct entirely upon the plan of the ancient Greeks, the ill-concealed ridicule of some of the courtiers, at the absurdity of the performance excited her anger so violently that, forgetful of the presence of the sovereign he struck M. Bourdelet a physician who as he fancied encouraged it a violent blow in the face. This indiscretion induced him to quit Sweden for Denmark where he obtained a professorship in the college established for the education of the young nobility at Sorø, was eventually advanced to the rank of a royal counsellor and made president of the customs. His inattention to the duties of his post soon caused his removal on which he repaired to Amsterdam and became historical professor there but lost this appointment also by his pertinacity in refusing to give lessons to the son of one of the principal burgomasters. After visiting France and England Menbomius returned to Amsterdam, and died there in 1711. His principal work is an edition of the seven Greek musical writers, *Anastorgaeus, Euctet, Isocinesches, Alypius, Gaudentius, Bacchus, and Anstides Quintilianus* with an appendix, containing the *De Musica* of Maccus Felix. His other writings are

"Dialogues on Proportions" On the construction of the Trireme Galles of the Ancients; and an edition of *Dioogenes Laertius* 4to. 8 vols.—*Mavri. Hawkins's Hist. of Mus.*

MEIEROTTO (JEAN HENRY LEWIS) born in 1745, at Stargard in Pomerania, where his father was rector of the Calvinist school. He

was first attracted by the study of natural history, but afterwards devoted himself to classical literature. After having studied at Joachim college, Berlin, he obtained the place of sub-librarian in the university of Frankfurt-on-the-Oder which he left in 1763 to become tutor to the son of a rich financier at Berlin. In 1775 he obtained the first professorship of the college in which he had been educated, and three years after he was appointed rector. He made considerable improvements in the course of study pursued in the institution which he conducted and he was patronised by Frederick the Great and still more warmly by his successor. He died in September 1800. Meierotto published *Ciceronis Vita ex Oratori Scriptis excerpta*, and other works in Latin and in German.—*Bieg Univ.*

MEINERS (CHRISTOPHER) a learned German historian and miscellaneous writer born in the Hanoverian territories in 1747. He studied at Göttingen, where in 1771 he became professor of philosophy and in his turn he very respectfully filled the situation of prorector. He was also an active member of the royal academy of sciences at Göttingen, and the government of Hanover bestowed on him the title of aulic counsellor. He published in conjunction with Spittler *The Historical Magazine* 1791-94 and with Feder he was associated in *The Philosophical Library* 1798-91. The Life of Meiners was but little varied from the regular routine of his college duties and literary studies, except by occasional journeys into different parts of Germany and Switzerland which gave rise to his *Letters on Switzerland* 1784 2 vols. He died in 1810 leaving a multitude of literary productions, a complete list of which may be found in Meissel's *Dictionary of German Writers* and the most important are also enumerated in the annexed authority.—*Bieg Univ.*

MEISSNER (AVGUSTUS THEOPHILUS) a German romance writer was the son of a Saxon quarter master and was born at Besten in Lusatia, in 1753. He studied law and the belles lettres at Leipzig and Wittenberg and after obtaining an office in the chancery became keeper of the archives at Dresden. He commenced his literary career by translating comic operas from the French, and afterwards distinguished himself as a writer of anecdotes, tales, romances &c. In 1785 he obtained the chair of belles lettres at Prague, and twenty years after he was invited to Fulda, to direct the superior schools, when he received the title of counsellor of the prince of Nassau. He died in 1807. Meissner translated Hume's *History of England* into German, 1777 1780, and wrote a number of historical romances and other works. His Sketches have been partly translated into French Danish and Dutch.—*Bieg Univ.*

MEISTER (LEONARD) an undistinguished Swiss writer born in 1762. He was appointed professor of history and morals at the school of arts at Zurich in 1773 and in 1795 he obtained the prebend of St James in that city

M E L

and afterwards other professor. He was secretary to the Helvetic directory at Lausanne, from 1798 to 1800; and he died at Cappel, October 19, 1813. His publications amount to the number of eighty, in the German language. Among the most interesting are "Memoirs for the History of the German Languages and Literature," "The Celebrated Men of Helvetia"; "The illustrious Natives of Zurich"; "Characters of the German Poets," and a "History of Zurich." —*Bug Unv.*

MELA (Pomponius) a geographer who flourished during the first century of the Christian era. Little more is known of him than that he was a native of Spain and the author of a treatise in three books in the Latin language, *De Situ Orbis*, containing a concise view of the state of the world so far as it was known to the ancient Romans. Among the latest and best editions of this work are that of Abt Granovius L Bat 1782 8vo and the very complete one of C H Tschackius Lips 1867 7 vols. 8vo.—*Stoth's Introd in Hist Lit Mervl.*

MELANCTHON (PHILIP) a German divine, who was one of the principal associates of Luther in the reformation of the church. He was the son of an armourer and was born February 16 1497 at Bretten in the palatinate of the Rhine. He studied at the college of Pforzheim where he became acquainted with Reuchlin who in compliance with a frequent custom of the literati of that period gave his young friend the Greekized name of Melancthon having the same signification with that of his family which was Schwartzel or black earth. He afterwards went to the universities of Heidelberg and Tubingen at the latter of which he took the degree of master of arts at the age of sixteen. The following year he commenced doctor and read lectures on the classics. In 1516 he was appointed professor of Greek literature in the university of Wittenberg which situation he held to the end of his life. Here his intercourse with his colleague Luther led to a permanent friendship between them and a similarity of religious sentiment though their personal characters and dispositions were widely different. Melancthon being as remarkable for suavity of manners mildness, and conciliation as Luther was for coarse impetuosity and unbending firmness. In 1519 Melancthon assisted at the conference with Eccluse at Leipzig and in 1527 he visited the Saxon churches under the sanction of the elector and aided in framing a code of ecclesiastical constitutions. In 1530 the states of the empire being assembled at Augsbourg he made a speech in the presence of the emperor, which for its moderation excited the applause of his opponents. He was employed in drawing up the Augsburg confession and was afterwards accused of having made alterations in it without the consent of other doctors of the reformed church. Such was the opinion entertained of his desire to promote unity among Christians that Francis I invited him to visit his kingdom, for the purpose of settling the religious disputes among his sub-

M E L

patriots. He was also invited to England in the reign of Edward VI, and he had many friends and well-wishers who belonged to the communion which he had forsaken. But his liberality was productive of some inconvenience, by involving him in disputes with the secession of his own party who branded with the names of adiaphorists and intermixists such as were not as obstinately opposed as themselves against all measure of concession or conciliation. These advocates for separation among the most prominent of whom were Flaccus Illyricus and Nicholas Gallo fons as he was of peace, he thought it his duty to combat as long as he lived. His death took place at Wittenberg April 19 1560. The writings of Melancthon consist of numerous theological treatises, notes and commentaries on several of the Greek and Latin classics, Latin poems, works on history, philosophy &c all which were published at Wittenberg in 1580 4 vols. folio. *Tanner's Elagor der H. S. Alten & Gen. Bug.*

MELANDERHIELM or MELANDER (DANIEL) an eminent Swedish astronomer and mathematician born in 1726. He first distinguished himself by a memoir on fluxions, and in 1757 he became assistant to the astronomical professor at Upsal and on the death of his principal succeeded to the chair in 1761. He became a member of the Swedish Academy of Sciences and afterwards perpetual secretary of that institution. He was ennobled in 1778 by Gustavus III when his name was changed to Melanderhielm. In 1789 he was made a knight of the polar star and in 1801 a counsellor of the chancery. About the same time he was entrusted by the king to measure a degree of the meridian in Lapland in conjunction with M M Svartberg and Olofsson. He died at Stockholm in January 1816. Besides other works of science he was the author of *Conspicetus Praelectiorum Astronomicarum contumens Fundamenta Astronomiae* Upsal, 1779 2 vols. 8vo, of which he afterwards published a Swedish translation.—*Bug Unv.*

MELAS (M de) an Austrian general who served with distinction in the wars with the French republic. In 1793 and 1794 he was employed as major general and then as lieutenant field-marshall on the Sambre and in the country of Trves. In 1795 he was removed to the army of the Rhine and in March 1796 to that of Italy which he commanded for a short time and afterwards served under different generals, who succeeded him. In 1799 he was at the head of the Austrian army which acted in concert with the Russians under Suvarow. He distinguished himself at the battle of Cassino and was present at those of Trebia and Novi and he beat Champaonnet at Genoa, November 3, and took Com. In 1800 he was less fortunate having lost the battle of Massenza. Though his conduct was censured he was still trusted by his sovereign who appointed him commander in Bohemia and in 1806 he presided at the court of inquiry into the behaviour of Mack relative to the capitulation of

MELLEAGER, a Greek poet, in the first century before the commencement of the Christian era. He was a native of Gades, and a resident at Tyre; but he died in the Isle of Cos, whether he had removed in the latter part of his life. His compositions, consisting of short pieces or epigrams, are among the most beautiful reliefs preserved in the Greek Anthology and in the ample elegance of their style and sentiment they are finely contrasted with the productions of more recent bards in the same collection. Some of the verses of Melleager have been presented to the public in an English dress, by the rev R. Bland, and others, in *Selections from the Anthology*. —*Biog. Univ.*

MELLETIUS bishop of Lycopolis, in Upper Egypt in the fourth century and the founder of a sect called by his name. He was degraded from his functions by Peter bishop of Alexandria on account of some difference of opinion in regard to the treatment of such members of the church as had swerved during the persecution of Dioclesian. Being supported by a large party he paid little attention to this act of authority and the schism notwithstanding the condemnation of the council of Nice lasted for 150 years.—*Cass. Duper.*

MELLETIUS a modern Greek geographer born at Janina in Epirus, in 1661. His original name was Michael and he took that of Melletius, on assuming the ecclesiastical habit. Having studied at home he was sent by the archbishop of Janina to Venice where he gained a knowledge of the Latin language and literature. Returning to his native place he was made professor in the college of Ephaphamus and he afterwards filled the archiepiscopal sees of Nampactus, of Arts, and of Athens. He died in 1714. His principal work is his *Ancient and Modern Geography* and he also wrote an *Ecclesiastical History*. —*Biog. Univ.*

MELITO bishop of Sardis is the second century cliafy remembered as the author of

An *Apology* for the Christian faith, presented to the emperor Marcus Antoninus, in behalf of the persecuted Christians a part of which is extant. He was also author of several other works, a catalogue of which may be seen both in Eusebius and Jerome.—*Euseb. Hist. Eccles. Ceve. Duper.*

MELISSIUS of Samos, a philosopher of the Eleatic sect, flourished about BC. 440. Being appointed by his countrymen to command a fleet, he obtained a great victory over the Athenians. He held that the principle of all things is one and unchangeable that there is neither vacuum nor motion in the universe nor any such thing as production or decay, all apparent changes being only illusions of our senses. Dr. Cadwells who has profoundly discussed this branch of scepticism, in his *Intellectual System*, is of opinion that Melissus understood the term motion meta-physically only, and simply meant that there

M E L

is no such thing in creation as passing from unity to nonentity, and the reverse; which expression expresses much objection attendant on his position respecting motion, understood in its obvious and physical sense.—*Cadwells Int. Sys. Evelyn's Hist. of Philos.*

MELLAN (CLAUDE) a French engraver was born at Abbeville in 1601. He became celebrated for his discovery of a manner of forming a whole head by one line of the graver swelling it in various parts to produce the shade. A head of Jesus Christ, formed of one spiral line beginning at the tip of the nose is the most famous work in this style. Charles II invited him to England but he was too much attached to his own country to leave it. He died at Paris in 1668.—*Stratt. Novo. Dict. Nat.*

MELLI (JOHN) a poet denominated the Sicilian Anacreon born at Palermo in 1746. He was destined for the medical profession and engaged in the requisite studies but the belles lettres had more charms for him than the sciences. He was particularly captivated with Anostro, and at the age of fifteen he published a poem entitled *The gallant Fair*. He took the degree of BM and settled as a physician at Cimai, a village near Palermo but after residing there some years, he returned to Palermo and became professor of chemistry. He died December 20 1815. Among his works are idyls, elegies and canzon, comprised in an edition of his poems, which he published a short time before his death. The city of Palermo proposed during the life of the poet to erect a marble statue in honour of him.—*Biog. Nouv. des Contemp.*

MELMOTH (WILLIAM) an eminent advocate and beucher of Lincoln's Inn was born in 1666. He was the publisher of Vernon's Reports in conjunction with Peter Williams but is now chaly recollect as the author of a pious and popular work, entitled *The great importance of a Religious Life* although not known to be so until the publication of Nichols's Literary Anecdotes. Of this work more than 100 000 copies have been sold since the death of the author. Mr Melmoth whose conscience was tender even to superstition scrupled taking the oaths at the Revolution but finally complied. He died in 1743.—*Memoirs by his Son*

MELMOTH (WILLIAM) son of the subject of the preceding article was born in 1710. He received a liberal education, but does not appear to have studied at either of the universities. He was bred to the law and in 1756 received the appointment of commissioner of bankrupts, but passed the chief part of his life in comparative retirement at Shrewsbury and Bath. He first appeared as a writer about 1742 in a volume of *Letters*, under the name of Fitzosborne which have been much admired for the elegance of their style, and their calm and liberal if not profound, remarks on various topics moral and literary. In 1747 he followed this production with a translation of the *Letters of Pliny the younger* in 2 vols. 8vo, which has been regarded as one of the happiest versions of a

Latin author in the English language, although somewhat enfeebled by a desire to oblige every trace of a Latin style. He was also the translator of Cicero's treatise, "De Amicitia," and "De Senectute." These he enriched with remarks, literary and philosophical, in refutation of the opposing opinions of lord Shafesbury and Soma Jesuyn, the first of whom maintained that the non-existence of any principle in favour of friendship was a defect in the Christian system, while the second held that very circumstance to form a proof of its Divine origin. His last work was memoirs of his father under the title of

"Memoirs of a late eminent Advocate and Member of the honourable Society of Lincoln's Inn." Mr Melmoth, who was twice married concluded his moral and exemplary life at Bath in 1799 at the age of eighty nine.

—*Gent Mag.*

MELOZZO (FRANCESCO) an early painter was born at Feltre in 1471. His memory is respected by artists as the inventor of perspective representation and foreshortening on arched roofs and ceilings. A figure of Christ which he painted for the vault of a chapel at Rose is so well foreshortened that it appears to pierce the roof. This painting has been since removed to the palace of the Quirinal, where it is still to be seen. The works of this artist of whose history little is known were frequently to be met with in the Venetian galleries.—*Pilkington*

MELVILLE (Sir JAMES) a statesman and historian, was born at Hall hill in Peshire in 1530 and at the age of fourteen he became page to Mary queen of Scots, then wife to the dauphin of France. Having continued some time in her service he passed into that of the constable Montmorency, who placed great confidence in him. At the end of nine years he went upon his travels, and visited the court of the elector palatine with whom he remained three years and was employed in various negotiations. On the accession of Mary to the throne of Scotland, Melville followed her and was made privy councillor and gentleman of the bed-chamber and continued her confidential servant until her imprisonment in Lochleven castle. He was sent to the court of Elizabeth and maintained correspondences in England in favour of Mary's succession to the English crown. On the discovery of her attachment to Bothwell he remonstrated with her so freely that in order to avoid the effect of her lover's anger he absented himself from court. By Mary he was recommended to her son James VI who on his accession to the throne of England, wished to have him for one of his ministers but Melvil, devoid of ambition preferred living in retirement at his family seat of Hall-hill where he remained until his death in 1606. He left an historical work in manuscript, which lay long unknown in the castle of Edinburgh, but which was published in 1683 under the title of "Memoirs of sir James Melvil, of Hall-hill containing an impartial Account of the most Remarkable Affairs of State during the last Age not mentioned by other

Historians, more particularly relating to the kingdoms of England and Scotland, under the Reigns of queen Elizabeth Mary, queen of Scots, and king James. In all which transactions the author was personally and pathetically concerned." This work contains many important facts not found elsewhere, and is written with much simplicity. His brother also in the service of Mary was most probably the sir Andrew Melvil who was present at her death.—*Melvil's Memoirs. Nashe's Hist. Libr. Robertson's Hist. of Scotland.*

MENNON a Greek historian, who appears to have flourished in the time of Augustus. He wrote a history of the affairs of Heracleum Pontis sixteen books of which were epitomised by Photius. He bears the character of a sensible and perspicuous writer. A Latin translation of his history was published by R. Brett, Oxford 1597.—*Voss Hist Grec*

MENA (don JUAN de) a poet, who has obtained the title of the "Castilian Ennius," and is regarded as one of the greatest geniuses of his age. He was born at Cordova in 1412 and studied at Salamanca after which he went to Italy where reading the works of Dante developed his talent for poetry. His most celebrated work is the "Labymutho," a poem also called "La trecentas Copias," from the number of its stanzas. It is modelled on the Commedia of Dante. Menas was made royal historiographer and died laden with honours and riches, at Gundalaxara, in 1456.

—*Bug. Urdia.*

MENAGE (GILLIS) a distinguished man of letters of the seventeenth century, was born at Angers, August 15 1613 in which city his father was king's advocate. After finishing his early studies with great reputation, he was admitted an advocate himself and pursued his occupation for some time at Paris but disgusted with that profession he adopted the eccentric character so far as to be able to hold some benefices, without care of soul. From this time he dedicated himself solely to literary pursuits and being received into the house of Cardinal de Rets, he soon made himself known by his wit and erudition. He subsequently took apartments in the cloister of Notre Dame and held weekly assemblies of the learned where a prodigious memory rendered his conversation entertaining although pedantic. He was, however, overbearing and opinionative and passed all his life in the midst of petty hostilities. His character of abbe did not render him averse to be thought a man of gallantry, and he was a professed admirer of the celebrated Mademoiselle La Fayette and Servigne, although little to the glory of their reputation. Being in easy circumstances, he was enabled to cultivate letters in the manner most agreeable to himself and to print some of his works at his own expense. He proclaimed himself from being chosen of the French Academy by a witty satire entitled, "Requête des Dictionnaires," directed against the Dictionary of the Academy. He died in Paris, at the age of seventy-nine. Menage was a very various writer in regard both to sub-

M E N

M E N

just and language. His principal works are "Dictionnaire Hymenologique, ou Origines de la Langue Françoise," "Origines de la Langue Italienne," "Miscellanies," a collection of pieces in prose and verse; an edition of "Diogenes Laertius, with valuable notes and corrections;" "Remarques sur la Langue Française;" "Anti-Baile, a satirical critique on that author;" "Histoire de Sablé;" "Histoire Muherens Philosoporum" satirical pieces against Montaigne, the Greek professor, Poëtes Latins, Italiennes, Grecques, et Françoises. After his death, a Menagiana was compiled from notes of his conversation, anecdotes, remarks, &c., which is one of the most lively works of the kind and has been several times reprinted.—*Beylie. Mever. Mens. Dict. Hist.*

MENANDER, one of the most celebrated of the Greek comic poets was born at Athens, BC 342. His master in philosophy was Theophrastus and he is represented as possessing every point of a dramatic writer: elegance of language, force and delicacy of sentiment and genuine humour. His attachment to the fair sex and especially his mistress Glycera, was vehement in the extreme, and his address and manners were correspondently soft and luxurious. He composed 108 comedies, of which eight only gained the prize, and he may be esteemed as the first if not the principal author of the new Grecian comedy which if it possessed less wit and fire was superior to the old in delicacy regularity and decorum. A few fragments only remain of the numerous pieces of Meander from whose however Terence is supposed to have copied all his pieces except the Phormio and Hecyra, and consequently that author may enable us to form a tolerably correct notion of the merits of his original. The admiration of this dramatist expressed by Quintilian is very great. He refers his orator to Meander for copiousness of invention, elegance of expression and a general fine feeling of nature, nor is Ovid in more than one passage much less complimentary. He was equally esteemed in his life time even according to Pliny he refused express invitations from the kings of Macedonia and Egypt. He was drowned in the harbour of the Perseus BC 296 having according to some accounts, thrown himself into the water out of mortification at the prize having been unjustly awarded to his rival Philemon. This catastrophe took place in his fiftieth year. The fragments and sentences of Meander were first collected by Morelle Paris, 1553 but the best edition is that of Le Clerc, Amsterdam 1702 to which however should be added the Editions of Dr Bentley printed in 1713 under the name of Philolentulus Lipsiensis.—*Vossi Post Graec.*

MENANDRINO (MAZZILIO), better known by the name of Mazzilio of Padua, the place of his birth was an eminent lawyer of the fourteenth century. He was educated at the university of Orleans, and became counsellor to the emperor Louis of Bavaria, for whom in 1384 he wrote an apology entitled "De-

finans papa, in which he maintained that the pope ought to submit to the emperor in spiritual as well as temporal concerns. This provoked John XXII, at that time pope, that he issued a long decree to refute it, and excommunicated the author in 1387. He was also the author of two treatises, entitled "De Jurisdictione Imperiali in causa matrimonialis," "De Translatione Imperiali." He died at Montematio in 1388 and was considered at Rome as a heretic of the first class.—*Gen. Diet.*

MENARD (Lion) an historical writer was born at Terascon in 1706. He devoted himself to the study of history and antiquities and obtained a place in the Academy of Inscriptions and belles lettres. He died at Paris in 1767. His works are "History of the Bishops of Nismes," 2 vols. 1800 1737 "L'Historie Civile Ecclesiastique et Litteraire de la Ville de Nismes," 7 vols. etc. This is a curious topographical work but is rather too prolix for readers in general. He likewise wrote a romance entitled "Les Amours de Callisthene et d'Arastocis," the chief merit of which is the delineation of Grecian manners. "Mœurs et Usages des Grecs" a work which displays much erudition and was highly popular.

"Pièces Fugitives pour servir à l'Histoire de la France," 3 vols. 4to. In 1750 he published a "Refutation of the Arguments of Voltaire against the authenticity of the Political Testament of Cardinal Richelieu." —*Encyclopédie Fran. Nouv. Dict. Hist.*

MENASSEH BEN ISRAEL a celebrated rabbi was born in Portugal about 1604. His father was a rich merchant, who suffering greatly both in property and person from the inquisition fled into Holland where his son was educated. At the age of eighteen he was appointed to succeed his tutor Isaac Usish, as preacher and expounder of the Talmud at Amsterdam a post which he occupied with reputation for several years. In 1632 he published in the Spanish language the first part of his work entitled "Concilior" &c. of which the next year a Latin version was printed by Dionythus Vossius, entitled "Concilior sive de Convenientia Locorum & Scripturae que pugnare inter se vidantur opus ex Vetus et Recentioribus omnibus Rabbini magna Industria ac Fide congettum." He also engaged in the printing business, and published three editions of the Hebrew Bible. In the time of Cromwell he came to England and actually obtained for his nation more privileges than they ever before enjoyed in this country. He died at Amsterdam in 1659. His other works are "The Talmud Corrected with Notes" "De Resurrectione Mortuorum" "Exposition de Israel dedicated to the parliament of England in 1650 and object of which is to prove that the ten tribes are settled in Armenia and an "Apology for the Jews" in the English language reprinted in vol. ii of the Phoenix.—*Mever. Mod. Univ. Hist.*

MENCKE (John Bochardt) was born at Leipzig in 1674, and after travelling for improvement in 1699 he was made professor of

history at his native place. He applied himself to the study of jurisprudence, and in 1704 he took the degree of Doctor of Law at Münster; after which he gave lectures in history, and in 1708 he was appointed historiographer and in 1709 counsellor to Frederick Augustus, King of Poland. He died at Leipzig in 1732. His works were, "A Latin Dissertation on the Consecration of Emperors and Empresses, as proved by medals," published at the age of nineteen; a collection of the German historians under the title of "Scriptores rerum Germanicarum speculator Saxoniscorum" 3 vols. fol. 1728-1730 and he also planned and had a share in a German Dictionary of Learned Men, and published an edition of Langlet's "Méthode pour Etudier l'Historie et sur la mort de son père he contrasted the

Leipzig Journal. He was also the author of two Latin declamations, "De Charitatem et Eruditissimo" to which subject he certainly did not justice. They were however read and translated into several languages.—*Mervi.*

MENDANA DE NEYRA (ALVARO) a Spanish navigator and maritime discoverer. He was born in 1541 and the first years of his life passed in obscurity. He went to America with his uncle, who was governor of Lima, and with whose assistance he fitted out an expedition in 1568, and sailed to explore the Pacific Ocean. He discovered the islands of Guadalcanal, St Christopher and Isabela, and returned to Lima in the following year. Having obtained from the Spanish government a fleet to visit Guadalcanal and establish a colony, he sailed again in 1595 but was unable to find out the islands he had before visited. He however made fresh discoveries particularly of the islands of Solomon and the Marquesas de Mendopa. He afterwards discovered an island called Santa Cruz where he attempted to make a settlement, but dying there October 18, 1595 the place was abandoned by his companions.—*Big. Univ.*

MENDELSON (Moysé) a modern Jewish philosophical writer was born at Dessau in Anhalt, in 1729. After he had been educated by his father who was a schoolmaster in humble circumstances, he was obliged at the early age of fourteen to proceed to Berlin where he lived some years in great indigence. At length he got employment as a transcriber of MSS. from a rabbi who at the same time that he afforded him the means of subsistence initiated him into the theology, jurisprudence and scholastic philosophy of the Jews. To this knowledge he added an assiduous study of philosophy and literature in general and formed some strong intimacies among the more cultivated members of his own tribe including the doctors Kisch and Gompertz, by whose encouragement and assistance he attained a competent knowledge of the modern languages, and particularly the English. He soon after obtained the countenance and friendship of the celebrated Lessing of whom he rapidly became the rival and associate. According to Deman he commenced writing in 1758, a brief disser-

tation "On the Formation of the Soul" and a volume of "Philosophical Dialogues," being among the earliest of his publications. These works attained considerable success and were particularly admired for their German style. He then associated himself with Lessing, Bürger, Albit, and Nicolai in conducting a periodical work entitled, "The Library of Belles Lettres," a kind of review which acquired great distinction and formed an epoch in German literature. Various works followed, one of which, "Phaedo or a Dialogue on the Immortality of the Soul" in the manner of Plato obtained for him the title of Jewish-Socrates. In another entitled "Jerusalem," in which he maintained that the Jews possessed a revealed law but not a revealed religion, and that opinions are not subjects of revelation exposed him to much animadversion both from Jewish rabbis and Christian divines. Among others the celebrated Lavater the physiognomist, entered the field against him to whom he published in reply

A Letter remarkable for its pathetic remonstrance and calm, dispassionate reasoning. With similar energy he refuted an attack by Jacobs on the reputation of his deceased friend Lessing an effort which from the weakness of his nervous system and extreme aversion to controversy agitated his spirits so highly that fits and other symptoms of mental disorder were the unhappy consequence. He died in 1785 aged fifty-seven esteemed by persons of the most opposite opinions, on account of the excellence of his character and philosophical mildness of his disposition. Besides the works already mentioned, he was author of "An Essay on the Evidence in Metaphysical Science," "Morning Hours, or Discourses on the Existence of God," a German translation of "The Psalms of David" and a Commentary on part of the Old Testament.—*Rev. Cyclop. Monthly Mag.*

MENDEZ (Moysé) an English poet, was born in London, of Jewish parentage and was educated at Oxford where he was created M.A. in 1750. He wrote the Chaplet and other popular musical entertainments, and several poems. He died in 1759 leaving property amounting to one hundred thousand pounds.—*Biog. Dens.*

MENDIL PINTO (FERDINAND) a celebrated traveller was a native of Portugal. In 1557 he embarked in a ship bound for the Indies but in the voyage it was attacked by the Moors who carried it to Mocha and sold Ferdinand for a slave. After various adventures, he arrived at Ormuz, whence he proceeded to the Indies and returned to Portugal in 1558. He published a curious account of his travels, which has been translated into French and English. Mendes Pinto, from his excessive credulity has been classed with our English Sir John Mandeville, and both are now chiefly quoted as recording personal adventures and observations, mixed up and debased by easy belief and extravagant fiction.—*Dict. Hist.*

MENDOZA (JOHN CONEALIS) an Augus-

descender of the governors of China, was sent ambassador to the emperor of China in 1580. He was made successively bishop of Liapet, in Italy, of China, in New Spain; and of Pagan in the West Indies. He was the author of "A History of China," which has been translated into several languages. The title of the French edition will give some idea of the work. The History of the Great Kingdom of China, in the East Indies in two parts the first containing the antiquity, antiquity, fertility, religion, ceremonies, sacrifices, kings, magistrates, manners, customs, laws, and other memorable things of the said kingdom; the second, three voyages to it in 1577, 1579 and 1581 with the most remarkable rarities either seen or heard of there, together with an itinerary of the New World and the discovery of New Mexico in 1583.—*Dicit His Ges Dicit.*

MENEALAUS a native of Alexandria a celebrated mathematician flourished under the reign of the emperor Trajan. We are informed by Ptolemy in his *Almagest* that he made astronomical observations at Rome in the first year of Trajan. He composed three books

On Spheres, or spherical figures which have been transmitted to us through the medium of the Arabic language. The first Latin version was edited by father Merseus at Iara, in 1664 and the treatise in Arabic is inserted by father Labbe in his *Nov. Catal. Manuscriptorum*. He is thought to be the same Menelaus whom Plutarch has introduced in his dialogue *De Facie que in Orbe Lunae apparet*—*Fabriac Bibl. Graec. vol. ii. lib. iii. cap. v.* act 17

MEVES-RIFR. (JOHN BAPTIST le) an antiquary was born at Dijon in 1664 and became secretary of the chamber king's counsellor and provincial comptroller of the artillery for the duchy of Burgundy. He was the author of two works entitled *Medailles, Monume[n]ts, et Monumens Antiques d'Imperatrices Romaines*, 1680 fol. *Medailles illustres des Anciens Emperours et Imperatrices de Rome*, 1682 neither of which is now held in much estimation. He died in 1684. There was also another Le MENESTRAK CLAUX also of Dijon, and an antiquary who was keeper of the Barberini museum. He was the author of *Symbolica Diana Ephemeris Status explicatio*, 1657 4to.—*Mores.*

MENESTRIER (CLAUDE FRANCOIS) a French jesuit of the seventeenth century known as the author of a curious treatise on music as connected with the drama entitled, *Des Representations en Musique Anciennes et Modernes*. This work contains many interesting particulars with respect to the state of the science among the ancient Hebrews, and traces the introduction of dramatic music into Europe to the era of the crusades when the author asserts it was first made use of by pilgrims returning from Palestine in a kind of religious interlude then frequent among them. This book appeared in 1681, and was followed in the subsequent year by an essay on *Ballets Anciens et Modernes*. Menestrier died in 1705.—*Mores.*

MENGOLI (PATER) an able mathematician of the sixteenth century, but the place and date of his birth are unknown. He was appointed professor of mechanics in the college of nobles at Bologna, in which situation he acquired great credit. His works are *Vita Mengoli ad Mathematicas omnes*; "Refractione à parabolico Sole"; "Circulo"; "Spiralibus de Musica"; "Nova Quadratura Arithmetica seu de additione Fractorum Arithmeticae rationales Elementa"; "Arithmeticae ratio"; and *Geometrum Speciosum Elementa* which is an essay upon infinitesimal numbers containing the same signs as some of those of Leibnitz. Mengoli was living in 1678.—*Mores. Note. Diet. His.*

MENGUS (ANTONIO RAPHAEL) a distinguished modern painter who was a native of Bohemia. His first instructions in the art in which he excelled were derived from his father who was painter to the king of Poland; he then went to Rome where he improved his taste by viewing the relics of ancient art, and added to his skill by the careful study of the best productions of the great masters of the Italian school. He obtained the patronage of Charles III king of Spain for whom some of his principal works were executed. His death took place at Rome in 1779 in the fifty third year of his age. Mengus exercised his pen as well as his pencil and his writings, consisting of essays, letters on taste on painters and the philosophy and progress of the arts, were published collectively at Parma 1780 2 vols. 4to and there is an English translation in 2 vols. 8vo. Many of the pictorial works of this painter are in England among which may be particularized the altar piece of All Souls college Oxford.—*Bibl. Univ. Bryn.*

MENINSKI or MENIN (FRANCIS) FRANCIS A KIEZNIKIER a celebrated Orientalist was born in Lorraine in 1623 and studied at Rome under the learned jesuit Gratiang. At the age of thirty he accompanied the Polish ambassador to Constantinople and applying himself to the study of the Turkish language he became first interpreter to the Polish embassy at the Porte and soon after he was appointed ambassador plenipotentiary to that court. He became naturalised in Poland and added the termination *ski* to his family name of Menius. In 1661 he became interpreter of the Oriental languages at Vienna, and was intrusted with several important commissions. In 1669 going to visit the Holy Sepulchre of Jerusalem, he was created a knight of that order and on his return to Vienna, he was created one of the emperor's council of war. His principal work was his *Thesaurus Linguarum Orientium* published at Vienna in 1690. A new edition of this valuable work was begun in 1780, but remains still unfinished. His other works were in controversy with J. B. Podesta. Oriental professor at Vienna. Meninski died at Vienna in 1698.—*Bibl. Diet. Nov. Eng. Diet.*

MENIPPUS a cynic and disciple of the second Menodorus, was a native of Gadara, in Palestine. His writings were cloudy of a ludicrous and satirical kind insomuch that he

M E N

is styled by Lacaze "the most marching of the cynics," and the same author in two of three of his dialogues, introduces him as the vehicle of his own sarcasm. It appears that his satire were composed in prose, on which account those of Vervu were denominated Monippian and for the same reason that of Satyre Minimpia was given in France to the celebrated piece written in France against the faction of the League. Monippus is said to have hanged himself, in consequence of being robbed of a large sum of money. He had been originally a slave but purchased his freedom, and was made a citizen of Thebes. No part of his works is now extant.—*Brucker's Mores.*

MENNES (or JONES) an English poet and wit of the seventeenth century. He was by profession a naval officer and was a native of Sandwich in Kent. He received a university education having studied at Corpus Christi college Oxford. In the reign of Charles I he received the honour of knighthood and obtained the post of comptroller of the navy; he had also the command of a ship of war but being a royalist he was removed from his station in the civil war. On the restoration of Charles II sir John Mennes again became comptroller of the navy was appointed governor of Dover castle and attained to the rank of admiral. His poetical productions are comprised in a small volume entitled *Mosaicum Delicium or the Muses Recreation* printed in 1656. He died in 1671.—*Campbell's Spa. of Brit. Poets.*

MENNO SIMONSON a heterodox divine of the sixteenth century founder of the sect of Mennonites or Dutch anabaptists. He was born in 1505 in the province of Friesland and entered into holy orders among the Catholics. Having adopted some of the tenets of the first reformers, and collected followers among the disciples of Münster Stork and other German fanatics he reduced their mysticism and extravagance to some kind of system, and formed a party in the Protestant church, which has preserved his name from oblivion. He died in the duchy of Holstein in 1561. The modern Mennonites, who are found chiefly in Holland and in Switzerland are favourably distinguished society for their industry and purity of manners though they still retain a degree of mysticism in their religious opinions and practices.—*Mosheim's Diet. Hist.*

MENOCHIO (Jacopo) a learned jurist, was born at Pavia, and in 1555 he became professor of civil law in the university there. In 1560 he was invited by Emanuel Phalibert duke of Savoy to his newly erected university of Mondovi; and six years afterwards he removed to Padua, as first professor of common law which post he changed for the chair of civil law. He died in 1597. His works are still used by many lawyers, particularly his treatise *De tactis et ambiguis Conventions* book, " and *De Competenti situum volumen*, which are much esteemed. He was considered the first doctor of his time both in civil and canon law.—*Thiessius.*

M E N

MENOCHIO (JOHN STEPHENS) a learned jurist, son of the preceding, was born at Pavia, in 1574. At the age of seventeen, he entered the society of Jesus, and having completed his academical course, he was chosen professor and was afterwards raised to the most considerable posts of the society in the colleges and provinces of Italy. He died at Rome in 1656. His principal works were, *Hieropithecus seu Institutiones Politicae & Sacrae Scripturae de promptis lib. iii.* " *Institutiones Economicae ex Sacris Litteris de promptis lib. n.* " *De Republica Hebreorum lib. viii.* and *Brevius Explicatio sensus Literarum totius Scripturae.* These are much esteemed for their extensive knowledge and solid learning particularly the latter which is distinguished for its perspicuity and judgment. Menochius was also the author of

A History of the Life of Jesus Christ
A Sacred History founded upon the Acts of the Apostles, *Dissertationes* on different Subjects in six volumes a treatise *On the Christian Economy &c—*Laudis Hist. de la Lit. de l'Italie. Moreli. Nouv. Diet. Hist.**

MENOU (JAMES FRANCIS baron de) a French revolutionary general who also figured as a politician. He was deputy from the nobility of Tournai to the states general and was one of the first of his order who entered into the chamber of the commons. He united himself with the faction of the duke of Orleans and the Jacobins, and took every occasion to manifest his hostility to the clergy. In 1792 he was employed as marshal of camp at Paris and on the 10th of August he was second in command of the troops of the line. In 1793 he was sent against the insurgencts of La Vendée as general-in-chief when he was beaten by La Rochefoucauld and displayed such glaring incapacity that he was superseded and returned to Paris. Having the command of a division in May 1793 he defended the National Convention against the Jacobins, but on a subsequent occasion the obliquity of his conduct exposed him to a decree of accusation as a traitor to the Convention he was however acquitted. In May 1798 he accompanied Buonaparte in his expedition to Egypt as general of a division, in which post he displayed talents as well as bravery. But his behaviour indicated the same deficiency of principle by which he had been previously influenced. After the flight of Buonaparte he turned Mahometan, for the sake of obtaining in marriage the daughter of the keeper of the baths of Rosetta who was very rich. He submitted to the peculiar rites of Islamism and called himself Abdallah James Menou. Kleber being assassinated he assumed the chief command and opposed, with vigour, the English under Abercromby but he was at length obliged to capitulate. He returned to France in May 1802 and was well received by Buonaparte who appointed him governor of Piedmont. He was afterwards sent in a similar character to Venice, and he died there August 13 1810.—*Diet. des H. M. du 18me S. Eng. Univ.*

MEN

MINTCHIKOF (ALEXANDER) a Russian statesman and general, was the son of two poor peasants, vassals of the monastery of Cosmopoli. At the age of thirteen he went to Moscow, and was employed by a pastry cook to cry his wares about the street. In this situation he attracted the notice of the czar Peter I by the peculiarity of his cry. He entered into conversation with him and was so much pleased with him that he ordered him to come to court, where he soon distinguished himself by his quickness, and the czar took him to serve about his person. He was next enlisted in Le Fort's company of soldiers, and the czar gave him the post of groom of the bed chamber. He further distinguished himself with the latter by using all his efforts to forward the new city of Petersburg, and he was next made governor of the province of Ingria, with the title of prince, and the rank of major-general. He was the companion of Peter in his travels and on several occasions he personated the czar who appeared as a private person in his train. In the war with Charles XII of Sweden Mintchikof was the conqueror of Meyerfeldt, a general of that monarch; he also distinguished himself at Lesman in 1708 and at the battle of Poltava. He became master of great wealth, but on Peter's instituting a court of inquisition to search into the abuses of the administration he did not escape and was obliged to pay a heavy fine. On the death of Peter in 1725 Mintchikof chiefly contributed to the elevation of the empress Catharine I in consequence of which he enjoyed great power during her reign and in the event of her death he took measures to secure the crown to Peter Alexeievitch on condition that he should marry his eldest daughter. The family of Dolgorouki, however jealous of his power and masters of the inclinations of the young emperor procured an order for his arrest, and he was exiled to his estate of Rennsburg. He departed with a splendid train and all the marks of his dignity, which imprudence still further irritated his enemies and he was overtaken by an order to carry him to Siberia. He was confined at Betsoff on the banks of the Oby where a wooden hut was assigned for his dwelling with a daily allowance of ten rubles. He supported the hardships of his situation with great courage, and even saved enough from his allowance to build a wooden church. He died of a fit of apoplexy two years after his banishment, November 1739. His children were recalled by the empress Anne and were restored to an honorable rank in society.—*Manichev : Mavrovi. Med Univ. Hist. Mavri.*

MENTZEL (CHRISTIAN) a German naturalist of the seventeenth century who was a native of Furtwauk. His soul in the cause of science induced him to travel into various regions of the globe, and on his return to Germany he became a member of the society of critical investigation of nature Societas Naturae Curiosorum, in whose transactions a great many of his observations are recorded. He

Bios Dict.—Vol. II.

MER

also published, "Index novissim Florastris," 1696, folio. "The Natural History of Bengal," 4 vols. folio, a work on Chinese chronology; and another on the botany of Japan. Mentsel died in 1701 aged seventy-nine.—*Dart. Big. Ura.*

MENZINI (BENEDETTO) an Italian poet who was a native of Florence. He entered into the church and obtained the canony of St Angelo in Picena. His productions comprise almost every species of poetry except that of the drama. The best of his works are "Il Paradiso terrestre," and his sonnets. Menzini who was a member of the Arcadian society and the Ornean academy died in 1704 at the age of fifty-eight. His "Art of Poetry" and some of his sonnets, have been translated into English.—*Dart. Zeyf.*

MERCALI (MICHAEL) a physician and naturalist was born in 1541 at St Miniato in Tuscany and was the son of an eminent physician. On taking his degree in the university of Pisa, he went to Rome where he became superintendent of the garden of the Vatican. He was in favour with popes Gregory XIII and Sixtus V the latter of whom made him apostolical protonotary and sent him into Poland with cardinal Hippolito Aldobrandini. He also gained the esteem of Clement VIII who made him his first physician, and he received various marks of favour from the emperor the king of Poland and Ferdinand grand duke of Tuscany who gave him letters of nobility. Mercali died in 1593 in the arms of his friend St Philip Neri. He was the author of a Dissertation on the Ophthalmic of Rome another On the Plague on the Malaria and on the Gout and Palsy. He also made a description of the subjects of natural history in the Vatican Museum formed under the auspices of Gregory XIII and Sixtos V this he divided into ten classes, corresponding to the cabinets of the museum. His manuscript remained in the hands of Carlo Dati at Florence until the time of Clement XI who caused it to be published in 1717 when it was edited by his first physician Lancisi with the title of "Metallotheca opus Posthumus Authoritate et Munificentia Clementis XI Pont. Max. e Lenebris in Locum edictum etc.—Tirshack. Egy Diet. Hist. Med.

MERCATOR (GERARD) a cosmographer and mathematician of the sixteenth century. He was a native of Ruremond in the Netherlands, and was distinguished for his close application to study which he is said to have prospected so assiduously as scarcely to allow himself time for eating and sleeping. He published a work on chronology atlases, and geographical tables besides treatises on philosophy and divinity. He also constructed celestial and terrestrial globes and mathematical instruments. He died in 1594, aged eighty two. The nautical chart, usually termed "Mercator's Projection," from its having been first published by this geographer seems to have been the invention of Edward Wright, an Englishman.—*Martin's Big Phœnix.*

MERCATOR (NICHOLAS) or Nicholas

s K

M E R

Huyghens an eminent mathematician born in Holstein, about 1630. He received a liberal education and attained a considerable knowledge of mathematical science but he displayed his talents rather in the improvement and adaptation of the discoveries of others than in any original inventions. He held a correspondence with his learned contemporaries in England, Denmark and Italy and having been invited to this country he came hither and died here in 1694. Mercator was the author of 'Logarithmotechnia', 1668 4to,

'Institutionum Astronomiarum libri II' 1676 8vo and other works. He is charged with having appropriated to himself Dr Wall's mode of demonstrating the quadrature of the hyperbola as he adopted without acknowledgement the principles laid down by that mathematician in his 'Opus Arithmeticum' — *Idem.*

MERCIER (BARTHÉLOMEW) known by the appellation of the abbé de St Léger an ingenious writer on bibliography and literary history. He was born at Lyons in 1736 and adopting the ecclesiastical profession he entered into the congregation of St Geneviève to which society he became librarian. Louis XV bestowed on him the abbey of St Léger at Soissons. His publications are a 'Supplement to Prosper Marchand's History of Printing,'

'Bibliotheque de Romains traduits du Grec' 12 vols. 8vo "Observations sur l'Essai d'un Projet de Catalogue de Bibliotheque" "Lettres sur diverses editions rares du xvme Siecle" 8vo &c. His death took place in 1799.—*Distr. Hist. Bug. Univ.*

MERICIUS (JONAS) a learned Hebrew critic of the sixteenth century. He was born at Uzes in Languedoc and was destined for the profession of jurisprudence. He relinquished the studies in which he was at first engaged to devote himself to divinity and the Oriental languages, in which he became such a proficient that, on the death of Vatablus, he was appointed to succeed him as professor of Hebrew in the Royal College at Paris. During the civil wars in France he retired to Venice and returning with a design to publish the learned works which he had composed he died at Uzes in 1572. His works, consisting chiefly of commentaries on the books of the Old Testament drawn from the writings of the Jewish Rabbis were published by his son, 'Tiersier Eliezer de H. S.'

MERCURIALIS (JEROME) an eminent Italian physician; born at Perugia in 1530. He studied at Padua, and having taken the degree of M.D. returned to his native place and engaged in medical practice. In 1563 he was sent on a mission to the pope when he was induced to remain at Rome, and reside with cardinal Alessandro Farnese. In 1569 he removed to Padua, to take the medical chair in that university whence he was invited to Bologna in 1577 and five years after to Pisa. In the latter part of his life he retired to Perugia, and died there November 1606. His writings are numerous, consisting chiefly of works on the practice of medicine. In 1606 were pub-

M E R

lished at Venice 'Opuscula varia et selecta J. Mercurialis, non comprehensa vols. nonne' including a treatise 'De Aria-Gymnastica' 'Consilium de Ratone Discendi Medicinam' &c. He published an edition of the works of Hippocrates Venice 1588.—'Natura Hutchensis' Bug. Med.

MERJIAN (SYBILLA) an eminent naturalist and artist, was the daughter of Matthew Merrian an engraver and topographer known by a topographical work printed in Germany in 31 vols. folio. Sybilla was placed under the tutition of Abraham Mignon and soon learned to paint insects, fruit, and flowers with great beauty, and at the same time she applied her self to the study of natural history and of the Latin language. She married Adriaen Grisaf a painter and architect of Nuremberg but household duties did not prevent her from continuing her studies and in 1679 and 1683 she published her 'History of the Insects of Europe.' In 1698 she went to Surinam for the purpose of drawing from nature the insects and reptiles with which that country abounds. On her return she presented her drawings to the magistrates of Amsterdam who placed them in the Stadt-house where they still remain. She is also author of a work 'On the Generation and Metamorphosis of the Insects of Surinam.' This industrious female artist died in 1717 leaving two daughters one of whom Donotha, added a third part to her mother's history of European Insects. D'Argenville 'Histoire Bug. Bug.'

MERLIN (AMAROSE) a British writer who flourished about the latter end of the fifth century. The accounts we have of him are so mixed up with fiction that to disentangle his real life from the mass would be impossible. He was supposed to be an enchantor and a prophet and to have been begotten by an incubus. He is also said to have foretold the arrival and conquests of the Saracens. Instead of dying it was supposed that he fell into a magic sleep from which after a long period he would awake and to that fable Spenser alludes in his 'Faery Queen.' Certain extravagant prophecies, and other ridiculous works have been ascribed to Merlin and some authors have taken the trouble to write commentaries on them. In the British Museum is 'Le Compte de la Vie de Merlin et de ses fons et Compte de ses Propheties' 2 vols. folio on vellum without date or place. We have also 'The Life of Merlin surnamed Ambrosius' by T. Heywood.—'Writings & Bust of Poetry Teacher Spenser's Faery Queen Macpherson's Andrew of Wistow.'

MERLIN (JAMES) a learned French priest of the sixteenth century was a native of Langres, and studied at the university of Paris where he took the degree of D.D. in 1499. He was rector of the parish of Montargis, and canon of Notre Dame at Paris. He used so much freedom in denouncing against the reformed religion, and against the countries who were supposed to be favourable to it, that Francis I caused him to be arrested and committed prisoner to the castle of Louvre in 1537.

M R R

He was enlarged but banished to Nantes, whence he was permitted to return in 1530 and was made vicar-general to the archbishop of Paris. He died in 1561. He published A Collection of the Councils " and was the first who ventured to defend Osius when publishing his works, which he did in an apology prefixed to them. He also published The Works of St Poucain, " The Works of Peter of Blois and The Works of Richard de St Victor —Dspns. Mours. Novis. Dct. Hst.

MERRET (Cassitorius) an English physician and naturalist of the seventeenth century. He was a native of Winchcombe in Gloucestershire and studied at Oxon college Oxford where he took the degree of MD. He settled as a medical practitioner in London and became a fellow of the Royal College of Physicians, and he was also an early member of the Royal Society in the scientific researches of which learned body he took an active interest, prosecuting in conjunction with Boyle and others, experiments calculated to throw light on various subjects of physical inquiry. He was the author of Pinax Rerum naturae Britannicarum, 8vo, a collection of charters, &c of the college of Physicians, and a tract against the apothecaries in their disputes with the college. Dr. Merret died in 1691 aged eighty-one —Pulteney's Sketches of the Progress of Botany.

MERRICK (JAMES) an English divine and poet whom Bishop Lowth calls one of the best of men and most eminent of scholars was born in 1720 and educated at Heading school whence he removed to Trinity college, Oxford where he took his degrees, and became fellow in 1744. He entered into orders but seldom preached, being subject to acute pain in his head, and frequent debility. He died at Reading in 1769. He was the author of numerous prose works and poems the principal of which are, A Translation of Lyphius' Dorus, A metrical Version of the Psalms

Poems on sacred Subjects A Letter on the Composition of Greek Indexes Annotations on the Gospel of St John

Annotatio on the Psalms," Dissertation on the ninth of Proverbs, 4to, A Metrical divine Essay &c Several of his poems are in Doddsley's Collection.—Gen. Biog. Dict.

MERRY (ROMAN) an English author of the last century, born in 1755 at London where his father was a merchant. From Harrow grammar school he proceeded to Christ's college, Oxford, and on quitting the university became a member of the society of Lincoln's Inn, with a view of making the law his profession but soon taking a disgust to the study he gave it up, and entered the army. The service did not, however prove more congenial to his taste, he therefore parted with his commission in the Guards, and after slogging for some time the character of a wit and man of fashion about town, went to Italy. Here he became a member of the Della Cruscan academy at Florence, and carried on for some time a poetical correspondence in the

M E R

English newspaper, under the signature of that society which at length became the object of the caustic satire of Gifford, in his well known Barred and Mewred.¹⁵ Mr Merry in 1791 married Miss Bruton, elder sister to the present countess dowager of Craven an actress of considerable talent and great personal attractions. He afterwards sailed with his wife to America, where the latter continued to perform, and was a great favourite. Although the poetry of Mr Merry and of the Della Cruscan school, as it was termed obtained a temporary popularity yet, after the severe exposure of the affected sentimentality which was its essence, by the satirist alluded to, it sank at once into oblivion nor have his dramatic attempts been much more successful. These latter consist of Lorenzo a tragedy Fenton, " The Magician no Conjuror and Ambitious Vengeance." His death took place in 1796. —Gent Mag.

MERSENNE (MARIN) better known by his Latin denomination Marinus Mersenne a French author of great learning and deep research born in September 1588 at Oye in the province of Maine. From the college of La Fleche where he received the rudiments of education in company with Descartes he removed to that of the Sorbonne; and in 1611 became a member of the order of Friars Minor at Nevers where he distinguished himself by his proficiency in the study of divinity and Oriental literature. Father Mersenne kept up a constant correspondence with many learned men of the age as well Frenchmen as foreigners, especially with his former friend and schoolfellow Descartes who consulted him generally with respect to his own publications. He was passionately fond of music and in his Harmonie Universelle printed in folio at Paris in 1636 as well as in a tract

De Sonorum Naturâ, enters very deeply and scientifically into the nature and properties of sound and gives the results of several curious experiments in acoustics, made by him for the purpose of demonstrating the principles of harmony. He is also celebrated for the discovery of what he calls the curve roulette (the cycloid) which gained him great credit, and he was particularly happy in suggesting as well as resolving many interesting and ingenious questions. Besides the works already mentioned, he was the author of Questions in Genesia celestium, 1663, Paris Les Questions physico-Mathematica, 4to, 2 vols, "La Virtute des Sciences," "Impiety of Devils refuted, 8vo 3 vols, "The Sphere of Melancholia," "Learned Recreations" &c. He died of an abscess in the side in July 1648.—Neas. Diet. Hst.

MERTON (WALTER de) a learned and accomplished prelate of the thirteenth century, descended from the place of his birth a village in Surrey. He received a classical education at a religious house in the neighbourhood, where he afterwards took the vows, and becoming distinguished both by his learning and

M. E. S.

greenability, rose through several ecclesiastical offices of weight and importance till, in 1528, he was advanced to the post of chaplain of England. The successful intercession of the baron removed him from his situation before the approach of the same year. Three years afterwards he was reinstated in his office; and in 1526 commenced the foundation of a college still called after his name in the university of Oxford; this edifice was ten years in building, and in the year of its completion its founder was installed in the see of Rochester. He presided over that diocese however little more than two years, dying before the expiration of 1527.—*Bug. Brit.*

MERULA (*Graecus*) a critic and historian, was a native of Alessandria in Italy and his family name was Medina. He acquired much reputation for his classical knowledge and passed the greatest part of his life in teaching the languages and rhetoric at Vence, Milas, and Pavia. He died at Milan in 1494. His works are *Antiquitates Vicentiorum sive de Gestis ducum Mediolanensium*, written in an elegant style, but not without many errors; *A Description of Monestat*, and of the Eruption of Mount Vesuvius; and a small historical tract entitled, "Bellum Scodense," describing the siege of Scutari by the Turks in 1674. He also gave editions of Cato L'arre, Columelli and Palladius collectively of Plautus, Juvenal, Martial Ausonius, and the Decimationes of Quintilian. He translated from the Greek of Xiphilinus the lives of Trajan, Nerva, and Adria which were mock-commanded by Graecus. He had many disputes with contemporary writers, and degraded himself by the acrimony and violence of his language.—*Vetus Hist. Let. Tira. buch.*

MERULA (PAUL) an historian was born at Duct in 1558. He travelled into France, Germany, Italy, and England and on his return he was appointed successor to the celebrated Lipsius in the chair of history at Leyden. He died at Rostock in 1607. He published 'The Fragments of Xenus, with a Commentary,' *Enteropae*; 'The Lives of Eusebius and Jerome,' *Cosmographia*; a 'Treatise on Law,' and a 'Treatise on Hunting.' After his death were published, "P. Merula Opera-vana postuma," 1694.—*Mores.*

MERENGUY (FRANCOIS PHILIP) a French abbe, was born at Beauvais in 1677 and for several years taught the classics and rhetoric at his native place. He was then sent for to Paris, to preside over the rhetorical class in the college of Beauvais, and was chosen confessor to Collin, and made catchet of the pensioner for whom he drew up his 'Exposition of Christian Doctrine.' He excited the displeasure of the court, by his vehement opposition to the constitution Unigenitus, in consequence of which he was obliged to relinquish his situation and withdraw into priory. He died in 1702. His works are, "Traité de l'Ancien Testament, 10 vol. folio;" "Notes on the New Testament,"

M. E. S.

Exposition sur le Baptême; "La Constitution Unigenitus, avec des Remarques." He was also concerned in compiling "The Lives of the Saints," edited by the abbot Coquer; and was employed in the Musæu of Paris.—*Mœst. Diet. Hist.*

MESMER (FRANCOIS ALEXANDRE) a German physician author of the famous doctrine of animal magnetism, called also Mesmerism. He was born at Memmingen in Swabia, in 1734. He first made himself known in 1766 by the publication of a thesis, "De Planetary influxo" in which he maintained that the heavenly bodies exercised an influence on the bodies of animals, and especially on the nervous system, by means of a subtle fluid diffused through the universe. But this whimsical association of the Newtonian philosophy with the reveries of astrologers being no abstruse for general reception he added the notion of curing diseases by magnetism, and went to Vienna to put his ideas in practice. Father Hell had previously performed some supposed cures by the application of magnets, and he considering Mesmer as a rival, charged him with borrowing or rather stealing his invention. The new empiric thought it prudent, therefore to renounce the use of common magnets, and declare that his operations were conducted solely by means of the magnetism peculiar to animal bodies. He had little success at Vienna, and his applications to the academies of Sciences at Paris and Berlin, and the Royal Society of London were treated with neglect. After an abortive attempt to cure mademoiselle Parades, a celebrated blind musician by the exercise of his art Mesmer quitted Vienna for Paris in 1778. There he for some time in vain endeavoured to attract the notice of men of science, but at length he succeeded in making a convert of M. Deslon who, from being his pupil, became his rival and with whom he soon quarrelled and represented him as an impostor [see Deslon (C)]. Mesmer had the impudence to demand from the French government the gift of a castle and estate as a reward for his pretended discoveries, and what is not a little extraordinary the baron de Breteuil seems actually to have carried on a sort of negotiation with this daring pretender offering him a large pecuniary reward, if he would establish what he termed a magnetic bed and instruct three persons, chosen by government, in his manner vivre. This latter condition induced him to reject the proposal and he removed with some credulous patients to Spa. A subscription was opened to induce him to return to Paris, and reveal the principles of his professed discovery. He consequently went thither gained a number of proselytes, among whom was La Fayette and he pocketed 540,000 livres. Government at length appointed a committee of physicians and members of the academy of Sciences, to investigate the pretensions of Mesmer, and the result of their inquiry appeared in an admirable memoir drawn up by M. Bailly which completely exposed the fallacy of animal magnetism and the quackery of

MET

his mother. He afterwards resided some time in England under a forged name and then removed to Germany; and in 1739 published a new exposition of his doctrine, which attracted no notice. He died at his native place in 1815. He was the author of "Mémoires de F. A. Mesmer; ou ses Découvertes" and other papers.—*Bug Uss.*

MESMES (JOHN ARREY de) count d'Avranches and marquis of Givry was ambassador extraordinary to Venice from 1671 to 1674 and the next year was one of the plenipotentiaries at the peace of Nijmegen. He was next appointed ambassador to Holland where he formed the truce with Spain, by which Luxembourg was given up to France. In 1689 he visited James II while in Ireland in the same capacity. He then visited Sweden and assisted in settling the preliminances of the peace of Ryswick. He went again to Holland but returned at the renewal of the war and died at Paris in 1709. His "Letters and Negotiations" were published in six volumes 12mo, in 1714.—*Moreri, Nouv. Dict. Hist.*

MESTON (WILLIAM) a burlesque poet was born at Midmar in Aberdeenshire about 1688 and was educated at Aberdeen after which he became tutor to the young earl Marischal and his brother and was appointed professor of philosophy in the Marshal's college which situation he lost in 1715 by joining the Pretender. He subsequently made several attempts at school-keeping which his imprudent and convivial disposition rendered abortive, and he subsisted upon the bounty of his different friends until his death in 1745. He was the author of the burlesque poems entitled "Mother Grim's Tales," and of some Latin poems of inferior merit. Some of his pieces are in the style of Butler whom he imitated rather servilely. Meston was one of the best classical scholars of his time as well as an able mathematician.—*Gen. Biog. Dict.*

MEI ASTASIO (Pirriro) a celebrated Italian lyric and dramatic poet was born at Rome in 1682 of parents in humble life originally of Assisi, whose names were Trapassi. At the age of ten he was in the habit of repeating extemporary verifications in the streets of Rome where he attracted the attention of the celebrated jurist Gravina who undertook to educate him in his own profession, and who on taking him, changed his name from Trapassi to Metastasio. At fourteen he produced his tragedy of "Giosuè," which so pleased his patron, that he took him to Naples where he contended with, and excelled some, of the most celebrated improvisatori of Italy. He still, however, continued his study of the law and with a view to the only two channels of government which prevail at Rome also assumed the minor order of priesthood whence his title of alio. In 1718 death snatched away his benefactor who bequeathed to him the whole of his personal property amounting to 15,000 scudi. Of a liberal and hospitable disposition he gradually made away with this provision, and resolved to apply more closely to law. He accordingly repaired to Naples to

MET

study for that purpose, but becoming acquainted with, and greatly annoyed—indeed by Brignacelli, usually called the Romanina, the most celebrated actress and singer in Italy, he no longer contended with his genius, but gave himself up entirely to harmony and poetry. The extraordinary success of his first opera, "Gli Orti Esperidi" confirmed him in this resolution and joining his establishment to that of the romanesca and her husband, in a short time he composed three new dramas "Cato in Utica," "Ene," and "Semiramide." He followed these with several more of still greater celebrity until his fame exceeding beyond the Alps, in 1730 he received and accepted an invitation from the court of Vienna to take up his residence in that capital as censor to the imperial laureat, Apostolo Zeno, whom he ultimately succeeded. The life of Metastasio henceforward presented a calm uniformity for upwards of half a century during which period he retained the favour of the imperial family undiminished; his extraordinary talents being admirably seconded by the calm tenor of his private character and avoidance of court intrigue. Indefatigable as a poet, he composed no less than twenty-six operas and eight oratorios or sacred dramas besides cantatas, canzonni, sonnets and minor pieces to a great amount. The poetical characteristics of Metastasio are sweetness, correctness, purity, simplicity, gentle pathos, and refined and elevated sentiment. There is, therefore, much less of nature than of elegance and beauty in his dramas, which in consequence appear insipid to those who have been nourished with stronger poetic aliment. This eminent man was visited by Dr Burney who describes him at the age of seventy two as looking like one of fifty and the handsomest man, of his time of life that he had ever beheld. He died after a short illness at Vienna in April 1782, having completed his eighty fourth year leaving a considerable property in money books and valuable. Besides his numerous works which have been translated into most of the European languages a large collection of his letters have been published since his death which work supplied copious materials for his biography.—*Burney's Life of Metastasio.*

METEREN (EMANUEL van) a Flemish historian was born at Antwerp in 1550. In consequence of his embracing the reformed religion he was obliged to leave his country and he came to England where he died in 1611. His "History of the Low Countries" from 1500 to his own time is much esteemed though even the Protestant writers charge the author with partiality and credibility. It was several times reprinted and was translated into French and German.—*Fraser's Thesaurus Nov. Dict. Hist.*

METHODIUS, a father of the church, and a martyr, was bishop of Olympus, or Patara, in Lycia, and afterwards of Tyre in Palestine. Epiphanius says, "that he was a very learned man, and a strenuous minister of the truth. He was the author of a large

M E T

work, "Almanach Thurgau et du Philosophe;" "A. Thureau ou des Amourmances," against Ogier; "Amour ou l'Amourmance;" "The Banquet of Virgins;" "On Free-will;" "Conversations avec Odame et le Catechiste." Several fragments of this writer were collected by father Combault, and published at Paris in 1646. "The Banquet of Virgins," was found again, and printed with a Latin version in 1657 folio.—*Cœs. Latimer.*

METTERECKE (ACROPUS) a learned classical scholar and critic of the sixteenth century. He was a native of Bingen, in the Netherlands, and was ambassador from the Dutch republics at the court of queen Elizabeth. He is chiefly distinguished as the author of a work entitled "De rebus et rectis pronosticationis Iugorum Graciorum commentatoris" and he edited the works of the Greek pastoral poets, Bion and Moschus and translated the poems of Theocritus into Latin. He also wrote an account of the proceedings at the treaty of Cologne in 1579. His death took place in London in 1591, at the age of sixty-three.—*Chalmers's Eng. Diet.*

MENO or MFTON a famous mathematician of Athens flourished 492 years BC, and was the son of Pausanias. In the first year of the eighty-seventh Olympiad he published his cycle of nineteen years, in which he endeavoured to adjust the course of the sun to that of the moon, and to make the solar and lunar years commence at the same point of time. This invention is called from him, the Metonic cycle, also the golden number. On the embarkation of the Athenian fleet to Sicily Meno escaped being sent, by counterfeiting illness. He was assisted in his observations by a fellow-citizen named Endemus. The time of his death is not known.—*Fabre's Bibl. Grec., Nation's Math. Diet.*

METTRIE (JULIAN OFFRAY de la) a very successful French author and physician was born at St Malo in 1709. He studied physic under Boerhaave, after which he removed to Paris, and became an army surgeon in a regiment of French guards, commanded by the duc de Grammont. Being taken ill at the siege of Freyburg, contrary to the usual operation of sickness, he was led into doubts of the immortality of the soul, and published, under the signature name of Charpe, a work entitled, "Histoire Naturelle de l'Âme" 1745 in which he denied its immortality and claimed most as an animal of the ape genus. He lost his appointment for this work after the death of the duc de Grammont, and further irritated his brethren of the faculty by his "Penelope, ou la Machine en Medicine," in which he attacked all the physicians of the time, and especially his own master Boerhaave. He then repaired to Holland, where he published his most celebrated work, "L'Homme Machine," which being ordered to be burnt, he returned to Paris, where he was made reader in the king, and a member of the academy. He lived tranquilly in the Prussian capital until 1751, when he died after a short illness. The king of Prussia thought as well of him

M E U

that he composed his funeral oration with his own pen, but his brother physicians represented him as a frivolous and inconsequentialosopher who could not even pay his debts to his contractors and carvers however. His "Graues Philosophiques," published at Berlin in one volume quarto contain, besides the production already mentioned *L'Homme Machine*, "Recherches sur l'Origine des Fauteaux," "Discours sur le Bonheur" &c. He also published in the last year of his life

"Curves de Medicina" which, as the work of a man who at the age of forty eight, deserved himself of life by his propositious treatment of a slight disorder, obtained very little attention.—*Haller Bibl. Antq. Assoc. Diet.*

METZU (GABRIEL) a painter of the Dutch school was born at Leyden in 1615. He studied the works of Gerard Douw and Mierva, but by also adhering to nature he created a style of his own distinguished by delicacy and a fine colouring. He was so long employed on his pictures that they are scarce and the Dutch so highly value them that but few have been suffered to go out of their country. His subjects are chiefly domestic: a lady tuning her lute and another washing her hands in a silver basin held by her maid are among his best pieces. He died at Amsterdam in 1668 in consequence of an operation which he underwent for the cure of the stone.—*D'Argenville's Pillington.*

MEULEN (ANTOINE FRANCIS VANDER) a Flemish painter was born at Brussels in 1634, and was the disciple of Peter Snyders an esteemed battle painter. His pictures attracting the notice of Colbert he induced him to settle in Paris, and Louis XIV gave him a pension of two thousand livres, besides the price of his works. He painted almost all the remarkable events in the campaigns of Louis, though he frequently had to represent dull in squalid scenes, he diversified them as such a manner as to render them agreeable. He was perfectly skilled in perspective and executed with an agreeable, though not always a natural tone of colour and with great delicacy. He died about 1690.—*D'Argenville's Walpole's Dissertations.*

MEUNG or MEUN (JOHN de) a French poet, sername from his hammock, Cloupet was born at Meon on the Loire in 1280. He was generally well informed but by a poetical talents and vivacity he rendered himself a favorite at the court of Philip le Bel. He was satirically inclined, and exercised his wit upon the ladies of the court, who were so irritated against him, that a party of them seized him, and resolved to give him a severe flogging but his wit here came to his assistance and he escaped the destined chastigation, by desiring the most unmerciful to give the first blow. He died about 1364, directing by his will that he should be buried in the church of the Dominicans at Paris, and leaving to them under a heavy chest, not to be opened until after the funeral. The friars, respecting a tradition, opened the chest, but found only vials old

visions, accented with signs and figures. In 1200 they distributed the body but the general of Paris obliged them to bury it again with frank honour. His principal work was his continuation of the " Roman de la Rose " begun by William de Lorris which comprises more than three parts of the whole. It is not so poetical as the other but has more satire and knowledge of the world. He was also the author of a translation of Boethius de Consolation. The Letters of Abelard " a work on the " Response of the Sybils " and a satirical piece styled " The Council of John de Meau " prefixed to Langlet du Fresnoy a edition of the " Roman de la Rose &c."—Morez. *Nouv. Dict. Hist. Warton's Hist. of Engl. Poetry.*

MURSIUS (John) a Dutch critic of great erudition and research born in 1579 at Losdun, a village near the Hague. At sixteen while a student in the university of Leyden he published his first work an edition of Ly copheron's Cassandra, with notes. He was afterwards selected by the celebrated Barneveld as travelling tutor to his sons whom about the commencement of the seventeenth century he accompanied over great part of the European continent, and during the journey took the opportunity of perfecting him self in the study of jurisprudence at Orleans, where that science was then especially cultivated. On his return to Holland after a ten years absence he was elected to the professorship of history and of Greek at Leyden with the title of historiographer to the states general. The fall of his patron Barneveld however had almost involved him in its vortex when finding that his enemies were unrewarded in their attempts to deprive him of his professorships he wisely resigned a situation which there might have been danger in retaining and accepting an invitation made him by the court of Denmark, proceeded to Copenhagen. Here he soon became established at the college erected for the education of the young nobility at Sorø in a similar post to that which he had occupied in Holland. Scaliger appears to have held both the learning and the talents of Mursius in great contempt and has charged him at once with pedantry and ignorance the works which he has left behind him, however are sufficient monuments both of his learning and his genius. These consist of a " History of the Rise and Progress of the Republic of Athens "

"On the Athenian Archons," "On the People of Athens," "On the Festivals of the Greeks," "On the Dances of the Antients," new editions of the works of Porphyry, of the "Elements of Music" by Aristoxenus, Leyden, 1616, of the "Imago Musica of Alypius" Leyden 1616, and of the "Enchiridion Harmonicae" of Nicomachus, "A History of Denmark," &c. The only complete edition of his works is that of Florence, in 12 folio volumes, 1745. Mursius died of the stone, at Sorø, September 20, 1639 leaving behind him a son a youth of great promise, who died at an immature age but whose essays on the

Tuba or pipe of the antients, and on the cultivation and preservation of trees, suffice to show some of Mursius talents which time only was wanting to bring to maturity.—*Nouv. Dict. Hist.*

MEUSEL (Johw Grossen) a learned and industrious German bibliographer born in Franconia in 1743. After completing his first studies at Cobourg he went to Göttingen in 1764, where he became a member of the philosophical assembly established under the auspices of Heyne; and he also applied himself to history under professor Achermann. In 1765 he accompanied C. A. Klotz to Halle in expectation of obtaining the first vacant chair at that university but two years afterwards the elector of Mayence invited him to Erfurt to become professor of history and at the same time he was appointed arch counsellor of the principality of Quelzburg. The same honour was afterwards bestowed on him by the king of Prussia. In 1779 he removed to occupy the chair of history at Kring where he remained till his death in 1800. Among his works are "Bibliotheca Historica" Leipzig 1782 1804, 22 vols. 8vo. "Gelehrte Leuchttürme" a bibliographical dictionary of German living authors, with exact lists of their works which he carried on to the extent of 16 vols. 8vo; "Die Literatur des Staates" Directions for the History of Literature 1799 1800 3 parts, 8vo and a Dictionary of German Writers, who died from 1750 to 1800 1805, &c. 15 vols. 8vo besides a multitude of useful compilations and new improved editions of the productions of other authors.—*Heg. Univ.*

MEXIA (Paxao) character to Charles V was born at Seville and was the author of a history of the Caesars including the German emperors which has been translated by Edward Granston. His "Salva de Varia Lectorum" with the additions of Senosino and Vendier in French and Italian translators, is referred to by Gross as that treasury of ancient and modern times. Mexia was also the author of a history of Charles V which he left unfinished and of some colloquies in favour of the Ass written in imitation of Lucan and Apuleius. Mexia was not deficient in learning and he passed himself upon his astrological skill. He died in 1559.—*Heg. Univ.*

MEYER (Janus) an historian, was born at Vleteren in Flanders, near Braine, whence he took the name of Ballingsloep in 1491. After studying in the university of Paris he took orders and became master of a school at Ypres and Bruges, where he had a benefice in the church of St Donatus. He corresponded with Erasmus, and other learned men, and was the author of "Flandricarum rerum Dacorum," 4to, 1551 being an account of the origin antiquity genealogy &c. of the counts of Flanders, "Annales rerum Flandricarum," beginning with the year 445 down to 1497, and written in a pure, easy style. He died at Blankenberg in 1552.—*Sav. Omer. Morel. Nouv. Dict. Hist.*

MEYER or MEYERS (Johannes) a mi-

nature painter, was born at Tübingen in 1725, and came over to England with his father, in 1749. He studied fine arts under Zinck, the eminent painter in Berlin, but soon surpassed him. In 1761 he received a prize of twenty guineas from the Society of Arts, for the best profile of the king. He was appointed miniature painter to the queen, and being recommended, by act of Parliament, he married a lady of fortune; and in 1765 was appointed painter in ordinary to the king. Moyer who was one of the founders of the Royal Academy, died in 1792.—*Hogley's Life of Romney.* *Bryson's Diet. of Paint. and Eng.*

MEZERAI (FRANCIS EZDAS de) a celebrated French historian, born in 1610 at Ry in lower Normandy, was son of a surgeon in that place. After studying at Caen, he came to Paris, and obtained the post of a captain of artillery, in which capacity he served two campaigns. He then quitted the army as disgruntled, and shut himself up in the college of St Barbe, where he devoted himself to close study and projected his "History of France." Encouraged by the countenance and pecuniary aid of cardinal Richelieu, he published his first folio volume in 1643, which was followed by the second and third in 1646 and 1651. This work was regarded as no superior to every thing of the kind which had appeared before it, that the count rewarded him with a pension of four thousand livres, and the title of historiographer. His success induced him to compose an abridgment of his great work under the title of "Abégé Chronologique de l' Histoire de France," which is reckoned much superior to the original. In the latter he gave an account of the origin of all the public imposts accompanied by some very free reflections, which so offended the minister Colbert, that he remonstrated with the author who promised to correct it in a second edition. He performed his promise, but at the same time informed his master, that he was compelled to do so, the result of which was the loss of half his pension in the first instance, and on further complaint the withdrawing of the whole. In 1675 the French Academy gave him the place of permanent secretary in which character he prepared a sketch of his projected dictionary. He died in 1683. Mezerai was a man of great singularity in temper and manners being慷慨, conciliatory, and full of attention to the common forms of social life. As an historian he is regarded as being more bold than accurate with a style harsh and incorrect, but clear energetic, and occasionally exhibiting a vigorous consciousness, not unworthy of Tacitus. The second edition of the "Histoire de France," 3 vols. folio, 1683, is deemed the more correct; but several of the most spirited passages in the first are suppressed in it. The latest edition of "Abégé" is that of 1735 in 14 vols. folio, in which the suppressed passages of 1683 are restored. Mezerai also wrote "Traité de l'Histoire des Prophéties," a work much valued for its originality, together with some translations. A number of judicial pieces against the government, under the name of Sandri,

ought, have also been attributed to him.—*Hogley's Diet. Hist.*

MICHELAC (CLAUDE GARNIER MICHELAC, about 1610) a French jesuit, distinguished as a philosopher, a poet, and a critic, born in 1581, at Poitiers, of a noble family. He was intimately acquainted with the French, Italian, Latin and Greek languages, and has left behind him poems of great merit, composed in each of the three former. His acquaintance with the sciences of geometry and the mathematics was also considerable and from the variety as well as the extent of his knowledge it was at one time in contemplation to place the direction of the studies of Louis XIII under his superintendence, the native modesty however of Michelac and perhaps, his prudence prevented his undertaking the task. His printed works, in addition to the poems above-mentioned consist of an able commentary on the six books of Diophantus, a life of Hippo, and a French translation of Plutarch beside which he is said to have left behind him some valuable manuscripts. His death took place at Bourg in 1638.—*Voss Diet. Hist.*

MICAL (abbé) a most ingenious mechanist, born in France about 1730. After having finished his studies, he entered into holy orders, and obtained a small benefice which added enough to his patrimonial fortunes to produce a competence for his support. He dedicated his time and talents to the construction of speaking machines and though he appears to have succeeded only so far as to produce an imperfect imitation of the human voice, yet his mechanism excelled all other inventions of the kind and did great credit to the talents of the artist. The first automaton or speaking head which the abbé made was destroyed by himself but he afterwards completed two more, which he presented to the Academy of Sciences in 1783. From the report of Vicq-d'Azyr one of the commissioners appointed to examine them it appears that the heads covered a box in which artificial tongues were so arranged as to produce by the impression of the air upon membranes with which they were connected various gradations of sound capable of being modified so as to resemble the human voice in the pronunciation of articulate words and sentences. What became of these heads is uncertain. The inventor died in indigence in 1789 or 1790.—*Biog. Univers.*

MICHAELIS (JOSEPH HENRY) a learned divine and Oriental scholar who was born at Kettwangen in Germany in 1666. He studied at the university of Leipzig, and afterwards at Halle, where he became professor of Greek literature in 1699. He subsequently obtained the office of librarian to the university, and at length was appointed to the chair of divinity and the Oriental languages. In 1720 he published at Halle a valuable edition of the Hebrew Bible with various readings from MSS. and printed editions, and the marginal annotations and annotations of the rabbis, a kind of appendix to this work at the same time appeared under the title of "Annotations

M I C

M I D

GIOSEPHUS PHILIPPIUS-BONHOMMIUS in *Hagiographia*,¹ Halle 1720 3 vols. 4to. Michaelis was also the author of a *Histoire Grecque* and other works. He died in 1732.—*Biog. Univ.*

MICHAELIS (JOHN DAVID) nephew of the foregoing, was born at Halle in 1717. He was educated at the university of his native place, and devoted himself to the clerical profession. Having visited this country, he became acquainted with Dr Lowth and other English writers; and for a time he was preacher at the German chapel at St James's palace. Returning to Germany, he was made professor of theology and eastern literature at the university of Göttingen, of which he was also librarian. He was appointed director of the royal society of Göttingen and by his writings and lectures he contributed greatly to the celebrity of that university as a school of theological literature. The order of the polar star was bestowed on professor Michaelis in 1775 by the king of Sweden, and in 1786 he was made an aulic counsellor of Hanover. He died in 1791. His works are numerous relating to Scripture criticism, and the Oriental languages and literature. Among the most valuable are his *Introduction to the New Testament*, which has been translated into English by Bishop Marsh, and his *Commentaries on the Law of Moses*, of which there is an English version by Dr Smith.—*Id.*

MICHAELIS (CHRISTIAN FREDERICK) son of the preceding distinguished as a physician was born at Halle about 1754. After studying at home he went to Strasburg in 1775 and took the degree of M.D. He practised medicine for some time at Paris; afterwards visited England and returning to his native country became an army physician in the service of the prince of Hesse. About the year 1780 he occupied the chair of medicine at Cassel, and in 1786 he removed to Marburg, where he was professor of anatomy and subsequently chief medical professor till his death in 1814. He was the author of a tract,

De Angina polyposa see *Membranacea* 1778, a *Letter on the Regeneration of the Nerves*,² 1785, *Medical Memoirs* &c.—*Biog. Nouv. des Contemp.*

MICKLE (WILLIAM JULIUS) an English poet, was the son of a presbyterian clergyman and was born at Langholm in the county of Dumfries, in Scotland in 1734. He received his education at Edinburgh, and in the first instance engaged in business as a brewer but not exceeding he devoted himself to literature and removing to London he was noticed by lord Lyttleton. In 1755 he was employed as corrector of the press in the Clarendon printing-office at Oxford where he published a poem, entitled 'The Concubine,' in imitation of Spenser republished with the title of "Sir Misty." He afterwards edited what is called "Preach's Collection of Poems," 4 vols. supplementary to that of Doddy, and he appears to have furnished many valuable contributions to the collection of "Old Ballads" by Erans, the bookseller. In 1775 appeared his principal production a

translation of the *Land of Canaan*; it was published by subscription, in a quarto volume, with a dedication to the Duke of Buccleugh, in whose family the author's father had been chaplain. Prefixed to the poem is an historical and critical introduction, including a life of Canaan; and the work itself is executed in a manner highly creditable to the talents of the translator. In 1778 Mr Mickle accompanied commodore Johnson as his secretary on a mission to Lisbon; and after his return home, he resided at Forest-hall in Oxfordshire, where he died October 5, 1788. His poetical works were published collectively in 3 vols. 8vo, 1807, with a biographical memoir.—*Campbell's Species. of Brit. Poets.*

MIDDLETON (CONVAN) a learned and ingenuous divine and polemical writer. He was born at York in 1683, and was the son of an episcopal clergyman to whom he was in debt for the early part of his education. He became a student, and afterwards a fellow of Trinity college Cambridge in which situation he attracted some notice by his quarrel with the celebrated Dr Bentley the master of his college.—[See BENTLEY R.]—In 1726 he visited Italy and on his return he published a tract designed to show that the medical profession was held in little esteem by the ancient Romans and in 1729 appeared his *Letter from Rome on the conformity between popery and paganism*. Not long after he obtained the Woodwardian professorship of mineralogy which he held till 1734 when he was chosen Librarian to the university. In 1735 he published *A Dissertation concerning the Origin of Printing in England* showing that it was first introduced and practised by our countryman William Caxton at Westminster and not as is commonly believed, by a foreign printer at Oxford." His greatest literary undertaking was *The History of the Life of M. T. Cicero* 3 vols. 4to, 1741, in which he displays an intimate acquaintance with his subject, accompanied with a degree of elegance in his style and language which entitles him to rank among the principal modern historians of this country. In 1743 he published "The Epistles of M. T. Cicero to Brutus, and of Brutus to Cicero with the Latin Text on the opposite Page and English Notes, a prefatory Dissertation &c." In 1747 Dr Middleton excited a good deal of alarm among the serious friends of orthodoxy, by his "Free Inquiry into the Miraculous Powers which are supposed to have subsisted in the Christian Church, from the earliest Ages through several successive Centuries." This treatise like most free inquiries, brought on the author the imputation of infidelity and occasioned a warm controversy which was confirmed after the death of Dr Middleton, which took place in 1750. Besides the preceding publications he wrote against Bentley's proposed edition of the Greek Testament; against bishop Sherlock Dr Waterland, and others. His miscellaneous works have been published in 2 vols. 4to, and 3 vols. 8vo.—*Biog. Brit. Nichols's Lit. Ann.*

MIDDLETON (HENRY) a citizen of

London, was the son of Richard Middleton, an engineer of Shrewsbury Castle under Edward II. Henry, and Elizabeth, were employed in London as a gunsmith, and constructed many speculations and invented mines in Conquistador's time which were very productive. A power being obtained against signs of Blaizebach and James I., to bring a new supply of water to the city Shropshire in Middleton or Herefordshire, several plans were proposed, but all rejected, on account of the expense and difficulty. Middleton, however, made light of these objections, and the city agreeing to him and his heirs all the powers and rights conferred by act of parliament in 1608, he took all upon himself, and commenced his undertaking. The expense was however, so great, that it almost ruined the projector, who vainly applied for assistance to the corporation of London. He at length procured that of the king to whom a moiety of the concern was made over on his taking an equal share of the expense. On Michaelmas-day 1613, the work being completed, the water was let into the reservoir at Ishington with much ceremony. Mr Middleton was knighted, but his fortune was so impaired, that he became a surveyor and engineer for embankment. In 1672 he was created a baronet, and his death took place in 1681. A share in this New River originally worth one hundred, is now worth ten thousand pounds.—*See Brit. Panacea: London and Tour in Wales.*

MIDDLETON, DD. FRS. (THOMAS FAWTHROP) first bishop of Calcutta, was the only son of the rector of Kedleston in Derbyshire, where he was born in 1769. He was educated at Christ's Hospital whence he proceeded upon a school exhibition to Peckbush Hall Cambridge, where he took his first degree in 1792. The same year he took orders as curate of Gainsborough in Lincolnshire, where he wrote a periodical paper called "The Country Spectator." In 1794 he attracted the attention of Dr. John Pretyman archdeacon of Lincoln, who employed him as a tutor to his two sons, and obtained for him the rectory of Tawton in Northamptonshire, to which in 1802 was added in commendam the consolidated rectory of Little and Castle Bytham. In 1808 he took his doctor's degree and the same year appeared his eruditus work on the Greek Article, addressed to Dr. Pretyman. In 1809 he was collated to a stall in the diocese of Lincoln, and presented to the vicarage of St Pancras, Middleton and to the rectory of Pottersham Farts and in 1812 he was made archdeacon of Huntingdon, and when government came to the consideration of establishing a resident bishop in India, Dr. Middleton was selected for that important station and being consecrated at Lancaster in May 1814, arrived at Calcutta in the November of the same year, and immediately began to exert himself zealously in his new ministry. In 1820 he laid the foundation-stone of a church at Calcutta, near to which a school was erected for the Christian poor, and soon after a Missionary college, towards the erection of which endowment the

captions for the propagation of the gospel in foreign parts, and for missions to Africa and the East, each contributed \$1000. At the end of three hours, Dr. Middleton died the same day after a short illness, July 6, 1822. His sermons and charges have been collected into a volume by Dr. Bowyer with a biographical memoir prefixed.—*Lif. by Bowyer.*

MIEL (JAN), an eminent painter, was born at Vlaanderen in Flanders, in 1599 and was first a pupil of Gerard Segers. He travelled into Italy and entered the school of Andrea Mantegna. Being employed by his master in the Barberini palace, he gave way to the natural turn of his genius, and made some grotesque figures which so irritated Andrea, that he turned him away. Miel then went into Lombardy to study the works of Correggio and the Carracci, and returning to Rome he painted the picture of Moses striking the rock in the gallery of Monte Cavallo and composed historical pictures for several chapels at Rome. He was admitted into the academy of St. Luke in that city whence he was invited to Turin by Charles Emmanuel duke of Savoy and died there in 1664. Some of his finest works are in the grand saloon of the duke's palace de la Venaria. His chief excellency consists in the delineation of carnivals, beggars, rural scenes and particularly hunting pieces, which he executed with great spirit. He etched several of his own designs—*D'Argenville, Pilkington.*

MIERIS (FRANCIS) a very celebrated painter of the Dutch school was the son of a jeweller at Leyden where he was born in 1653. He was the pupil of Vliet, Gerard Douw and Hendrik Temple, and he is generally considered as the principal scholar of the second. His works consist of portraits, and scenes in common life. He possessed the delicate finish of Gerard Douw with more taste in his designs, his colouring, too, is more clear and his touch more spirited. He usually worked for a decent sum; but through his intemperance he always remained in poverty. One of his finest productions was a picture of a young lady fainting a physician attempting to recover her and an old woman standing by and for this three thousand francs were vainly offered by the grand duke of Tuscany. Mieris died at Leyden in 1681.—He had two sons, JOHN the elder who gave great promise of future excellence died in 1696 at Rome.—The younger WILLIAM MIERIS was the pupil of his father and adopted his style in which he showed great talent. He died in 1741.—His son FRANCIS MIERIS the younger was also a painter, but was not very successful. He published several works relating to the history of the Low Countries, and the lives of their sovereigns.—*D'Argenville, Pittegalle.*

MIGNARD (NICHOLAS) a French painter, was born in 1668 at Troyes. After studying the antiquities and paintings at Fontainebleau, he went into Italy, where he passed two years. He returned to Avignon and acquired the name of Mignard of Avignon, by way of dis-

disengaging him from his brother, Mignard the Painter. In 1665, when cardinal Mazarin accompanied Louis XIV on his way to meet the subjects of Spain, in passing through Avignon, he sat for his portrait to Mignard, who was invited to court, and for some years employed as portrait painter to the royal family. He did not, however, confine himself to portraits, but produced several considerable historical paintings. He also became professor and finally director of the academy of painting. Mignard's heads are desultive of fire or expression, but he is graceful and his colouring is good.—*D'Argenville's Pictorium*

MIGNARD (PARIS) surrounded the Roman, a celebrated French painter brother to the preceding was born at Troyes in 1610. He was originally intended for the medical profession, but his father finding that his inclinations led him to the study of painting placed him at the school of a painter at Bourges. After receiving the instructions of Vriel in 1634, he visited Rome and copied the works of Raphael, Michael Angelo &c. He married a beautiful young woman, the daughter of an architect at Rouen who served him as a model for his goddesses. After residing twenty-two years in Italy he was recalled to Paris by Louis XIV whose favourite artist he became and whom he painted ten different times, pleasing him as much by his flattery as by his talent. In 1657 the king enabled Mignard, and on the death of Le Brun in 1690 he succeeded to his places of first painter and director of manufactures, and of director and chancellor of the academy. He died in 1695. His composition was rich and elegant, and colouring harmonious, but he wanted fire and expressiveness. His works were very numerous, and the engravings from them amount to one hundred and forty seven. Mignard was in habits of intimacy with the principal French wits, and was beloved by them for his social disposition.—*D'Argenville's Pictorium*.

MIGNON, or MINJON (ABRAHAM) an eminent flower and fruit painter was born at Frankfort in 1639 and was at first placed as a pupil with James Murel a flower painter of that city. At the age of seventeen he accompanied his master to Holland, where he took lessons of David de Heam, of Utrecht. His brilliancy of colouring and delicate execution rendered him unrivalled in his time and in his style he is only surpassed by Van Huysum. He was very particular in the choice of his subjects, and by his exquisite delineations of insects, dew-drops, &c., produced an abounding illusion. By his very great anxiety he injured his health, and eventually shortened his life, dying in 1679, in Holland. His works obtained very high prices, and are to be found in most principal public and private collections.—*D'Argenville's Vue des Peintres*. *Pictorium*.

MIGNOT (BRUNO) a French writer of the last century member of the Académie des Inscriptions, born 1696, graduated as doctor of divinity in 1725. He was the author of a variety of tracta, principally upon subjects con-

nected with the history and the discipline of the church of Rome. Of these the principal are, "A History of the Disputes between King Henry II. of England and St. Thomas a Becket," 1700; "On the rights of the March and the Civil Government over the Revenues of the Church," 6 vols.; "A History of the Reception of the Council of Trent in the Catholic States," 2 vols.; "The real History of the Church of St. Omer," "A Panoplia on the Passions, and an elaborate treatise 'Des prêts de Commerce' in five duodecimo volumes. Mignot died in 1771.—*Nous, Dict. Hist.*

MIGNOT (VINCENT) the nephew of Voltaire born at Paris about 1730. He obtained without being a priest, several benefices among which was the abbey of Bellière, in Champagne, and he became counsellor to the grand council which place he resigned in 1765, only reserving to himself the honorary title. He acted in conjunction with the Marquis de Ville-Vieille the profession of faith which Voltaire is said to have made just before his death; and fearing obstacles might occur to the interment of his uncle he transported the remains of that celebrated individual to the abbey of Bellière whence they were subsequently removed to the Pantheon or church of St Geneviève at Paris. Mignot was the author of "Histoire de l'Empire Ottoman, depuis son Origine jusqu'à la Paix de Belgrade en 1740" Paris, 1771, 4 vols. 12mo of which there is an English translation "Histoire de l'Empereur Irene" 1760 12mo. "Histoire de Jeanne I. Reine de Naples" 12mo; "Histoire des Rois Catholiques Ferdinand et Isabelle" 2 vols. 12mo and he translated Quintius Curtius and 4 leets de Senece and de Amstelius. His death happened in 1790.—*Bug Notz des Contemp.*

MILBOURNP (IUK) the son of a purring divine of the same name who refusing to take the oaths was ejected from his living of Wroxall in Warwickshire where the subject of this article was born in 1607. He received a classical education at Frambridge Hall Cambridge where he took the degree of master of arts, and entering the church, obtained the rectory of St. Paul's Shoreditch in the city of London. He published some critical remarks on Dryden's translation of the *Aeneis*, which Johnson in his life of that poet speaks of somewhat contemptuously. His name also has been introduced by Pope in the *Dunciad*. The remainder of his writings consist of a version of the *Psalm*, and about thirty sermons. He died in London in 1720.—*Biogr. Brit.*

MILDMAY (SIR WILLIAM) a highly respectable statesman under the Tudors, was educated at Christ's college Cambridge. He was employed under Henry VIII in the court of augmentation; and during that of Edward VI in the tithe. He also sat in Parliament in the reign of Mary as knight of the shire for Cumberland and finally became chancellor of the exchequer under queen Elizabeth, which

office he held for twenty-three years, and discharged it with so much zeal for the subject as well as for the public, that he left no small portion of money derived by his integrity. Mr Walter Mildmay was not only a zealous Protestant, but on many occasions favourable to the puritans, which conduct induced Elizabeth to call him, when he founded Emmanuel college, that she might that he had erected a puritan foundation. He replied that he had set an altar, which when it became an oak, God alone could tell what it would produce. This able and learned man died May 31 1589.—*Big Brit. Fuller's Hist. of Camb.*

MILL (Hector) an English engineer distinguished for his acquaintance with the science of hydraulics. He was a native of London and for many years held the office of principal surveyor to the New River company, in which station his services were highly appreciated by his employer, and by the public in general. He also erected water works for the supply of the town of Northampton and others for the use of the noble garden of sir Robert Walpole, at Houghton in Norfolk. He died in 1770, in the eighty first year of his age.—*Big Univ.*

MILL (John) a learned English divine and Biblical critic, was born at Shap in Westmorland, in 1645. He became a servitor in Queen's college, Oxford, in 1661 where he graduated MA, in 1669. Being afterwards elected a fellow, he became an eminent tutor and having entered into orders was much admired as an eloquent preacher. In 1680 he received from his episcopate the living of Blewchangdon in Oxfordshire, and proceeding DD became chaplain in ordinary to Charles II. The valuable edition of the New Testament, on which Dr Mill employed thirty years of his life, appeared in 1707 under the title of "Novum Testamentum Graecum, cum Lectio- nibus variis, ex MSS. &c." Of the great learning and critics' accuracy of Dr Mill, this laborious work forms an indispensable testimony; although some ecclesiastical writers have aimed their objections to the collection of such a vast mass of various readings (gathered in this instance, it is said, from more than 30 000 MSS.) as supplying arms to infidelity Dr Bentley, however, in his "Remarks," has ably supported the other side of the question. Dr Mill secured the publication of his great work only a fortnight, dying of an apoplexy in 1707, at the sixty-third year of his age.—*Big Brit.*

MILLER (John) a professor of law in the university of Glasgow, was born in 1735 in the parish of Sleat, in Lancashire. He was educated at Hamilton whence he was removed at an early age to Glasgow. He was designed for the church, but turned his attention to law, and being desired by Lord Kames to become advocate to his bar, was rendered, by his love of the profession, a most eligible candidate for the learned judge himself. In consequence of popularity, and was rising rapidly in his profession, when he was induced to accept a professorship for the vacant professorship of the law at Glasgow and supported by

the minister of lord Kames and Adam Smith, was chosen in 1761, and the reputation of the university as a school for jurisprudence, was much increased by his talents as a lecturer. In 1771 he published a treatise on the "Origin of the Dissociation of Friends," in which he shows himself a disciple of Montesquieu. This work, which Mr Dugald Stewart classes under theoretical or conventional history, was followed, after the interval of some years, in 1787 with his "Historical View of the English Government," in which he traces the progressive changes in the property the state of the people and the government of England, from the settlement of the Saxons to the accession of the house of Stuart. It exhibits the same love of system and partiality as his hypothetical reasoning as his first production but is at the same time valuable for its information and research. Professor Miller who was a zealous whig of the school which adopted Mr Fox as their leader died May 30 1801 at the age of sixty nine, leaving behind him several manuscripts, from which were compiled two posthumous volumes, printed in 1803. A part of those is occupied by a continuation of his "Historical view of the English Government."—*Life prefixed to Works.*

MILLER (John) doc. (Foware) was born at Norwich of humble parentage in 1736. Eking from his father who had been compelled by his poverty to bring him up to a life of labour he came to Lynn, where Dr Burney discovered his genius for music and gave him instruction. In 1756 he obtained the appointment of organist at Doncaster and after continuing in this situation thirty years took his doctor's degree in music at Cambridge. Besides his skill on the organ he was an excellent flute-player and performed upon that instrument in Handel's first oratorio. Dr Miller was the author of an introductory treatise still held in considerable estimation entitled "The Elements of Thorough Bass and Composition" of another called "The Institutes of Music;" and of a topographical work of merit on the "History and Antiquities of Doncaster." He also arranged and published by subscription a set of new medodes for the Psalms, the king himself heading the list of his subscribers. His death took place at Cambridge in 1807.—*Gene. Mag.*

MILLER (James) a political and dramatic writer was born in Dorsetshire in 1763, and received his education at Wadham college, Oxford. During his residence at the university his turn for satire led him to compose great part of a comedy called "The Humours of Oxford" which bearing allusion to well known characters in that city, gave much offence, and hindered his subsequent progress. He notwithstanding took orders, and after enduring much vicissitude at length obtained the living of Upnor in Kent. He wrote several political pamphlets against sir Robert Walpole, and some plays, most singular, the principal of which is the tragedy of Matrona. He was also connected with a translation of Molier.—*Big Dram.*

MILLER (JOHN) the name of a witty author, whose name has become identified with the repetition of wit and epigram, wherever the English language is spoken. He was born in 1684, it is supposed in London, and was a favourite law comedian, about the time that Congreve's comedies were fashionable, to the success of which, it is said, his humour much contributed. In these he performed Sir Joseph Winkel, in the "Old Bachelor," and Ben, in "Love for Love." Another of his favourite characters was Tongue, in "The Committee." He died August 13, 1730 and was buried in the church-yard of St Clements, where a stone (recently re-erected) was placed to his memory with an epitaph, written by his friend, Stephen Duck. After all, the jests which have immortalised his name seem to have connexion with nothing else; for although originally compiled by a professed fraud and companion, it is well known that they were collected by John Motley author of the life of Peter the Great, and other works. Joe Miller's Jests had run through eleven editions in 1751 and was reprinted, after a lapse of thirty years by Barker of Rosemary-street, Covent-garden. A copy of the original volume was lately valued at ten guineas in the catalogues of an eminent bookseller.—*Waldron. Nichols's Lit. Hist.*

MILLER (PHILIP) an eminent botanist, distinguished among his contemporaries by the flattering title of "Hortulanorum Princeps." He was a native of North Britain, born in 1691 and was educated by his father gardener to the Apothecaries Company at Chelsea, to succeed him in his situation, which he did on the decease of the latter in 1728. Soon after his appointment, the good offices of sir W Watson and Mr Hudson introduced him to the acquaintance and correspondence of the celebrated Linnaeus, whose plan he afterwards pursued in the arrangement and classification of his garden. Mr Miller to a thorough acquaintance with the theory of botany added great practical knowledge of that science and from the reputation which he acquired in this particular branch of natural philosophy was elected a member of the Horticultural Society of Florence, as well as of the Royal Society of England, among whose transactions are to be found several papers of his composition. His other writings are "A Gardener's Dictionary" first printed in folio in 1731. Of this work, which has gone through several editions, Linnaeus speaks in terms of unqualified praise, "The Gardener's Calendar," 8vo; "The Gardener and Florist's Dictionary" 8vo, "A Catalogue of Trees, Shrubs, Plants, and Flowers in the Gardens near London," "Plates of Plants," folio, 5 vols. 1755, and "A Short Introduction to Botany." He also left behind him a valuable herbarium, or herbarium siccum. His death took place in 1771.—*Haw's Cyclop.*

MILLER (THOMAS) Bishop of Waterford, & Lismore, born at High-Clear-Hants, of which parish his father, the seafarer Isaac Miller, was many years the incumbent. He received

his education at Waterham, college, in the university of Oxford, and took his degree there in bachelors of divinity in 1764. Two years afterwards, he was elected to the Greek pastorate which, however, he resigned in 1767 having accepted an invitation from Lord Fins to accompany him to Ireland in quality of his domestic chaplain. The steady pursuit of his lordship eventually procured his election to the episcopal bench. Bishop Miller was a prelate of considerable learning and an able divine. The only productions of his pen which have appeared are a new edition of St Cyril's works, with annotations, in one vol folio, and a life of his own father in two. His death took place in the city which gives a name to his diocese, in the year 1760.—*Nichols's Lit. Hist.*

MILLES (JACOBIAH) nephew of the preceding an English divine and antiquary was born in 1714. He was educated at Eton, whence he was removed to Queen's college, Oxford where he graduated as DD in 1747 Having married one of the daughters of archbishop Potter he obtained by the interest of that prelate the united rectories of St Edmund the King and St Nicholas Acon which he held with the livings of Manchestre in Surrey and West Tarring in Sussex. In 1768 he became dean of Exeter and in 1763 president of the Society of Antiquaries, having been for some years previously a fellow of the Royal Society. Dean Miles is the author of several curious papers in the Archaeologia, one of which involved him in a controversy with Horace Walpole. His zeal for antiquity was not always tempered by judgment, and his attempt to vindicate the authenticity of the poems of Flawley in an edition which he printed in 4to in 1762 subjected him to exceeding ridicule especially from George Stevens, and the witty author of "An Archæological Epistle." He died in 1784.—*Nichols's Lit. Hist.*

MILLIN OR GRAND MAISON (ANTOINE AUBIN) member of the French Institute and of the legion of honour born at Paris in 1759. His education being completed he was destined for the ecclesiastical profession which he renounced to devote himself to literature and the sciences and being possessed of an independent fortune, he was enabled to follow his inclination. His first literary attempts were translations, published in 1785 under the title of "Mémoires de Littérature Strangère," 6 vols. 12mo. He next attached himself particularly to the study of natural history and formed the plan of an extensive work in which he intended to treat of that science systematically as Buffon and Montalembert treated astronomy and mathematics, but the scheme was too extensive to be more than partially executed. He became the founder of a Linnaean Society of Paris, which being reorganized after the Revolution in 1799, was designated the Society of Natural History and of which Millin was appointed perpetual secretary. At this period he ranked among the principal friends of liberty, and published a series of tracts in favour of the popular cause. He

was one of the founders of the "Champlain de Paris," all 1730, when his thought is present to have been the author of *Le Monde*, and impelled him to the chair of Philosophy. He was interested in the progress of history in the critical schools, and he established, and principally conducted, the "Magazine Philologique." In 1754 he succeeded the Abbé Boulainvilliers as keeper of the medals in the National Library, which post he held till his death in 1768. His works on natural history, archaeology and the fine arts are numerous and highly esteemed.—*Bibl. Nouv. des Contemp.*

MILLEOT (CLAUDE FRANÇOIS XAVIER) a learned and ingenious French author, born in the spring of 1732 at Besançon. He was educated at the jesuit's college and became a member of that fraternity but quitted it and settled at Paray where the patronage of the duc de Nevers obtained him the historical professorship. This situation he filled with much ability and reputation for some years when the prince of Condé offering to his acceptance the appointment of tutor to the young duc d'Enghien he returned to Paris. His works, some of which are much esteemed for the spirit and elegance of their style consist of "A History of the Tropbadoors" in 3 vols.,

"Memoirs, Political and Military for the History of the Reigns of Louis XIV and Louis XV" 6 vols.; "Elements of Universal History," 9 vols.; "Elements of the History of England," 3 vols.; "Elements of the History of France" 3 vols.; besides some academic papers, and a few translations from the Latin. His death took place in the French capital in 1783.—*Bibl. Univ.*

MILLET (NICHOLAS CHRISTIAN DE THY) comte de la French noblemen who distinguished himself by his researches and improvements in chemistry. He was born in 1736 and like most persons of his rank, he passed a part of his life in military service. He was present at the battle of Ladeit in 1741 and in 1756 at those of Rostbach, Craveldt, and Minden. He afterwards became adjutant-general in the army of the duke of Württemberg to whom he was also chamberlain, and who conferred on him the order of the red eagle. On the restoration of peace returning to his native country he engaged in the study of chemistry, and as the result of his observations and inquiries he published a very elaborate treatise on the manufacture of portcullis of Saxony, (Dresden-shire) which procured his admission into the Academy of Sciences at Paris. He was also chosen a member of the Royal Academy of Madrid and the Academy of Florence. His researches were principally directed to the improvement of colours for engraving and the construction of furnaces. The name of Millet died September 17 1784. His son, also called Millet, was

MILLET (PAUL, M.D., F.R.S. (or FRANCIS) a physician of considerable eminence in his profession, born in 1736 at Chichester, educated at Exeter, and admitted to the western university he was afterwards appointed a consulting physi-

cian to the Middlesex foundation. While on his travels, he visited the slate of Germany at Hanau, a circumstance which led to the most extensive practice on his return to England in 1760. He wrote the *Gastric Poems before the College of Physicians*, having published, the year preceding, his "Anatomicon of Natural Hygiene," &c. He also wrote a treatise on the stamp of the scurvy and putrid fever printed in 1792 &c. His death took place June 24, 1821 in the 75th year of his age.—*Cant. Mag.*

MILNE, LL.D. (COLIN) a native of Aberdeen, in which university he received his education, under the superintendence of his uncle, Dr Campbell, provost of the Marischal college. He afterwards was selected by the duke of Northumberland to direct the studies of his younger son Lord Albermarle, and having taken orders was presented, through the interest of the Percy family to the living of North Chapel, in the county of Essex in reward of his services. The lectureship of Duxford was afterwards added to his preferment. Dr Milne is principally known as an excellent naturalist and his writings, chiefly on subjects connected with botany are much admired by those versed in that particular branch of science. They are entitled "Institutiones Botanicae Linnaei, 4to Indigo Botany" and a "Botanical Dictionary." A few specimens of his composition have also appeared. His death took place in 1814.—*Cant. Mag.*

MILNER (ISAAC) an episcopal divine, eminent as a mathematician and natural philosopher. He was a native of Yorkshire and was of low parentage having been brought up to the employment of weaving which he followed for some time dedicating every moment of leisure to the study of classical literature and the mathematics. He was then employed as an assistant in a grammar school and afterwards admitted a student at Queen's college Cambridge. In 1774 he gained the first mathematical prize and becoming a tutor he had among his pupils Mr Pitt and Mr Wilberforce with whom he travelled abroad. Rotating at the university he was chosen professor of natural philosophy in 1783, and master of his college in 1788 when he proceeded D.D. and about the same time he obtained the deanship of Carlisle. He was vice-chancellor of the university in 1792, and six years afterwards he became Lucasian professor of mathematics. Dr Milner wrote against Bishop, in favour of the Bible Society, and published some professional pieces, but he chiefly distinguished himself by some important papers on chemistry and natural philosophy, published in the Philosophical Transactions. He died in 1829.—His elder brother, JAMES MILNER, also originally a weaver, raised himself by the exercise of his talents to eminence in the literary world. He was educated at a free grammar school at Leeds, where he was born, and he afterwards studied at Caius college Cambridge, and took the degree of M.A. in 1795. Having taken orders in the church, he attain-

at a lectureship at Hert, where he became supply of the grammar school. He subsequently abandoned the religion of March Fairbury in Yorkshire, and converted to the Holy Trinity, or Episcopalianism. He died in 1777, aged 76. His works consist of a "History of the Church of Christ," 3 vols. 8vo., "Sermons," 2 vols. 8vo., published posthumously with the assistance of his brother deacon Milner. "Ezekiel on the Influence of the Holy Spirit," a tract against Gibbons, &c. Mr. Milner belonged to the class of the evangelical or Calvinistical clergy, and his Ecclesiastical History is highly esteemed by those whose religious sentiments correspond with his own.—*Gent Mag.*

MILTON (John) the most eminent of English poets, setting aside Shakespeare as a dramatist, sprang from an ancient family formerly proprietors of Milton near Thame in Oxfordshire. His grandfather who was under ranger of the forest of Bladon being a zealous Roman Catholic dismembered his son, the father of Milton for becoming a Protestant, on which account he was obliged to quit his studies at Oxford and settle in London as a scrivener. This gentleman who was a good classical scholar and remarkable for his skill in music married a lady also of ancient family by whom he had two sons and a daughter John the poet Christopher who became a judge in the court of common pleas and Anne who married Edward Phillips, secondary at the crown office. John Milton was born at his father's house in Broad street, December 9 1608. He received his early education from a learned minister of the name of Young, and was afterwards placed at St Paul's school whence he was removed in his seventeenth year to Christ's college Cambridge where he graduated MA, and seems to have distinguished himself by the purity and elegance of his Latin versification. The original purpose of Milton was to enter the church but his dislike to subscription and to oaths, which in his opinion required what he emphatically termed "an accommodating conscience," prevented the fulfilment of this intention. On leaving college therefore, he repaired to his father's house who, having retired from business, had taken a residence at Hinton in Buckinghamshire. Here he passed five years in a study of the best Greek and Roman authors, and in the composition of some of his finest miscellaneous poems, including his Allegro and Penseroso, Comus and Lycidas. That his learning and talents had by this time attracted considerable attention is proved by the production of "Comus" at the solicitation of the Bridgewater family which was performed at Ludlow castle in 1634, by some of its youthful inmates, as also by his "Atalantis," part of an entertainment performed before the countess dowager of Derby in the same manner at Hatfield. In 1638, having obtained his father's consent to travel, he visited Paris, where he was introduced to Grotius, and thence proceeded successively to Florence, Rome, and Naples, in which latter capital he

was highly entertained by Maffei, successor of Valla, the proton of Naples. His manners, however, being very illiberal and somewhat wanton, he was also highly overreverenced; and it is said that it would have been impossible for him to have been admitted into the society of the Accademia degli Arcadi, had not the author of "L'Amfipoli" interceded for him. After remaining abroad for fifteen months, he returned to England, giving up his intention of visiting Sicily and Greece, in consequence of accounts of the state of affairs in his own country. "I esteemed it dishonorable," he writes, "for me to be harboring abroad, even for the improvement of my mind, while my fellow-citizens were contending for their liberty at home." His turn however not being military and being shut out by want of friends from parliament, he fixed in the metropolis, and undertook the education of his two nephews the sons of his sister Mrs. Phillips. Other parents being also induced by his high character to apply to him, he was encouraged to engage a house and garden in Aldersgate-street, and to open an academy for education. However engrossed by cultivation, he soon found time to mingle in the controversial struggles of the day and published four treatises relative to church government, which produced him antagonists in bishop Hall and archbishop Usher. A fifth publication followed, entitled "Reasons of Church Government urged against Prelacy" in which he promises to undertake something but yet he knew not what, which might be of use and honour to his country," a calm anticipation of great performance which he amply redeemed by his "Paradise Lost." About this time his father who was disturbed in his residence by the king's troops came to reside with his son John who in 1643 united himself in marriage with Mary daughter of Richard Powell esq., a magistrate in Oxfordshire. In more than one respect, this was an unsuitable connection, for the father of the lady being a zealous royalist, who practised the jovial hospitality of the country gentlemen of that party, the residence of her husband so disgusted the bride, that in less than a month, under the pretence of a visit, she left him, and remained for the rest of the summer with her parents. His letters and messages for her to return home being treated with neglect, Milton at length became incensed, and regarding her conduct as a desertion of the marriage contract, he sought to punish it by repudiation. To this matrimonial disagreement is to be attributed his treatises, "The Doctrine and Discipline of Divorce," "The Judgment of Martin Bucer concerning Divorce," and "Treatise on the Expunction upon the four chief places in scripture which treat of marriage." The presbyterian assembly of divines, then sitting at Westminster, alarmed at this reasoning, had the writer called up before the house of Lords, which, however, instituted no process. Convinc'd by his own arguments, Milton began to pay attention to an accomplished young lady the daughter of Dr Davis, a step which pleased the parents of his wife, who having become obnoxious to the ruling

powers, had need of the good offices of their master, but with his party. These dispelled, they supported him and his movement with Miss Milton, whose warm advocacy of republicanism, he not only supported again with affection, but also sent her parents and brothers, in the most generous manner, to his house home. He continued to employ his pen on public topics; and, in 1644, published his celebrated "Protestant on Education." The puritanists, then in power, having imposed the severing restrictions upon the press, he also printed, in the same year his "Apologia, a speech of Mr John Milton for the Liberty of Unlicensed Printing being a spirited and energetic defence of that grand essential to public liberty a free press, which great nations have to struggle for in the present age nearly as much as ever. In 1645 he published his juvenile poems in Latin and English, including, for the first time, the "Allegro" and "Poesoma." Milton's notions of the origin and end of government carried him to a full approbation of the trial and execution of Charles I., which he sought to justify in a tract entitled "The Tenure of Kings and Magistrates." Even in the title-page he asserts the right to put a tyrant or wicked king to death on due conviction by any who possess the power should the ordinary magistrates have no means to do so. By this doctrine which is the contrary extreme to that of passive obedience, he plainly meant to include the case of such a minority as then composed the parliament taking the performance of this national act upon themselves. He further employed his pen in the same cause by the composition of a "History of England, of which however, he had only completed six books when he was interrupted, by being nominated Latin secretary to the new council of state. He had sorrowfully accepted the appointment, when he was requested to answer the famous book, attributed to Charles I., entitled, "Iconoclaste." This task he accomplished in a work, which he called "Iconoclaste, or the Image-breaker" which is considered by many writers as one of the ablest of his political tracts. His celebrated controversy with Salmasius soon after followed which engrossed in the latter writing a defence of Charles I. and of monarchy, under the title of "Defensio Regis," at the instigation of the abdicated Charles II. Milton excused his reply "Defensio pro Populo Anglicano." It was published in 1651 and though tainted with party virulence and the discordant personal animosity which discoloured the controversies of the times, exhibits an occasional strain of fervid eloquence, which completely overwhelmed the force and eloquence of his opponent. He obtained by this production a high reputation at home and abroad, being visited on his arrival by all the foreign ambassadors resident in London; he also received from the University of Leiden a reward of 1000 d. He however did not long live to enjoy, as an effect of the fatigues and exertions induced by intense study, a short life, his declining predicted, in an

irremediable gout攻寒症 owing to his early illness on the occasion. It is melancholy to observe how truly and feelingly he endeavoured to his health in more than two passages of his unprinted poetry. His loss of sight did not, however, impede his faculty of composition and in 1652 he wrote a second "Defence of the People of England" against an attack by Dr Medlicot, under the name of More similar to that of Salmasius. In this piece Milton inserts some high-flown panegyric of Cromwell, who had now assumed the title of Protector and this tribute, at a time when the wisest and most conscientious of the republicans had become sensible of his arts forms one of the strongest testimonies in favour of the involuntary admittance which the vigour and energy of that extraordinary person a man, and the correspondent greatness of his actions produced on kindred strength of intellect. In 1652 Milton lost his wife who had produced him three daughters, and soon after married another the daughter of a captain Woodcock, who died in childhood the same year. To divert his grief for this loss, he resumed his History of England and also made some progress in a Latin dictionary and still composed much of the Latin correspondence of his office. On the death of Cromwell he employed his pen with great ability to stem the increasing feeling in favour of the Restoration but mere argument in these reactions of public feeling is seldom much attended to, not to mention the difficulty with republican consistency to argue the right of the few to oppose the inclination of the many. On the Restoration Milton took refuge for some time in the house of a friend. His "Defences of the People and Iconoclastes" were called up, and ordered to be burnt, but the author was reported to have absconded, and in the act of indemnity which followed, his name formed no exception. He appears, however to have been some time in the custody of the sergeant-at-arms, but was at length discharged, and even treated leniently in regard to fine, as it is said, owing to the friendly interposition of Sir William Davenant, who had received similar kind offices from Milton, when undergoing by his adherence to the royal cause. In reduced circumstances, and under the disengagement of power he now removed to a private residence near his former house in the city and his industry respecting female aid, was led, in his fifty-fourth year, to make as a third wife, Elizabeth Minstrell of a good family in Cheshire. He now resumed the political studies which he had for seven years laid aside, and left in suspense to meditate upon the lofty ideas that filled his mind, the noble result was his immortal "Paradise Lost," which was finished in 1658, and first printed in 1667, in a small 4to. The sum which he obtained for it proved the wretched price of literature in that day, his remuneration being five pounds in hand, with a consideration of fifteen dependent upon the sale of two more impressions, the net profit subsequently, however still remaining his own.

should have long struggled with bad temporal and political perplexities; before it took a more glorious among the few great productions of the human mind which continually rise in estimation and are estimated by man or man. In 1670 appeared his "Paradise Regained," which, however inferior to its predecessor, he is said to have preferred to it. In grandeur and invention, however, no inferiority is conspicuous, although by no means so unworthy the genius of its author as more comparative criticism might imply. With "Paradise Regained," appeared the tragedy of "Samson Agonistes," composed upon the ancient model, and abounding in moral and descriptive beauties, but exhibiting little pure dramatic talent, either in the development of plot, or delineation of character, and never intended or calculated for the stage. In 1672 he composed a system of logic after the manner of Ramsey, and the following year again entered the dangerous field of polemics, with a "Treatise of True Religion Harvey Schism Toleration and the best means of Preventing the Growth of Popery." A publication of his familiar epistles, in Latin and of some academic exercises occupied the last year of his life, which repeated fits of the gout were now rapidly bringing to a close. His rank tranquilly under an exhaustion of the vital powers in November 1674 when he had nearly completed his sixty-sixth year. His remains, with a numerous and splendid attendance were interred in the church of Cripplegate; where the elder Bunyan, Whistred had erected a monument to his memory. It was for that incommodious divine and politician Dr Spenet, bishop of Rochester, as dean of Westminster to deny him a monument in the abbey where however in 1737 one was erected to his memory by auditor Benson. Milton was distinguished in his youth for personal beauty and was to the last a very comely-looking man. His habits of life were those of a student and philosopher being strictly sober and temperate, his chief relaxations consisting of music and conversation. His temper was serene and cheerful and although warm and ardent in controversy after the manner of the times, he appears to have indulged no rancour, except on a public ground, and to have been civil and urban in the ordinary movements of society. He has been called a fondly husband and unkind father, and as he seems to have inflicted something like parental rebukes on the authority of the male head of a family in a comparative few cases something of this may have been deserved. His twenty forefathers of his wife, however for certainly no small effort, shows that he was at least a very pliable son; and all that can be said against him as a parent is, that when blind he obliged his daughters to read to him in languages which they did not understand. Of these he had three, by his first wife; and it is to be regretted that the account of their conduct to him was by no means favourable. In 1736 the tragedy of "Cain" was performed for the benefit of one of

his oldest daughters, named Postle, though a very humble actress. Of the nobility of the genius, and the depth and variety of the learning of Milton, there can be no difference of opinion; and in respect to the first, his own countrymen, at least, will readily admit that he has ever been equalled. Had he never even written "Paradise Lost," his "Allegro," "Feverfew," and "Comus," must have stamped him a poet in the most elevated conception of the title. Including that immortal production it is a high effort of critical skill duly to appreciate his merit, and a proof of cultivated taste with discrimination to admire it. His prose writings have had fewer advocates; but his satiric spirit and vigour, even in these, are predominant, and his style, although sometimes harsh and unsmooth, is pregnant with energy and imagination. Nowing in the ranks of party himself no man's fame has been more rancorously attacked than that of Milton by political animosity, but after all the deductions it has been able to make, either critically or hypothetically as a man of genius he will ever rank among the chief glories of the English nation. The best edition of the poetical works of Milton is that of Todd, in 6 vols. 8vo, with his life in one volume.—*Biog. Brit.* *Newton* and *Johannes L. Aldrich's G. Big*

MIMNERMUS. The name of an ancient Greek poet and musician known according to Athenaeus, as the inventor of the pentameter measure in versification. Strabo ascribes Calophon as the city of his birth which took place about six centuries before the commencement of the Christian era. Horace speaks in the highest terms of his love elegies, which he prefers to the writings of Calimachus, while Propertius places him before Homer in the expression of the softer passions. Both he and his mistress, Nanno, are said to have been musicians by profession and to have been celebrated for their performances on the flute especially according to Pliny, in a particular air called *Cnidina*, used at the Athenian sacrifices. A few fragments only of his lyric poems have come down to posterity, as preserved by Stobaeus; they are, however, of a character which lead us to suppose that the high reputation he enjoyed was not unmerited. Nothing is known of the time or manner of his death.—*Tab. Bib. Græc.*

MIND (Gosaray) an eminent painter born at Berne in Switzerland, in 1768. He studied drawing and landscape painting under Freudenberger whose delineations of Swiss scenery and village sports he successfully imitated. At length he devoted his talents entirely to the art of designing two particular species of animals, viz. bears and cats; and in this narrow department of his profession he acquired unrivalled excellence. The following were his peculiar favourites, and he had always several of them in his room which he would allow to sit quietly perched on his shoulders for hours at a time. Madame Lebrun, a traveller in Switzerland, who visited Mind, and purchased some of his designs,

time had the President of State. He was born at Paris, and educated in the University of Paris, and he studied law, but did not practice it, and published books at Paris, in the several meetings of which city that nation makes a prominent figure. This eccentric painter died at Paris, November 8, 1814.—*Bog. Uni.*

MIRLOT (Louvain) an ancient English poet, who flourished in the fourteenth century, but remained unknown, until by accident Mr Tyndale discovered his works, which were edited by Mr Russon in 1794. His versification is uncommonly harmonious and easy, nor has he the dull prolixity of many early authors, but neither do his remains contain those portraits of ancient times and manners from which early writers derive their greatest value.—*Ribes's edition of Minst. Crit. Rev.*

MINUCIUS FELIX (Maneius) a native of Africa, who about the close of the second and the commencement of the third century of the Christian era, attained to a considerable degree of reputation at Rome as a rhetorician. He was a Christian, and wrote a dialogue in defense of his religion entitled, ' Octavianus, of which Jerome and Lactantius speak highly. This work however was long ascribed to be the composition of Arnobius, till in 1560, Bandolin restored it to its real author. Another treatise "De Pato," has also been ascribed to him, but from the difference of style which it exhibits, when compared with the other work some doubts are entertained as to its authenticity. There are two English translations of the "Octavia." —*Cass. Dupin.*

MINUZIANO (Alessandro) a learned printer was born at St. Severo in Puglia in the fifteenth century. He studied under George Merula, at Milan, and succeeded him there as professor of rhetoric. He employed himself for some time in correcting and editing learned works which were then being published, and finally he established a printing press of his own. His first publication was a printed edition of all Cicero's works in four volumes folio. He then proceeded to publish editions of various ancient and modern authors, with very elegant prefaces of his own. When pope Leo X caused the Annals of Tacitus to be printed at Rome for the first time, Minuziano exerted his influence by procuring the sheets as they went through the press and publishing a rival edition. The year of his death is uncertain, but the last time that he was noticed was in 1551.—*Thackeray.*

MIRABAUD (JEAN BAPTISTE de) a native of Paris, who adopted the profession of arms, and distinguished himself by his courage at the battle of Steenwijk, after which he quitted the army; to devote himself to literature. He entered into the congregation of the Society, that he might be able to pursue his studies with tranquillity, and at length he became a canon to become private secretary to the cardinal of Ossesme, and was to be advanced. In 1704 he published a manuscript history of the French Revolution, "Histoire des événements de la Révolution Française Découverte," which was soon suppressed by the preceding, written in the

French language, and passed his early education. He was admitted into the French Academy, of which he became president of the country in 1748. His death took place May 26, 1769, at the age of eighty-five. He published in 1750, a translation of the "Oraisons Funèbres," but it was referred to his former predecessor. He was also the author of "Le Monde, ses Origines et son Antiquité," and "Système des Philosophes sur la Nature de l'Amour"; but the atheistical work, published in his name under the title of "The System of Nature" is wholly supposititious, having been written by Diderot, D'Holbach, and others.—*Bog. Uni.*

MIRABEAU (VICTOR RAMBERT marquis de) one of the propagators of the doctrines of the political economists in France, born at Paris, thus, October 5, 1715. His ancestors having been exiled from Florence had in the fourteenth century taken refuge in Provence, where they maintained their rank among the noble families of the country. The marquis fixed his residence at Paris, where he attracted much notice by advocating the doctrine of Quesnay founder of the sect of economists. In 1755 he published his "Art des Hommes," 5 vols. 12mo, which produced a great sensation in England and was translated into Italian, and published at Venice in 1784. His "Théorie de l'Impôt," 1760 occasioned his imprisonment in the bastile. He died at Argeville July 13, 1789. A list of his numerous publications may be found in the annexed authority.—*Bog. Uni.*

MIRABEAU (HONORÉ GABRIEL RIQUIER 71 comte de) famous for the political influence he exercised during the French Revolution. He was the eldest son of the preceding, and was born at Bignon near Nemours, March 9, 1749. He derived from nature strong passions, an ardent imagination and considerable talents, to which was added by education a vast but superficial acquaintance with literature. After having served some years in the army, in Corsica, he returned to France and retired to an estate in the Limousin attending to agriculture and the management of some law-suits. In 1771 he repaired Paris, and the following year he married mademoiselle de Marguerite a rich and beautiful heiress. The wife was by no means fortunate and in two years he dissipated all the available part of her wife's fortune. Her father procured a royal order for his admission to the country where he wrote his essay on despotism. An officer of honour accompanied his confinement in the castle of Ille, and being transferred to the fort of Joux, in Franche Comté, he obtained permission to go to Pontarlier. There he became acquainted with Sophie le Moine, wife of a president of the parliament of Bourgogne, whom he seduced and took with him to Holland. For differences he was condemned to lose his head, and was executed in effigy. He made his migration to America, where he and his wife were received as distinguished as MPPs, and being succeeded in France, he was ennobled in the

MIRABEAU (Jean Baptiste, 1755). "The most brilliant and most brilliant French orator of his time; who destined a reputation from him. In 1789 he visited London, and afterwards Paris; and he was variously employed in literary services and conversations till the commencement of the Revolution opened a grand field for this highly talented but unprincipled orator. Having compromised in his attempts to become a deputy to the states-general from the nobility of Provence, he opened a lawyer's shop, and got himself chosen deputy from the commonalty of Aix. His name became a leading member in the assembly of the "Tiers Etat," and when the nobility and clergy had decidedly refused to concur with the Third Order, Mirabeau prompted the deputies to assert their power. At the memorable session of the 5th of June, 1789 when the king sent M. de Bérot to command the assembly to disperse, he boldly declared that force alone should conclude their meeting and passed an immediate decree, proclaiming the inviolability of the representatives of the people. On many subsequent occasions he manifested the most powerful influence and daring spirit, but self-interest appears to have been his governing motive and he at length entered into a negotiation with the court, and engaged to exert his authority in quelling the storm which he had contributed to raise. Whether he would have been able to fulfil his promises, must ever remain a matter of speculation, as he died rather suddenly in the midst of his projects, April 9, 1791. His death was considered as a public misfortune, and his funeral was celebrated with national honours, but his intrigues with the royal party coming to light, the national convention declared him a traitor to his country in December 1793, and his remains were dragged from the Pantheon, burnt, and dispersed in the air. The principal works of Mirabeau are, "Les Lettres de Cachet," 2 vols. 8vo. "De la Monarchie Prussienne sous Frédéric II," 2 vols. 8vo, written in conjunction with Mauvalis; "Histoire sacrée de la Cour de Berlin," 5 vols. 8vo, "Lettres originales écrites du Bouillon de Vincennes," 4 vols. 8vo. His speeches in the constituent assembly have also been published as well as his letters.—*Diot de M. de Mirabeau &c.* *Biog. Univ.*

MIRABEAU (Bonnac Riquet, vicomte de), younger brother of the preceding, was born in 1754. He served in the French army in America during the war with England, where he manifested great bravery, and from his subsequent conduct it does not appear that like many of his brother officers, he became partial to the principles of republicanism. In the states-general he was chosen a deputy from the nobility of Languedoc, and he successfully resisted the union of the three orders, supported the rights of the clergy, and warmly opposed the progress of the Revolution. In 1790 he emigrated to Germany, and taking a refuge of hyssop, with which he covered the prison of Coblenz, served without remission his sentence. The fugitive to whom he was now

reduced might as well be numbered in this class of revolutionaries. His death at Pillnitz, early in the month of 1791, though not published at the spinalid time of his birth, by excited considerable interest; and he preferred "La Louve Marquise," and a number of other light pieces.—*Biog. Univ.* *Diot. Hist.*

MILKEDD (Albrecht) a learned German divine, was born at Bamberg in 1713, and was first almoner and librarian to Albert, archduke of Austria. His works are, "Opera Historica et Diplomatica," a collection of charters and diplomas, relating to the Low Countries; "Elogia Illustrium Ralphi sculptoris," 1609, &c.; "Roman Antiquorum Chronicon"; "Visus Justi Lipsii"; "Bibliotheca Ecclesiastica" "De Rebus Bohemicis," &c. He died in 1640.—*Maurer. Diet. Hist.*

MIRANDA (Francesco) a general in the service of the French republic, who was native of Peru. He entered first into the Spanish service, but having made an attempt at Guatimala to free his countrymen from the yoke of the viceroy his project was discovered, and he made his escape to Europe. He presented to different courts plans for the emancipation of the Spanish American colonies, which are said to have been favourably received in England and in Russia. However he conceived the French government more likely to second his schemes, and going to Paris in 1790, he connected himself with Pétion and the Girondists. While waiting for an opportunity to commence operations in America, Miranda was appointed general of division, in the army of Dumourier. His conduct at the siege of Maastricht, and at the battle of Nivelle did him no credit, and some time after he was imprisoned as consequence of his political intrigues. In July 1794 he was liberated, but renewing his malignancy, he was commanded to quit the territories of France, which order he evaded, and returned to Paris. A second sentence of deportation, in 1797, obliged him to take refuge in England. In 1800 he repaired again to Paris, when his intrigues against the consular government caused him to be a third time arrested, and condemned to leave France. He returned to America in 1806, and resumed his projects against Spain. Within five years, he succeeded in revolutionizing a part of the country, and in 1811 he endeavoured to establish a consular government at Cartagena. Amidst all the English and North Americans, he had made some progress in his schemes, when they were ruined, by intestine disputes. He fled to Cagliari, where he was besieged by the Spaniards, and being taken prisoner, he was sent to Cagliari, and there was a dungeon, in which he remained till his death in 1816, after four years' confinement.—*Biog. Wm. de Costera.*

MILINWECHEK (Joseph) assumed this name, was born in 1737, at a village near Prague, where his father was the proprietor of a mill. Having studied music under Siegel at Prague, he went to Italy, and performed under the name of Milinweczek, at Venice. His first opera, "Melpomene,"

which," professed at Naples, established his reputation as a champion of the Frenchmen, and vice-versa; which followed were equally successful. His enemy Bonaparte (1796, when his former good friends seemed to have forsaken him) and his "Ariosto" meeting with her an indifferent reception, he took it much to heart, and died at Rome the year following, in very unusual circumstances.—*Biog. Diet.* of Mus.

MISON (FRANCIS MAXIMILIEN). A French writer, was a counsellor in the parliament of Paris, at the time of the revocation of the edict of Nantes, when he retired to England. In 1687 he travelled to Italy with a nobleman, and on his return he published a "Nouveau Voyage d'Italie" 3 vols. 1700. It presents a true and lively picture but he offended the Catholics by his representations of their ceremonies and superstitions, which they say are exaggerated and untruthful. He also wrote "Mémoires d'un Voyageur en Angleterre" and "Le Théâtre Sacré de Cévennes, ou Recit des Prodigies arrivés dans cette partie de Languedoc et des petits Prophéties," in which latter he is said to have displayed great cruelty and fanaticism.—*Moreri. Addisons Travels.*

MITAN (JAMES) an historical engraver of some celebrity born in London in 1776. His principal productions are, Gerard Dowd's "Musidora"; Louis & Anne Page the Interior of Worcester Cathedral; many plates for Mr Dibdin's "Bibliographical Tour" and a Gem after Palissy of the Massed Bell for Dibdin's "Muses Althepusiana." He died of a pulmonary attack, August 16, 1822 in London.—*Gent. Mag.*

MITCHELL (JOHN) a dramatic writer was the son of a stone-cutter in North Britain, and was born about 1684. He came to London, and was patronised by the earl of Shaftesbury and sir Robert Walpole. The particulars of his history are little known but he appears to have been of a wild dissipated turn being very poor his friend Aaron Hill, presented him with the profits and reputation of a successful dramatic piece in one act, entitled "The Fatal Extravagance." It was printed in Mitchell's name but he was impudent enough to undersell the world, and to discover its true author. His own pieces were "The Fatal Extravagance, a tragedy enlarged"; "The Highland Fair" a ballad opera. He possessed but little invention and was but a mediocre poet. He died in 1736.—*Biog. Briton. Chidio's Lives.*

MITTARELLI (JOHN BERNARDI) a learned monk of the order of the Camaldoli, was born at Venice in 1704, and in 1725 he became professor of philosophy and theology in the monastery of St. Michael at Venice, and in 1740 he removed to Puteaux, as chancellor of the church. In 1744 he was appointed general administrator, and he died in 1777. He wrote "Meditationes Christianissimae," 2 vols. folio; "Tractatus de Monachis della camaldoliensi, et de monachis cisterciensibus." "Bibliotheca Tridentina" 1744. "Monachorum Tridentini et Michaeles Vi-

cenitanae," folio, "Ad Epidemias vires Difficiliorum Cr. Marmorei secundum Theodorum Faventiam," and "De Litomaria Revolucionaria."—*Vedoni. Vita Italica. Biog. Diet.*

MITZLER (LAURENTIUS CHARLES DE KEROL) a German naturalist and compiler of encyclopedias, born at Vertheim in 1711. He received his education at Ampech, where in addition to the rudiments of classical literature, he studied music under Scherer and Cury. In 1730 he removed to the university of Leipzig where he made a considerable proficiency, both in mathematics and natural philosophy as well as in music, and after a residence of twelve years, gave public lectures in all those branches of science. While thus occupied, he published a treatise on the claims of music to be considered as a science. He at length accompanied a Polish nobleman to Warsaw and there grew into so great favour at court, as to obtain from the king a patent of nobility. His other works are a "Musical Library or an Analysis of Books and Writings on Music," Leipzig, 3 vols. published between the years 1738 and 1754. "A Musical Illustration of the War carried on by the Emperor Charles VI, against the Allied Forces" Wittenberg 1753. "The Elements of Thorough Bass" Leipzig 1739. "The Musical Oracle" &c. 1740, and a German translation of Fox's "Gradus ad Parnassum" 1742. His death took place in 1778.—*Biog. Diet. of Mus.*

MOCENIGO (ANDREW) a native of Venice, in the early part of the sixteenth century. He served his country with zeal, being employed in its public affairs, which he managed with great success. He was the author of a Latin History of the War sustained by the Republic of Venice in consequence of the League of Cambrai from 1509 to 1510 in Four Books which though not possessing much elegance is esteemed for its truth and accuracy. He also wrote a Latin poem on the war with Bajazet II which is lost.—*Moreri. Trasteveri.*

MOESEN (JOHN CHARLES WILLIAM) an ingenious German physician of the last century. He was born at Berlin in 1732 and studied at the universities of Jena and Halle. Having taken the degree of MD at the age of twenty he returned to Berlin and succeeded his grandfather M. Horch as physician to the gymnasium of Joachim. After holding other offices, he was, in 1778 appointed physician to Frederick the Great, whom he attended in the war relative to the Bavarian succession. He became a member of various learned institutions, and in 1793 was chosen an associate of the Royal Academy of Arts and Sciences at Berlin. His death took place in the course of the same year. His works display ratiocines, rather than profound erudition. They relate to the history of medicine and its progress, including a treatise "De Medicis Rerum Diagnosticis," 1768, 4to, "A Catalogue of a Collection of Engraved Portraits of celebrated Physicians," 1773, 1vo, "A Description of Middle or Jewish school in Skinner of Physick, with Novelties explain-

M.O.E

Ingen's *Course of the Ancients, as associated with Moral, History, and Literature,* 1772, 2 vols., and "An Agreeable Experiment to determine the Utility of Inconsistency for the Small-Pox," 1772, 8vo.—*Big. Univ.*

MOELLENDORF (RICHARD JOACHIM RUMY, count de) a Prussian general, born 1736. He was educated in the equitation academy of Brunswick, and in 1760 admitted among the pages of Frederick II whom he accompanied in the first Silesian war and was at the battles of Mollwitz and Kotsowitz. His behaviour procured him protection and in 1764 he obtained a company in the guards. He served at the siege of Prague in 1757 and at the battle of Roetzen and that of Leuthen for his conduct on which last occasion he was rewarded with the order of merit. He was made a colonel in 1761 afterwards lieutenant-general, and in 1765 governor of Berlin. In the reign of Frederick William II, he was appointed general of infantry, and he commanded the Prussian troops employed in 1793 in the disgraceful dismemberment of Poland on which occasion Moellendorf did every thing in his power to alleviate the misfortunes of the Poles. On his return home he was created a field-marshall and soon after made governor of South Prussia. He opposed the war with France which followed, but he succeeded the duke of Brunswick as the command of the Prussian army on the Rhine in 1794, when he gained the victory of Kasselstein. He was one of the principal advisers of the treaty of Basle in 1797 after which he was made grand marshall. Not being able to prevent, by his advice hostilities with France in 1806 though far advanced in years, he accepted a command, and joining the army of the duke of Brunswick, was present at Jena and Auerstadt, where he was wounded. He retired to Berlin, and subsequently to Havelberg where according to an odd Prussian usage he held a pretend in the ecclesiastical chapter. He died there January 20th 1816.—*Big. Univ.*

MOESEN (Jvers) an eminent German advocate and man of letters, born at Osnaburg in 1730. He was educated at Jena and Gottingen, and on his return to his native place he entered on his professional career which he exercised with as much credit in defending indigent innocence that in 1747 he was invested with the office of advocates pauperum. Being sent to London to arrange some financial affairs during the seven years' war he embraced the opportunity for obtaining an acquaintance with the political ramifications of the country. When the late Duke of York became Bishop of Osnaburg, and the affairs of the diocese fell under the administration of the English government, Moeser contributed much to the preservation of harmony between his fellow-citizens and their rulers. In 1763 he received the title of counsellor of justice, and in 1772 the canonization order of Osnaburg celebrated the fifth anniversary of his entrance on his public functions. He died January 7th, 1794. Among his principal

M.Q.J

works may be noticed, "Archetype," a study, 1764, 8vo; "The History of Chemistry," 1781, 2 vols., 8vo; "Practical Speculations," Berlin, 1774-66, 4 vols.; the *Præcis* treatise on the German Language and Literature 1781, and "Miscellanies," published with a memoir of the author by Fred. Nicolai, 1797-8, 2 vols., 8vo.—*Big. Univ.*

MOHAMMED (Osman) the founder of the famous sect of the Wahabites, who derive their appellation from Abd el Wahab, the father of Mohammed. He was born in Arabia, about the commencement of the eighteenth century, of a family claiming to be descended from Mahomet. At an early age he seems to have formed the project of founding a new sect, and he carefully studied the laws and traditions of the moslems, of which he undertook the reformation. Having been ill treated by his father he fled and took refuge at Basora, and afterwards travelled through Syria and Arabia, where the unreserved expression of his religious opinions exposed him to danger. Mohammed ibn Saoud, governor of one of the provinces of Arabia, at length gave him an asylum and permitted him freely to propagate his doctrines. From this chief he obtained a detachment of troops to accompany him in his travels, and assist his missionary labours with their swords. Like Mahomet, he offered to the choice of his hearers, the alternative of conversion or death; and he thus made a multitude of proselytes, and subjugated many tribes and villages. On the death of his protector he found equal favour with his son and successor, Abd el Aziz, who at the head of his troops, converted to Wahabism all the tribes of the vast province of Nejd. An ineffectual attempt, made by the pacha of Bagdad, to crush this sect of innovators in 1798 only added to their power; and in 1800 they made themselves masters of Mecca, though they were unable to keep possession of it. In the course of their expeditions, Sheik Mohammed died at an advanced age; and Abd el Aziz who survived him a few years, was assassinated in 1803. The Wahabites receive the Koran as of Divine authority, but reject all traditions and their profession of faith is confined to the words, "There is no other God but God, suppressing the addition of the moslems, that "Mahomet is the prophet of God." —*Big. Univ.*

MOINE (ABRAHAM) a French Protestant, and minister of a French church in London, was born about the close of the seventeenth century and died in 1760. He was the author of *A Treatise on Miracles*, in answer to Mr Chubb. To this work he added a postscript, intended to vindicate the authenticity of the ancient fathers, in answer to Dr Midleton's "Free Inquiry." Le Moine's other works are, "A Sermon on the Fall," 1731, 8vo; "A Visitation Sermon," 1755, 8vo; "A Sermon in Defence of Sound History," in answer to lord Bolingbroke; translated into French of Bishop Gibson's "Practical Letters," Sherlock's "Dissertations on the Errors and Use of Prophecy," and of "The

With all the members of the Templars, 2000, he was admitted to that order. He distinguished himself by his great activity, vigilance and virtue of the members assigned to him.—*Martyr Histor.* Vol. 32.

MORIN (*Paris 16*) an important painter, was born at Poitiers in 1388, and was a pupil of Melchior. He had no natural genius for painting, but acquired all his skill through his great perseverance. His manner of drawing was very incorrect, nevertheless, his taste was always graceful and pleasing. He was employed four years in painting the robes of Jeanne d'Arc, for which the king granted him a pension of 6000 livres. His best pictures are the Assumption of the Virgin in front, at St. Sepulchre; a St. John in the Desert, at St. Etienne's; the Conversion of St. Paul, at St. Germain-des-Prés; the Martyr, at St. Gervais's, &c. Death of moderately well-educated artist. Paris 6, 1707.—*D'Argenville*.

MOLINE (*Paris 16*) a French poet and a poet, was born at Châlons-en-Champagne in 1398. He possessed more imagination than taste; Rollens said of him, "that he was too weak-minded to be much contended, and too weak of a poet to be strongly condemned." He wrote several works, in prose on theological and other subjects, and several small poems; but his greatest work was "Saint Louis, ou la Vie Courtoise romancée sur les Indulgences," an epic poem in eighteen books. Worked at Paris 1461—*Dit. Hist. Moral.*

MOREA (*Perugia 1480*) an eminent painter was born at Colle in the Marches in 1440. He was the pupil of the cavalier di Bartolo and of Alfonso. On leaving the last master, he went to Venice and studied under Mantegna, perfecting himself in colouring from the perfections of the Venetian school. On his return to Italy he painted several altarpiece pieces for popes Innocent X. and Alexander VII., of which that of Joseph discovering himself as his brother, in the Quirinal, is the most esteemed. He is still more distinguished as a landscape-painter, for his varied composition and vigorous touch. In 1665 he received an invitation to the court of Louis XIV. with which he was about to comply when a sudden disorder caused him of. There was another Morea, (Juan Gherard), said by some to be his brother, who acquired some reputation in history and heraldry; but he is much inferior to the preceding.—*D'Argenville.* *Dictionary of Art.* by Joubert.

MORAL (*Jam 16*) the last grand-master of the order of the Knights Templars, of the family of the baron of Longue and of Beaumont, was admitted into the order about 1365 under the rule of William de Beaujeu, he was subsequently elected to the office of grand master. His great wealth and power of the Templars, their possessions, their absolute independence, often a source of vexation, and his decided dissensions. In 1387 an order was issued for the disbanding of the Knights Templars. They were accused of being, usurers, and especially usurers

usurers; and of the violent crimes they committed in Italy, particularly the massacre of Jerusalem, committed by soldiers sent to assist the Christians of Jerusalem against them. The Templars were burnt in 1382, and the order was abolished the following year, by the council of Vienne. Michel, with his compatriots, Guy Despiles of Arvergne and Hugh de Pouille, were destined to preside at Philip the Fair's, where their chief task was to obtain concessions approved by the pope, and confirming their claims, they were condemned to perpetual excommunication. Michel and Guy having subsequently accepted their confessions, which they had made in the hope of obtaining their freedom, were exonerated as respects heresy. They perished in the flames at Paris March 18, 1382, according their accusations to the last. The abolition and punishment of the Knights Templars are usually represented by writers historians, as in the highest degree cruel and unjust, and as originating in the avaricious policy of Philippe le Bel, king of France and his instrument, pope Clement V. That some of the crimes imputed to the Templars were absurd, and probably imaginary, may be conceded; but the despotism and disgraceful cruelty of these military monks was no motivation, as to supply a fair pretext for the suppression of the order, though it cannot exceed the hardness to which some of the knights were subjected.—*Dit. Hist.*

MOLD (*Fouriers Rane*) an eminent French comedian, born at Paris in 1734. He first appeared on the stage of the metropolis in 1764, when he was well received, and after having travelled in the provinces, he returned to Paris in 1769, and soon arrived at great distinction, particularly in the characters of lowers and post-masters. During the progress of the Revolution he became an associate of the Jacobins, and so far prostituted his talents as to officiate in the church of St. Roch, as the prior of the guilds of Rome. Mold was a member of the National Institute, and was the only actor except Marat and Grandmoulin, who has been admitted to that honorable station. He died December 11, 1802. Some letters in the *Journal de Paris*, and fugitive poetry are attributed to him, as well as an unsuccessful comedy.—*Bog. Encyc.* *Biog. Contemp.*

MOLESWORTH (*Roscar, viscount*) an Irish statesman and political writer, born at Dublin in 1656. He received his education at Trinity college, and, entering on public life, displayed a firmness of principle and attachment to the cause of liberty, which rendered him obnoxious to the court of James II. During the short-lived triumph of that prince in Ireland, his estate was confiscated, but on the establishment of affairs, under William III., he was made a member of the privy-council. Being despatched on an embassy to Denmark, he gave offence to the king, and was induced to return home reluctantly. He took the name, by publishing "A Journal of 1688-90," which was considered as a book of open hostility, and was complained of by the

by the English authorities in London, who in 1793 discontinued the publication of his works. However he represented a commissionership of the committee in 1794; and in 1795 he was made a peer of the kingdom of Ireland. His death took place in 1795. He translated Flotteman's "Fauves-Gaulois;" and besides the work above mentioned he was the author of some controversial pamphlets.—*Bug Bry*

MOLIEVILLE (ANTOINE FRANÇIS BARBEAU de) a French historian and historical writer born in 1744. He occupied the situation of intendant of the finances in Brittany previously to the Revolution and in October 1791 he was appointed minister of the marine. Being accused in the Legislative Assembly of having favoured the emigration of the officers of the navy he resigned his post in March 1793. He subsequently thought it prudent to take refuge in England, where he employed himself in various literary undertakings. He died at Paris in 1819. Among his works are, *A Chronological History of England*, 6 vols. 8vo. *Mémoirs relative to the last Year of the Reign of Louis XVI* and *Annals of the French Revolution*; all which were first published in English, being translated from the MSS. of the author.—*Dictionnaire H. M. du 18me S. Gent. Mag.*

MOLIERE (JOHN BAPTIST POUQUELIN de) the most celebrated of the modern writers of comedy was born at Paris in 1622. His father named Pouquelin, who was valet de chambre and upholsterer to the king and also kept a shop in that line of business, intending to bring his son up to his own employment gave him a conformable education. He accordingly reached the age of fourteen without any other instruction than that of reading and writing when having imbibed a taste for literature by frequenting the theatre, he was, by the permission of his grandfather sent to the jesuit's college as a day student. His father becoming infirm, he was, however obliged to officiate for him in the royal household and in that capacity attended Louis XIII to Narbonne in 1641. On his return to Paris his passion for the theatre became uncontrollable and he associated himself with a company of young persons, who played in the suburbs of St Germain among whom he assumed the name of Moliere and composed several little comic pieces for the stage in which he himself took a part. At length he joined La Bajart, a proscenial actress, and they formed a company which in 1658 presented at Lyons his first regular comedy in verse, entitled "*L'Etourdi*." It was followed by "*Le Dépit Amoureux*" and "*Les Précieuses Ridicules*," first exhibited at Bourges, where he obtained the protection of the prince de Condé. He subsequently acted at Grenoble and Rouen and finally, during some visits to Paris, secured the favour of Gaston, duke of Orleans, the latter introducing him to the king, who, having witnessed the performances of his company at the Old Louvre, gave orders for their admission at Paris. In 1668 he was assigned a theatre in the Faubourg Royal, and in 1673 he

was formally taken into the service of the king with a pension of 1000 francs. Moliere immediately wrote in response to his new position a comedy, by the general consent of those who were placed at the head of genuine comedy. His more serious drama, and those written in prose are esteemed his masterpieces, especially *Le Misanthrope*, and *Le Tartuffe*.

The subject of the latter being religious hypocrisy has always excited the *fâcheux dévots* against him, but they have not been able to prevent it from retaining its place as one of the most effective pieces on the French stage, and owing to recent circumstances, it is more popular at the present time than ever. For twenty years Moliere wrote for the stage and bring all the while an actor also, and interrupted by various evasions, his fertility was most extraordinary. His last piece was the celebrated "*Le Malade Imaginaire*," to the fourth representation of which he fell a sacrifice. He himself acted the imaginary sick man in the piece, but labouring at the time under a pulmonary complaint, he was requested by his wife, and Baron the actor to defer the performance which on the score of injury to the company he declined, and exerting himself with unusual spirit, his efforts brought on the rupture of a blood vessel, by which he was suffocated. This happened in February 1673 in the fifty third year of his age. Harlan archbishop of Paris, a man of loose morals himself refused his Christian burial, and the king's authority was requisite to procure him private interment in a chapel of ease of the church of St Eustache and even this was impeded by a portion of the superstitious populace. Such was the treatment of a man so generally esteemed an honour to his country. Louis XIV was much affected at his loss. Boileau has honored him with some fine lines in his seventh satire, and Racine deemed him the first of the writers in that distinguished reign. Voltaire also, regards him as 'the best comic writer of any nation' nor has any one risen in his own peculiar social line to bear away the palm from him. He may indeed be said to have claimed away a great share of the consciousness false wit, and pedantry of his day and possessed as he was of a large portion of the philosophy of good sense, he seldom failed to discern the weak part of whatever was absurd or condemnable. His great excellency being excellency of character, he is not deemed equally happy in development, and his solemnities are frequently brought about with precipitance. He is sometimes also deemed too hasty in the diction of his serious pieces, and too forcible in that of his light ones. In private life this eminent man was humane and benevolent in a very high degree many anecdotes being recorded of his great goodness and philanthropy. No one had more friends of rank and talent, or was more honoured by them. In matrimony however he was unfortunate, being led to marry an actress younger than himself whose conduct subjected him to all the ridicule which he despised as ridiculous in that particular. —*Bug Bry*

and a certain sense between Mollier and it fixed on the subject, the exactness of which has however been denied. A complete edition of his works was published by Didot in 1792, 6 vols. 4to.—*Moreri. Note Dict. Hist.*

MOLIERES (JOSEPH PRIVAT de) professor of philosophy at the Royal college and member of the academy of sciences, was born in 1677 at Tarascon. He entered among the fathers of the Oratory and was pupil to Malebranche, but after that philosopher's death he quitted the Oratory and devoted himself wholly to physics and mathematics. He was the author of "Philosophical Lectures," 4 vols. 12mo; "Mathematical Lectures" and "La première Partie des Éléments de Géométrie" 12mo. He died in 1742. His absence of mind was so great, that a shoeblack once finding him absorbed in a profound reverie contrived to steal the silver buckles out of his shoes, replacing them with iron ones.—*Moreri. Dict. Hist.*

MOLIN (DU) commonly called Du Moulin, a celebrated French physician born in 1666. He studied at Montpellier and afterwards at Paris, where he took his doctor's degree. He was soon after appointed professor of anatomy at the Royal garden and at the age of twenty six he became chief physician to the army in Catalonia. He returned to the capital in 1706 and added to his reputation by his cure of the prince of Condé. He was employed by Louis XIV and his successor and the latter settled on him a pension of 600 livres. He died at Paris, March 21 1753. To uncommon skill in his profession Molin added harsh and repulsive manners, and a degree of parsimony closely bordering on avarice. His wealth however was often worthily employed in the relief of indigence and wretchedness and as he had no children he devoted much of his property to the education and establishment of a numerous train of young relatives. In his medical practice he was partial to the use of resection and hence it has been concluded that Le Sage in his *Gil Blas* intended to satirize Molin under the character of Dr Sangrado, though Hecquet, another Parisian physician is more commonly supposed to have been aimed at. In his general character Molin seems to have resembled Dr Radcliffe and like that celebrated practitioner he left no published work of importance.—*Dict. Hist. Biog. Univ.*

MOLLINA (Luis de) a celebrated polemic descended of a noble family of Caenca in New Castile where he was born in 1535. He became a member of the jesuits' college after having completed his studies at Coimbra, where he had distinguished himself by his perseverance in the acquirement of classical as well as theological learning. Mollina was afterwards professor of theology at Eboea, and filled the chair there for more than twenty years with great reputation, although his adversaries accused him of a leaning towards the Pelagian heresy. In support of this charge, they cited his treatise, "De Concordia Gratiae et Iher. Aristotelis," etc., which gave rise to

such a fierce contention between the followers of Ignatius and Dominicans, that in 1597 the pope found it advisable to issue a bull in order to suppress them. His other works are a treatise "On Law and Equity" and some annotations on the writings of Thomas Aquinas. His death took place at Madrid in 1600.—*Note. Dict. Hist.*

MOLINET (CLAUDE DU) regular canon and procurator-general of the congregation of St Genevieve and a learned antiquary was born at Châlons sur Marne, in 1670. His principal works are an edition of the Epistles of Stephen Bishop of Tournay with notes "History of the Popes," by Medals

"Réflexions sur l'Origine et l'Antiquité des Chanoines séculiers et réguliers" "Dissertation sur une tête d'Isaïe" "Dissertation sur la Mitré des Ancêtres" "Le Cabinet de la Bibliothèque de St Genevieve" etc. He collected a large cabinet of curiosities and placed the library of St Genevieve in the state for which it is so celebrated. He was a man of great research but according to his countrymen "plus rempli d'érudition que de critique." Moline died in 1689.—*Biog. Univ. art. Discours. Moreri. Dict. Hist.*

MOLINÉS (JONNE) a French poet born in the fifteenth century. He studied at the university of Paris after which he went to Flanders, where he married but becoming a widower he entered into the ecclesiastical state and obtained a canonry at Valenciennes. He was almoner and librarian to Margaret of Austria, governess of the Netherlands and historiographer to the house of Burgundy. He died in 1507. Besides a translation of the "Roman de la Rose" he was the author of

"Faus et Dits contenant plusieurs beaux tractés orationes et chants royaux" Paris, 1531 folio and 1537 and 1540 8vo which editions are much sought after by the lovers of scarce books. His *Poësies* were re-published at Paris in 1723, 12mo.—*Biog. Univ.*

MOLINIER (WILLIAM) distinguished in the fourteenth century as the chancellor of an association of Toulouse troubadours, who, under the title of "Collège du gai Savoir" gave rise to the academy of the *Floral games*. Molinier was directed to prepare a system of the art of poetry as practised by the professors of the "gay science" which task he executed in 1356 and copies were despatched by the college to the princes of all the countries in which the Romanic language was cultivated. The poetics or "Lays d'Amors," compiled by Molinier is a curious monument of the state of literature in the south of France in the fourteenth century. A specimen of this work was published by M. Raynaud in his "Grammaire Romane." —*Biog. Univ.*

MOLINOS (MICHAEL) a Spanish controversialist of the seventeenth century founder of the sect called Quietists, from the nature of their doctrine, which inculcates perfect abstraction from the world and its concerns, in order to a complete union with the Divinity. He was born in 1627 at Saragossa, but passed the greater part of his life at Rome, where,

MOL

In 1673, he published his celebrated "Spirituos Guide," written in Spanish. On its first appearance little notice was taken of it; but afterwards, and on a republication six years afterwards, arrested its author. Molinos consenting to recant his opinions his life was spared but he never recovered his liberty dying in the dungeons of the Holy Office in 1694. The celebrated Fenelon, archbishop of Cambrai, madame Guyon and some other persons of eminence in France were strongly倾注 with the opinions of Molinos.—*Bug. Uni. Neu. Duct. Hist.*

MOLLOY (CHARLES) a political writer was born in Dublin and was educated at Trinity college and on coming to England he entered of the Middle Temple. He was supposed to have contributed greatly to a periodical paper entitled "Fog's Journal" and also to have been the principal writer of a well known paper called "Common Sense." Large offers were made to Mr Molloy to write in defence of sir Robert Walpole which he refused but notwithstanding on the change in the ministry in 1742 he was entirely neglected. He died in 1767. He also wrote three dramatic pieces entitled "The Perplexed Couple," "Half pay Officer" and "The Coquet." —Another CHARLES MOLLOY was a native of Ireland and a lawyer of the Inner Temple and was the author of a treatise De Jure Martimo et Naval. He died in 1690.—FRANCIS MOLLOY also an Irishman was professor of divinity in the college of St Isidore at Rome and wrote Grammatica Latino-Hibernica compendiosa and Lector Fidelium which although the title is Latin is written in Irish and contains an explanation of the Christian religion according to the Roman Catholic faith.—*Bug. Drama. Wars. Lyons's Environs.*

MOLYNEUX (WILLIAM) an eminent mathematician and astronomer born at Dublin in 1656. He was educated at Trinity college where he stayed four years, and having taken the degree of BA, he removed to the Inner Temple London in 1675. Being possessed of a competent fortune he never engaged in the law as a profession but returning to Ireland in 1678 he occupied himself with researches into various departments of natural philosophy and more particularly astronomy. In 1683 he formed a philosophical society at Dublin on the plan of the Royal Society to which he became secretary and continued to act in that capacity till the association was broken up during the storms of the Revolution in 1688. Through the influence of the duke of Ormonde, Mr Molynex was appointed joint-surveyor of public works, and chief engineer in consequence of which he had a commission to examine the principal fortresses in Ireland. After his return, in 1686 he published his "Scotanderus Telescopicus," containing an account of a telescope dial which he had invented. In 1690 he removed to London, on account of the political commotions in Ireland, and shortly after he settled

MON

whilst finally at Chester. There he drew up a tractate on Opticks, published in 1692, under the title of "Dioptrist Novus," etc. Going back to his native country he was chosen MP for Dublin in 1692, and in 1695 he was elected representative of the university. In 1696 he published a tract relating to some measures adopted by the English government which he conceived to be injurious to the Irish woollen manufacture. He died October 11 1698. Mr Molynex was a fellow of the Royal society and a contributor to the Philosophical Transactions.—His son EDMUND MOLYNEUX who was secretary to George II when prince of Wales, was also a cultivator of the mathematical sciences, and made some improvements in the construction of telescopes of which Dr Robert Smith published an account in his treatise on optics.—*Martin's Bug. Philos.*

MOLZA (FRANCIS MARIA) an Italian poet of the fifteenth century was born at Modena in 1489. He was equally distinguished for his poetical facility and the liberum genus of his manner. His compositions are chiefly poems in Latin and Italian on topics as well moral and serious as sportive and amorous, in all of which he excelled. He died at Modena in 1544.—LAERQUINA MOLLA a learned lady the grand daughter of the preceding was born at Modena in 1542. She became a proficient in the Latin, Greek and Hebrew languages in logic rhetoric mathematics philosophy theology and music. In 1560 she married Paul Porrius with whom she lived eighteen years. On her death she went to Ferrara and lived twelve years as lady of honour to Lucretia and Leonard d'Este after which she retired to Modena and passed the remainder of her life in literary pursuits. She died in 1617. Her writings consist of Italian and Latin poems a translation of the Charimides and Crito of Plato, &c. Tasso has introduced this lady as one of the interlocutors in his Dialogue on Love, which he entitles Molia. She received the extraordinary honour of being presented with the citizenship of Rome in a patent extolling her merit and giving her the title of Unica. This privilege through her is extended to the whole family of the Molias of Modena.—*Bayle. Trubach.*

MOMBRIUS or MOMBRIZIO (Bonivitus) a native of Milan, who flourished in the fifteen century was the author of a work, entitled "Sanctissima Ave Viza Sanctorum, 2 vols. false supposed to have been printed at Milan about 1479; it is extremely scarce, and as deemed very valuable. In this work the author took the greatest pains to distinguish truth from fable and thus he was enabled to do by closely examining all the existing authorities and carefully collecting MSS. He also wrote several Latin poems, particularly one on the Passions which was greatly admired.—*Brunet Manuel du Libraire. Mover. Thesaurus.*

MONARDES (NICHOLAS) a Spanish physician, was born at Seville in the early part of the sixteenth century. His reputation is founded

M O N

ed shortly upon his work, entitled "Des plantes de la nature qui se trouvent les Indes Orientales, avec diverses observations," published at Paris in 1566, to which a third book was afterwards added, concerning the medicinal substances imported from the new world. This work was translated into Latin, with notes and figures, by Charles Pithou or Clémens, under the title of "Simplicium Medicorum ex novo orbis delicto, quoniam in Medicina non est Historia," about 1574. It was also translated into Italian, French, and English. The other works of Monardus are a tract, "De Ross et paribus ejus de scoto Resumam temperature," and "De secunda via in Phoenicida inter Graecos et Arabes canticis," &c. The name of Monardus is perpetuated by the botanical genus *Monardia*, in the class Dicotyledons of Linnæus. He died in 1576.—Antoine Buff Rep. Ross's Cyclop. Morat.

MONBELLAILL (PHILIBERT GUYENRAU) a naturalist was born at Berger in Auxois, in 1729. On coming to Paris, he distinguished himself in the scientific world and continued with reputation the Collection Académique a work consisting of every interesting circumstance in the measure of the learned societies of Europe. He became the associate of Buffon, in his great work on natural history taking part of the entomological department. He first wrote under the name of his colleague and no difference of style was observed, until Buffon himself announced him in his preface saying, that of all men he was the person whose manner of seeing, judging and writing was most conformable to his own. Monbeau laid afterwards undertook the class of insects, on which subject he had written several articles in the new Encyclopédie; but before he could finish it, he was seized with the illness which terminated in his death in 1765. His wife, who was an excellent linguist, and otherwise accomplished, rendered him great assistance in his labour.—*Newt. Dict. Hist.*

MONCONYS (BALIBARAS de) a writer of travels, and son of the lieutenant-criminal of Lyons, was educated in the jesuit's college. In 1668 he was driven from his country by the plague, and he went to Spain, and studied at the university of Salamanca. He afterwards visited the East for the purpose of tracing the remains of the philosophy of Hermes Trismegistus, and Zoroaster but meeting with little success, he returned to France and applied himself to mathematical and physical pursuits. He died in 1665 at Lyons, and his "Travels, in 5 vols. &c., were published by himself and the posthumous Brother They contain much curious matter.—Morat Newt. Dict. Hist.

MONCRIF (FRANCIS AUGUSTIN PARAN) a poet and miscellaneous writer, was born at Poole in 1697. He devoted himself at an early age to literature, and one of his first efforts was an "Ode on the death of Louis le Grand," by which he expected to gain the favour of the court. He became private secretary to the queen of Clement, and reader to the queen; he was a member of the French

M O N

Academy, and censor of those of Normandy, Martin. He was also admitted by Louis XIV to the privilege of the censor of music, a favour denied to Voltaire. Moncrif excelled chiefly in ballads, romances, complimentary verses, & theatrical pieces the figures of his poems were not lofty. He died in 1770. His principal works are, "Essai sur la Nécessité et sur les moyens de Plaire," Les Ames Rivalles, an ingenious romance, founded on the metempsychosis. Les Abéreux à comedy, Poésies diverses, &c. &c. His "Histoire des Chats" was severely and unmercifully criticised at the time of its publication, but is now forgotten.—*Neurologie des Hommes célèbres. Newt. Dict. Hist.*

MONGAULT (NICOLAS HUARD de) a literary man, was the natural son of Colbert Peaugres, and was born at Paris in 1674. He entered the congregation of the fathers of the Oratory and studied philosophy at Mâcon. The system then generally taught was that of Aristotle but Mongault judging for himself adopted that of Descartes, which he openly professed. In 1701 Colbert archbishop of Toulouse who had procured him a priory invited him to Toulouse, and gave him apartments in his palace, and soon after the president Foucault prevailed upon him to reside with him, and obtained his admission into the Academy of Inscriptions and Belles Lettres. In 1710 Mongault became tutor to the young dauphin de Chartres, son of the duke of Orléans. He was the author of a Translation of Herodotus and A Translation of the Letters of Cæsar to Atticus in 6 vols. which he annotated with notes, which equally prove his learning and the elegance of his taste. He also published two dissertations in the Memoria of the Academy of Inscriptions. He was admitted a member of the French Academy in 1718, and died in 1746.—Morat Newt. Dict. Hist.

MONGE (GASPARD) a celebrated mathematician and natural philosopher born at Beaune in 1746. He studied in the college of the fathers of the Oratory at Beaune and Lyons, with such success that he became a teacher at the age of sixteen. He was afterwards employed at the military school of Meudon, where he assisted Boullut the professor of mathematics, and afterwards Nodlet, professor of physics whom he succeeded. In 1780 he removed to Paris, on being admitted into the Academy of Sciences, and became the codirector of Boullut, in a course of lectures on Hydrodynamics at the Louvre. He quoted Mémoires entirely in 1783, on being appointed examiner of the same, when he composed a Treatise on Statues, afterwards used for the Polytechnic school. In 1789 like other friends of freedom Monge indulged in expectations of the regeneration of France. Through the influence of Condorcet, he was made minister of the marine in 1792, and he held at the same time the portfolio of minister of war during the absence of general Servan with the army. He thus became a member of the executive council of government, in which quality he

signed the edict for the execution of Louis XVI. Shortly after he resigned his functions, in consequence of which he was exposed to the persecution of the ruling party of the Jacobins, against which he successfully defended himself. He was then employed together with other men of science in improving the manufacture of gunpowder and otherwise augmenting the military resources of the country. The National School was founded with which Monge became connected, and he there published his "Géométrie Descriptive," one of his principal works. Together with Bertholet and Guyton Morveau he principally contributed to the establishment of the Polytechnic school after which in 1795 he was commissioned to go to Italy and collect the treasures of art and science from the countries conquered by the French and the labours of Monge and his colleagues gave rise to the splendid assemblage of works of taste and genius which for a time ornamented the halls of the Louvre. In 1798 he went with Buonaparte to Egypt, where he was again employed in the service of science. On his return to France he resumed his functions as professor at the Polytechnic school in the success of which he greatly interested himself. The attachment which he on various occasions manifested to Buonaparte led to his being nominated a member of the senate on the first formation of that body. The emperor further bestowed on him the title of count of Pelissier, the senatorial lordship of Lille, made him grand master of the Legion of honour, gave him an estate in Westphalia and a little before he set out on his Egyptian expedition, a present of 200,000 francs. The fall of his benefactor involved him in misfortunes. He was expelled from the institute in 1816 one of his sons-in-law was exiled, and he was deprived of all his employments. His fortunes became shattered, and he died July 23 1816. Besides the works above noticed Monge published "Description de l'Art de fabriquer les Cañons," &c., and "Application de l'Analyse à la Géométrie des Surfaces," &c.; as well as a multitude of memoirs on mathematical and physical science.—*Bug. Univ. Bug. Russ. des Contes.*

MONK (Grenville) an English military officer distinguished in history for the prominent part he acted on the restoration of Charles II. He was the son of Sir Thomas Monk of Pocheridge in Devonshire, whence he was born December 6th, 1608. Entering into the army at an early age he served under Sir Richard Grenville in the expedition to Spain and in 1630 he went to the Netherlands, where he was promoted to a captaincy. He was engaged in the unfortunate expedition of Cromwell against the Scots in 1639 at which period he was raised to the rank of lieutenant-colonel. On the rebellion taking place in Ireland he was sent thither and his services were rewarded with the post of governor of Dublin. Hostilities ensuing between the king and the parliament, colonel Monk brought over his regiment to the king's assistance. He was

employed major-general in the Irish brigade, and being employed at the siege of Newmarket, he was made a general, and advanced to brigadier in the Tower of London. He devoted his leisure to writing, and composed "Observations on Military and Political Affairs," published not long after his death. Having been detained about three years in confinement, he accepted of a commission from the Parliament, on condition of being employed only against the Irish insurgents. He distinguished himself especially in this service but having made a treaty with the Catholic chieftain, O'Neal, which gave offence to the English parliamentary government, he resigned his command, and retired to his estate. After the entire overthrow of the royal party Monk was employed with Cromwell in Scotland, and was present at the battle of Dunbar. His conductor returning to England, he was entrusted with the chief command. Wartaking place with the Dutch republic he engaged in the naval service, and together with admirals Blake and Dean he commanded in two engagements, in which they triumphed over the enemy commanded by the famous seaman Van Tromp. On the re-establishment of peace Monk returned to Scotland, where at the head of the English army he maintained the authority of Cromwell in that country. On the decease of the protector the resumption of power by his son and the contest of parties which subsequently took place, he availed himself of the commanding situation which he occupied, to crush the republicans, and promote the recall and restoration of the Stuart family to the throne in the person of Charles II. The measures adopted for this purpose, indicate a more political sagacity than principle in Monk or his advisers, but the detail of these transactions must be sought for in our national histories. The dukedom of Albemarle the order of the garter and the office of privy-councillor, rewarded the loyalty of the restorer of Charles II. During the Dutch war in the reign of that prince Monk was again employed in the service of his country and in 1666 he beat the Dutch fleet commanded by his former antagonist, Van Tromp and admiral De Ruyter. He died January 3d, 1670 and was buried in Westminster abbey. He was married to a woman in law his said to have been the daughter of his landlady who as may be supposed maintained a complete ascendancy over him so that it has been observed, that the warrior who was not afraid of a cannon-ball, dreaded the tongue of his wife.—*Hume's Hist. of Eng. Bug. Brit.*

MONK (See. Mary) daughter of lord Molesworth and wife to George Monk, esq. was an ingenious poetess, and a proficient in the Latin, Italian, and Spanish languages. Her poems were printed after her death under the title of "Manus." Poems and Translations upon several Occasions, and a dedication to Caroline, princess of Wales, was printed by lord Molesworth. She died in 1715, and as her death bed she wrote some very affecting verses to her husband, which may be found in

MON

MON

"Châtel's Lives. — Bellard's Mansions. — Gibby's Lives.

MONNET (Antoine Gérard) an eminent French chemist, inspector general of mines and member of the academies of Rouen Stockholm, and Turin. He was of low extraction and was born in Avergne in 1734. Having settled as an apothecary at Rouen he distinguished himself by his acquaintance with chemical science. Becoming known he removed to Paris and obtained, through the patronage of Malherbes, the place of inspector-general of mines in 1774. In conjunction with Guettard he prepared and published a mineralogical atlas of France. He was one of the very few cultivators of chemistry who rejected and opposed the great discoveries and theories of Lavoisier a circumstance which involved him in disputes with his fellow labourers in the field of science and lessened his reputation. Being deprived of office at the Revolution he passed the latter part of his life in absolute retirement, and died at Paris in 1817. He was the author of "Mémoire Historique et Politique sur les Mines de France" 1790 8vo. "Démonstration de la Fausseté des Principes des Nouveaux Chimistes" 1798 8vo., and various other works, besides a great number of analyses and memoirs in the *Journal de Physique &c.* —*Bug Univ.*

MONNOYE (Bernard de la) a literary man was born at Dijon in 1641 and was brought up to the bar but conceiving a dislike to the law he devoted himself to literature and contented himself with the office of corrector in the chamber of accounts at Dijon. He gained several prizes of the French Academy but in consequence of his preferring to reside in his native province he was not associated to that body until 1712. In the latter part of his life he was reduced to distress, which was alleviated by a pension from the duke de Villeroi. He died at Paris in 1727. His principal works are "Remarques sur les Bibliothèques de du Verder et de la Croix du Maine" "Remarques sur les Jugemens des Savans" de Baillot. "Notes sur la Bibliothèque chosne de Colomiers," "Remarques sur le Menagier avec une Dissertation sur le Livre de Tribus Impostoribus" "Noëls Bourguignons" a set of Christmas carols, in the Burgundian dialect, very humorous, but condemned by the Sorbonne for their coarseness. Poemes Françaises, and Nouvelles Fables, consisting of fables, epigrams tales &c. with some Latin poems, elegantly written but in a licentious spirit. Monnoye was also the editor of a collection of French poets and of a "Recueil des Poésies chouantes." —*Moresi. Nagy. Diet. Hist.*

MONOYER (John Baptiste) commonly called Baptist, an eminent flower-painter was born at Liège in Flanders, in 1635 and applied his art at Antwerp. In 1663 he went to Paris, and in 1665 he was admitted into the academy of painting; but as the rules of that society did not permit him to be a professor he received the title of counsellor. He

came to England, and was employed in embellishing Hampton house, now the British museum, Hampton court, Kensington, Burghley house, &c. He died in London in 1699. His style is bold and free, and the disposition of all his objects strikingly elegant, but he did not finish his work so highly as Van Huysum. One of his most celebrated pieces is the flower border of a mirror at Kensington palace. His son Anthony called Young Baptist adopted his father's style, and was member of the French academy of painting.—*Watpois's Ann. D'Argentille. Pitkington's Dict.*

MONRO (Alexander) a celebrated physician and anatomist, of Scotch descent, but born in London in 1697. After commencing his studies under Cheselden, he travelled for improvement in various parts of Europe observed the hospital practice at Paris, and passed some time at Leyden, where he contracted a friendship with professor Boerhaave. Returning home he settled at Edinburgh in 1719 where he was appointed anatomical demonstrator to the company of surgeons, and he commenced a course of public lectures on anatomy. Two years after he also began to give lectures on surgery and he contributed to the foundation of a public hospital where he delivered courses of clinical lectures. He established his reputation as an anatomist by the publication of his treatise on Osteology which passed through a multitude of editions, and has been translated into several foreign languages. This was followed by his anatomy of the nerves and many valuable productions of his pen appeared in the *Medical Essays and Observations*, published at Edinburgh in six volumes octavo. His last work was a tract on the success of inoculation in Scotland to the general introduction of which as literary practice he was greatly instrumental. He died in 1767. As professor of anatomy he contributed much to the high character which that university of Edinburgh has long maintained as a school of medical science and he displayed his zeal for the interests of his profession not only by his writings and his lectures, but by assisting in the formation of a society for the improvement of medicine and aiding and encouraging the researches of his pupils and others. A collective edition of his works was published by his son with an account of his life in 1781 quarto.—**MONRO** (Alexander) eldest son of the preceding succeeded on his death to the anatomical professorship, and creditably supported the reputation of his family. He was the author of "Observations on the Nervous System" 1783 folio a treatise on the Structure and Physiology of Fishes, folio. A Description of all the Bones Mucous of the Human Body" 4to three "Treatises on the Brain, Eye and Ear" 4to; besides other works. He died in 1817 at an advanced age.—**MONRO** (Donald) brother of the last mentioned professor, was also engaged in the practice of medicine, and became a physician in the army. He died in 1808 leaving a "Treatise on Medical and

MON

Mathematical Chemistry, 4 vols. 8vo, and "Observations on the Means of preserving the Health of Soldiers," 2 vols. 12mo; besides some papers in the Philosophical Transactions, highly honourable to his talents.—*Hutchinson's Biog. Med. Lond. Med. Journ. Ann. Sing.*

MONRO (*Journ.*) an eminent physician who devoted his attention to the treatment of insanity. He was born at Greenwich in Kent in 1715 and was the son of Dr James Monro, physician to the hospitals of Bridewell and Bethlem. He was educated at Merchant Taylors' school, and St John's college Oxford where he obtained a fellowship. In 1745 he became one of the travelling fellows on Dr Radcliffe's foundation when he visited France and Italy and some other parts of Europe. The degree of M.D. was bestowed on him by the university of Oxford during his absence and on his return in 1751 he was elected colleague with his father on whose death the following year he succeeded him as physician to Bridewell and Bethlem hospitals. He died December 27 1791 at Hadley near Barnet. Dr Monro is principally known on account of his controversy with Dr Batteau who having censured the practice of the medical attendants of Bethlem in his Treatise on Madness the former published a small pamphlet entitled "Remarks on Dr Batteau's Treatise" designed principally as a vindication of his father.—*Hutchinson. Charnier's Biog. Diet.*

MONSIGNY (*PIERRE ALEXANDRE*) a native of Artois, surnamed the French Sacchini. He was born in 1729 and was placed by his parents at an early age in the chamber of acclimatises of the clergy at Paris but becoming accidentally a witness of the success of Pergolesi's opera of the Servant Mistress his genius for music soon developed itself and became a passion with him. Having placed himself under Giannotti after five months' instruction from that master he produced an opera in one act, entitled "Les Aveux Indiscrets" which he brought out with great success in 1759 Sedans being present at his

Le Coq d'Or the following year was so pleased with the talent which it exhibited that he immediately introduced himself to the author and the two afterwards produced seven operas in conjecture all of which were successful. Monsigny was in 1802 director of the conservatory but the time of his death is uncertain.—*Biog. Diet. of Mus.*

MONSON (*or WILLIAM*) an English seaman and writer on naval affairs, who was a native of Lincolnshire. He was born in 1669 and studied at Balliol college Oxford. Having entered into the navy he accompanied the Earl of Essex in his expedition to Cadiz, and received from his commander the honour of knighthood, and he also distinguished himself in the Dutch war in the reign of James I. He died in 1685. He was the author of a volume of Naval Tracts, published in 1683.—*Campbell's Lives of Admirals.*

MONSTRELET (*ENGUERRAND de*) a character of the fifteenth century was born

MON

at Cambrai, of which city he became governor. He was the author of a history in French of his own times, from 1460 to 1477, the last fifteen years of which were furnished by another hand. It contains a faithful but rather tiresome narrative of the contentions of the houses of Orleans and Burgundy, the capture of Normandy and Paris by the English, with their expulsion &c. It was published with the title of "Chronique d'Enguerrand de Monstrelet, Gentilhomme, jadis demeurant à Cambrai en Cambrésie," and is particularly valued for the original documents which it contains. The best edition is that of Paris, 1575 2 vols. folio. Monstrelet died in 1453 Movers. *Biog. Diet. Hist.*

MONTAGU (*CHARLES*) earl of Halifax, an English statesman and poet, born at Horton in Northamptonshire in 1661. He was descended from the family of the Montagues, earls of Manchester and he was educated at Westminster school and Trinity college Cambridge. From the university he went to London where he attracted notice by his verses on the death of Charles II., and in 1687 he wrote in conjunction with Prior "The City Mouse and Country Mouse" a travesty on Dryden's Hind and Panther. In the reign of William III he obtained the place of clerk of the privy council and became a member of the house of commons and a decided supporter of the whig party in politics. In 1694 he was raised to the post of chancellor of the exchequer and subsequently to that of first lord of the treasury. His administration was distinguished by the adoption of the funding system or anticipation of the public revenues and creation of the national debt, which from five millions the original amount, had increased to three hundred millions at the close of the American war and has since been most enormously augmented. The establishment of the Bank of England was another measure of that period, as was also the recoinage of the national money. In 1698 Montagu was a member of the council of regency during the temporary absence of the king and in 1700 he was raised to the peerage. In the reign of Anne when Tory influence prevailed he was impeached before the house of Lords on two occasions, but the proceedings against him fell to the ground. George I created him an earl and bestowed on him the order of the garter, but being disappointed in his expectation of obtaining the office of lord treasurer he joined himself to the opposition. His death took place May 19, 1715. The poems and speeches of lord Halifax were published with biographical memoirs, in 1715 8vo and the former were included in the edition of English poets by Dr Johnson. He held a distinguished place at one time among our minor bards, but except some of his songs, and his share of the burlesques on Dryden his works are fallen entirely into oblivion. His aspersion to the character of the Macbeths of his age, and his pretension of Addison is creditable to his discrimination, though little can be said in praise of his masterpiece.—*Walpole. Johnson.*

MONTAGU (KING ARTHUR) Earl of Sandwich, a noted commander of distinction in the reign of Charles II. He was the son of Sir Sidney Montagu, descended from an illustrious Norman family and who died in 1625. Like many other officers of that period, he conducted his career in the army, and terminated it in the navy. During the civil war, he commanded a regiment which he had raised for the service of the parliament, and served with great bravery at various engagements. In the subsequent war with Holland, under the government of Cromwell, he was associated in a maritime command with admiral Blake. He was then sent with a fleet into the North sea, but suspicion arising of his fidelity to the party then in power, he was dismissed on his return to England. Through the influence of general Monk, he was again employed, and he commanded the fleet on board which Charles II returned from exile, to take possession of the throne. For this piece of service he was created viscount Hinchingbrooke and earl of Sandwich July 19, 1660. In the Dutch war, which commenced in 1664, he greatly distinguished himself especially in the battle with admiral Opdam, June 3, 1665 when he commanded a division of the English fleet under the duke of York. He was afterwards employed on a diplomatic mission to the court of Madrid. On the renewal of hostilities with the Dutch he was again employed, and lost his life in an engagement of Southwold on the coast of Suffolk in 1673 owing to the vessel in which he was taking fire, when he leaped overboard and was drowned. Lord Sandwich wrote on politics, natural philosophy &c., in consequence of which he is noticed in Walpole's Catalogue of Royal and Noble authors.—See *Bra. Collins.*

MONTAGU (Lady MARY WORTLEY) one of the most celebrated among the female literary characters of England was the eldest daughter of Evelyn duke of Kingston by his wife lady Mary Fielding the daughter of the earl of Rosshire. She was born about 1690 at Thoresby in Nottinghamshire and displaying uncommon abilities at an early age was educated upon a liberal plan and instructed by the same masters as her brother in the Greek Latin, and French languages. In her twentieth year she gave an extraordinary proof of her erudition by a translation of the *Eneid* of Virgil, which version was reviewed by bishop Burney by whom her education was ultimately superintended. Her mind was adorned in great comparative retirement, previously to her marriage in 1712 with Edward Wortley Montagu esq; son of the hon. Sidney Montagu, a relative of the earl of Rosshire. Even after her marriage she lived away of her husband's seat of Woburn, until the latter being introduced into Whitehall treasury by the earl of Halsbury hereditary his lady to London. Being thus placed in the sphere of the court, she attained that estimation which beauty and eloquence, joined to wit and the charms

of conversation, added. So it is imagined—she became frequently consulted with Addington, Pope, and other distinguished writers, and rapidly obtained the character of a woman of very superior talents. In 1718 Mr. Wortley being appointed ambassador to the Porte, lady Mary determined to accompany him, and hence that admirable series of correspondence which has so excited her literary fame. This was chiefly formed by letters addressed to the countess of Mowbray and Mr. Pope to whom she communicated her observations on the new and interesting scenes to which she was a witness. On many occasions she displayed a mind superior to common prepossessions, but is more so happily seen in a courageous adoption of the Turkish practice of inoculation for the small pox for her own son, and zealous patronage of its introduction into English practice. In 1718 Mr. Wortley returned to England, and at the request of Pope lady Mary took up her summer residence at Twickenham, and a friendship was formed between these kindred geniuses, which gradually gave way to the natural dislikes produced by difference of political opinion, pretensions and irritability on the side of the poet, and no small disposition to sarcastic keenness on that of the lady, and a literary war ensued, which did honour to neither party. Lady Mary preserved her ascendancy in the world of rank and fashion until 1739 when her health declining she took the resolution of passing the remainder of her days on the continent not without the world surmising that other causes concurred to induce her to form this resolution. She however retired with the full concurrence of her husband with whom her subsequent correspondence betrays neither resentment nor humiliation. Vence Avignon and Chambery were in turn her residence until the death of Mr. Wortley in 1762 when she complied with the solicitations of her daughter the countess of Bute, and returned to England after an absence of twenty two years. She enjoyed a renewal of family intercourse for a short time only as she died of a gradual decay in 1762 aged seventy two. As a poetess, lady Mary Wortley Montagu exhibits ease and some powers of description, but she is negligent and incorrect. The principal of her performances in this class is her "Town Eclogues," a satirical parody of the common pastoral applied to fashionable life and manners. Of her smaller pieces, some are more free than would generally be thought becoming her sex. As a letter-writer her fame stands very high; and the collection under her name is certainly not surpassed, upon the whole, by any other in the language. After having been shown about in MS. they were collected and copied by her self, and presented, in 1766, to the rev Mr. Sowerby of Amsterdam, of whom they were purchased by the earl of Bute, but a supernumerary copy of them having been obtained by a trick, they were published in 1763, in 3 vols. 12mo. The authority of these letters, which obtained universal admiration for their

and satirical, and descriptive poems, was first published; but all editions were soon superseded by the following publication under the direction of the edit of Mrs. — "The Works of the Right Honourable Lady Mary Wortley Montagu, including her Correspondence, Poems, and Essays, published by permission from her private papers," London 1749, 6 vols. 12mo with a life by Mr. Dallaway. This edition contains many additional letters written in the latter part of her life, which display much discerning sense and solid reflection although tinged with some of the prejudices of high rank and indicative of increasing misanthropy. The last Mrs. Montagu used to describe lady Mary as one who "neither thought nor acted like any one else" and doubtless she was distinguished by a masculine freedom which it is difficult on all occasions to reconcile with the usual standard of female sensibility and propriety.—*Lyt's by Dallaway.*

MONTAGU (EDWARD WORTLEY) the only son of the subject of the preceding article was born in 1713. At an early age he was sent to Westminster school from which seminary he ran away three times, and associating himself with the lowest classes of society passed through some extraordinary adventures until to Spain as a cabin boy and was at length discovered by the British consul at Cadiz and restored to his family. A private tutor was then provided for him with whom he travelled on the continent. While at Paris he became involved in a dispute with a Jew which subjected him to a criminal prosecution but exclusive of this affair his conduct seems to have been tolerably correct and during his residence abroad he wrote a tract entitled *Reflections on the Rise and Fall of Ancient Republics*. On his return to England he obtained a seat in the House of Commons where he sat in two successive parliaments. But living extravagantly he after a time became involved in debt, and at length left his native country never to return. His future conduct was marked by eccentricities, not less extraordinary than those by which he had been distinguished in the early part of his life. He went to Italy where he professed the Roman catholic religion and from thence apostatised to become a disciple of Mahomet, and a scrupulous practitioner of the formalities of Islamism. After passing many years in Egypt, and other countries bordering on the Mediterranean he was about to return to England when his death took place at Padua, in Italy in 1776. Besides the work above noticed he was the author of an *"Examination into the Causes of Earthquakes,* and some papers in the *Philosophical Transactions.*—*Am. Reg.*

MONTAGU (ELIZABETH) a lady of great literary celebrity in the latter part of the last century. She was the daughter of Matthew Robinson, esq. of the Rothesby family and was born in 1720. She had an opportunity of prosecuting her studies under the direction of Dr. Cudly's Methodists to whom she was pre-

pared to teach for the theory of history which so remarkably informed her character and manners. In 1749 she became the wife of Mr. Montagu, a descendant of the first earl of Sandwick, who had no children by her, and dying some time after he left her possessed of a handsome fortune, which enabled her to gratify her taste for study and literary society. In 1759 she published an *"Essay on the Writings and Genius of Shakespeare compared with the Greek and French Dramatic Poets,* with some *Remarks upon the Misrepresentations of Mons. de Voltaire, &c.* This work became exceedingly popular and raised Mrs. Montagu in the opinion of a large party of the metropolitan literati to the rank of an actress of public taste. She opened her house in Portman square to the "Blue Stocking Club," a society so denominatd from a peculiarity in the dress of Mr. Benjamin Stillingfleet, one of the members, and she carried on an epistolary correspondence with men of letters published after her death which took place August 25th 1800. Among British female authors, Mrs. Montagu holds no mean rank, and if not a very profound she may be considered as an acute and ingenious critic, possessing both judgment and taste as well as learning though she must yield the palm of mental superiority to her name sake lady M. W. Montagu exclusive of whom she had perhaps no successful rival among her contemporaries of the fair sex.—*Lyt's published with her Letters.*

MONTAGU (JOHN) fourth earl of Sandwich a statesman and antiquary born in 1718. He studied at Eton whence he removed to Trinity college Cambridge. On leaving the university he set out on his travels, and in 1738 and in 1739 visited Sicily Malta Turkey, Egypt, and other countries bordering on the Mediterranean. He brought home a valuable collection of antiquities, particularly a marble vase obtained at Athens which he presented to the college where he was educated. An account of his Voyage round the Mediterranean drawn up by himself with memoirs of his life by his chaplain the rev J Cooke, was published after his death in 1799, &c., and a second edition of the work appeared in 1807. After his return home he was appointed a lord of the admiralty and in 1740 he was despatched to the congress of Breda as minister plenipotentiary. He was subsequently employed at the pacification of Aix la Chapelle and on his return to England he was made first lord of the Admiralty. He was removed in 1751, but twice afterwards he held the same office. This nobleman died in 1792.—*Bigg Parry.*

MONTAIGNE, or MONTAIGNE (MICHAEL DE) a celebrated French essayist, born in 1533, was the son of Peter Esquier, lord of Montaigne in Périgord. Induced by an early display of quickness and vivacity his father took great pains with his education, being taught Latin as soon as he could speak, by a German, who was ordered to converse with him in their language alone. He afterwards

MON

learned Greek under the guidance of masters, and in this way was shot into various accomplishments, so that at the age of thirteen he had completed his course at the college of Bourdeaux. It is supposed that he subsequently cultivated jurisprudence, as, upon his marriage with a daughter of a counsellor of Bourdeaux, he for some time occupied a similar post. His son, however, quotes the legal profession in disgust, and devoted himself to the study of men and books. In 1569 he published the "Natural Philosophy of Raymond Lébède," a learned Spaniard, and the death of his father soon after giving him possession of the estate and seat of Montaigne he repaid thither and began to collect materials for his essays. In order to enlarge the sphere of his observation he also travelled through France and visited Germany, Switzerland and Italy. In 1581 he was admitted a citizen of Rome and in the same year during his absence, was chosen mayor of Bourdeaux and subsequently delegated by his fellow citizens to transact business at court. In 1588 he also appeared to advantage in the assembly of the states of Blois and during one of his visits to court was honoured by Charles IX with the order of St Michael. He finally settled at his family residence where he assiduously devoted himself to study in which, however he was occasionally disturbed by the disorderly events of the civil wars. In his old age he was much afflicted by the colic and nephritic pains, but could never be prevailed upon to take medicines. He died of a quinsy in 1592 in his sixtieth year leaving an only daughter who was advantageously married. With a considerable share of vanity and other foibles, Montaigne possessed a fund of discernment and practical philosophy which enabled him to pass life with credit and tranquillity. His literary reputation is founded on his "Essays," which may still be deemed one of the most popular books in the French language. They embrace a great variety of topics which are touched upon in a lively enteraining manner with all the raciness of strong native good sense, careless of all system or regularity. Sentences and anecdotes from the ancients are interspersed at random, with his own remarks and opinions and with stories of himself in a pleasant strain of optimism, and with an occasional licence to which severer censures can with some difficulty reconcile themselves. Their style without being pure or correct, is simple, bold, lively and energetic and, according to La Harpe, "Le" impressed on the French language an energy which it did not before possess, and which has not become an acquired taste, it is that of sentiments and ideas, and not alien to its idiom. It is not a book we are reading but a conversation to which we are listening; and he persuades, because he does not teach. The best edition of Montaigne's Essays is that of Corder in three volumes, 1740; of which Thomas's London, 1774, is divided the text. We have also two English translations, the one by Charles Corder, and the other, an earlier one by

MON

John Florio. In 1774, "Montaigne's Travels" were published by Quinet, but they were disappointed, as they amounted to little more than a jumbled hasty written, with little of the style and essence of the author of the Essays.—*Moveri. Niemur.*

MONTALEMENT (Marc Rauz, marquis de) a French general born at Agde, of a noble family in 1714. He received a liberal education, and at the age of eighteen he entered into the army and was at the siege of Kehl in 1733 and at that of Philipburg in the year following. He afterwards served in Bohemia, and on the occurrence of peace he devoted himself to study. He constructed forges for casting cannon in Anjou and Périgord. In the seven years war he was attached to the staff of the armies of Russia and Sweden to give an account of military operations to the French ministry. In 1761 he published the prospects of a work on Fortification which the jealousy of his government prevented him from committing to the press till some years after. This treatise is entitled "L'Art défensif supérieur à l'offensif, par une nouvelle manière d'employer l'Artillerie ou la Fortification perpendiculaire," Paris 1793, 11 vols. 4to. He was also the author of several papers in the memoirs of the Academy of Sciences, besides other works. His death took place in 1800.—*Bieg Univ.*

MONTANUS the founder of a new sect in the second century of Christianity, was a native of Myra who affected to be inspired by the Holy Ghost and to utter prophecies. According to St Jerome he obtained an ascendancy over Priscilla and Maximilla two wealthy ladies whom he exalted into prophetesses, and by means of whose riches and influence he seduced many churches and obtained numerous followers. He seems to have made Pepusa, a town in Phrygia, his first residence where after a while it is asserted that he contrived to make a plentiful harvest of his deluded votaries. It does not clearly appear that this sect broached any doctrine peculiar to themselves, but like other Christians, disputed and disagreed concerning the mystery of the Trinity. The distinguishing peculiarities of this sect related rather to discipline and manners, in which they affected greater severity. The Montanists obtained a proselyte in Tertullian and were even countenanced by one of the bishops of Rome, but they were ultimately excommunicated and their baptism declared null. Of the death of Montanus and his female coadjutors, there is no certain account.—*Cave Hist. Lat. Justin's Remarks on Ecclesi Hist.*

MONTANUS (BENEDICT ARRIAS) a learned Spaniard was born at Fresneda in Extremadura, in 1527. After studying in the university of Alcalá, he took the habit of a Benedictine and attended the council of Trent in 1563, where he obtained considerable reputation. On his return to Spain he retired to a hermitage, whence he was withdrawn by Philip II. to edit a new Polyglot, which he completed in 2 vols. folio, Antwerp, 1582.

MON

After satisfactorily clearing himself at Rome from a charge of corrupting the text, he was offered a banopis by Philip, but preferred a second retirement, from which he was again solicited by the king to return and become librarian of the Escorial. He died in 1598 aged seventy-one. Besides the Antwerp Polyglott, Arias, who was one of the most learned divines of the sixteenth century, published several other works, which are chiefly eruditie commentaries on Scripture and will be found enumerated in Antonio and Nicetas.—Antonio. *Bibl Hispan. Novae. Beg. Universitatis.*

MONTANUS (RAGNOLD GONSALVO) veracularly Montano a Spanish Protestant of the sixteenth century whose history is merely gleaned from his own work. He lived at Seville and was the intimate friend of the Spanish martyr Juan Ponce de Leon. The only work he published was entitled *Sancta In quatuor Hispanica Artes aliquot detecta ac psalm tractus*, and is the earliest account of the inquisition whence other accounts have chiefly been taken. It was written for the purpose of teaching his fellow Protestants in what manner to escape and what they would have to suffer if they fell under the notice of that horrid tribunal. The trials and examples which he gives were those of his own personal friends and the details of examinations, &c. were principally furnished by those who had been prisoners themselves though some think this passage alludes to himself—*Quic lic exempla reverentur unius modo Inquisitorum tribunibus nemp Hispane sunt cuius solius mysteria cognoscere et majora ex parte in se ipsius experientia traductioribus est datum.* Montanus a work has been inserted in a volume with this title *Hispanica Inquisitionis et Carniciana Secretioris per Joachim Uranium Ant. Jesuitam. Ambergae 1611.*—Aikin's *Gen. Beg.*

MONTANUS or DA MONTE (Johs. Baptist) an Italian physician of great eminence was born at Verona in 1488 of a noble family and was sent by his father to Padua, to study civil law. He however turned his attention to physic which so displeased his father that he withdrew from him all support. He lived for some time at Rome with cardinal Hippolytus, but on procuring a competence he returned to Padua where he was installed by the senate in the professor's chair and notwithstanding the liberal offers of many sovereigns he would not quit his post. He died in 1551. He was the author of several works, consisting principally of comments upon the ancients and illustrations of their theories. He translated into Latin the works of Aetius. He also translated into Latin verse the poems of Meleager and made translations of the Argonauts attributed to Orpheus, and of Lucretius's *Tanquapologia*.—Eley *Dict. Hist. de la Medicine.*

MONTECUCULI (Barozzus de) a celebrated general in the service of the emperor of Germany was born in 1600, of a distinguished family in the Marches. In 1626, at the head of two thousand horse, he surprised

Bos. *Diet.*—Vol. II.

MON

ten thousand Swedes, besieging Neisse in Silesia and took their baggage and artillery but he was soon after defeated, and taken prisoner by general Baenier. In 1637 the emperor appointed him maréchal de camp general, and sent him to assist John Casimir king of Poland. He defeated Razola, prince of Transylvania, drove out the Swedes, and distinguished himself against the Turks in Transsylvania and Hungary gaining the battle of Gödöllö in 1644. In 1673 Montecuculi commanded the imperial forces against France, and acquired much honour by the capture of Bapaum. On the death of M. de Turenne the great prince of Condé was sent to the Rhine and stopped Montecuculi's progress, and this was his last campaign which he considered his most glorious one not because he was a conqueror but because he was not conquered by Turenne and Condé. He passed the remainder of his life at the emperor's court, and died in 1680. Montecuculi was the author of some excellent *Memories* on the military art and to him the academy of naturalists owes its establishment.—*Diet. Hist. Roveri.*

MONTEMAYOR (Georox de) a Castilian poet who took his name from the place of his birth was born in 1530. In his youth he entered the army but afterwards he appears to have obtained an employment in the suite of Philip II. on account of his musical talents he was also patronised by queen Catharine sister to the emperor Charles V. He died in 1562. His principal work is a pastoral romance entitled *Diana*, which is much admired. A continuation of it was published by Gaspar Polo in 1778.—Art. *Bibl. Mus. Diet. Hist.*

MONTFERRUL or MONTEREUIL (Beraudin de) a learned jesuit, was born at Paris in 1569. He became professor of moral philosophy and afterwards of theology in his college and was greatly admired as a preacher. He died at Paris in 1646. His works were

A History of the early State of the Church comprising the Acts of the Apostles 1641, 12mo. The last Conflict of the Church as explained in the Apocryphes 1649, &c. and

A Life of Jesus Christ, originally published in two volumes, quarto, but afterwards augmented to four. It is much esteemed and is said to be a good substitute for a harmony of the Evangelists. It was afterwards revised by father Brugnon and reprinted in 1741 in 3 vols. 12mo.—Strutt's *Bibl. Script.* See *Jesu. Nostr.* *Diet. Hist.*

MONTESQUIEU (CHARLES DE SECONDAT baron de) an eminent French magistrate and writer descended from a distinguished family in Gascony was born at the castle of Breda, near Bordeaux, in 1689. Great care was taken of his education, and at the age of twenty he had even collected materials for his

Esprit des Lois. He was the son of a younger brother, but a personal misfortune at his death left him his property together with the office of president-a-mecier to the parliament of Bordeaux. In 1731 he published his "Pensees Litteraires," so well known for

g K

MON

their wit, piety, and devotion in reference to politics and religion. The literary reputation acquired by this production induced him to become a candidate for a place in the French academy, which however after some proceedings more dexterous than ingenuous, to subdue the opposition of the devotees, he obtained in January 1722. With a view to the literary and philosophical labours on which he was to intent, he determined to travel for instruction, and after visiting Germany, Hungary, Italy, Switzerland, and Holland, he finished with a residence of two years in England which he observed he found the best country to think in. Being favoured with the society of queen Caroline and the friendship of the most eminent characters in literature and science in this country he passed his time with much satisfaction, and endeavoured to acquire a correct notion of the British constitution. In 1734 he gave to the world his work *Sur la Cause de la Grandeur et de la Decadence des Romains*, in which he has succeeded to render a true subject extremely interesting by the acuteness of his remarks the energy of his style and an animated regard for liberty. It was not until 1748 that he published his celebrated "Agent des Lois" in 3 vols. 4to in preparing which he had been occupied to many years. The great reputation of this work which discusses at large the nature of different forms of government from which laws emanate and to which they ought to be adapted is now considerably declined but it will ever remain worthy the attention of the philosopher and politician notwithstanding its many errors in theory and inaccuracies in facts. According to Voltaire if he does not always instruct his readers he uniformly makes them think and his wit and ingenious expression in which he rivals his countryman Montaigne will always render him a favourite in France. As Montesquieu exhibited as much freedom in this work as in his *Persian Letters*, on the subject of religion he excused similar conduct and among the rest the Socinians undertook an examination but scared by the ridicule heaped upon other sects, it never appeared. A more weighty critique was prepared by a M. Dupin a man of considerable reading and information, and it is not to the honour of Montesquieu that he got it suppressed by the influence of his *Amis de l'Emperador*. This eminent writer died of a pulmonary complaint, on February 16 1755 in his sixty sixth year not without considerable consciousness on the part of the penitent who were eager to induce him into that death-bed act of retraction, on which so much stress is usually laid. One of that body indeed published a pretended confession in his name, of which the authority under such circumstances is wholly contemptible. The public character of Montesquieu is described as having been immensely amiable and benevolent and although habulously frugal, however sparing in the exercise of his liberality and magnificence to exceed. He was also mild temperate than abstinent, and simple and

MON

unaffected in manners. After his death, a collection of his works appeared in three volumes, quarto, in which was included some previously unpublished pieces, the principal of which are "Le Temple de Guido" a sort of poem in prose, "Lymanthus," and an "Essay on Taste." —He left a son Jean Barrist de Montesquieu, counsellor of the parliament of Bordeaux, and member of the Royal society of London who died in 1795 aged seventy-five. He wrote *Observations sur les Physiques et d'Histoire Naturelle sur les Hautes Mairures des Pyrénées* —*Considerations sur la Commerce et la Navigation de la Grande Bretagne* 1744 —*Considerations sur la Marine Militaire de France*. —*Saints de Louis XIV* —*Nouvelles Hist.*

MONTEZUMA emperor of Mexico at the time of the Spanish invasion in 1519, when Cortes arrived on the coast of Mexico and expressed his intention of visiting the emperor in his capital, Montezuma sent him a rich present, but forbade his further advance. Cortes, however, heedless not this prohibition and the emperor intimidated began vainly to negotiate for the departure of the Spaniards. His despotic government having procured him many enemies, who willingly joined Cortes and harassed him in his progress to Mexico he was obliged to consent to the advance of the Spaniards, to whom he assigned quarters in the town of Cholula, where he plotted their destruction. His plot being discovered a massacre of the Cholulans followed and Cortes proceeded to the gates of the capital before Montezuma was determined how to receive him. His trepidity prevailed, and meeting him in great state he conducted the Spanish leader with much respect to the quarters allotted to him. The mask was however soon removed, and coming to open contention Cortes seized Montezuma in the heart of his capital and kept him as a hostage at the Spanish quarters. (See *CORTES*.) He was at first treated with respect which was soon changed to malt, that was carried so far that scfers were put on his legs on which he burst into loud lamentations, which were changed to expressions of joy on their being taken off again. He was at length obliged to acknowledge his vassalage to the king of Spain but he could not be brought to change his religion, although in the custody of the Spaniards. He was constantly planning how to deliver himself and his countrymen, and when Cortes, with great part of his forces was obliged to march out to oppose Narváez the Mexicans rose up, and furiously attacked the Spaniards which remained. The return of their commander alone saved the latter from destruction, and hostilities were still going forward, when Montezuma was induced to advance to the bastioness of the Spanish fortress in his royal robes, and attempt to pacify his subjects. His tumultuous subjects only cheered indignation against himself, and having struck at the temple with a stone, he fell to the ground. Every epithet was paid to him by Dantes, from epithets of malice, but rejecting all con-

MON

statement, he was off his headgates, and soon after expired, sparing every attempt at conversion. This event took place in the summer of 1680. He left two sons and three daughters, who were converted to the Catholic faith. Charles V gave a grant of lands, and the title of count of Montfaucon to one of the sons, who was the founder of a noble family in Spain.—*Robinson's Hist. of America.* Moret.

MONTFAUCON (BÉRARD de) A French Benedictine of the congregation of St Maur celebrated as a crux and martyry. He was of noble descent, and was born at the castle of Floulage in Languedoc in 1655. When young he engaged in military service which he quitted, and in 1675 took the monastic vows. In 1688 he published conjointly with fathers Lopis and Ponget a volume, entitled *Analepsis Graeca, sive vana Opuscula*. He after wards translated a tract on numeration from the Greek, and in 1690 he published a paess on the apocryphal history of Judith. One of his great undertakings was an edition of the works of Athanasius, which appeared in 1698 in three volumes folio. He then visited Rome where he exercised the functions of agent-general of the congregation and in 1700 he printed *Vindictae Editiones Sti Augustini* a Benedictine adorned 12mo in reply to the criticisms of the abbé Alaman. On his return from Rome he published an account of his observations under the title of *Diarium Italicum* and in 1708 a collection of the works of the ancient Greek fathers with a Latin translation, notes, and remarks. In 1708 appeared his *Paleographia Graeca sive de crto et progressu Literarum Graecarum* and this was followed by a translation of a Greek tract of Philo Judaeus, on the contemplative life which gave rise to a controversy with president Bouquier. Among the subsequent literary labours of Montfaucon are the *Heraclia* of Origen, 1713 2 vols folio and an edition of the works of St John Chrysostom extending to thirteen volumes folio. But the most important of all his productions is the treasury of classical archaeology entitled "*L'Antiquité expliquée et représentée en Figures*" forming with the supplement fifteen volumes folio. He also published a catalogue of MSS. in the Coislinian library and a work entitled "*Bibliotheca Bibliotheccorum*". His death took place at the abbey of St Germain des Prés, December 21 1741. English translations have been published of the *Diarium Italicum et Antiquité Expliquée*.—*Le Cey Bag Uan.*

MONTFLEURY (ANTONY JACOB) A writer of comedies, was the son of an eminent actor, and was born at Paris in 1640. He was brought up to the bar but his inclination for theatrical pursuits prevailed, and he devoted himself to writing for the stage. He was the author of several popular comedies, among which *La Fâche Juge et Partie* and *Campagnon Gouffrousse*, are distinguished for their humor and plausibility. He died in 1685 and his "*Théâtre*" was published in 4 vols. 1686, 1713.—*Nous Hist. Hist.*

MON

MONTGERON (LOUIS BAPTISTE) Called also a dupe to the impotences practised at the tomb of the abbé Paris, was the son of a master of requests at Paris, where he was born in 1686. He was brought up to the bar and at the age of twenty-five he became one of the counsellors of parliament. Like many of the young men of his time, he was sceptically inclined and in 1731 hearing of the miracles performed at the tomb of the abbé Paris, he repented thither with the intention of detecting and discovering the impostures. Of these however he became so completely the dupe that he immediately abandoned his former opinion and assuming the character of a religious fanatic maintained with the greatest zeal the truth of the wonderful cures effected by the relics of the abbé. He subsequently employed himself on his work, entitled *The Truth of the Miracles wrought through the Intercession of M. Paris*, a copy of which work he presented to the king, but its effect was far different from what he expected the author being arrested and imprisoned in the bastile whence he was removed to several prisons and finally to the citadel of Valence, where he died in 1754.—*Nous Dict. Hist.*

MONTGOLFIER (STEPHEN JAMES) A native of Annonay who distinguished himself by the invention of air balloons. He was a paper-manufacturer at Annonay where in 1782 in conjunction with his brother he made the first successful experiments on record in the art of aerostation. Their plan consisted in the inflation of a large paper bag by kindling under the mouth of it a fire which rarefied the air contained in it, and being thus rendered specifically lighter than an equal bulk of atmospheric air at the usual temperature, it rose to a considerable height. It having been ascertained that a balloon with a car attached to it could thus be kept suspended by a supply of heated air the experiment was repeated on a large scale at Versailles when the marquis d'Arlandes ascended in the presence of the royal family and a vast concourse of spectators. An important improvement was afterwards made in the practice of aerostatics, by substituting for heated air hydrogen gas, which is probably the lightest aerial fluid in nature. S. J. Montgolfier who invented a kind of velum paper was rewarded with a pension and the order of St Michael. He died in 1799 at the age of fifty two.—*Montgolfier* (JOSEPH) the brother and coadjutor of the preceding, was an ingenious experimentalist, and was the inventor or improver of a machine which he denominates the hydrostatic ram. He died at the baths of Balaruc whether he had gone for the benefit of his health, in June 1810 in the seventieth year of his age.—*Diet. Hist. Bag Uan.*

MONTMORIN ST HEREM (ARMAND MARC, comte de) minister and secretary of state for foreign affairs to Louis XVI. He was a member of the assembly of the nobility held at Versailles in 1787, and was secretary of state at the opening of the states-general. In July 1789 he was dismissed at the onset

MON

time with Necker and was recalled to office together with that minister. In April 1790 he published observations on the Red Book and the calculations which accompanied it, and thus exposed himself to the hatred of the authors of these calculations. He nevertheless remained in office after the removal of his colleagues and for a while he also held the portfolio of the home department. He now connected himself with the revolutionary party and joined in several popular measures, but having given offence to the Jacobins, he thought proper to resign his post. His attachment to the king occasioned his arrest, in August 1792; and after having defended himself at the bar of the National Convention, he was ordered to be confined in the prison of the abbey at Paris where he fell a victim to popular fury on the 2d of September.—*Dict. des H. M. du 18me S. Bieg Univ.*

MONTMORT (PETER RAYMOND de) an able mathematician was born at Paris in 1678. He travelled into various countries of Europe until the death of his father who had destined him for the law and then taking possession of an ample fortune he devoted himself to the study of philosophy and mathematics under the direction of Malebranche. In 1700 he came to England a second time and on his return he assumed the ecclesiastical habit and became a canon of the church of Notre Dame at Paris. In 1703 he published an Analytical Essay on Games of Chance. In 1715 he paid a third visit to England for the purpose of observing a solar eclipse and was elected a fellow of the Royal Society to which he transmitted a treatise on Infinite Series inserted in the Philosophical Transactions. He died of the small pox at the age of forty one. He was employed several years in writing

A History of Geometry which he did not live to complete. He also edited the works of M. Grimaldi on The Application of Algebra to Geometry and that of Newton on the Quadrature of Curves.—*Morey. Dict. Hist. Belles Lettres's Cyclopaedia.*

MONTPENSIER (ANNE MARIE LOUISE d'Orléans) better known by the name of mademoiselle de Montpensier was the daughter of Gaston, duke of Orléans, brother to Louis XIII. She inherited from her father an unassayable restless temper and allied with Condé in the civil contests which distinguished the minority of Louis XIV. After a variety of intrigues, this princess, who all her life was battling about the privileges of her rank and station, was led by passion to privately marry the comte de Lautun a nobleman of no distinguished origin, and amply exalted by the favour of Louis XIV. This capricious adventuress treated her with great insolence and returning one day from hunting, exchanted, "Louise of Orléans, take off my boots a dose of humility which roused her native virtue, and she would never see him more." A Revolutionary woman wrote her own memoirs which have been published in 8 vols. These, together with her "Letters," She was the author of two romances, entitled *Rais*

MOG

tion de l'Imaginative" and "La Princesse de Papageno." She died in 1803.—*Nous. Dict. Hist.*

MONTPETIT (ARNOULD VINCENT) an artist was born at Mâcon in 1713. He was the inventor of several machines, and a manner of painting called stiurone, which consists in supporting a design in water colours with a coat of oil. He made several improvements in the steam-engine and also presented to Louis XVI the model of an iron bridge of a single arch the span of which was four hundred feet. He wrote an essay on his chelone discovery, and died at Paris in 1800.—*Dict. Hist.*

MONTUCLA (JOHN STEPHEN) an eminent French mathematician born at Lyons in 1725. He studied in the college of the Jesuits, and completed his education at Toulouse with a view to the legal profession. He then engaged in practice as a counsellor but afterwards relinquished jurisprudence to devote himself to the cultivation of mathematical science. He published a treatise on the quadrature of the circle and in 1758 appeared his *Histoire des Mathématiques*, 2 vols. &c. a work of great research highly creditable to his industry and abilities. He was appointed secretary to the intendant of Grenoble and subsequently went to Cayenne with the title of royal astronomer. The latter part of his life was devoted to the augmentation of his history of which a new edition was published at Paris in four volumes quarto in 1799 reprinted in 1810. Montucla also published an enlarged edition of the *Recreations Mathématiques et Physiques* of Ozanam an English translation of which by Dr Charles Hutton appeared in 1803 4 vols. 8vo. His death took place in 1799.—*Dict. Hist. Belles Lettres Univ.*

MOOR (KAREL de) an eminent portrait painter was born at Leyden in 1656 and was the pupil of Gerard Douw Francis Mieris and Godfrey Schalcken. He painted portraits in a beautiful style emulating the taste and delicacy of Vandyke with the force and spirit of Rembrandt, and his pictures are always neatly and highly finished. The grand duke of Tuscany desired to have the portrait of De Moor painted by himself to be placed in the Florentine gallery and on the receipt of it he sent the original a chain and large medal of gold. He was engaged by count Zinzendorf the imperial ambassador to paint the portraits of prince Eugene and the duke of Marlborough on horseback, which he did in so masterly a manner as to occasion several commendatory poems in Latin and the emperor created De Moor a knight of the empire. He died in 1736.—*Pilkington. D'Argenville.*

MOORE (Edward) an English poet and dramatic writer of the last century. He was the son of a dissenting clergyman at Abingdon in Berkshire, where he was born in 1712. He was brought up to the business of a hems-draper which he carried on for some time in the metropolis. In 1744 he published "Faibles for the Female Sex," and having been noticed by lord Lyttleton, he complimented

that nobleman in a pastoral piece, entitled "The Trial of Solon." His dramatic works are, "The Foundling," a comedy, 1749; "Gil Blas," another comic drama; and "The Gunner," a tragedy 1753 all acted at Drury-lane theatre. The two former had little success; but the last became a stock piece and it is perhaps one of the best examples of a domestic tragedy which our literature affords. Mr Moore engaged in conducting a periodical paper called "The World" to which lords Lyttelton, Chesterfield, Bath and Cork, Mr H. Walpole, R. O. Cambridge and Somes Jenyns, became contributors. The last number of the World was published on the day of the editor's death February 17th 1757. The literary reputation of Moore rests on his tragedy and his fables, the latter of which have less humour and point than those of Gay and are also inferior to his compositions in ease and elegance of style but they exhibit lessons of morality in pleasing language and have become deservedly popular.—*Big Dram*

MOORE (John) a physician distinguished as a cultivator of polite literature. He was the son of an episcopal divine and was born in 1730 at Stirling in North Britain. He became a student at the university of Glasgow and having obtained a knowledge of medicine and surgery he went to the Netherlands in 1747 and served as a mate in the military hospitals. Peace taking place he became household surgeon to the British ambassador at Paris and afterwards returning to Scotland he practised as a surgeon till 1772 when he took the degree of M.D. at Glasgow. He was soon after engaged by the duchess of Argyle as medical attendant to her son (the late duke of Hamilton) who was in a delicate state of health and whom he accompanied to the continent, and spent there five years in traveling. In 1778 he returned to London and in the following year published "A View of Society and Manners in France Switzerland and Germany" 2 vols. 8vo which passed through numerous editions, and has been translated into several foreign languages. In 1781 appeared his "View of Society and Manners in Italy" 2 vols. and in 1785 a volume entitled "Medical Sketches." The next production of his pen was "Zelucco" a novel, containing interesting delineations of Italian character and manners. In 1795 he published "A View of the Causes and Progress of the French Revolution" 2 vols. 8vo describing scenes which he had witnessed during a residence at Paris. The following year he produced a novel entitled "Edward, or various Laws of Human Nature" and in 1800 another called "Mordaunt, or Sketches of Life Character and Manners in various Countries." He also published a collective edition of the works of his countrymen Smollett, with the life of the author. Dr Moore died at Richmond in Surrey February 20th 1800.—*Adv. Reg.*

MOORF (Sir John) a military officer also of the subject of the last article. He

was born at Glasgow, November 13th, 1754; and at the age of fifteen entered the army, as sergeant of the 51st regiment of foot. In 1790 he was made a lieutenant-colonel, and he afterwards served in Corom, when he was wounded at the siege of Calvi. In 1794 he accompanied Sir Ralph Abercromby to the West Indies, as brigadier-general and having assisted in the capture of St Lucia, he was appointed governor of that island. The following year he was employed against the insurgents in Ireland, when he was promoted to the rank of major general. In 1799 he was sent to Holland where he was severely wounded and he was subsequently engaged in the expedition to Egypt, on which occasion he again experienced personal injury. He was made a knight of the Bath after his return to England and in 1808 he commanded a body of troops sent to the assistance of the king of Sweden but he became involved in a dispute with that prince which occasioned his being placed under personal restraint, from which however he extricated himself and returned home. In October the same year he landed in Spain at the head of an English army to aid the people of that country in resisting the ambitious projects of Buonaparte. After advancing some distance into the interior and meeting with little support from the Spaniards he was obliged to retreat before a superior body of French troops and having reached Corunna and part of his forces having embarked on board transports to return home an attack took place on the 16th of January 1809 when the general was killed by a cannon ball and was interred on the field of battle the enemy having been defeated.—*Gent. Mag.*

MOOK (Sir Jonas) an English mathematician born in Lancashire in 1617. In the reign of Charles I he was employed to teach mathematics to the duke of York but being deprived of that office in consequence of the civil war he was obliged to open a school for his support. Under the government of Cromwell he obtained the appointment of surveyor of the Fens and on the restoration of Charles II he was knighted and was nominated surveyor general of the ordnance. Being chosen governor of Christ's hospital, he exerted his influence at court to obtain the establishment of a mathematical school in that seminary and another measure which he advocated was the foundation of the Royal observatory at Greenwich. He died in 1679. Sir Jonas Moore was the author of a general system of mathematics published posthumously London, 1681 2 vols. &c.—*Martyn's Biog. Philos.*

MORABIN (James) secretary to the ten tenant of the police in Paris, was a native of La Flèche and died in 1768. He was the author of a "Translation of Cicero's Treatise on Laws, and of the Dialogue on Orators, attributed to Tacitus," 1728, "Nomenclature Cicéronienne," 1757, "A Translation of Boethius de Consolationis," 1753, "Histoire de l'Esprit de Cicéron;" and "Histoire de Ca-

MOR

matic," which two latter were translated into English, and were much esteemed.—*Mapa Hist.*

MORALES (*Asturian*) a learned Spanish poet, was born in 1510 at Cudova, and sought with reputation at the university of Alcalá. He was appointed historiographer to Philip II., king of Spain, and died at Alcalá in 1590. His principal works are: 'The General Chronicle of Spain,' begun by Flaminio Ocampo; 'The Antiquities of Spain' a curious and valuable work, 'Scholis' in Latin, on the works of Eusebius, the Genealogy of St. Dominic. He was a man of learning but of extreme credulity, scarcely rising above the gross superstitions of his age and religion. He was originally a Dominican but he was obliged to quit that order in consequence of being induced, by a mistaken party to follow the example of Origen.—*Antonius Bibl. Hisp. Sacra Oeuvr. Moris.*

MORAND (*Perre de*) a poet and dramatist, was born at Arles in 1701. An unfortunate marriage drove him to the capital where he devoted himself to a life of dissipation and the drama. In 1737 he brought forward his tragedy of *Togha*, which was successful and was followed by *Childegar*, that failed. In revenge on his mother-in law who had instituted a process against him and published a factum very injurious to his character he brought her on the stage in a comedy called 'L'Esprit de Divorce.' This was one of his best pieces, but on its being reported to the author that the character of his mother in law was considered monstrous he came forward to prove that it was drawn from life. He was however upon the whole an unsuccessful writer. In 1749 he was nominated literary correspondent to the king of Prussia, but he held the post only eight months. He died in 1757 and his works were published in 3 vols 12mo. They are not without marks of talent but are deficient in grace and elegance.—*Merton*

MORANT (*Philip*) an antiquary was born in 1700 at St. Saviour's, in the Isle of Jersey and was educated at Abergavenny school and at Pembroke college, Oxford where he took his degree of MA in 1724. He was presented successively to several benefices in Essex one of which was in Colchester of which town he published a history in 1748. His acquaintance with Norman French caused him to be appointed successor to Mr. Blayke in preparing for the press a copy of the rolls of parliament and in this he was employed until his death in 1770. Several of his works relate to English history and among them was the companion of *Rapin's history* with all Rymer's *Fœdera*, and all the ancient and modern histories, the result of which furnished most of the notes to the folio edition of 1722-24. He was also the author of a 'History of Essex,' &c. &c. false, and he composed all the fine numbered C. in the *Biographia Britannica*.—*Wright's Lit. Ann.*

MORATTA (*Ottorino Fortuna*) a learned and enthusiastic logic, was born at Fano,

MOR

whose father was a teacher of logic, in 1565. At an early age she was destined to the court of Ferrara, and made companion to the princess Anna of Este. She soon distinguished herself by her extraordinary talents, and received the homage of many of the sons of letters of her time. Calongnes wrote two sonnets to her full of praise. She retired from court in consequence of the machinations of her enemies who had injured her in the opinion of the duchess. She embraced the Protestant faith, and soon after she married a young German physician Andrew Granther, who had graduated at Ferrara. She accompanied her husband in 1548 to Schweinfurt, but as they could be well settled the entrance of hostile troops drove them thence strip of all their property. They wandered for some time about Germany in great distress. The elector palatine at length offered Granther the professorship of physic and Olympia that of Greek in the university of Heidelberg, but it was too late her health was ruined and she did not survive above a year longer dying in the twenty ninth year of her age. Her works consisting of letters dialogues Latin orations and Greek poems, were collected by Cobo Secundo Curione, and published at Basle in 1558.—*Tirabach*

MORDAUNT (*CHARLES*) 3rd of Peterborough the son of John lord Mordaunt whom he succeeded in his title and estate in 1673. Entering into the army he was engaged in the expedition to Tangier in 1680 in which he served with distinction against the Mahomedans. He went over to Holland in the reign of James II. and entering into the scheme for his dethronement returned to England with his successor by whom he was created earl of Mountmouch and he was likewise appointed first commissioner of the Treasury. Having succeeded to the earldom of Peterborough on the death of his uncle in 1697 he was subsequently employed as commander of the English army in Spain in the war relative to the succession to the crown of that kingdom. He distinguished himself greatly by his courage activity and conduct in taking Barcelona, and obtaining many other advantages over the French in consequence of which he was appointed generalissimo of the imperial forces, and he received the thanks of the British parliament. In the reign of George I. he was made a knight of the garter and received the appointment of general of marines. His death took place during a voyage to Lisbon in 1726. Lord Peterborough was intimate with his literary contemporaries, and was himself a writer of poetry, some of which has been published. In the correspondence of the countess of Suffolk, recently edited by Mr. Croker, are several letters of this nobleman. His second wife Anne Stanhope, was, previously to her marriage, much distinguished as a public singer.—*Lord Oxford's Cat. of R. and N. Aut.*

MORÉ (*Alexander*) a French Protestant divine, was born of a Scottish family at Captres in Languedoc, in 1616. He became successively professor of Greek and divinity, at

M O R

Quarrel; but being unapted of faculty of writing, he regard to the other sex, he retired to Middleburgh in Zealand where, by the interest of Selmanus, he obtained a professorship of divinity which three years afterwards he exchanged for another at Amsterdam. While in Holland he became engaged in a contest with Milton, by sending into the world *Du Molin's "Rogh Sangums Clamer ad Culem,"* and in consequence wrote *Alexandri Mori Fides Publica.* In 1654 he visited Italy and while at Venice, received a golden chain for writing a fine Latin poem on a naval victory over the Turks. He afterwards settled in Paris; where he died in 1670. His other works are *De Grata et Libero Arbitrio* & *De Scriptura Sacra* —*Beyls*

MORE (ANTONIO) a celebrated portrait painter was born at Utrecht in 1519 and was pupil of John Schoreel. He was recommended by cardinal Granville to the emperor Charles V who sent him into Portugal where he painted the portraits of most of the royal family. He then came to England to paint the portrait of queen Mary in which he succeeded so well that he was appointed painter to their majesties with a handsome pension. On the death of Mary he accompanied Philip to Spain and was admitted by him to great familiarity upon which he presumed too much and incurring the displeasure of the king he returned to Flanders and though Philip sent to recall him, he entered the service of the duke of Alva who after a time made him receiver of the revenues of West Flanders. Upon this he burnt his easel and gave away his tools and lived in ease and even magnificence the rest of his life. He died in 1575. Besides his portraits he painted some esteemed historical pieces. His style resembled that of Holbein but with less delicacy; and his colour according to Mr Fuseli was Titianesque — *Watson's Anecd. of Paint. Palkington's Diet.*

MORE or MOORE (See FRANCIS) an eminent lawyer was born in Berkham in 1558. He was admitted of St John's college Oxford whence he removed to the Middle Temple. He died in 1621. His works are *Cases collected and reported* London 1663 folio. His reading upon 4 Jac I, in the Middle Temple, concerning charitable uses, abridged by himself was published in 1675. He was a member of that parliament which passed the statutes for charitable uses and it is said the bill as it passed was passed by him. A MS. of his consisting of cases principally agreeing with those in print, as in the hands of Mr Brooke, compiler of the *Bibliotheca Legum Anglicae*, —*Githen, Owen, Bridgeman's Legal Dic.*

MORE (HENRY) a celebrated divine of the church of England and Platonic philosopher was born at Grantham in Lincolnshire in 1614. He was the son of a gentleman of good estate who educated him at Eton whence he was sent to Christ's college Cambridge, in 1631. While at the university he deeply studied the most celebrated systems of philosophy and finally settled into a decided prefer-

M O R

ence for that of Plotinus, and the disquisitions of the school of Alexandria. In 1639 he graduated M.A., and in the following year published his "Psyche-Zeis; or the First Part of the Song of the Soul, containing a Platonical and Platonical Display of Life." Having been elected a fellow of his college he became a tutor to several persons of rank. One of these was sir John Finch, whose sister lady Conway an enthusiast of his own stamp brought him acquainted with the famous Van Helmont and that singular pretender Valentine Greatrakes. In 1653 he accepted a prebend in the church of Gloucester which it is supposed he accepted only to resign it to his friend Dr Fowler. He also gave up his rectory of Ingoldsby in Lincolnshire the perpetual advowson of which had been purchased for him by his father and would never afterwards accept of preferment of any kind refusing deaneries, bishoprics, and even the mastership of his own college so desirous was he of unmolested study. During the civil war although he refused to take the covenant, he was left unmolested. In 1661 he became a fellow of the Royal Society and for twenty years after the Restoration, his writings are said to have sold better than any other of their day. Dr More died in September 1687, aged seventy three leaving behind him the character of a man of profound learning and great genius, alloyed by a deep tincture of enthusiasm chiefly coloured by the supposition that divine knowledge had been communicated to Pythagoras by the Hebrews and from him to Plato. He was also persuaded that supernatural communications were made to him by God's appointment, by a particular genius like that of Socrates. The writings of this singular but amiable man who was beloved by all parties have been published in two volumes folio. The most admired are his *Euthydemus Ethicum* and *Divina Dialogues* concerning the attributes and providence of God. — *Ward's Life of Dr More.*

MORE (Sir THOMAS) a celebrated champion of England was the only son of sir John More one of the judges of the court of King's Bench and was born in London in 1480. He received his education from a schoolmaster of great reputation in Threadneedle-street and at a proper age was placed in the family of cardinal Morton archbishop of Canterbury and chancellor who, struck with the quickness of his parts, prophesied his future eminence. In 1497 he went to Canterbury college, now Christchurch Oxford and in 1499 became a student in Lincoln's Inn. At the age of twenty-one he obtained a seat in Parliament and distinguished himself with so much spirit in opposition to a subsidy demanded by Henry VII that the compensated and avowedly monarch in revenge contrived a quarrel with his father whom he imprisoned until he had emitted an arbitrary fine. After being admitted to the bar he was appointed law reader of Fawcett's Inn, and by the advice of his friend, Dean Colet, having married the daughter of Mr Colt of New Hall, Essex, he

M O E

took a house, and applied exclusively to the promotion of law. In 1500 he was made judge of the Sheriff's court, and justice of peace and enjoyed great reputation as a pleader. In 1516 he accompanied the commissioners sent to renew the alliance between Henry VIII and Charles, then archduke of Austria, and showed so much ability, that the king was desirous of engaging him in his particular service. In 1518 he published his celebrated political romance of 'Utopia,' which shows a mind which had exercised itself freely and vigorously on several important topics, and evinced a liberality of sentiment respecting religion which was strongly opposed to the author's subsequent bigotry. This production engaged him in a correspondence with Erasmus with whom he had previously contracted an intimacy while in England, as well as with several other eminent men of letters. About this time too, cardinal Wolsey pressed him to receive a pension, which with his usual disinclination, he refused as inconsistent with his official duties, but after awhile he was induced to accept the place of master of the requests. He was also shortly after knighted and taken into the privy council and the king becoming delighted with his conversation he was received in the highest degree of favoritism. In 1520 he was appointed treasurer of the Exchequer and in 1523, at the instance of Wolsey elected speaker of the house of Commons in which capacity having done much to frustrate an oppressive subsidy he much exasperated the cardinal. If he gave any personal offence to the court by this conduct it was not of long duration as in 1527 he was joined with Wolsey in a mission to France and on his return was made chancellor of the duchy of Lancaster. In 1531 he succeeded the disgraceful cardinal as lord high chancellor which office he filled three years with scrupulous integrity gilded only by employing all the authority of his office in assisting the popular clergy in their rigorous proceedings against the reformers. It is even asserted on good authority that he caused one Bumham a gentleman of the Temple to be whipped and tortured in his own presence. That he was conscientious in the opinions which prompted this severity and bigotry however there can be no doubt and he soon proved it in a manner which has immortalized his memory. Unable to acquiesce in the king's wishes respecting his divorce from Catherine of Aragon he obtained permission to resign the seals, which although received graciously the affront rankled in the vindictive mind of Wolsey which was still further inflamed by his refusal to attend the coronation of Anne Boleyn. An attempt was made to implicate him in the plotteries of Elizabeth Barton which altogether failed; and he also perfectly cleared himself of another singular charge which was that of inducing the king to publish the book against Luther in which the pope's authority was held forth a doctrine that was now found inconsistent with the intended attack on the Roman see. At length the famous match of

M O R

supremacy being required by act of parliament, sir Thomas More was cited before the council to take it, and in spite of all the sophistry of Cranmer and others to induce him to compliance, he nobly persisted in a refusal to act in opposition to the dictates of his conscience and was consequently committed to the tower and indicted for treason. After an imprisonment of twelve months, during which time he resisted all attempts both public and private to induce him to retract he was brought to trial and after an eloquent defence condemned and sentenced to be hanged and quartered. He received the barbarous sentence with his usual composure which was disturbed only by the circumstance of a singularly affecting interview with his favourite daughter Mrs Roper, on his return to the Tower. The king spontaneously changed the sentence from hanging and quartering to beheading, which act of grace he received with his usual vein of humor and also acquiesced in the tyrannical mandate that he should not use many words at the scaffold. His execution took place on the 6th July 1535 when he deported himself with a degree of good humour which in another sort of man might be termed levity, but which Addison attributes to the satisfaction arising from conscious integrity and lord Byron to a species of temperament too strong even for the control of circumstance and which conceals a sense of misery without destroying it. Thus died sir Thomas More, at the age of fifty five than whom a character of more disute restlessness and integrity is scarcely to be met with in either ancient or modern history. Erasmus who passed much time with him at his residence near Chelsea gives a very interesting account of the internal state of the family of this eminent man and the admirable manner in which he united moral and religious observance with a taste for liberal science, music and the fine arts. His learning was at the same time various and extensive his wit abundant and his elocution ready and agreeable. Except on the one topic of toleration indeed the qualities of his mind were so happily blended and tempered that he wants but some allowance on this score to make a perfect character at least as to virtue and integrity. On the score of profundity of intellect he has possibly been overrated. His writings which were chiefly polemic, have with the exception of the "Utopia" long ago reached merited oblivion. His English works were published collectively by order of queen Mary, in 1557 and his Latin in 1567 at Basle. His Utopia has been translated by bishop Burton and Dr Warner. By his first wife sir Thomas More had three daughters and one son. The latter like his father was condemned for refusing the oath of supremacy, but pardoned and he soon after died.—MARGARET his eldest and favourite daughter married William Roper esq. of Eltham, in Kent, who wrote the life of his father in law published in 1716. She was a mistress of the Greek and Latin languages, and composed with elegance both in English and Latin. Her

M O R

sorrows and affliction for her father was unbounded. After his head had been exposed fourteen days on London bridge she contrived to obtain it, and when she died it was at her dying request buried in her arms.—MARY her daughter who became one of the bed chamber women to queen Mary translated into Latin the Ecclesiastical History of Eusebius, and into English a portion of the exposition of the Psalms by her grandfather.—*Biog. Brit.*
Life by Warner

MOREAU (JANIS NICOLAS) a French advocate counsellor of the subsidies of Provence historianographer of France and librarian to the queen was born at St Florentine in 1717 and died at Chamboux near St Germain-en Laye in 1799. He was employed in collecting and arranging all the charters edicts, historical documents and declarations of the French legislature which were published under the title of *Dépot des Chartes et de Législation*. He was also the author of *Observateur Hollandais*, a political journal, *Mémoire pour servir à l'Histoire des Cacoucous* a satire *Mémoires pour servir à l'Histoire de notre Temps Devours d'un Prince* and *Principes de Morale Politique et du Droit Public* ou Discours sur l'Histoire de France. It was the maxim of Moreau that every thing should be done for the people nothing by them, and that the best state of France would be that in which the people received their laws from the absolute will of a chief. In consequence of his boldness in expressing these sentiments he was refused a place in the French academy.—*Dictionnaire Hist.*

MOREAU (JEAN VICTOR) one of the old set and most celebrated generals of the French republic was born at Morlaix in Bretagne in 1763. His father destined him for the law but led by his decided predilection for the military profession he fled from his studies, and enlisted in a regiment before he had attained his eighteenth year. He was not, however suffered to indulge his ruling passion but was obliged to apply himself anew to the study of law at Rennes of which school he became provost. When the Revolution broke out, he had acquired considerable reputation and in 1793 a general confederacy of the Bretons being formed at Pontivy he was chosen its president, and also became commander of the first battalion of volunteers, raised in the department of Morbihan at the head of which he joined the army of the north. He subsequently favoured the party of the Gouraud the fall of which much affected him and it was with great repugnance that he accepted the constitution of 1793, when formally presented to the army. In the mean time he much distinguished himself at the head of his battalions and Pichegru under whom he served, did all he could to befriend him. The same year he was made general of brigade and in 1794 general of division, and was entrusted with a separate force, to act in Hindoo Pfandian, where he took many towns. He also had a share in the memorable winter campaign of 1794, in which he commanded

M O R

the right wing of Pichegru's army. He was soon after named commander-in-chief of the army of the Rhine and commenced that course of arduous operations which terminated in the celebrated retreat from the extremity of Germany to the French frontier in the face of a superior army by which his skill as a consummate tactician was so much exalted. Meantime, the republic was torn with intestine divisions, and a conspiracy was entered into by Pichegru, which it was the fortune of Moreau to discover by a correspondence which accidentally fell into his possession. After struggling for some time with his friendship for his old commander he finally gave up these documents to the directory, but the evident reluctance with which he took this step excited suspicions at Paris and finding that he could not explain himself satisfactorily he begged leave to retire, which was granted. His talents as a general again brought him forward, and in 1798 he was sent to command the army of Italy where after some brilliant success he was obliged to give way to the Russian force under Suvar row and he managed another retreat with great skill. On quitting the command in Italy, for that on the Rhine he visited Paris where he received some propositions to strengthen the party of the declining directory to which he would not accede. On the return of Bonaparte from Egypt he at first cordially supported him but a coldness and jealousy ensued notwithstanding which the latter as First Consul entrusted him with the command of the armies of the Danube and the Rhine. The passage of these rivers with the battles of Moestkirch Fupen Memmingen Biberach Hochstadt Niedenheim and others followed, ending with the decisive victory of Hohen Linden which induced the Austras to ask for peace. On his return to Paris he was received by the First Consul with the most flattering attention and he soon after contracted an alliance with a young lady of birth and fortune whose ambition with that of her connections is supposed to have fomented the discontent which soon after induced him to retire to his estate at Grosbois and finally to implicate himself in the conspiracy of Pichegru and Georges. He was brought to trial on the latter charge, with fifty four other persons and finally declared guilty and sentenced to two years imprisonment and to bear the expenses of the suit. He was, however allowed to travel in lieu of imprisonment, and to seek an asylum in the United States of America, on condition that he would not return to France without permission from the government. He accordingly embarked at Cadiz in 1805 and safely reached America, where he bought a fine estate near Moquinville at the foot of the Delawar. Here he remained some years in peace, until hastened to the invitation of the allies, and more especially of Russia he embarked for Europe in the July of that year, and reaching Gothenburg proceeded to Prague. Here he found the emperors of Austria and Russia, with the king of Prussia, all of whom received him with great cordiality and he was induced

as well in the direction of the allied troops against his own country. It was a fatal miscalculation to him, for on the 27th of August, soon after his arrival, as a recognition before Dresden, one of the first shots from the French fractured his right-hand and leg, and carried away the calf of the left, so as to render the amputation of both necessary. To crown the disaster the allied army was obliged to retreat, and here the wounded general with those, who after languishing five days, expired in the night of the 1st of September 1813. He was buried at St Petersburg and the emperor of Russia made an ample provision for his widow who also received the title of marchioness from Louis XVIII. The maxims of Moreau were simple and he was humane and generous as well as brave. He was however one of those officers who are great only professionally, and are better adapted to head armies than to shun in political intrigue. Of his great merits as a soldier all parties are agreed but much of his personal conduct as a partisan and especially that which led to the termination of his life will be judged of agreeably to the different theories of those who pronounce upon it. It certainly has not met with the suffrages of the majority.—*Bug Ulis*

MOREL. There were several eminent French printers of this name. **FREDERIC MOREL** the elder was born at Champagne. He was king's printer at Paris and also his Greek and Latin interpreter. He was heir to the celebrated printer Vascosan whose daughter he married. He was the author of several works. He died at Paris in 1563.—**FREDERICK MOREL**, the younger and the most celebrated was son of the preceding and succeeded his father in 1561 as king's printer. He translated from the Greek and published several authors from the manuscripts in the king's library among which were treatises of St Basil, Galen, Philo, Iudaeus, Synesius, Theodoret, &c., and the works of Libanius with his own annotations. He was so devoted to study that when in the midst of a sentence he was told that his wife was dying, he would not quit it, and on a second messenger bringing news of her death he looked up and replied I am very sorry for it—she was a good woman. He died in 1638.—His son **NICRULAS** was the king's interpreter for the learned languages and the author of several poems.—**CLAUDE MOREL**, brother to the foregoing was named king's printer in 1602 and gave editions of several Greek fathers, to which he wrote the preface. He died in 1626, leaving unfinished an edition of St Athanasius and Li. Ligitis, which were completed by his son and successor **CLAUDE**.—**CHARLES MOREL**, another son of Frederick, was also king's printer but resigned his office in 1639 to his brother Claude, who printed an edition of "Aristotle," "Georgic," 4 vols. folio, and the "Bibliotheca Politica," in 17 vols. folio.—*Mores.*

MOSSELS (Andreas) an eminent antiquary who was a Protestant and a native of Berne. He died at an early age at Paris, and distinguished

himself by his antiquarian knowledge. He was advised by his learned friends to form a description collectively of all the medals that had already been made public or were in his own cabinet. He complied, and in 1663 he gave a prospectus of this work in a publication entitled "Specimen universi et summariae antiquarum quod literariorum republiques propositum fratres Morelli Helveti." When M. Rainier was arranging the royal cabinet of antiquities he requested Morel to design all the ancient medals which it contained, and the king Louis XIV, observing his zeal and hearing of his intended work ordered him to model in it all the medals of the royal cabinet which he did but finding that no reward was intended he applied to Louvois, who gave him an unsatisfactory answer of which he complained so unceasingly that in July 1686 he was committed to the bastile. On the death of Rancourt in 1689 M. de Villacerci went to Morel in the bastile and offered him the vacant place on condition of his conversion to the Roman Catholic faith. On his rejecting this proposal his confinement was doubly strict. Through the intercession of Villacerci he obtained his liberty in the following August, but he was again imprisoned in 1690 and liberated at the intercession of the grand council of Berne whither he returned in 1692. He then went on a visit to the court of Schwartzburg at Arnstadt with whom he remained until he was introduced to M. Danckelman prime minister to the elector of Brandenburg who promised him his master's patronage in the publication of his great work, which was published in 1736 by Sigobert Havercamp under the title of "Thesaurus Morelianis sive Famularum Romanarum summi-matae omnis" and though not so full as the author intended it, is greatly esteemed by the learned. The medals were beautifully engraved by Morel himself and are 359 in number.—*Mores. Nouv Dict Hist.*

MOREL (ROBERT) a French monk was born at La Chaise Dieu in Auvergne, in 1633. At the early age of eighteen he entered the order of Benedictines of the congregation of St Maur in the abbey of St Fare at Meaux, when he was removed to the abbey of St Germain-des-Prés, of which in 1660 he was made librarian. He became successively prior of Meulan prior of St Crispin's at Soissons and secretary to the visitor of France; but in 1697 he declined all business, and retired for the remainder of his life to St Denis, where he died in 1731. His writings became very popular, they are written in a very devotional style, abounding in scripture language and expressions, borrowed from the ascetic writings of the fathers. His popularity excited the envy of his enemies, who called him a Jansenist, and as such he is described in the "Dictionary of Jansenism." His works are "Spiritual Conversations in the Form of Prayers, on the Gospels for Sundays, and throughout the whole Year" 1730 4 vols. 12mo.—"Spiritual Conversations in the Form of Prayers, intended as a Preparation for Death," 1730

M O R

Christian Hope and Confidence in the Mercy of God," 1710; "Effusions of the Heart on the Song of Songs," 1720; "Christian Meditations on the Gospels for the whole Year," 3 vols. 1720; "Minutes of the Heart on each Verse of the Psalms and the Hymns of the Church," 4 vols. 1720, &c.—*New Hist.*

MOREL (WILLIAM) was born in Normandy but at what year is uncertain. He was professor royal of Greek and succeeded Turcet in 1555 as director of the royal press. He died in 1564. He was the author of

A Table of the Sects of Philosophers, a

Commentary on Cicero de Finibus 1545, 6to and a Dictionary in Greek Latin and French which are mentioned with applause—*Mores.*

MORELL (THOMAS) an eminent writer on philology and criticism in the last century. He was a native of Eton and received his education in the college there as a scholar on the foundation. He removed to King's college, Cambridge of which he was chosen a fellow and in 1743 he took the degree of DD Having entered into holy orders he became rector of Beckland in Herefordshire and chaplain of the garrison at Portsmouth, and he also was curate of Kew and Twickenham. His death took place in 1784 at the age of eighty Dr Morell-republished with improvements King's edition of four of the tragedies of Euripides, 1748 2 vols. 5vo, and published an edition of the Prometheus Vinctus of Aeschylus 4to a Lexicon of Greek Prose 4to, an Abredgment of Anaworth's Latin Dictionary, and a translation of the Epistles of Seneca with notes, 2 vols. 4to, besides which he selected the words for some of Handel's oratorios and assisted in a modernized version of the Canterbury Tales of Chaucer. He also left notes on Locke's Essay on Human Understanding published after his death.—*Nichol's Lit. Ans.*

MORETI (LEWIS) a French ecclesiastic and biographical writer born in Provence in 1643. He was educated among the Jesuits at Aix, and entering into Holy orders he became almoner to M. Gaillard de Longueau, bishop of Apt. That prelate having formed the plan of a universal historical dictionary caused researches for materials to be made in various countries, and particularly in the Vatican library at Rome. Not choosing to let the work appear in his own name he transferred his collections to Moreti by whom they were arranged and prepared for the press. He published his "Dictionnaire Historique" at Lyons in 1674, in one volume folio, and a second edition enlarged to two volumes appeared in 1681. Moreti died in the course of the preceding year. The voluminous compilation to which his labours gave birth having been variously augmented by Le Clerc, and other writers, extended in the last edition published at Paris in 1725, to ten volumes folio.—*Aitken's G. Biog. Dict. Hist.* *Biog. Uni.*

MORES (EDWARD BROWN) a topographer was born in 1730 at Tunstall in Kent, of which

M O R

place his father was master. He was educated at merchant-tailors school, whence he was admitted to Queen's college, Oxford, where, in connection with Mr Bonnace, he edited Collier's Hebrew Concordance, in 4 vols. folio. In 1755 he took the degree of M.A. after which he went abroad, and received the degree of LL.D. in some foreign university. Towards the latter part of his life, he fell into habits of intemperance, which brought on a mortification, of which he died in 1778. His other works are a new edition of *Dionysius Halicarnassensis De Clavis Rhetoribus*; *Nomina et Insignia gentium Nobilium Equitumque sub Edwardo primo rege Miltantium*, "History and Antiquities of Tunstall in Kent," and several pamphlets on the subject of the Equitable Society for Assurance on Lives, of which he was the founder.—*Gen. Biog. Dict.*

MORGAGNI (JOHN BAPTIST) an eminent physician and anatomist, born at Forlì in Italy in 1682. He studied at the university of Bologna, where he is said to have taken his doctor's degree at the early age of sixteen. He afterwards delivered lectures on anatomy and at length was appointed to fill the medical chair at Bologna. In 1706, 1717 and 1719 he published various observations and discoveries under the title of "Adversaria Anatomica," which extended his reputation beyond the limits of his native country. He was afterwards made professor of the theory of medicine at Padua where he published his

Nova Institutionum Medicorum Idea, and at length he obtained the first professorship of anatomy which he retained till his death in 1771. Morgagni who was a member of the Royal Societies of London and Paris, was the author of a very important work on medical anatomy *De Canis et Sedibus Morborum per Anatomiam Indagatis* besides many professional tracts, published together with those above mentioned in 1765 5 vols. folio.—*Hart Chapman's Biog. Med. Biog. Uni.*

MORHOF (DANIEL GEORGE) a learned philological writer born at Wismar, in the duchy of Mecklenburg in 1639. He was educated at Stettin and Rostock where he studied jurisprudence but in 1660 he was chosen professor of poetry at the latter university. Previously to engaging in the duties of his office he travelled for two years in Holland and England. In 1665 he became professor of poetry and rhetoric at Kiel. He visited this country as well as Holland a second time in 1670 when he contracted an intimacy with Boyle and with Oldenborg, secretary to the Royal Society as well as with several of the Dutch literati. In 1673 he obtained the chair of history at Kiel and in 1680 he was appointed librarian to the university. He died in 1691 at Pymont, whether he had gone for the benefit of his health. He was the author of a valuable work entitled "Polyhistor Literaturae, Philosophae, et Practicae," part of which he published at Lubec in 1688 and it was reprinted with additions in 1695 but the most complete edition is that of 1747, 2 vols. 8vo. Morhof was also the author of a tract

MOR

"De poto Dictionis Latinae," and other works.—*Studii Inqvi. in Hist. Et. Ling. Usp.*

MORIN (John BARTET) physician and regius professor of mathematics at Paris in the seventeenth century. He was born in 1663, and studied philosophy at Aix in Provence, and medicine at Avignon where he commenced M.D. in 1613. He then read at Paris with the bishop of Besseigne who employed him to examine the mines of Hungary after which he published his *Mundi subtilis Anatomia*, in 1619. He afterwards became infatuated with the mysteries of judiccial astrology and obtained extraordinary credit with cardinal Richelieu and other persons of distinction for his skill in that ridiculous but then fashionable science. He died at Paris November 6 1656. He published a number of works not worth specifying but his principal production entitled *Astrologia Gallica* the fruits of thirty years labour did not appear till after his death in 1661 when it was printed at the Hague in one volume folio with two spistles dedicatory one addressed to Jesus Christ and the other to Louise Marie de Gonzaga queen of Poland a patroness of the author.—*Hutchinson's Eng. Hist.*

MORIN (John) a French ecclesiastic who was a native of Blois. His parents were Protestants and he was educated at Rochelle and Leyden. Returning to France he embraced the Roman Catholic religion and entered among the fathers of the Oratory. He distinguished himself by his proficiency in Biblical and Oriental literature and he published an edition of the Septuagint version of the Old Testament and assisted in the Parisian polyglot of Le Jay. In 1653 he caused to be printed a letter against certain customs of the congregation of the Oratory which was specially suppressed and the author was forced to seek pardon of his general. This good father is said to have made a collection of all the acritical reflections he met with in ancient authors and in his controversies with his contemporaries he freely availed himself of this treasury of literary vituperation. Morin died in 1659. Besides the works above noticed he was the author of exortations on the Samaritan Pentateuch the antiquities of the Eastern church &c.—*Huet's Diet. Hist.*

MORIN (1615) a French physician and naturalist born at Mans in 1615. He was educated at Paris and having taken the degree of M.D. he engaged in medical practice and was at length nominated physician to the [late] Duke. In 1659 he was appointed associate botanist to the Royal Academy of Sciences; and he succeeded Bournefort as botanical demonstrator at the Jardin du Roi when this naturalist set off on his journey to the Levant. Morin died in 1714.—*Diet. Hist.*

MORIN (STEPHEN) a learned Protestant divine, born at Caen in Normandy January 1 1624. He became pastor of a congregation in the Huguenot of Caen in 1649 and fifteen years after he removed to take charge of another in that city. The revocation of the edict of Nantes, obliging him to quit France he re-

MOR

tined to Leyden, and afterwards became professor of the Oriental languages at Amsterdam. He died there May 5, 1700. He was the author of "Explications sacre et philologique au sujet des Vetus et Novi Testaments Loca;" "Exercitationes de Lingua primitiva;" "Discourse de Paradise terrestre" and other works relating to Biblical literature. He published a letter on the origin of the Hebrew language in French and Huet says Morin held sentiments un peu oultre relative to that subject which however he had deeply studied.—*Huet Origines de Cœur Diet. Hist.*

MORISON (JAMES) an ingenious writer who was the son of a bookseller at Perth and carried on the same business at Leith. He died at Perth in 1809. He belonged for some years to the sect of the Glasites, from which he seceded and founded a sect of his own. He was the author of *Bibliotheca Sacra* or a Dictionary of the Bible and an "Introductory Key to the Scriptures" in which he endeavours to prove that the Gospel was preached in Paradise.—*Evans's Denominations of the Christian World*

MORISON (ROBERT) an eminent English physician and botanist of the seventeenth century. He was born at Aberdeen in 1680 and after studying at the university of his native place he went to Paris, and then to Angers, where he took the degree of M.D. in 1648. His reputation as a botanist induced the duke of Orleans to appoint him superintendent of the royal gardens at Blois in 1650 when he published a catalogue of plants. He removed to England in 1660 and was made physician to the king and royal professor of botany and was afterwards chosen a fellow of the college of physicians. In 1669 he published his *Præmium Botanicum* and soon after he was elected botanical professor at Oxford. In 1672 appeared a specimen of his *Historia Plantarum* a portion of which was published in 1680. The death of the author which took place in London in 1683, prevented him from finishing this work in which he adopted a new method of botanical arrangement. Another volume of the History of Plants was added by Jacob Bobart in 1690.—*Hutchinson's Eng. Hist. Peletier's Sketches of the Progress of Bot. n.*

MORLAND (GILBERT) an eminent painter of rustic scenery and low life. He was born in London in 1704 and was the son of Henry Morland an artist of some merit from whom he received instruction in his profession. He acquired a great degree of skill as a faithful copyer of nature and in the early part of his career confined himself to the delineation of picturesque landscape but having contracted irregular habits, and a partiality for the bottle and low company he forsook the woods and fields for the ale-houses and stage-coachmen, postillions, and drovers drinking, became the favourite subjects of his pencil. Some of his best pieces exhibit farm-yards and stables, with dogs, horses, pigs and cattle or scenes at the door of the village ale-house, designed with all the truth and feeling which communi-

M O R

into a chase to the most eminent objects, and proclaims the genius of the artist. Morland's unfortunate habits of dissipation prevented him from reaping the fruits of his exertions, and left him at the mercy of designing malcontents, by whom he was surrounded. Many of his pictures were painted in the midst of embarrasments occasioned by his imprudence and some of them while under confinement for debts which he had contracted. He at length fell a victim to intemperance dying while in durance October 29 1804. As an artist, Morland has been compared with Adriaan Brouwer whom he resembled in a propensity to vicious indulgence but the works of the Dutch painter generally relate to subjects as disagreeable as those of our countryman are pleasing and attractive.—*Fuseli: Edit of P. M. Kingston's Dict of Paint.*

MORLAND (see SAMUEL) an ingenious mechanic and natural philosopher born in Berkham in 1625. His father was a clergyman and he received his education at Winchester school and Magdalene college Cambridge. He went to Sweden in 1653 with Balstrode Whate lock the English ambassador and on his return was employed under Iburton secretary of state to Cromwell who sent Morland to remonstrate with the duke of Savoy against the persecution of the Piedmontese Protestants. Returning to England, he published an interesting work entitled *The History of the Evangelical Churches of the Valley of Piedmont* 1658 folio Having had an opportunity of rendering some services to the exiled royal family he was at the Restoration created a baronet, and made a gentleman of the bed chamber to Charles II. Though he also received some more substantial marks of court favour his taste for speculation led him into expensive schemes which proved very injurious to his fortune. Among his inventions are reckoned the speaking trumpet the fire engine a capstan for heaving anchors, and the steam engine as well as a mechanical contrivance for performing arithmetical operations. But he was rather the improver than the original discoverer of some of the objects referred to though doubtless a man of considerable ingenuity and like many other projectors, a benefactor to the public to the detriment of his private concerns. He had a house at Vauxhall where he expended a great deal of money in the prosecution of his favourite speculations. His death happened about 1690.—*Challoner's Biog. Dict.*

MORNAY (PHILIP DE) sieur du Plessis Morlay a distinguished French nobleman of the sixteenth century. He was born in 1549 at Beau in Vexin, and was educated by his mother in the tenets of the reformed religion. In 1567 he entered the army and bore his part in the civil wars, which, about that period, tore France in pieces. An accident, however compelling him for a time to quit the service, he retired to Geneva, thence into Switzerland, and at length settled at Heselburg, in Germany with the view of studying jurisprudence. After making some stay at

M O R

the latter place, he again set out on his travels, visiting Italy and a great part of the north of Europe including England, where Elizabeth, who was then upon the throne received him with distinguished marks of favour as an able supporter of the Protestant cause. When in 1576 Henry of Navarre afterwards Henry the Fourth of France had succeeded in escaping from the Catholic faction and openly placed himself at the head of the Huguenot party De Mornay once more took up arms and so far gained the favour of that sovereign that he was appointed by him one of his privy counsellors. In the service of this monarch he continued during the whole of his struggles against the leaguers but when in 1593 Henry in order to secure his seat upon the throne made his public recantation and reconciled himself to the church of Rome, De Mornay sent in his resignation and retiring from court devoted the remainder of his life to literary pursuits, and to advocating with his pen the cause of that religion which he had so well defended with his sword. His first work had appeared as early as 1578, under the title of *A Treatise on the Church* which he followed up the succeeding year by another *On the Truth of Christianity*. It was not, however till 1598 four years after his recession from the court of Henry that his most able as well as most celebrated work was given to the world this was a treatise on the sacrament of the Lord's Supper in which he so ably vindicated the Calvinistic doctrines as opposed to that of transubstantiation that the book made a great noise and cardinal Du Perron two years after its publication entering into a personal dispute with the author on the subject in a conference at Fontainebleau, the latter maintained his argument with so much ability as to acquire from those of his own persuasion the honorary appellation of the Protestant Pope. Seven years afterwards he printed a history of the papacy under the title of *The Mystery of Iniquity*. He was also the author of an address to the Jews on the subject of the Messiah. This estimable man whose learning constancy and unblemished morale, acquired the respect even of those most opposed to him in religious and political opinions died in 1623 at his chateau of La Forest, in Poitou whether he had retired in 1601 after having been deprived two years previously of his government of Saumur by Louis the thirteenth.—*New Dict. Hist.*

MOROSINI the name of an illustrious Venetian family many members of which attained to eminence on various accounts and in differentages DOMINICO MOROSINI was elected doge in 1448 MARINO in 1549 and MICHAEL in 1581. The latter died of the plague, which raged in that city the same year. In 1525 MARCO MOROSINI was consecrated bishop of Venice as was NICOLÒ in 1539, and GIOVANNI FRANCESCO in 1664. ANDREA, born in 1556 and his brother PAOLO, were distinguished by their literary abilities as much as by their rank. Of these the former

M O R

was a member of the council of Ven, and at the age of forty was appointed historiographer to the state. Besides his continuation of Paolo Farina's history of the republic which did not appear till 1663, five years after his death, he was the author of a volume of letters, and miscellaneous pieces written in the Latin language, and a work on Palestine, in his native tongue. The younger brother also wrote a history of Venice from the earliest period to the year 1637. FRANCESCO MOZZONIO born 1618, was a gallant soldier who, about the middle of the seventeenth century, in his capacity of governor of Candia, defended that island with thirty thousand men against a Turkish force of four times that amount. Compelled at length to surrender he obtained terms which were better observed by the Ottoman conquerors than was their wont; and although on his return to Venice he suffered a temporary disgrace yet he soon recovered his credit with the government, and was appointed to the office of procurator of St Mark's. Setting afterwards against his former antagonists, the Turks, he attacked their fleet not far from the Dardanelles and totally defeated it, with great loss both of ships and men. Returning in triumph to Venice he continued to enjoy great popularity till 1688 in which year he was elected doge and survived his elevation about six years dying at Napoli di Romania.—*Biog. Univ.*

MORTIMER (John) an English gentleman who in the early part of the last century published a treatise on the art of husbandry which was much esteemed. He died in 1736—His son THOMAS MORTIMER was secretary to sir Joseph Jekyll master of the rolls, and to his successor Mr Verney. He died at the age of thirty five in 1741.—Two mas Mortimer son of the preceding was born in London in 1739. He received a liberal education and obtained the appointment of his master's vice consul for the Austrian Netherlands but having been displaced after a few years, he adopted the profession of an anchor which he exercised with great assiduity and responsibility during the remainder of his life. His principal works are *The British Pilot*, 1769, 6 vols. 12mo., 'Dictionary of Trade and Commerce', 1766 2 vols. folio; 'The Elements of Commerce, Politics, and Finances', 1772 4to of which a German translation by J A Englebrecht, was published at Leipzig in 1781. 'History of England', 3 vols. folio, and 'The Student's Pocket Dictionary or Compendium of History, Chronology, and Biography' 12mo. He also translated Neckar's treatise on the administration of the finances of France and edited Boswell's *Lex Memorum*. In 1809 this literary veteran published a 'General Dictionary of Commerce, Trade, and Manufactures,' 2 vols. derived from his former dictionary; and he died in December the same year.—*Univ. Biog. Jones.*

MORTIMER (John Hamilton) an English statesman, was born in 1743, at Easthampstead, in Surrey, where his father was collector of

M O R

customs. His father perceiving the bent of his inclination, placed him as a pupil with Haden, then the most celebrated portrait painter in London. About this time the duke of Richmond opened his gallery of medals and antiquities to students of painting, and this was Mortimer's principal school. At the exhibition of artists in Spring gardens, before the institution of the Royal Academy he greatly distinguished himself by his picture of the conversion of the Belton, now the altar piece in the church of Chipping Wycombe. He had fallen into a dissipated course of life which had injured his constitution but upon his marriage he became more regular. He died in 1777 at the house of his friend Dr Bates, at Aylesbury whether he had been induced to go for the recovery of his health. He painted many historic pieces which were much admired for their strength of conception and boldness of execution but his colouring is defective and his drawings and sketches are preferred to his finished pictures.—*Monthly Mag.* vol. L. Pilkington.

MORTON (John) archbishop of Canterbury and a member of the Roman conclave as an English prelate of considerable note during the wars of the Roses. He was a native of Bere near Dorchester born 1410. He studied divinity and jurisprudence with great success at Oxford where he was a member of Balliol college and afterwards succeeded to the headship of Pockwater man now merged in Christchurch. His knowledge of the law and general character for ability and uprightness, recommended him to the notice and favour of Henry the Sixth who made him master of the Rolls in 1473 with a seat in the privy council. The fidelity and steady adherence of Morton to this unhappy sovereign, during all his reverses and turns of fortune evinced the sincerity of his gratitude and the steadiness of his principles nor did his conduct injure him in the estimation of the Yorkists, as Edward the Fourth, after the deposition and death of his predecessor not only confirmed to Morton his seat at the council-board, but advanced him to the see of Ely to which in 1478 he added the high and responsible office of lord high-chancellor. During the reign of Richard the Third his known attachment to the house of Lancaster rendered him an object of suspicion to that usurper, who ordered his arrest, and he was in consequence committed to the custody of the duke of Buckingham in Brecknock castle. From this fortress however he managed to escape and succeeding in his endeavor to quit the kingdom, fled for protection into Brittany, where he attached himself to the earl of Richmond, then meditating a descent upon England. On the fall of Richard at Bosworth, in 1485, bishop Morton returned to his native country and the following year was elevated to the archiepiscopal see of Canterbury when he distinguished himself by his magnificence, and built the principal tower of that cathedral, which is still called after his name. In 1487 the great seal was again committed to his

change, and in 1463 the pope conferred upon him a cardinal's hat. The year following, the university of Oxford elected him their chancellor. He was a prelate of great liberality, as well as learning and abilities, and was a generous promoter of many public works of great utility as well as a benefactor to all the establishments with which he was connected. His death took place about the commencement of the sixteenth century in the auctoreth year of his age.—*See Brit. Hist. of Eng.*

MORYSON knt., LL.D. (Sir RICHARD) an eminent civilian of the sixteenth century, a native of Herefordshire. From Eton college where he received the rudiments of a classical education, he removed to Cambridge and graduated there as doctor of civil law. He augmented himself much with Henry the Eighth by his reply to John Cochlear, who wrote against that monarch's divorce from Queen Anna Boleyn with great asperity doctor Moryson (or Morison as his name is sometimes spelt by succeeding authors) took up the gauntlet and in the controversy which ensued exhibited at least as much acrimony as his antagonist. He was afterwards despatched on a diplomatic mission to the emperor, and on the accession of Edward the Sixth continued to enjoy the sunshine of court favour. He received the honour of knighthood, was named on the Oxford commission and eventually sent ambassador to Brussels. When in the succeeding reign the professors of the reformed doctrines especially those who had in any way signalized themselves by assisting in their introduction into England became conscious to persecution Mr Richard retired to the continent and died at Strasburg in 1556.—*See Brit.*

MORYSON (FIVES) an English writer was born in Lancashire in 1566 and was educated at Cambridge, where he became a fellow and studied civil law but he was created MA at Oxford. He then set out on his travels, and remained abroad ten years. On his return he settled in Ireland where his brother was vice-president of Munster and was there made secretary to the lord-deputy Mountjoy. He died in 1614. His works are

A History of Ireland, from 1599 to 1603 with a short Narration of the State of the Kingdom from the year 1169 2 vols. 8vo 1733 An Itinerary containing Ten Years Travels through the Twelve Dominions of Germany &c. 1617 folio.—*Worl's Hist. of Ireland.*

MOSCHUS, a Greek pastoral poet, was a native of Smyrna. The time when he flourished is not accurately known some making him a pupil of Bion who is supposed to have lived under Ptolemy Philadelphus, while others suppose him a contemporary of Ptolemy Philometer BC 160. The under tone with which he speaks of Bion in his pastoral elegy to that poet, by implying a mutual antipathy seems to render the latter opinion most probable. A few idyls from the whole of the remains of Moschus which exhibit great elegance of style and

deficiency of conception. They are generally printed in conjunction with those of Bion, and may be found in the "Poetae Milioni," or also in a separate volume by Melanchthon—Fabricius BM. Grec.

MOSLEY (BENJAMIN) a physician, was born at Exeter, and practised as a surgeon and apothecary at Kingston, in Jamaica, for several years. On returning to Europe he took his doctor's degree at Leyden and obtained the situation of physician to Chelsea hospital. He was a man of eccentric character and distinguished himself by his violent opposition to the vaccine inoculation. He wrote "Observations on the Dysentery of the West Indies, and Two Treatises on Coffee and Sugar." He died in 1819.—*Ann. Biog.*

MOSES CHORAZZIUS an historian and geographer and archbishop of Chorazz new Karosa, in Armenia, flourished about AD. 602. He translated several Greek works into the Armenian, and was also well acquainted with the Syriac and a proficient in music and poetry. His principal work, A History of Armenia from the deluge to the middle of the fifth century was first published with a Latin version by John and William Whiston sons of William Whiston in 1736 and though mixed up with a great deal of fable is a valuable history containing many narratives not elsewhere to be found. He was also the author of an Abridgment of Geography first published at Amsterdam in 1668 and several canaries which are sung in Armenian on the anniversary of Christ's presentation at the temple. Moret. Gedon. Said Orson.

MOSHELM (JOSEPH LAURENCE) a learned German writer of the last century descended from a noble family of Lubec where he was born in 1695. He devoted himself principally to the study of divinity and after distinguishing himself in several of the universities of Germany went into Denmark, in the metropolis of which country he remained some time, and read his lectures with great reputation, under the immediate patronage of the king. On his return to Germany the duke of Brunswick appointed him master of the schools at Holstein, with the divinity class and the rank of ecclesiastical counsellor. Three situations he afterwards resigned for the chancellorship of the university at Gottingen. His ecclesiastical history written in Latin under the title of *Institutiones Historiae Christianae* is a standard book almost indispensable to the study of divinity and has gone through many editions. The English translation of this work by Dr Macpherson is to be found in most theological libraries in the kingdom. His other works are "De rebus Christiano-rum ante Constantium magnum Commen-tarii" translated by Vidal; a "Life of Servetus" The Ecclesiastical History of the Tartars, "A vindication of the Discipline of the Primitive Christians," Observations Sacrae, "De Estate Apologeticis Tertulliani" and a Latin translation of Col-worth's "Intellectual System of the Universe," &c. 2 vols. His death took place in

1755.—*Castis: Proses to Machebe & Kester.*
Hist. Novet. Diet. Hist.

MOSS (ROBERT) an English divine, was born at Gillingham in Norfolk in 1666. He was a fellow of Homers college Cambridge and after taking his degree as BD in 1696, he was chosen preacher to the society of Gray's Inn, which place he held during his life. The year after he was made preacher assistant at St. James's Westminster and soon after he was admitted chaplain in ordinary to King William III. Being created doctor in divinity he became lecturer of St. Lawrence Jewry and in 1715 dean of Ely. On the accession of George I he was again appointed chaplain but the part he took in the Bangorian contest gave such displeasure at court that he was dismissed with Drs Hare and Sherlock. He died in 1729. He wrote several sermons, which after his death were collected and published by Dr Andrew Snape provost of King's college Cambridge. He was also the author of a treatise entitled "The Report vindicated from Mis reports being a Defence of my Lord the Bishop, as well as the Clergy of the Lower House of Convocation" in a Letter from a Member of that House to the Prosecutor concerning their late Consultations about the Bishop of Bangor's Writings &c. 1717 8vo and of some short Latin and English poems.—*Gen. Dict. Biog. Brit. British Biog.*

MOSS (CHARLES) nephew of the preceding was educated at Caius college Cambridge where he took his doctor's degree in 1747. After passing through various promotions in 1766 he was consecrated bishop of 't Davidia', whence he was translated to Bath and Wells. He died in 1802. He published a tract entitled "The Evidence of the Resurrection cleared from the Exceptions of a late Pamphlet," in vindication of Dr. Sherlock's "Trial of the Witnesses against Chubb." He was also the author of several sermons, and of a charge.—His son Dr. CHARLES MOSS was bishop of Oxford, and died in 1811.—*Aikew's Lit. Ans.*

MOSSOM (ROBERT) an Irish prelate of whose history we have but an imperfect account. He suffered much in the civil wars but on the Restoration he was made dean of Christchurch Dublin and prebendary of Knaresborough and was finally promoted to the see of Derry. He died at Londonderry in 1679. His works are "Variae colloquendi Formulae" 1659. The Preacher's Triparatus" 1657. "Narrative of George Wild Bishop of Derry," 2 vols. Prospect in its first View 4to Sermons &c.—*Harris's Edition of Wars.*

MOSSEOP (HINWAY) an eminent tragic actor, born in Ireland in 1729. He was the son of a clergyman who held a rectory in the diocese of Clogher, and he was educated at Trinity college, Dublin, where he took a degree. He made his first appearance on the stage at Dublin in November 1749 in the character of Zerubbabel in Dr. Young's tragedy of "Jephtha" which was extremely well received,

Having quarrelled with the manager he soon removed to London where next to Garrick and Barry he was esteemed the principal tragedian of his time. In 1761 he became manager of one of the Dublin theatres, in opposition to Barry and Woodward and the rivalry proved ruinous to all parties and especially so to Mossep, whose vanity and untemperate conduct having at length excluded him from the exertion of his professional abilities on the metropolitan stage he was reduced to great distress and died in absolute penury at Chelsea, in November 1773.—*Theat. Diet.*

MOTANABBI (ABU TAYYIB AHMED AL) a celebrated Arabian poet, born at Cufa in 915. He studied at Damascus and applied himself especially to grammar and the belles lettres. At length being inflamed with a passion for poetry he gave himself up to the cultivation of that species of literature with the utmost enthusiasm and professed to believe that he was divinely inspired. He aspired to become the rival of Mahomet, and by the charms of his versification he seduced a multitude of the Arabs to become his disciples. The governor of Emesa stopped the progress of the new sect, by seizing their chief and dispersing his followers. Motanabbi, reduced to reason by confinement renounced his chimerical pretensions to inspiration and on regaining his liberty applied himself wholly to poetical composition. He was entertained at the court of the prince of Aleppo, whence he removed to Egypt and afterwards to Shiraz where he was loaded with benefits by the sultan Adadodwia. He was at length killed by robbers in crossing the desert to visit his native country in 965. Translations of some of his poetry have been published by the French and German literati, and a memoir of Motanabbi with two of his poems, may be found in *Ousey's Oriental Collections.*—*Biog. Univ.*

MOIHE LE VAYER (FRANCIS DE LA) a learned French writer was born in Paris in 1588 and bred to the profession of the law. He occupied in succession to his father the post of assistant procureur general in the parliament of Paris which office however he resigned in order to dedicate himself entirely to literature. He soon opened himself a road to the French Academy by his learned labours and he was also appointed preceptor to the duke of Anjou afterwards of Orleans, brother to Louis XIV as well as historiographer of France. His known tendency to scepticism exposed him to some annoyance which he bore with great equanimity and seemed rather to value himself for imputed singularity than otherwise. He died in 1673 in the eighty fifth year of his age. He was a writer on a great variety of subjects, in which he discovered more erudition and judgment, than taste or invention. His works were collected in two volumes, folio, in 1669, from which are extracted his "Dialogues after the Manner of the Antients," in which he gave free scope to his scepticism and his "Hommeaux Romains," a work not quite free from licentiousness.—*Biog. Univers.*

M O T

M O U

MOTTE (ANTOINE HOUART de la) an eminent and ingenious French writer was born at Paris in 1672. He was sent by his father a rich hatter to a jesuit's seminary for education, and was destined for the profession of the law, but after pursuing for some time the studies proper for the bar he deserted them in disgust, and devoted himself to polite literature. At the age of twenty-one he composed a comedy which being condemned, he flew to the monastery of La Trappe, but the celebrated abbé de Rancé doubting the reality of his vocation, induced him to return, and he took to composing operas, which tolerably well succeeded. In 1707 he published a volume of

Odes, which were deemed more philosophical than poetical, and in 1710 he was admitted a member of the French Academy. He next tried his hand at tragedy and partially succeeded especially in his *Ines de Castro*, which still keeps the stage. Resolved to leave no part of the drama untried, he then essayed comedy and wrote several pieces, which were favourably received. In 1714 he gave a poetical version of Homer's *Iliad*, although entirely ignorant of the original language, and affixed thereto a free censure of the plan of that celebrated poem. This literary豪放 set the learned world in arms, and drew a severe and pedantic attack from madame Desclier to which he replied with the most polished wit and elegance. In 1719 he published a volume of *Fables*, but, although exceedingly ingenious he could not reach the natural simplicity of La Fontaine. Some pastoral eclogues, castanets psalms, and hymns, complete the list of his remaining poetical labours, all which exhibit much ingenuity but little of the poet. As a prose writer he was greatly esteemed, and his pen was often borrowed for purposes that were foreign to the general tenor of his writings. He was much beloved for the urbanity of his temper both on literary controversy and all other occasions. Being once in a crowd he chanced to tread on the foot of a young man who immediately struck him

Sir and he you will be sorry for what you have done—I am blind—which was the case for many years before his death. He died of a decline in 1731 at the age of fifty nine. His works are printed in 11 vols 8vo, Paris 1764.—*Now Dect. Hist. Eloge par D'Almela*

MOTTEUX (PIERRE ARROUX) a gentle man of a good family in Normandy born at Rouen in that province, February 19 1660. He came to London in 1685, on the revocation of the edict of Nantes, and embarking his property in commerce opened an East-India warehouse in Leadenhall-street, where he carried on business to a considerable extent. His familiar acquaintance with most of the modern languages of Europe obtained him a respectable situation in the foreign department at the post-office, while his leisure hours were devoted to the cultivation of poetry and the belles lettres. He had early acquired the most perfect familiarity with the English language; and not only translated into it the best

Quotations of Cervantes and the works of Brehaut, but also composed several original dramatic pieces in it, which met, however with but indifferent success, although their author unquestionably possessed both talent and humour. He had just attained his fifty-eighth year when he was discovered on the morning of his birth-day, dead, in a house of ill fame near the church of St Clement Danes in the Strand not without strong suspicion of foul play.—*Biog. Brit.*

MOTTEVILLE (FAUSTINE BRUYAUD de) a celebrated French lady and niece of Bertrand bishop of Senlis, was born in Normandy about 1615. She was brought up at the court of Anne of Austria; but the jealousy of cardinal Richelieu caused her to be banished, and she retired into Normandy where she married Nicolas Langlois lord of Motteville first president of the chamber of accounts at Rouen and an old man. She was left a widow two years after. On the death of Richelieu she was recalled by the queen then regent, who kept her constantly about her person. She also enjoyed the friendship of Henrietta Maria, widow of Charles I. She was the author of *Mémoires pour servir à l'histoire d'Anne d'Autriche* 1725, 5 vols. 12mo and 1730 6 vols. 12mo which are written in a candid, unaffected style though not very elegant. Madame de Motteville died in 1689.—*Moreri. Novo. Dict. Hist.*

MOTTLEY (JON) the son of an English officer who, adhering to James II during the Revolution of 1688 followed the fortunes of that monarch to the continent. His son was born in 1694 in England, and received his education at the school of St Martin's library. Many promises of a provision were made him by persons in power who had been connected with his father, but he had the mortification to see several situations under government the reversions of which he had fully calculated on bestowed upon others. At length he obtained a small place in the customs, which however he soon resigned and in 1720 became, from necessity an author by profession. In this capacity he gave to the world the lives of Peter the Great of Russia, and of the empress Catherine the former in three the latter in two octavo volumes. He also wrote five plays which met with a tolerable share of success, but the work of his which obtained by far the greatest degree of popularity is the well known collection of fictions, which goes under the title of *'Joe Miller's Jests* of which the humorous comedian, to whom it is ascribed and who lies interred in the burying-ground of Portugal-street, Lincoln's Inn Fields, constituted nothing but his name. Mottley died in 1750.—*Biog. Drex.*

MOUFFET or MUFFET (THOMAS) a physician and naturalist, was born in London in the sixteenth century and studied at Cambridge. He then travelled for improvement, and while abroad he took the degree of MD, after which he returned, and residing in London, he practised with much reputation. He was patronized by Peregrine Bertie lord Will-

M O U

roughly when he accompanied on an embassy to the king of Denmark. He was also with the earl of Essex, when he encamped in Normandy. He received a pension from the Pembroke family and died at Bulbridge near Wiltshire, on Whits, towards the close of queen Elizabeth's reign. His works are *De Jure et praeceptis Chemicorum Medicamentorum*, 1584; *Nomenclatura Hippocratica*, 1588; "Epistola quinque Medicinalium," *Health's Improvement; or Rules for preparing Food &c.* As a naturalist he distinguished himself by his work *Insectorum seu minimorum Animalium Thesaurus* published by sir Theod. Mayerne in 1624.—*Halleri Beitrage, Meth. Stud. Med. Ross's Cyclop.*

MOULIN (Charles du) a very eminent French jurist was born at Paris, of an ancient and noble family in 1500. He was educated at Orleans, where he read lectures on law in 1531 and the year following was admitted an advocate in the Parliament of Paris. An impediment in his speech however induced him to quit the bar and to devote himself to the composition of the legal works which obtained him so much celebrity. He embraced the Protestant religion and in 1552 attacked the authority and practices of the court of Rome with much severity in his *Observations sur l'Edit du Roi Henri II contre les Petites Dates*. The parliament pronounced the suppression of this piece and he found it necessary for his present safety to quit Paris and repair to Germany. He spent some years in that country lecturing in various towns with great reputation. On his return to France he suffered imprisonment at the instigation of the jesuits, and could only obtain his release by a promise to print nothing without the royal permission. The parliament of Paris sensible of his high professional merit, offered him the post of counsellor which he refused. Before his death which took place in 1566 he had entirely reconciled himself to the Catholic church. Charles du Moulin was considered as oracle of jurisprudence and being of a confident, inquiring spirit he carried his researches into matters of faith as well as questions of law, a boldness which was seldom tolerated in his age. His works, forming a great mass of legal erudition were printed collectively in 1681 in five volumes folio.—*Murie. New Desc Hist.*

MOULIN (Peter du) There were two eminent theologians of this name father and son. The elder of the two better known by his Latin denomination, Mohanus, was born at Boulogne in the Vexin, in 1568. After receiving the rudiments of a classical education at Sedan, he came to England, and entered himself at Christ's college Cambridge, where he many years afterwards, graduated as doctor in divinity. Previously however to his obtaining this ecclesiastical honour an offer of the professorship of philosophy at Leyden induced him to return to the continent, where he ranked among the scholars the celebrated Gratian. In 1600 he went to France and obtained the benefice of Charleville, having about

M O U

the same time appointed chaplain to Catherine sister of Henry the Great. When that monarch consecrated himself to the church of Rome, many efforts were made by the Roman Catholic party to obtain a similar reconciliation from Catherine, from which step the influence and exhortations of Du Moulin were supposed to have been one great means of diverting her in 1611 a serious controversy was carried on between him and the society of jesuits, whom he accused in no very measured terms of having originated the assassination of Henry and the height to which the dispute was carried at length induced him to accept an invitation from James I of England. He accordingly came to this country in 1615 and received from his new patron a stall in Canterbury cathedral. In England he did not continue long but was depated by the French Protestants to represent them at the synod of Dort; a dispute however arising respecting his nomination he did not ultimately accept the appointment. In 1618 the divinity professorship at Leyden was offered to his acceptance which he declined but his old antagonists the jesuits exerting their efforts once more to annoy him he finally settled at Sedan of which place he became the pastor filling at the same time the theological chair there. Among his writings are *A History of Monachism* and a treatise *On the recent Origin of Popery* with a great variety of other controversial tracts. His death took place in the spring of 1638.—
Francois, Peter, born in 1600 at Paris graduated at Leyden but coming afterwards to England obtained, like his father, a prebend at Canterbury and was one of the chaplains to king Charles II. He published a French treatise entitled *The Peace of the Soul* of which there is an English translation by Scrope, *Clarior Regia Sangnum ad Celum* a tract which Milton answered and which was published under the name of Alex. More and a *Defence of the Protestant Church*.—
Loi is du Moulin a younger brother of the last, was born in 1603 and distinguished himself during the time of the commonwealth by his violence as an independent. He was the author of two tracts, the one entitled *Patronus Boni Fidei*, an attack on the established church, the other *Parvenses ad Adiutorias Imperii* which latter he dedicated to Oliver Cromwell. He saw reason, however to change many of his opinions before his death which did not take place till 1683.—There was also a French historian named *Gaspard du Moulin* an ecclesiastic of Mansfield known as the author of a *History of Normandy* folio 1651 and another *Of the Norman Conquests in Sicily* 1658.—*dilectus G. Reg.*

MOUNIER (John Jonays) a French politician one of the most distinguished members of the states-general of 1789. He was born at Grenoble in 1728, and being prevented from entering the army he devoted himself to the legal profession, and at the age of eighteen took the degree of bachelor of law at the university of Orange. In 1779 he was admitted

MOU

an advocate of the parliament of Grenoble, and a few years after he became judge royal, one of the two magistrates to whom was confided the administration of justice in that city. On the occurrence of revolutionary commotions, he took an active part in politics, and became a member of the states-general and afterwards of the national assembly. When that body determined not to disperse till the constitution they demanded should be granted Monnier was appointed one of the committee established for the furtherance of that object. He afterwards exerted all his talents and influence to promote the establishment in France of a limited monarchy but finding his efforts vain he at length retired to Grenoble. He afterwards removed to Geneva where he published *Recherches sur les Causes qui ont empêché les Français de devenir Libres* 2 vols. 8vo 1792. He went to London in 1793, and afterwards resided in Switzerland Italy and Germany till 1801 when he returned to his native country. In 1802 he was appointed prefect of l'ile and Vilaine but was removed from office in 1804, when he was nominated a counsellor of state. He died January 26 1806 leaving behind him a high reputation for talents and virtue.—*Biog. Univ.*

MOUNTAGUE (RICHARD) whose name is also variously spelled Montague and Mount bishop of Norwich a prelate of considerable learning and great polemical ability born in 1576, at Dorney Bucks of which parish his father was the incumbent. From Eton he removed in due course on a foundation fellowship to King's college Cambridge. In 1613 he obtained the rectory of Stamford Rivers in Essex with a fellowship at Eton and three years subsequently the deanship of Hereford. His next piece of preferment was a stall at Windsor where he read the divinity lecture from 1720 the date of his appointment till 1729. In the mean time he commenced an attack on the first part of the learned Belden's

History of Tythes, which performance James I was much pleased with and encouraged him to proceed in his examination of early church history. This work appeared in 1621 and in the following year he published his *Analecta Ecclesiastiarum Excerptorum*. In 1624 finding that some of the society of Jesuits were making converts in his parish of Stamford he gave them a challenge to answer certain queries to which they replied by a short pamphlet entitled *A New Gag for the old Gospel*. To this Dr Mountague rejoined another *An Answer to the late Gagger of the Protestant*. In the management of this controversy however he gave considerable offence to the Calvinistic party who accused him before the house of Commons as a favourer of Arminianism but the encouragement which he received from the king induced him to publish a vindication of the work under the title of *Apelio Commixta*. This aggravated his offence in the eyes of his antagonists and he was brought, in 1625, before the first parliament of Charles I, in spite of whose personal countenance the book

MOU

was voted seditious, the author repudiated by the speaker at the bar, and ordered to find security for his appearance in 1626, being committed in the mean while to the custody of the sergeant-at-arms. Archbishop Laud now interfered in his favour and with such success, that in the following year although on a revision of the case parliament still pronounced the work calculated to discourage the well-affected in religion from the true church, "yet the proceedings against its author were discontinued, and in 1628 Charles advanced him to the episcopal bench as bishop of Chichester. Over this diocese he presided ten years at the expiration of which period he was translated to Norwich but survived that last elevation only a short time dying in 1641. Besides the writings already enumerated he assisted in bringing out an H. Savile's edition of St Chrysostom's works which appeared in 1613 and was the author of a *Commentary on the Epistles of Photius* folio, Gr et Lat. *Originum Ecclesiasticarum* folio. *The Acts and Monuments of the church before Christ* folio and *Thesanthropicon seu de Vita Jesu Christi*. Bishop Mountague was a prelate of great acuteness as well as learning and even his opponent Seiden among the number do justice to his scholarship and Biblical learning.—*Biog. Brit.*

MOUNTFORT (WILLIAM) a dramatic poet and actor of considerable merit both in tragedy and comedy a native of Staffordshire born in 1653 Colley Cibber speaks highly of his abilities in his apology for his own life and the talent of mimicry especially he appears to have possessed in great perfection. Mountfort was the author of five plays and was in the zenith of his reputation when he fell a victim to the jealousy and treachery of a rival Being in the flower of his age and one of the handsomest men upon the boards the parts of the lovers were usually allotted to him, in one of which he had captivated the affections of Mrs Bracegirdle an actress much admired for her personal charms. Returning one night home to his lodgings in Norfolk-street, Strand, in the winter of 1692 he was waylaid by a captain Hill (whose addresser Mrs Bracegirdle had rejected) in company with lord Morden the parties were seen in conversation when Mountfort fell being run through the body with a small sword before he could draw his own Hill who was supposed to have given the blow fled to the continent while lord Morden was tried by his peers for the murder but was acquitted upon some informality. This nobleman was himself eventually killed by the duke of Hamilton, in a duel fought in Hyde park.—*Biog. Dram.*

MOURAD BEY a famous mamruk chief born in Circassia, about the middle of the eighteenth century. He was purchased as a slave by Mahomet Abu Dshabib, and became one of the twenty four boys of Egypt, he partook of the enmity of his patron against Ali Bey and assisted in the destruction of that chief in 1773. He afterwards obtained the government of Cairo in conjunction with

Moskow Bey; but they were driven from that place by a combination, at the head of which was Mourad Bey. After various contests with their rivals and with the Turkish government, they recovered their power, and re-established themselves at Cairo. Some oppositions, to which the French ministers and consuls were subjected, served as a pretext for the invasion of Egypt. By September, Mourad opposed the French with great vigour, but he was at length obliged to retreat to Upper Egypt. He subsequently entered into a treaty with general Kleber and accepted the title of prince of Asouan and Siryeh, under the protection of France. After the death of Kleber he offered assistance and advice to his successor Menou who rejected the overtures of Mourad Bey. The latter was about to join with his troops general Belliard at Cairo, when, being attacked by the plague, he died at Benimous/ April 22 1801 aged about fifty.—*Bog Univ.*

MOURADGEA D OHSSON (IGAVATU) an Armenian by descent, born at Constantinople in 1740. His father was Swedish consul at Smyrna, and he was educated with a view to a similar situation. At the age of twenty four he understood most of the Oriental languages, and had made himself acquainted with the history of various nations. After having been secretary and first interpreter to the Swedish embassy he received the title of chargé d'affaires of Sweden, in 1782, and was decorated with the order of Vasa. He had formed the design to compose a work which should afford to Christian Europe correct and extensive information relative to the Turkish empire and going to Paris in 1784 with the assistance of Mallet du Pan, he arranged his materials for the press. The result of his labours was his *Tableau général de l'Empire Ottoman*, prem. part. Paris, 1787—1790 2 vols folio. He left France on account of the revolutionary troubles and in 1795 he was appointed minister of Sweden at Constantinople. He returned to Paris in 1799 to complete his work and in 1804 appeared an introduction to the former publication, entitled

Tableau Historique de l'Orient 2 vole. 8vo. On war breaking out between France and Sweden, he retired to the castle of Favre, where he died in 1807. His son, the chevalier D Ohsson, published in 1821 a third volume of the *View of the Ottoman Empire*. Of the former part of that work there is an English translation.—*Bog Univ.*

MOURGUES (MICHAEL) a French jesuit and philosopher was born in the province of Auvergne, about 1643. He taught the mathematics and rhetoric in several houses of his order and finally became professor royal of those sciences in the academy of Lyons, where he died in 1713. He was a man of profound erudition, to which he united polished and amiable manners. His most esteemed works are *A Parallel between Christian Morality and that of the Ancient Philosophers*, 1708. "An Explanation of the Theology of the Pythagoreans, and of the other heretical sects in Greece" 2 vole. 8vo,

1710. "New Elements of Geometry," "A Treatise on French Poetry;" and a choice "Collection of Rer-mots," a French work, &c.—*Meyer. Nouv. Dict. Hist.*

MOYLE (WALTER) an ingenious writer, was born in Cornwall in 1672. He studied at Oxford, and next in the Temple, but having an independent fortune, he devoted himself to the pursuit of polite literature, and he cultivated the acquaintance of most of the wits of his day. In 1695, when a translation of the works of Lucan was proposed he undertook to give a version of four of that author's pieces, which he executed with spirit and correctness. In 1695 he sat in Parliament for the borough of Saltash, but being disengaged to public business, he made no attempts to renew his seat. At the instance of Dr Charles Davenant, he translated Xenophon's Discourse upon improving the Revenues of Athens, which was prefixed to that writer's work upon *The Trade and Revenue of England*. In conjunction with Mr Treschard he published *An Argument against a Standing Army*. His other works are *An Essay on the Miracle of the Thundering Legion*; *An Essay on the Lacedemonian Government*; another on the Roman constitution; *A Dissertation upon the Age of the Philopatris Remarks on Prudenz's Connection Letters*, &c. which were published after his death, with a biographical memoir in 3 vols. 8vo.—*Bog Brt.*

MOZART (JOHANN CHRYSOSTOM WOLFGANG THEOPHILUS) one of the most eminent musical composers that Germany or any other country ever gave birth to. He was the son of Leopold Mozart, sub-chapel master of Salzburg and himself a respectable musician by Anna Maria Pertl a woman of great personal beauty who bore her husband seven children. Of these the subject of this article born at Salzburg January 27 1756 and a sister named Mary Ann four years older than himself were even in infancy remarked as musical prodigies and the extraordinary talents which they exhibited, at length induced their father to give up his other avocations altogether in order to devote himself entirely to their instruction. At the age of three years the son began to display astonishing abilities for music and in the two following years composed some trifling pieces, which he performed to his father who carefully preserved them. He evinced in his childhood the greatest sensibility and affection, and as soon as he had the slightest notion of music his love for the gambols of his age entirely vanished and for many amusement to please him it became necessary in some way to introduce music with it. When he had attained the age of six years all Mozart a family consisting of his father mother sister and himself, removed to Munich, where the elector heard the two children perform, who received unbounded applause. The famous Wagenseil happening to be in Munich, young Mozart, who preferred the approbation of a good master to that of any other begged the emperor to allow Wa-

MOZ

greatest to be present at his performance "Good for him," said the child, "he understands the thing." Francis I desired Wagenseil might be called who resigned to him his place at the harpsichord. "Sir said the young virtuoso, then six years old, I am going to play one of your concertos you must turn over the leaves for me." In July 1763 when Mozart was just seven years old, his whole family left Germany and in the month of November arrived in Paris, where he was introduced to play the organ in the king's chapel at Versailles in the presence of the whole court. In 1764 he left Paris for England and was there received with equal approbation both at court and in the city. Some of the most difficult pieces of Bach, Handel &c were presented to him which he performed at first sight with the greatest accuracy and in the strictest time. At another time Christian Bach music master to the queen took him on his knees and played a few bars, Mozart then continued the air and they thus performed an entire sonata with such precision that those who were present imagined it was played by the same person. Having returned to Salzburg towards the close of the year 1766 he ardently applied himself to the study of composition Emanuel Bach, Hesse and Handel being his guides and models. In 1768 he composed by command of the emperor Joseph II an opera buffa entitled "La Finta Semplice" which was approved both by Hesse and Metastasio but was never performed. In December 1769 he went with his father into Italy staying some months previously to his departure been nominated concert-master to the archbishop of Salzburg. In that country he met with the most flattering reception. At Bologna the Padre Martin and other musicians were delighted at hearing him execute the most difficult fugues on the harpsichord without hesitation and with the greatest precision. Mozart arrived at Rome in the Passion week and on the Wednesday evening went with his father to the Sistine chapel to hear the celebrated Misere, a composition of which it had been prohibited to give or take a copy on pain of excommunication. Aware of this prohibition he listened so attentively that on his return home he noted down the whole piece. On Good Friday the Misere was repeated, when Mozart was again present and during the performance held his manuscript in his hat, by which means he was enabled to make the necessary corrections. From Rome the family continued their journey to Naples, whence, after a short stay they returned when the pope who had much wished to see Mozart, created him knight of the golden spur. In passing through Bologna he was named by universal consent a member of the Philharmonic academy on which occasion as anthem for four voices was given him to compose and as was customary on such occasions, he was shut into a room alone where he completed his task in half an hour. A previous engagement now called him to Milan. On

the 26th of December, 1770, the month after his arrival, being at that time not quite fifteen years old, he produced his second opera, called "Mithridate" which had a run of twenty nights the manager immediately made a written engagement with him for the composition of the first opera for the year 1773, which opera was called "Lucio Silla," and was equally successful with the former. He had also composed for Milan, in 1771 "Ascanio in Alba" and for Salzburg in 1772 "Il Sogno di Scipione" to celebrate the election of the new archbishop. Being subsequently invited to Vienna, Munich and Salzburg he among other works composed

"La Finta Giardiniera," an opera buffa, two grand masses for the chapel of the elector of Bavaria and one for the archduke Ferdinand at Salzburg and on the occasion of the arch duke Maximilian remaining for a few days at Salzburg the cantata "Il re Pastore." Mozart was at this time nineteen years of age and his fame was so extensive that he could now make choice of any capital in Europe in which to establish himself. His father thinking that Paris would be most suitable for him in 1777 he commenced his second journey thither accompanied by his mother. Having the misfortune to lose her during his stay and also taking some disgust at the style of vocal music adopted in that city, he returned to his father at the commencement of the year 1779 having only produced a symphony at the spiritual concerts and a few other instrumental pieces. Mozart subsequently indulged himself in ridiculing the musical taste of the French, in a set of burlesque instrumental quartets, by bringing together all the striking peculiarities of their style with the most irreverently comic effect. He next composed the opera of "Idomeneo" under the most favourable auspices having been called to Vienna by the command of his sovereign the arch bishop of Salzburg. That work was under taken at the request of the elector of Bavaria for Munich and it was here that Mozart's genius, now fully matured displayed its great strength and boundless resources. He was at this time five and twenty and in love with a young lady to whom he was afterwards united. The stimulus given to his mind by this passion did not desert him through life from this period his melodies grew more refined his harmonies bolder the design of his productions became exquisitely symmetrical, his ideas subtle and纁cise. Mozart left Munich for Vienna, where he entered the service of the emperor to whom, though but indifferentlly treated, he ever remained attached. Some vexatious occurrences at court excited him at length, however to demand his dismissal of Joseph but one word from that prince who really loved his composer and more particularly his music made him change his mind. Mozart received, in capacity of chamber composer the small annual sum of eight hundred florins for which no service was required, and it was never augmented. At one time he was legally asked, in consequence of

M O Z

ses of those general orders of government so frequent at Vienna, what present he received from the court. He wrote back word, in a sealed note, Too much for what I have done too little for what I might have done

L'Enlèvement du Serail was performed in 1782, Joseph II remarked to Mozart. It is too grand for our ears, there are a prodigious quantity of notes. There are just as many as there ought to be replied the musician. During the composition of this opera he married Miles Weber an amateur of great talent by whom he had two children. The Marriage of Figaro was a piece then much in vogue at the theatres, and Mozart was desired by the emperor to set it to music. He obeyed, and thus opera was performed at Prague the whole of the winter of 1787. Mozart went himself to Prague that winter and there composed for the Bohemians his opera of Don Giovanni which met with still more brilliant success than even the Marriage of Figaro. The music of Don Giovanni was the triumph of dramatic composition and the author who wrote it merely to please himself and his friends anticipated that the amateurs of Vienna would not be able to appreciate its merits. His expectations were realised for the opera was not understood on its first performance in that city. Mozart lived, however to see justice done to his great work although his health had now begun to decline and his death followed on the 5th of December 1791 when he had not attained his thirty sixth year. During the last months of his life, though weak in body he was full of the god and his application though indefatigable could not keep pace with his invention.

Il Flauto Magico. *La Clemenza di Tito* and a requiem which he had scarcely time to finish, were among his last efforts. Mozart was particularly partial to his opera of *Il Flauto Magico* though not of the parts of it which had been most admired by the public. The debility under which he laboured, prevented him from conducting the orchestra for more than the first nine or ten representations. The composition of the requiem in the decline of his bodily powers, and under great mental excitement hastened his dissolution. He was seized with repeated fainting fits brought on by his extreme assiduity in writing, in one of which he expired. Mozart was in person rather short of a pale complexion with an abundance of fair hair and of a temperament eminently luxurious and voluptuous. The melancholy which characterises his compositions is rather the feeling of one who has indulged passion to excess and who seeks relief from the intensity of his happiness than that which is produced by misfortune or disappointment. It is here that the great distinction exists between Mozart and other composers, who have possessed, in common with him, an eye for symmetrical proportion and a great nicely and exactness in the finishing of their scores. But whatever style he adopts, the daring ambition of a great master whose thoughts will neither bear addition nor diminution, is evi-

dent. If he has not originated as much in the first principles of the art as some other composers, much owes to Mozart a stride from mediocrity to perfection. No musician has ever possessed so comprehensive a genius, in the church style he may be said to vie with Handel in fugue writing with Sebastian Bach; he surpasses Haydn in the symphony and quartett and Gluck in the operatic. The true fame of Mozart is, however founded on his four great operas *Idomeneo* *Le Nozze di Figaro* *La Clemenza di Tito* and *Il Don Giovanni*, the music of which is dramatic but not theatrical. His love of refinement led him to correct his compositions with minuteness, yet he was no dealer in petty detail. As he drew near his end the grandeur of his ideas became still more obvious the music of the requiem is truly funeral a mixture of sublimity and heartfelt entreaty, and it was the excitement produced by the crowd of images which came unsought before his mind which hastened his death. A few hours before that event took place he is reported to have said "Now I begin to see what might be done in music." —Original Com. unison.

MUDGE (ZACHARY) an eminent divine of the church of England in the last century. He was a native of Exeter and his friends being nonconformists he was educated for the ministry at one of their seminaries. But he obtained episcopal ordination and in 1716 he became master of a free grammar school at Bideford in his native county whence he removed in 1736 to Plymouth on being presented to the rectory of St Andrews at that place besides which he was a prebend of Exeter. In 1739 he published a volume of Sermons on different Subjects which have been warmly praised by Dr Johnson. He died in 1769.—John Mudge MD youngest son of the preceding was educated for the medical profession and settled in practice as a surgeon at Plymouth. He afterwards procured the diploma of MD and was distinguished not only for his skill as a physician but also for his mechanical genius and his scientific acquirements. He was the author of a tract on the inoculated small pox 1776 8vo which was translated into German and a Care for a recent Catarhoic Cough 1778 8vo besides medical surgical and obstetrical cases and essays published in the Philosophical Transactions and other periodical works. Dr Mudge was a fellow of the Royal Society in whose Transactions also appeared his Directions for making the best Composition for the Mirrors of reflecting Telescopes together with a Description of the process of grinding, polishing and giving the great Speculum the true parabolic Curve which essay was rewarded with the Copernicus prize medal. This ingenious philosopher died in 1793.—His son, William Mudge entered into the army in which he arrived at the rank of major-general. He inherited from his father a taste for science, and particularly distinguished himself by the skill and accuracy which he displayed in the trigonometrical survey of Great Bri-

M U L

win, a considerable part of which was executed under his direction. In the Transactions of the Royal Society, of which he was a fellow are several of his communications relative to this undertaking. His death took place in 1820.—THOMAS MUDOX elder brother of Dr J Mudox was apprenticed to Graham, the philosophical instrument maker whom he emulated in mechanical ingenuity and scientific knowledge. He devoted much labour and talent to the improvement of time keepers and he was one of the persons employed by the Board of Longitude to examine the inventions of Harrison. He also obtained a reward from Parliament for a chronometer of his own construction. He died in 1794 at the age of seventy-eight.—*Ann Reg Choi

MULCASTER (RICHARD) a celebrated schoolmaster was born at Carlisle and was educated at Eton whence he was removed first to King's college Cambridge and next to Christchurch Oxford where in 1555 he was elected student. In 1561 for his extraordinary accomplishments in philology he was appointed first master of Merchant Taylors school. In 1594 he was collated to the prebendal stall of Glastonbury in the cathedral of Sarum and in 1596 he resigned the mastership of Merchant Taylors and the same year was chosen master of St Paul's school where he remained twelve years and then returned to the rich rectory of Stamford Rivers in Essex to which he had been instituted at the presentation of the queen. He died in 1611. As a scholar he ranks high his Latin works were celebrated in their day and he enjoyed a high reputation as a Greek and Orientalist. His works are *Postures* wherein those primitive Circumstances be examined which are necessary for the training up of Children either for skill in these Books or Health in them. *Bodleian Bodleian* Lond 1581 1587 of which a second part was published in the

First Part of the Elementa which on treateth chiefly of the right writing of the English Tongue. He also wrote several commendatory and other Latin poems, which were much esteemed.—*Ost Mag Fuller's Worthies. Gen. Biog Dict.*

MULLER (ANDREW) a learned Pomeranian born in 1630. He came to England where his celebrity as one of the first Oriental scholars and Biblical critics of the age in which he lived procured him an engagement among the other learned men who composed Walton's Polyglot. His other works are an edition of Abdallah Bedawi's History of China, in the original Persian with a Latin version; a work on the Antiquities of the Chinese empire with notes, entitled *Monumentum Sini cum "A Chinese dictionary and another treatise on the state of that empire called "Hebreorum Observationum de Rebus Sacra, Symbols Syntexis cum dubius Diuersitatis omnibus;* and some other miscellaneous treatises on subjects connected with Eastern literature. Morel adduces a curious instance of his abstractness and entire devotion to his stu-

M U L

does, to the exclusion of all external objects, has refused to walk to the window to see Charles the Second's triumphal entry into London on his Restoration. Muller eventually returned to the continent, and died at Mentz in 1694.—*Morel.*

MULLER (GEORG FABRIKUS) a celebrated German traveller was born in 1705 at Herforden in Westphalia, and was educated at Banteln and Leipzig at which latter place he so distinguished himself that professor Alenck obtained for him the place of adjunct in the historical class of the academy founded by Peter the Great at Petersburg in which city he also taught Latin geography and history. In 1728 he was made under-keeper of the imperial library and in 1730 he was chosen professor of history. In the following year he visited England and was elected a fellow of the Royal Society and on his return to Russia he accompanied Grauhn and de l' Isle in a tour through Siberia which occupied them ten years. In 1744 at the desire of prince Jussi of Muller wrote *A Dissertation on the Trade of Siberia* which was published in 1750. In 1747 he was created historiographer of Russia in 1754 secretary of the academy of Sciences and 1766 keeper of the archives. He died in 1783. His principal work is *A Collection of Russian Histories* in 9 vols. 8vo which is a storehouse of information with regard to the antiquities history geography and commerce of Russia.—*Cate's Travels in Russia. Russ. Cate's Media.*

MULLER or MULLERUS (JONAS) surname Regiomontanus from Koningsberg (Mona Regius) in Franconia the place of his nativity. He exhibited great precocity of talent at a very early age and having received an excellent classical education at Leipzig placed himself under Parbachius, the celebrated professor of mathematics at Vienna. Under so able an instructor he soon acquired the greatest proficiency and became one of the first astronomers as well as mechanics of that age. Of his skill in the latter capacity many curious specimens are recorded such as automata of different descriptions, and other ingenious trifles of art. Muller afterwards together with Parbachius accompanied cardinal Beissorn to Rome where Theodore Beza gave him further instructions in the abstruser parts of Greek literature which enabled him to complete a new abridgment in Latin, of the Almagestum of Ptolemy, and to correct many serious errors in the former translation made by George of Trebizond. In 1471 he built an observatory at Nuremberg to assist him in his astronomical pursuits and established a press but after a stay of little more than three years, returned once more to Rome, on the invitation of Sixtus IV who employed him in the reformation of the calendar and rewarded his services by raising him to the archbishopric of Ratibor. He did not long survive his elevation dying in 1476. The manner of his decease is variously related, some authors ascribing it to the plague while others assert that it was occasioned by poison administered

M U L

to him by the son of George of Truhinow out of revenge for his having superseded the regulation of his father.—*Life by Gassendi.*

MULLER (John von) a very eminent Swiss historian, born at Schaffhausen January 2d, 1755. He studied at the university of Gottingen and was destined for the ecclesiastical profession, but his own inclination led him to devote his attention to history. In 1772 he published at Zurich the history of the Cambric war; and he undertook to write the annals of his native country. Returning to Schaffhausen he was appointed professor of Greek, but he still pursued his favourite studies. In 1780 he published the first part of his "History of the Swiss Confederation;" and shortly after he went to Berlin where he printed

"Historical Essays." He then became professor of history at Cassel but in 1783 he returned to Switzerland. The elector of Mayence made him his secretary of state and privy councillor and he continued at Mayence till that place was taken by the French when he removed to Vienna. In 1804 he settled at Berlin where he became attached to the Royal academy and undertook to write the life of Frederic the Great. The war between Prussia and France occasioned his removal to Paris and he was appointed secretary of state for the ephemeral kingdom of Westphalia and afterwards director-general of public instruction. He died May 39th 1809. Besides the "History of the Helvetic Confederation" translated into French by Labatut 12 vols. 8vo and a "Course of Universal History" of which there are French and English translations he was the author of several other works, published collectively at Coblenz in 27 vols. 8vo.—*Bibl. Univ. Bibl. Nouve des Contemp.*

MULLER (John Sebastian) a German diplomatist and antiquary of eminence in the beginning of the last century. He was secretary and keeper of the public records to the duke of Saxe Weimar by whom he was often employed in a variety of negotiations, which he conducted with great ability and success. He devoted the latter part of his life to the composition of a work on the history of the family of the prince in whose service he was engaged, which was published at Weimar 1761 also under the title of "Genealogische und Chronologische Tabellen von Chur und Fürstl. Hauses zu Sachsen." He died at Weimar in 1798 aged seventy seven.—*Stell's Intro'd. to Hist. Lit.*

MULLER (Louis) a celebrated Prussian engineer. He served under the great Frederic in the seven years' war and in 1760 he was appointed captain and director of the studies of the cadets, in the corps of engineers at Berlin. In 1777 he was promoted to the rank of major and he died in 1804, at the age of seventy. He was the author of a view of the wars of Frederic the Great, and other works relating to the military art, published together at Berlin 1806, 2 vols. 8vo.—*Bibl. Univ.*

MULLER (Otto Farkasius) an eminent Danish tragedian, born at Copenhagen in 1730

M U N

He became tutor to the young count de Schleswig, with whom he travelled into the south of Europe. Returning to Copenhagen in 1767, he published, in two volumes octavo, an entomological work, entitled "Fauna Inspectiores Friedrichsdalensis," to which was appended, "Flora Friedrichsdalensis." He was then employed by the Danish government to continue the Flora of Denmark, commenced by G. Chr. Oeder in 1761. Muller was appointed a counsellor of chancery in 1769 and in 1771 archivist of the chancery of Norway. He died in 1784. He published the introductory part of an extensive work on the Zoology of Denmark which was continued by Abildgaard.—*Bog Univ.*

MUNCER (Thomas) or as he is sometimes called Münster a fanatic who in the early part of the sixteenth century rendered himself for awhile extremely formidable in Germany by his enthusiasm and the atrocities to which it led. The place of his birth has been variously stated to be Zwickau in Saxony and Stolberg in the Harz; it is certain however that the latter was the scene of his first appearance in public life after he had quitted the university of Wittenberg. From being a convert to Lutheranism, he suddenly turned round, declaiming with great violence against the reformed church and in conjunction with one Nicholas Stork a half-crazy anarchist not only preached up the necessity of being rebaptised naked and the practice of the greatest ansturies but the community of goods and the abolition of all distinctions and temporarities as contrary to the word of God and the law of nature. His disciples increasing to the number of nearly 40 000 he put himself at their head, and prepared to reduce his principles to practice by summoning all the princes of Germany to abdicate their thrones, and plundering all the buildings, ecclesiastical and civil which lay in his line of march. The landgrave of Hesse at length proceeded against him with a strong force and putting him to the route with the loss of seven thousand of his deluded followers (to whom he had prophesied a complete victory) chased him to Franchhausen where he took him prisoner and executed him shortly after at Mülhausen in 1526.—*Münster's Church Hist.*

MUNCKLEY MD (NICHOLAS) an eminent English physician who died in 1771. He was a fellow of the Royal Society and published in the Philosophical Transactions a "Case of the Efficacy of Bark in the Delirium of Fever" "An Account of the Comet of May 1759" and "Observations on the Comet of January 1760" and he was also the author of a curious "History and Cure of a dangerous Affection of the Esophagus" and of "A Case of the Hydrocephalus" which appeared in the Medical Transactions.—*Roux Ed.*

MUNDAY (ARMSTRONG) a dramatic writer of the sixteenth century, whose plays and pageants are said to have been popular in their day though none of them have come down to posterity. Born of a Protestant family, he re-

MUN

confined himself to the Spanish church, which he afterwards again abjured; and rendered himself notorious by his treachery to the queen, Edward Capons, executed for high treason, under Elizabeth. Little more is known of him except that he was afterwards in the service of lord Oxford, and a messenger of the queen's bedchamber. The only work by which he is now known is an enlarged edition which he published in 1618 of Bowe's Survey His death took place in 1633.—*Biog. Dram.*

MUNDINUS or MONDINO A physician was born at Miles and flourished in the fourteenth century. In 1316 he held the professorship of medicine at Bologna. He was the first among the moderns who dissected human bodies upon which subject he wrote a work reprinted at least fourteen times and entitled "Anatomia corporis humani Corpora Internorum Mammaturum," Parva, 1478 folio with all its errors which are numerous it was of real use to the infant science and the statutes of Padua and some other medical schools of Italy prohibited the use of every other work as a text book for the students of anatomy Mundinus died at Bologna in 1318.—*Elog. Dot. Hist. French Hist. of Physic*

MUNICH (BUREND CHRISTOPHER COUNT von) A German officer distinguished in the annals of Russia. He was a native of the duchy of Oldenburgh and having adopted the military profession he served with credit in the wars of Germany. Afterwards going to Russia he acquired great power under the empress Anne, and in the regency of the grand duchess, and obtained the rank of field marshal but on the assumption of imperial authority by Elizabeth the daughter of Peter the Great in 1741 marshal von Munich was condemned to lose his life which sentence was changed to that of perpetual exile to Siberia. He was, however, recalled from banishment on the accession of Peter III when he made his appearance at court in the sheep-skin habit which he had been accustomed to wear during his exile. His death took place in 1767 at the age of eighty four. He was the author of treatises on fortification and other subjects.—*B. Wm.*

MUNOZ (JUAN BARTIER) A Spanish historian was born in 1745 at Munero a village near Valencia, and studied in the university of Madrid. At the age of twenty two he wrote prefaces to the rhetorics of Louis of Grenade, and the logic of Verner, both which displayed great erudition. He was appointed cosmographer of the Indies, in which situation by order of the king, he began a history of America of which he lived to publish only one volume under the title of "Historia del Nuevo Mundo," Madrid, 1795, in folio. His other works, by which he acquired great reputation are "De Scenorum gentilium Lectiones et Professarum Disciplinarum Studia ad Christianae metane Normam angustam" Valencia, 1768. "De recte Philosophiae recente in Theologia ac Dialectico," ibid. 1767; "Institutiones Philosophicae," ibid. 1768; "A Treatise on the Philosophy of Aristotle," &c. 1768.—*Dart. Hist. British Critic*, vol. iii.

MUR

MURAT (Jeanne) One of the illegitimate of Bonaparte born March 26, 1773, at la Bastide near Cahors, in the department of Lot, where his father kept a tavern. Being patronized by an ancient family of Perigord, he obtained a scholarship in the college of Cahors, and finished his studies at Toulouse with a view to the priesthood. But his disposition induced him to relinquish his prospects, and enlist in the army. Dismissed from his regiment for malediction he returned home, and remained there till the formation of the national guard, into which he entered and was sent to Paris. He left this service and became sub-lieutenant in a regiment of chasseurs. Displaying an active zeal for revolutionary principles he was soon advanced to the rank of lieutenant-colonel. The overthrow of the terrorists checked his progress, but he soon recovered his station and was by the executive directory made a chief of brigade. In 1796 he accompanied Bonaparte to Italy as his aid-de-camp. He was employed by that chief as a diplomatist at Turin and at Genoa and in 1798 he commanded the army sent to effect the subordination of the Valetines to the new Cisalpine republic. He followed his leader to Egypt and distinguished himself at the battle of Mount Tabor during the Syrian expedition. On his return to France, he afforded Bonaparte maternal assistance in his progress to the attainment of the sovereignty. He was then made commander of the consular guard, and soon after married to the sister of the first consul, whose favours he profusely experienced. He commanded the cavalry at the battle of Marengo; and in 1802 he governed the Cisalpine republic with the title of general. In January 1804 he was appointed governor of Paris with the title of general in chief and he directed the military force when Bonaparte was proclaimed emperor. Soon after he was made a marshal of the empire and in the campaign of 1806 he repeatedly distinguished himself. Having been invested with the grand-duchy of Berg he assumed the state of a sovereign prince and figured as such in two campaigns, particularly at the battle of Jena. He commanded the cavalry at Eylau and at Friedland and showed himself on every occasion the devoted instrument of his brother-in-law. In 1806 he was sent with an army to Spain when he effected the temporary submission of that country. On the 1st of August the same year he was proclaimed king of the two Sicilies, and he had reigned peacefully at Naples four years when he was called upon to join Bonaparte in his Russian expedition. He commanded the cavalry of the French army, and after the defeat of Smolensko he imitated the example of his leader and left the army for Naples. In the campaign of 1813 he joined the French, but after the loss of the battle of Leipzig he endeavoured to make terms with the enemies of the emperor. He entered into separate negotiations with England and with Austria, and his vacillating conduct at length proved his ruin, and he was

M U R

precipitated from his throne. He then remained for some time at Florence, near Tuscany, till after the battle of Waterloo, when he took refuge in Corfu. Thence with a few followers he sailed to Italy, in the hope of recovering his crown; but he was made prisoner soon after his landing and conducted to the castle of Pisa, where he was shot October 13, 1815.—*Bug Uva. Bug Noue des Conserves.*

MURAIGRI (Lewis Anthony) a distinguished Italian antiquary and historian. He was born at Viggiù, in the Modenese territories, in 1672. Having adopted the ecclesiastical profession and received the order of priesthood he obtained some preferment in the church but he is said to have appropriated to charitable purposes the greater part of his income arising from this source. He was made keeper of the Ambrosian library at Milan and subsequently librarian and archivist to the duke of Modena. His literary productions are extremely voluminous and in general highly valuable but his fame principally depends on his labours as an editor of the works of others. He published a treatise *Della Cantic Christiana* 1723, 4to., *Della perfecta Poema Italica* 1706 2 vols. 4to., *Antiquitates Italicae mediae aevi* 1738 5 vols. folio

Novus Thesaurus Veterum Inscriptionum, 1739 4 vols. folio *Anecdota Latina*, 4 vols. 4to *Anecdota Graeca*, 4to besides his great historical collection entitled *Rerum Italicarum Scriptores ab anno A.D. Christianae 500 ad 1500* 27 vols. folio, of which the two supplementary volumes appeared after his death. He was also the author of *Annales d'Italia* 1744-1749 12 vols. 4to repeatedly republished in 18 vols. 8vo.; *Dissertationes sopra Antiquitatem Italiam* 1751 3 vols. 4to and several other works. This very erudite and industrious scholar died in 1750.—*Bug Uva*

MURET or MURETUS (Marc Anthony) a learned French grammarian so called from a village of the same name in the neighbourhood of Limoges, where he was born in April 1526. He became a pupil of Caesar Scaliger at Agen having previously distinguished himself at Auch and afterwards taught languages at Villemain Poitiers, Bourdeaux and Paris. In the latter university he was contemporary with Turnebus and George Buchanan till an accusation of an infamous and disgusting nature caused him to be thrown into prison. At Toulouse where he had settled after obtaining his liberation he taught jurisprudence for some time when a second charge of a similar nature was brought against him, and in 1554 he and one Meunier Fremont, a native of Dijon were condemned to be burnt in effigy. From the indignation of the public he on this occasion escaped not without difficulty to Padua, where as well as at Venice he continued to give public lectures till 1560, when he accepted an invitation given him by cardinal Ippolito d'Este to Rome. Muret afterward accompanied his patron to Paris, when the latter went thither in 1562 as the papal legate. After an interval of fourteen years, he took the *oath*, became a member of the college of je-

M U R

nats, and obtained a valuable benefice. His works, consisting of orations, letters, poems sacred hymns, &c. four dispositions on the Pandects, "On the Origin of Laws," "De Constitutione Principis" "De Legibus et Senatus-consilio," *Canticum Juvenale*, &c all written with much purity and elegance, were collected in 1787 and published in three octavo volumes at Verona. Another edition appeared at Leyden in 4 vols. in 1789.—*Meveri.*

MURILLO (BARTOLOME ESTAVAN) one of the most pleasing of the Spanish school of painters was born at Pilas near Seville in 1617 being descended from an ancient family in the province of Andalusia. He studied under his maternal uncle Juan del Castillo a painter of some eminence. The first objects in which he exercised his pencil were rustics and beggar boys in which he discovers a faithful and accurate attention to nature and an attractive simplicity of character which is almost peculiar to himself. Encouraged to visit Madrid he acquired the countenance and patronage of the celebrated painter Velasquez then in the height of his reputation who in dependently of his own instructions obtained him a free access to the royal collections. After a few years of study under these favourable circumstances, he returned to Seville and resumed the practice of his art with the most flattering success. Most of the principal churches in Seville as also in Grenada, Cadiz and Cordova, are enriched by the labours of his pencil. His last work was the picture of St Catherine in the church of the Capuchins at Cadiz. While painting this admired picture he fell from the scaffold and thereby brought on a complaint which terminated his existence in 1680 in his seventy second year. Few painters have a juster claim to originality of style than Murillo. He is at the same time more distinguished by a close and lively imitation of nature than by much infusion of the ideal and his pictures of virgins, lambs and even savours are stamped with the features and characteristic expressions of his country. His colouring which is clear and harmonious, partakes of the manner both of Titian and Vandyke and his general manner may be deemed a pleasing medium between the unpolished nature of the Flemish school and the elevated and graceful style of Italy. The character of this eminent painter was very amiable being equally susceptible to ambition and avarice and such was his benevolence he died in confined circumstances, although his own conduct was strictly regular and his remuneration usually ample.—*Bryan's Diet. of Paint. and Eng.*

MURPHY (Aloysius) an ingenious dramatic and miscellaneous writer was born at Clooneenagh in the county of Roscommon Ireland December 27 1727. His father who was a merchant, perished in 1729 on his passage to Philadelphia, in one of his own vessels, so that his education devolved upon his mother who, at the age of ten, sent him for education to the college of St Omers. Here he remained six years and as his talents were

M U R

employed in the counting house of his uncle who intended to make him superintendent of a large estate, which he possessed in Jamaica but his inclination being averse to this destination he repaired to his mother then resident in London. In the first instance he accepted a situation in a banking house but was soon altogether engrossed by a turn for literature and the drama. In October 1752 he published the first number of the *Gray's Inn Journal* a literary periodical which made him known to the public as a writer and a critic. He first essayed his dramatic powers in the farce of *The Apprentice* which was soon followed by *The Upholsterer* founded on a humorous delineation by Addison in the *Tatler*. He soon after made an attempt as an actor in the character of Othello and held an engagement with Foote for a single season and then retired not without incurring a share of ridicule from Churchill. On quitting the stage he determined to study the law and was admitted a barrister by the society of Lincoln's Inn in 1757. He seems never however to have acquired much practice although he occasionally attended the circuits. In 1759 he produced *The Orphan of China*, which he adapted from a tragedy under the same title by Voltaire and a variety of other pieces consisting of tragedy comedy and farce successively proceeded from his pen for the groundwork of which he was generally in debt to some foreign original. Of these

The Greek Daughter *The Way to Keep Him All in the Wrong* and *Know your own Mind* still keep the stage. He also published several occasional poems and gave Latin versions of some popular English poems by which he obtained considerable credit as an elegant scholar. At one time too he engaged in political warfare as a ministerial pamphleteer for which he was by no means qualified and in consequence endured much exposure from the ridicule of Wilkes and Churchill whose politics he endeavoured to repel. In 1763 he retired altogether from the bar and occupied himself entirely for the press. In 1772 appeared his *Essay on the Life and Genius of Dr Johnson* and in 1793 he published his translation of Tacitus, with historical supplements of all the imperfect parts which respectable if not masterly performance he addressed to Mr Burke. In 1796 appeared his tragedy of *Armistice*, and by his warmth in favour of the then pending war he entitised himself to the countenance of persons in power one of whom, lord Loughborough made him a commissioner of bankrupts, and he also received a pension of 200*l.* per annum. He died in June 1805 in his eighty fifth year. One of his latest works was a *Life of Garrick* and a translation of Sallust; from his pen has appeared since his death. His works, so early as 1786, were printed in seven volumes octavo. His later writings are only to be met with separately.—*Bog Univ*.

MURPHY (JAMES CAVANAGH) an eminent English architect, antiquary, and travel-

M U R

ier. He was a native of Ireland, and in 1790 he made a voyage to Portugal, where he collected the materials for the following work: *Travels in Portugal in 1793 and 1795*, Lond. 1795 4to. *Plans, Elevations, Sections and Views of the Church of Betalha, in the Province of Estremadura in Portugal*, 1795 folio. He afterwards published, "Antiquities of the Arabians in Spain" 1916 folio. His death took place in 1816 during the progressive publication of the last mentioned work.—*Bog Univ*.

MURR (CHRISTOPHER THEOPHILUS von) an eminent writer on bibliography and literary history and antiquities. He was born at Nuremberg in 1735, and died in 1811. He studied in the university of Altdorf and afterwards visited the public libraries in most of the principal cities in Europe. Returning home he became director of the customs in his native city in 1770 and having experienced a matrimonial disappointment, led a life of celibacy and devoting his leisure to literary pursuits, produced a vast number of learned works specified in the annexed authorities.—*Bog Univ Bog Noves des Contemp*

MURRAY (ADOLPHUS) professor of anatomy and physician to the king of Sweden was born at Stockholm in 1750 and died at Upsal May 5 1803. His father was the minister of the German church at Stockholm and he was educated at Upsal and afterwards travelled to Italy. In 1774 he returned to Sweden to occupy the anatomical chair at Upsal where he long taught with great reputation. He was a member of the Royal Academy of Stockholm whose memoirs he enriched with many scientific dissertations and he published a *Description of the Arteries of the Human Body* of which an English translation appeared at Edinburgh 1801 8vo.—

MURRAY (JOHN PHILIP) elder brother of the foregoing was born at Shewick in 1726 and died in 1776 at Göttingen where he was professor of history. He translated into German Voltaire's history of Charles XII and published in the transactions of the Royal Society of Göttingen many curious dissertations on the geography and history of the north of Europe.—MURRAY (JOHN ANDREW) another brother of the same family born in 1750, became professor of medicine and keeper of the botanical garden at Göttingen. Besides many other publications enumerated by Menzel he was the author of *Eusemato Librum praeceptorum Medicci argumentum*, 1773, 8vo. A *Library of Practical Medicine* 3 vols. 8vo, and, *Apparatus Medicandi sum*, 1776—1792 6 vol. 8vo of which a new edition was published at Göttingen in 1793 8 vol. 8vo. Professor Murray died in 1791.—*Bog Univ*.

MURRAY (ALEXANDER) an extraordinary self taught scholar was born at Kitterni, in the highlands of Scotland, October 22 1775. His father was a shepherd who taught him to read and write at home after which he was sent to school for two years, at the expense of an uncle, but at the age of ten was ob-

M U R

M U R

ployed to assist the rest of the family as a shepherd boy. By his own application, he enabled himself to communicate the elements of instruction to others, which assisted him to acquire more education himself and by extraordinary application he made himself master of the Latin Greek Hebrew and French languages. He also wrote some poems, and the fruits of his acquirements at length gained him admission to the university of Edinburgh in 1796. He devoted much attention to Eastern literature and having acquired a knowledge of the Abyssinian language was employed to superintend a new edition of the travels of Bruce. In 1806 he became assistant minister at Ur, and in 1808 was called to fill the chair of Oriental languages at Edinburgh and created DD. He did not enjoy this honourable office long dying of a consumption on the 15th of April 1813. He left a 'History of the European Languages' which was printed with his life prefaced 2 vols. 8vo 1823.—*Lyc. as above*

MURRAY (CHARLES) an eminent theatrical performer born at Cheshunt in Hertfordshire in 1754. He was the son of Mr John Murray of Broughton who acted as secretary to the Pretender in 1745 and was arraigned for high-treason on account of his share in the rebellion but received the royal pardon. The subject of this article was partly educated in France and on his return home was apprenticed to a surgeon in London. He then became a surgeon's mate in the naval service which he quitted to go on the stage. He made his first appearance at York in April 1775 under the assumed name of Raynor. He afterwards performed at various other places in the country and for some time belonged to the theatre of Norwich where he resumed his family appellation. During the time he remained there he produced two dramatic pieces 'The New Maid of the Oaks' 1778 and 'The Experiment,' 1779 both of which were published. From Norwich he went to Bath where he became a great favorite and obtained an engagement for five years. His first appearance in London was at Covent-garden in 1786 in the character of Shylock. At length he became manager of the theatre at Edinburgh and passed the latter part of his life in that city. He died November 6, 1821.—*Thesp. Diet. New Month. Mag.* vol. v.

MURRAY (John) an eminent physician was a native of Scotland the date of whose birth is not recorded. He was educated at Edinburgh, where he rose to great eminence as a lecturer in natural philosophy chemistry the materia medica, and pharmacy. He was the author of 'Elements of Chemistry' 2 vols. 8vo; 'Elements of Materia Medica and Pharmacy,' 3 vols. 8vo; 'A System of Chemistry,' 4 vols. 8vo; and 'A System of Materia Medica and Pharmacy' 2 vols. 8vo. Dr Murray died in the prime of life and reputation July 22, 1810.—*Gent. Mag.*

MURRAY (LANDIS) an ingenious grammarian and dialectic writer, born in 1745 at

Sectaria near Lancaster in Pennsylvania. His father a member of the society of Friends, was originally the proprietor of a flour mill there, but in 1753 became a merchant at New York. It had been his earnest wish to bring up his son to the same profession; but after receiving a good education from a private tutor he was allowed, at his own desire, to study the law and was admitted a member of the American bar and soon after married. His practice as a lawyer was at first, not very extensive and received a temporary interruption from a visit which he paid to England but on his return to New York in 1771 he resumed it with more success. On the commencement of the disputes with the mother country Mr Murray whose religious principles prevented his taking an active part in the struggle retired to Islip in Long Island where he employed the leisure which he possessed in an abortive attempt to manufacture salt. The bar holding out at this period but little prospect he became like his father a general merchant, and was so fortunate in his ventures that about the period of the establishment of American independence he found himself enabled to retire from business with a handsome competency. But while his pecuniary resources were thus prosperous, his health had received a severe shock and after vainly trying the most celebrated medicinal springs of America he was at length induced to take a second voyage to England the bracing air of Yorkshire being especially recommended for his complaint. At Holdgate a village within three miles of the capital of that county he was fortunate enough to find a small estate which exactly suited his wishes. This he soon purchased and continued to reside upon till his death. For many of the latter years of his life all exercise with the exception of occasional airing in his carriage was too severe for the debilitated state of his frame. His mind however continued in full vigour and the tedious of a protracted confinement was much alleviated by the composition of several instructive works of considerable value and utility. The first of these was a tract entitled 'The Power of Religion on the Mind' of which he printed five hundred copies and distributed them gratis among his friends, till the popularity into which it rose induced him to make a present of the copyright to a London bookseller under whose auspices it has run through no fewer than seventeen editions. His next work and that by which he is principally known was his 'English Grammer' first published in 1785, which was succeeded by his 'English Exercise,' and 'Key' calculated to correspond with and illustrate the Grammer an abridgement of which treatise was, in 1797 published in conjunction and met with a most extensive sale which it still maintains. His other writings are 'The English Reader with an introduction and sequel, both subsequently composed two compilations, on the same plan in the French language, "Le Lecteur Français," and 'Introduction au Lecture

M U R

Frances;" "The English Spelling Book," a small volume, compiled with great judgment and ingenuity; a new edition of his Grammar, Exercises, and Key in two 8vo volumes, which has obtained a highly favorable character; a Selection from Horne's Commentary on the Psalms and The Duty and Benefit of Reading the Scriptures. Mr Murray was seized with a paralytic affection on the 10th of January 1836 which although he experienced a temporary relief from fits terminated his mortal career on the 16th of the February following.—*Anns. Biog.*

MURRAY (WILLIAM) earl of Mansfield the fourth son of David lord Stormont, was born at Perth in Scotland March 2 1705. He received his education at Westminster school and Christchurch Oxford where he proceeded BA in 1727 and MA in 1730 soon after which he appears to have left the university. He then made the grand tour and on his return became a student at Lincolns Inn and after the usual term of probation was called to the bar. He gradually made his way to eminence in his profession and in 1742 he was appointed solicitor-general about which time he also obtained a seat in parliament. After distinguishing himself as an advocate at Edinburgh in 1743 and as one of the managers of the impeachment of lord Lovat in 1747 he succeeded sir Dudley Ryder as attorney general in 1754 and as chief justice of the king's bench in 1756 soon after which he was created baron Murray of Mansfield. For a few months, in 1757 he held the office of chancellor of the Exchequer. During that interval he effected a coalition of parties which led to the administration of Pitt afterwards lord Chatham productive of events which extended the power and influence of Great Britain in various quarters of the world. The same year he declined the offer of the great seal as he did twice afterwards. A change of parties in the cabinet, in 1765, which introduced into office the majority of Rockingham and his friends, for a while threw lord Mansfield into the ranks of the opposition. The year 1770 was memorable for attacks on his character in a judicial capacity in both houses of parliament which however led to no serious result. His conduct on the trial of Woodfall for publishing Junius's Letters, and on other occasions when he showed himself the zealous supporter of government, had previously subjected him to the animadversions of the partisans of the popular cause. In October 1776 he was advanced to the dignity of an earl of Great Britain. During the riots in London June 1780 the town house of this nobleman was attacked by the anti-catholic mob and his valuable collection of books and manuscripts fell a sacrifice to the indescribable fury of the ignorant and minded multitude by whom the mansion was burnt to the ground. He continued for some years longer to exercise his judicial functions with considerable reputation. At length, in 1786, he resigned his office of chief justice and the remainder of his life

M U S

was spent in retirement principally at his seat at Cirencester, near Gloucester. He died March 20, 1793. As a politician lord Mansfield may be deemed a favourite of high and low in government in general; and in the law of libel he supported the opinion, since practically given up that the jury is the judge of the fact only and not of the law. He was, however generally an enemy to violent exertion of power as well as a friend to religious toleration. On various occasions he set himself against vexatious prosecutions under intolerant laws and as already related, suffered for his vote in favour of the bill for the relief of the Roman Catholics. Indeed in many instances his ideas of legislation were large and liberal although on the whole, his conduct as a politician is not generally regarded as that part of his public life which does him the most honour. As an orator he displayed more of the persuasive elegance of Cicero than of the bold and declamatory force of Demosthenes but he might fairly have contested the palm of eloquence with any of his contemporaries except lord Chatham. In reference to his subtle powers of argumentation, lord Ashburton used to say that when he was wrong the faults of his reasoning were not easily detected, and when he was right, he was irresistible. His fame will rest chiefly on his conduct as a judge, and it is no mean proof of his sagacity and integrity that his decisions have rarely been reversed. It has been mentioned as an instance of disinterestedness, that he would not accept of the legal compensation to which he was entitled for the destruction of his property in 1780—*Lif. of Lord M. by Holliday.*

MUSÆUS a poet and magician of Athens said by some to have been the son by others only the pupil of Orpheus. The Andromedan marbles fix the era in which he flourished about fourteen centuries before the Christian epoch. He was at the head of the Eleusinian mysteries instituted at Naples in honour of the goddess Cerer.—There is another Musæus called the Grammarius author of a Greek poem on The Loves of Hero and Leander which has been frequently reprinted. He is supposed to have lived in the fourth century—*Vases de Peint. Grec.*

MUSÆUS (JOHN CHARLES AVOTURUS) a German writer of eminence who was professor at the gymnasium of Weimar. His "Popular Tales" — *Die Deutschen Volksschichten* — republished by Wieland at Gotha, 1804 1805 in 5 vols 8vo, and his "Physiognomical Travels," contribute to vindicate his right to be reckoned among the classic authors of Germany. He died in 1787.—*Zeyf. Biog. Unt.*

MUSCHENBROECK (Peter de) an eminent Dutch mathematician and natural philosopher born in 1696 at Utrecht, or as some say at Leyden, in both which places he eventually held the professorships of his favorite sciences. Muschenbroeck came to England, where he was elected a fellow of the Royal Society and afterwards obtained a similar

M U S

honor from the Parisian academy of Sciences. The works by which he is principally known, are his "Elementa Physicae" and his "Compendium Physicae Experimentalis," 1700, an excellent English translation of which has been given by Colson, printed together in two octavo volumes. His other writings are "Institutiones Physicae" 4to, "Tentamina Experimentalia," and some other useful scientific tracta. His death took place at Leyden in 1761.—*Newz. Diet. Hist.*

MUSCULUS (WOLFGANG) a celebrated German divine and reformer was the son of a cooper and was born at Dieuse upon Lorraine, in 1497. His parents could give him no education, so that he begged from door to door by singing until his talents attracting the notice of a convent of Benedictines, they offered to receive him into their order which he accordingly entered and applying himself to study he became a good preacher. About the year 1512 he embraced Lutheranism which he supported with great zeal and thus as may be supposed, creating him a great many enemies, he made an open profession of his religion, and fled to Strasburg in 1527 where he soon after publicly married but having no provision whatever he was obliged to send his wife to service in a clergyman's family and had himself apprenticed to a weaver who soon dismissed him on account of his religious principles. In 1531 he removed to Augsburg where on the expulsion of all the priests and monks in 1537 he was made minister of the church consecrated to the Holy Virgin which he held until 1548 when Charles V having entered the city and re-established property he found it necessary to return to Switzerland where, in 1549 he was invited by the magistrates of Berne to the professorship of divinity. He died at Berne in 1563. Musculus was a man of great learning and application and considerable master of the Greek and Hebrew languages. He translated the "Comment of St Chrysostom upon St Paul's Epistles" the second volume of the "Works of St Basil" the "Scholia of the same Father upon the Psalms" and "The Ecclesiastical History of Eusebius, Socrates, Sozomen, Theodore, Evagrius and the History of Polybus." He also published

"Commentaries upon some Parts of both the Old and New Testaments" and was the author of some original works, both in Latin and German, particularly his "Loci Communes, or Common Places" which, with other of his tracta were published in England during the reign of Elizabeth in conjunction with the writings of the principal foreign reformers—*Maltebor. Adam. Gen. Diet. Bate. Lewis. &c.*

MUSGRAVE (Sir RICHARD) an Irish baronet, who was born about 1736. Having married a lady of the family of Cavendish, he obtained, through her connections the place of collector of the excise for Dublin and a seat in the Irish parliament, as well as a baronetcy. He died in 1813. Sir R. Musgrave published "Memoirs of the Rebellions in Ireland" 1801 4to, in which he exhibited such a picture of the atrocities of the Catholic insurgents as

M U S

1798, as provoked the animadversions of anti-Catholics of the Catholic party who questioned the authenticity of his statements.—*Ann. Eng.*

MUSGRAVE (WILLIAM) an eminent English astrologer and physician, born in Somersetshire in 1657. He was educated at Winchester school whence he removed to New college Oxford in 1674 and took the degree of LL.B in 1681. He afterwards engaged in the study of medicine and having graduated as M.D in 1689 he was afterwards admitted a fellow of the Royal College of Physicians. He was also a fellow of the Royal Society to which he became secretary in 1684. He settled as a medical practitioner at Exeter in 1691 and long exercised his profession with great reputation and success. He died December 23d 1721. Dr Musgrave was the author of some Latin tracts on the gout and various publications relating to the Roman antiquities of Britain the most important of which are "Geta Britannicus" 1715 8vo and "Belgum Britannicum" 1719 8vo.—*Hutchinson's Eng. Med.*—**MUSGRAVE** MD FRS (SAMUEL) a physician and classical editor was the grandson of the preceding. He was engaged in medical practice at Exeter and attracted some notice as a politician by a vague accusation against the English ministry of having accepted bribes to conclude a peace advantageous to France in 1763 but he is more advantageously known on account of his attention to Greek literature. He published

"Exercitationes in Euripidem" L. Bat 1762 8vo and a complete edition of the tragedies of Euripides with notes Oxon 1778 4 vols 4to reprinted at Glasgow 1797 10 vols 8vo besides dissertations on the Grecian mythology and the Olympiads. He died July 4 1780.—*Nichols's Lit. Diet.*

MUSSATO (ALBERTINO) an Italian poet and historian was born at Padua in 1261. From a state of great poverty he became notary and pleader of causes and was made a knight, and admitted to the public council. Towards the close of his life he was involved in a charge of sedition brought against his brother and son and was banished to Chioggia, where he died in 1330. He wrote several Latin poems and tragedies inserted in the "Thesaurus Hist. Ital. and Historia Augusta Henrici VII." He also began the "Life of Lewis the Bavarian" but did not live to finish it. They are written with eloquence and are esteemed the best Latin compositions from the decline of letters to that time.—*Trabatelli.*

MUSONIUS (MARCUS) a learned Greek was born in the island of Crete about 1481 and came over to Italy where he studied under John Lascaris. He became professor of Greek at Padua, and when that university was dissolved he went to Venice where he taught publicly for many years. He also assumed Aldius Manutius in his editions of the Greek authors, prefacing Greek epigrams or parades of his own. In 1516 he was invited to Rome by Leo X who made him archbishop of Milvium; but he did not long enjoy this dignity;

N A D

dying the next year at the early age of thirty six. Several of his epigrams were published, with his concurrence of Plato.—*Histoire Grecque Illustrée. Tivoli.*

MUTIANO (GIOACCHINO) an eminent painter was born at Aquafredda, in the territory of Brescia, in 1562. He visited Venice and Rome, where he was employed by Gregory XIII, in the Capella Gregoriana, and by cardinal Farnese, to decorate his villa at Tivoli. He died at Rome in 1590. His colouring is true and harmonious, and his landscapes are executed in a masterly style which acquired him the surname of Il Giovanna de' Pazzi. His works exhibit much grandeur of design; his heads are dignified and expressive and he appears to have excelled Buonarroti, whose friend he was in his display of muscular anatomy.—*Bryan's Diet of Paint and Eng.*

MUYS (WILLIAM) an eminent Dutch physician and physiologist, born at Steenwyck, in the province of Overijssel in 1682 and died at Franeker in 1744. He was the author of

The Elements of Physicks 4to Opuscula and a treatise De virtute Seminali qua Plantæ et Animalia generi suo propagando sufficient of which a French translation was published under the title of Dissertation sur la Perfection du Monde Corporal et Intellectuel. But he principally distinguished himself by his investigation of the structure of the muscles, of which he gave an account in

N A D

his "Muscularum Articulatione Notation," 8vo. Edit. 1724, &c. He likewise published a tract, "De Satio Ammoniaci in Palustres Internuntiatis mensa," 4to.—*Zappi.*

MYLENE (ROBERT) an architect of considerable eminence memorable as the builder of Blackfriars bridge across the Thames. He was the son of an architect who was a magistrate of the city of Edinburgh where he was born in 1734. After receiving an education adapted to his profession he was sent to Rome and while in that capital he had the honour to gain the first prize in the architectural class at the academy of St. Luke. He was also chosen a member of that institution and of the academies of Florence and of Bologna. Returning home he established himself in the metropolis and among other undertakings in which he engaged was the erection of Blackfriars bridge which was commenced in 1760 and completed in 1770 in a manner highly creditable to the reputation of the artist. It was the first work of the kind executed in this country in which arches approaching to the form of an ellipse were substituted for semicircles by means of which the roadway is brought much nearer to a level surface than in bridges constructed on the old plan. Mr Mylene obtained the appointment of surveyor of St. Paul's cathedral and was employed in the erection of many private edifices in various parts of the kingdom. His death took place in 1811.—*Architect's Lit. Assoc. Edit.*

N A D

NAHIR SCHAH or THAMAS KOULI Khan king of Persia a famous conqueror and usurper was born at Calot in the province of Khorassan in 1686. His father was governor of a fortress on the borders of Tartary to which office he succeeded in his minority under the guardianship of an uncle who engrossed all the authority. He was subsequently kidnapped by the Usbecks, but escaped after a detention of four years and in 1714 entered into the service of the begler beg of Muschinda in Khorassan where he so much distinguished himself by his bravery that he was entrusted with the command of a thousand cavalry and was soon after placed at the head of an army with which he gained a great victory over the Usbeck Tartars. This achievement excited so much jealousy in the begler beg, that he gave the command to another person and when Nadir remonstrated ordered him to be bastinadoed. Irritated by this disgrace he joined a band of robbers and with this troop ravaged all the country and surprising Calot, put his uncle to death although he had been previously negotiating with him to enter the service of schah Thamas, king of Persia, then exceedingly pressed by the Turks and Afghans. Such was the bad-temper of his affiancée, the schah felt him-

N A D

self impelled to overlook this villainy and take Nadir into his service who greatly repaid both his enemies and was honoured with the title of Thomas Khan. The schah during his absence having in person sustained a defeat from the Turks was induced to make peace with that power and Nadir was directed to disband his army of 70 000 men instead of obeying he immediately led them to Isphahan where he seized the schah confined and deposed him and proclaiming his son Abbas then an infant as his stead and himself assumed the title of regent. He forthwith renewed the war with the Turks and recovered all the lost provinces and the young king dying in 1736, he was raised to the sovereignty. This elevation only extended his views and after making an honorable peace with the Turks, being invited by some conspirators about the person of the great mogul to undertake the conquest of India he began his march at the head of 120,000 men and with little resistance reached Delhi March 7 1734. The riches which he found in this capital were immense; but being exasperated by some insults on the part of the inhabitants, he caused a general massacre in which upwards of 100,000 persons perished. After this barbarity the sanguinary victor crossed

a peace with the mogul, whose daughter he married, receiving with her as a dowry some of the finest provinces of the empire that were contiguous to Persia. In this expedition, it is supposed, that he carried away and distributed among his officers, valuable to the amount of nearly one hundred millions sterling. On his return, he levied war against the Uzbecks and others, but, like many other Eastern tyrants, had nearly lost his life by an assassin instigated by his own son. In 1745 he once more defeated the Turks at Erivan, but his career was now drawing to a close. A conspiracy having been formed against him by the commander of his body guard and his own nephew, he was assassinated in his tent on the 8th of June 1747, the same nephew Ali Kouh who had caused his death succeeding to the throne. This extraordinary usurper was of a tall stature and robust form with handsome and expressive features. His conduct sufficiently marks his cruelty, ambition, and rapacity. His most favourable feature appears to have been a disposition to religious toleration. On his accession to the throne he required certain causes pronounced annually on the caliphs preceding Ah and other incentives to religious strife to be dispensed with which being objected to by the head of the clergy he had him bow strung. Nadir was cut off in the sixty first year of his age and eleventh of his reign.—*Life by Sir W Jones.*

NÆVIUS (CNEULS) an ancient Roman poet and historian, was born in Campania. He served in the first Punic war of which he wrote a history in Satyrman verses. Cicero says that it was written perspicuously and that Ennius who speaks contemptuously of it borrowed from it. Nevius was the second Roman who brought dramatic compositions on the stage his first comedy gave offence to some of the great men of Rome and Metellus, who thought the satire directed particularly to him, procured his punishment from Rome. He died at Utica BC 503. A few fragments of his works only have reached posterity—*Aulus Gellius. Voss. Hist et Post. Lat.*

NAIRONI (ANTHONY FAUSTUS) a learned Maronite was born at Mount Lebanon, about 1631 and was the disciple of Abraham Eccellenensis. He became professor of the Chaldee and Syriac languages in the college of St. Peter at Rome where he died in 1711. He wrote two works, entitled *Euphrosy Fidel Catholicæ Romane historicæ dogmaticæ ex vestimentis Syroœ seu Chaldaeorum Monachorum crux adversus evi nostri novitates 1694, 5vo; and Dissertatio de Origine, nomine ac Religione Maronitarum, 1679* in which he endeavours to prove that the Maronites have preserved the genuine Christian faith from the time of the apostles, and that they derived their name from St. Maron, a celebrated anchorite, who lived in the fourteenth century. His arguments are, however, overruled by Catholic critics, who remark that the dates of his authorities are not sufficiently ancient to be admitted as satisfactory evidence of the facts.—*Moret. Hist. Diet.*

NALDI (SCARZIENO) a celebrated Italian buffo singer who came to London in the early part of the present century and distinguished himself above all who had gone before him in that particular branch of singing which was considered his forte especially by his personation of the principal character in the *Fancio per la Musica*. Naldi met his death in Paris in 1819 by the explosion of an apparatus which had been invented for cooking by steam.—*Eng. Diet. of Mus.*

NALSON There were two English divines of this name, John born in 1638, having gone through the usual course of a university education at Cambridge took the degree of LLD and entering the church obtained a stall in the cathedral at Ely with the living of Doddington in the same diocese. He translated Mazarin's *History of the Crusades* into English, but is most advantageously known by his historical memoirs respecting certain transactions which took place during the civil war. His principal narrative appeared in two folio volumes and is entitled

An impartial collection of the Affairs of State from the Scotch Rebellion to the Murder of Charles the First. He also wrote an account of the trial of that monarch, and died in 1696.—VALENTINE NALSON born at Matton in Yorkshire, in 1641 was a member of St John's college Cambridge. He became a prebendary of York minster and incumbent of a benefice adjoining and he is known as the author of a volume of sermons on miscellaneous subjects. His death took place in 1724.—*Chalmers's Biog. Diet.*

NANCEL (NICHOLAS de) a physician and philologist, was born at Nancel in 1539. He studied at the college of Preyla, at Paris where he made such proficiency that at the age of eighteen years, Ramus appointed him teacher of Latin and Greek in the college. He then turned his attention to the study of physic but on the civil wars in France he retired to Flanders and in 1561 he became professor of the learned languages at Douay. He returned to Paris, and in 1587 he was appointed physician to the princess Eleanor of Bourbon abbesse of Fontevrault where he died in 1610. He wrote *Sachologia Graeca Latinaque informanda Reformanda* an attempt to reduce French verse to the rules of Greek and Latin poetry which incurred the usual ridicule attending all such attempts “*Discours de la Peste De Immortalitate Animæ veitante adversus Galenem*” “*Analogia Microcosmi ad Macrocosmum*, *Petrus Ramii Vita.* — Moret.

NANGIS (GUILLAUME de) a French historian of the fourteenth century is supposed to have taken his name from the place of his nativity in the Isle of France and was a Benedictine of the abbey of St Denis. He wrote the lives of St Louis and of Philip le Hard, and also two chronicles the first from the creation to the year 1300 the second a chronicle of the kings of France. The former which is clearly written in good Latin, has had two continuations, who have brought it down to

1296. The first were first printed in Pithou's collection in 1795 and afterwards in that of Du Chêne. The chronicle from the year 1115 was published in the "Speculum" of Dom Luc d'Achery.—*Meveri. Nouv. Dict. Hist.*

NANI (Giovanni Battista) the name of a noble Venetian distinguished both as an historian and a diplomatist. He was born in August 1616 and having been admitted at the age of five and twenty into the senatorial college rose rapidly by his abilities to some of the first offices in the state. During the war in Candia, he was sent ambassador from the republic to the French court, where he so ingratiated himself with cardinal Mazarin as to obtain considerable supplies both of men and money. His success in regard to this mission occasioned him to be accredited afterwards to the court of Vienna, and on his return he obtained from the gratitude of his countrymen, the honourable dignities of procurator of St Mark and captain general of the marine. He published an account of his French embassy and wrote at the request of the senate a History of the Venetian Republic, the publication of the first part of which he superintended in person the second however did not appear till 1679 the year preceding that in which he died. The whole is contained in two quarto volumes.—*Tribouch.*

NANNI (Peter) or NANNIUS a critic and philologist was born at Alkmaer in Holland about 1500. He applied himself for some time to painting but not finding that congenial to his taste he taught philosophy and was chosen professor of the learned languages at Louvain. He also obtained a canonry at Arns. He died in 1557. He is regarded as a good critic an estimable poet, but an indifferent orator. His works consist of translations of the Psalms in Latin verse "Miscellaneorum Ductus" containing annotations upon several ancient authors, "Dialogum Heronarum Annotations in Institutiones Iuris Civilis Scholis in Canecta Canticorum" with various Greek translations.—*Baudot. Meveri. Nouv. Dict. Hist.*

NANTEUIL (Roussat) an eminent engraver was born at Ribaix in 1630. He early manifested his talents for the art and coming to Paris he made his works known and soon gained great employment. He applied himself chiefly to painting portraits in crayons which he afterwards engraved; and his success in taking that of Louis XIV procured him the place of the king's designer and cabinet engraver with a pension. Carlo Dato, in his life of Zuccari, quotes the portraits of Nanteuil as the most finished examples of modern engraving. Nanteuil also composed pleasant verses, and recited agreeably. His death took place at Paris in 1678.—*Meveri. Nouv. Dict. Hist.*

NANTIGNY (Louis Charot de) a celebrated genealogist, was born in 1698 at Soult-le-dec in Burgundy. He studied at Dijon and Paris, and at the latter place he became tutor to some young noblemen. He employed his leisure in drawing up genealogical tables,

which he published in a work entitled "Anecdotes Historiques des Rois, des Empereurs, et de toutes les Maisons Souveraines," 6 vols 4to. This is considered a valuable work, and he left materials for its continuance. His other works were, "Tablettes Historiques Genealogiques et Chronologiques," and "Tablettes des Thèmes." Nantigny became totally blind before his death which happened in 1755.—*Meveri.*

NAOGEORGII or KIRCHMAER (Iac. Mai) a celebrated Protestant divine, was born in 1511 at Straubing in Bavaria. He acquired considerable celebrity by his Latin satires against the customs of the Catholic church entitled "Regnum papaceum." His other works are "Hierosolima Tragedia" 1551 8vo, "Mercator Tragedia" 1560 12mo and "Pyrgopolitae Tragedia," 1558 8vo

"Agricultura sacra" 1551 "Pamachius Tragedia" 1558 There are two editions of the French translation of the "Converted Merchant" 1558, 8vo, and 1561 12mo and a third 1591 12mo in which is Beza's "Comedie du Pape malade." These works are very scarce and are much prized by collectors.—*Meveri. Dict. Hist. Sacri Doctr.*

NAPIER or NPFRI (John) baron of Marston a Scottish nobleman, distinguished as a mathematician. He was born in 1550 and was educated at the university of St Andrews, after which he travelled abroad, and on his return to Scotland devoted himself to the cultivation of science and literature. His fame depends on the discovery of logarithms. Being much attached to astronomy and spherical trigonometry he wished to find out a method of calculating such triangles, since tangents &c. shorter than the usual one. In the exertions arising out of this desire is to be attributed his admirable invention of logarithms, and the actual construction of a large table of numbers in arithmetical progression in correspondence with another set in geometrical progression the property of which is, that the addition of the former answer to the multiplication of the latter. The result of these important labours he published in 1614 under the title of "Logarithmorum Canonis Descriptio." He also made several improvements in spherical trigonometry and was regarded by the celebrated Kepler as one of the greatest men of the age. The last publication which appeared in 1616, was his "Rabdologiae seu Numerationis per Virgulas" which work contains an explanation of the use of his celebrated Bones or Rods, with several other ingenious modes of calculation. He died at Manchester April 3 1617 in the sixty eighth year of his age. Lord Napier was also author of a "Plain Discovery of the Revelation of St John," 1593; and of a letter to Anthony Bacon entitled, "Secret Inventions."—*Hutton's Math. Dict. Life by Lord Buchan.*

NARDI (Jacopo) an eminent Italian historian was born of an ancient and noble family at Florence in 1476. In 1507 he was sent ambassador to the republic of Venice; and upon his return to Florence he distinguished himself by his opposition to the Medici, &

N A S

consequence of which he was imprisoned and exiled and he retired to Venice, where he passed the rest of his life in the cultivation of literature. Nardi wrote the history of Florence from 1494 to 1531, it was a party work and was not printed until 1589. He wrote a *Life of Malaspini*, and acquired great reputation by his translation of Levy which is considered one of the best versions in the Italian language. He moreover composed *Canti Carnascialeschi* and a comedy in verse, entitled *L'Almagna*. He is thought to have died about 1555.—*Timbowski*

NARES, MUS. DOCT (JAMES) an eminent English composer of the last century brother to Mr Justice Nares of the Common Pleas. He succeeded Travers in 1758 as organist and composer to the king. Dying in 1783 his remains were interred in the church of St Margaret, Westminster. His compositions of sacred music, though not numerous are marked by great genius and a thorough knowledge of the science. Two of his best are themes, Behold how Good &c and O Lord my God are to be found in the second volume of Stevens's collection and several others, together with a beautiful service in the key of C are in frequent use among all the choirs of the metropolis.—*Bug. Dict. of Mus.*

NASH or NASHI (THOMAS) a dramatist and satirical writer in the reign of queen Elizabeth. He was born at Lowestoft in Suffolk about 1564 and was educated at St John's college Cambridge but left the university after taking his first degree. He then settled in London, and became a writer for the stage and engaged in literary controversies with his contemporaries in which he displayed some wit and no small portion of scurrility and abuse. Some of his publications were levelled against the puritan Penry the author of *Martin Marprelate*, but the chief object of his satire was Gabriel Harvey in the article relating to whom one of his tracts has been noticed. He was also the author of *Pierce Penniless his Supposition to the Devil* 4to, *Plaine Perceval, the Peace Maker of England* 4to, and other pieces; besides three plays. He died in London in 1601.—*Bug. Dram. Censor Literar.*

NASH (THOMAS RUSSELL) an English antiquary and provincial historian who was a clergyman of the established church. He studied at Worcester college Oxford where he took the degree of DD in 1758 and he obtained the rectory of St Peters at Droitwich in Worcestershire. Becoming possessed of a considerable estate at Bewdley near Worcester he employed his time and fortune in the investigation of the antiquities of the county and in 1783 he published "Collectiona for the History of Worcestershire" 3 vols folio, comprising materials collected by the Habing tone in the seventeenth century and augmented by Dr Thomas and Bishop Lyttelton. Dr Nash was a fellow of the Society of Antiquaries, and he published, in the Archaeologia, "Observations on the Time of the Death and Place of Burial of Queen Katherine Parr." He also edited Butler's *Hindbriar*, in 3 vols.

N A U

4to. His death took place in 1811, at the age of eighty-seven.—*Nichols's Lit. Anecd.*

NASSMITH DD (JAMES) a learned antiquary a native of Norwich, born 1740. He completed a classical education at Cambridge where he became fellow of Corpus Christi (or Bens t) college, and in 1773 obtained from the society of which he was a member the rectory of St Mary Abchurch in the city of London and subsequently that of Snailwell, Cambridgeshire on which occasion he resigned his former benefice. He was the author of a small tract on the statutes respecting the issue of bread and published new editions of the *Notitia Monastica*, by Tanner and of the *Itineraries* of Simon and William of Worcester. He also compiled a catalogue of books contained in the library of the college to which he belonged which has since been printed. Dr Nasmyth died in 1808 at Levington in the Isle of Ely a living of which he had some time previously become the incumbent. His publications evince much industry and the accompanying notes display considerable research.—*Gent. Mag.*

NATHAN (ISAAC or as some say MOSES) the name of a learned Jewish rabbi who about the middle of the fifteenth century published the first Concordance of the Old Testament in the original tongue. This work on which he is said to have bestowed ten years of labour was first printed in 1523 at Venice Michael Calasio reprinted it at Rome in 1621 in 4 folio volumes with such additions and improvements as to render it a complete dictionary of the Hebrew language. Eleven years after another edition appeared at Basel revised and corrected by Buxtorf. The rev W Ro mane with the assistance of Mr Edward Kows Mores and a Portuguese rabbi published in 1747 a new edition from that of Calasio at London in the same number of volumes but several liberties having been taken with the text in order to adapt it to the peculiar opinions of a sect its value as a work is proportionably diminished. Of the personal history of the original author little or nothing is known.—*Nov. Diet. Hist.*

NAUDE. There were two of this name GABRIEL the elder generally known by his Latin designation Naudeus was a French physician equally eminent in his profession and as a man of letters. He was born about the commencement of the seventeenth century at Paris, studied medicine at Padua, where he graduated and afterwards repairing to Rome became in succession librarian to the cardinals Bagni and Barberini. A desire of returning to his native country induced him to quit the service of the latter prelate for that of cardinal Richelieu at Paris, with whom he remained till the decease of his patron transferred him to his successor Mazarin. Through the interest of the new minister Naude was appointed physician to the court, and received some lucrative appointments, but at length the disgrace and banishment of the cardinal, his master induced him again to quit France and to attach himself in quality of physician to

NAV

Christina of Sweden. His stay at Stockholm however proved but short and on his return a fever occasioned by the fumigations he had undergone in travelling carried him off at Abbeville, July 29 1653. His writings consist of

An Apology for the great Men who have been accused of Mayne; A Supplement to the Life of Louis XI. The Life of Cardinals. A Treatise against Labels. On the study of Military Tactics. On Liberal Studies. Advices towards forming a Library. Observances on the attacks made upon Cardinal Mazarin. Bibliographia Politica and some miscellaneous tracts.—PHILIP NAUDE born in 1654 at Metz was a good mathematical scholar but being driven from his home in communion with others who professed the reformed religion by the revocation of the edict of Nantes he found an asylum in the Prussian capital. Here he rose to considerable eminence as a professor of his favorite science and was appointed mathematical tutor to the court of Berlin and a member of the academy there. He had a son who succeeded him in his professorship at his death which took place in 1722. A work of his on geometry written in the German language in one volume quarto is considered a clever book. The younger Naude died in 1745 being like his father a member of the Berlin Academy and also a fellow of the Royal Society of London.—*Mores.*

NAUNTON (Sir ROBERT) an English statesman and court historian in the beginning of the seventeenth century. He was descended from an ancient family in Suffolk and was educated at Trinity College Cambridge after which he became fellow of Trinity Hall. After having been employed in embassies to Scotland and France he returned to the university where he filled the office of public orator in which capacity he attracted the notice of King James I. He became master of requests and surveyor of the court of wards and in 1617 he was appointed secretary of state. He died in 1630 leaving some curious memoirs of his contemporaries which appeared posthumously under the title of "Fragmata Regalia," of which there is a modern republication.—*Father's Worthes. Lloyd's Mem. of Statesmen.*

NAVAGERO (ANDREA) an Italian poet and orator was born of a patrician family at Venice in 1483. He was a great assistant of Aldus Manutius in his editions of the ancient writers and his reputation for eloquence was such that he was chosen by the republic to recite the funeral orations of Alfonso the doge Loredano and Catherine Cornara queen of Cyprus. He was then appointed historiographer to the state and on the successes of Charles V he was sent on an embassy to him. On his return, he was sent ambassador into France, and on his way home he was seized with a fever at Biasca, which terminated fatally May 1528. He was an elegant Latin poet and such an admirer of simplicity in poetry that every year he was accustomed to burn a copy of Martial's epigrams which he regarded

NAVY

as the corruptors of that species of composition as it existed in the Grecian models. He composed part of the Venetian history which he also committed to the flames. His works were published by the brothers Vobis in 1718, 1 vol 4to.—*Theatrica. Rerum s. Leo X*

NAVARETE (JUAN FERNANDEZ) a Spanish painter surnamed El Mudro from his being deaf and dumb, was born at Logrono in 1562. He travelled into Italy for improvement and on his return to Madrid in 1588 he was appointed painter to the king. His most distinguished pieces are preserved in the Escorial and a Holy Family which is considered his masterpiece is no less noticed for its beauty than for the strange accessories it contains in the figures of a dog a cat and a partridge indeed, so adulated was Navarrete to the representation of these animals that in a contract made with Philip II he was obliged to bind himself not to introduce them into sacred subjects. His mode of colouring was so fine as to acquire him the name of the Spanish Titian. He died in 1579.—*I like to Fusti.*

NAVARFTA (FERNANDEZ) a missionary of the order of St Dominic was born at Leon in Old Castile. He quitted Spain in 1646 on a mission to China where he did not arrive until 1650 and he was at the head of the mission in the province of Chekiang when the persecution took place and he was expelled with the rest of the missionaries. In 1672 he returned to Madrid and soon after went to Rome to give an account of his mission. In 1678 he was consecrated archbishop of St Domingo where he died in 1689. He wrote a work entitled "Tratados Históricos y Políticos Ethicos y Religiosos de la Monarquia de China" which is esteemed one of the most faithful and curious accounts of that country. The second volume was suppressed by the inquisition but as it has been frequently quoted by the Jesuits it is supposed that they obtained a copy before its destruction.—*Mores.*

NAYLER (JAMES) an English Quaker of the seventeenth century remarkable for his enthusiasm and sufferings was the son of an industrious small farmer in the parish of Ardsley near Wakefield Yorkshire where he was born in 1616. He had a good natural capacity and was taught to read and write. At the age of twenty two he married, and removed to Wakefield where he remained until the breaking out of the civil war in 1641. He then entered the parliamentary army in which he served eight years when he returned home where he remained until 1651 when the preaching of George Fox made him a convert to Quakerism. In the beginning of the following year he imagined that he heard a voice calling upon him to renounce his father's house and become an itinerant preacher. He attended to this fancied inspiration, and soon distinguished himself among those of kindred sentiments both in London and other places, until in 1666 he was committed to Newgate jail for propagating his opinions. At that time

N E A

N E A

his own enthusiasm, and the extravagant admiration of some female followers, seem to have engendered an incipient derangement, which induced Fox, and the more formal body of Quakers, to disown him. On his release from imprisonment, he repaired to Bristol, where his equally crazy followers formed a procession and led him into that city in a manner which they intended to resemble the entrance of Christ into Jerusalem. For this absurdity, Nayler and several of his partisans were committed to prison and afterwards sent to London where a parliamentary committee was appointed to examine witnesses on a charge of blasphemy. Nayler asserted that the honour paid were not shown to himself but to Christ, an explanation which did not prevent him from being declared guilty of blasphemy and sentenced to a double whipping at different times branding boring of the tongue with a hot iron and imprisonment and hard labour during pleasure. This sentence which was equally repugnant to wisdom, humanity and equity resembles that pronounced by the star chamber on Dr Leighton, and was equally illegal the house of Commons being no court of judicature, nor legally possessed of any power beyond that of imprisoning during the session. It was however fully inflicted upon this unhappy man who separated from the incitement which had affected his reason ingenuously acknowledged the extravagance of his conduct and having afforded satisfactory evidence of his unfeigned contrition upon his enlargement he was again received into the communion of the Friends. He did not long survive this event which took place on the death of the protector but died in Huntingdonshire on his way to his native place in the month of December 1660 in the forty fourth year of his age. Nayler uttered on his death bed some very affecting sentiments of calm resignation, which exhibit an intensity of feeling and a beauty of expression, which allow him to have possessed no common mind, and add to the courtesy of his character among the victims to the reveries of imagination. His writings were collected together and published in a single volume which although scarce may sometimes be met with.—Sewell's *Hist. of the Quakers.* Nayl's *Hist. of the Purit.*

NEAL (DANIEL) an eminent dissenting divine and historian of the puritans, was born in London, December 14 1678 Having lost his parents when young, his education devolved on an uncle who had him educated at Merchant Taylors' school. Declining the offer of an exhibition to St. John's college Oxford in 1697 he entered as a student in a seminary conducted by Mr Roe a learned dissenting minister, after which he proceeded to the university of Utrecht, where he studied under Bezaeus and Grawius. On his return to London, in 1703 he began to officiate as a preacher, and in 1706 succeeded Dr Singletor as minister of a congregation in Aldersgate-street, in which connexion he continued for six-and-thirty years. Although indefatigable and zealous as a minister, he found leisure

for literary labours, and in 1720 published his *History of New England*, 2 vols. 8vo, which met with a very favourable reception, especially in America. In 1722 he published, 'A Letter to Dr Francis Hare, Dean of Worcester occasioned by some observations on the dissenters, delivered by that divine in a visitation sermon. He subsequently wrote "A Narrative of the Method and Success of inoculating for the Small-Pox in New England which led to an interview with the prince and princess of Wales, afterwards George II and queen Caroline. In 1731 he sent into the world the first volume of his *History of the Puritans* 8vo the second, third and fourth appearing in 1733, 1736 and 1738. This work which has obtained considerable authority is very honourable to the talents of the author and possibly exhibits as much impartiality as can be expected from a writer who inherited the religious principles of the body whose history he composed. It called forth a *Vindication of the Doctrine Discipline and Worship of the Church of England* as established in the Reig of Queen Elizabeth from the impious *Reflections of Mr Neal's First Volume* 8vo from Dr Madox bishop of St Asaph to which he published a reply which he calls *A Review of the principal Facts objected to &c.* His remaining volumes were reviewed in a similar spirit by Dr Zachary Grey to which Mr Neal himself never replied but an answer appears in a new edition of Neal 1797 5 vols. 8vo by Dr Toni sun and these various productions are valuable as showing the most forcible arguments on each side the question. In 1738 the health of Mr Neal began to give way under the severe literary application to which he devoted himself and after repeated paralytic attacks he died at Bath in April 1743 in the sixty fifth year of his age leaving a high character behind him both as a writer and a divine. He married a sister of the celebrated Dr Lardner by whom he had a son named NATHANIEL, an attorney and secretary to the Miltons bank who wrote *A Free and Serious Remonstrance to Dissenting Ministers on Occasion of the Decay of Religion*, and some Letters in Dr Doddridge's collection.—Wilson's *Hist. of Dissenting Churches. Memoirs by Townson.*

NEANDER (MICHAEL) a German writer on ethics and phisiology in the sixteenth century. He was a native of Sorau, in Silesia, and studied under Melanchthon at Wittemberg. He became rector of the school of Northhausen, and subsequently rector and administrator of the school and convent of Islefield, where he remained till his death, in 1595. He was indefatigable in his attention to his duty as an instructor of youth for whose use he published several works, among which may be noticed his "Erotomata Linguae Graecae," "Opus Arsenii et Scholastici," and "Graecologia Graeco-Latina," in which he has collected several sentences from the writings of the ancient poets, philosophers, historians, &c., as also in another treatise entitled "Ethica veterum

et apud veterum Latinorum testimonia, Israh. 1361 8vo.—Sedis Invenit, in Hist. Eccl.

NEARCHUS, one of the captains of Alex under the Great, who was employed by that conqueror in conducting his fleet from India by the ocean to the Persian gulf. This expedition proved so tedious and fatiguing, that the leader on his return was not recognised by his friends until he had made himself known. His service was so much esteemed that he was crowned with a garland by Alexander at Susa. The relation of his voyage is extant, and is a curious and valuable record. It may be found among the geographic memoirs by Herodotus. Nearchus is reckoned among the historians of Alexander and is referred to as such by Strabo, Sudas and Arrian.—*Journ. His. Grec.*

NECKER (JAMES) a celebrated financier twice minister of state in France. He was born in 1738 at Geneva, where his father was professor of civil law and regent of the college. At the age of fifteen he was sent to Paris to be placed in a banking house for instruction, after which he carried on the business of a banker in partnership with Mr Thellusson and after his death with his brother and others. He first distinguished himself by his Eloge de Colbert, which was crowned by the French Academy, and by a treatise Sur la Legislation et le Commerce des Grains which passed through more than twenty editions. Having acquired great reputation as a financier by these productions and some memoirs on the resources of France which he transmitted to the count de Maurepas he was in 1776 appointed director of the finances and soon after invested with the important office of comptroller general. In 1781 he published an account of his administration under the title of

Compte Rendu au Roi and soon after he made an attempt to obtain admission into the council and being refused on the score of his religion as he was a Calvinist, he threatened to resign his official situation. He was in consequence removed and exiled to his country seat. During his retirement he wrote his work De l'Administration des Finances de la France 1784, 3 vols. 8vo and another "De l'Importance des Opérations Bréggiennes" 8vo. In 1788 he was restored to his place of comptroller general when he recommended the important measure of the convocation of the states general. The momentous events which followed are matter of well known history and cannot come within the scope of this notice. In July 1789 Necker who was regarded by the court party as a spy on their conduct was suddenly dismissed from the king's service but being then in the height of his popularity the strong voice of the public procured his immediate recall. His talents, however were not adapted to the scenes of commotion which then existed, and ere long he became the object of the hatred of that people by whom he had been almost adored. He took his departure from France and was only protected from the fury of the mob during his journey by the sanction of a decree of the

National Assembly. He retired to Copet in Switzerland, where he chiefly devoted himself to literary pursuits. He published a treatise, "Du Pouvoir exécutif des grands Etats," 1793 2 vols. 12mo., Cour de Morale religieuse, Geneva, 1800, 3 vols. 8vo, and Dernières Vues de Politique et de Finances offertes à la Nation Française 1802 8vo.

His death took place at Copet in 1804 and his posthumous works were published by his daughter madame de Staél under the title of Manuscrits de M. Necker"—*Bieg Univ.*

Mad. de Staél. *Bieg Univ.*—NICOLLA (SV. ANNA CURCHOD) wife of the foregoing was the daughter of a Swiss clergyman and was born in the Pays de Vaud. She distinguished herself by her literary talents having published "Réflexions sur le Divorce et Des Ié habitation précipita." She died in 1795, after which appeared "Mélanges extraits des Manuscrits de Mad. Necker" 3 vols. 8vo and "Nouveaux Mélanges" 2 vols. 8vo edited by her husband. Mad. Necker was in her youth the object of the early attachment of the celebrated historian Gibbon.—*Letters of Gibbon Bieg Univ.*

NECKER (NOEL JOSSEPH) a native of the Netherlands, who became botanist and histiographer to the elector palatine. He was the author of Elementa Botanica cum 63 Tab. aere incisa," 1791 4 vols. 8vo published at Nieuwveld, Physiologie Philosophique 1790 8vo and other works relating to botanical science. He died at Mainz in 1793.—*Bieg Univ.*

NEELDHAM (JOHN TUBERVILLA) a philosopher and antiquary of the last century born in London in 1713. His parents who were of the Romish church placed him at the Scotch college in Douai where he made a considerable proficiency in the sciences as well as in classical literature. Having completed his education he returned to England and kept a school in Hampshire for some time till a vacancy occurring in the English college at Lisbon he went thither as professor of natural philosophy. The situation however not answering his expectations he visited great part of the European continent, in the capacity of tutor to some young men of rank belonging to his own country and persuasion. He was elected a fellow of the Royal Society of London of the Antiquarian Society of the French Academy of Sciences, and assisted M. de Buffon in the composition of some parts of his Natural History. His other writings are,

Enquiries on Microscopical Discoveries and the Generation of Organized Bodies, 3 vols.;

New Microscopical Discoveries; "Observations on Spallmann's Discoveries; " Enquires concerning Nature and Religion, and an "Essay on the Origin of the Chinese Empire" which he affirmed to have been colonised from ancient Egypt. His death took place in 1781 at Brussels where he had lived for some time as rector of the Imperial Academy of Sciences. Though a learned man he was singularly credulous and given to superstition.—*L'Art de bien Mener.*

N E E

NEEDHAM (MERCATOR) an active partisan and political writer during the civil war, a native of Needham near Oxford where he was born in 1610. Having received a classical education in the chapel of All Soul's a college and at St Mary's Hall, Oxford, he became for a short time an assistant at Merchant Taylors' school, in the city of London, till the commotions of 1640 when he threw up his situation and embracing the popular side of the question, edited a periodical paper against the royal cause, under the title of *Mercurus Britannicus*. This work, together with some employment which he obtained as an attorney in Gray's Inn procured him a substance till after the battle of Naseby when he espoused the cause which he had before written against, and retraced his steps in a paper entitled

Mercurus Pragmaticus in which he setted the presbyterians, and became a warm advocate for the king. The parliament party becoming again predominant, threw Needham into prison for his turgidism, but the same versatility which brought him into danger earned him out of it. He changed sides again and in his *Mercurus Politicus* from 1649 to April 1660 when it was prohibited by the council unred all that he had said and before now arguing strongly in favour of the independents. During this period he was much in vogue with his party as a physician as well as an author and had obtained considerable practice when the death of Cromwell and the restoration of Charles II once more threw him into difficulties. A man whose political opinions are of so pliable a nature however, is rarely at a loss and although Dr Needham for so he was now called thought it advisable at first to leave the country he soon obtained his pardon and returned to London where he died in 1678. Wood speaks of him as combining some ability with considerable humour and convivial qualities.—*Biog. Brit.*

NECKHAM, or NEQUAM (ALEXANDER) a monk of the order St Augustine founded in the twelfth century. Notwithstanding his attachment to the monastic life he travelled frequently into Italy. He became abbot of Cirencester where he died in 1217. He left numerous treatises on divinity philosophy and morality. He also wrote a tract on the ancient mythology *Æsopian fables* and a system of grammar and rhetoric. Of his poems that *De Laude Sapientiae Divinae* is the most esteemed.—*Watson's Hist. of Poetry*. *Tanner*.

NEELF or NEEFS (PIERRE) the elder an eminent artist was born at Antwerp in 1570. He painted the interiors of churches and tapestries with surprising neatness and delicacy. To avoid the monotony attendant upon such a style he introduced a variety of objects and by a good management of the chiaro scuro, he gave a lively and animated effect to what otherwise would have been tame and uninteresting. As he was but an indifferent designer of figures some of his pictures are decorated with those of Velvèt Brueghel the elder Tanners, &c. He died in 1601. His

N E L

son, Peter the younger painted similar subjects, but they are deficient both in neatness and correctness.—*D'Argenville*. *Pittington*.

NEER (ARNOLD VANDE) an eminent artist, was born at Amsterdam in 1618. He excelled in painting views in Holland, cottages or fishermen's huts, and in his beautiful delineation of the effect of moonlight. He was a perfect master of the chiaro scuro. His sunsets are excellent, nor was he less successful in painting water pieces, in which he is only surpassed by Cuyp. He died in 1683.—His son Euston HENDRICK VANDE Neer was born in 1645, and was an historical and portrait painter. His pictures of conversations and gallant subjects are most admired; they are well coloured, and highly finished. He was employed for some time by the elector palatine at Dusseldorf where he died in 1703.—*D'Argenville*. *Pittington* by Fuseli.

NELSON (HORATIO) a celebrated naval officer who was born September 29 1758, at Burnham Thorpe in Norfolk, of which parish his father was rector. At the age of twelve when a war with Spain was apprehended, on account of the dispute about the Falkland islands he entered as a midshipman on board the *Raisonnable* commanded by his uncle captain Suckling. He afterwards went to the West Indies in a merchant vessel, and in 1773 he accompanied commodore Phipps in the expedition towards the north pole. In 1777 he was made a lieutenant and in 1779 raised to the rank of post-captain and appointed to the command of the *Hinchinbrook*, when our West Indian settlements were threatened by the French under D Estang. He distinguished himself in an attack on fort Juan in the gulf of Mexico and on other occasions and he remained on the American station till the conclusion of peace. He afterwards commanded the *Boreas* frigate and was employed to protect the trade of the Leeward islands, and while on that service he married Mrs Nesbit the widow of a physician. On the commencement of the war with the French republic he was made commander of the *Agamemnon* of sixty four guns, with which he joined lord Hood in the Mediterranean, and assisted at the taking of Toulon and at the siege of Bastia, when he superintended the landing of the troops. He was subsequently attacked by five French ships of war and afterwards was at the siege of Calvi, in which service he lost an eye. He next removed from the *Agamemnon* to the *Captain* and not long after having hoisted a commodore's pendant, he was employed at the blockade of Leghorn and the taking of Porto Ferrajo. Sealing to Gibraltar on board the *Minerva* frigate he fell in with two Spanish frigates one of which he captured, and then proceeding to join sir John Jervis, he fell in with the Spanish fleet, by which he was pursued and escaping, he conveyed to the admiral that intelligence which led to the victory off cape St Vincent February 13 1797. On that occasion he commanded the *Captain* on board which he attacked the *Santissima Trinidad* of 136 guns and passing

N E L

to the San Nicholas of 80 guns, and the San Joseph of 112, he obliged both those ships to strike their flags. For his gallantry he was made a knight of the Bath rear-admiral of the blue and appointed to the command of the maine squadron at the blockade of Cadiz. His next service was an attack on the town of Santa Cruz in the island of Tenerife in which he was unsuccessful and being severely wounded, his life was saved by his son-in-law captain Neabit, who at great personal hazard conveyed him to a boat. He was obliged to suffer the amputation of his right arm in consequence of which he obtained a pension of one thousand pounds and in the memorial which he presented to his Majesty on the occasion he stated that he had been present in more than one hundred engagements. In April 1796 he hoisted his flag on board the Vanguard and rejoined lord St Vincent (admiral Jervis,) who sent him to the Mediterranean to watch the progress of the armament at Toulon. Notwithstanding his vigilance the French fleet escaped which conveyed Buona parte to Egypt. Thither Nelson followed and after various disappointments he discovered the enemy's vessels moored in the bay of Aboukir. Notwithstanding the disadvantages which their situation presented he boldly attacked them and by a well executed manœuvre obliged them to come to action and obtained a most complete victory all the French ships but two being taken or destroyed. This achievement was rewarded with the title of baron Nelson of the Nile and a pension of two thousand pounds besides the honours conferred on him by the Grand Seignor. His next service was the restoration of the king of Naples, which was accompanied with circumstances of cruelty by no means creditable to his character and which may be attributed to the pernicious influence of lady Hamilton the wife of the English ambassador who most improperly entered into the feelings of the restored family. His attachment for that lady with whom he lived publicly after the death of her husband occasioned his separation from lady Nelson on his return to England. In 1801 he was employed on an expedition to Copenhagen under sir Hyde Parker in which he displayed his accustomed gallantry and effected the destruction of the Danish ships and batteries. On his return home he was created a viscount, and his honours were made hereditary in his family even in the female line. When hostilities recommenced after the peace of Amiens lord Nelson was appointed to command the fleet in the Mediterranean and for nearly two years he was engaged in the blockade of Toulon. In spite of his vigilance the French fleet got out of port March 30 1805 and being joined by a Spanish squadron from Cadiz, sailed to the West Indies. The English admiral hastily pursued them and they returned to Europe and took shelter at Cadiz while lord Nelson came home. After a few weeks he again set sail for the coasts of Spain. On the 19th of October the French commanded by Villeneuve and the Spaniards

N E L

by Gravina ventured again from Cadiz, and on the 21st they came up with the English squadron off cape Trafalgar. An engagement took place in which a most glorious victory was obtained, at the expense of the life of the English commander who was wounded in the back by a musket ball and shortly after expired. His remains were brought to England and after lying in state at Greenwich he was magnificently interred in St Paul's cathedral where a monument has been erected to his memory. Having left no issue by his wife an earldom was bestowed on his brother and a sum of money voted by parliament for the purchase of an estate which is to descend with the title to his collateral relatives. The life of this distinguished naval commander has been written by Mr M Arthur Dr J Stanier Clarke and Dr Southey.—*Navy Chronicle*

NELSON (Robert) an English gentleman of good private fortune which he employed in works of benevolence and charity and from this circumstance as well as from the devotional works of which he was the author is now generally distinguished from others of the same name by the epithet of The Pious. He was the son of a London merchant engaged in the Levant trade and was born in the English metropolis June 29 1656. His friends placed him for education on the foundation of St Paul's school and he subsequently became a fellow-commoner of Trinity college Cambridge. Having gone through the customary course of study he then proceeded to make a continental tour in company with his friend Edmund Halley. While in Italy he was introduced to lady Thosopha Lucy daughter to the earl of Berkley and widow of sir Kingesill Lucy bart. With this lady he formed a friendship which on his return to England in 1682 terminated in marriage. It was not till some time subsequent to the formation of this connexion that Mr Nelson discovered the religious principles of his wife not to be in accordance with his own she having been for some time a convert to the Romish church. Strongly attached however as he himself was to the principles of the reformed faith that difference of opinion did not form, as is too frequently the case any bar to their conjugal happiness although the lady actually wrote against the doctrine to which her husband was so sincerely attached. Protestant as he was the notions of hereditary right had so strong an influence upon his mind, that on the accession of William he remained a non-juror associating and communicating principally with the recusant clergy. These opinions did not, however interrupt his intimacy with archbishop Tillotson whom he assisted in every work which had the good of mankind for its object till the death of the worthy prelate who expired in his arms in 1694, dissolved their friendship. In 1709 the arguments of some of his clerical friends had produced such a degree of conviction upon his mind that he became a member of the Established church and continued in that communion till his death which took place at Ken-

N E R

September 16th 1745. There are few writers on devotional subjects whose works have been so popular as his Nelson's. His treatise entitled "A Companion to the Festival and Fast" especially has gone through a great number of editions. Among his other works, are, "The Whole duty of a Christian,"

The Duty of frequenting the Christmas Sacrifice
See "An Address on the Means of doing Good" "A Letter on the Trinity"

The Practice of True Devotion 1590
Transubstantiation contrary to Scripture" 4to
A Letter on Church Government a life of his old tutor Bishop Bell &c.—*Bigl. Brit.*

NEMESIUS a learned heathen of Phenicia, converted to Christianity about the close of the fourth century. He became afterwards bishop of Isessa in his native country. A work of his On the Nature of Man in which he advocates the opinion of the existence of the soul in a state previous to its junction with the body is yet extant in an edition printed in 8vo in 1671, at the Clarendon press.—*Am. Diet Hist.*

ENNUS an ancient British historian abbot of Bangor is generally said to have flourished about the year 620 and to have taken refuge at Chester at the time of the massacre of the monks of that monastery. Bishop Nicolson however contends, that from his own book it is evident that he did not exist before the ninth century. He composed several works, of which catalogues are given by Bale and Pita, but the only one remaining is his Historia Britonum or Elogium Britannum which is published in Gale's Hist. Brit. Script. Oxon 1691.—*Am. Diet Hist. Lit.*

NEPPOS (CORNELIUS) an historian who flourished under the two first Caesars and was especially favoured by Augustus. He is said to have been born at or near Verona in Cisalpine Gaul and wrote the lives of several of the most illustrious heroes of Greece and Rome. This work formerly published under the name of Cornelius I robust is a standard book and from the simplicity as well as the elegance and purity of its language is commonly used as an introductory one in most of our principal seminaries. Nepos is said to have enjoyed the personal friendship of Cleopatra and Pompey Atticus, the life of the latter of whom is among his writings. The time of his death is uncertain. There are several editions of his works, the best of which is that printed at the Clarendon press in 1803.—*Bigl. Class.*

NERI (ANTONIO) one of the earliest chemists who wrote on the art of glass-making. He was born at Florence towards the middle of the sixteenth century. Though he adopted the ecclesiastical profession he constantly refused to accept of any benefice that he might be at leisure to study what have been termed the occult sciences. He visited several parts of Europe and resided for a long time at Antwerp but the period of his death is not exactly known. His treatise entitled Arte Vetraria distinta in libri sette which has been often

N E S

printed and translated into various languages, is still deserving of perusal notwithstanding the great improvements in the art which have taken place in modern times.—*Bigl. Univ.*

NERI (St PHILIP de) founder of the congregation of the priests of the Oratory in Italy was born July 23, 1515 of a noble family in Florence. He was distinguished very early by his great devotion and was ordained priest at the age of twenty six from which time until his death not a day passed without his celebrating mass or communing. In 1550 he founded a fraternity for the relief of strangers pilgrims and destitute sick persons which led the way to the celebrated institution of the Oratory which was formally organized by him in 1568, and approved by pope Gregory XIII in 1574. The members of this society which differs from the congregation of the Oratory founded by cardinal Berulle in France, take no vows their general is changed every three years and their officer is to deliver such instructions every day in their church as are suited to all capacities. Each institution has produced some celebrated men one of the first of whom was cardinal Borromeus. Neri died at Rome in 1593 and was canonized by pope Gregory XV in 1622.—*Moreschi Novar. Diet Hist.*

NERI (POMERIO) a native of Florence and professor of law at Pisa in the eighteenth century. He was the author of Observations on the Tuscan Nobility a treatise on commerce and another on the imposts of Milan. He founded a botanical institution at Florence where he died in 1776.—*Moreschi Novar. Diet Hist.*

NERLI (PAULIN de) an Italian historian born in 1485 was a senator of Florence. He is supposed to have been the same who was governor of Modena for the church in 1526 and who was excluded from Florence when attempting to return thither with Guicciardini. He died in 1556. He was the author of a work entitled I Commentari de Fatti ci vili occorsi nelle città di Firenze dal 1215 fino al 1437 which was published at Florence in 1728. Giannotti in a letter to Varchi complains of Nerli's misrepresentations and partly a natural consequence of the part which, as a person in authority he took in the transactions of his day.—*Am. Diet Hist. Tintoretto*

NESBIT (ALEXANDER) a Scottish lawyer and antiquary son of the lord president of that name. He was born in 1672 at Edinburgh but though educated by his father for the bar practised very little in his profession dedicating his time almost exclusively to the study of the antiquities of his native country. Of these he wrote an able "Vindication" still preserved in the advocate's library at Edinburgh though never printed. His other works are

An Essay on the Use of Armories a valuable treatise On Heraldry in two folio volumes and an Heraldical Essay on a collection of Figures of Coat-Of-Arms "His death took place in 1725 at Darthon the family seat.—*Am. Diet Hist. Bigl. Reg.*

NESTOR or NFTOI IS NESTOROVA a

N E S

Rusman historian, was born at Biepler in 1066. He was a monk of Petcherki at Kief and is supposed to have died about 1115. He is chiefly known by a chronicle in which he gives a geographical description of Russia, and an account of the Slavean nations, and lastly a chronological series of the Russian annals from 859 to 1113. This work remained in obscurity until Peter the Great ordered a transcript to be made of a copy of it, found in the library of Kongsberg. It is esteemed as the earliest monument of Russian history and has been continued to 1803.—*Coke's Travels in Russia.* *Aust. Diet. Hist.*

NESTORIUS a celebrated patriarch of Constantinople from whom originated the sect of Nestorians, was born at Germanica, a city of Syria in the fifth century. He was educated at Antioch, and on receiving the order of priesthood he acquired so much celebrity by his sanctity and eloquence that the emperor Theodosius appointed him to the see of Constantinople. He immediately began to distinguish himself by his zeal for the extirpation of heretics, and not above five days after his consecration he attempted to demolish the church of the Arians who thereby rendered desperate set fire to themselves and the conflagration reaching other buildings in the vicinity much confusion was created and Nestorius was ever afterwards stigmatised as an incendiary. He next assailed the Novatians, but was interrupted by the emperor on which he proceeded to persecute the various congregations within his reach who persisted in celebrating the feast of Easter on the fourteenth day of the moon and for this unimportant deviation several persons were murdered by his agents at Miletum and Sardis. At length the time arrived when he was to suffer from an intolerance equal to his own for holding the opinion that the Virgin Mary cannot with propriety be denominated the mother of God. The extraordinary devotion of the people for the virgin the latent causes of which are curiously set forward by Bayle greatly inflamed them against their bishop which dissatisfaction was much increased by the haughty and turbulent Cyril who was jealous of the influence of a prelate of a disposition so resembling his own. Each party assembled councils and declared the other side heretical, until at length the third general council in the annals of the church assembled at Ephesus in 431 and under the influence of Cyril deprived Nestorius of his see and banished him to Tarsus without even allowing him to explain his doctrines which simply intended to assert that the virgin was not the mother of the divine nature of Christ. In the first instance the deposed prelate was allowed to return to a monastery but the inveteracy of religious hate procured his further banishment to Osma, in the deserts between Egypt and Lybia and he was subsequently dragged and driven from place to place until his death, the exact time of which event is unknown. Little compassion is due to Nestorius who, if victorious, would probably have treated Cyril and his adherents with equal rigour. His sect

N E T

by no means died with him, in the twelfth century the Nestorians abounded in China, and extended their opinions beyond mount Emei into Tartary and to the north of China. On this account, the court of Rome exercised all its policy to court them over to her dominion and succeeded so far as to produce a schism, but the mass body whose pontiff resides at Mosul, have resisted every overture of the kind, and remain separate to this day.—*Cave Moskva.*

NETSCHER (GASPAR) an eminent painter was born at Prague in 1639. Being left destitute by his father who was a sculptor he was taken under the protection of a physician at Arnhem who perceiving his native taste for the arts placed him under Gerard Terburg, and in a few years his pieces were deemed nearly equal to those of his instructor. The pictures of Netscher usually represent domestic subjects and conversations which he treated with a lustre and delicacy that we wish the productions of Francis Miers. He also excelled in portraits of a small size in the production of which he was much employed. It is said in Walpole's *Anecdotes* that he visited England upon the invitation of sir William Temple where he painted the portraits of several persons of distinction. He died at the Hague in 1684.—He had two sons, *Tzadoc* and *Constantine*, each of whom excelled in portrait painting.—*Bryan's Diet. of Paint and Eng.*

NETTELBLADT (CHRISTIAN baron de) a learned lawyer born at Stockholm in 1696. He studied in the German universities and obtained the professorship of law in the academy of Gripavald. In 1743 he was nominated assessor in the imperial court of Wetzlar which office he filled with great reputation till his death in 1776. He published a Swedish library 1723—36 five parts, 4to designed to make known to foreigners the state of science and literature in Sweden, *Memoria Virorum in Suecia eruditissimorum redi- viva*, 1728 31 4 parts, 8vo, *Thesaurus Ro- mano Scicci* 1729 4to, besides other works.—*Bieg. Univ.*

NETTELBLADT (DANIEL) a juridical writer born at Rostock in 1719. He studied in the university there, and afterwards at Marburg and Halle under Christian Wolff. Having taken his degrees in 1746 he was made professor of the law of nature at Halle whither his lectures attracted pupils from all parts of Germany. He was nominated a member of the privy council in 1765 and ten years after director of the university. He died September 4, 1791 leaving the character of having been one of the most profound jurists which Germany ever produced. Among his numerous and valuable works may be specified

Systema elementare universae Jurisperudentiae naturae, 8vo, and *Instia Historia literariae iurisdictio universalis*, 8vo.—*HENRY NETTELBLADT* his brother who was a counsellor published some historical treatises relating to the duchy of Mecklenburg, &c. He died in 1761.—*Idem.*

N E W

NEWMONTON (Trotter) a physician and philosophical writer, was born at Derrybrough in Scotland, in 1682. Having taken his degree of M.D. at Utrecht, he settled at Halle, in his native country, where he practised for many years with great success. Dr Nottesteed instructed the celebrated Snellius in the principles of mathematics; and in 1709 published a pamphlet, entitled "Some Thoughts concerning Virtue and Happiness, in a Letter to a Clergyman" 8vo, reprinted in 1736 and 1751. The design of this production is to show, that happiness is the end of all our actions, and virtue the only means of attaining it. He died January 9, 1742. His other works are "Disputatio de Inflammatione" and "An Account of the Method of Inoculating for the Small Pox." —Watson's Hist. of Edinburgh.

NEUMANN (CASPAR) an eminent German chemist of the eighteenth century. He was at first an apothecary at Berlin where his skill in pharmacy and chemistry attracted the notice of Frederick III elector of Brandenburg and king of Prussia, who supplied him with the means of pursuing his studies at the university of Halle. He afterwards travelled for improvement in England France and Italy, and on his return to Berlin he was nominated professor of chemistry at the Royal college. He took the degree of M.D. at Halle in 1727, and was honoured by the king with the title of subc counsellor. He died in 1757. Neumann contributed to the progress of science by his writings which comprise some important facts and observations and are still valuable though more recent discoveries have overturned the theories which prevailed in his time. His chemical works were translated into English and published in 1759 4to and in 1773 3 vols 8vo.—Ross's Cyclop.

NEVE (TIMOTHEUS) an English divine was born at Stanton Lacy in Shropshire in 1694 and was educated at St John's college, Cambridge. He was scholmaster of Spalding and minor canon of Peterborough and he afterwards became prebendary of Lincoln archdeacon of Huntington and rector of Alwalton in Huntingtonshire where he died in 1757. He was the author of "An Essay on the Invention of Printing" which he communicated to the Gentleman's society at Spalding of which he was a joint founder.—His son, Dr. NEVE was born at Spalding, in 1734, and studied at Corpus Christi college, Oxford of which he was elected fellow. He took his degree of DD. in 1751 and was elected Master of Divinity and was installed prebendary of Worcester. He died at Oxford in 1793. His works consist chiefly of sermons, but he also published "Annotations on Phillips's Life of Cardinal Pole." —Nichols's Lit. Ann.

NEVILLE (ALEXANDER) an English poet and writer was son of Richard Neville esq. of the county of Nottingham. He was born in Kent in 1694, and educated at Cambridge where he took his degree of M.A. and became Secretary to the archbishops Parker and Grafton.

N E W

He wrote a narrative in Latin of Kett's rebellion, under the title of "Ketum, sive de Pinibus Nottinghamensium Ketum dux;" to which he added an account of Norwich. He also published the Cambridge version on the death of sir Philip Sidney and paraphrased the "Edges" of Seneca, in the collection translated by Stanley New, Heywood etc. which volume is highly spoken of by Warton. He died in 1614.—His brother THOMAS NEVILLE, was dean of Canterbury and an eminent benefactor to Trinity college Cambridge. He died in 1615.—Warton's Hist. of Eng. Poet.

NEVILLE (HAWRY) a republican writer the second son of sir Henry Neville of Billingbear, in Berkshire was born in 1630 and educated at Merton college Oxford. At the commencement of the civil war he travelled to the continent, but returned in 1645 and became an active advocate of republican principles. In 1651 he was elected one of the council of state but retired when he fully understood the ambitious views of Cromwell, and associated himself with Harrington, and other votaries of a commonwealth. On the Restoration he was taken into custody but soon released and from that time he lived privately until his death at Warfield in Berkshire in 1694. His principal publication was, "Plato Redivivus or a Dialogue concerning Government" 1681 which was reprinted by Mr Hollis in 1763. His other works are "The Parliament of Love," "The Isle of Pines" and poems, to be found in various collections. He also edited the works of Machiavelli.—Nichols's Poets. Biggs Brit. Athene Oxon.

NEWBURGH (WILLIAM of) or Gulielmus Newbigensis a monk of the abbey of Newburgh was born at Bridlington in York shire in 1136. He is called by many Parvus or Little but whether this be a surname or nickname is doubtful. He wrote a chronicle, published at Paris with Picard's notes, 1610 8vo then by Gale and lastly by Hearne 3 vols. 8vo 1719. It is written in a good style but with the crudity of his time and profusion. He attacks Geoffrey of Monmouth with great asperity but this is attributed to his disappointment at not succeeding him in the bishopric of St Asaph.—Tanner's Notitia.

NEWCOMB, MA (THOMAS) a clergyman of Hertfordshire was born in 1675 and was educated at Corpus Christi college, Oxford. He was chaplain to the second duke of Richmond and rector of Stephan in Sussex. He died about 1766. He published several poems congratulatory odes satires, &c. which were published in one vol 8vo 1756. He was also the author of poetical versions of "The Death of Abel," "Hervey's Meditations," and other pieces and of "Novus Epigrammatum dictorum, or States Epigrams and Mimic Odes."—Vizetelly's Poets.

NEWCOME (WILLIAM) archbishop of Armagh, a prelate of great learning and exemplary manners. He was a native of Burton le-Clay Bedfordshire where he was born in

1733. His father being the incumbent of the parsonage of Abingdon, placed his son at the grammar-school in that town, and afterwards procured him a scholarship at Pembroke college in the university of Oxford. From the society he removed on a fellowship to Hertford college, of which he became tutor, and reckoned among his pupils the late hon. Charles James Fox. In 1763 having graduated as doctor of divinity, he went to Ireland, in the capacity of chaplain to the lord-lieutenant, the earl of Hertford, and under the patronage of that nobleman became successively bishop of Dromore Omagh and Waterford, over which latter diocese he presided upwards of sixteen years. In 1793 earl Fitzwilliam, the then viceroy translated him to the primacy Archbishop Newcomen was the author of a great variety of theological works, the principal of which are "A Revision of the English Translation of the New Testament," 8vo 2 vols.; "An Attempt towards an improved Version of the Book of Ezekiel" a similar attempt with respect to the twelve minor prophets; "On the Harmony of the Gospels" An Historical View of the English Translations of the Bible 8vo, "On our Lord's Conduct as a divine Teacher" A Review of the chief Difficulties in the Gospel Account of the Resurrection of our Lord and "On the Duration of our Lord's Ministry" in a letter to Dr Priestley printed in 8vo. His death took place in the capital of that country in 1800.—*Gent. Mag.*

NEWCOMEN (—) a practical philosopher distinguished for his successful efforts towards the improvement of the steam engine. He was a locksmith at Dartmouth in Devonshire towards the close of the seventeenth century and notwithstanding his humble situation he engaged in scientific researches, and carried on a correspondence with his celebrated countryman Dr Robert Hooke, to whom he communicated his projects and inventions. Newcomen having had his attention excited by the schemes and observations of the Marquis of Worcester the French philosopher Papin and by captain Savery's proposal to employ the power of steam in drawing the mines of Cornwall conceived the idea of producing a vacuum below the piston of a steam-engine after it had been raised by the expansive force of the elastic vapour which he effected by the injection of cold water to condense the vapour. This an important step towards the construction of the very powerful instrument in question appears to have been owing to the ingenuity of Newcomen who, in conjunction with captain Savery and Switzer took out a patent for the invention. To Watt, of Glasgow and afterwards of Birsingham, the world is indebted for the extraordinary advances towards perfection subsequently made in the construction of the steam-engine.—*Biog. Univ.*

NEWCOMEN (MATTHEW) a nonconformist divine of eminence in the middle of the seventeenth century. He was educated at St John's college Cambridge where he took the degree of MA On the triumph of the pres-

byterian, after the subversion of the authority of Charles I, Mr Newcomen became a member of the assembly of divines at Westminster, and assisted in drawing up the extractives published by that association. But he is chiefly noted as having been one of the authors of the attack on episcopacy entitled "Sinecynna," a word formed in the taste of the age from the initials of the names of the contributors who were Stephen Marshal Edmund Caenbury Thomas Young M Newcomen and William Spurstow. Our author held for some time the living of Dedham in Essex, from which he was ejected in 1662, when he returned to Leyden in Holland, where he died in 1666.—*Calamy Leprius's Univ. Biog.*

NEWCOURT (RICHARD) a civilian of the seventeenth century who practised in the court of arches, and was over the registry-office of the diocese of Canterbury. He is principally known as the author of an ecclesiastical survey entitled "Repertorium Ecclesiasticum Parochiale Londinense" in two folio volumes, 1708. He survived till 1716, when he died in extreme old age.—*Cough's Tops.*

NEWDIGATE bart. (Sir ROGER) a magnificent patron of learning born at Arbury in Warwickshire the family seat in 1719. His father Sir Richard Newdigate placed him at Westminster school whence he removed to Oxford as a gentleman commoner of University college. The death of his elder brother in 1735 vested in him the family title and estates which induced him, seven years afterwards to offer himself as a candidate to represent the county of Middlesex in the house of Commons. In this attempt he succeeded and sat for it till the end of that parliament. In 1751 the university of Oxford chose him as their representative and as with some few exceptions has been usually the case continued to return him as one of their members during every succeeding parliament till 1780 in which year he retired from public life. The university owes to his munificence an annual prize for the best copy of English verses on subjects connected with the fine arts, in length neither exceeding nor falling short of fifty lines, the composition of an under graduate; for this purpose he bequeathed the sum of 1000*l.* There is a treatise on the harmony of the four Gospels from his pen. His death took place in 1780.—*Gent. Mag.*

NEWTON (Sir ISAAC) a celebrated philosopher admitted by the general consent of the learned to have been the greatest master of the exact sciences that ever existed. He was descended of an ancient and honourable family in Lincolnshire and was born at the manor house of Woolsthorpe or Woolsthorpe in the parish of Colsterworth in that county on Christmas-day O S. 1642. His father died previously to his birth, and his mother was married to a clergyman named Smith by whom she had a second family. He was sent for education to a grammar school at Grantham at the age of twelve when the natural bent of his disposition displayed itself in the construction of machinery and in a taste for calcu-

tion, and the art of drawing. On the death of his father-in-law he returned home for the professed purpose of assisting his mother in the management of a farm, in which she had been previously engaged. But the young philosopher who actually went to market with corn and other produce of husbandry left the sale of his goods to his servant, while he shut himself up at an inn to ruminate over the problems of Euclid, the laws of Kepler, or to meditate discoveries of his own which should eclipse the glory of his predecessors. His mother had wisdom enough to release him from the superintendence of business for which he was unqualified, and afford him facilities for the improvement of his talents, by sending him to Trinity college Cambridge where he entered as a student in 1660. Mathematics immediately engaged his attention and he studied with avidity not only the works of Euclid and Kepler but also those of Descartes, Oughtred, Van Schooten and others. But he soon displayed his genius by his original discoveries, one of the earliest of which was that of the various refrangibility of the rays of light, which led to his new theory of light and colour, and to vast improvements of the construction of telescopes. In 1664 he took the degree of BA and the following year he was obliged to remove for a time from Cambridge on account of the plague. This temporary interruption of his studies is singularly connected with one of his most important discoveries for in his country retirement, sitting one day alone in his garden the accidental observation of some apples falling from a tree excited in his mind a train of observations on the cause of so simple a phenomenon which he pursued till he had finally elaborated his grand theory of the laws of gravitation. Referring to the university he was chosen a fellow of his college in 1667 and the next year he was admitted to the degree of MA. In 1669 he was chosen professor of mathematics, on the resignation of Dr Barrow and he then also began to read a course of lectures on optics. In 1672 he became a fellow of the Royal Society to which learned body he communicated an account of his theory of light and colours, afterwards published in the Philosophical Transactiois. In 1675 he explained his invention of infinite series, noticing the improvements he had made in it by his method of fluxions. This was done at the request of Leibnitz, who was engaged in similar speculations, and who appears to have independently arrived at the same conclusions with the English philosopher to whom however the priority of discovery may fairly be assigned. He was engaged in 1680 in making astronomical observations on the comet which then appeared, whence he proceeded to inquire concerning the laws of motion of the planetary planets; and in 1685 he communicated to the Royal Society some propositions on that subject, which afterwards were printed under the title of "Philosophiae Naturalis Principia Mathematica," consisting in the third book what has been termed his communication

or rather his system of the world. A second and improved edition of this work was published at Cambridge, under the superintendence of Cotes, the professor of astronomy and experimental philosophy. Fontenelle says, that that treatise, in which the author had built a new system of natural philosophy upon the most certain geometry was written with such profound judgment, and yet so concisely that it required some time and skill to understand it properly on which account it did not at first meet with the attention it deserved, but at length when its worth came to be sufficiently known, nothing was heard from all quarters but a general shout of admiration. In 1687 Newton signified himself as the defender of the privileges of the university of Cambridge, when they were attacked by James II, and in 1688 he became a member of the house of commons in the convention parliament. His extraordinary merit was now well known and generally acknowledged, and when under the ministry of Montagu, afterwards lord Halifax the recovery of our money was undertaken, Newton was appointed warden of the mint, in which office he performed very essential services to the nation. About three years after in 1699 he was promoted to be master of the mint, a post which he held to the time of his death. Upon this promotion he constituted William Whiston his deputy in the mathematical professorship at Cambridge and resigned the chair to him in 1703, on becoming president of the Royal Society. In 1704 he published a treatise on the refractions, inflections and colours of light which passed through many editions and was translated into a variety of languages. In the following year queen Anne conferred on him the honour of knighthood and in 1707 appeared his Arithmetica Universalis. Soon after the accession of George I he was applied to by parliament to decide on the merit of a scheme for the discovery of the longitude at sea, proposed by Dutton and Whiston with a view to the reward offered by government, when he delivered an opinion favourable to the projectors. In 1715 Leibnitz, who seems to have been jealous of the fame of Newton proposed to him for solution the famous problem of the Trajectories, as the most difficult task which he could devise, but such was the transcendent genius of our countryman, that this puzzling question served as the mere amusement of his leisure and he solved it the same evening he received it, though he had been fatigued that day with business at the mint. Newton became a great favorite with the princess of Wales, afterwards queen consort of George II, at whose request he drew up an abstract of a treatise on ancient chronology a copy of which in manuscript being taken to France by the abbe Conti, it was there translated, and published with annotations, in opposition to the views of the author who at length however had the work before the public in a legitimate form. His habitual temperance, and the constitutional equanimity with which he was endowed, con-

N E W

tributed to the preservation of his health, and the enjoyment of his faculties to extreme old age; but he was at last attacked by a calculus disease, from which he suffered great pain and which occasioned his death March 30, 1726 in the eighty-fourth year of his age. His corpse lay in state in the Jerusalem chamber at Westminster, and on the 28th of March his interment took place in Westminster abbey where the pall was supported by the lord chancellor the duke of Montrose and Roxburgh and the earls of Pembroke Suffolk and Macclesfield. A monument, with a Latin commemorative inscription, was erected in the abbey, and his statue by Roubiliac has been placed in the college of which he was a member at Cambridge. He left an estate of £2,000, which as he made no will became the property of his legal heirs the descendants of his sister Mrs. Conduit, having himself led a life of celibacy. The character of this great man has been thus drawn by Home.—In Newton this island may boast of having produced the greatest and rarest genius that ever arose for the ornament and instruction of the species in philosophical astronomical and mathematical knowledge cautious in admitting no principles but such as were founded on experiment; but resolute to adopt every such principle however new or unusual from modesty ignorant of his superiority above the rest of mankind and thence less careful to accommodate his reasonings to common apprehensions more anxious to merit than to acquire fame. He was from these causes long unknown to the world but his reputation at last broke out with a lustre which scarce any writer before his time ever attained. While Newton seemed to draw off the veil from the mysteries of nature he showed at the same time the imperfections of the mechanical philosophy and thereby restored her ultimate secrets from that obscurity in which they had before lain, and in which without his assistance they would probably ever have remained. Sir Isaac Newton left a vast mass of unpublished manuscripts, which after his death were examined by a committee of the Royal Society but none were thought worth printing except his "Observations upon the Prophecies of Daniel and the Apocalypse" which appeared in 1733, &c. "It is astonishing," says Dr. Charles Hutton, "what care and industry Newton employed about the papers relating to chronology church history &c., so on examining them it appears that many are copies over and over again often with little or no variation, the whole number being upwards of four thousand sheets in folio, or eight reams of foolscap paper besides the bound books, of which the number of sheets is not mentioned. The best edition of Newton's "Principia," is that of Father Le Sueur and Jacques 4 vols. 8vo, 1739, his "Optical Mathematics, Philosophical or Philalethes," were published by Castilian, Liss. 1744, 3 vols. 8vo; and his "Arithmetica Universalis," with a commentary by the same editor, Amsterdam, 1761, 2 vols. 8vo. All his

works were published by Dr. S. Hartung, Amst. 1779, 5 vols. 8vo, and an English translation of the Principia, is extant by Martin—Martin's *Bug Phizel*. *Hutton's Math. Diet.*

NEWTON (John) an English mathematician, of the seventeenth century. He was a native of Owbridge in Northamptonshire, and was educated at Oxford where he commenced a commoner of Edmund Hall in 1637. He took the degree of B.A. in 1641 and that of M.A. the following year. Having adopted the Socinianistic profession, he was created DD. immediately after the Restoration, when he was also made one of the royal chaplains, and promoted to the rectory of Rose in Herefordshire. He died December 25th 1678, aged fifty-six. Among his principal works, are "Astrologia Britannica" &c., Tables of Declination Ascension &c. for Calculations, "Trigonometria Britannica" folio, "Chilades centum Logarithmorum" Geometrical Trigonometry, Mathematical Elements

A perpetual Diary A Treatise on Gauging An Introduction to Astronomy and An Introduction to Geography These publications manifest industrious application to study and no common degree of skill in the science of mathematics.—Martin's *Bug Phizel*.

NEWTON (John) an episcopal clergyman of Calvinistic principles, born in London in 1725. He did not enjoy the advantages of a regular education having in the early part of his life been taken to sea by his father who was master of a merchant ship. Becoming commander of a vessel employed in the slave trade he made several voyages to the coast of Africa for the purpose of carrying on that disgusting traffic and in the mean time contracted habits of dissipation and vice which the brutalizing scenes he witnessed tended to originate and confirm. At length he grew serious and fond of study and having relinquished the occupation of a mariner he in 1755 obtained the office of tide surveyor of the port of Liverpool. There he remained several years, and during the latter part of that period he became a preacher and made some abortive attempts to gain a settlement as pastor to a dissenting congregation. In 1764 he was ordained a clergyman of the church of England, by the bishop of Lincoln and immediately after, through the intervention of Lord Dartmouth, he was appointed curate of Olney in Buckinghamshire. During a residence of fifteen years at that place he formed an intimate friendship with the poet Cowper whom he originated a volume of hymns for public worship their joint composition. In 1779 Mr. Newton removed to London on being promoted to the rectory of St. Mary Woolnoth, which he held till his death in December 1807. He was the author of a "Review of Ecclesiastical History" 1770 8vo; "Messiah, or a Series of Discourses on the Scriptural Passages which form the Occasional of Hosanna" 1786, 2 vols. 8vo; and other works which have been printed together in 6 vols. 8vo and 18 vols. 12mo.—*Young's Mag.*

NEWTON (Thomas) an eminent English

divine and theological writer, born at Llandaff, December 31, 1708. He was educated at Westminster school and Trinity college, Cambridge, where he obtained a fellowship. In 1744 he obtained the rectory of St. Mary-in-Bow, London, and in 1745 he took the degree of DD. He published an edition of the *Paradise Lost* of Milton, with notes, and a memoir of the author, in 1749; and he afterwards edited, in a similar manner the *Paradise Regained*. But his literary fame depends chiefly on his " Dissertations on the Prophecies which have been remarkably fulfilled, and are at this time fulfilling in the World," 1750 3 vols. Two several times reprinted. In 1757 Dr. Newton was made a prebendary of Westminster and subsequently precentor of York and in 1761 he was raised to the episcopal bench as bishop of Bristol becoming at the same time a canon residentiary of St. Paul's, he resigned his former preferments. He often wrote obtained the deanship of St. Paul's which he held till his death, which happened February 16th 1786. His works were published with an autobiographical memoir, in two volumes, quarto.—*Acta: G. Bug*

NEY (MICHAEL) a French marshal under the government of Buonaparte. He was born at Sarre Louis in 1769 and having entered as a private into a regiment of hussars, he had attained the rank of a subaltern at the beginning of the Revolution. He was soon after made a captain, when he served with distinction at Marstrand, Valenciennes and on other occasions. His address and bravery as a partisan officer attracted the notice of Kleber under whom he served as adjutant-general. He was next made general of a division, in which quality he commanded the French cavalry in 1798 during the inglorious invasion of Switzerland, when, however Ney is said to have behaved with humanity to the unfortunate objects of republican tyranny. The following year he distinguished himself under Massena, and in 1800 he shared in the victories gained by Moreau at Moersch and Hohenlinden. In 1804 he was honoured with the title of marshal, and the following year he gained the victory to which he owed the title of duke of Elchingen. He was next employed against the Prussians and the Russians, when he greatly contributed to the success of the French at Friedland. His talents were then put into requisition in Spain, where he showed skill and courage in his retreat from Portugal before the date of Wellington. In 1812 he accompanied Buonaparte to Russia, and his services at the terrible battle of Borodino, where he commanded the centre of the French army, procured him the title of prince of Moskva. His conduct on this and other occasions has gained him the epithet of "the bravest of the brave." Having afterwards lost the battle of Dresden, in the campaign of Germany, the disqualification of Napoleon induced him to retire to Paris, in a kind of disgrace. He was, however, soon employed in 1814; still he afterwards contributed to receive the emperor to resign his authority and

he was one of the first of the imperial generals who offered submission to the Bourbons. He preserved, therefore, all his titles and possessions, and was created a peer of France. In February 1815 when Buonaparte escaped from the Isle of Elba, Ney was at his estate in the country, and he received orders from the minister of war to repair to his government of Bourgogne. He went to Paris, where he made strong protestations of his loyalty to the king and, it is said, promised to bring him, the disturber of Europe captured as on his way. He then proceeded with some regiments towards Lyons, but instead of attacking the invader he joined his standard, and became one of his most active partisans. He seems to have served his old master with fidelity notwithstanding his conduct has been censured relative to the affairs which preceded the overthrow of Buonaparte at Waterloo. After that event Ney went to Paris and then took refuge in Auvergne where he was arrested on the 6th of July being denounced as one of the authors of the revolution of the preceding 20th of March. Being conveyed to Paris he was tried and convicted of treason before a council of war by whom he was condemned to death December 6 1815. He was consequently shot on the following day near the Luxembourg palace displaying in his last moments the same firmness he had ever exhibited in the field of battle.—*Bug Uau! Bug Neuf des Contretemps.*

NICAISE (CLAUDE) a French abbé eminent as one of the most learned antiquaries of the seventeenth century. He was born in 1623 at Dijon of a good family and taking holy orders obtained a canonry in the holy chapel of his native city. The duties of his office however interfering with the study of ancient monuments to which he was more especially devoted, he resigned it, and went to Rome where he grew into favour with pope Clement XI and continued to maintain a communication with most of the literati of Europe for several years. Among his printed works are a treatise *De Nummo Paethio*; an other *On the Forms of the Sirens*; and a third *On the Schools of Athens and Parnassus*, two pictures by Raphael. He also left behind him, in manuscript, a small dissertation *De veterum Musici*. His death took place in 1702 at Villy in France while he was engaged in deciphering an ancient inscription "Minerva Arpalis," then lately discovered in the vicinity of that village.

NICANDER, an ancient Greek physician, grammarian and poet, flourished in the time of Attalus Galatensis, king of Pergamus; and was a native of Colophon. He is also said to have been a priest of the Chilian Apollo. His works were numerous, but only two have reached our time, the one entitled "Therion," a poetical description of the wounds made by venomous animals, with their cures, the other "Aesculapius," a treatise of poisons and antidotes. He also wrote "An Account of the Affairs of the Aborigines, (whence he has been called the Aborigine,) the Beothuci; and

the *Geological Geognosie*, *Metamorphose*, and several treatises in medicine. The best editions of his works are those of Aldus 1567; *Bonfoli*, 1744; and *Schmid* 1792.—*Vetus de Post. Graec.*

NICCOLE, or **NICCOLLS** (RICHARD) an English poet of some note in the beginning of the seventeenth century. He was the editor of the most complete edition of the *Mirrour for Magistrates*, Lond. 1610 4to, towards which he contributed "A Winter Nigh's Vision, together with "England's Ease, &c." He seems to have availed himself of the attraction arising from the adoption of popular topics for the exercise of his poetical talents, as he published in 1616 a poem, entitled *Sir Thomas Overbury's Vision with the Ghosants of Weston Mrs. Turner the late Lieutenant of the Tower and Franklin* 4to, ornamented with curious wood cuts. That very rare poem is omitted by Wood in his enumeration of the works of Niccols who was the author of several other poems—*Wood's Athene Oxon.*

NICEPHORUS CALLISTUS XANTHO PULUS, an ecclesiastical historian, was born at Constantinople in the fourteenth century. He wrote a History of the Church which he addressed to the emperor Andronicus Palaeologus the elder and divided into twenty three books from the birth of Christ to the death of the emperor Leo the philosopher in 911. Nicephorus has been called the Ecclesiastical Thucydides and the "Theological Pliny" both for the elegance and the credibility of his work. Besides this he was the author of

A Catalogue of the Constantinopolitan Emperors, and A Catalogue of the Constantinopole Patriarchs and an Abridgement of the Scenaria, all in Greek names—*Modern Hist. Eccl. Fabrioli Bibl. Graec. Corv's Hist. Lit. Dapn.*

NICEPHORUS GREGORIAS one of the Byzantine historians, flourished in the fourteenth century, and was a favourite of Andronicus Palaeologus the elder, who made him librarian of the Constantinopolitan church and sent him on an embassy to the prince of Serica. In the disputes with Berlaeus and Palaeologus he defended the part of the former with so much vigour that he was cast into prison, whence he was liberated by John Palaeologus. He wrote eleven books of the Byzantine history, from 1204 to 1341 but in a barbarous style, and very inaccurately. Gregory also wrote the life of his uncle John metropolitan of Hieraclea, and composed scholia on *Syntaxis*, *De Isonomia*, besides other pieces still in manuscript.—*Vest. Hist. Grec. Mover.*

NICERON (JOHN FRAUEN) a French ecclesiastic of the order of Friars Minims, distinguished for his writings on optics. He was a native of Paris, and an intimate acquaintance of the celebrated Descartes. His works are, "L'Interprétation des Clésines, ou Régies pour l'examen et empêcher faussement toutes sortes des Clésines simples, &c.;" "Tractat. de la Conic. sine arithmeticis, &c."

trise, comprenant, et dioptrice;" and "Le Perspective Curieux." Niceron died in 1666, aged thirty-three.—*Biog. Univ.*

NICÉMON (JOHN PARAN) a Benedictine prior eminent as a literary historian. He was born at Paris in 1600, and having entered into the clerical order of the Benedictines, he became a teacher of rhetoric and classical literature at the college of Loches in Touraine. He afterwards removed to Montargis, and at length became professor of the belles lettres at Paris where he died in 1736. Father Nicémon published *Mémoires pour servir à l'histoire des Hommes illustres dans la République des Lettres, avec un Catalogue raisonné de leurs Ouvrages*, 40 vols. 12mo, the last two of which were printed after his death. Much valuable information is contained in this work, which however is defective in point of arrangement and the taste and judgment of the author are not always to be commended in his selection of subjects.—*Id.*

NICETAS or **NICETIUS** (St.) a bishop of Heraclea in the eleventh century canonised by the Romish church after his death. He wrote the life of Gregory Nazianzen, and some annotations on the Scriptures, and is said by Fornel to be the real author of the hymn *To Deus Laudamus* erroneously attributed to St Ambrose.—There were also two hieromonks of that name **DAVID** a Paphlagonian by birth who wrote the life of St Ignatius in Greek translated into Latin by Rudier in 1604. He flourished in the ninth century. The other who lived in the thirteenth was surnamed **ACHONIATES** and was a native of Colossa a town in Phrygia. When the Franks in 1204 stormed Constantinople where he held a situation in the service of the Greek emperor he fled to Nesa in Bithynia. His annals which embrace a period of time from the early part of the twelfth to the commencement of the thirteenth century appeared at Paris 1647. His death took place in 1206.—*Moreri.*

NICHOLS, MD, FRS. (FRANK) body physician to king George I. He was a native of London born in 1699 and educated at the foundation of Westminster grammar-school whence he went off in due course to Christ-church Oxford, and there graduated in medicine in 1729 having previously filled the stations of anatomical reader to the university. Returning to the metropolis, he commenced there the practice of physic and rose to considerable eminence in his profession. He was elected by the college of physicians Gulstonian reader, and appointed to deliver the surgical lectures in that society in 1736, in which discourse he was accused of favouring too much the doctrine of materialism. Dr Nichols married the daughter of Dr Maud in 1743, and succeeded sir Hans Sloane ten years afterwards as physician to the king, of whose last illness and death he published an account, to be found in the transactions of the Royal Society. His works are, "De Antro Medicis;" "De Motu Cordis et Sanguinis, &c.;" and a tract against midwives. His death

took place in 1772, at Spain.—*Lif* by Dr. Lawrence.

NICHOLLS (Josy) fellow of the Antislavery society of London, Edinburgh and Perth, and for nearly half a century editor of the Gentleman's Magazine. He was born at Idington, February 5, 1744, and having received a liberal education, he became at an early age an apprentice to Bowyer, the learned printer. He was subsequently admitted into partnership with his master, on whose death he succeeded to the management of one of the first typographical establishments in the metropolis, and long conducted it with high reputation. In 1778 he became conductor with Mr David Henry in the publication of the Gentleman's Magazine and on the decease of that gentleman, the duties of editor devolved on Mr Nichols, who, besides his regular contribution as conductor of that useful miscellany, inserted in almost every number some of the productions of his pen, relating chiefly to British topography and antiquities. He was admitted into the common council of the city of London in 1784 to which he belonged till 1801, and in 1806 was chosen master of the Stationers' company. In 1808 his printing-office was destroyed by fire when a great number of valuable works perished in the flames. Among his numerous literary publications may be mentioned, *Anecdotes, Literary and Biographical of William Bowyer* 1778, 8vo which formed the basis of his *Literary Anecdotes of the Eighteenth Century* 9 vols. 8vo, "Illustrations of the Literature of the Eighteenth Century" 3 vols. 8vo, supplementary to the preceding work, and *The History and Antiquities of Leicestershire*, folio. Mr Nichols died Nov 26. 1820.—*Autobiog. Mem.* in *Lit. Ann.*

NICHOLS, DD (WILLIAM) born at Donnington, Bucks, in 1644, was a divine of great learning and piety, and distinguished as an able polemic. From Magdalen hall Oxford, of which he had become a member after going through St Paul's school, he removed to Wadham college. This society he also quitted on obtaining a fellowship at Merton college in 1664. Nine years afterwards he graduated as doctor in divinity, and was presented to the living of Seaford Sussex, in the neighbourhood of Chichester. His principal works consist of a "Defense of the Church of England," written originally in Latin but afterwards printed in English also. Of this tract there are two editions, one in 1680, 1707 the other published subsequently in 8vo. "On the English Liturgy" in folio and 8vo. "The Religion of a Prince;" "A Conference with a Turk," 8vo, 2 vols. "On the Thirty-nine Articles;" "A Paraphrase on the Book of Common Prayer" and an essay, "On the Contingencies of the World." His death took place Jan 1711.—*Chichester's Big Dict.*

NICHOLSON (William) an indistinct and confused writer on mathematics, natural philosophy, and chemistry. He was born in London in 1785, and went to India when young in the mercantile service. In 1776 he

became an agent on the continent for Mr Wedgwood, the manufacturer of Staffordshire-ware, and he afterwards settled in the metropolis as a mathematical teacher. An academical establishment which he had formed proved unsuccessful, and he became a bankrupt. He took out patents for various inventions, and published a "Journal of Natural Philosophy Chemistry and the Arts," which was continued for several years but soon failed to attract all his speculations, which proved of little enrichment to the projector. He was at one time employed as engineer to the Portsea Water-works company which situation he lost, and died in poverty in 1815. His works are principally compilations but being executed with judgment, they are mostly of them extremely useful. The most important are *An Introduction to Natural Philosophy* 1782 2 vols. 8vo *The First Principles of Chemistry* 8vo and a *Dictionary of Chemistry* 2 vols. 8vo. With the *Encyclopaedia* published under his name he is understood to have had but little concern [See *Josce JERASIMIAN*]—*Genl Mag*

NICOLAI (CHRISTOPHER FREDRICK) a learned and ingenious German writer. He was born in 1733, at Berlin where his father was an eminent bookseller, and after having been educated in the schools of Berlin and Halle he was sent to Frankfort on the Oder to acquire a knowledge of the details of business. In 1752 he returned home and assisted his father in his trade but at the same time he devoted much of his attention to literature. He became acquainted with Lessing and Mendelssohn with whom he engaged in conducting a periodical journal called the *Library of the Belles Lettres* continued from 1757 to 1760 and forming 24 vols. 8vo. With Abbt and others, he afterwards published *Letters on Modern Literature* 24 vols. 8vo and this was succeeded by the *General German Library*, which he edited from 1765 to 1792 in 107 vols. After an interruption of some years, this undertaking was resumed under the title of the *New General German Library* 1800—1805. Nicolai died January 8 1811. Besides his poetical productions, he published *The Life and Opinions of Sabadius Nathan her* a novel which has been translated into English, *An Account of a Tour in Germany and Switzerland* in 1781, "Characteristic Anecdotes of Frederick II," and several other works.—*Big Univ. Big Novels. Contemp.*

NICOLAUS DAMASCENUS, a philosopher and historian, was a native of Damascus, and flourished in the time of Augustus. Herod the Great chose him for his preceptor in philosophy and took him with him to Rome, where he introduced him to Augustus, who also honoured him with his friendship. At the request of Herod, Nicolaus wrote a "Universal History," which is often quoted by Suidas, Josephus and others, but of which only a few fragments are preserved. He also wrote "A Dissertation on the Monarchs of various Nations," "Monarchs of Augustus,"

N.I.C

and his own life, of which some fragments are preserved by Voltaire; and a complete edition was published in 1686, by Grotius, under the title of "Moralium Documentorum Historiarum ex-
cerptae et fragmenta quae superantur. —Fasci-
llat. Grati. Moxvi.

NICOLE (Pierre) a celebrated French mathematician, was born at Paris in 1682. He was instructed in mathematics by Montmort, and early secured the respect of the scientific world, by detecting the fallacy of a pretended quadrature of the circle which a M. Maths had so confidently believed he had discovered, that he deposited three thousand livres in the hands of a public notary at Lyons to be paid over to any person who, in the judgment of the Academy of Sciences, should demonstrate his solution to be erroneous. This deposit was paid over to M. Nicole who gave it to the hospital at Lyons. In 1707 the academy nominated him assistant mechanician, and in 1724, permanenter. He died in 1758. The numerous able papers of this expert mathematician, are inserted in the *Memoirs of the Academy of Sciences*.—*Newn. Diet. Hist. Hu-
mane & Math. Diet.*

NICOLE (Pierre) a celebrated French divine in the seventeenth century was born at Chartres in 1635. He received his early education from his father under whom he attained a high proficiency in the learned languages, after which he was sent to the university of Paris, and having graduated M.A. entered upon a course of divinity at the Sorbonne. He also devoted a portion of his time to the instruction of youth placed under the care of Mme de Maintenon, of the Port Royal which led to his becoming an associate of the celebrated Arnauld in his defense of Jansenism. He was selected to take orders, but remained only a tonsured priest, in consequence of the refusal of the bishop of Chartres who disliked his Jansenism, to ordain him. He continued undisturbed at Paris until 1677 when a letter which he wrote to pope Innocent IX in favour of the bishops of St. Omer and Arras, excited a storm which obliged him to quit the kingdom and seek refuge in the Netherlands. He was, however, soon allowed to return and to live privately at Chartres, under another name. At length, in 1683, he was permitted to return to Paris, where he spent the remainder of his life in the composition of numerous new works. During the latter years of his life he entered into two celebrated disputes, concerning meta-
nistic studies and questions, in which he much distinguished himself. He died in 1695, aged seventy-five. The principal works of this able controversialist, are "Moral Essays," 14 vols. 12mo., "Lettres Imaginees et Visionnaires," 3 vols. 12mo., "The Perpetuity of the Faith of the Roman Catholic Church concerning the Eucharist," 3 vols. 12mo. "Les Prejuges Le-
gitimes contre les Calvinistes," "Traité de Plaidy de l'Eglise," "Epicurean Doc-
trines," 1696, 12mo., and a Latin translation of "The Provincial Letters," with notes.—*Newn. Diet. Hist. Moxvi.*

SUDOLSON (William) architect of
Bridgwater.—*Vol. II.*

N.I.R.

CASHEL in Ireland, a proofs of extensive knowledge and deep erudition. He was the son of the rev. Joseph Nicolson, vicar of Headlam, in Cumberland, or Cumbrae, in which county, the subject of this article was born in 1655. In his twenty fourth year he was elected a fellowships of Queen's college, Oxford, when he had taken his bachelor's degree in arts, and entering the church became domestic chaplain to Rambow bishop of Cashel, who in 1681 gave him a stall in his cathedral and in 1688 made him his archdeacon. His literary reputation both as a divine and an antiquary from this period, continued to increase till 1702 when he was further promoted to the bishopric of the same diocese, over which he presided sixteen years, and was then translated to the see of Londonderry. In January 1727 he was made archbishop of Cashel, a dignity which includes that of primate of Munster but never lived to take possession, dying on the 13th of the month following. Besides his correspondence which has lately appeared he was the author of an "English Historical Library" 1696-9. A similar work connected with Scotland and another on Ireland. These tracts were collected in 1776 into one quarto volume. An *Essay on the Border Laws* and "A Description of the Kingdoms of Poland and Denmark." He also wrote the prefaces to Chamberlayne's Polyglot of the Lord's Prayer, and to Wilkins's "Laws of the Anglo-Saxons," and in 1717 especially distinguished himself by the zeal and ability with which he entered into the Beogorian controversy. Browne Willis speaks in terms of the greatest respect of his research and character as an antiquary.—*Chalmers's Eng. Diet.*

NICOT (Jean) a native of Niort in France who obtained the office of master of requests at Paris. In 1559, being sent on an embassy to Portugal, he brought home on his return the plant tobacco which thence obtained the appellation of Nicotiana, adopted as a generic name by Linnaeus and other botanists. Nicot died in 1600. He was the author of a French and Latin Dictionary, "Traité de la Meris," &c.—*Diet Bla.*

NIELD (James) celebrated for his benevolence and philanthropy was born at Kesterton in Cheshire May 24 1744. He was in the first instance designed for agriculturist but in his sixteenth year he became apprentice to a goldsmith in London, and when out of his time commenced business in St James's street, where he realized a handsome fortune. Having been much impressed by a visit which he paid, early in life, to the king's Bench prison, and possibly assisted by the example of the benevolent Howard, he explored all the prisons of the country with a view to the mitigation of human wretchedness and the alleviation of the misery of his fellow-creatures under confinement. It was his constant practice in these excursions to visit upon the magistrates in the cities and boroughs, and remonstrant to them what he saw might in their power, or what his experience might suggest for

N I G

their instruments. Mr. Nield was the author of "A New System of Arithmetic, and of the Elements of Algebra," and of "An Elementary Arithmetic, or a Gentleman's Magazine, showing Moral Instruction in Science." This worthy person was also the prime founder of the Society for the relief and discharge of persons reduced from all debts, formed in 1775, to which he was unanimously appointed treasurer. Mr. Nield died universally lamented, February 16 1814. Besides his communications to the Gentleman's Magazine he was author of the interesting reports of the society to which his benevolence gave existence.—*From a Manuscript by Himself.*

NIEULAND (PETER) a Dutch author, was the son of a carpenter and was born at Dlim mermeer near Amsterdam, in 1764. At the age of ten years he wrote tolerable poetry and solved several mathematical problems without having had any instructor. The Batavian government appointed him one of the commissioners of longitude and he became successively professor of mathematics at Utrecht and Amsterdam. He died in 1794. His principal works are treatises "On the Means of enlightening a People," "Of the System of Leveevoer," and "On Navigation," Poems in the Dutch Language; with other treatises on scientific subjects.—*Rees's Cyclop. Diet. Hist.*

NIEUWPOORT (WILLIAM HENRY) a learned writer on classical archaeology born in Holland about 1670. He applied himself especially to the study of ancient history of which he became professor in the university of Utrecht. His death took place about 1730. Nieupoort was the author of a treatise entitled "Rituum cui clavis apud Romanos obseruantur seu omnes explicatio," 8vo, which has been often printed, and "Historia Republicae et Imperii Romanorum, contexta ex monumentis veteribus," 1733, 2 vols. 8vo.—*Bog Univ.*

NIEUWVENTY (BRUNAUS) an ingenious Dutch philosopher and mathematician born in 1654. He was intended for the clerical profession, which was that of his father, but having a stronger taste for mathematics than theology, he applied himself chiefly to mathematical and physical studies, to which he added that of jurisprudence. He became counselor and burgomaster of the town of Purmerend in North Holland, and a member of the states of the province. He died in 1712. His works are, *Considerations on the Analysis of Infinites, and the Analysis of Curve Lines* by means of the Doctrine of Infinites, *Considerations on the Principles of the Differential Calculus*; a *Treatise on the use of Tables of Sines and Tangents*, and *Contemplationes on the Universe* translated into English by John Chamberlayne and published under the title of "The Religious Philosopher," 2 vols. 8vo.—*Martin's Engg. Philos. Diet. Hist.*

NIGHTINGALE (JOSEPH) a dissenting minister, of considerable literary talent, born at Chipping in Lancashire, in 1775. Having studied for some time close to a congrega-

N I V

tion in the Wesleyan cause, at Manchester, he converted or rather in the newspaper office he supported himself principally by the writing of the *Adventures of an Author*. In consequence he compiled several volumes of the "Itinerarium of England and Wales," "English Topography," fol. 1815, "A Portraiture of Methodism," &c. This last work he published in 1807 having previously become a convert to Unitarianism. Sessions preached at Hanover-street and Worship-street chapels, 8vo 1807, "A Portraiture of Orthodoxy," 8vo, 1812 and *Refutation of a recent anonymous Pamphlet, entitled 'A Portraiture of Hypocrisy'*" 8vo 1815. His death took place August 9 1834.—*See Biggs.*

NIGIDIUS FIGULUS (Publius) a Roman author and senator and friend of Cicero whom he assisted in defeating the conspiracy of Catiline. Cicero speaks highly of the attainments of Nigidius, and ascribes to him the revival of the Pythagorean philosophy. It has been thought that he was exiled for some of the deceptions which he practised under the veil of that philosophy; but the real cause of his banishment was his attachment to Pompey. He died BC. 45. His works were "De Anugno privato," "De Animula," "De Exitu," "De Vento," "De Dua," and commentaries on grammar of which fragments only remain which were published by Janus Burdigensis.—*Vetus de Scient. Math. Fabrich. Bel. Let. Brucker.*

NIPHUS (AVVENTINE) a learned Italian was born at Sena, in the kingdom of Naples in 1473 and was appointed professor of philosophy at Padua. He composed a treatise "De Intellectu et Demonibus," in which he maintains that there is but one soul which animates all nature. He gained so much reputation by his works, however trifling they may now appear that he was offered professorships in the most celebrated universities of Italy and he was created count palatine by Leo X. The philosophy of Niphus, however was only in theory being even in his old age remarkable for his levity and intrigue. He died in 1537. He left Commentaries in Latin on Aristotle and Avicenna, 16 vols. folio, "A Treatise on the Immortality of the Soul," "De Amore de psychro Venere et Cupido venales," &c.—*Trivulzio Diet. Hist.*

NITHARD a French historian of the ninth century was the son of Angilbert, abbot of St. Riquier and of Bertha, daughter of Charlemagne. He was born about the year 790 and appears to have been distinguished both as a soldier and a politician. He was author of a chronicle which gives an account of the divisions between the children of Louis le Débonnaire, which was published in 1594, by M. Pitou, in his Annals of Historie Financiere Scriptores.—*Mowri. Nouv. Diet. Hist.*

NIVERNAIS (LOUIS JULIUS BARON) MARTIN (See de) a French statesman and man of letters, born of an Italian family at Paris in 1716. He filled the office of ambas-

NO. A

*andré st. Hilaire, Berlin, and London, having been sent to England to complete the study of French in 1822. He was subsequently admitted a member of the Royal Academy of Inscriptions and Belles Lettres at Paris; and he distinguished himself as the author of five fine, original dialogues of the dead and other light and elegant productions, original and translated, which have been collected and published in ten volumes octavo. His death took place in 1795.—*Say, Univ.**

NIZAM UL MULK, an enlightened Persian wise, in the eleventh century, rose from obscurity to be vizier to the sultan Alp Arslan, and to his son Malek Schah. He was as once as able statesman, a consummate general, and a zealous patron of learning. His palace was not only always open to men of science, but many of them were pensioned by his liberality. He also founded and endowed numerous seminaries of education and particularly the once flourishing college of Bagdad. He himself wrote a valuable history of his own times, which work abounds in much interesting matter of fact and description. Nizam, who was one of the most extraordinary characters of his age, was stabbed at the age of ninety, while reading a petition presented to him by an ascetic or subject of the old men of the mountain.—*D'Herbelot.*

NIZOLIUS (MARIUS) a learned Italian was born at Brescello in the duchy of Modena, in 1498. When his writings had made him known, he was invited by the princess Farnese of Parma, to give lectures in rhetoric, and he was afterwards appointed principal of the new university of Sabionetta. The work by which he is chiefly distinguished was a dictionary of the words which occur in Ciceronian treatises. *Thesaurus Ciceronianus*, of which the latest edition was printed at Padua in 1734, folio. Nizolian carried his edification of Cicero from his language to his philosophy in favour of which he maintained a strenuous contest with several of his learned contemporaries. In the course of this dispute he wrote a treatise "De vero Principio et vera Ratio Philosophandi" which so struck Leibnitz by its philosophy and elegance, that in order to expose the obstinacy of the numerous adherents of Aristotle, he gave a new edition of it, with critical notes of his own, 1670 4to.—*Theophrast.*

NOAILLES (Léon-Antoine de) a celebrated French poet, was the second son of Anne de la Noailles. He inherited at his birth, which took place in 1651, the dukedom of St. Cloud, with the appurtenance of Achères, and the dignity of a peer of France. An early inclination for literature, and a devout taste of piety induced him, however to forsake those temporal advantages, and to enter the church at an early age that is but twenty fifth year he had already become a doctor of the law, which he had applied himself to the study of divinity. As his commanding power of the first importance in the state, his rise was proportionately high and rapid, until he at length became archbishop of Paris, and pri-

NO. B

mate of Paris. In this ecclesiastical situation he remained sixteen years, not only by the surviving regulations which he introduced for reforming the lives and manners of the French ecclesiastics, but for the strictness and impartiality with which he carried them to the carrying out. The progress of the Jansenists and Quietists, which at the period excited so much attention in the councils of the Vatican, he counteracted himself with much zeal and vigour to arrest and terminate. His influence in the cause of the Romish church on this occasion raised him high in court favour, both at Paris and at Rome, and was at length rewarded in 1700 by his elevation to the purple. Fifteen years afterwards however his opinions militated so strongly against those then expressed by the papal court in the famous Bell Unigenitus, respecting Pasquier Quesnel's work on the New Testament; that not only did his popularity in that quarter decline, but a sentence of banishment was issued against him, through the influence of Tellier and the Jansenist party who loudly accused him of a tendency to heresy and the encouragement of schismatized doctrines. His disgrace, however proved to be but of short duration, and he so far so cast out as to reconcile himself to the sovereign pontiff by which he was enabled to turn the tables on his old antagonist, Father Tellier. His death took place at Paris, May 4 1739.—*Nous, Diet. Hist.*

NOEDDEN LLD. DZ. (Gottlieb Heyne) a learned and amiable German writer many years domiciled in this country. He was born January 23, 1770 at Göttingen, in Hanover and received the rudiments of education at the grammar-school there, after which he entered the university and applied himself more particularly to the study of Greek and Roman antiquities having for his instructor the learned Heyne, whom he assisted in his edition of Homer. In 1791, being recommended by his master to an English gentleman named Lawrence, at that time residing in Göttingen, as tutor to his children, he became domesticated in the family, and through that connection was introduced, in the winter of 1792, to the late sir William Milner, whose son, the present baronet, he attended to Eton in the capacity of private tutor. Here he obtained the friendship of Jacob Bryant, Hemphill, till the education of his pupil being completed, he accompanied a younger son of the same family to Göttingen, where he wrote a dissertation "De Physikal Schule in Hannover." After visiting the courts of Brunswick and Berlin, they returned to Eton, and in 1800 Noedden published his German and English grammar which has since gone through five editions, and is considered the best extant. In the Milner family he continued to reside till the death of sir William in 1811, some time after which a vacancy occurring among the librarians of the British Museum, his well-known reputation caused the election against three opponents. He was at Woburn, superintending the education of the possibility grand-children, when this event oc-

NOL

coued, and he left no time in returning to Reggio in 1782. The year following he travelled to Genoa, a copyist on the 'Last Supper' of Leonardo da Vinci, with a profiglomy and success, and soon after succeeded to the superintendence of the numismatic department in the Museums, for which his essay on the "Northwick Coins" evinced him to have been peculiarly adapted. This work he had intended to comprise at twelve num- bres, but his death which took place in March 1806, prevented its extension beyond the fourth number. Among his papers after his decease were found a translation of part of Winckelmann's History of Art, another of part of Lessing's Iaccoon, some me- merauds of his travels, and An Introduction to Numismatology. A cast was taken from his face after his death, for the Asiatic Society, of which he had been elected pres- dent in 1803.—*See Biog.*

MOCAROLA (Lurevaco) a noble Veronese, born in 1509. He was as distinguished by his learning and abilities as by his rank and served his country at several diplomatic missions, especially in one to the Venetian na- tions, from whence he received the honour of knighthood. He was afterwards created gene- ralissimo of the papal forces at Rome, but returning at length to his native city died there in 1558. Among his writings are an oration delivered by him at the council of Trent, "On the Divorce of the Queen of England;"—"On the Causes of the overflow- ing of the River Nile." On the treatise De Universitate Naturae of Ocellus Lucanus and an "Essay on illustrious Authors, Natives of Italy who have written in the Greek lan- guage."—*Now Dic. His.*

NOLDIUS (CANTERIAN) a learned Danish divine, was born at Hoyby in Scania, in 1695. He was educated at the university of Copenhagen, and in 1695 he was nominated rector of the college of Landskrona. He after- wards travelled in Europe, and in 1696 he be- came tutor to the son of the lord of Ger- tager. In 1697 he was ordained minister and professor of divinity in the university of Copenhagen. He died in 1693. He is said to have been the first opposer of demonology and was the author of the following works, "Concordantia particularum Holmio-Chal- dæorum, sive a much esteemed work, Se- cundum Historiam et Antiquitatem Syopis;"—"Liger distinguendi seu de Virtute et Vice Distinctio Opus;"—"Historia Lin- eorum artis de Vita et Gestis Herodiani Da- matis;"—"Logion;" &c. "New Edition of Jo- sephus History,"—"Prober Theor Vir Erod. Catt. Canterian. *Now Dic. Hist.*

NOELLETTIN (Johannes) a celebrated astro- loger, was born in Siena in 1737. He was the son of Joseph Francis Nollekens, a painter of considerable ability but little inclination of science. The conduct of this article was guided very much by Nollekens, and in 1780 he received many valuable distinctions, and in 1790 the title of knight from the Society of Arts. He subsequently repaired to Rome,

NON

where he obtained the notoriety of Cast- oppo, a sculptor of considerable note, under whom he studied so successfully that he soon had the honour of receiving a gold medal from the Roman academy of painting and sculpture. At the same time he materially improved his fortune by becoming a dealer in antiquities, as well as in the productions of Italian art generally. He remained nine years at Rome, during which time he executed the busts of many Englishmen of distinction, and returning in 1770 soon after married the youngest daughter of Mr Justice Welch, with a handsome fortune and speedily took the lead in his profession, and acquired great riches. The school of Nollekens was chiefly distinguished by its careful and accurate imitation of nature, and by the absence of any peculiarity of manner. His "Venus with the Sandal" is esteemed his principal production in the ideal line of art but his professional reputation rests principally upon his busts. This artist who was a great fa- vorite with George III was eccentric in many points of his character and in particular was distinguished by that sort of avarice which while rigidly parsimonious in small matters, is capable of occasional expensive acts of generosity. Mr Nollekens who became a royal academician in 1772 died April 23, 1823, in the eighty-sixth year of his age, and in the possession of a fortune amounting to nearly 200 000L—*See Biog.*

NOLLET (JOHN ANTHONY) an eminent natural philosopher of the last century. He was a native of Pimbré in the diocese of Voyer in France and died at Paris in 1770 at the age of sixty nine. He was lecturer on experimental philosophy to the duke of Savoy and afterwards to the royal family in his native country and he also held the professorship of physics at the college of Navarre at Paris. He was the author of "Lecons du Physique Experimental" 6 vols. 12mo, "L'Art des Experiences," 3 vols. 12mo, "Recueil de Lettres sur l'Electricité" 3 vols. 12mo besides other works.—*Biog. Univ. Diet. Hist.*

NON (CLAUDE RICHARD de St) born in 1728 and advantageously known as the author of a splendid work published at Paris by subscription, under the title of "Voyage Pittoresque de Naples et de Sicile," which was afterwards abridged by Koeni secretary to the court of Anspach. In the composition of this book, which is valuable, as well for its biographical notices as for the mode in which it treats of every thing connected with the arts or antiquities of the kingdom of the two Sicilies, he was assisted by his brother and by the painters Fragonard and Robert, in some numer- ous views and delineations which it contains. He was in the earlier part of his life a com- mander of the parliament of Paris, and died in that capital in 1791.—*Biog. Univ.*

NONIUS or **NONNIUS**. There were four of this name. **MARPALLUS**, a precipitate phi- losopher, critic, and grammarian was a native of Tiber, (now Italy) in the fourth century and was the author of a treatise, "De pro- prietate Serpentis," five or eight apotropaic

N O R

"volumen," in nine books, edited by J. Moretius, with a commentary, Paris, 1614.—Another of this name, called also sometimes Nansen Pythagoras, flourished in the succeeding century at Memphis in Egypt, and was the author of a medical pamphlet of St John's Gospel, printed at the Aldine press, Venice, in 1501, and of an heroic poem, in forty-eight books, entitled "Dionysius," printed at Antwerp with a Latin translation by Ellard Leiss in 1559.—LAWES NOVENSIS, born at Antwerp, in the early part of the seventeenth century was a physician of considerable eminence, celebrated as well for his professional ability as for his intimate acquaintance with classical and general literature. A treatise of his, *De re Cibarum*, Antwerp 1646 is valuable for the light it throws upon the domestic luxury of the ancients, as described by their own poets. His other works are an account of the principal rivers in Spain and a Numismatic treatise on the Greek medals, and those struck by the first three Caesars. This last appeared in 1680 illustrated by some admirable engravings of Goltius.—PETER NOVIUS or NUNUS, an eminent Portuguese mathematician was born in 1497 at Alcaçor anciently called Salcena whence he is sometimes styled Salciense. He obtained the mathematical professorship in the university of Coimbra, and was elected, on account of his talents, by king Emanuel to superintend the education of his son, Don Ensignes, with the title of cosmographer royal. He published a treatise "On Navigation," "Mechanical Problems on the movement of Vessels by Ours," "Observations on the Planetary Theory of Purbachus," "De Crepusculo," some notes on Aristotle's works and a valuable treatise on algebra and geometry published in Portuguese and Spanish. His death took place in 1577.—*New Hist.*

NOODT (GERARD) a learned jurist was born at Nimeguen in 1547. He visited the universities of Leyden, Utrecht, and Franeker where he took the degree of doctor of law in 1569. On his return to Nimeguen he was chosen professor of law and in 1584 he was appointed professor in the university of Utrecht. He afterwards removed to the same station at Leyden where he died in 1725. His works were collected and published in 1713 and 1734, and include two treatises,

De jure Secundi Imperii et Legi Regiae, and *De Religione ab Imperio iure Gentium liberis*. The style is pure but they are to conceive as sometimes to be obscure.—*Moreri, New Hist.*

NORBERG (Gustav) chaplain and historian of Charles XII of Sweden. He was born at Stockholm in 1677 and having finished his studies at Upsal he entered into the church, and in 1708 became chamberlain to the Swedish army. In 1707 he was made chamberlain to the king, with whom he was at the battle of Poltava, where he was taken prisoner. Having been sent to Russia with count Piper he was not liberated till 1715, when he joined King Charles in Poland. Soon after he

N O R

obtained the office of pastor to a chamberlain Stockholm, where he died in 1746. Gustafberg was distinguished as a youth orator, and has published a good many historical discourses, but his history of Charles XII is the only work which entitles him to notice. The materials which he used were partly furnished by the Swedish government, and the manuscript was corrected by queen Ulrica Eleonora, the sister and successor of Charles XII. The history was published at Stockholm, 1746; 8 vols. folio and a French translation appeared at the Hague in 1742 in 3 vols. 4to.—*Hag. Univ.*

NORDEN (Fransisco Lewis) an eminent geographer and traveller was born at Glückstadt in Holstein, in 1708. He entered the marine service and became an excellent draughtsman, that the king of Denmark sent him to travel in Europe, in order to study the construction of ships. By command of the same monarch he afterwards went to Egypt, to examine the curiosities of that country, and he published the results of his observations in a work entitled "Travels in Egypt and Nubia." In 1739 when the war broke out between England and Spain he entered the English navy but his health being very delicate he went to France and died at Paris in 1746. His Travels were translated into French by Des Roches de Parthenon, and published at Copenhagen in 1755 there is also an English translation by Dr Peter Templeman. Norden was also the author of "Drawings of some Ruins and Colossal Statues at Thebes of Egypt with an Account of the same, in a Letter to the Royal Society," 1741.—*Dicit. Hist.*

NORDEN (John) a topographer and engraver was born in Wiltshire in 1546, and was admitted of Hart Hall Oxford, where he took the degree of M.A. in 1573. He was patronised by lord Burleigh, and became surveyor to Henry prince of Wales. He surveyed the counties of Essex, Hertford, Middlesex, but the last of his county maps is that of Surrey. He died in 1586. His works are "England, an intended Guyde for English Travellers, &c. London, 1625 4to; "Speculum Britanniae; a Topographical and Historical Description of Cornwall," "An Historical and Chorographical Description of Middlesex and Hertfordshire," "A Delineation of Northamptonshire," 8vo; "The Surveyor's Dialogue," 4to.—*Gough's Topog. Archiv. Oxon.*

NORGATE (Edward) a native of Cambridge, celebrated as an excellent illuminator of manuscripts in the seventeenth century. A beautiful specimen of his talents is yet extant, in the transcripts to the original patent of the government of Nova Scotia, granted by Charles I to lord Bering, in whose family it is preserved. He died in 1656, being at the time Windsor herald, and one of the clerks to the signet.—*Big. Brit.*

NORRIS (Edward) a learned apothecary, was born at Weston in 1651, of a family originally Irish. His father Alexander Norris, was the author of a "History of Germany." At the age of fifteen he was admitted a pensioner at

N O R

the postul. college at Brescia, and determined to pursue the ecclesiastical profession; he took the habit in the convent of the brothers of St. Augustine. When his novitiate expired, the general of the order sent for him to Rome, and he was afterwards appointed to teach philosophy and theology at Pavia and Parma, where he took his degree of D.D. He then proceeded to Padua, where he finished his "History of Paganism," which was printed at Florence in 1673, and in 1674 the grand-duke of Tuscany invited him to Florence, and appointed him his chaplain, and professor of ecclesiastical history in his university of Pisa. In 1696 he was made under librarian of the vaticans, and in 1698 he was created a cardinal. In 1700 he was appointed librarian of the vaticans and two years after he was directed to undertake the reformation of the calendar, but while employed on this he was attacked by a disease of which he died in 1714. The numerous controversial and learned works of this cardinal were all published at Verona in 1719-1738 in five volumes folio.—*Lond. Hist. de la Lit. de l'Italie. Dugm. Moxvi. Noss. Diet. Ital.*

NORRIS (John). There were two of this name, the first a learned but enthusiastic and mystical divine was the son of the incumbent of Collingbourne Kingston in Wiltshire, where he was born in 1657. From Winchester grammar school he proceeded to Exeter college, Oxford, which he quitted in 1688 on obtaining a fellowship at All Souls. Here he took his master's degree in arts, but vacated this professorship in 1689, by his marriage on succeeding to the living of Newton St L. Somerset; two years after he was further promoted to that of Bemerton in Wiltshire. He was a great controversialist, but visionary in his ideas, espousing Malebranche's opinion of seeing all things in the Divinity and is considered one of the principal of the English Platonists. Among his works, which are numerous, are "An Idea of Happiness;" "A Picture of Love unveiled;" "Theory and Regulation of Love;" "On the Beatitudes;" "Peces and Discourses;" "On the Conduct of Human Life;" "On the Love of God;" "On Christian Prudence;" "On Humility;" "An Essay towards the Theory of the Ideal or Intelligible World." See, "On the natural Immortality of the Soul;" Reasons and Religion, with four volumes of sermons, some poems, and other miscellaneous pieces. His death took place in 1711.—The second John-Norris was a native of the county of Norfolk, born in 1704, and educated at New College, he proceeded on the foundation to King's College, Cambridge. Mr. Norris was a graduate of good private fortune, and at his death, in 1777, bequeathed to the university of which he had been a member property to the value of £500 per annum, for the endowment of a divinity professorship and a library and prize essay, both which still bear his name.—He was the intimate friend of Priest, who owed much to his friendship.—*Biog. Brit. Gene. Mag.*

N O R

NORTH (Sir Edward) a lawyer-of-arms in the reign of Henry VIII and Queen Mary, by the latter of whom he was created Baron North, of Collyngwra, Lancashire. He belonged to the court of ambassadors, and he was a benefactor to the college of doctors at Cambridge.—His great grandson, Dunstan, lord North, was born in 1581, and succeeded to the title in 1600. He belonged to the court of Henry prince of Wales, and in the civil war under Charles I, he adopted the cause of the parliament. He was the author of a piece entitled "A Forest of Vanities, Extractions, and Privacies or Extravagancies." His death took place in 1664.—Dunstan, lord North's eldest son of the preceding received his education at the university of Cambridge, and afterwards entered into the army. Walpole has given him a place in his "Catechism of Royal and Noble Authors" in consequence of his having published "Observations and Advices Economical," "Passages relating to the Long Parliament," and "A History of the Life of Edward Lord North." He died in 1677 leaving four sons, who attained political or literary eminence.—1. **Fulkes North**, baron Guildford, lord keeper of the great seal under Charles II and James II, was the second son of the last-mentioned. He was born about 1640, and became a student of St John's college, Cambridge, after which he entered at the Middle Temple, and was regularly called to the bar. He gradually made his way to the first dignities of his profession rather by his prudence and dexterity than by the influence of extraordinary talents. He was promoted to the office of solicitor-general in 1671, when he received the honour of knighthood; in 1673 he was made attorney-general the next year chief justice of the common pleas, and in 1683 he was appointed lord keeper and raised to the peerage. He was much esteemed by Charles II who, one evening when his courtier invasively observed that North was no lawyer, immediately replied Whoever said so did not know the lord-chief justice North. He died in 1685. Besides some papers in the Philosophical Transactions lord Guildford was the author of "A Philosophical Essay on Music" which has been highly praised as a scientific performance which contributed greatly to the improvement of the art of which it treats.—2. **Sir Dudley North**, brother of the lord keeper, engaged in commercial pursuits, and became an eminent Turkey merchant. He travelled to the Levant, and was for some time president of the English factories at Smyrna and Constanople. Returning home, he was appointed a commissioner of the customs, and afterwards one of the lords of the treasury in the reign of Charles II. He wrote observations on the revenue, customs, and jurisprudence of the Turks, published in his brother's family biography. He died in 1694.—3. **Dr John North**, another brother embraced the ecclesiastical profession. He was born in 1666, and was educated at Jesus college, Cambridge, whence he obtained a fellowship. In 1693 he was

N O R

N O R

classical professor at Oxford, and the following year he was created DD. He subsequently became the master of Trinity college Cambridge, and was sometime clerk of the closet to Charles II. Dr North was a man of considerable qualities and is said to have been a particular admirer of the writings of Plato, a selection of whose dialogues, including "Crito," "Phaedo" with the "Apologia Socratis," he published in Greek and Latin, 1673 8vo. His death took place in 1683.—4. ROBERT NORTH a younger brother of the same family belonged to the legal profession, and was attorney-general under James II and steward of the courts to archbishop Sheldon. It is however, as the historian of his family that he principally merits notice. His life of the lord keeper lord Guildford 1734, 4to, was reprinted in 1808 2 vols. 8vo and has lives of sir Dudley and Dr John North 1744, 4to recently appeared in a new edition with the preceding 3 vols. 8vo. He was also the author of an "Examen or Inquiry into the Credit and Veracity of Kenelm's History of England" 1740 4to which though the work of a partisan of the Stuarts and designed as a vindication of Charles II abounds with curious information and anecdote, giving it a degree of positive value beyond most works of the kind. He likewise wrote other pieces among which is a "History of Esculent Fish" 1794 4to. He died in 1733.—*Fuller's Worthies, Walpole's Beg Brer Rose's Cyclop. Beg Unit.*

NORTH (FREDERICK) earl of Guildford an English statesman of the same family with the foregoing. He was the eldest son of Francis the second earl of Guildford and was born in 1732. He received his education at Eton school and Trinity college Oxford after which he passed some time at Leipzig. He returning to England he obtained a seat in the House of Commons and in 1759 he was appointed a commissioner of the treasury. On the resignation of lord Bute in 1763 he was advanced to the head of that board, which post he held till 1765 and the next year he was made joint receiver and paymaster of the forces. At length in 1767 he became chancellor of the exchequer and in 1770 first lord of the treasury. His administration lasted till 1782 during a period of peculiar difficulty and danger. Having accepted of office at a time when the court party had become unpopular on account of the secret influence supposed to be possessed by lord Bute something of that unpopularity attached to the whole course of lord North's ministry. But this was greatly augmented by the unfortunate contest which was carried on with our North American colonies, and which ended in the loss of that part of the British empire after the expenditure of a vast deal of the national wealth and the sacrifice of multitudes of lives. For this unwise measure of subjugating America, the premier appears to have been a strong advocate, and in defending his proceedings against the attacks of Mr Fox and his party in parliament, he evinced a degree of political

skill and resolution which would have done however to a better cause. His circumstances by no means creditable to his opponents, that after his dissolution from office, instead of distinguishing against him that impeachment with which they had often threatened him, a league was formed between his lordship and the Whigs, which led to the famous coalition ministry, but this heterogeneous administration lasted only a few months, after which lord North had no responsible station in the state. He succeeded to the earldom of Guildford in 1790 on the death of his father and died in 1792. Lord North was much esteemed in private life and was distinguished for urbanity of manners, and a turn for repartee. He was afflicted with blindness several years before his death, and his political antagonist, colonial Barre was subject to the same misfortune. Replying to some observations of the colonial in the house of Commons, lord North said—

Notwithstanding the hostility which the honourable gentleman opposite has shown towards me yet I am certain that there are no two persons in the world who would be more happy to see each other.—*Bridges's Edit. of Collins's Farce.*

NORTH (GEORGE) an English antiquary and writer on numismatics. He was born in London in 1710 and received his education at St Paul's school and Bene't college, Cambridge where he proceeded MA in 1744. He was rector of Codicote in Hertfordshire and died in 1772. Mr North was the author of "A Table of English Silver Coins, from the Conquest to the Commonwealth with Remarks," "An Epistolary Dissertation on some supposed Saxon Gold Coins," "Remarks on some Conjectures relative to an ancient Piece of Money found at Etham in Kent" and "An Answer to a Libel" added the Impertinence of Modern Antiquaries displayed.—*Nichols's Lit. Anec.*

NORTON (THOMAS) a dramatic writer of the sixteenth century a native of Shropshire Bedfordshire, principally known as the author of the first three acts of "Ferrar and Ferrex" to which Thomas Sackville earl of Dorset added the fourth and fifth, and published the whole under the title of "Gorboduc." He was a staunch Calvinist in his religious opinions and put into metre twenty-seven of the Psalms in Sternhold and Hopkins's version these may be distinguished by his initials affixed in the first edition. His other writings are some controversial tracts against the Roman Catholics, and translations of Novell's "Gretter Catechisme," "Calvin's Institutes," &c. He made the law his profession and acted as counsel to the Statuaries' company. His death took place about 1584.—There was also a John Norton a whimsical writer of the time of Charles II who is a strange work entitled "The Scholar's Vade Mecum," proposed to alter the whole structure of the English language.—*Biog. Brit.*

NORWOOD (RICHARD) an English numismatist who first measured a degree of the medallions in this country. This undertaking

NOT

was executed in 1622, the operations being carried on between London and York. Moreau was the author of a treatise on Hydro-mechanics, printed at London in 1607, though the dedication is dated 1604. The work was published in 1609, with two sheets relating to navigation and fortification. He also published papers and papers in the "Sociological Transactions," on the size and nature of the tide; meteoric observations of an arc of the meridian, and on other subjects.—*Bibl. Univ.*

NOSTRADAMUS (*MAGNAN*), a celebrated empiric of the sixteenth century, born December 1460, 1480, at St Rémy in Provence. After studying at Aragon and Montpellier and graduating in physic at the latter city in 1503, he practised medicine at Agen, Marciac, Lyons, and Aix. Here he acquired great credit by a clemency composition of such pestilential virtue, real or supposed, that the plague which had been raging with great violence in the neighbourhood was arrested by its presumed influence, and the physician received some substantial tokens of the gratitude of the citizens. The reputation of a skillful physician however was not sufficient for his ambition; he aimed at the higher character of an astrologer and adept in the occult sciences, by virtue of which he pretended to foretell future events, and published a volume of obscure metrical rhapsodies in 1555 under the title of *Prophetical Centuries*. Henry II and Catherine de Medici yielded implicit credence to his pretensions, and loaded him with favours a circumstance which naturally induced him to prosecute still further a trade so profitable, and his prophecies were consequently soon increased from three hundred stanzas to a thousand. The king at length dying of a wound received from the lance of the count de Montgomery, at a tournament, it was soon after discovered that an enigmatical expression in one of the prophecies of Nostradamus could refer to no other event. His fame now reached its zenith, and all ranks, from the palace to the cottage, vied in cherishing his presence. Charles IX himself came in person to Salon where he now resided, for the purpose of visiting him, and appointed him his first physician. He did not however long survive this honour dying on the 3d of July 1563. There is an English translation of his book in one folio volume.—*Morat. Bibl. Univ.*

NOTT MD (*JONES*) a polite scholar, an elegant poet, and philological writer born at Worcester December 24th, 1751. Having studied surgery under Mr Hector of Barming hall, and at Chester Hospital, he visited Paris, in order to avail himself of the opportunities afforded by the French school of medicine, and subsequently went out to China, as surgeon to the East India Company. While in the East he acquired an extensive acquaintance with the Persian language; his proficiency in which as well as in Persian verse, he evinced, on his return to England, by some elegant translations of Persian poems. In 1786 he graduated in medicine, and soon after attained the degrees of Bachelor and Master of the University, in quality of

NOV

family physician. In 1792 he removed to Liverpool, and settled at Bristol Hot-wells, where he remained to reside till his death in 1808, the last eight years of his life being those of infirmity, arising from a painful state of gouty rheumatism, attending to hemiplegia. Among his writings are, "Alonzo, a poetic Tale," 4to, 1773; a translation of the "Basic" of Joachim Sartorius, 8vo, 1775; "Lucanus, an Elegy," 4to, 1775; "Poems from the Italian of Petrarch," 8vo, 1777; "Original Pictures and Translations, 8vo, 1780; "Heroic Epistles from numerous Authors in London to Madame Helvetia in France," 4to, 1781; the "Cynthia of Propertius," 8vo, 1782; "Chemical Dissertation on the Springs of Pisa and Arezzo," 8vo, 1792; "On the Hot-wells of Bristol," 8vo, 1793; an edition of "Catullus," with the Latin text rendered into English verse, and classical notes 3 vols. 8vo, 1794; a translation of the "Kisses of Bonifacius of Aixargues" with the Latin text annexed 8vo, 1797; another of "The first Book of Lucretius," with the Latin text, 8vo, 1799; "The Odes of Horace" with the Latin text revised, 8vo 2 vols. 1803; "Sappho after a Greek Romance 1790-1803" On the Influence which prevailed at Bristol in 1803" 8vo, 1803; a further Selection from Petrarch with Notes," 8vo, 1808; select poems from the "Hesperides of Herck" 8vo 1810. A *Nasological Companion to the London Pharmacopoeia* 1810 1811; and an edition of Decker's "Gull's Horn Book" with notes and illustrations 4to 1812, besides several works left incomplete in manuscript, especially a translation of *Silius Italicus*.—*Ains. Bibl.*

NOUÉ (*FRANCIS de la*) surname Bras de For an eminent warrior and statesman, was born in 1551 of an ancient family in Brittany. In his youth he served in Italy but on returning to France he embraced the Calvinistic religion, of which he became a zealous supporter. In 1567 he took Orléans from the Catholics, and afterwards he distinguished himself at the battle of Jarnac. His left arm being broken at the capture of Fontenay he had it replaced by one of iron, whence he derived his surname. In 1571 he surprised Valenciennes, and on his return the king gave him the command of the troops sent against Rochedalle but his indignation at the massacre of St. Bartholomew overcoming his fidelity he betrayed his trust and used the forces for its defence. He rendered signal service to his party and on the accession of Henry IV he continued to serve with glory under him until he was killed by a musket shot at the siege of Lamballe, in 1591. He was the author of "Discours Politiques et Militaires," composed in prose, they have been several times reprinted, and are still esteemed.—His son, *Oscar de la Noué*, was the author of "Pistis Christiana," Geneva, 1594. He died between 1611 and 1630.—*Morat. Bibl. Hist.*

NOVATIUS, a Greek philosopher, converted to Christianity in the earlier part of the third century. He became a member of

N O W

the priesthood; although, from some inequality, the bishop refused to make his ordination. Notwithstanding this, he subsequently so far prevailed upon a few ignorant priests, that they ordained him a bishop, and, although excommunicated by St Cyprian, he became a candidate for the papacy in 237. Failed in his attempt by the election of Cornelius, he separated himself from the communion of the Romish church, and became the head of a sect called from their pretensions to superior sanctity Cathartes, (puritans,) or Novatians, from their founder. It was one of their tenets to refuse the Eucharist to recovered heretics, as also to those who contracted second marriages, and they caused all those who had been baptised into the church to undergo the rite a second time. This sect, after the council of Nice, fell into disrepute in the Western empire but continued to prevail for a much longer period in the East. There is an edition of his works published by Jackson, 4to, London 1729.—*Cave. Monit. Dupin.*

NOVERRE (Jean Goujon) reformer of the art of dancing in Europe was born at Paris in 1737. His father was an adjutant in the army of Charles XII, and he was destined for the military profession; but his taste led him to prefer dancing to fighting, and he became the pupil of the famous dancer Dupré. After attracting the notice of royalty in his own country he went to Berlin where he was equally well received. He returned to France in 1766, and composed for the comic opera his noted Chinese ballet, which made no extraordinary sensation. He afterwards produced other pieces of the same kind and acquired so much celebrity that Garrick invited him to England where his talents attracted great admiration. Returning to France he published, in 1767 *Lettres sur la Danse*, in which he started some new ideas and proposed a radical reformation of his art. He afterwards became master of the revels to the duke of Württemberg with whom he continued some years, and then held a similar office at Vienna. He went to Milan on the marriage of the archduke Ferdinand and also visited the courts of Naples and Lisbon where his merit was rewarded with the cross of the order of Christ. After a second journey to London Noverre entered into the service of Mme Antoinette, queen of France who appointed him chief ballet-master of the royal academy of music. He suffered greatly at the revolution and passed the later years of his life in indifferent circumstances. His death took place November 19 1810. He published in 1807 a new and enlarged edition of his "*Lettres sur les Arts mimiques, et sur la Danse en particulier*," 2 vols. 8vo., and at the time of his death he was engaged on a dictionary of the art of dancing, intended to rectify the errors of the *Encyclopédie* on that subject.—*Big. Univ.*

NOWELL. There were two learned dignitaries of the church of this name in the sixteenth century brothers, and natives of Headhall, in Lancashire.—ALEXANDER the elder,

N O Y

born in 1580, removed from Middlesex school to Merchant's college, Oxford, where he obtained a master's fellowship. In 1599; viz 1600 he was appointed to the second mastership of Westminster school, to which was added, eight years after a stall in the abbey. On the occasion of Mary his religious opinions made it advisable for him to seek a temporary asylum on the continent, where he continued to reside during the whole of that reign. The re-establishment of Protestantism under Elizabeth induced him to return; and in 1590 he was raised by that sovereign to the deanship of the metropolitan church, with the rectory of Great Budham, Herts. The convocation for settling the Liturgy chose him their prolocutor soon after which he published his "*Graunt*" and *Lesser' catechisms*, in Latin, the latter being an abridgment of the former. Besides a free grammar-school at Middleton, he founded and endowed thirteen fellowships in the college of which he was a member, and which, in 1605 elected him its principal. His death took place in the spring of 1606.—LAWRENCE, the younger brother, was an able antiquary, and compiled a dictionary of the French tongue the manuscript of which is still preserved in the Bodleian library at Oxford. NOY (WILLIAM) an eminent lawyer of the seventeenth century in whose counsels the fatal civil war which, during a part of that period, desolated England, may be said to have originated. He was a native of St Ives, in Cornwall and after going through a course of university education at Exeter college Oxford became a member of the society of Lincoln's Inn, and was called to the bar. In his profession he rendered himself remarkable by his plodding industry and indefatigable research into ancient charters and records, which together with his cynical temperament and unbending sternness, rendered him afterwards a very powerful instrument in the hands of the court. The outset of his parliamentary career however gave little token of the line of politics which he eventually thought proper to follow. Being returned for Helston and afterwards for St Ives, in the time of the first James, he distinguished himself by the violence of his opposition to the measures of the court, and in these opinions he persevered during the first part of the succeeding reign till, in 1651, being suddenly appointed (without solicitude, it is said,) attorney-general he veered about at once and became one of the most strenuous supporters of that prerogative he had formerly laboured to abridge. The final project of attempting to raise supplies, by what was called ship-money is said to have originated with him. He did not, however live to see the whole of the misery which he was preparing for his country, but died in the August of 1658, at Tunbridge Wells, whither he had gone for the benefit of his health, and was buried at Brentford, in Middlesex. He was

considerable distinction, whose position did not improve, and after the number of "The Oracle and Monitor" in English, "L'Oraculo," "The pocket Oracle," "The complete Lawyer," "Arguments of Law and Practice," and a collection of Reports—*Die Reihe*.

NUGG (Aurelius) a skillful anatomist and surgeon, was educated by birth, but studied in Holland. He was professor of anatomy and surgeon in the university of Leyden, and founder of the college of Surgeons. He died in 1679. He acquired great celebrity by his skill in dissection, and he was the discoverer of a new interval due, of the common carotid between the red vein and the lymphatics, and of a mode of making preparations of the lungs by inflation. His works are "De Ductu Galvini novo, Mahr, doctrinae systematis humanae aquae ventricos," Leid. 1668; "De Vena aorta Gouby" 1669; "Adanatomica carica et Utens facultatis anatomica novissim Epistola ad Amicum de Faventia novis;" "Operaciones et Experimenta Chirurgica;" "Siculographia et Descriptio aquorum Anatomie novarum." The three last were published together at Lyons in 1722 in 3 vols. 12mo.—*Eley Dict. Hist. de la Medecine*. *Moor.*

NUGENT (ROBERT CRANES, sard.) a minor post of the last century. He was a native of Ireland, and of a family professed the Catholic faith in which he was educated. Becoming a Protestant, he obtained a seat in the English house of Commons, where he thrice sat as member for the city of Bristol. In 1707 he was created viscount Clare and raised to the peerage of Nugent in 1716. He published a volume of poetry in 1739, and some of his works will be found in Dodgley's collection. One of his performances is a copy of "Verses to the Queen, with a New Year's Gift of Irish Manuscripts," (a piece of linen) printed in 1774. To this nobleman Goldsmith addressed his poem, entitled, "The Plough of Venus." Lord Nugent died in 1788.—*Parl's Hist. of the Royal and Noble Authors.*

NUGENT (THOMAS) an ingenious literary compiler and translator, who was born in Ireland and died in London April 27 1773. He was a fellow of the Antiquarian Society and in 1765 he obtained from the university of Aberdeen the diploma of LL.D. Among his publications are, "Travels through Germany 1765, 4 vols. 8vo," "Observations on Italy and its Inhabitants" 1769, 2 vols. 8vo, and a French and English dictionary, which has been often reprinted. He translated Hennel's Chronological Abridgment of the History of France; "The Life of Benvenuto Cellini" and several other works.—*Christophorus Nugent* NUGGETT, was a native of Ireland, and was the author of one of the celebrated *Edinburgh Stories*, "An Essay on Hydropathy." He practised with much reputation in Dublin, in the metropolis, and died December 14, 1775.—*Gent. Mag.*

NUNEZ (FRANCIS DE GUzman) a knight

and commander of the order of Knights, was born at Valladolid in the year 1490. His inclination leading him to literature, he wrote, long study unaided, interpretation and when cardinal Ximenes founded the university of Alcalá, he, and Domènec the Cretan, were appointed Greek professors, and he was employed by the same cardinal on his celebrated Polyglott. He distinguished himself in the cause of liberty, endeavouring to win the people of Alcalá to the side of the Comuneros of Castile, but the tide ran against him; he removed to Salamanca, where he was also appointed Greek professor. He died in 1553. His principal works are, "Annotations in Seneca Philosophi Opera," "Observationes in Posidonius Melius;" "Observationes in loca obscuris et degeneris Hist. Nat. C. Plinius," "Refraues & Proverbia ex Romance folio" "Glossa sobre las obras de Juan de Mena." —*Autor. Bibl. Hisp.*

NYE (PETER) an eminent nonconformist divine who distinguished himself by his support of the parliament against Charles I during the discussions in the assembly of divines at Westminster, was born in Sussex about 1606. He took his degree in arts in Magdalen-hall Oxford, after which he became minister of St Michael's church, Cornhill. Here he remained, until by his resistance to archbishop Laud, he rendered himself obnoxious to the episcopal court, and to escape persecution fled into Holland. There he remained until 1640 when finding that his party was gaining the ascendancy he returned, and was made an elder of Kimbolton, in Huntingdonshire. He was one of the assembly of divines, and distinguished himself by his greatness, for which he was rewarded with the rectory of Acton near London. In 1647 he was appointed one of the chaplains who attended the commissioners empowered to treat with Charles I in the Isle of Wight. He continued to make himself conspicuous by the active part he took in politics until the Restoration when he was ejected from the rectory of St Bartholomew behind the Exchange and an act was passed, restraining him from holding any office, civil or ecclesiastical. He died in 1673. "and says Galway left behind him the character of a man of uncommon depth, who was seldom if ever outreached." He published several treatises and exhortations on controversial subjects, but they are now obsolete.—*Wood's Ath. Ox. Biog. Brit. Galway. Nasl's Hist. Purit.*

NYSTEN (PETER HUSAR) an eminent physician and physiologist, born at Lange in 1771. He was intended for the legal profession, but preferring the study of medicine, he went to Paris for improvement in that science and distinguished himself by his researches concerning galvanism. In 1800 he was appointed member of a medical committee despatched to Spain to make observations on the yellow fever. Returning to Paris, he published several works; and through the interest of M. Haldé he was made physician to the Bounding Hospital. He died owing to an attack of apo-

O B E

OBIGEY, M.D. (THOMAS LEWIS) A noted physician, a native of the county of Loughfarn in Ireland, born in 1748, of a Catholic family by whom he was sent to St Omer at an early age together with his brother John with a view to the priesthood. In the latter instance, the wishes of their relations were

O B E

"Novelles expériences faites sur les Organes Musculaires de l'Homme," &c., "1803, 8vo; "Recherches de Physiologie et de Clinique

O B R

OBATES (TOM). This infamous character was born about 1619. He was the son of a heretical preacher and educated at Merchant Taylors' school whence he removed to Cambridge, and afterwards took orders. In 1657 he turned Roman Catholic, and was admitted into the society of priests but subsequently declared himself a Protestant and in conjunction with one Dr L'Estrange gave information of a pretended papist plot for the destruction of the Protestant religion and falsely accused the Catholic lords Petre, Powis, Bellasis, Arundel, of Warwick and other persons of quality, several of whom, including lord Stafford, were executed, of being concerned in the conspiracy. Such was the heated credulity of the times, this versatile and unscrupulous character was rewarded with a pension of 1,000*l.* per annum and lodged for safety at the palace of White hall. On the accession of James II, however he was thrown into prison, and indicted for perjury and being convicted, was sentenced to stand in the pillory five times a year during his life and to be whipped from Aldgate to Newgate, and thence to Tyburn, the last part of which sentence was executed with extraordinary severity. Though the whipping was so harshly inflicted, he was enabled, by the care of his friends, to recover, and at the Revolution, the current of popular prejudice again setting in his favour he was rewarded with a pension of 1,000*l.* per annum. In 1698 he sought to be restored to the congregation of baptists, to which he had primitive belonged, but in the course of a few months was excluded as a hypocrite and disorderly person. He died in 1705. Hume says that this execrable tool of faction had in early life been chaplain on board the fleet, from which he was dismissed for unnatural practices and it was then that he became a convert to the Catholic religion as he boasted, with a view to obtain the secrets of its adherents. On all sides the infamy of his character is allowed, and the credit given to a massacre or utterly unscrupulous confidence to the destruction of several persons of respectability, and even consequence affords a memorable illustration of the opposing bigotry which predominated in that most disgraceful period of English history.—Hume.

OBRIEN, DD (THOMAS LEWIS) a learned prelate, a native of the county of Loughfarn in Ireland, born in 1748, of a Catholic family by whom he was sent to St Omer at an early age together with his brother John with a view to the priesthood. In the latter instance, the wishes of their relations were

O B R

complicated with John, taking orders in due course, and becoming a Calvinist prior to the disease of which his hereticism eventually the Protestant bishop—whether, at the contrary conversion to the church in which he had been educated, disinterested that of the Established church. At the commencement of the American war having taken service in the Protestant communion, he accompanied Lord Howe as chaplain of the fleet. On his return to England he published a vindication of his patrons, the Howes, whose conduct was at that time a subject of parliamentary investigation, which he followed up by a printed pamphlet on the opposition side, entitled "The Gleam of Comfort." His connection with the noble family introduced him to the then Duke of Portland, whom in 1782 he accompanied to Ireland, as private secretary, and obtained, the following year, from his grace, two valuable livings in Northumberland and Cumberland. Becoming afterwards first chaplain to the new lord lieutenant, earl Fitzwilliam, he was promoted to the see of Ossory, from which, on the death of Dr Maxwell he was translated to that of Meath. As a prelate he was highly popular among the clergy of his diocese. His writings, some of which were published anonymously are "The Crucifixion" a poem, in 4to, 1776, "The Generous Imposter" a comedy 1780; "A short History of the last Session of Parliament," 8vo, anonymous, Considerations on the late Disturbances, by a consistent Whig 8vo, "Considerations on the Principles of Naval Discipline and Courts-Martial" 8vo, 1781, and several sermons and charges on various occasions. His lordship died February 13th, 1823.—Cont. Mag.

OBERKAMPF (OBERKAMPF PAPER) the founder of the manufacture of printed linens of Jossy and of the cotton manufacture of Essoyes in France. He was born in 1759, in the territory of Ansbach in Germany; and was the son of a dyer who, after converting his occupation in several parts of Germany, had taken up his residence at Arns in Switzerland. Young Oberkampf having acquired the art of making printed linens, quitted his father at the age of nineteen; and two years after he commenced, on a small scale, a manufactory in the valley of Jossy. The designs of the figures, the printing, and the dyeing of the goods, were all performed by a single individual, who, in spite of various difficulties with which he was surrounded, acted with such spirit and perseverance that in the progress of time he collected a population of 1,300 persons in a spot which had been almost a desert, and by the supply

ON IT

admitted titles at least, yet as well as the inheritances of those nobles who had been. That however he had "territories" on the country-side property appertained. Louis XVI conferred on Oberkampf letters of nobility; and in 1790, the general of the department deserved the creation of a status in honour of him, which mark of gratitude, however, he declined. In 1793 his wife died, however, but he fortunately recovered from her death. Some years after he was appointed to the command of a small, which he rendered very serviceable, the cross of the legion of honour having set him by Bonaparte. Oberkampf by another part of his life, established a cotton industry at Rouen and thus introduced the important branch of industry in France. His connections which accompanied the overthrow of Bonaparte had a disastrous influence on the assassinations of Joly and deeply affected the mind of the prosector, whose death took place October 4th, 1815.—*Biog. Univ.*

OBERRLIN (JEREMIAH JAMES) a learned and judicious antiquary and philologist born at Strasburg in 1735. He studied in the university of his native city and in 1758 he obtained the degree of doctor of philosophy. He afterwards attended lectures on theology but his researches were devoted chiefly to sacred criticism and antiquity. At the age of twenty he became an assistant to his father who was a tutor at the gymnasium, and whom he succeeded in 1770, at which period he was likewise appointed professor of Latin eloquence at the academy. He also gave lectures on archeology, ancient geography, diplomacy, &c. relative to which subjects he published six masterly treatises which have been used as text-books in many of the German seminaries. In 1778 he was nominated professor extraordinary at the university of Strasburg and in 1785 he obtained the chair of logic and metaphysics, to which, in 1787, was added, the office of director of the gymnasium. The French Revolution interrupted his learned labours, and in 1793 he was imprisoned at Metz and treated with great cruelty. The termination of the tyranny of Robespierre restored him to liberty and he returned to Strasburg to resume his literary occupations. On the establishment of the central schools, he was appointed librarian of that of the Lower Rhine. He died October 10th, 1806. He published valuable editions of Tacitus and Caesar and various other works, of which a list may be found in the annexed authority.—*Biog. Univ.*

GERECHT (Ulrich) native of Strasburg who became professor of history and rhetoric in the university of that city. Such was his reputation for variety and extent of learning, that he was termed the epitome of human science. Among his principal writings are: "Resumé de l'Historique Politique;" "Exercitationes Historicae et Juridicae de iure mercatorum in Mercatoribus Hispanorum;" "Predictio Sacrae Abstinentie." He published an edition of the Trojan history ascribed to Dictys Cretensis; and also wrote commentaries on the treatise of Grotius. De Jure

OCC

Belli ac Pacis." He was originally a Protestant, but in 1684 he became a Catholic, and was subsequently employed in offices of state. His death took place in 1704, at the age of fifty-four.—*Niceron, Mem.*

OCARIZ or OCARITZ (don J. CASA, chevalier d') a Spanish diplomatist, who distinguished himself by his attempt to prevent the execution of Louis XVI. He was born about 1750, near the frontier of Biscay and having completed his studies at Madrid, he became secretary of the embassy at Tunis and then at Copenhagen. In 1789 he was sent to Paris as counsel-general and in August 1792 he held the post of chargé d'affaires. Shortly after, he wrote to the French minister Lebrun a letter in favor of Louis XVI, which seems to have produced a strong impression in the National Convention, and on the 17th of January, 1793, he wrote a second letter addressed to the Convention, in which he offered the mediation of his sovereign to engage Prussia and Austria to terminate the war with France on condition of the suspension of judgment against the king. When war was declared against Spain in the following month of March the chevalier Ocariz quitted Paris, whether, however, he returned soon after or on the restoration of peace. He occupied other diplomatic situations, and at length having been nominated Spanish ambassador at Constantinople, he died on his way thither at Varna in Hungary in 1805.—*Biog. Univ.*

OCCAM or OCKHAM (WILLIAM) an eminent divine and philosopher of the fourteenth century. He was a native of Ockham in Surrey and was educated at Merton college Oxford, where he studied under the celebrated Duns Scotus whose opinions he notwithstanding controvred, becoming the founder of the philosophical sect of the nominalists as Scotus was of the realists. Occam entered into the Franciscan order of Friars Minor or Cordeliers and he also took orders in the church and became archdeacon of Stowe in the diocese of Lincoln, which preferment he resigned about 1330. He wrote against pope John XXII whom he treated as a heretic, and joined the anti-pope Nicholas V set up by the emperor Lewis of Bavaria. Occam having been excommunicated, betook himself to the protection of the emperor exclaiming, "Defend me O prince with thy sword, and I will defend thee with my pen." He died at Munich in 1347. Trithemius says, he was well acquainted with the Neoplatonists, and with the philosophy of Aristotle; and that he possessed a subtle genius, and a great deal of eloquence. Among his works are, "Commissarium super Sebastianum," lib. iv., "Quodlibet;" "De Invenientia Scientiarum;" and a treatise against the pope, "De Paupertate Christi et Apostolorum." The philosophical tenets of Occam seem to have approached those of Malebranche and Bayle. He obtained the title, among the scholastics, of the Invincible Doctor.—*Trithem. de Script. Eccl. Stell. Latv. in Hist. Lit. Prolegm. Stewart: Prof. Diss. to Encycl. Brj.*

O C H

O D E

OCCO (Augsburg), an eminent writer, an Augustinian; born in 1534, at Augsburg. He received a medical education, and took the degree of M.D. at the academy of Fermo in Italy. Having returned to his native place, he practised his art with success, and on the establishment of the college of medicine at Augsburg in 1560, he held an official situation in it for some time and was deprived by the senate for having opposed the introduction of the Gregorian calendar. He then devoted himself entirely to the study of antiquities and the science of medals relative to which he produced a work of importance entitled, "Numismata Imperiorum Romanorum," a Pompeii Mag ad Heraclium, printed at Antwerp, 1579—40 and with additions at Augsburg in 1601. Occo also published a Pharmacopoeia, and other works. He died in 1605 or 1606.—*Bibl. Univ.*

OCELLUS LUCANUS, so called from being a native of Lucerne, was a Pythagorean philosopher, who flourished about BC 500. He wrote a treatise "On the Universe" which is still extant, and from which Aristotle in his treatise on generation and corruption seems to have borrowed freely. Some critics have been of opinion that this book was compiled from the writings of Aristotle, but Brucker thinks with little reason, as this book passed out of the hands of *Aetius* into those of Plato, and consequently must have existed previously to the time of Aristotle. This remnant of philosophical antiquity was first published in 1539. Of succeeding editions, the best is that by Gale in his "Opuscula cum the Latin translation of Nogarola.—F. W. B. M. G. Brucker

OCHINUS (BERNARDIN) a celebrated Italian monk was born at Sessa, in 1497. He was at first a Cordelier but applying himself to the study of physic he threw off the monastic habit, which in 1534 he again resumed embracing the reformed sect of the Capuchins of which he became vice-general. He also became father confessor and chaplain to pope Paul III. In 1541, whilst at Naples, he became acquainted with John Valdes, a Spaniard and Lutherans, who, by his arguments, succeeded in bringing him over to his faith, which Ochonus began to preach with great boldness. To avoid the persecutions which most necessarily follow his conversion he went to Geneva, thence to Lausanne, where he married and then proceeded to Augsburg, where he published some sermons. In 1547, on the invitation of archbishop Cranmer, he accompanied Peter Martyr to England, for the purpose of ministering in the Reformation, but upon the death of Edward VI being forced to leave the country, he returned to the continent in 1548, and became minister of an Italian church at Zurich where he remained until 1552, when he was banished thence on account of some dialogues, in which he maintained the doctrine of polygamy. He afterwards proceeded to Moravia, where he fell ill with the plague, and then proceeded to Poland, on quitting which country on his way

back to Moravia, he fell ill of the plague, and died at Slupkow in 1564. He was the author of a great number of sermons, dialogues, &c. which have been translated into English by Gen. Dietz. *Strype's Life of Cranmer.*

OCHIS (Peter) chevalier and grand bailli of the state of Basle one of the most celebrated statesmen of modern Helvetic, he was born at Basle about 1742, had having finished his academical studies he received lessons on politics from Imhoff, &c. He has long been distinguished for his political knowledge, when in 1795 he was chosen by his fellow citizens to negotiate with the Barthélémy agent of the French Directory. His subsequently entered in other diplomatic transactions and at length became a member of the Helvetic senate and president of the assembly convened to organize a confederation for the state of Basle under the influence of France. Political intrigues occasioned him to be displaced and in 1800 he went to Paris, where he remained some time. Having attended at the Consulta, held at Paris when Bonaparte was First Consul for the purpose of preparing a federative constitution for Switzerland, Ochs was appointed a member of the council of state at Basle under the new government, which subsisted till the return of the Bourbons to France in 1814. He died at Basle June 19 1821. Ochs was distinguished as an author, having published "Histoire de la Ville et du Pays du Bâle 1785—1821 5 vols. 8vo; Projet de Constitution Helvétique, and some dramatic pieces.—*Bibl. N. des Contemp.*

OCKLEY (Simon) an eminent Orientalist of the last century. He was born at Exeter in 1678 and received his education at Queen's College Cambridge where he took the degree of MA. He entered into holy orders, and obtained the vicarage of Swavesey in Cambridgeshire. In 1708 he published "The Life of Haf Ebu Yekdan, a kind of moral romance translated from the Arabic of Abu Janfar Haf Topkali;" and the same year appeared his great work, "The History of the Saracens, illustrating the Religion, Rites Customs, and Manners of Living of that warlike People," with a life of Mahomet, 2 vols. 8vo of which a new edition was published in 1757. This very learned and industrious scholar met with little encouragement in the prosecution of his studies, and after having been imprisoned for debt, he died in poverty in 1720. Besides the publications mentioned he was the author of "Introductio ad Linguas Orientales," 1713, 8vo and other works.—*Bibl. Brit.*

ODERIC OF PORTENAU, one of the most famous travellers of the fourteenth century. He was born in Frisia about 1286 and entered young into a convent of Franciscans at Utrecht. He visited as a missionary many parts of Asia, then almost unknown, among which were the islands of Ceylon, Sumatra, Java, and Borneo, the southern provinces of China, Chinese Tartary and Tibet. He returned to Europe, after sixteen years' absence about 1330, and hastening to the papal at Avignon, he endeavoured to obtain audience several times

O.D.I

efforts for the conversion of the infidels. The majority of the Church establishment of this See were converted back; and he returned to his old residence at Oderis, which he filled in the beginning of 1000. The interests of Oderis were pursued, and the collection of Romanus, and also that of his predecessor, were increased.—*Bug. Ura.*

ODIUS (Giovanni Lurini) a learned and eminent physician, who was a native of Genoa. He entered into the society of the Dominicans and went to Rome, became professor of Philosophy, and taught canon, medals, and ecclesiastical and other implements of Greek and Latin antiquity. These were the principal objects of his researches. He was admitted a member of the Florentine academy of Cortona, under the name of Thaumaturgus Odericus. On the suppression of the order to which he belonged he receded to Genoa where he was made conservator of the university library, and in 1587 he went to Tenerife with his brother, to conduct some negotiations, and remained there six years. The revolution at Genoa deprived him of his office, but on the reorganization of the university he was re-elected, and at the same period he was chosen a member of the Institute. He died of apoplexy December 10 1603 aged seventy eight. He published some valuable works relating to ancient medals and inscriptions and left us *MS. Notizie storiche sulla Toscana fino all anno 1455* written at the request of the empress Catherine II.—*Bug. Ura.*

ODIRE (Lurini) one of the founders of the medical-surgical society of Geneva, a correspondent of the French Institute and a member of many scientific associations, was a physician at Geneva, where he was born in 1742. He studied at Edinburgh, where he received MD and afterwards visited Leyden and Paris. Returning to Geneva he commenced a course of lectures on chemistry in which he unfolded the great discoveries which had been made in that science by the English and French philosophers. He practised medicine with great reputation in his native city where he exercised several public functions and he assisted in the arrangement of a new code of criminal law. His death took place April 13, 1817. He was the author of a *Mémoir de Pratique Medicine*; and many scientific memoirs in periodical works. He also distinguished himself by his successful endeavours to introduce vaccine inoculation on the continent.—*Bug. Ura. Biog. N. de Gexene.*

ODINTON (WALTER) or Walter of Evesham, a monk of that monastery in Worcestershire, who flourished in the reign of Henry III. He was an astronomer and mathematician, and is said to have been the author of *De Motibus Planetarum et de Mutatione Aries*.² He also wrote a treatise entitled *De Prodigiorum Interpretatione Misticæ*, preserved in the library of Eton's college, Cambridge, of which Dr. Housman says, that if all other medieval treatises, save the *Life of Beatus* to France and John Gower's *Speculum*, were lost, with this MSS. we

O E D

would not be much diminished.—*Barlow's Hist. of Med.*

OED (Eduard) a celebrated abbot of Cluny, was born at Toul in 979. At the age of nineteen he was made a canon of St. Martin's, in that city, and he afterwards went to Périgueux where he became a disciple of St. Blasius of Aix-en-Provence. In 912 he took the habit in the monastery of Berne in the diocese of Besançon and in 927 having taken orders, he became second abbot of Cluny and by his efforts the order or discipline of that monastery obtained a very high character. So high stood Oed's reputation for sanctity and wisdom, that the popes, bishops and prelates paid the greatest deference to his opinions, and frequently made him the arbitrator of their disputes. He died at Rheiher in 946. He was the author of *"The Life of St. Gerard, Count of Aurillac in four Books; Sermons, Homilies,"* which Duchesne has edited in his *"Bibl. Cluniae,"* and *"Moralities in Job lib. xxvi,"* which are chiefly taken from the *"Moralia of St. Gregory."* All these pieces may be seen in the *"Bibl. Patr."*—*Moray. Bug. Ura.*

ECOLAMPADUS (Joh.) a distinguished reformer was born in Franconia in 1492. He studied at Heidelberg after which he became tutor to the son of the elector palatine and was presented to a benefice. In 1520 he entered into a convent near Augsburg but on reading the books of Luther he quitted his cell and repaired to Basel where he was made professor of divinity. He embraced the doctrine of Zwingli on the sacrament, but conducted himself, controversially, with great moderation. In 1528 he married the widow of Cellarius. The writings of Ecolampadius which evince a great want of learning, are too numerous to be particularly named here but a list of them will be found in our authorities. He appears to have been held in high estimation even by his opponents. He died of the plague in 1531.—*Melchior de Bolz. Bug. Ura.*

OSCUMENIUS, an ancient Greek commentator upon the Scriptures, flourished in the tenth century, and is said to have been bishop of Trica, in Thessaly. He was the author of *Commentaries* upon the Acts of the Apostles, the fourteen epistles of St. Paul, and the seven Catholic epistles, which, besides his own remarks, contain those of many of the ancient fathers. He is thought also to have written a commentary upon the four Gospels, but this is not certain. His works were published in Greek at Verona, in 1550; and in Greek and Latin at Paris, in 1551, in 8 vols. folio. To the latter is added, the *"Commentary of Arethas, upon the Book of Revelation."*—*Cesa. Lovell. Fabrioli. Bug. Ura.*

ODER (Gustav Louis) an eminent physician and botanist, born at Anspach in 1776. He studied under Müller, at Göttingen, and after having practised as a physician at Hirschwick, he was, in 1798, invited to take the unusual chair at Copenhagen. His manifold

through many of the provinces of Denmark and Norway, to investigate the native plants, and the result of his labour was a work entitled, "Flora Danica," the first part of which appeared in 1763. He also turned his attention to political economy and finance, and in 1769 he published a memoir on the civil and political state of the peasantry. Count Bernstorff often consulted him on affairs of administration; and under Stremme he was appointed counsellor of finance and president of the council of revenues of Norway. The fall of that minister occasioned his removal from Copenhagen. He was made bailiff of the duchy of Oldenburgh, where he employed himself in the establishment of a fund for the benefit of widows and other financial undertakings. He died the 29th of October 1791. Besides the works already referred to Oeder published *Elementa Botanica* 1769—64 2 vols. 8vo. *Nemaciatum Botanicum* 1769 8vo, "Figures of Plants growing spontaneously in Denmark and Norway" 1766 folio.

Observations on a Bank for Widows, Copenhagen, 1771 8vo; besides many memoirs inserted in periodical journals. Linnaeus gave the name of *Oederia* to a genus of plants, natives of the Cape of Good Hope in honour of this botanist.—*Bieg Univ.*

OELRICHS (JOHN CHARLES CONRAD) a German historian and bibliographer born at Berlin in 1722. He was educated at Frankfurt on the Oder where he proceeded LLD and in 1752 he was appointed professor of history and civil law at the academy of Sestin. Notwithstanding his official occupations he published a number of curious dissertations chiefly relating to the history of Germany in the middle ages. At the age of fifty he married a widow who brought him considerable property and resigning his chair he settled at Berlin. In 1784 he obtained the post of counsellor of legation, and resident of the duke of Deux-Ponts, at the court of Berlin. His death took place December 30 1798. Besides the Berlin Library a literary journal carried on in conjunction with Meichsel from 1747 to 1750 he published many valuable works in Latin and German the most important of which are mentioned in the Biographie Universelle. Prefixed to the catalogue of his library which was sold after his death, is a life written by himself in Latin.—*Bieg. Univ. des Contemp.*

OELRICHS (GRIMM) a learned lawyer born at Bremen in 1757 who studied at Göttingen and Utrecht. After having been for some time resident of the emperor at Frankfurt, he abandoned diplomacy to become syndic of Bremen, where he died in 1789. Oelrichs was particularly skilled in the ancient dialects of the Teutonic language. He published, *Glossarium ad Statuta Bremensia antiqua*, 1767, 8vo, a collection of the ancient and modern laws of Bremen, the laws of the city of Riga, with a glossary, and other works.—*John Ostendorp*, professor of theology, and rector of the gymnasium of Bremen, who died in 1801, aged sev-

en, distinguished himself by numerous important publications relative to German and Anglo-Saxon literature, among which is an "Anglo-Saxon Christomathy" with a German version, 1796, &c. — *John Grænor Anthoni* Dappritz a native of Hanover died in his twenty fourth year in 1791 at Göttingen, where he had studied under Heyne and Heyer and exerted much notice by his early proficiency. In 1787 he published a dissertation on the philosophy of Plato, and in 1788 another on the philosophy of the Fathers of the Church but his greatest work was published posthumously by professor Heyne under the title of "Commentaria de Septuaginta Ecclesiae Latinae praeiora sex saeculorum," Lupa, 1791 8vo.—*Bieg. Univ. Bieg. Univ. des Contemp.*

OENOPIDAS or OENOPIDES of Chios, a Pythagorean philosopher who lived in the fifth century BC. Like others of the Grecian sages he visited Egypt, in search of knowledge and there he made himself acquainted with geometry and astronomy Some of the problems of Euclid are attributed to this mathematician who chiefly distinguished himself by the invention of a cycle for the regulation of the year which was afterwards improved by Meton. Oenopides engraved on a tablet of brass his astronomical calculations applied to a period of fifty nine years which he considered as marking a revolution of the stars and called it the great year. He consecrated this table at the Olympic games that it might be preserved for the use of the public.—*Bieg. Univ.*

OTTER (SAMUEL WILLIAM) a German historian born in 1730 in the dominions of the margrave of Bayreuth. He studied at Erlang and having adopted the ecclesiastical profession became pastor at Lindau in 1749 and removed in 1763 to Mäkerlebach. His historical productions having made him advantageously known, he was appointed historiographer of Brandenburg Anspach and Bayreuth and member of the consistorial council of his district. He died in 1792. He possessed an extensive acquaintance with history, diplomacy, and antiquities, especially those of Franconia, and he illustrated a multitude of obscure transactions but he was deficient in taste and was too fond of conjectural etymologies. He was the author of "An Essay towards a History of the Burgraves and Margraves of Brandenburg and Franconia, founded on coins seals and documents, 1751—58 2 vols. 8vo, and many other works, of which an account may be found in Schichtzschegriff's Necrology.—*Bieg. Univ.*

OEKKERLIN (ALEXANDER OLIVER) a traveller and historian, who was probably a Fleming. In July 1666, he was at Tortes in America, in the service of the West India company where he was sold to a planter for thirty crowns. After three years servitude he joined some freebooters, and remained with them till 1674, engaging in all their enterprises. He then availed an opportunity to return to Europe, thinking God, as he says;

that he had been enabled to relinquish such a turbulent kind of life. His afterwards made three other voyages to America, with the Dutch and with the Spaniards, and he was at the taking of Cartagena in 1697. He wrote an account of his adventures, published in French at Paris in 1698, 2 vols. 12mo., and afterwards at Toulouse, 1704 and 1775 4 vols. 12mo. From some passages in his narrative, it seems probable that he exercised the profession of a surgeon.—*Bibl. Univ.*

OGDEN (MAXWELL) an eminent divine of the establishment, was born at Manchester in 1714, and educated at the grammar-school there, from which he was removed to King's College, Cambridge, and next to St John's, where he obtained a fellowship. In 1744 he became master of the grammar-school at Halifax; but in 1753 returned to Cambridge, where he took his degree of DD and was presented to the living of Duxbury, in Wiltshire. In 1766 he was appointed Woodwardian professor and subsequently received the rectories of Lawford in Essex, and of Stansted in Suffolk. He died in 1778. Two volumes of sermons by this divine were published in his lifetime, which being short, animated, and striking, obtained considerable celebrity. A new edition of these were published in 1780, by his friend bishop Halifax, with a memoir of his life in which some objections to his style and manner are freely canvassed.—*Ld's by Halifax's Memoir.*

OGG, a creole of St Domingo, belonging to the class called in the colonies Quarterouns, who was, at the commencement of the Revolution, engaged in commerce at Cape François. Mercantile affairs having drawn him to Paris, he was there admitted into the society of Friends of the Negroes. (Amis des Noirs,) and aided by some of the most active members, he warmly solicited the National Assembly in favour of his brethren. But he soon perceived that solicitations alone would not procure the rights of equality for men of colour and returning to St Domingo, he resolved to adopt some more efficacious means for their liberation. Having made his way to the quarter of Dondon, where he was born, he began by spreading a proclamation, inviting all the people of colour, and negro slaves to join him. The insurrection took place in November 1790, in the quarter devastated Grande Rivière. The insurgents at first daunted nothing but what was just, freedom and political equality but their cause was too long disgraced by crimes equally useless and atrocious. These, however, were not attributable to their leader but to his lieutenant Chouanne, a profligate wretch, who delighted in deeds of violence. Troops of the national guard and of the line were sent against the negroes, who were obliged to give way to superior force. Ogg, with a few of his lieutenants, took refuge in the Spanish territories, and having given up by the governor in the French, he was tried before the popular council at Paris, condemned and con-

demned to be beaten on the wheel, as also was his lieutenant. Ogg, in "beating" his donkey, took a quantity of black stones, and placing them in the hollow of his hand, covered them with a small quantity of white gypsum; as these stuck them together, and the former remaining unbroken, he exhibited to his judges, "Where are the Whites?" This impudent allegory was terribly verified in the subsequent revolution of St Domingo.—*Dor de St M. ds 18me S. Bibl. N de Louvain.*

OGIER (CHARLES) a man of learning, was born at Paris in 1595. He was for some time an advocate but becoming disgusted with his profession he accepted the post of secretary to Claude de Mousme, count d'Avaux, whom he accompanied in his embassy to the northern courts in 1624 and 1625. He drew up an account of his travels, which was first published in 1626, with this title 'Ca roll Opera Ephemerides sive non Daudemus Suscipiam, Poloniam cum esset in consilio et hunc Clanditi Meum cum Avaux ad septentriones reges extraordinari legati' etc. This journal contains some curious particulars of the negotiations of the count of Avaux, the manners, customs, &c. of the countries which he visited. Ogier also published two Latin poems to the memory of D. Petar and Peter du Pay. He died in 1664.—FRANCIS Ozanx his brother was an ecclesiastic and attended the count d'Avaux when he went to sign the peace of 1648. He defended Babec in his quarrel with Gobelin and wrote several works, of which the most esteemed is "Jugement et Censure de la Doctrine catholique de Fr Garasse." He died in 1670.—*Morer. Neur. Dict. Hist.*

OGILVIE (John) an industrious writer was born at Edinburgh in 1600. His father becoming a prisoner for debt in the King's Bench, the son bound himself apprentice to a dancing master in London, and with the first money he procured he released his father. A strait, which he received in cutting a caper disabled him in his profession, and he was obliged to seek other means of subsistence. After suffering great vicissitudes, he at length overcame his want of a literary education so far as to translate from the Latin and Greek and to compose verses of his own, which however, were but very indifferent. He made a translation of Homer which, though very wretched, was esteemed at the time it appeared, and had the honour of killing a poetical flower in the youthful breast of Pope. The cuts to his translation of Virgil were greatly valued, and served for a splendid Latin edition of that poet. In London, after the great fire, he erected a printing-office, and was appointed the king's cosmographer and geographic printer, and he printed some volumes of a great size. He also published an account of the great and cross-roads of the kingdom, from his own actual surveying representation. He also built a theatre at Deptford.—*Bibl. Brit.*

OGILVIE (John) a divine of the church of Scotland, was born in 1720. He was educated at the university of Aberdeen, by which

having associated with the degree of D.D., and his learned minister of Minster, is the same man. He also became a fellow of the Royal Society of Edinburgh, and was much esteemed both as a divine and man of literature. His works are "Poems on several Subjects," 2 vols. 8vo; "Sermons," 8vo; "Psalms, a Poem," &c.; "Herc, a Poem;" "Philosophical and Critical Observations on Composition," 2 vols. 8vo; "An Inquiry into the Causes of Infidelity and Scepticism," 8vo; "Theology of Plato, compared with the Principles of Oriental and Graecian Philosophy," 8vo; "Examination of the Evidence of Prophecy in behalf of the Christian Religion," 8vo; "Balaam, a Poem," &c.—*Gent. Mag.*

OGLETHORPE (JAMES EDWARD) an English general officer who was the son of sir Iphigene Oglethorpe of Godalming, Surrey. He was born in London in 1696 and was educated at Corpus Christi college, Oxford, leaving which he obtained a commission in the guards. He subsequently went abroad and served under prince Eugene and on his return obtained a seat in parliament. In 1733 he distinguished himself by his exertions to found the colony of Georgia, for which he obtained the royal charter. He also conducted a body of emigrants to the province at which time he was accompanied by the two Wades. In 1736 he returned with some Indian chiefs in his suite who were presented to the king and in 1736 revisited Georgia, with another band of emigrants, and proceeded very successfully in the settlement of the colony. On the rupture with Spain he was made general and commander-in-chief of the English forces in Georgia and Carolina with which he successfully repelled the attempts of the Spaniards but was unsuccessful in an expedition against St. Augustine. In 1745 he was promoted to the rank of major general and was employed to follow the rebels under the Pretender but not being able to come up with them he was tried by a court martial for neglect of duty and acquitted. The private character of general Oglethorpe was extremely amiable, and he has been eulogized both by Thomas Pope, and Dr Johnson. His chief claim distinction however for his benevolent and judicious settlement of Georgia.—*Ward's Lit. Anec.* *Boswell's Life of Johnson.*

O'HARA (KATE) an Irish dramatist, who was a younger brother of a good family. He had much musical taste, and a happy talent of adapting verses to old air. In the latter part of his life he was afflicted with loss of sight and employed as harmonium, whom he kept constantly near him, as he was often making alterations in his theatrical pieces, which were all burlesques or ballad operas. His first production was "Nuala," acted at Covent Garden in 1782, which was extremely well received and is still a favorite entertainment. His other works are, "The Golden Pippin," 1772; "The Two Muses," 1775; "April Day," 1777; and "Tom Thumb," 1780. His death took place June 27, 1798.—*Thompson.*

OILLI, or **OZELI** (JAMES) a learned scholar, was born at Dantzig in 1624. After receiving his education at Leyden, where he took his doctor's degree, and published an excellent edition of Minstrelus Pezii. After travelling in Europe in 1667, he was appointed professor of law at Groningen. He died in 1686. He likewise published an edition of Andes Galliae, Leyden, 1665, 8vo; and a treatise, entitled, "Thesaurus adiectorum Nominum antiquorum sive expressorum," Auct. 1677 &c., a scarce and curious work. He was the friend of Peacock, between whose ideas and his own there existed a great conformity.—*Chapman. Mason. Moxon.*

OISL, or **OISEL** (PHILIP) a learned German reformed professor of divinity and Oriental scholar, was born at Dantzig in 1671. He became minister of the German church at Leyden and was afterwards appointed professor of divinity at Frankfort on the Oder. It is related of him, that when he was upon his death bed, and his colleague was reciting for his consolation passages of scripture in Latin or German he corrected the language of the version made use of by him according to the original Hebrew or Greek, with the same accuracy and calmness as if seated in his academic chair. His principal works are, "Introductio in Accostationem Hebreorum Promiscuum" 1715 "De Lepre," and several treatises on the ten commandments.—The above mentioned, James Ozsel, who wrote notes on the "Octavius" of Minstrel Pezzi, was his relation.—*Voss. Diet. Hist. L. Admont's Diet. Hist. et Biol. Portafolio.*

OKOLSKI (SIMEON) a Dominican was born in Russia, and became provincial of his order in Poland in 1649. He was the author of a work entitled "Orbis Poloniae, or a history of the Polish nation with learned researches concerning the origin of the formations." It is very scarce and valuable but the author is somewhat partial. He also published a work entitled "Præce diuinæ verbi Albertine episcopæ Ratioponensis."—*Moxon.*

OLAHUS (NICOLAS) a learned pietist, was born at Hermannstadt in 1493. After various preferments, he was nominated by Ferdinand, king of Hungary bishop of Zeged and chancellor of that kingdom. He afterwards became bishop of Agria, and was present at the siege of that town by the Turks in 1566, at which by his liberality and exertions, he greatly supported the inhabitants in their defense. The next year he was appointed archbishop of Strigavia, and held two national councils at Tyrus, the acts of which were printed at Vienna in 1569, and was instrumental in founding the first Jesuit's college in Hungary. In 1569 he was created palatine of the kingdom. He died at Tyrus in 1586. His works are, "A Chronicle of his own Times;" "A History of Africa," French 1586; and "A Description of Hungary."—*Moxon. Migne. Des. Bib.*

OLAVIDES (PAU ATTAMONY YANQU) a Spanish statesman, one of the nobles who

O I. A

of the Inquisition. He was born in 1705 at Lima, in Peru, and was of wealthy and respectable parents. At an early age he displayed an ardor for study, and having given proof of his capacity, he was appointed reader of the province of Lima. Having, by the liberality of his relatives, given offence to the monks, and, when they succeeded to get him removed to Spain, where he was compelled to submit to the Inquisition; but his innocence was at length established, and he was liberated. He took up his residence at Madrid, and being appointed agent for his Norwegian countrymen, he employed his talents and influence for their benefit as well as for that of the kingdom in general. His power fully seconded the measures of the Spanish minister, the count d'Aranda, for the expulsion of the priests, and having displayed on many occasions enlightened policy and generous patronage, the government appointed him in 1760, of the province of Andalucia. He there founded a new colony, which flourished under his auspices, becoming the seat of agricultural and commercial industry. From this establishment he endeavored to exclude as much as possible the mestizo and mulattoes, whose vanity being excited, they charged Olavides with heresy on account of some regulations which he had made relative to his colony, many of whom were Jews and German Protestants. In November 1776, he was arrested and thrown into a dungeon of the Inquisition, and after two years confinement he was brought before that merciful tribunal to receive his sentence. Among the charges against him was that of having in his library the French Encyclopedia, Bayle's Dictionary Montaigne's Spirit of Laws, and the works of Voltaire and Rousseau. The remaining imputations were equally nugatory and absurd, including those of having taken a journey to see Voltaire, and having in his possession a letter from that philosopher to himself, wherein was the phrase—"It seems to be reckoned that Spain possessed forty such persons as yourself." Olavides denied the charge of heresy, notwithstanding which he was condemned to eight years seclusion in a monastery to practice exercises of penit, and so he afterwards banished twenty leagues from the court and all great cities, and to be incapable of public employment, and subject to various degrading privations. He contrived to escape from the convent, and took refuge in France, where soon after pursued him, and he was forced to seek an asylum at Geneva. After the death of Charles III., he was permitted to return to France. He re-entered the Revolution; and under the reign of Louis Philippe he was imprisoned at Orleans, and remained there until after the fall of Napoleon, when he returned to Paris. A period of his captivity was spent in writing a history of the propagation of the Gospel, which he dedicated to his own countrymen, and was soon after published, and was immediately successful. This success induced the author to apply

upon the most of having converted an Indian philosopher, and they exhibited him, bound in chains, "He was released in 1795, and after a short stay at Madrid, passed, to his cousin in Andalucia, where he died in the bosom of his family in 1805.—*Bugloss, de Cocteau.*

OLDCASTLE (or Jug) lord Cobham, the last martyr among our nobility was born in the fourteenth century in the reign of Edward III. He obtained his peerage by marrying the daughter of that lord Cobham, who so firmly opposed Richard II. He excused the remonstrance of the clergy by his zealous adherence to the doctrines of Wycliffe, whose works he collected and transcribed, distributing them among the people. In the reign of Henry IV. he was at the head of an English army in France during the Orleans and Burgundian factions, and he obliged the duke of Orleans to raise the siege of Paris. Under Henry V. he was accused of heresy but the king with whom he was a favorite, defayed the prosecutions against him and tried to reason with him and to convince him of his alleged errors, but in vain, and he soon after left him to his fate. He was then cited before the archbishop of Canterbury and not being able to satisfy his accusers, he was condemned as a heretic and committed to the Tower, whence he escaped into Wales. A report was then zealously circulated by the clergy and sent to the king, that 80 000 Lollards were assembled at St Giles's for his destruction, with lord Cobham at their head. This accusation seems to have been fully credited by Henry though there does not appear to have been really the slightest foundation for it, on which a bill of attainder was passed against lord Cobham, and he was burnt alive in St Giles's field in 1417. He was a man of high spirit and warm temper which his misfortunes could not subdue. His amusements were extensive and his thirst after knowledge first made him acquainted with the doctrine of Wycliffe. In conversation he was remarkable for the frankness and readiness of his wit. He wrote

"Twelve Conclusiones," addressed to the Parliament of England, "published in Bale's Briefe Chronicle concerning the Martyrdom and Death of the blessed Martyr of Chast, sir John Oldcastle the lord Cobham, which was repented in 1782.—*Gibson's Lives. Bale's Acta and Monuments.*

OLDENBURG (Hans) a mathematician and natural philosopher, who was a native of the duchy of Brunswick, and is said to have been descended from the couple of Oldenborg in Westphalia. He was born in 1626, and spent the middle of his seventeen years, in 1643, in London received for his master, Dr. Lee, then office he went to Oxford, and in 1650 entered as a student at the university, with a view to avail himself of the advantages of consulting the books and MSS. of the Bodleian library. He acted as a tutor and friend an acquaintance with many of his scientific contemporaries with whom he communicated in the meetings of the Royal Society, and on its incorporation in

Second year of the Consulship. In 1805 he removed to the neighbourhood of the French-prince Thurn and Taxis, whom he succeeded in 1807, whilst he was succeeded in his office by Dr. Mathew G. New. He retired on an extensive estate, which he had bought and named, and transmitted into trust many of the philosophical remains of Mr. Boyle and others. About 1806 he became involved in a dispute with Dr. Robert Hooke, who complained to the Royal Society that Oldenburg had not properly noticed in their Transactions his invention of optical eyeglasses for watchmakers, but on an inquiry taking place, the doctor's complaint was declared to be unfounded. This philosopher informed himself much in theological controversy, and at one time attempted to effect a union between the followers of Luther and Calvin, but he afterwards became a decided Calvinist, esp. in the Westminster assembly of divines, and joined in the secession of the independents till the Restoration. He died at his residence at Charlton, near Greenwich in Kent, in August 1675. A list of his works, which relate to politics, divinity and philosophy, may be found in Chalmers's Biographical Dictionary.—*Martin's Big Phil.*

OLDFIELD (Anne) a celebrated English actress, born at Westminster in 1683. Her father held a commission in the guards, but dying while she was young, he left his family in such circumstances that the daughter was apprenticed to a sempstress. She and her mother roamed for some time with a relation, who kept a tavern in St. James's market, where her talents attracted the notice of Farquhar the author of the "Beau Brummel," who introduced her to Sir John Vanbrugh, through whose means she obtained a theatrical engagement in 1699. She first distinguished herself in the character of Almack, in the "Pilgrim" of Beaumont and Fletcher, but it was not till 1703, when she appeared as Leonora, in "Fair Queen Nica," that her merits were properly appreciated, and having the advantages of a good figure and a fine voice, she soon became a general favourite. Her great excellence lay in comedy, and the parts of lady Betty Modish, in the "Carolean Husband," and lady Townly in the "Provoked Husband" of Cibber were those in which she was most admired, but she sometimes also appeared in tragedy and in such characters as Calista and Cleopatra, her taste being very comprehensive. Though much esteemed in private life, her character was not immaculate. She was the acknowledged mistress of Mr. Astley during nearly the seven years preceding to his final fall in 1712; and she afterwards became connected with general Churchill. Her death took place October 22d, 1730, and her effects, after being in state, were buried for Westminster Abbey, lying East. *Thomp.*

OLDWORTHY (T. P.) a work, whose history commences in the reign of Edward VI., and continues to the end of Queen Elizabeth's reign, written by the author of "The History of the Puritan Revolution," which professed itself to be a continuation of the former history.

to principles of the lower philosophy and mechanics, and particularly in mathematics; and, after years of reflecting, he was affected with insanity and hemiplegia, which continued till his death at Margate, July 10th, 1804, in the sixtieth year of his age. His preserved great evidence of apprehension and an extraordinary memory, so that almost all that he ever evidently remembered. He made himself acquainted with mathematics, natural philosophy, geography, history and painting. He could recite the principal events in the history of Greece and Rome, and of his native country, and had become familiar with the discoveries of modern astronomers. The works of Newton and Laplace were the favorite objects of his studies. He displayed taste and talent as an artist, and is said to have produced, from memory, admirable delineations of persons whom he had seen. His temper was as amiable as his capacity was excellent. Though a constant invalid, he bore his sickness without repining or impatience; and it seems to have exhibited a union of virtues and abilities seldom to be found in one individual.—*Goss May.*

OLDHAM (John) an English poetical minister of the seventeenth century. He was born in 1665, at Shipton in Gloucestershire, and received his education at the neighbouring town of Tisbury. His father, who was minister of the parish at the time of his birth, but was afterwards dismissed for nonconformity, is said to have suffered much wantonness in consequence of his youthful indiscretions. But his dissipation did not prevent his application to learning, and from school he went to Edmund Hall, Oxford, where he took but one degree, after which he obtained the situation of usher to the free school of Craydon. There his talents as a poet procured him the notice of some persons of distinction, and he was taken into a gentleman's family as a domestic tutor. He subsequently resided with the earl of Kingston, in whose house he was sick with the small pox and died at the age of thirty. Oldham's principal work is his "Four Satires upon the Jesuits," written in 1679, which, with his other poems, have since his death been published in 8 vols. 1720. He displays force and spirit in his descriptions, and his language is nervous and expressive, though sometimes deficient in elegance and propriety, but these faults may be excused on the score of the youth and premature death of the author. His literary merit consists rather of an apology or extenuation for the contemptuous writers.—*Mag. Brit. Ed.*

OLDISWORTHY (William) a celebrated writer in the reign of queen Anne and George I., son of William Oldisworth, who wrote under the name of his brother, which see, "Oldisworth, William." A "History of the Duke, Duke, and Countess of Devon," "The Life of Edward, Duke of York," and "Histories of the Commonwealth and Protectorate, written during the reign of the Church." "Oldisworth" also published a translation of "Utopia."

OLE

"Accomplished Senator" of Gostkis, bishop of Posna, in the preface to which he defends his own character as a writer for the prerogative and the ministry and admits that he wrote under the earl of Oxford. Oldisworth was one of the original authors of the *Examiner* and continued to write in it as long as it existed. He died in 1734.—*Nichols's Lit. Anec.*

OLDYS (WILLIAM) a bibliographer was the natural son of Dr Oldys, a civilian and was born in 1696. Little is known of the early part of his life but in 1726 he succeeded Wanley in the care of Lord Oxford's library of which he partly formed the catalogue. He was also employed in the selection, entitled

The Harleian Miscellany. His circumstances always appear to have been moderate, at one time he was confined in the Fleet prison where he acquired such a hukng for the company he found there that during the rest of his life he always passed his evenings at a house within the rules with people of that class. In return for the pleasure he received from his life of Sir Walter Raleigh his principal work the duke of Norfolk gave him the post of Norroy king at arms and this was the only situation he ever held. During the latter part of his life he abandoned himself to drinking which contributed to shorten his days and he died in 1761. He was the author of a great many works of which the following are the principal. Life of Sir Walter Raleigh. The British Librarian.

Tables of the eminent Persons celebrated by the British Poets this does not seem to have been printed. The Scarborough Miscellany, The Universal Spectator. He also wrote several lives in the Biographia Britannica, General Dictionary &c. The following ingenious anagram is in one of his MSS.

In word and WILL I AM a friend to you
And one friend OLD is worth a hundred new

Bog Br.

OLEARIUS (ADAM OLECHLAUSER or) a German traveller the son of a tailor at Aschersleben in the country of Anhalt, where he was born about 1600. He studied at Leipzig and having taken his degree he entered into the service of Frederick duke of Holstein Gottorp who appointed him secretary to an embassy which he sent to the court of Muscovy and the king of Peru. The ambassadors left Gottorp in October 1633, and after traveling through various parts of Peru and visiting the borders of the Caspian sea they returned home in 1639. Olearius who had received the title of ducal counsellor was on his return appointed librarian and mathema tician to the duke which office he held till his death in 1671. He published an account of his travels, *Itinerarium 1647* folio of which there are several other editions and French, English, and Dutch translations the Galician of Saadi, translated from the Persian, the Fables of Lokman, from the Arabic, and the Chronicle of Holstein.—*Bog Br.*

GODFREY OLEARIUS doctor of theology and superintendent of Halle, who died in 1697 at

OLE

the age of eighty-one was the author of a body of theology for the use of the Lutherans.—His son JOHN OLEARIUS professor of rhetoric, and afterwards of theology at Leipzig was one of the first authors of the literary journal published there under the title of 'Acta Eruditorum'. He also wrote an Introduction to Theology, and other works. He died at Leipzig in 1713 aged seventy four.—*Diel. Hist.*

OLEARIUS (GOFRAY) a learned German writer on divinity and philology born at Leipzig in 1672. He studied in the universities of Germany and Holland after which he visited England and staid for some time at Oxford. Returning to Leipzig he obtained the chair of Greek literature, which in 1708 he exchanged for that of theology. He translated into Latin Stanley's History of Philosophy to which he added dissertations,

De Philosophia Eclectica. De Democrito Socratis and Exercitatio ad dialogum L. Allatii de Scriptis Socratis. He also published an edition of the Life of Apollonius of Tyana by Philostratus and augmented Frankensteins' Introduction to the Roman and German History besides which he produced Observations on St Matthew's Gospel and other theological works. He died in 1715.—*Stolli Intrud. in Hist. Lit. Diet. Hist.*

O LEARY (ARTHUR) a Roman Catholic divine was born in the city of Cork but in what year is not recorded. He studied at the college of St Mark in Brittany and subsequently entered into the Franciscan order of capuchins. He acted for some time as chaplain to the English prisoners of the Catholic religion during the seven years war for which he received a small pension from the French government until the Revolution. He subsequently returned to Ireland and was enabled to build a small chapel at Cork where he distinguished himself by entering into a controversy in defence of the divinity of Christ. When the parliament of Ireland shewed a disposition to relax the rigour of the penal laws against the Catholics and framed the Test Act now in force he published his

Loyalty Asserted or the Test Oath vindicated by which address he induced many Catholics to comply with the provisions of the legislature. These and similar services, in which he ably and eloquently endeavoured to show that the Catholics might legally swear that the pope possessed no temporal power in Ireland procured him the friendship of many eminent Irish political and literary characters. He also distinguished himself by the most laudable attempts to produce subordination and induce the lower class of Catholics to be less lawless in their resistance to the tithes portions of the Protestant clergy. These and kindred services induced the Irish government, on his departure for London to recommend him to persons in power in England, and accordingly he was much countenanced, and officiated for many years as principal minister in the Roman Catholic chapel in Soho-square. He died at an

OLI

advanced age in January 1802 Mr O'Leary was eminently gifted with wit and humour and as a writer his style is fluent, bold and figurative but sometimes deficient in grace and incorrect He was author of several " Addresses to the Catholics in Ireland" His marks on Mr Wesley's Defence of the Protestant Association which with several other tracts were collected in one vol octavo. He also wrote a very spirited Defence of the Conduct and Writings of the rev Arthur O'Leary in answer to Dr Woodward bishop of Cloyne.—*Mosch Mag Great Mag*

OLEASTIR (JANOS) a learned Portuguese Dominican of the sixteenth century was born at Azambuja. In 1545 he attended the council of Trent as theologian from John III king of Portugal and upon his return he was nominated bishop of St Thomas in Africa, which dignity he refused. He was then made inquisitor and held with honour the principal offices of the Dominican order in his province. He died in 1563. He has left Commentaries on the Pentateuch (Lisbon 1556 1558 five parts in one vol folio much sought after by collectors from its not having been subjected to the examination of the holy office. His Commentaries on Isaiah were published at Liss in 1623 and 1658.—*Antonius Bibl Script Hisp Moretus Novis Dict Hist*

OLIVI A (ALEXANDER) a celebrated Italian cardinal was born of humble parents at Sassoferato in 1409. He entered among the hermits of St Augustine and was appointed professor of philosophy at Perugia, and afterwards attorney general of his order. His modesty prevented his displaying his talents and erudition at the public disputations but he preached with great reputation at Venice, Naples Bologna Florence Mantua, Ferrara &c. In 1459 he was made general of his order and the following year he was promoted to the purple. He died at Ivoh in 1463. He was the author of various works, of which the principal are De Cosa cum Apostolis Faciat De Christi Ortu Sermones Centum Orationes Elegantes lib I. De Peccato in Spiritu Sancto. —*Moretus Novis Dict Hist*

OLIVA (GIOVANNI) a learned antiquary was born at Rovigo in the Venetian territory in 1666. He was ordained priest in 1711 and was immediately afterwards professor of belles lettres at Axolo. In 1719 he was invited to Rome by Clement XI and in 1722 the cardinal de Rohan appointed him his librarian in which office he remained during his life dying in 1757 at Paris. The abbd Oliva was the author of two dissertations one " De Antiquis Romanis Scholis Grammaticorum Disciplina" the other on the discovery of a four footed marble of Issa. He also published an edition of some hitherto unpublished letters of Poggio. His works were printed after his death, with a third dissertation on the necessity of adding the study of medals to that of history.—*Moretus*.

OLIVAREZ (GASPAR GUSMAN count duke d') a famous Spanish minister of state

OLI

descended from the ancient Castilian family of Gusman. He was born at Rose where his father was sent on an embassy to pope Sixtus V. Having finished his studies at Salamanca, he was called to court and soon obtained the confidence of the prince royal who, on succeeding to the crown as Philip IV in 1621 abandoned the management of public affairs entirely to Olivares, though the title of minister was bestowed on his uncle Bernard de Zuena who had been the king's governor. He enjoyed, during a period of twenty two years almost unbounded authority. The commencement of his administration was distinguished by some useful regulations adapted to increase the population and resources of the country. The system he pursued with regard to foreign affairs, however, was unfortunate, and being constantly thwarted in his schemes by the bolder genius of the French minister Richelieu he had the mortification to witness the revolt of the Catalans, the dismemberment of Portugal from the crown of Spain and the loss of Brazil and other foreign colonies which fell into the hands of the Dutch. These national misfortunes rendered him so unpopular that the king was forced to dismiss him in 1643 when he was succeeded by his nephew Don Louis de Haro. A justificatory memoir which he published is said to have irritated his enemies, and prevented his recall and he died at Toro a few months after his removal from the ministry.—*Duc. Hist. Esp. Univ.*

OLIVET (JOSEPH THOUVILLE d') a member of the order of the jesuits, distinguished as a classical editor. He was born at Saives in France in 1682 and died at Paris in 1768. He devoted himself to the cultivation of the belles lettres and becoming a member of the French academy he published a continuation of the history of that literary society. In 1723 appeared his translation of Cicero's Dialogues on the Nature of the Gods and he also translated the speeches against Carneus and other works of that orator as well as the Philippics of Demosthenes, all which have been repeatedly printed. But the most important literary labour of the abbd d' Olivet was his edition of the entire works of Cicero published at Paris in 1740 9 vols. 4to and reprinted at Geneva and at Oxford. He was likewise the author of a treatise on French proverbs.—*Adrie s C. Biog. Biog. Univ.*

OLIVER OF MALMESBURY a Benedictine monk of the eleventh century famous for his skill in mechanics. He was born at Malmesbury in Wiltshire and became a member of the monastery at that place. The historian William of Malmesbury says, that he was skilled in mathematics and astrology and further informs us, that though not deficient in learning or abilities, he undertook one enterprise when he had arrived at years of manhood which savoured strongly of juvenile audacity. Having affixed wings to his hands and feet, he ascended a lofty tower whence he took his flight and was borne upon the air for the space of a furlong but owing to the

violence of the wind, or his own fears, he then fell to the ground, and broke both his legs. From this cousin surmises it is impossible to determine what degree of merit is due to this monkish invention. It may however be concluded that his machinery was constructed on the principles of the parachute and he appears to have been the first Englishman who attempted to travel through the aerial regions. Oliver who died a little before the Norman conquest, wrote on astronomy and mathematics, but none of his works are extant.—*Mofat's History of Malmsbury, Eng. Uni.*

OLIVEIRA (Francis Xavier d') a Portuguese gentleman, a knight of the order of Christ, born at Lisbon in 1702. At the age of fourteen he was admitted into a public office and in 1730 he went to Madrid where his uncle who held a diplomatic situation presented him to the king of Spain. His father dying he succeeded him as secretary of embassy at Vienna and having had a dispute with the count de Tarazona the ambassador he resigned his employment and went to Holland in 1740. His connexions with some Lutherans at Vienna had excited in his mind propensities against the Catholic faith to which he gave vent in "Memoirs of his Travels," and "Familiar Letters," which he published in 1741 and 1745. These works were censured by the inquisition and the author having removed to England made an open profession of Protestantism in 1746. He published a "Pathetic Discourse to his countrymen on the earthquake at Lisbon in 1756, and the following year a second discourse. In September 1762 he was declared a heretic at an Auto-de-Fé and condemned to be burnt at the stake on which he published a book entitled "The Chevalier d'Oliveira burnt in Effigy as an Heretic, why and wherefore? Anecdotes and Reflections on the Subject and before the Publick by himself." He died at Hackney near London in 1782. He published some poems, besides those mentioned, and left a great number of MSS. including "Olivereiana, or Memoirs, historical and literary" 27 vols. 4to.—*Gent. Mag.* for 1784. *Bug. Unit.*

OLIVIER, a French author member of the academy of Lyons, who, in 1750 wrote an essay on the advantages derivable from music in the cure of disease. His theory supposes that there exists a certain sympathy between the human body and the surrounding atmosphere, and that the former is consequently acted upon by the vibrations of the latter which produce a kind of electrical effect. He was also the author of a work entitled "L'Egypte d'Orphée, ou de l'Influence de la Musique," printed at Paris in 1798.—*Rieg. Doc. Hist.*

OLIVIER (Guillaume Antoine) an eminent French naturalist and traveller, member of the Institute and of the Agricultural Society of Paris. He was born near Freys in 1756 and studied at Montpellier, where he received the degree of M.D. at the age of seventeen. Natural history and especially botany and en-

tomology were his favorite pursuits, and at the age of twenty-three he went to Paris, to assist in the compilation of a work relative to the natural history of the district in which the metropolis is situated. He was afterwards sent into England and Holland to collect materials for a general history of insects and he was also employed on the entomological part of the "Encyclopédie Méthodique." The Revolution having arrested the progress of both these enterprises Olivier travelled to Persia, together with M. Bruguerre, another man of science, on a diplomatic mission planned by the minister Roland, whose death deprived the envoy of the financial resources and official protection on which they had calculated. Oh vier returned to Paris in December 1790 after an absence of six years, during which he visited Egypt, Greece Turkey Armenia Persia, and other eastern countries. He brought home numerous and valuable collections of curious objects of natural history of which he published an account in his "Voyage dans l'Empire Ottoman l'Egypt, et la Perse" 3 vols. 4to. with an atlas and plates. This scientific traveller died suddenly at Lyons in 1816.—(See BRUGUERRE, J. W.)—*Bug. Uni.*

OLIVIERI (ANTIBAL) a learned Italian antiquary. He was born at Pesaro in the Marche of Ancona on the 17th June 1706 of an ancient family. After being educated at the college of noblemen at Bologna he studied civil law at Pesaro, and became honorary chamberlain to pope Clement XIII and perpetual secretary of the academy of Pesaro. He had scarcely attained his twenty-eighth year when he published his admired work entitled "Marmora Pessunenses Notae illustratae" 2 vols. folio. In 1744 appeared his "Memoirs of the ancient Port of Pesaro," 4to and in 1790 his "History of the Church of Pesaro in the Thirtieth Century." He also composed the "Memoirs of the Chevalier Passer." —*New. Diet. Hist.*

OLYMPIODORUS, an Alexandrian philosopher who flourished about the year 450 and is celebrated for his knowledge of the Aristotelian doctrine. He is to be distinguished from a Platonic of the same name, who wrote a "Life of Plato," which has been published in a Latin version by James Winder. He also wrote a "Commentary upon Plato" preserved among the MSS. in the royal Library at Paris.—There was also a peripatetic of the same name, who flourished in a later age, and wrote a "Commentary upon the Metempsychosis of Aristotle."—Another Olympiodorus was a Greek monk who lived under the year 801. His works are "A Commentary on Ecclesiastes," "A Commentary upon the Lamentations of Jeremiah" and "A Commentary upon Job."—*Studia Eusebii His. Phil. Cate. Marv.*

OLYMPUS. There were two celebrated surnames of antiquity who bore this name; the one a scholar of Mampha, born in Myra, flourished before the Trojan war and is mentioned honorably by Homer, Aristotle, and

ONE

OPI

Platnick, who speak of his productions as still extant in their time Suidas, and John Pollux also notice him as an elegant elegiac poet. The other who died about the close of the seventh century before the Christian era, was contemporary with Midas by birth a Phrygian and, according to Suidas, the author of several poetic effusives sometimes or erroneously attributed to his predecessor of the same name.—*Burney's Hist. of Mus.*

On the death of that monarch he was for some time in disgrace because he opposed the queen in her design of establishing a French prince upon the throne of Poland nevertheless he was made vice chancellor of the crown, and on the assassination of Michael Koribut he became grand chancellor. On the death of Koribut he interested himself zealously in procuring the election of John Sobieski who rewarded him with the archiepiscopal see of Gnesna, and would have made him a cardinal had he not protested against it. He died at Danzig in 1678. His works are, *Singulare Juris Polonorum R. Polonus* ^{inductio Polonica} and some other political treatises.—*Muriv.*

OMAR I caliph of the Saracens, the second of the successors of Mahomet. Under his reign the empire of the Moslems was greatly extended. His generals Kaled and Abu Beldeah drove the Greeks out of Syria and Phoenicia, and the caliph himself took possession of Jerusalem in 638 which city remained in the hands of the Infidels till it was reconquered by Godfrey of Bouillon at the end of the eleventh century. Under Omar also Amaru became master of Egypt, and after taking Alexandria he is said to have destroyed the famous library there by the express order of the caliph who declared that the books of which it consisted if they agreed with the Koran were superfluous if they contradicted it, erroneous and therefore in either case useless. It however ought to be observed that this story is regarded by modern historians as of doubtful authenticity. The conquests of the Mahometans in the reign of Omar extended to Mesopotamia and Persia, and having fixed his residence at Jerusalem he was there assassinated by a Persian slave in the tenth year of his government, AD 643. Omar is distinguished for having collected and arranged the chapters of the Koran which assumed its present form under his direction from the collection of various copies of different portions dispersed among the duplicates of Mahomet, or preserved by oral tradition.—*Ockley's Hist. of the Saracens.*

ONESICRITES, a Greek historian, a native of the island of Egina, and a disciple of the Cynic philosopher Diogenes. He was taken into the service of Alexander the Great, whom he accompanied in his expedition to India, and wrote an account of that undertaking on the plan of Xenophon's Expedition

of Cyrus. He is treated by Scobio, and others of the ancients, as a fabulous and romantic writer but it is probable that the ignorance of the Greeks and Romans relative to India contributed not a little to render the narrative of Onesicritus incredible to his countrymen. He survived Alexander but the exact time of his death is not known. His History is no longer extant though some of his details relative to the geography and natural history of the regions he visited have been preserved by Scobio, Alles and Pliny.—*Bug. Univ.*

ONKELOS a Jewish rabbi supposed to have been the disciple of Hillel the elder, and to have lived in the beginning of the first century. He was the author of the earliest Targum, or Chaldee interpretation of the Hebrew scriptures, extending however only to the Pentateuch. The Targum of Onkelos consists of little more than a verbal translation but it is distinguished for accuracy and purity of style and is therefore much esteemed both by Jews and Christians. The other Targums are that of Jonathan Ben Uzziel on the historical and prophetic books of the Bible from Joshua to Ezekiel inclusive composed nearly at the same period with the preceding and approaching to it in the style and manner of its execution the Targum on the law of Moses, ascribed to Jonathan but disgraced by the introduction of legendary tales and ridiculous digressions and probably not of earlier date than the seventh century the Jerusalem Targum a Chaldee paraphrase on select parts of the law apparently a compilation from various authors made in the seventh or eighth century the Targum on the Hagiographia or Psalms Proverbs &c. said to have been the work of rabbi Joseph the Blind in the third century but from its legendary character and the corruptions of style which it exhibits it is obviously the production of a much later period the Targum on the Megillah or books of Canticles, Ruth &c. apparently written in the sixth century and, like the last, abounding in fables three Targums on the book of Esther written in very corrupt Chaldee, and the Targum on the books of Chronicles, of a late date and of little authority. The earliest and most important of these Targums are printed in Walton's Polyglot Bible.—*Moriv. Prudex. Horne's Intro. to the Holy Script.*

Univ.*

OPIE (JOHN) professor of painting at the Royal academy was born in 1761 in the parish of St Agnes, near Truro, in Cornwall. His father was a carpenter and he was intended for the same occupation but when very young he manifested a taste for study and a strong predilection for the arts of design. His

the first exhibition of Dr Winkelstein's collection of pictures at the Royal Academy, he exhibited there a portrait-painting. He exhibited again his compositions with varying success, which, indeed, varied by his pencil; and he determined resolved to devote himself to the profession of painting. When about nineteen he removed to London, where he improved the various advantages for study which the situation afforded; but it was not till 1786 that any of his pictures were admitted into the exhibition at Somerset House. He was short-lyeader nominated an associate of the academy and then an academician. The first specimen he gave of his literary ability was in a life of Sir Joshua Reynolds, in Dr Wolcot's edition of *Pilkington's Dictionary*. He then published an Inquiry into the Requisite Cultivation of the Arts of Design in England; and he delivered lectures at the Royal institution. In 1804 he succeeded Mr Fatio as professor of painting, when he read four lectures on painting, which have been published. He died April 9, 1807, and was interred in St Paul's cathedral. *Opus* holds a high station among modern historical painters, and his pencil was employed on the pictures exhibited in the Boydell and Macklin galleries.—*Bryan's Dict. of Paint. and Eng.*

OPITZ, or OPITIUS (HANAY) a divine of the Lutheran persuasion eminent as an Oriental scholar. He was born at Altenburg in Germany, in 1642, and after studying the Eastern languages in his native country he came to England, and pursued his researches under professor Poetel, at Oxford. In 1675 he obtained the Greek professorship at Kiel, to which was added three years after that of Oriental literature. He became professor of divinity in 1689 and subsequently ecclesiastical counsellor to the duke of Holstein. He died in 1712, leaving many useful works relating to the study of the Hebrew language and Biblical literature comprising a grammar and lexicon, and a tract, entitled *Atnam Lingua Sancta, quo exhibetur Coenobium de Studio Ling. Sacrae.* 4to.—*Bugl. Univ.*

OPITZ VON BOBERFIELD (MARTIN) known also by his Latinized name Opitius, a celebrated German poet of the seventeenth century. He was born at Brandis in Silesia in 1597 and commenced author by the publication of Latin poems, entitled, "Socratian Libellus," in 1616. The following year he became a teacher at the gymnasium of Beuthen on the Oder, and besides poetical compositions, he published his "Anarachus, sive de Contemptu Langue Testimoniæ." 4to. He then studied at Frankfurt on the Oder, and having afterwards visited many cities in Germany and Holland, he went in 1631 to the court of the Duke of Magdeburg whence in about a year, he removed, to become professor of philosophy and Belles-Lettres at the university of Wittenberg, then lately founded by Elector John George. The minister growing impatient, he was dismissed by Elector, and afterwards to England. Becoming distinguished for his

eloquence he went to Vienna, where the emperor Ferdinand II. bestowed on him the hereditary sword, and afterwards gave him letters of nobility, when he assumed the title of von Boberfeld. He returned to Silesia, and became secretary to the Burgrave of Dohna. But on losing his patron by death, he entered 1659 into the service of the duke of Lüneburg. At length he was appointed secretary and historiographer to the king of Poland and he passed the last few years of his life at Danzig, where he died August 20, 1659. Among his works are, a poem on mount Veterum, *Silva, Epigrams, &c.* He has been termed the father of German poetry and the Malibor of Germany having greatly contributed to polish the poetical style and language of his countrymen.—*Meyer. Bugl. Univ.*

OPORINUS (JOHN) a learned printer and classical scholar of the sixteenth century. He was the son of John Herbst, a painter and was born at Basle in 1507. After finishing his education at Strasburg and experiencing great difficulties from the narrowness of his circumstances, he became teacher in the school at the abbey of St Urban in the canton of Lucerne. He afterwards was made professor of classical literature at Basle but he was obliged to quit that situation because he had not taken the degree of master of arts. He then studied medicine, which parent he relinquished to engage in business as a printer in partnership with another person, and he then changed his family name for the Greek epithet of Oporinus. This typographical undertaking was unsuccessful and the partnership being dissolved, Oporinus carried on business afterwards on his own account. He printed fine editions of a great number of ancient authors many of which were accompanied with transcripts and annotations from his pen highly creditable to his learning and industry. He wrote notes on some of the works of Plutarch, Sennus Cicero and Demosthenes and he translated into Latin those of Xenophon, Thucydides and Herodotus. He died in 1568 having been four times married, and by the last of his wives he left one son.—*Tristam Elegies in H. S. Bugl. Univ.*

OPPENHEIMER (DAVID BEN ABRAHAM) a rabbi of the eighteenth century who was a native of Worms in Germany. He was educated at Nikolsburg in Moravia, and presided over that of Prague where he died in 1737 at the age of seventy. He was distinguished for his learning, and formed a most valuable library of Hebrew books and MSS. which was of great use to Wolfson in the composition of his *Bibliotheca Hebraica*. A catalogue of that collection was published at Hamburg in 1782 4to. Oppenheimer left a great number of works in manuscript, and he published a "Preface for the Pentateuch" in the rabbinical Bible of Berlin, 1795, &c. and other pieces.—*De Rossi. Diet. Bibl. Ant. Ebrei. Bugl. Univ.*

OPTIAN, a Greek poet, who held while the emperor Constantine, in the beginning of the

disputation. He was a native of Cologne, and a member of Cologne University, but his first name was Agobertus, and his mother's Agnes. He wrote poems distinguished for elegance and subtlety, but two only of his productions are now extant, his "Habitation ex six books on fishing," and four books on hunting, entitled "Cynageteon." Cenculus, the Roman emperor to whom the latter work was presented, was so pleased with it, that he gave the author a piece of gold for every verse, whence the poem has been styled the golden verses of Oppius. He died in his thirtieth year A.D. 213, and his countrymen erected statues in honour of him. The best edition of his works is that of Schneider Strub, 1776 8vo and there is another by the same editor 1813 8vo. His Historicus have been translated into English by Jones, Oxford, 1728 8vo.—*Elton's Spec. of Classic Poets. Eng. Ver.*

OPSOPEUS, or **OSSOPÆUS** (Jons) a German physician born at Bretten in the Palatinate, in 1536. Having received a classical education at Neumarkt and at the college of Wisdom at Heidelberg he went to Frankfort on the Main where he became corrector of the press, for the printer Wechelius. There he also applied himself to the study of medicine and after remaining six years he visited England and Holland, when returning to his native country he obtained the medical chair in the university of Heidelberg. He became physician to the elector Frederick IV whom he attended on a visit to Hamburg and being taken ill immediately after his return home he died in 1596. He published several of the treatises of Hippocrates with Latin versions and notes the Sibylline Oracles with remarks, "Zornmetris Magica cum Scholae Pileonis et Paelii" and "Oracula Metrica Jona" printed altogether at Paris, in 1607.—**SIMON OSORIUS** brother of the preceding was also professor of medicine at Heidelberg where he died in 1619 aged forty four. He enjoyed high reputation as a physician and published some works on his profession.—*Mauri. Hutchinson. Eng. Ver.*

OPPONÆUS (VINCENS) a learned philological writer born in Friesonia, towards the end of the fifteenth century. He opened a school of classical literature at Anspach and employed his leisure in the revision of such manuscripts as he could procure. He endeavoured to stimulate the German printers of his time to follow the example of Aldus Manutius, in publishing editions of ancient authors, instead of employing their presses on the futile production of their contemporaries. The details of his life are little known, but he died about 1560. He translated into Latin the letters of Luther, and from the Greek several books of the Iliad; the history of Polybius, that of Dioclesius Sisulus, and the romance of Helenora. He was likewise the author of a comic poem "De Arte Rabelloide," a treatise on rhetoric, and other works.—*Eng. Ver.*

OPPONATOR, a name given to those who were leaders of "Scholastic" or "Novatian" schools, and composed in the fourth century a complete of Valentinian and Valens. His name gained much reputation by a work which he wrote in favour of the Catholics against the Donatists, in six books, to which a seventh has been added by another hand. This work has been published several times, the best editio is that of Dupin, in 1700 in which he has inserted the notes of the other editors, with a collection of the acts of councils, edicts of emperors, letters of bishops, proconsular acts, and acts of martyrs which in any way regard the history of the Donatists. It also contains two other dissertations of Optatus, one containing the "History of the Donatists;" the other upon "The Sacred Geography of Africa."—*Cave. Dupin.*

ORANGE (PHILIBERT DE CRATOZ) a famous military officer of the sixteenth century. He was in the service of Francis I of France which he quitted in 1540 through pique at being deprived of his appointment at Fontainebleau to make room for the Polish ambassador. He went over to the emperor Charles V who recompensed him for the loss of his principality and the government of Brittany by giving him the principality of Amalphi the duchy of Gravina, various territories in Italy and Flanders and the order of the golden Fleece. He commanded the Spanish infantry at the siege of Fountarabis in 1543 but his greatest exploit was the capture of Rome in 1547 after the death of the constable de Bourbon to the command of whose army he succeeded. He was killed at the battle of Pictom in 1550, at the age of twenty eight. Dying unmarried he left his estates to René de Nassau the son of his sister and thus the principality of Orange to which Philibert had been restored by the treaty of Madrid, descended to the house of Nassau.—**ORANOE** (WILLIAM or NASSAU, prince of) succeeded to the title on the death of his cousin René in 1544. He was appointed by the States general of the Dutch United Provinces chief of their republic to the establishment and security of which he had contributed on their throwing off the yoke of Spain. He was a great captain and a wise politician and he was so much dreaded by the Spaniards that not being able to overcome him by force of arms they resorted to the famous expedient of taking him off by assassination. In 1582 he was wounded by a pistol shot as he was rising from table, by Jaingui, the servant of a ruined banker who was suspected of having poisoned Don John of Austria. The prince recovered from the effects of this injury but he was killed by Baltazar Gerard, a Burgundian employed by the Spaniards, June 10 1584. He had four wives, and left twelve children of whom two of his sons became successively stadholders of the United Provinces.—**ORANOE** (Maurice of Nassau, prince of) the second son of William, succeeded his elder brother Philip William in 1618 in the hereditary principality,

but the cause of Holland, Zealand, and Utrecht, and he was sent to command the forces of the United Provinces. He made himself master of all the provinces belonging to the United Provinces. In 1600 an important battle, not won by strategy; but in a short time he recovered all Friesland, Groningen, Drente, Overijssel, and the county of Drente, and the city of Maastricht was never taken under his government. In 1600 he defeated the archduke Albert, at the famous battle of Nieuwpoort, in which 6000 Spaniards were left on the field. A peace for three years concluded in 1609, between Spain and the Dutch states, was the happiest result of his enterprise. Prince Maurice, who had been reckoned the greatest general of his age, was only destined to share in war. His endeavours to obtain the sovereignty of Holland, and his turbulent treatment of Burenwald, and other patriots who opposed him, tend greatly to diminish the glory he had previously acquired. In 1611 he was received with the Spaniards, under the younger Spaniard, who, having taken Breda from the Dutch in 1618, contrary to the expectations of prince Maurice, he was so disgraced at the misfortune, that he died shortly after, at the age of fifty-five.—*Memo. Eng. Univ.*

OBEDENCUS VITALIS, an historian of the twelfth century. He was of a French family but was born in England, and at the age of ten he was sent for education to an abbey in Normandy, in which his father who had become a widow had taken the religious habit. He also entered into the order of priesthood, but never attained to any of the dignities of his profession, having devoted his life to literary studies. He died about 1143. He wrote an "Eccllesiastical History" in thirteen books, published in Durham's "Historia Normannorum Scriptores," and in other collections. This work, amidst a multitude of fictitious details and religious fables, contains many interesting facts relating to Normandy and England, which are not to be found in any contemporary author.—*Dart. Hist. Eng. Univ.*

ORILLANA (FRANCE) a Spanish officer who is regarded as the discoverer of the great river of the Amazonian South America. In 1599 he embarked near Quito, on the river Coen, which flows down the steppes, taking the name of Napo. From this river he passed to another which gradually became upon extensive, and following the course of the current, he at length arrived at Iquitos North, on the coast of Guiana, after a navigation of nearly 4000 miles. Orillana perished ten years after his return home, with which he had been sent by the Spanish government to explore the interior of the country, and particularly the river which he had previously discovered, the Amazon, of which he was not able to penetrate the navigation of the river, as well as the numerous streams through which it flows. He was a native of Toulouse, an engineer of the fortifications, and served during the wars of Henry IV.

ORFEO (Greece) a German mechanist, whose original name was Zeller. He was born in 1712, of a poor family in Silesia. He did not attend school and meditated, but although devoted himself entirely to the cultivation of the mathematical sciences, and mechanics. After travelling through various parts of Germany, and experiencing a considerable amount of adventure, he entered into a convent as a lay-brother, but getting tired of the confinement, he made his escape, and went to Italy. He then turned vagabond, and subsequently devoted himself to researches after the proposed machine. In 1715 he exhibited a machine, in the construction of which he pretended to have attained his object; but this he afterwards destroyed. In 1736 he obtained the patronage of the elector of Hesse who invited him to Cassel to renew his operations, and he was so far successful, that he produced a piece of mechanism, which was examined by the philosopher D'Gravemont who was convinced that it was set in motion by an external power though it continued moving for an indefinite length of time. Orfeyus, displeased at the investigations of D'Gravemont, to whom he refused to exhibit the interior of his machine, broke it in pieces. He afterwards obtained a house and estate at Cerdhausen, where he undertook to re-construct his machine on a large scale, and he succeeded there in 1749 but he made no further attempt, devoting his time to other projects, equally nugatory. He died in November 1745. He published a tract, entitled "The Perpetual Motion triumphant," Cassel, 1719 &c., and other works.—*Eng. Univ.*

ORIBASIUS a celebrated Greek physician of the fourth century born at Pergamus. He was the pupil of Eusebius of Cyprus, and became physician to the emperor Julian, whom he accompanied in his expedition to Persia, and witnessed his death. Under the succeeding emperors, Valens and Valentinian, he fell into disgrace, was deprived of his property exiled, and obliged to take refuge among the barbarians. At length his merit was acknowledged, and he was recalled, and compensated for his losses. He lived till towards the middle of the fifth century. Notwithstanding his misfortunes and his travels, he composed many professional works, none of which are still extant. The most important is his treatise on anatomy published at Pavia, 1556, &c., and at Leyden 1735 &c., finished with notes, by Dr W. Dandie.—*Eng. Univ. Hippocrate.*

ORIGEN, one of the most celebrated among the Christian writers of the third century. He was called also Amphilochius, and was born about A.D. 185, at Alexandria in Egypt, being the son of Leontius, who suffered martyrdom in the reign of the Roman emperor Decius. He studied under the philosopher Ammonius, and afterwards under Clement of Alexandria. He was first appointed to the chair of philosophy, which he retained for some time and then gave up, desiring to share the fate of Leontius, and for his mother's sake, his parents. Origin then became master of the

In a somewhat later, in order to support his advanced age and several younger brothers who were reduced to poverty. He became an acute professor of sacred literature at Alexandria, where his lectures were much frequented, and he had among his hearers several persons who afterwards attained great eminence in the church. He then devoted himself to preaching, and practised extraordinary mortifications, never sleeping on a bed, and abstaining from wine and flesh with a variety of other austere intermissions with religious exercises. It however his enthusiasm carried him to all the lengths which have been reported; he must have had less confidence in the strength of his resolution than has fallen to the share of most ecclesiastic, since it would appear that he resorted to physical means to succor himself against temptation. At this period he commenced his celebrated "Hexapla," which first suggested the idea of Polyglot Bibles. This work contained the Hebrew text of the Old Testament, with the Greek versions of the Septuagint, and those of Aquila, Theodotion, and Symmachus, together with other versions of some portions of the Scriptures. Fragments alone of the Hexapla have been preserved, which were collected and published by father Mouttaouia. Origen having taken the order of priesthood in Palestine, Demetrios, bishop of Alexandria, was displeased at his conduct, and professing to have discovered errors in his writings, he prevented him from teaching, and proscribed his heresies. He then went to Caesarea where his fame is said to have attracted the notice of Minerva, the mother of the emperor Alexander Severus, who sent for him to Antioch, and was highly edified by his apostolic soul and the eloquence of his discourses. When the Christians were persecuted in the reign of Maximinus, Origen took refuge at Athens, where he employed himself in writing Scholia, or commentaries on the Scriptures. He subsequently converted Beryllus, bishop of Eleusa, who had fallen into error relative to the pre-existence of Christ, and he also assisted at a council in which the heresy of some Ariosophists was condemned, who, like the modern Unitarians, maintained that the soul died with the body, and will be revived at the resurrection. Origen himself, however, was charged with holding various heretical opinions, among which the most formidable is that of the full duration of futurity past death, and the infinite duration of devil, which, as may be supposed, gave great trouble to the church. His attachment to the philosophy of Plato, in which he had been instructed by his master dissipated, she appears in his "Explanation of the Scripture," which showed his literary and spiritual elevation. He, however, in some measure, aided by his agents by the force of arms of the General, against the Saracens subduing Cilicia, in a campaign which he conducted. About the year 248, he was excommunicated by the Bishop of Cyrene, - "The same year came to him also Marcion." In the Diocles, persecutors who were impelled and tortured, and, ac-

cording to most accounts, his violent torturers, though it is generally agreed that he died a natural death at Cyrene, A.D. 254. His works were published by Euseb., but the best edition is that of the Benedictines, Paris, 1733, 4 vol. folio. Tritomaria. French. Geneva. *Catechism of the Fathers.*

ORIGNY (ANTOINE JOHN BAPTISTE ARMATIUS d.) born at Elblain in 1734, held the office of counselor of the court, and dedicated his leisure to the cultivation of letters. He was a member of many provincial academies, and died in October 1798. He published "Dictionnaire des Origines, ou Histoire des Inventions, Découvertes, &c." Paris, 1776, 1778, 6 vols. 8vo; "Abrégé de l'Histoire du Théâtre Français," (quatre quatrains,) 1782, in continuation of a work by Monchy, and "Annales du Théâtre Italien," 1788, 3 vols. 8vo.—See *Unit.*

ORIGNY (PIERRE ADAM d.) a writer on classical antiquities, who was a native of Riom in France, and died there September 9, 1774. In the early part of his life he entered into the army, and became a captain of grenadiers; but having been disabled by a wound, which he received at the attack of the lines of Wassenbourg in Germany, he retired from the service, with a pension and the cross of St Louis. He was the author of a learned work entitled "L'Egypte Ancienne, ou Mémoires historiques et critiques sur les Objets les plus importans du grand Empire des Egyptiens," 1762, 2 vols. 12mo; and another on Egyptian Chronology; and at the time of his death, he was occupied in more extended researches relating to the same subject.—*Dicit. Hist. Eng. Unit.*

ORLANDI (FRANCESCO ANTHONY) a learned bibliographer and writer on the history of the arts, who died about 1750. He published an "Account of the Origin and Progress of Printing, from 1450 to 1500." Bologna, 1725, 4to, a "History of Bolognese Writers, with Remarks on their Works," 1714, 4to, and a Dictionary of Authors, entitled "Almanacco Pittoresco," 1719, 4to, which was republished with additions after the death of the author. All the works of Orlandi are unequal for their great accuracy, and the abundance of information which they afford. This writer was a Carmelite friar, and was doctor and professor of theology at Bologna.—*Dicit. Hist. Eng.*

ORLEANS (GASPARD JOHN BAPTISTE, duc d') the third son of Henry IV of France, by his wife Mary de Medici. He was born at Fontainebleau in 1608, and at first received the title of duke of Anjou, but after the death of an elder brother in 1611, he was made duke of Orléans. He was engaged in various intrigues and innovations against the government in the reign of his brother, Louis XIII., and the university of Paris XIII., pronounced by his sentence, he made a vindication of his conduct of attempts to rule without the king. It was by his permission that the Duke of Montmorency, governor of Gascony, was induced to take arms against the minister;

ORL

and Gaston traversed France to join him in a sable robe resembling that of a fugitive, followed by a few domestics, than like a prince in arms against a king. This revolt proved very unfortunate, for Montmorency was taken prisoner and executed, and Orleans was forced to make most humiliating submissions. Some time after, he became involved in the conspiracy of Beaulieu and Cinq-Mars from which he extricated himself by accusing his accomplices and removing his banishment. After the death of Louis XIII., he was appointed *hetairiste general* of the kingdom when he acquired an ill-fated reputation by the taking of Gravelines, Courtrai and Marlyck, but his cabal against cardinal Mazarin at length occasioned his being banished to Bins, where he died February 2d, 1660. The prince possessed much wit and humour and many of his repartees are recorded. He left "Mémoires de ce qui a eté passé de plus considérable en France depuis l'an 1608 jusqu'en 1635," printed at Amsterdam in 1683, and at Paris in 1685, 12mo.—**ORLEANS (PHILIP duke of)** the younger son of Louis XIII., born in 1640. He had for his tutor La Motte le Vayer to whom cardinal Mazarin said "Why should you make the king a brother a clever man? If he be some more learned than the king he will not know how to yield him implicit obedience. Upon such principles was his education conducted and he consequently proved dissipated, vain, and effeminate. He was married in 1661 to Henriette, the sister of Charles II. who died in 1670 under circumstances which rendered it highly probable that she was poisoned. In the following year the duke took for his second wife Charlotte Elizabeth daughter of the elector of Bavaria. He died of apoplexy at St Cloud June 1st, 1701. A French translation of the Roman history of Florus by the duke of Orleans, was published in 1670 12mo.—**ORLEANS (PHILIP duke of)** son of the preceding by his last wife born at St Cloud August 4th, 1674. He possessed great natural abilities, which might have been better cultivated if he had not fallen under the control of his sub-preceptor Dubois, afterwards cardinal. He nevertheless made a rapid progress in various sciences, and especially in geometry, chemistry and poetry and he was also skilled in the arts of music and drawing. He was married to mademoiselle de Boids one of the daughters of Louis XIV. by madame de Montespan whom he treated with antipathy, but at the same time he gave way to his inclinations which led him to practise the grossest sensuality and dissipation. Yet in the midst of his criminal career he was not deaf to the calls of ambition and he was engaged in military service in Flanders, Italy and Spain, where he displayed considerable abilities. When the cause of his cousin, Philip V., appeared almost hopeless he formed a design of seizing the Spanish sceptre for himself but his plan was discovered, and that and some other intrigues of which he was suspected deprived him of the favour of Louis XIV., whose death, in 1715, prevented the

ORL

completion of arrangements for preventing the duke of Orleans from obtaining the regency during the minority of the next king. He accordingly succeeded to that office and during nearly the whole of his government he was guided by the counsels of his able but profigate minister cardinal Dubois. The duke himself is said to have manifested a spirit of clemency and generosity towards his enemies, and a disposition to alleviate the burdens of the people, but some of his plans proved unsuccess-
ful, and others were overruled by his advisers. Exhausted by business and pleasure he died December 25 1723. He left some good specimens of his ability as an artist particularly in the plates to a splendid edition of Amyot's translation of the romance of *Daphnis and Chloe* designed and engraved by himself and he also composed the music of two operas.—**ORLEANS (Louis duke of)** son of the regent, was born at Versailles, August 4, 1703. He had for a tutor the abbé Mongault, who inspired him with an early taste for study but the first part of his life was spent in dissipation. In 1724 he married the princess of Baden and having had the misfortune to lose her two years after he was afflicted with a profound melancholy which at length induced him to seclude himself from the world and devote himself to religious exercises and study. He took an apartment in the abbey of St Genevieve in 1730 and resided there entirely from 1742 till his death which happened February 4, 1752. He wrote translations, paraphrases, and annotations on the Scriptures and various other theological works.—**ORLEANS (Louis Joseph PHILIP duke of)** grandson of the foregoing was born at St Cloud April 13 1747. He was called when young the duke of Chartres and in 1769 he was married to the daughter of the duke of Penthièvre who held the office of grand admiral of France. He wished to have succeeded him, and not being able to obtain his object, he went as a volunteer on board the squadron of the count d'Orvilliers, when he was present at the engagement with the English off Ushant, and he is stated to have behaved on that occasion with extreme cowardice. On his return home instead of receiving promotion in the navy, the post of colonel-general of the hussars was created and bestowed on him. Some time after he succeeded the count de Clermont as chief of the French Freemasons. After the death of his father in 1787 he became possessed of the hereditary title and estates and from that period he adopted various methods to obtain popularity with a view to political power. In the disputes between the court and the parlements he constantly opposed the royal authority and gradually drew around him almost all the friends of revolution or reform. His behaviour towards the king at the royal session of November 19, 1787 occasioned his exile to Villars Cotteret during which the praises of the journalists heightened his influence with the populace. Previously to the convocation of the States-general, some

ORL

attempts are said to have been made to gain him over to the court, but they were ineffectual, and becoming a member of that body, he, from the beginning protested against all the decrees of the chamber of nobles, and at length joined, with other members, the tiers-état to form the National Assembly. At this period it appears to have been his object to reduce the king to a state of tutelage and procure for himself the formidable office of lieutenant-general of the kingdom. But he was by no means qualified to profit by the commotions to which he had contributed and he became in a great measure the passive instrument of the Jacobins and ultimately the victim of his schemes of ambition. He was chosen a member of the National Convention in September 1792 at which time the commune of Paris authorised him to adopt for himself and his descendants the appellation of Egmont instead of the name and titles of his family. In the Convention he voted for the death of the king, and on the 7th of April following he was himself arrested and committed to prison at Marseilles, with other members of his family. Being brought before the criminal tribunal of the department he was declared innocent of the charges of conspiracy against the government which were preferred against him but the committee of public safety forbade his liberation and after six months' detention he was transferred to Paris to undergo a new trial. At his examination he defended his conduct with calmness and address but ineffectually, and being condemned to suffer by the guillotine he submitted to his fate with courage and firmness. He was executed November 6 1793.—*Dart Hot Bug Univ.*

ORLEANS (ANNE MARY LOUISA of) see **MONTPENSIER**

ORLEANS (CHARLOTTE ELIZABETH du chassé) was the daughter of Charles Louis elector of Bavaria. She was born in 1652 and in 1671 became the second wife of the brother of Louis XIV by whom she was the mother of the regent, duke of Orleans. Her person was extremely plain but her disposition was lively and she possessed talents and wit which made her a favourite with the king. She died in 1722. Her letters written between 1715 and 1720 and addressed to duke Ulric of Bavaria, and the princess of Wales tend to elucidate the history of the reign of Louis XIV and the regency of her son as well as the manners and characters of her contemporaries. They were published at Paris in 1793, and reprinted in 1807 but the best edition is that of M Scheibler, Paris, 1823, 8vo.—*Dart Hist.*

ORLEANS (PETER JOSEPH d.) a jesuit and writer of history was born at Bourges in 1661 being the member of an ancient family in the province of Berry. He entered into the college of priests in 1680 and for several years taught rhetoric in its seminaries. He cultivated talents for the pulpit, but more particularly attended to historical composition. He was a man of lively parts and ingenuous conversation but his writings are more distinguished for imagination and eloquence than

ORL

for accuracy and justness of thinking. The work by which he is most known is his "Histoire de la Révolution de l'Angleterre," 3 vols. &c. a work which was much admired in France and which has even found admiring among the partisans of arbitrary power in Great Britain. English history however, is no theme for a jesuit; and as a proof of it, father d'Orléans regards Magna Charta, without stating its contents as the root of all political dissensions in England. His next considerable work is the "Histoire des Révoltes d'Espagne," of which he wrote about a volume and a half the remainder completing three volumes 4to, being executed by hitherto Rouillé and Brunoy. His other works are "Histoire des deux Conquérants Tartares Chinchu et Canchu qui ont subjugué la Chine 1689 8vo." "Histoire de M. Constant Premier Ministre du Roi de Suas &c. 1696 12mo." "Sermons et Instructions Chrétiniennes 1696 2 vols. 12mo," and the lives of PP Cotin and Ricci Lewis de Gomage Mary of Savoy the infanta Isabelle and Stanislaus Kotaka.—*Aust Dict Hist.*

ORLOFF (Gavriil) one of the favourites of Catherine II of Russia. He served in the artillery under the empress Elisabeth and at length became aide-de-camp to general Schuhvaloff whose mistress, the princess Kurakin preferring him to the general their intrigue was discovered and Orloff was dismissed from his post and narrowly escaped banishment to Siberia. Catherine then grand duchess heard of the affair saved him from banishment and took him under her protection. He had a principal share in the revolution which placed his mistress on the throne of Russia after which he was made grand master of the artillery and raised to the first dignities in the state. His ambition prompted him to aim at sharing the throne of the empress who would have submitted to a private marriage. This he imprudently refused to accept in consequence of which his influence declined and he was supplanted by a new favourite. He was then ordered to travel but was gratified with magnificent presents and received the title of prince of the German empire which Catherine procured for him. After an absence of five months he returned hoping to recover his former influence at court but he was disappointed. He resided several years at Petersburgh, and then made a tour in Germany Italy and France, indulging himself in the most extravagant luxury. He went to Peterburgh again in 1782 when he became disgraced and being removed to Moscow he died there in the following year. He had by the empress one son, named Bobrinski who was educated under the direction of his mother but he showed himself unworthy of the cares bestowed on him.—**ORLOV (Alexis)** brother of the preceding was remarkable for his gigantic stature and Herculean strength. He powerfully assisted the measures of Gregory for the elevation of his mistress to the throne, and is said, with his own hand, to have strangled the emperor in his prison. He con-

showed to move the emperor with great tenderness and fidelity, and was employed by her in the treasury and navy. On the accession of Paul I he was disgraced, and banished from Russia. He then went to Germany, and resided several years at Leipzig; but after the death of Paul, he returned to Moscow, and died in that city in January 1809.—*Rieg. Russ.*

ORLOFF (cccc. GREGORY BLADIMEROVICH) a Russian nobleman, more distinguished by his attachment to literature, and the progress which he extended to it, than by his rank and fortune. He was born in 1775, and passed the earlier part of his life in his native country till the delicate state of his health obliged him to exchange it for a milder climate. He therefore repaired to Italy where he composed his "Mémoires Historiques, Politiques et Littéraires, sur le Royaume de Naples." This work, which comprehends the entire history of lower Italy appeared in 1800, and was succeeded in 1809 by his "Histoire des Arts en Italie." The year following he published an account of his travels through part of France. His other productions are a translation of Karamzin's History of Russia into French, but his decease in the July of that year prevented his completing a task which, if accomplished, would have communicated to the rest of Europe that respect this proof of young Russian literature.—*Annot. Biog.*

ORME (Roxas) a distinguished historian, was born at Akyapo in the East Indies in 1748 and was educated at Harrow. He then obtained a civil appointment at Calcutta and was created a member of the council at Fort St George. After being elected commissary and accountant general in 1753 he embarked for England for the recovery of his health; but the ship in which he sailed being captured by the French, he did not reach his destination until the spring of 1760. The first volume of his celebrated work, "History of the Military Transactions of the British Nation in India," from the year 1743 "appeared in 1763, and the second in 1772. The elegance and perspicuity of the narrative, with its great fidelity and impartiality cause the author to rank with the best historical writers of his time. He also published "Historical Fragments of the Mogul Empire of the Maharatnas, and of the English Conquest in India." Mr Orme was at the same time an elegant writer, and possessed of a fine taste for music and drawing. He died in 1801.—*Life* prefixed to *Fragmenta.*

ORNITHOPARIUS, a German author of the sixteenth century who wrote on the science of music with considerable ingenuity and labour set forth in a thorough acquaintance with his subject. His principal work, "Musicae nigrae disceptatio," Leipzig, 1517, was the first ever printed in Germany on the

science. There is an English translation of it by Dowland, London, 1609.—*Sing. Diet. of Music.*

OROBIO (ISAAC) or BALTHASAR DE CASTRO, a learned Jew who was a native of Spain. His parents professed the Catholic faith, in which he also was educated, and having studied the scholastic philosophy he was appointed professor of mathematics in the university of Salamanca. He afterwards became a medical practitioner at Seville and being secretly attached to the religion of his ancestors, he at length had the misfortune to be accused before thequisition of infidelity and Judaism. He was treated with all the rigour to which the victims of the holy office were usually subjected; but three years con tinued in a dark dungeon with the repeated administration of torture not producing a confession of his imputed crime and there being no direct evidence against him as he was at length discharged and, as may be supposed, he seized the earliest opportunity for quitting the Spanish territories. He first settled at Toulon in France where he obtained the professorship of medicine and there he conformed to the religion of the country. But being after a time desirous to enjoy liberty of conscience, he removed to Amsterdam relinquished his Christian name Balthasar and submitting to the distinguishing rite of Judaism, took that of Isaac and conforming openly to the law of Moses he practised as a physician with great reputation. He employed his pen in confuting the principles of Spinoza, but the friendly controversy which he carried on with Leibnitz relative to the respective merits of Judaism and Christianity has chiefly tended to maintain his literary reputation. It ended as such disputes usually do in each party retaining his own sentiments but the papers on both sides were afterwards published by Linhorst. The death of Orobo took place in 1687.—*Hatchinson's Rieg. Med. Biog. U.S.A.*

OROSIUS (PAULUS) a Spanish priest and historian of the fifth century. He was a native of Tarragona and a disciple of St Augustine and he lived in the time of the emperors Arcadius and Honorius. The city of Rome having been taken by Alaric, king of the Goths, the Pagans attributed that, and the other misfortunes which had befallen the empire to the abomination of the adored religion from heathenism to Christianity. It was to purify the Christians from this reproach that Orosius, at the request of St Augustine, undertaken the principal work, entitled "Histories," in which he exhibits a view of the most important events from the creation of the world to his own time in order to show that great calamities had happened in every age and that the Roman empire had not been more exempt from these at any other period than since the birth of Christ. This treatise forms a kind of general chronicle, or universal history divided into seven books. The writer has taken into some important countries, especially in point of chronology, unacquainted,

G R T

ing which his work became exceedingly popular in the middle ages, and it was translated into Anglo-Saxon, and commented on by King Alfred. Origen wrote also against the heresy of Pelagius, and on other theological topics. The best edition of his history is that of Havercamp, *Lugd. Bat.* 1738, &c.—*Duges Beli de Aut. Ecclie. Eng. Uni.*

ORPHEUS, a name celebrated in Graecian mythology, by some asserted to have been a poet, musician and philosopher of Thrace, while Ariosto, from the manifestly fabulous accounts connected with his history, has gone so far as to deny his existence altogether. He is said to have been the son of Asager and the chief founder of allegorical theology among the Greeks, as well as according to Suidas, of the religious ceremonies, called from the country which gave him birth "Thracia." The era in which he flourished is generally placed before that of the Trojan war, and although the ancient verses which go under his name are manifestly the productions of a later age yet, if we believe Plato, Isocrates, and Diodes Saculus, there seems to be no cause for doubting his existence. The addition of three strings to the lyre and the invention of hexameter verse have been attributed to him. He was also skilled in medicine which circumstance is thought to explain the fable of his recalling his wife Eurydice from hell. His death is variously related, but it is usually said to have proceeded from the hands of his infurated countrywomen.—*Brucker. Hist. Ecclie. Ecclie.*

ORSATO (SARTORIO) Lat. Ursatus, an eminent antiquary was born at Padua in 1617 and became professor of natural philosophy in the university of that city. He died in 1678. His works are numerous and esteemed the principal are "A History of Padua," in Italian 1678 fol. "Prænoscana, Cognoscina, et Agnosco antiquorum Romanorum;" "Deorum, Deorumque Nomina et Attributa;" "Monumenta Patavina. Commentaria de notis Romano-Romanorum Cronologia et Regimientu di Padova Poems and Orationes" and "Marmi cruditi."—*Tribolchi. Novus Dic. Hist.*

ORSI (FRANCIS JOSEPH AUGUSTINE) an eminent cardinal was born in Tuscany in 1692. He entered the Dominican order and was appointed theological professor. He was afterwards made master of the sacred palice and after receiving various promotions, in 1759 he was raised to the purple. He was the author of "Jalobulatus ac Rom. Post." 1741, and "An Ecclesiastical History of the first millennium." He died in 1761.—There was also another Orsi (John Joseph) an Italian grammarian and poet, who was born at Bologna in 1652, and died in 1733. He left several sonnets, pastoral, and pastoral pieces but his principal work is his "Thoughts" on Bouhours's "Musique de Peintre Modena, 1735, 2 vols. dico.—*Johann.*

ORTELIUS (ANNAEUS) an eminent antiquary and geographer of the sixteenth century. He was a native of Antwerp, and trav-

O R V

elled extensively with Grotius, whom he visited in the course of his travels in England. He was particularly skilled in mathematical science, and was one of the earliest writers among the moderns who elucidated the geography of former ages. On his return to the Netherlands, he became cosmographer to the king of Spain. His death took place June 26, 1617, at the age of seventy-one. He was the author of "Synopsis Geographia," Antwerp, 1570, 4to. "Thesaurus sive Lexicon Geograph." 1595, 4to. "Dictionarium, Deumusq; caput, ex Naufragiis, &c., Itinerarium per non satis Belgias partem;" and "Germanorum veterum via, mores, et religio, cum Localibus," 1596 4to.—*Moreri. Bibl. Unio.*

ORTON (JOHN) an eminent nonconformist divine, was born at Shrewsbury in 1712. He was educated at the free-school of his native place, and was afterwards placed under the care of Dr Doddridge whose assistant he became. He preached occasionally in several congregations in Northamptonshire until 1741 when he became minister of the united independent and presbyterian congregations at Shrewsbury. In 1765 his health being in a very delicate state he was obliged to retire from his public duties. He fixed his residence at Kidderminster where he passed his time in literary occupations until his death which happened in 1783. Mr Orton received the degree of doctor in divinity several years previous to his death but he never would be addressed by that title or prefix it to any of his writings. His works are very numerous, and are written in a fervent energetic style and in a spirit of strict piety and morality. The principal are three "Memoirs of Dr Doddridge," "Christian Zenith three Discourses," "Discourses on Stereoty Religious Exercises Christian Worship three Discourses Sacramental Meditations" "Summary of doctrinal and practical Religion Exposition of the Old Testament Discourses to the Aged Letters to a young Clergyman, &c.—*Roy Brit.*

ORVILLI E (JAMES PHILIP D') an eminent writer on classical literature of French extraction but born at Amsterdam in 1696. He pursued his studies at the university of Leyden where in 1721 he took the degree of LL.D. Having, however, renounced his design of becoming an advocate and determined to devote himself to the belles lettres, he travelled in England, Italy, France, and Germany, visiting every where the public libraries, cabinets of medals and antiquities, and forming an acquaintance with the most celebrated classical scholars of the age. On his return to Holland, about 1730, he obtained the chair of history rhetoric, and Greek literature at Amsterdam, which he occupied till 1743 when he gave in his resignation still however preserving the titles and honours of the office. He died September 16, 1751. His works are, "Miscellaneous Observations Critical notes," carried on periodically in association with Bonne; "Oratio Funeris in funere Jo. Corri. Novae sparta," 1725, a

O S I

sathical treatise against M. de Pauw of Utrecht, an edition of the Greek romance of *Amoris Leda*, &c.—*Melior adae. Dogen.*

Chaucier, with a learned commentary 1770; *Antiquus or OSIO (Felix)* a celebrated monk, was born at Milan in 1587. He became professor of rhetoric at Padua where he died in 1631. His works are "Tractatus de Sepulchris et Epitaphiis Ethimicorum et Christianorum. Elogia Scriptorum illustrium Romanico-Graecorum." "Orationes" "Epistolae Latini duo." Notes and Corrections to the History of the age of Frederic Barbarossa," written by Moretus in tom. iii. of the *Treasures Italicae* and to Albert Mazzato's History of the Emperor Henry VII," Venice 1633 folio. A Collection of Authors of the History of Padua. —His brother Tiberius or Osio also wrote several tracts.—*Sacra Omnia. Huius Dicitur de L'Adverso.*

OSBURN or OSBERT a Benedictine monk of Canterbury who flourished about 1040. Testimonia says he was learned in the Scriptures, deeply skilled in music and eminent for his knowledge and eloquence. He wrote on sacred and prophetic literature, and among the various subjects of which he treated was music; but he is chiefly known at present as the author of a life of St Dunstan into which Osburn in compunction with the taste of his age has introduced a number of legendary tales doubtless designed to do honour to his hero but which have had the effect of robbing his own credit as a biographer. This work has been published in Wharton's *Anglia Sacra*.—Trithem. de Script Ecclesi. *Fuller's Worthies*.

Osiander (Andreas) an eminent divine was born in Bavaria in 1498 and began to preach at Nuremberg in 1522. He was one of the promoters of the reformation but finally by his peculiar doctrines, he became the cause of great disturbances in the Lutheran churches. At the conference of Marburg in 1569 between Luther and the Swiss divines he maintained his opinion that a man is justified formally not by the faith and apprehension of the justice of Jesus Christ or the imputation of his justice according to the opinion of Luther and Calvin; but by the actual justice of God. He then drew up a confession of faith which was printed by order of the magistrate of Brandenburg but highly disapproved of by the Lutherans. He was a studious and acute divine but much disliked for his arrogance and the insolent manner in which he treated the aged Melanchthon. His works are "Harmonia Evangelica" "Liber de Imagine Dei quid sit" "Epistola ad Zenophontem de Eucharista," "Dissertationes duae de Loge at Evangelio et Justificatione." He died suddenly at Königsberg, where he was minister and professor in 1562.—His son **LURE** was a Lutheran divine and wrote an inscription of the Christian religion &c. He died at Tübingen in 1604.—Another **Lure Osiander**, was chancellor of Tübingen, and died in 1638. He was the author of a treatise "On the Omnipresence of Christ as Mag."—**Anoszus Osiander** grandson of the preceding Andrew was preacher and a counsellor to prince Louis of Württemberg and was the editor of *Biblica Sacra Latina vulgata*, and other works. He died in 1617.—There was also a **Jacob Anoszus Osiander** another Lutheran divine, and professor and provost of the university of Tübingen, where he died in 1659. He wrote "Commentaries in Pentateuchum," 3 vols. folio, "Commentaries on Joshua, Judges, Ruth, and Samuel" 3 vols. folio, and "Disputationes Academicæ in Principiis et maxime concordantibus Notis Trans-

O S M

mons Leon," &c.—*Melior adae. Dogen.*

Chaucier, with a learned commentary 1770; *Antiquus or OSIO (Felix)* a celebrated monk, was born at Milan in 1587. He became professor of rhetoric at Padua where he died in 1631. His works are "Tractatus de Sepulchris et Epitaphiis Ethimicorum et Christianorum. Elogia Scriptorum illustrium Romanico-Graecorum." "Orationes" "Epistolae Latini duo." Notes and Corrections to the History of the age of Frederic Barbarossa," written by Moretus in tom. iii. of the *Treasures Italicae* and to Albert Mazzato's History of the Emperor Henry VII," Venice 1633 folio. A Collection of Authors of the History of Padua. —His brother Tiberius or Osio also wrote several tracts.—*Sacra Omnia. Huius Dicitur de L'Adverso.*

OSMAN BEY (Nikosky) a noble Hungarian who entered into the army and obtained the rank of colonel in the Austrian service. Having been accused of robbing the regimental chest he endeavoured to justify himself at the expense of the paymaster who had disappeared. His defence not appearing satisfactory to the emperor Joseph II he was deprived of his commission and imprisoned. In about a year after he was liberated, but not being able to obtain the restoration of his rank he determined to go to Constantinople and turn Mahometan. He arrived there in 1779 and his intention being made known to the Austrian ambassador baron Heribert Rathkral he endeavoured to persuade the intended renegade from fulfilling his purpose but in vain for he made profession of the Moslem faith and received from the grand seigneur a pension of five or six thousand francs with an estate in Magnesia in Asia Minor. Osman Bey possessed a taste for the fine arts and for the study of archæology and numismatics. He had brought from Germany a collection of ancient medals, to which his new situation enabled him to make considerable additions. He had continued thus to employ himself for some years when he was murdered by two of his servants who robbed him of a considerable sum of money which he had recently received. His property was as usual seized by the Turkish government and his medals being sold, were ultimately lodged in the cabinet of the king of Bavaria at Munich. Osman was considered in the Levant as a manufacturer of false medals of which description were many of those in his collection. His murder happened in 1785.—*Bug Usin.*

OSMOND or OSMUND (Sr.) bishop of Salisbury in the eleventh century. He was the son of the count of See, and in 1066 he accompanied William the Norman to England. That prince made him earl of Dorset, counsellor of state, and chancellor of England. He had not only acquired military renown in the early part of his life but had also distinguished himself by his learning, to which, and to the duties of religion he at length determined to devote himself. Having taken holy orders, he was, in 1078, made bishop of Sherborne, where he remained till his death in

O S S

O S T

1099. St. Osmund erected a cathedral at Old Sarum in which he was interred but his bones were afterwards taken up and carried to Canterbury. His canonisation took place in 1458. He composed religious offices, which were subsequently interpolated with Apocryphal legends, but his Missal or service book, for the use of his cathedral is the production which has principally contributed to preserve his name from oblivion. It became at length the most popular manual of public devotion among the English clergy and prayer-books.

Secundum usum Sarum were adopted for the service of churches in general.—*Bieg L'vne*

OSORIO (JEROME) a Portuguese divine and historian who was a native of Lisbon. He studied at Paris and Bologna, and on his return to Portugal he became professor of theology at the university of Coimbra. Having taken holy orders he was at length made bishop of Silva, in which station he distinguished himself by his virtue and piety, as well as by his learning. The troubles which took place in Portugal after the death of king Sebastian who is supposed to have perished in fighting against the Moors in Africa in 1578 deeply afflicted Osorio who died at Tavira, August 20 1580 aged seventy four. Among his works are treatises *De Nobilitate Christiana*, *De Regis Institutione* and *De Rebus Emmanuelis Regis Lusitanis virtute et auspicio gestis* which together with several others were published at Rome in four volumes folio by his nephew Jerome Osorio canon of Evora.—*Traeser Elages des H. S. Bieg L'vne*.

OSSAT (ARNAUD d') an eminent cardinal was born of humble parents at Cassagnabère a village near Auch in 1536. He became tutor to some young noblemen whom he accompanied to Paris where he applied himself zealously to his own improvement. After studying the law he practised at the bar and was much admired for his eloquence. When Paul de Foix archbishop of Toulouse was nominated by Henry III ambassador to the court of Rome he carried d' Ossat with him as his secretary who after the death of that prelate in 1564 took holy orders and was received into the house of the cardinal d' Este. He was afterwards made chargé d'affaires for the French court and in that capacity he was greatly instrumental in reconciling Henry IV with the see of Rome for which he was rewarded first with the bishopric of Rennes and afterwards with a cardinal's hat and the see of Bayeux. He died in 1604. He was a man of great penetration and prudence and though a profound politician he was an honest man. He wrote a work in defence of Razius, whose disciple he was, entitled *Expositio Arcadii Ossati in Disputationem Jacobi Carpentarii de Methodo.* His letters relative to the negotiations in which he was employed, were published by Amelot de la Houssaye, Paris, 1678 2 vols. 4to and 5 vols. 12mo.—Morer. *New Diet Hist.*

OSSHAN a Gaelic bard supposed to have

Bieg Dict — Vol II

lived in the third century and to have been son of Flagul, a Caledonian chief; whose name is accompanied in various military expeditions. Some epic poems, and other pieces, ascribed to Ossan were published in a professed English version in prose by James Macpherson in 1762 and subsequently, and a warm and protracted controversy took place relative to their authenticity. In 1781 Mr W Shaw author of a Gaelic grammar and dictionary published "An Enquiry into the Authenticity of the Poems ascribed to Ossan," and he was answered by Mr John Clarke a member of the society of Scottish antiquaries and a translator of Caledonian poetry. More recently Malcolm Lang attacked the credit of the Ossanic poetry and was opposed by Mr Archibald Macdonald and Dr Patrick Graham. Further information on the subject may be found in the Report of the Highland Society published by Henry Mackenzie esq and in the pieces stitched to the Gaelic poems published as the originals of Ossan with a literal Latin version by Robert Macfarlan A.M. 3 vols. 8vo.—*Org*

OSTADE (ADRIAN van) a Dutch painter was born at Lubbeck in 1610 and studied under Francis Hals. His pictures are characterized by an exact imitation of nature and his admirable representations of subjects which in other lands would only have disgusted us. They usually consist of the interiors of alehouses or kitchens, with Dutch peasants smoking quarrelling or drinking but he throws such expression into the heads of his characters that their vulgarity is lost in our admiration of their truth and animation. His colouring is rich and clear his touch spirited and free and all his works are highly finished. On the approach of the French troops in 1667 Ostade sold all his pictures and effects in order to return to Lubbeck but at Amsterdam his fears being overcome he was prevailed upon to remain there and he practised his profession with great reputation until his death which took place in 1685.—*Isaac van OSTRADZ* his brother and scholar was born at Lubbeck about 1617. His earliest pictures, which he painted in imitation of his brother were greatly inferior but he afterwards adopted a style of his own in which he was successful and he was often solicited by contemporary landscape painters to add his figures to their pieces. He died young.—*D Argenville Philibert Bryas's Diet. of Paint and Eng Pilkington*

OSTERVALD (JOHN FREDERIC) a Swiss Protestant divine was born at Neuchatel in 1665, and became pastor of the church in that place in 1699. He died in 1767. His works are *A Treatise concerning the Causes of the present Corruption of Christians, and their Remedies*, 8vo, "A Discourse against the Sin of Unchastity; An Abridgment of the Sacred History," "Ethica Christiana" *Theologico Compendium* 'A Treatise on the Sacred Ministry.' A Catechism, &c. M. Osterwald also published an edition of the Geneva French version of *The Holy Bible* "with arguments and reflections."—His son,

O S Y

JOHN RODOLPH OSSEVAL, was pastor of the French church at Basle and wrote a much esteemed treatise, entitled, *The Duties of Correspondents*.—*Nous. Dict. Hist.*

OSTERWICK (MARIA VAN) a celebrated painteress of flowers and fruit, born at Noordorp, a small town near Delft, in 1630. She was the pupil of John David de Heem, the most celebrated flower painter of his time. Her pictures were admitted into the choicest collections: the emperor Leopold commanded her to paint one for his gallery with which he was so much pleased, that he gave her the portrait of himself and his empress, set with diamonds. She was also distinguished by William III, and Louis XIV. Maria van Osterwick is ranked among the most celebrated flower painters, her colouring is clear and transparent, and finishing exquisite. She died unmarried, in 1693. Her pictures are extremely scarce and valuable.—*Bryce's Dict. of Paint and Eng.*

OSWALD (JOHN) a native of Scotland who displayed an early inclination for literature but entering into the army was sent to the East Indies as a lieutenant in a regiment of foot. He returned to England in 1783, and having attained a knowledge of Latin and Greek without the assistance of a master he made himself acquainted with the Arabic also during his residence in the East. He distinguished himself by some singularities of behaviour among which was a partiality for the opinions of the Brahmins whom he imitated in abstaining from animal food. In 1786 he published a burlesque piece entitled

Rame Comœte Evangelizante or the Co and Frogs turned Methodists and this was followed by The alarming Progress of French Politics accompanied by the treaty of commerce with France in 1787. Euphrasyne an Ode to Beauty 1788, and Poems with the Humours of John Bull, an operatic farce, under the pseudonym of Sylvester Otway 1789. On the occurrence of the revolution in France Oswald went thither and obtained the rank of colonel under the republican government. He was at length killed in battle.—*Redhead York's Letters from France*. Eng. *Moss. des Contemp.*

OSYMANDYAS an ancient king of Egypt celebrated for his conquests and for the magnificent monuments attributed to him by the historian Diiodorus Siculus. He is supposed to be the same monarch who is styled by Strabo Ismaenes who was also called Memon. To this prince, the vocal statue, (the remains of which still exist in the ruins of ancient Thebes,) is supposed to have been dedicated. The palace he erected at Thebes is said to have contained a library which is the earliest mentioned in history. He also built a sun-dial monument surmounted by a golden circle marked with astronomical divisions, reported, by Diiodorus, to have been taken away by Cambyses, king of Persia, when he conquered Egypt. Ozymandias is conjectured to have reigned 3,000 years before the beginning of the Christian era.

—Romans. Idee, anty literatur Egypt. Scherlens Canon. Chron. Egypt. Eng. *Mag.*

OTFRID the author of one of the earliest specimens of composition in the German language. He was a native of Swabia, and lived in the middle of the ninth century. After having become a monk of the abbey of Weissenburg, in Alsace he studied under Rabanus Maurus abbot of Fulda; he then returned to his monastery where he opened a school of literature and wrote a variety of works in prose and verse. The most important of these is a version, or paraphrase, of the Gospels, in Allermannish rhyme still extant in which some passages of lyrical poetry occur especially one where the cloistered bard expresses a longing for his native home. Schors has published that work with a Latin translation in his edition of Schultes's *Phænomena Antiquorum Testimoniarum*.—*Trithem. de Script. Ecclesi. Bag. Univ. Lond. Mag. vol. iii.*

OTHER, OHTHERE or OTHAR A Norwegian traveller of the ninth century. He resided at the extremity of the inhabited part of Norway and was engaged in the seal and whale fisheries. At length probably in the prosecution of a mercantile adventure he made a voyage to England, where he became known to king Alfred the Great who took him into his service. To that prince he communicated an account of two voyages in which he had been engaged in the Arctic seas of finding the earliest information extant relative to the north of Europe and the narrative of Other together with that of Wulfstan another traveller were inserted by Alfred in his Anglo-Saxon version of Orosius. An account of the voyages of Other was published by Hakley and Purchas, and more recently in Daines Barrington's edition of the Saxon Orosius. The work has also occupied the attention of the Danish literati.—*Turner's Hist. of the Anglo-Saxons*.—*Bag. Univ.*

OTRO or OTIO of Freisingen a German ecclesiastic and historian of the twelfth century. He was the son of Leopold marquis of Austria, and is said to have been equally illustrious for his birth his learning and his piety. After studying at the college of Neuburg which was founded by his father he went and completed his education at the university of Paris. He then entered into the monastic order of the Cistercians in the convent of Morimond in Burgundy of which he became abbot. Having afterwards been elected bishop of Freisingen in Bavaria he returned to Germany but in 1148 he followed the emperor Conrad in an expedition to the Holy Land. The latter part of his life was passed in seclusion at the monastery of Morimond, where he died in 1158. Otto composed a Chronicle, or general history from the creation to AD 1146 and also a life of the emperor Frederic Barbarossa in two books, which last work was continued by Radwic, a canon of Freisingen.—*Dict. Hist.*

OTT (JOHN HAWAII) a Swiss divine, was born at Zurich in 1617. He received a liberal

OTT

education at several universities, and then travelled into England and France. Upon his return to Switzerland, he was presented to the living of Dietrichen. In 1651 he was appointed professor of eloquence at Zurich in 1655, of Hebrew and in 1668 of ecclesiastical history. He died in 1682 leaving behind him numerous works, which are esteemed for their erudition. The principal are, 'An Hale relating to the History of the Ambassadors' On the Grandeur of the Church of Rome 'A Latin Discourse in favour of the Study of the Hebrew Language' A Latin Treatise on Alphabets and the Manner of Writing in all Nations. —His son JOHN BAPTIST OTT was born in 1661 and acquired celebrity by his knowledge of the Oriental languages and antiquities. He was pastor of a church at Zollikon, and professor of Hebrew at Zurich and in 1715 he was promoted to the archdeaconry of the cathedral in that city. He was the author of 'A Dissertation on Vows' A Letter on Samaritan Medals, addressed to Adrian Reland a treatise On the Manuscripts and Printed Versions of the Bible before the era of the Reformation 'A Dissertation on certain Antiquities discovered at Klothen in 1724. —More. *L'Adversaire's Dict. Hist. et Biol. portatif.*

OTTO count de Moeloy (Louis WILLIAM) an eminent French diplomatist born in 1754 in the duchy of Baden and educated at the university of Strasburg. In 1777 he was appointed secretary of legation to the French embassy in Bavaria, and the ambassador M de la Lussonne being appointed minister plenipotentiary to the United States of America in 1779 took with him M Otto who remained there as secretary and chargé d'affaires till 1792. He was then employed by the committee of public safety in the foreign department of the state but on the fall of the Girondists shortly after he was sent to the Luxembourg prison where he remained till the revolution of the 9th of Thermidor. He then lived in retirement near Laguy till 1798 when he went to Berlin as secretary to the ambassador the abbé Seeyen. In 1800 he was sent to England to treat for an exchange of prisoners, and he subsequently exercised the functions of minister-plenipotentiary till the peace of Amiens, when he was succeeded by general Andreassy. His removal from a situation which he had filled with great ability has been attributed to the displeasure of Napoleon at his refusal to assist in the schemes of the French ruler for speculating in the funds. Otto was employed subsequently in a mission to Bavaria, and after the campaign of 1809 he was sent ambassador to Vienna, where he negotiated the marriage of Buonaparte with the archduchess, and remained there till 1813. He became a minister of state on his return to Paris and during the hundred days in 1815, he was under-secretary of state for foreign affairs. He died at Paris November 9, 1817. He is said to have been a man of highly cultivated talents and fascinating manners, and to have been professedly skilled in

OTW

political diplomacy.—*Bug Uva. Big Note. des Contes.*

OTWAY (THOMAS) an eminent writer of tragedy was born in 1651 at Trotting, in Sussex his father being the rector of Woolbeding in that county. He was educated at Winchester and was entered a commoner of Christchurch, Oxford, which he left without a degree or any professional determinacies, possibly owing to the narrowness of his circumstances, as he went to London and made some attempts as an actor with but little success. As he possessed talents for poetry he was naturally led to turn his attention to the drama and in 1675 he produced his first tragedy of 'Alcibiades'. The following year appeared his 'Don Carlos' which proved extremely successful and it appears by some brutal and libidinous lines by lord Rochester in his 'Seasons of the Poets' that the profits of this piece rescued him from great indigence. His theatrical reputation introduced him to the patronage of the earl of Plymouth a natural son of Charles II who procured him a commission in a new raised regiment of cavalry destined for Flanders, in which country he served for a short time and then returned. It is not known why pursued by his habitual poverty. He continued to write for the stage but either owing to dissolute habits, or inadequate encouragement, he found it a very scanty means of subsistence. He produced in 1677 'Timus and Berenice' from Racine and the 'Cheats of Scapin' from Moliere which were acted together as play and farce and succeeded. The following year he produced his 'Friendship in Fashion' a comedy which was followed in 1680 by his tragedies of 'Cæsus Marcellus' and 'The Orphan', and in 1682 by 'Venice Preserved' on which last two pieces his dramatic fame is chiefly founded. An intervening comedy entitled 'The Soldier's Fortune' merits little notice nor indeed any of his comedies, which were coarse and licentious even for that day. All these pieces were produced before he reached his thirty fourth year for he died in 1685 previously to having completed it, at a public house on Tower Hill where he had secured himself from his creditors, in a state of great destitution. It is a traditionary story that being nearly famished, he begged a shilling of a gentleman who gave him a guinea, and that he was choked by eagerly devouring a roll which he then purchased to allay his hunger. Pope was however informed that he fell a sacrifice to a fever occasioned by his anxious pursuit of a person who had shot a friend of the name of Blaketon. All accounts agree, that he closed his life in great poverty. The unhappy fate of Otway has excited great sympathy associated as his memory is with some of the most tender and pathetic scenes in English tragedy but his dissoluteseness of life and manners, and shameless flattery of the great, much tended to abate this kindly feeling. As a tragic writer he stands high and no one has touched the string of domestic distress with more force.

O U G

and feeling. Thought often highly poetical, his language is easy and natural, and the sentiments and incidents irresistibly moving. His

Venice Preserved, with an equivocal plot, and scarcely a virtuous character except the heroine never fails to excite the most heartfelt interest, and the skill of the poet completely triumphs over the colder conclusions of reason. The miscellaneous poetry of Dryden is very indifferent. The latest edition of his works is that of Mr Thornton in three volumes 8vo 1612.—*Biog Brit. Lays prefixed to his Works*

OUDIN (CASIMIR) a French monk was born at M.-meries-on the Meuse in 1638. He entered among the monks of the Premontré order at the abbey of St Paul at Verdun, where he applied himself to the study of philosophy and divinity but more particularly to ecclesiastical history. In 1677 he was placed in the abbey of Baully in Champagne where on the occasion of a visit from Louis XIV he made such a display of his talents and genius that his superiors were induced to employ him in making collections for a history of their order. In 1688 he published *Supplementum de Scriptoribus vel Scriptis ecclesiis item a Bellarmine omnibus ad annum 1400* 8vo. In 1690 a change taking place in his religious sentiments, he embraced Protestantism at Leyden and was soon after appointed sub-librarian of that university. He died in 1717. His works are *Commentarius de Scriptoribus ecclesiis antiquis scriptis &c.* "Veterum aliquot Gallicis et Belgicis scriptorum opercula Sacra. Tras dissertationum Criticarum &c.—*Norow. Moret.*

OUDIN (FRANCIS) a learned French jesuit was born at Vignory or Vignory in Champagne in 1673. In 1691 he entered among the jesuits at Nancy and in 1707 he took the vows and orders. He was professor of rhetoric and afterwards of positive theology in the college of Dijon where he died in 1752. He was the author of numerous *Orations* *Dissertations* "Elogies" Lives of different Writers inserted in *Niceron's Memores*

Commentaries on the Psalms, the Gospel of St Matthew and almost all the Epistles of St Paul still in MS. He was employed by his superiors upon a compilation of the *Bibliotheca Scriptorum Societatis Jesu* on which he spent the latter years of his life. Father Oudin had also a taste for polite literature and possessed great facility in composing Latin verses most of which were inserted in a collection entitled *Poemata didascalica* 3 vols 15mo.—*Moret. Nour. Diet. Hist.*

OUGHTRED (WILLIAM) an English divine celebrated for his very great skill in the mathematics, was born at Eton in Buckinghamshire, in 1573 or 1574. His father who was a currier, placed him on the foundation of that school, where he was elected in 1592 to King's college, Cambridge of which after a due probation, he was admitted a fellow. He applied himself with great assiduity to the different branches of academic learning but particularly to the mathematics to which the best of his genius more particularly directed

O U T

him; and while yet an undergraduate he invented an easy method of geometrical dialling. In 1600 he graduated MA and the following year projected a "Horizontal Instrument;" for delineating dials on any kind of planes, and for working most questions which could be performed on the globe of which invention he published no account until 1636. About 1600 he was ordained priest, and presented to the rectory of Albury in Surrey where he distinguished himself by the conscientious discharge of his pastoral duties and assiduous cultivation of the mathematical sciences. In 1614 lord Napier having published an account of his invention of logarithms Mr Oughtred is thought to have been then led by Mr Briggs to compose his treatise "On Trigonometry" which however did not appear until many years after in 1628 he was engaged by the earl of Arundel to become mathematical tutor to his son for whose use he drew up an "Arithmetica in numeris et speciebus Institutio" intended to serve as a general key to the mathematics, which work was highly esteemed and translated into English under the title of "The Key to the Mathematics" now forged and filed. Later editions of the Latin original with great additions gradually became a standard book with the mathematical teachers of Cambridge. Notwithstanding his mathematical attainments which have gained him a name throughout Europe he was in danger in 1646 of a sequestration by the committee for plundered ministers but upon the day of hearing the astrologer William Lilly applied to sir Bulstrode Whitlocke and other friends who appeared in such numbers on his behalf that he was acquitted by a majority. While thus persecuted at home he received various invitations from abroad all which he declined. He lived to see the Restoration in 1660 in which year he died at the age of eighty six it is said in consequence of joy at hearing the news of the vote at Westminster which produced that event. His books and MSS. came into the possession of Mr William Jones, and afterwards into those of Sir Charles Scarborough who selected such of the latter as were fit for the press, and had them printed at Oxford in 1676 under the title of "Opuscula Mathematica hactenus medita." In 1660 sir Jones Moore annexed to his "Arithmetica" a treatise entitled "Cosical Sections &c" translated from the papers of the learned William Oughtred. According to Dr Hutton this eminent mathematician was more scientifically profound than happy in his method of treating the subjects on which he wrote his manner being dry and obscure and rules and precepts so involved in symbols and abbreviations that his mathematical writings are both troublesome to read and difficult to understand.—*Biog Brit. Hutton's Math. Diet.*

OUTRAM or OWTRAM (WILLIAM) a learned English divine was born in Derbyshire in 1635 and was educated at Cambridge where he took all his degrees. After various promotions, he was collated to the rectory of Leiston, and installed parochial

O V E

of St Peter's church in Westminster. He was also for some time rector of St Margaret's, in the same city. He died in 1679. He was celebrated for his skill in rabbinical learning, and has acquaintance with the ancient fathers. He was an accurate and precise writer. His works are, *De Sacrifice Liber deo quorum altero explicatur omnes Iudeorum novissima Gentium profesarum sacrificia altera Sacrifice Censi* &c. Twenty Sermons preached upon different Occasions. —*Bog Brt Preface to Sermons.*

OUVILLE (ANTHONY LE METRE d.) the brother of Bourchier the favourite of cardinal Richelieu. He was born at Caen but in what year is uncertain and he died before his brother in 1656 or 1657. He wrote ten plays and translated some romances from the Spanish but he is only known at present on account of his tales which have been compared with those of La Fontaine whose licentious indecency he has rivalled though he falls far beneath that writer in wit and humour. D'Urvile's pieces which are in prose were published in 1669 under the title of "L'Élégie des Comtes du Steun d'Urvile" 2 vols. 12mo. —*Bog Univ Dict Hist.*

OUVRARD (Rene) a celebrated canon of Tours, was a native of Chalon in Bourgogne. He was a poet, mathematician divine and controversial writer and even a musician having for ten years filled the post of master of music at the holy chapel at Paris. He died at Tours in 1694, and on his tomb are these lines, composed by himself—

Dum vixi divina mihi Lauz unica Cara
Post obitum sit Lauz divina mihi unica
Mercies!

He was the author of numerous works of which the following are the principal: *Motifs de réunion à l'église Catholique présentés à ceux de la Religion prétendue réformée de France*; *Les Motifs de la Conversion du comte de Lorges Montgomery*; *Defense de l'ancienne Tradition des Eglises de France*.

Secret pour composer en Musique par un Art nouveau; *Studiois sanctarum Scripturarum Rabia Sacra in Lectiones ad angulos dies &c*; *L'Art de la Science des Nombrs*; *Architecture harmonique*; *"Ca lendarium novum"*; *Breviarium Turonense renovatum &c.* His *History of Music* and dissertation on *Vassus's treatise De poesmatum canto et virtibus rituum* remain in MS.—*Moresl. Hist. Dict. Hist.*

OVERALL (JOHN) an English prelate was born about 1599. After taking his degree, he was promoted by queen Elizabeth to the deanship of St Paul's. He was appointed bishop of Lichfield and Coventry where he was translated to Norwich where he died in 1619. He maintained a correspondence with Gerard Vassus and Gronau, in which he declares himself in favour of Arminianism, for which he paved the way in England. The work by which bishop Overall is chiefly known is *The Convocation Book*, in which he maintained the divine origin of government. It was read in convocation and passed in or-

O V E

der to be published; but James I not hating a convocation to enter into such a theory of polity, commanded that it should proceed no further. It was however finally published by Dr Sherlock, as a justification of his taking the oaths at the Revolution in order to be come dean of St Paul's —*Ecclesiast. Brit. Bur. not. Own Times.*

OVERBEECK (BORAVVENTURE VAN) a Dutch painter born at Amsterdam in 1660. After having studied under Janssens he went to Rome where he made designs from ancient statues and other works of art. Returning to Holland, he again connected himself with La Rose with whom he indulged in habits of dissipation extremely unfavourable to his progress in the prosecution of his studies. At length he precipitately quitted his society and made repeated visits to Rome where he stayed some years and collected the materials for a great work on which his reputation is founded. He was preparing to publish it when he died in 1706 and the work appeared in 1709 under the following title *Heliisque antiquae Urbis Romae quoram singulas per scrutatas est ad vivum delineavit*; *dimensiones est, descriptam, atque incidit Boravventure de Overbeeck* large folio in three parts each containing fifty plates. The explanatory text which had been written in Flemish was translated into Latin and French and an edition of the latter was reprinted in 1763 —*Bog Univ.*

OVERBURY (or THOMAS) a miscellaneous writer principally known by the tragic circumstance of his death was descended from an ancient family in Gloucestershire. He was born in 1581 at the house of his maternal grandfather in Warwickshire and in 1593 was entered a fellow commoner of Queen's college Oxford. Thence after taking a degree he removed to the Middle Temple for the study of the law but his inclination being more turned to polite literature he preferred the chance of pushing his fortune at court. In 1604 he contracted an acquaintance with Robert Carr the worthless favourite brought from Scotland by James I. The ignorance and mean qualifications of this man ren dered the services of a man of parts and education like Overbury exceedingly welcome and he repaid his services by procuring for him in 1608 the honour of knighthood and the place of a Welsh judge for his father. The intimacy continued to be mutually advantageous until the favourite engaged in his celebrated amour with the countess of Essex. With too much of the license of fine gentlemen in every age sir Thomas countenanced this gallantry in the first instance but when that infamous woman had, by a disgraceful series of proceedings, unhappy but too much countenanced by the king himself procured a divorce from her husband he opposed the projected marriage between her and her gallant by the strongest remonstrances. This counsel Carr then became viscount Rochester communicated to the lady who immediately exercised her influence for the removal of her adversary. An attempt was made to place

him at a distance by appointing him to a foreign mission, but relying upon his ascendancy with the favourites, which he exercised with considerable arrogance, he refused to accept it. On the ground of disobedience in declining the king's service he was immediately arrested and committed a close prisoner to the Tower in April 1613 and all access of his friends was debarred. At length fear of his resentment and disclosure, if released, induced Car and the countess, now become his wife to cause infected viands to be administered at various times to the unhappy prisoner who finally fell a sacrifice to a poisoned clyster on the 15th September 1613. All these facts afterwards appeared in evidence when the accomplices in the murder were tried and Mr Gervase Elwes the lieutenant of the Tower a creature of Car's, with several others were condemned and executed. Car and his lady then became earl and countess of Somerset were also convicted and condemned but to the eternal disgrace of James, pardoned for no assignable cause that will not add to the ignominy of the proceeding. Sir Thomas Overbury wrote both in verse and in prose and his poem entitled "The Wife" has been much admired as also his "Characters, or witty descriptions of the properties of sundry persons somewhat in the manner of the sketches in the posthumous works of Butler." A tenth edition of all his works was published in 1753 8vo.—His nephew Mr THOMAS OVERBURY published "An Account of the Trial of Johnerry and her two sons, for the Murder of William Harrison" a most remarkable case the parties who were executed having confessed themselves guilty of the murder although innocent. Queries on Persecution in Religion and Ratiocinative Veraculum a further work on the same subject.—*Bug Brit State Trials.*

OVID or PUBLIUS OVIDIUS NASO a celebrated Latin poet who flourished in the reign of Augustus. He was the son of a Roman knight and was born at Sulmo, about ninety miles from Rome 43 BC. He was liberally educated and studied rhetoric under Portius Latro, being destined for the profession of an advocate. But his decided predilection for polite literature and especially poetry led him to neglect severer studies and the early death of an elder brother put him in possession of the family estate and left him at liberty to follow his inclinations. Previously to this event he had made himself acquainted with the Greek language and spent some time at Athens, then the fashionable resort of the Roman youth. Returning to Rome he became a member of the court of the Triumvir and afterwards held other judicial offices, but his attachment to poetry and pleasure induced him, at about the age of twenty four to renounce all public employment for the life of an idle courtier and a man of letters. He now published his poems "De Arte Amandi" in five books, which however unexceptionable in point of morality affords sufficient evidence of his abilities, and this was followed by his

"Heroides," and other works. At length after having been a companion of the great and a favourite at court for some years, he was suddenly banished from Rome for some unknown cause and sent to live among the Geats or Goths, on the borders of the Danube. Learned men have formed a multitude of conjectures as to the cause of Ovid's disgrace, and the precise situation of Tomos, the place of his exile and many of them have supported their various opinions with a great deal of misplaced erudition. It is probable from some concurrent circumstances, that the political intrigues of the empress Livia and her son Tiberius contributed to the removal of the poet while the licentiousness of his writings and the irregularities of his life afforded plausible pretenses for the infliction of his punishment. He wrote several books of elegies and epistles while among the Goths, and amused himself in studying their language and composed in it a work which procured him great reputation among them. After in vain soliciting his recall during the reign of Augustus he lost all hopes of obtaining it under his successor and died at Tomos, AD 17. Be aside the works mentioned Ovid wrote the "Fasti" and "Metamorphoses" relating to the heathen mythology &c. Among the best editions of the works of Ovid, are those of Henrion apud Elsev L. Bat. 1629 3 vols. 18mo, Amst. 1661 6 vols. 18mo Notes Varior L. Bat. 1670 3 vols. 8vo in usum Delph. Lugd. 1689 4 vols. 4to Burman Amst. 1727 4 vols. 4to and the Metamorphoses and other pieces have been often edited separately.—*Mason's Life of Ovid Martin's Bug Phas Bug Univ.*

OVIEDO Y VALDES (GONZALVO HENRANDEZ de) a Spanish military officer who became inspector general of American commerce in the reign of the emperor Charles V. He was the author of "Cronica de las Indias" and "La Historia General de las Indias" 1546 republished with additional matter at Salamanca in 1547 folio. This is one of the scarce books relative to the early history of the intercourse of the Spaniards with America and it has been the source whence succeeding writers have drawn much of their information concerning the New World. Ramusco published it in Italian in the third volume of his collection of voyages. Oviedo was alive after 1534, but the exact time of his death is uncertain.—*Morey. Edt*

OVIEDO (JOHN GONKALEZ) a native of Madrid who soon after the discovery of America visited the West Indies, to examine the natural productions of that part of the world. He published the result of his researches in a work entitled "Historia general y natural de las Indias Occidentales," 1533 folio which has been translated into French and Italian. Oviedo according to Fallopian, was the first discoverer of the virtues of Guanacava in the cure of syphilitic complaints. He died in 1540, aged seventy-two.—*Antonio. Bug Univ.*

OWEN (Hector) a learned divine was the

O W E

son of a gentleman of good estate, in the county of Monmouth, where he was born in 1716. He was educated at the grammar school of Ruthin in Denbighshire whence he was removed to Jesus college Oxford. He turned his attention in the first instance to physick, but subsequently took orders, and after various preferment became rector of St Olave, Hart-street, and vicar of Edmonton in Middlesex. He died in 1795. His works are, "Harmonia Tragomachica" "The Intent and Propriety of the Scripture Miracles" "Observations on the Four Gospels"

Directions to Students in Divinity. Enquiry into the State of the Septuagint Version of the Old Testament Critica Sacra, or a short Introduction to Hebrew Criticism

Collatio Codicis Cottianani Genesios cum Editione Romano & vno clarissimo Johanne Ernesto Grabe deemed the most ancient manuscript in Europe Critical Disquisitions

The Modes of Quotation used by the Evangelical Writers. He was also the editor of Xenophons Memorabiliæ, and furnished several papers to the Archæologia and to Bowyer's Collections on the New Testament.—A short Life Anecd.

OWEN (Jno.) a distinguished writer of Latin epigrams, was a native of Carmarvonshire. He received his education at Winchester school, whence he was removed to New college, Oxford, where he graduated LLB and obtained a fellowship. He afterwards became master of a free school near Monmouth and in 1594 was placed over that of Warwick where he became celebrated for his skill in Latin poetry especially epigrams. He is said to have expensed the poet's frequent lot of indigence being struck out of the will of a rich uncle who was offended with his attacks on the church of Rome one of his epigrams on which as a specimen of his manner is here supplied.

An Petrus fuit Roma sub judice ha est,

Simeonem Roma nemo fuisse negat
Owen died in 1612 and was buried at the expense of bishop Williams, (by whom he was chiefly supported in the latter part of his life) in St Paul's cathedral. His epigrams in twelve books, have been several times published. In some he unites the point of Martial but the greater number have little to recommend them but purity and simplicity of language. An edition of them was printed by Remond, at Paris, in 1704.—*Bug. Brit.*

OWEN, DD. (Jno.) the most eminent of the English nonconformist divines, was descended from a respectable family in North Wales, and born at Stidiham in Oxfordshire in 1616 of which place his father was vicar. He studied at Queen's college Oxford, where he graduated M.A. in 1635. He remained at college where he was supported by his uncle a gentleman of good fortune in Wales until he had attained his twenty first year. During this period he became a most distinguished scholar but retaining a dislike to the disciplines of the university then under the chancellorship of archbishop Laud it disposed him on

O W E

the breaking out of the civil war to take part with the parliament. By this conduct he lost the favour of his uncle, who died without leaving him any thing. He then successively became a tutor in the family of sir Robert Dormer and chaplain to lord Lovelace but subsequently repaired to London where he wrote his "Display of Armisilence" which was published in 1642 and was deemed so important by the ascendant party that the chairman of the committee then formed for purging the church of scandalous ministers, presented him with the living of Fordham in Essex, whence he removed to that of Coggeshall in the same county to which at the request of the inhabitants, he was presented by the earl of Warwick. He had hitherto been a presbyterian in matters of church government, but now adopted the congregational or independent mode as more conformable to the New Testament and published his reasons for thinking so in two quarto volumes which proceedings exceedingly offended the presbyterian party. During the siege of Colchester he became acquainted with general Fairfax, and now having acquired great celebrity was appointed to preach at Whitehall the day after the execution of Charles I. On this occasion however, he kept his sentiments on that subject in such reserve, that while his friends had little opportunity for exciting the opposing party could stir up nothing for future accusation. He was soon after introduced to Cromwell whom he accompanied in his expeditions both to Ireland and Scotland, and in 1651 was made dean of Christchurch college Oxford, on which appointment he received his doctor's degree and in 1652 was nominated by Cromwell then chancellor of the university his vice-chancellor. In this capacity he behaved at once with great firmness and moderation and held this office five years but on the death of the protector he was deprived both of that and his deanery by the influence of the presbyterian party. At the meeting of his brethren at the Savoy in 1658 he had a powerful hand in drawing up the confession of faith of the congregational churches. On the Restoration he retired to Stidiham where he preached until prevented by the interruption of the military and others on which he settled in London and so pleased lord Charendon by his answer to a work by a Franciscan friar entitled "First Lxx" that he offered him immediate preferment if he would conform, which proposal he respectfully declined. While the bill to revise the conventicle act was pending he drew up reasons against it with great ability which arguments were laid before the lords by several persons of respectability and consequence although fruitlessly as the bill passed into a law notwithstanding Charles II and his brother James both affected to disapprove of it, and the former gave Dr Owen a thousand guineas to distribute among the sufferers under it. This very influential and learned divine died at Ealing Middlesex on the 24th August 1683 in the sixty third year of his age. Dr Owen's works which at least

not be said are of a high Calvinistic character are very numerous, amounting to seven volumes in folio, twenty in 8vo and thirty in 2vo. In this number are "An Exposition on the Epistles to the Hebrews" in 4 vols. folio; "A Discourse on the Holy Spirit;" "A complete Collection of Sermons and several Tracts," folio, "An Inquiry into the original Nature, Institution, &c. of Evangelical Churches" &c. "An Account of the Nature of the Protestant Religion," and a great many more tracts, either in vindication of the general doctrines of Christianity or of the independent churches.—*Biggs' Calamy's account of Ejected Ministers. Granger.*

OWEN (Lewis), a controversial writer against the jesuits, was born in Monmouthshire in 1578. He went abroad and entered the society of jesuits in Spain but finding that they paid more attention to worldly intrigues than to the affairs of religion he withdrew from them and made use of the information he had gained to expose them in his works, which are The Running Register recording a true Relation of the State of the English Colleges Seminaries and Cloisters of all Foreign Parts together with a brief and compendious Discourse of the Lives Practices Covenaunce Impostures, and Decrets of all our English Monks Friars Jesuits and Seminaries Priests in general. Lond 1656. The Unmasking of all Popish Monks Friars and Jesuits, and Speculum Jesuiticum or the Jesuit's Looking Glass wherein they may behold Ignatius (their patron) his Progress their own pilgrimage &c. The time of Owen's death is unknown but he was living in 1659.—*Athen. Oxon. vol i.*

OWEN (Thomas) a learned judge was born at Condover in Shropshire and died in 1598. After passing through various promotions he became judge of the Common Pleas which office he discharged with great integrity and ability. His Reports in the King's Bench and Common Pleas in the Reign of Queen Elizabeth were printed in folio in 1656.—*Athen. Oxon.*

OWEN RA (WILLIAM) an eminent English artist a native of Shropshire in which county he was born in 1769. He was placed by his friends at the grammar school at Ludlow where the early indications of genius and the passionate love of painting which he exhibited, fortunately attracted the notice of Mr Payne Knight, whose mansion was in the vicinity of that place. By the advice and assistance of that liberal patron of the arts young Owen was sent to London and placed under Charles Catton the royal academician. Having made an excellent copy of one of sir Joshua Reynolds's best portraits, that great painter paid him much attention and benefited him considerably by his instructions. From this period his exertions were unremitting and although the depreciation of a friend at one time involved him in serious pecuniary embarrassments, yet it may be questioned whether the increased application to his profession which this circumstance rendered ne-

cessary, did not eventually tend to his advantage. In 1800 he settled with his family at Bishop's Stortford, and in 1813 was appointed principal portrait painter to the prince regent, on which occasion he was offered but modestly declined the honour of knighthood. His professional emoluments, as well as his reputation continuing to increase he in 1818 removed to a larger establishment in Bruton-street but from this time his health appears to have abandoned him, and although he survived till the February of 1824, yet the five last years of his life were passed in being wheeled from his bed-room to his drawing room on the same floor. The immediate occasion of his decease originated in the carelessness of a chemist's apprentice who, mixing up for his use a cathartic and a preparation of opium known by the name of Battley's Drops transposed the labels on the phials. The whole contents of the one containing the latter were in consequence swallowed and the patient fell into a lethargy from which he never awoke. Besides his celebrated pictures of Mr Pitt, lords Grenville and Eldon the duchess of Buccleugh and other distinguished characters Mr Owen occasionally relieved the monotony of portrait painting by employing his pencil on historical pieces and subjects of fancy. Among the latter his Blind Beggar of Bethnal Green. The Village schoolmistress and Road Side have been engraved and met with deserved popularity. He had been enrolled among the members of the Royal Academey as early as the spring of 1806.—*Anan. Bug.*

OXENSTIERN (Axel) an eminent Swedish statesman son of baron Gabriel Oxenstiern was born at Fano in Upland, in 1583. He was sent at an early age to study in Germany and on his return becoming distinguished for his abilities was in his twenty sixth year admitted a member of the Swedish senate and placed by Charles IX at the head of the regency rendered necessary by his increasing infirmities. On the accession of Gustavus Adolphus he was made chancellor and acted a distinguished part under that spirited and able sovereign. On the death of Gustavus at Lützen the great talents of Oxenstiern kept alive the declining spirit of the allies until this most eventful war was brought to a conclusion by the celebrated treaty of Westphalia. For these and other eminent services Oxenstiern received the title of count from queen Christina and at the same time was chosen chancellor of the university of Upsal. He strongly opposed the abdication of Christina and even feigned indisposition that he might be absent from the deliberations on that measure. This able and patriotic statesman died in the month of August, 1654 in his seventy first year leaving behind him a character for ability and integrity which may vie with that of the most illustrious of those who have distinguished themselves in the art of wisely governing their fellow creatures. His knowledge of the human heart was profound and his political sagacity exercised as it was with integrity,

excited no less respect than admiration. The form of government which he drew up at the command of his sovereign in 1634, has been deemed a master-piece of political wisdom, in comparison to the general theories of the age. A list of his works, as well as of the manuscripts which he left behind him may be seen in the Bibliotheque Simeon-Gethsemane.—*TOMS OXONIENSIS* son of the chancellor was the Swedish ambassador and plenipotentiary at the treaty of Munster and ably supported the credit of his name.—*ERIC OXENFORDUS* another son also obtained considerable distinction in the same line.—There was also a count OXENSTROM a grand nephew of the chancellor, who became a Catholic, and died in 1707. He was author of *Pensees sur divers Sujets, avec des Reflexions Morales*, 2 vols. 12mo.—*Cicero Biographia Litteraria*.

OZANAM (JAMES) an eminent French mathematician descended from a family of Jewish extraction but which had long been converts to the Romish faith. He was born at Bolognac in Brescia, in 1640 and being a younger son, was bred to the church. On the death of his father however he gave up the study of divinity and devoted himself entirely to the mathematics. He afterwards repaired to Lyons, where he conduced mathematical tutor for his support, and acquired many pupils and considerable reputation. His generous confidence in advancing money to two of his pupils who were disappointed of receiving bills of exchange was the means of his being recommended to M D Aguesseau father of the chancellor who invited him to Paris where he met with great encouragement; but being young handsome and sprightly was seduced into some immodesties in the way of gallantry and gaming which induced him to marry a young lady without fortune but with whom he enjoyed much happiness for several years. After long enjoying great emolument as a mathematical teacher he ex-

perienced some reverses, in consequence of being deprived of his foreign pupils by the war for the Spanish succession, and about the same time he lost his wife and was thereby reduced to a state of great melancholy depression, which was somewhat alleviated by his admission into the Royal Academy of Sciences. He died of an apoplexy in 1717. He wrote a great number of useful works the principal of which are, "Dictionnaire des Mathematiques," 4to, "Cours des Mathematiques," 5 vols. 8vo; "Recreations Mathematiques et Physiques," 4 vols. 8vo, "Trait de la Fortification," 4to, "Nouveau Elements d'Algebre," 8vo, "La Perspective Theorique et Pratique," 8vo, "Histoire des Maths. Diet."

OZELI (JOHN) a miscellaneous writer, of French extraction but born in England. He was intended for the church but his inclination not being that way he obtained the situation of auditor general of the city and bridge accounts, also of the accounts of St Paul's cathedral and St Thomas's hospital Mr Ozell gave translations of Don Quixote Rabelais, and Molieres but possessing neither humour nor imagination himself it was impossible for him to do justice to those excellent works. He also published Common Prayer and Common Sense, in several Places of the Portuguese Spanish Italian French Latin and Greek Translations of the English Liturgy which is esteemed *Fension on Learning*. Veriot's *Revolutions of Rome*; *The Law of Veronica of Milan* *Nicole's Logic* parts of Rapin Boileau &c Ozell was endowed with a considerable share of vanity and on being introduced by Pope in the Dunciad he expressed his resentment in an extraordinary advertisement, signed with his name in a paper called *The Weekly Medley* and drew a comparison between Pope and himself in which he professed himself superior both in respect to learning and poetical genius. He died in 1743.—*Gibber's Lives*.

PAAW (Petrus) a physician and botanist was born at Amsterdam in 1564. His reputation caused him to be called to Leyden where he was appointed professor of medicine and died in 1617. His works are chiefly on anatomical and botanical subjects and though much surpassed by the subsequent discoveries, they are still esteemed. The principal are "Notes et Commentarii in Epitome Anatomicae Andream Vesalii," Leyden 1616, "Hortus Lugduno-Batavorum," 1629 8vo, "De Pestis Tractatus cum Henrici Florentini additionibus," Leyden 1636. Paaw was the founder of the botanical garden at Leyden.—*Elog. Diet. Hist. de Medicina.*

PACATUS (LATINUS DREPANUS) a Latin poet and orator of the fourth century, was

a native of Drepamus in Aquitania. When Theodosius the Great visited Rome in 388 after the defeat of Maxentius Pacatus was sent from Gaul with congratulations, and he pronounced on the occasion a panegyrical oration for which he was rewarded by the proconsulship of a province in Africa, and in 395 with the office of superintendent of the imperial domain. None of his poems are extant the panegyric on Theodosius only remains the best edition is that by Arantius, Amst. 1753. It is more distinguished by its imagination and expression than by its purity but for the age in which it was composed it is a tolerable piece of eloquence.—*Maurer. Novis. Diet. Hist.*

PACCIONI (ANTHONY) an eminent am-

F A C

tonet, born at Ragni, in Italy in 1664. Having taken the degree of M.D. he was invited to Rome by Moliére, and afterwards practised as a physician at Tivoli. Returning to Rome, he became assistant to the celebrated anatomist Lepini, and devoting himself to dissection, he distinguished himself by his researches relative to the structure and properties of the brain and its membranes. He was chosen a member of the academies of Bologna and Siena, and of the Accademia Cuiuslibet Natura. He died at Rome in 1736. Among his principal works are "Dissertationes physico-anatomicae de Durâ membra humana, novis Experimentis et Lubricationibus actis et illustratis," 1731 which with his other treatises on the same subject appeared at Rome 1741 &c under the title of

Opera Omnia. —*Bug Uru*

FACE (EDWARD) sometimes called Faces, a learned and eloquent divine high in favour with Henry the Eighth of England who employed him on various occasions of state policy. He was a native of Hampshire born 1482 and was educated at Padua at the expense of Thomas Langton bishop of Winchester who made him his secretary. After his studies had been completed at Queen's college Oxford, cardinal Cambridge then carried him with him to Rome in his suite, on his return he obtained an employment about the court, till having attracted the notice of the monarch by his accomplishments he became a secretary of state and taking orders received from the bounty of his royal patron a stall in the cathedral of York, the archdeaconry of Dorset, and the deaneries of Exeter and St Paul's, most of which benefices were conferred upon him while employed as an ambassador abroad. In this capacity he visited Vienna and Rome to which latter capital he was despatched in 1524 by Wolsey with the view of forwarding that ambitious prelate's attempt on the papal vacant by the death of Leo X. Before he reached the point of his destination however the object of his mission was already frustrated the concclave having previously proceeded to election a cardinal which lost him the favour of the disappointed cardinal who took the opportunity on his being subsequently accredited to the court of Vienna so to harass him by withholding the necessary resources and directions, that a strong sense of the neglect he experienced operating upon a nervous temperament produced a temporary insanity. His redress was the consequence, when his health became partially re-established notwithstanding the yet unavailed rancour of his former patron not only deprived him of the king's countenance but procured him an incarceration for two years in the Tower of London. He at length obtained his liberty but withdrew at once from public life with an unfettered constitution, resigning all his preferments and retiring to Stepney, where he died in 1538. Dr Fox was much esteemed by Erasmus, sir Thomas More and cardinal Pole. His principal writings were, a treatise on the

P A C

marriage of the king with Catherine of Aragon; "De Eiusmodi Scientiarum," 4to and a medical tract "De Restitutione Misericordie," —*Athenae Oxon.*

PACHYMERUS (Gennes) a Greek historian of the fourteenth century, was born at Nicæa. He entered the church, in which, as well as in the state he bore considerable offices under the emperors Michael Palæologus and Andronicus the elder. He is supposed to have died about 1310. He wrote "The History of Michael Palæologus and Andronicus," in thirteen books which was published with a Latin version by father Pausanias, at Rome in 1666 and was translated into French by the president Cousin. The style is harsh and obscure, but it is written in an ampler and enlightened spirit. To Pachymerus is also attributed a paraphrase on the Epistles of Dionysius the Areopagite and a treatise on the procession of the Holy Ghost. A compendium of Aristotelian philosophy was published from his MS. at Oxford in 1666.—*Voss Hist. Grec. Moreri Brader Nov. Diet. Huit*

PACIAUDI (PAUL MARIA) an Italian ecclesiastic antiquary and historian was born at Turin in 1710. After studying at the university of that capital he took the religious habit in the order of Theatines at Venice and after studying under Beccaria at Florence he became professor of philosophy at Genoa. In 1761 he settled at Parma as librarian to the grand duke who also appointed him his antiquary and invested him with the conduct of several public works. To these honours and employments he likewise added that of lustographer of the order of Malta. Father Paciaudi, who was the correspondent of Caylus Barthélémy and Winkelmann died in 1785. His principal works are A Series of Medals, representing the most remarkable Events of the Government of Malta, folio De Sacris Christianorum Balloes De Athletarum Culstant Monuments Peloponnesia 2 vols 4to Memoirs of the Grand Masters of the Order of St John of Jerusalem 3 vols. 4to.—*Fabron Vitæ Itiorum.*

PACIUS. There were two learned men of this name brothers, and natives of Vicenza, who flourished in Italy during the latter half of the sixteenth century. Of those *FABRIZIO* was eminent as a physician. *JULIUS* the more celebrated of the two, born 1550 distinguished himself while yet a youth by the solidity as well as the precocity of his talents. At the age of thirteen he composed an arithmetical treatise of considerable merit, and after having completed his education at Padua, where he made great proficiency in Oriental as well as classical learning and took his doctor's degree travelled over great part of the northern states of Europe delivering lectures on jurisprudence. Though born of Catholic parents, he became a convert to Protestantism, and visited Geneva, whence he removed in 1585 to Heidelberg on obtaining a professorship in that university. He subsequently visited Sedan, Montpellier, Aix, and other cities,

P A G

until the prospect of a professorship at Padua at length induced him to reside in the Venetian territories, where he was held in such high estimation on account of his learning and abilities, that the senate conferred on him the honour of admission into the equestrian order of St Mark and bestowed a professorship upon him too. Beside the juvenile production already alluded to he was the author of *Corpus Juris Civilis*, 1560, folio; an edition of the "Organus of Aristotle, Gr et Lat" 8vo 1590. *De Contractibus*, 1565 folio, "De Jure Mariae Adriana," 8vo, 1609. In *De ceteris a treatise in five books*, 8vo. *Constitutio Fœderum*, folio and *Doctrina Perpetuata*, 3 vols. His scholar Nicholas Papeo, is said to have recovered him to Catholicism a short time previously to his death which took place in 1630 at Valence — *Nicomo.*

PACK (RICHARDSON) an ingenious writer who published some miscellaneous works of merit in the early part of the last century. He was born in the county of Suffolk but received the rudiments of a classical education in London at Merchant Taylors school. Going off to college upon that foundation he became a fellow of St John's Oxford and on quitting the university entered himself of the Middle Temple but subsequently entered the army and rose to the rank of major. His works, an edition of which appeared the year following that of his decease, in one volume octavo consist of a tale entitled "Religion and Platonick Philosophy" and a "Life of Pomponius Atticus" with some miscellaneous pieces, both in prose and verse. His death took place in 1726 at Aberdeen. — *Cobbe's Lives.*

PACUVIUS (Marcus) a Latin tragic poet, and the nephew of Lucretius, was a native of Brundusium, and flourished about BC 154. He obtained great reputation by his tragedies of which that of "Orces" is particularly mentioned by Cicero. He also wrote satires and possessed a talent for painting. The only remaining fragments of his works were published in the "Corpus Poetarum Latinorum." He died at Laurentum in his eightieth year. — *Vossi Part Lat. Basilei.*

PAGAN (BLAISE FRANCOIS count de) an eminent French military engineer was born in 1604 at Avignon. He entered the army at an early age and lost an eye at the siege of Montauban which did not prevent him from following up his profession with great bravery and success. In 1642 he was sent into Portugal as field-marshal and then lost his other eye and thus disabled from serving his country in the field, he employed the whole force of his mind in mathematical studies in which he had previously been much conversant, with a view to the science of fortification. The result of his application appeared in 1645 in his "Traité de Fortifications" the best work which had then appeared on the subject. This was followed by his "Théorèmes Géométriques," 1651, "Théorie des Planètes" 1657, and "Tables Astronomiques" 1658. He was also the author of an "Historical and

P A G

Geographical Account of the River of Amazon." He died, highly esteemed, at Paris in 1665. — *Perrot's Hommes Illust.*

PAGE, DD (WILLIAM) a native of Harrow Middlesex, or according to others, of the metropolis, born 1590. He was educated at Oxford where he entered originally at Balliol college but quitted it in 1619 on being chosen fellow of All Souls. Ten years after he obtained the head mastership of Reading grammar-school and the rectory of East Locking Berks; but on the breaking out of the civil wars, his principles rendering him obnoxious to the republican party, he was ejected from his school though the profits of his benefices were not sequestered. He is principally known as the author of a devotional treatise on *Glorification* in 4to, printed at Oxford in 1651, a Reply to John Hales's Tract on Schism and a translation of the *De Imitatione dei* of Thomas à Kempis. His death took place in 1663. — *Athenae Oxon.*

PACI-S (FRANCIS XAVIER) a literary compiler and indefatigable romance writer born at Aix-en-Provence in the department of Cantal in France in 1745. He settled at Paris a short time before the beginning of the Revolution of which he professed himself an admirer but deprived of his property by the ensuing commotions in the state, he devoted himself to literary pursuits, as a means of existence. He died at Paris, December 21 1802. Among his numerous works may be mentioned "Histoire secrète de la Révolution Française" 1796-1801 6 vols. 8vo, which was translated into English, Italian and German and "Nouveau Voyage autour du Monde, en Asie en Amérique et en Afrique" preceded by *Un Voyage en Inde* 1797 3 vols. 8vo. This last is a kind of compilation (in the manner of the "Voyageur Français" of the abbé de Laporte) which M. Boucher de la Richardière deceived by the name of the author has confounded with the work mentioned in the following article — *Biog. Univ.*, *Biog. Asso.*, *des Costumes*.

PAGES (PIERRE MARIE FRANCOIS, vicomte de) a French navigator born of a noble family at Toulouse in 1748. He entered into the navy at the age of nineteen and in 1767 he embarked at Cape François in St Domingo on a voyage with a view to explore the Indian seas, and travel through China and Tartary to the Northern Ocean. He arrived at the Philippines Islands in October 1768 and finding it impossible to penetrate China, he went by sea to Bassora and travelling through the desert to Syria, he reached France in December 1771. In 1773 he sailed in Kerguelan's expedition towards the South Pole and on his return he made a voyage in a Dutch vessel employed in the whale fishery in the North Seas, when he proceeded as far as 81 degrees and a half of north latitude. Pages obtained, as the reward of his services, the rank of captain and the cross of St Louis, and he was chosen a correspondent of the Academy of Sciences. He served in the Americas, and after the peace of 1783 he retired to St

Domingo, where he had a considerable estate. He was unfortunately murdered during the revolt of the negroes in 1793. He published

Voyages Autour du Monde et vers les deux pôles, par Terre et par Mer pendant les Années 1767 76. Paris, 1762 2 vols. 8vo, a work praised for its fidelity by Humboldt with the exception of inaccuracy with regard to the orthography of foreign names.—*Eddon*

PAGI (ANTONIO) a famous cordelier was born at Rognes, a small town in Provence in 1664. He was made four times provincial of his order and died at Aix in 1699. He was a learned judicious, and candid writer and his style is distinguished by its simplicity. His principal works are “*Critica Historico-Chronologica in Universis Annales Ecclesiasticos etemant et Rev Cca. Card. Baronii &c et Dissertation upon the Consulates*” His nephew FRANCIS PAGI also a cordelier was born at Lambeth in 1654. He assisted his uncle in his critique upon Baronius’s *Annales* of which he became the editor. He also wrote a work entitled *Breviarium Historico-Chronologico-Crucicum Illustriora Pontificum Romariorum Gestæ Conciliorum generalium Acta &c. 4 vols. 4to.* This displays some learned and curious research and the style is simple and plain and he is a zealous advocate for the Ultramontane theology and uses every argument to exalt the authority of the papacy. He died in 1721.—*Chrysostom Nitorn*

PAGNINI (LUCCANTINO) an Italian poet born at Pistoia in 1737. Distinguished for his talents when young he attracted the notice of the vicar-general of the Carmelites at Mantes at whose invitation he entered into that order. After remaining some time at Florence he was sent to Parma where he became professor of philosophy in the schools of his order and afterwards of rhetoric and Greek in the Royal Academy. In 1806 he was aggregated to the university of Pisa as professor of humanity and then of hellenist literature. After the occupation of Tuscany by the French the university being newly modelled as an academy he was appointed professor of Latin poetry and dean of the faculty of literature. In 1813 the Accademia della Crusca of Florence, bestowed on Pagnini the prize of poetry for his translation of Horace. The same year the bishop of Pistoia appointed him a canon of his cathedral, but he held the office only a few months dying March 21 1814. Among his works are translations of *Anacreon Theocritus, Bion, Moschus, Callimachus, Hassard, &c.* *Le Quattro Stagioni*, from the English of Pope besides some original productions.—*Big Uoi*

PAGINUS (SANTER) a Dominican friar was born at Lucca in 1466. He was master of the Greek, Latin, Chaldean, Arabic, and Hebrew languages the latter of which he taught in a monastery at Lyons. Conceiving the idea that the Vulgate translation of the Scriptures was not by Jerome, or was greatly corrupted, he undertook a new one and his intention meeting with the approbation of Leo X he promised to furnish him with all the necessary

expenses. He was employed five and twenty years upon this translation, on which there has been great difference of opinion. The great fault of Paginus was, that he adhered too strictly to the original text, which often made his work obscure and full of solecisms. He afterwards translated the New Testament, and was the author of a Hebrew Lexicon and a Hebrew Grammar —*Le Long Edit. Sacre Script.*

PAINÉ (*TOMAS*) a celebrated political and domestic writer. He was born in 1737 at Thetford, in Norfolk, where his father who was a quaker carried on the business of a staymaker. He received his education at a grammar school in his native place, but at tenanted to little beyond the rudiments of the Latin language, which slight information he never afterwards improved affecting to hold the dead languages in extreme contempt. He seems however to have paid great attention to arithmetic and to have obtained some knowledge of the mathematics. In early life he followed the business of his father which he practised in London Dover and Sandwich where he married, but afterwards became a grocer and exciseman at Lewes in Sussex. He lost this situation for some misdemeanour of no flagrant nature as he was subsequently restored on petition until finally dismissed for keeping a tobacconist’s shop which was deemed incompatible with his duties. The abilities which he displayed in a pamphlet composed by him, in order to show the propriety of advancing the salaries of excisemen having struck one of the commissioners, he gave him a letter of introduction to Dr Franklin then in London who recommended him to go to America. He took this advice and reaching Philadelphia towards the close of 1774 in the following January became editor of the Pennsylvania magazine which he conducted with considerable ability. A few months after his arrival hostilities commenced between the mother country and the colonies which led him as it is said at the suggestion of Dr Rush to compose his celebrated pamphlet, entitled *Common Sense* which he writing with great vigour and addressed to a highly excited population was doubtless of great benefit to the colonial cause. The direct object of this tract was to recommend the separation of the colonies from Great Britain which advice was virtually carried into effect by the famous declaration of independence issued by congress a few months afterwards. For this production the legislature of Pennsylvania voted him 500\$, he also received the degree of MA from the university of the same province and was chosen a member of the American philosophical society. To these rewards was soon afterwards added the office of clerk to the committee for foreign affairs which although a highly confidential situation scarcely justified him in assuming the title of late secretary for foreign affairs which he did in the title page of the *Rights of Man*. While in this office he published a series of popular political appeals on the nature of the

P A I

pending struggle which he demonstrated the "Crisis." He was obliged to resign his secretaryship in 1779, owing to a controversy with Salas Deane whom he defeated in a fraudulent attempt to profit by his agency in conveying the secret supplies of warlike stores by France. Led by the wrath of his tempor he divulged the real state of the case which as he had acquired it officially was deemed an injurious breach of trust, and one which might tend to alienate the French court. The next year however he obtained the subordinate appointment of clerk to the assembly of Pennsylvania, and in 1785, on the rejection of a motion to appoint him historianographer to the United States, with a salary received from congress a donation of 3000 dollars. He also received 500 acres of highly cultivated land from the state of New York. In 1787 he embarked for France and after visiting Paris, came over to England with a view to the prosecution of a project relative to the erection of an iron bridge of his own invention at Rotherham in York shire. This scheme involved him in pecuniary difficulties and in the course of the following year he was arrested for debt when he was banished by some American merchants. He went to Paris in 1791 and published under the borrowed name of Achilles Duchesne a tract recommending the abolition of royalty. He soon returned to this country and on the appearance of Burke's "Reflections on the French Revolution" he wrote the first part of his "Rights of Man" in answer to that celebrated work. The second part was published early in 1792 and on the 1st of May that year a proclamation was issued against wicked and seditious publications alluding to, but not naming the "Rights of Man." On the same day the attorney general commenced a prosecution against Paine as the author of that work and amidst the irritation of conflicting opinions between the partisans and the enemies of the recent Revolution in France he became the object of extreme execration with the ascendant party. While the trial was pending he was chosen a member of the National Convention for the department of Calais and making his escape from the dangers that awaited him, he set off for France and arrived there in September 1792. He was in that assembly an advocate for the trial of Louis XVI but he voted against the sentence of death passed on him, proposing his imprisonment during the war and his banishment afterwards. This conduct so offended the Jacobins, that towards the close of 1793 he was excluded from the Convention on the ground of his being a foreigner (though he had been naturalised) and immediately after he was arrested, and committed to the prison of the Luxembourg. Just before his confinement he had finished the first part of his work against Christianity and revelation generally entitled "The Age of Reason" being an investigation of true and fabulous Theology, and having confided it to the care of his friend Joel Barlow it was published by which stop

P A I

he undoubtedly forfeited the countenance of by far the greater part of his American connexion. In his prison he was taken dangerously ill to which circumstance he ascribes his escape from the guillotine and on the fall of Robespierre he was released. In 1795 he published, at Paris the second part of his "Age of Reason" and in May 1796 addressed to the Council of Five Hundred a work entitled "The Decline and Fall of the System of Finance in England;" and also published his pamphlet entitled "Agrarian Justice." Fearing of being captured by English cruisers, he remained in France till August 1802 when he embarked for America and reached Baltimore the following October. He had lost his first wife the year following his marriage, and after a cohabitation of three years and a half had separated from a second by mutual consent several years before. Thus situated he obtained a female companion in the person of a madame de Bonneville the wife of a French bookseller who with her two sons, accompanied him to America but whatever the nature of this connexion (at the age of sixty five) which has been differently represented the husband and children as well as the wife because his chief legatees. His subsequent life was by no means happy for although occupied in various mechanical speculations and other engrossing pursuits and possessed of decent competence his attacks upon religion had exceedingly narrowed his circle of acquaintance, and probably always a little inclined to the bottle, these slight which he felt keenly encouraged the pernicious practice until it became habitual to the extreme injury of his health and the ultimate production of a complication of disorders to which he fell a victim on the 8th of June 1809 in his seventy third year. Bring re interred in the ground of the society of friends which favour he had requested before his death he was buried on his own farm. The strong part taken by this extraordinary man in religion and politics has produced such extremes of praise and execration, that there exist few or no sources of unbiased information either as to his abilities or character except his writings. That he possessed much native vigour of intellect is indisputable and concentrated as it became by resolute exclusion of maddening acquirement, and of even a moderate recourse to books it appears in his writings that pernicious force and simplicity which of all qualities, secure the largest share of general attention in popular controversy. Both his "Common Sense" and "Rights of Man" prove the truth of this observation and like the kindred publications of a noted writer of the same class now existing form striking specimens of a faculty of appealing to reason in the abstract with a total disregard of the prejudices of education the operations of institution and of habit, as well as of the incidental and involuntary traits of association which modify human character independently on education. To say nothing of the total ignorance of mental and of moral philosophy

P A L

which this form of appeal too frequently exhibits, it is unnecessary to add, that however occasionally searching and serviceable, it is frequently disguised fully as any other although possibly the error is more difficult of detection. "The Age of Reason" exemplifies in a still greater degree the characteristic of its author; but the whole of his subsequent experience was of a nature to convince him, that attacks upon revelation have to encounter principles and feelings which of all others are the least amenable by direct onset of this nature. That he made sacrifices to, and was sincere in his opinions, must however be conceded for the vague stories related of his examinations on his death bed appear to rest upon no solid foundation, and would prove little or nothing were it otherwise. For the rest he has been described as liberal and benevolent according to his means, but irascible and peevish in temper and exceedingly vain of the distinctions which he had acquired. Some defects in deportment and conduct indeed seem always to have impeded his cordial reception among the more steady and influential of the American leaders, although receiving an occasional countenance from nearly all of them until the publication of "The Age of Reason." The best political tracts, letters, and addresses of Paine are very numerous and may be found in the collective editions of his works. They are also enumerated at the end of his life by Sherman.—*Lies by Chatham and Sherman.*

PAINTER (WILLIAM) a writer in the reign of queen Elizabeth who published a very popular work entitled *The Palace of Pleasure*, beautified, adorned and well furnished with pleasant Histories and excellent Novels selected out of divers good and commendable Anthems, London, 1566-7 2 vols. 4to. This work, which was reprinted, is interesting to the critic on account of its having apparently been the source whence Shakespeare and other dramatists derived the plots of some of their plays. In 1813 Mr Haslewood published a new edition of the *Palace of Pleasure* some copies of which were printed on vellum forming 6 vols. 4to.—*Org.*

PAISIELLO (GOVANNI) a celebrated singer and maestro the son of a veterinary surgeon of Tarento in Italy where he was born in 1741. From the age of five to that of thirteen he was placed by his father in the jesuit's college in his native city where his musical talents first exhibited themselves in the matin services performed in the chapel and the chevalier Carducci, who superintended the choir prevailed upon his friends to send him to Naples, for further instruction in the science. Accordingly in 1756, he was put under the care of the celebrated Durante, at the conservatory of St Cecilio where his progress was very rapid, and in 1763 his first opera, "La Papilla," was performed with great applause at the Massigh theatre in Bologna. From this period commenced a long career of success, which attended him at Modena, Parma, Verona, Rome, Milan, Naples,

P A L

and Florence till in 1796 he was induced to enter the service of Catherine II of Russia who settled on him a pension of 4000 rubles, with a country house and other advantages in his capacity of musical tutor to the grand-duchess. In Russia he remained nine years, when he returned to Naples visiting Vienna on his way and continued in the service of Ferdinand IV till the court retired into Sicily. On the French Revolution extending to Naples Palomini who remained behind, received from the republican government, now established, the appointment of composer to the nation. On the restoration of the Bourbons family he fell into disgrace but at the expiration of two years was restored to his situation. Napoleon afterwards sent him an invitation or rather a command to come to Paris which he obeyed but declined the directorship of the imperial academy which was offered to him acceptance contenting himself with that of the chapel. After remaining in the French capital nearly three years, his own health and that of his wife compelled him to return to Italy when on the expulsion of the Bourbons, he was made chamber musician to Joseph Buonaparte receiving at the same time from Napoleon the cordes of the legion of honour and a pension of 1000 francs. In this situation he continued under Murat, and became a member of many learned and scientific as well as musical societies, especially of the Napoleon academy of Lucca, the Italian academy of Leghorn and the French institute. There are few composers who have given greater proofs of industry than Paisiello, or whose works have met with a greater portion of success all over Europe. His operas serious and comic, exceed seventy besides a great variety of ballet cantatas and some sacred music of great merit. He died in 1816 at Naples and was honoured with a public funeral. Simplicity, elegance and correctness are the characteristics of his style, while the grace and freshness of melody in which he has far surpassed most other composers have constituted a model to numerous imitators.—*Bugl. Diet. of Mus.*

PALÆPHATUS Three ancient writers of this name are recorded, one an Athenian anterior to Homer another a native of Paros or Phœnix who flourished under Artaxerxes Mnemon and the third a grammarian and philosopher born either at Athens or in Egypt posterior to Aristotle. There is a work extant bearing the name of Palæphatus, but it is not known to which of the three to attribute it. It is in Greek and is entitled *De Incredibilibus*, it consists of an explication of ancient fables. The best edition is that of J F Fischer, Lips. 1761, 1789.—*Voss Hist. Let. Bibliogr. Diet.*

PALAFOX Y MENDOZA (D JUAN DE) natural son of the marquess de Harina, and bishop of Anguloporto in New Spain, where he became viceroy in the absence of the duque de Escalona. He was made bishop of Oviedo or Ossia in Old Castile in 1653 where he died in 1659. He was a voluminous writer,

P A L.

but his principal work is a little history of the conquest of China by the Tartars, published after his death by Dr. Joseph Palafox at Paris, and translated into several languages.—*Ned.*

PALAMEDES, a distinguished Greek, of the semi-fabulous times, was the son of Nauplius, king of the isle of Eubœa. He is said to have discovered, by a stratagem, the pretended madness of Ulysses, in order to be excused from accompanying the expedition against Troy in revenge for which act the latter contrived to involve him in a charge of treason and to get him stoned to death. This tale is possibly only an invention, but so many different authors record instances of his knowledge and ingenuity he was probably a very extraordinary person. To him are attributed the first use of weights and measures, the art of drawing up a battalion, the regulation of the year and months by the sun and moon and the invention of the games of chess and dice. Pliny and Plinostrotus also ascribe to him the adoption of four of the letters of the Greek alphabet. Sudas likewise mentions him as a poet.—*Plini Hist. Nat. Mores.*

PALEARIUS (AONIUS or ANTONI) a learned Italian writer of the sixteenth century was born at Vercelli in the Campagna di Roma. He taught rhetoric and the belles lettres first at Siena and afterwards at Lucca, but being suspected of favouring the sentiments of the reformers, and having otherwise given offence to the monks they never rested until they had convicted him of heresy which on the accession of Paul V a Dominican and an inquisitor to the papal chair they were enabled to effect. His conviction was grounded on his having called the inquisition a dagger drawn against literature in general. For this honest truth he was burnt at Rome in July 1570. His principal works are *De immunitate et auerse Epistola*, *Orationes Poemata* which have been collected into one volume 8vo, Amsterdam 1696.—*Mores.*

PALEOTTI (GABRIEL) a learned prelate of the sixteenth century the first archbishop of Bologna in which city he was born about the year 1584. His reputation as a scholar especially in the science of jurisprudence gained him early in life a professorship in his native university which he retained till a favourable opportunity offering at Rome, he obtained in his thirty third year the post of auditor of the Rota, in that capital. After filling several official situations about the papal court, he in 1565 reached his highest point of elevation being then presented with a cardinal's hat. Besides a history of the proceedings of the council of Trent, (at which he assisted in an inferior capacity) a work still preserved at Rome in manuscript, he was the author of treatises, *De Sacra Consultatione Consultationis* *Archiepiscopale Bono nomine De Imaginibus Sacri et Profanis*, &c. His death took place in 1597.—*Mores.*

PALESTRINA (GIOVANNI PIETRO ALBERTI da) an eminent musical composer of the

P A L.

sixteenth century the particulars of whose life and condition are little known at comparison with the fame which his works have gained him. He appears to have been born in Palestrina, the ancient Praeneste, about the year 1569, and to have studied under Gundemi. About 1585 he became a member of the Papal chapel at Rome and was afterwards chapel-master at the church of Santa Maria Maggiore, and at St Peter's. His death took place in February 1594 and a strong proof is exhibited of the veneration in which he was held by contemporary professors, in their numerous dedications of their works to him as well as in the inscription on his coffin in St Peter's, "Johannes Petrus Aloysius Praenestinus Munens Princeps. —*Burney's Hist. of Mus.*

PALFY (WILLIAM) a celebrated divine and philosopher was the son of a clergyman, who held a small living near Peterborough, where the subject of this article was born in 1743. He was instructed under his father who became master of a grammar-school in Lincolnshire whence he was removed as a scholar to Christchurch college Cambridge. He soon obtained a scholarship and 1763, having highly distinguished himself as a disputant on questions of natural and moral philosophy he took his first degree. He was afterwards employed for three years as an assistant to an academy at Greenwich and on taking deacon's orders, officiated as curate to Dr Hinckliffe then vicar of Greenwich and afterwards bishop of Peterborough. In 1766 he proceeded MA was elected a fellow of his college and appointed one of its tutes. In the latter capacity he signalized himself by his industry and ability, and the lectures which he then delivered on the Greek Testament and on moral philosophy contain the outlines of the works by which he subsequently obtained so much celebrity. In 1767 he took priest's orders, and maintained an intimate acquaintance with the most eminent persons in the university particularly Dr Law bishop of Carlisle Dr John Law his son and doctors Warang and Jubb. Most of these being presumed to fall below the established standard of orthodoxy Mr Paley began to be regarded with some coolness by its most zealous defenders. His friends could not, however, persuade him to sign the petition for relief in the matter of subscription to the articles, on which occasion he observed, with more point than decorum that he could not afford to keep a conscience. In 1776 he quitted the university after a residence of ten years and entered into a matrimonial connexion. He had previously obtained a small benefice in Westmoreland, and he now was induced into the vicarage of Dalton in Cumberland to which was soon after added the living of Appleby and a prebendal stall in the cathedral of Carlisle. In 1782 he was appointed archdeacon of the diocese and not long afterwards succeeded Dr Burn in the chancellorship, for all which preferments he was indebted to the bishop of Carlisle. In 1785 he published his

"Elements of Moral and Political Philosophy" with a highly liberal dedication to his episcopal patron. Of a work so well known it is unnecessary to say more than that, while with much vigour and discrimination it stands unrivalled for its simplicity and pertinence of illustration, many of the definitions and principles laid down both in his politics and morals, are justly open to exception. That his erudition occasionally degenerates into an apology for existing practices, or exhibits the doctrine of mere expediency has been discovered by more than one able opponent; and allusions have, in consequence, been made to the maxims of the school of Loyola, which at least are abundantly severe. On the death of the bishop of Carlisle in 1767, archdeacon Paley drew up a short memoir of that liberal prelate, and soon after published his "Horae Paulinae" a work which ranks him very high among the argumentative advocates of Scripture authority. The chief object of this work is to bring together from the Acts of the Apostles, and from the different epistles, such passages as furnish examples of undesigned concurrence and thus to infer the authenticity of the Scriptural writings, independently on inspiration. In 1794 he published his "View of the Evidence of Christianity in three parts," in 3 vols. 12mo afterwards printed in 2 vols. 8vo. This work which contains an able popular view of the arguments for the truth of the Christian religion drawn up with his usual perspicuity and dialectic skill is now generally regarded as the most complete summary on the subject which has ever appeared. It seems indeed to have roused the episcopal bench into a due sense of his services, and he was made a sub-dean of Lincoln by bishop Fleetwood and received the valuable living of Bishop's Wearmouth from the bishop of Durham, and the prebend of St Pancras from the bishop of London. In 1795 he was created DD by the university of Cambridge, and his health not allowing him to officiate in the pulpit he undertaken the compilation of his "Natural Theology or Evidences of the Existence and Attributes of the Deity collected from the Appearances of Nature," 8vo which however was not published until 1802. The object of this masterly treatise is to trace and show the marks of design in the various parts of the creation but the author has dwelt principally upon those which may be discovered in the constitution of the human body. Such was its favourable reception it reached a tenth edition before the expiration of three years. This was his last publication his death taking place on the 25th of May 1805 in his sixty second year. He left four sons and four daughters by his first wife and a second wife who survived him. In private life Dr Paley seems to have exhibited very little of the gravity of the philosopher being fond of amusement and company whom no one could better entertrain, by a spontaneous exhibition of wit and humour. At the same time no man was more beloved by his friends, or excited more attachment to them in general.

It is said that Mr Pitt wished to make him a bishop but that objections prevailed on a high quarter in the church, but whether on account of suspicions of his orthodoxy or any other latent reason is not known. As a writer Dr Paley was less solicitous to delight the ear than inform the understanding yet few authors have written so pleasantly on similar subjects and there is, both in his conceptions and language a peculiarity of manner which marks the native vigour of his mind. After his death a volume of his sermons was published in 8vo, and he was also author of two small pieces, entitled, "The Clergyman's Companion to the Sick" and "The Young Christian Instructed" — *Life by Medley*

PALFIN (JONN) an eminent writer on surgery and anatomy born at Ghent, in the Netherlands, in 1649. He practised as a surgeon in his native city where he also became anatomical and surgical lecturer. His death took place in 1730. He published "Osteology or a Description of the Bones," in Flemish translated by himself into French "Surgical Anatomy or an exact Description of the Parts of the Human Body" also in Flemish and French. An Account of the Dissection of Two Monstrous Infants united together. A Dissertation on the Circulation of the Blood in the Fetus in opposition to the opinion of M. Mery besides other works. — *Hutchinson's Biblio. Med.*

PALINGENIUS (MARCELLUS) a modern Latin poet who lived at the beginning of the sixteenth century. His real name is believed to have been Pier Angelo Marzollo of which his Latin appellation is the anagram, and he is supposed to have been a native of Stellata in the Marches and to have held the post of physician to the duke of Ferrara, to whom he dedicated the work for which he is chiefly celebrated entitled "Zodiacus Vitæ," this is a poem divided into twelve parts each inscribed with one of the signs of the zodiac the professed object of which is to guide men to present and future happiness. It is interspersed with many invectives against the court and church of Rome the monks and the clergy whence it was placed in the Index Expurgatorius. He published this book in which he unreservedly revilets the opinions of Epicurus in 1536 and seems not to have lived long after that date. His body after his death was ordered to be dug up and burnt but the duchess of Ferrara who favoured the Reformation interfered to prevent its execution. His poem of the Zodiac has passed through many editions the best of which is that of Rotterdam, 1722. — *Bayle. Thibault*

PALISOT DE BEAUVIOIS (AMBROISE MARIE FRANCOIS JOSSE) an eminent naturalist born at Arras in the French Netherlands, in 1752. He studied at the college of Harcourt at Paris, and in 1772 he was admitted a counsellor of the parliament of that city. Some time after he succeeded his elder brother as receiver-general of territorial imposts, which office was suppressed in 1777. He then devoted his attention entirely to natural history and

PAL

especially botany, and in 1781 he became a corresponding member of the Parisian Academy of Sciences, to which he addressed several memoirs on botany and vegetable physiology. The love of science induced him to undertake a voyage to the coast of Guinea with an intention to travel across the African continent to Egypt, but he was unable to execute that design and after remaining some time at Oware and Bennu he sailed for St Domingo and arrived at Cape Francois in June 1788. He continued there some years occupying official situations in the colony but his opposition to the revolutionary attempts of the negroes having endangered his safety he with difficulty effected his escape to Philadelphia, in the United States. Thence he purposed to return to France when he learned that he had been proscribed as an emigrant. He was obliged to support himself as a teacher of languages, and by exercising his talents as a musician till the arrival of the French minister Adet, who was himself a man of science and who afforded Palissot the means of prosecuting inquiries into the natural history of America. At length he received the news of his name being erased from the list of emigrants, and he returned to his native country taking with him the rich collection of natural curiosities which he had formed. In 1806 he was admitted into the Institute in the room of Adamson and he became a member of other learned societies. He died January 31 1820. Among his principal works are *Flore d'Oware et de Benin* Paris 1804 & 2 vols. folio *Insectes recueillis en Afrique et en Amerique* 1805 & 1 folio *Essai d'une nouvelle Agrostographie ou Nouveaux genres des Graminees* 1817 4to and 8vo all which are illustrated by engravings.—*Bug Univ.*

PALISSOT DEMONTEVOY (CHARLES) a French dramatist born at Nancy in 1730 his father being counsellor to the duke of Lorraine. He made an early progress in his studies and entered into the learned congregation of the oratory but he soon quitted it, and was married at the age of eighteen. He then wrote a tragedy which had no great success on which he turned his attention to comedy and after producing two pieces of some merit, he brought forward in 1755 his comedy of

Le Cercle in which he gave offence to the philosophical party of the French literati by ridiculing Jean Jacques Rousseau. Henceforward he was engaged in a series of literary hostilities. In 1756 appeared his *Petites Lettres contre des grande Philosophes* in 1760, was represented his comedy of "Les Philosophes", and in 1764 he published his *Dunciade* in imitation of the satire of Pope. This he afterwards enlarged, and he also produced several other comedies, and *Memoires sur la Litterature Francaise* besides other works. In the latter part of his life he was administrator of the Marame library and a correspondent of the Institute. He died in 1814.—*Ibid.*

PALISSY (BRUNEL DE) an ingenious artist, was born at Agne about 1510. Having

Bug DICT.—Vol. II

PAL

got possession of a cup of enamelled pottery he turned his whole attention upon imitating it, and after repeated unsuccessful attempts, in which he wasted his whole fortune he succeeded so well that his manufacture surpassed the finest of the Italians. He was the first person who formed a collection of natural history at Paris upon which he gave lectures at half a-crown each person under the obligation of returning it fourfold should any thing which he taught be proved false. Palissy was a Calvinist, and firmly attached to his religion and during the fury of the league under Henry III in 1568 he was committed to the bastille. The king who was his well wisher having told him that if he did not comply with the prevailing religion he should be constrained to leave him in the hands of his enemies, Palissy replied Your majesty has often said that you pity me for my part I pity you for pronouncing the words, I shall be constrained this is not speaking like a king, but let me inform you in royal language that neither the Gu sarts, your whole people nor yourself shall constrain a potter to bend his knee before images. He used to say that he had no other property than heaven and earth. The works of Palissy are *Moyens de devenir riche &c Discours admirable de la Nature des haux et containes de Bletonx des Sois des Sahars des Pierres des Terres, &c* He died in 1590.—*Moreri. Dict Hist.*

PALADINO (JAMES) known also by the name of James de Feramo from the city where he was born in 1349 was successively archibishop of Lorenzo Florence and Spoleto had the administration of the duchy for popes Alexander V and John XXIII and was sent legate into Poland where he died in 1417. He wrote some very curious books which were very popular in their day the principal is *Jacobi de Feramo compendium perverbis consolatio Peccatorum nuncupatum et apud nonnullos Behal vocatum id est Procesus Luciferi contra Jesum*. It has been translated into French by Peter Farset, an Augustine Lyons 1485 4to and has been frequently reprinted in the same form. It is also printed under the name of James d'Anchiarano.—*Varcham. L'ancet Dict Hist.*

PALLADIO (ANDREA) one of the greatest classical architects of modern Italy whose works of art and his writings alike contributed to improve the taste of the age in which he lived and direct the genius of posterity. He was born at Vicenza in the Venetian territory in 1508, and after having studied under Tassino he went to Rome where he acquired a maturity of skill and science from an examination of the productions of ancient and modern art which that capital afforded. Returning to his native country he established his fame by his designs for many noble edifices both there and in other parts of Italy which have afforded models for some beautiful structures in England as well as other parts of Europe. The villa built by lord Burlington at Chiswick (but since enlarged by James Wyatt) was from a design of Palladio, as was also a

bridge at Wilton, the seat of the earl of Pembroke, in Wiltshire. But this great architect is best known in the present age on account of his published works especially his treatise of architecture in four books, which first appeared in a folio volume at Venice in 1570, and has been many times reprinted. It has also been translated into French and English. James Leon, an Italian architect, published Palladio's architecture in English, with the notes and remarks of Inigo Jones and engravings by Picart London 1742 2 vols. folio and some of the designs of this architect were published by lord Burlington in 1730. Palladio was likewise the author of an Italian work on the antiquities of Rome Venice 1594, and Rome 1599 8vo and of Illustrations of the Commentaries of Caesar. He died at Vicenza in 1580.—*Tessaracta Litterarum et Veteris Architecturae et Sculpturae. Edit.*

PALLADIUS (*Rutilius Taurus Almi lianus*) also called *Rutilius Palladianus* the author of a curious treatise on the agriculture and rural economy of the ancient Romans. His work entitled *De Re Rustica*, lib. xiv. was published at Lyons in 1533 and at Heidelberg 1598 8vo an Italian version was printed at Venice in 1528 4to and there is a German translation published together with the *Agriculture of Columella* at Magdeburg 1612 folio. Palladius treats systematically of the labours of the husbandman through the twelve months of the year and affords some interesting details relative to the rural affairs of the ancients. Little is known of this author who wrote at Naples probably towards the close of the fifth century or the beginning of the sixth as he is mentioned by Cassiodorus.—*Bug Uss. Annales des Arts*, v. xl.

PALLADIUS bishop of Helenopolis in Bithynia, and afterwards of Aspros was born in Cappadocia in 368. In 388 he became an anchorite in the mountains of Nehra, and was made a bishop in 401. He was the firm friend of St John Chrysostom whom he never forsook. About 421 he wrote his *Lausiac History* so called from Lausus a nobleman of the court of Constantinople to whom it is inscribed. It contains the lives of persons who at that time were remarkable for their extraordinary austerity in Egypt and Palestine and is written in a plain and unornamented style. He died in the fifth century but in what year is unknown. His History was published in Greek by Maurus, Amst. 1619 and in Latin in the *Bibliotheca Patrum*, but he seems not to have been the writer of the Life of St John Chrysostom, in Greek and Latin published by M. Rigot in 1680. *Dagm. Moros. Lardner. Care.*

PALLAS (*Felix Simon*) a celebrated German traveller and naturalist born at Berlin, in 1741. After having studied medicine at the universities of Halle and Göttingen, he removed to Leyden, where he graduated as M.D. in 1760. He then went to London, to improve his professional knowledge by observing on the hospital practice of that metrop-

olis. About 1762 he returned to Berlin but at length settled at the Hague, where he published some valuable works relating to zoology. In 1767 he went to Russia, and was employed by the government of that country in conjunction with other persons on an expedition of discovery in the Asiatic provinces of that vast empire. In the course of this undertaking which occupied six years he not only collected a variety of miscellaneous information but likewise procured the materials for several important works on the various branches of natural history which he afterwards published. In 1793 and 1794 he travelled in the southern provinces of Russia and subsequently settled in the Crimea on an estate bestowed on him by the empress Catherine II. His death took place at Berlin in 1811. Among the principal works of M. Pallas are *Elenchus Zoophytorum Reg Com* 1763, *Miscellanea Zoologica*, Hag Com 1765 4to, *Speciega quibus novae Animalium species Iconibus illustrata* Berolii 1767—80 4to *Nova Species Quadrupedum et Glirium Ordine Erlang* 1778 4to *Icones Insectorum presertim Rossiae Sabineque pecunatum* Erlang 1791 4to *Flora Rossica seu stirpium Imperii Rosae per Furo pat et Asiam indigenarum Descriptiones et Icones*, Petrop 1784—1815 2 vols. folio *Illustrationes Plantarum imperfecte vel non dum cognitiorum* Petrop 1804—6 folio *Languarum totius Orbis Vocabularia compatta* Petrop 1786—99 2 vols 4to *Reise durch verschiedene Provinzen des Russischen Reichs* Peterburg 1771 &c 5 vols 4to *Sammlungen Historischer Nachrichten über die Mongolischen Volkschaften* Leipzig 1779 8vo *Bemerkungen auf einer Reise in die Südlichen Staatsstaatschaften der Russischen Reiche in den Jahren 1793—4* Leipzig, 1799—1801 2 vols. 4to The travels of M. Pallas have been translated into French under the title of *Voyages dans plusieurs Provinces de l'Empire de Russie et dans l'Asie Septentrionale trad. par Gauthier de la Peyronne* Paris 1788 5 vols 4to and 1794, 6 vols. 8vo and *Second Voyage en Russie pendant les années 1793—4* Paris 1811 4 vols. 8vo There is also an English translation of the latter work 1812 2 vols. 4to.—*Bug Uss.*

PALLAVICINO The name of a noble Italian family which has produced many remarkable characters. Cardinal **ANTONIO PALLAVICINO** born at Genoa in 1443 distinguished himself as a statesman and a scholar during the latter half of the fifteenth century. He was employed by the Vatican in conducting several important negotiations, and died bishop of Pamplona in 1507.—**FERRANTE**, the most notorious, and perhaps the most talented, of his race was a native of Piasezza born in that city in 1616. In early youth he exhibited tokens of very extraordinary abilities and, obedience to parental authority assuaged the monastic habit. For a time he appears to have acquired as much reputation for profligacy of conduct as for his learning, and obtained a

P A L

cannery at St. Giovanni de Laterano. But yielding at length to the seductions of pleasure, while at Venice, the irregularity of his life became a source of poverty to himself, and of great scandal to his order. Being reduced to the last has impaired fineness by the assistance of his pen has talent for satire shewed itself in a series of poetical lampoons entitled

The Courier robbed of his Mail. The work at length attracted the notice of the holy office by the causticity of its animadversions on an officer of the republic, and the author found it convenient to retire from the coming storm into Germany. After a while he was induced to return and might probably have done so with impunity had not his sarcastic vein again broken out in distiches of much bitterness against the whole of the Barberini family and more particularly against its head pope Urban the Eighth. He was arrested by the familiars of the inquisition from whom he managed to effect his escape but being betrayed again into their hands by a pretended friend one Morin a native of France who offered to procure him an asylum in that country under the protection of cardinal Richelieu he was treacherously conducted to Avignon instead of Paris and redelivered into the power of his enemies. His fate was now decided and although the form of a trial was allowed him at which he defended himself with great ingenuity sentence of decapitation was pronounced against him and was carried into effect at Avignon in 1643. His works, an edition of which appeared at Venice in four duodecimo volumes, in 1655 contain many pieces of considerable literary merit especially a tract entitled Il Divortio Celeste (The Heavenly Divorce or Separation of Christ from the Church of Rome). Of this there is an English translation. The traitor who unengaged him to his fate though richly rewarded at the time fell afterwards by the poniard of a companion of his victim. It is much to be lamented that such utter profligacy and gross sensuality degraded a genus of so superior an order as that possessed by this unhappy and infatuated man who amidst all his debauchery seems to have possessed some amiable qualities as well as a most brilliant wit.—SPOZI born at Rome in 1607 though the eldest son of Alexander marquis Pallavicino resigned his prospects as a layman and voluntarily taking the tonsure entered into the order of jesuits in 1638. His family connections soon raised him to high dignities in the church which his learning and correct life proved him not unworthy of. Innocent the tenth made him a bishop and Alexander the sixth elevated him to the purple in 1657 out of gratitude it is said for kindnesses shown to that pontiff when in a less exalted situation. He wrote a history of the council of Trent, in opposition to that composed by father Paul the best edition of this work in the original Italian is that of Rome folio 2 vols 1656 there is also a Latin translation of it in three 4to volumes. Upon the whole this treatise is

P A L

more esteemed for the elegance of its style than the accuracy of its statements, which are sometimes distorted by the prejudice of the author. Cardinal Pallavicino died in 1667.—*Rev. Des. Hist.*

PALIOT (PATER) an industrious genealogist was born at Paris in 1608, and settled at Dijon where he became a printer. He devoted himself to the studies of genealogy and heraldry and published the following works Le Parlement de Bourgogne 1649 folio to which another volume was added by Fr Petitot in 1733, ' Science des Armoiries de Gellot, augmentée de plus de 6 000 Ecussons' Paris 1666. His other works are genealogical histories of particular families, and he left in manuscript thirteen volumes folio of memoirs concerning the families of Burgundy. He died at Dijon in 1698.—*Mores Novis Dict. Hist.*

PALLUEL (FRANCIS CANTZ de) a distinguished French agriculturist born at Dugny near Paris in 1741. He was nominated a member of the electoral assembly of the Isle of France in 1789 and was also admitted into the Royal Society of Agriculture. In 1791 he was chosen a deputy to the legislative assembly and in 1796 a member of the commission of agriculture. Amidst his various occupations, the improvement of husbandry in France principally engaged his attention and his merit as an experimental farmer is warmly acknowledged by Arthur Young in his *Itineraries in France*. He published a variety of memoirs and observations in the *Transactions of the Agricultural Society* and in other periodical works. His death took place at Dugny November 22 1798.—*Biog. Univ.*

PALM (JAMES PHILIP) a German book seller memorable as one of the victims of French ambition. He was a native of Wurtemberg and was established in business at Nuremberg in 1806 when that fine city was suddenly occupied by the French army. Being accused of having distributed in the spring of 1806 a pamphlet against Bonaparte ascribed to M. Gutz and entitled Germany in its profound abasement Palm was arrested by virtue of an order sent from Paris and conducted to Braunschweig. Three days after his arrival he was arraigned before a military commission when he alleged that he received by post the offensive pamphlet and that he knew nothing of the author. He was however condemned to be shot, and the sentence was speedily executed notwithstanding the intercession of the inhabitants of Braunschweig. Palm was regarded throughout all Germany as a martyr and subscriptions were opened for the benefit of his widow and children not only in his native country but also at London and at Petersberg where the emperor and the empress dowager became contributors.—*Biog. Univ.*

PALMER (John) a dissenting minister of some note in the last century was born in Southwark and being brought up to the ministry in 1759 became minister of a dissenting congregation in New Broad-street. Al-

P-A-L

though brought up a Calvinist, he finally became a Unitarian, and particularly opposed himself to every thing in the form of a religious test. He retired from preaching in 1780 and having married a lady of considerable property lived privately until his death in 1790. His works are "Prayers for the use of Friends," "Free Thoughts on the Inconsistency of conforming to any religious Test as a Condition of Toleration Observations in Defence of the Liberty of Man as a moral Agent in answer to Dr Priestley's Illustrations of Philosophical Necessity An Appendix to the same and A Summary of Christian Baptism —*Life by Truth*.

PALMER (JOHN) an eminent English actor born in London about 1742. He made his first appearance under Foote's management at the Haymarket theatre and after having performed with reputation in the country, he was engaged by Garrick at Drury Lane. For some time however he was confined to inferior characters and attracted but little notice till the accidental illness of another performer furnished him with an opportunity for displaying his talents. He gradually appeared in a great variety of parts both in tragedy and comedy in which he was greatly admired and in some of which perhaps he was never excelled. He remained at Drury lane sometimes visiting Liverpool in the summer till he engaged in the scheme for erecting a new theatre in the Eastern suburb of London. Having been appointed manager of the concern he laid the first stone of the building December 26 1785 and in June 1787 it was opened but without legal authority Mr Palmer persevered for some time in a fruitless attempt to obtain a patent and after having involved himself in a quarrel with the proprietors of Drury Lane by his secession from that house he was obliged to return thither His unlucky project was the cause of great pecuniary embarrassments, and he was at length committed to the King's Bench from which he was liberated by means of a compromise with his creditors. His difficulties still continuing he purposed emigrating to America and he went with that view to Edinburgh in his way to Glasgow where he intended to embark but he afterwards relinquished his scheme and returned to London. Towards the close of his life he passed the summer season in the country and his last engagement was at Liverpool At the theatre there on the 2d of August, 1798 while performing the principal character in Kotzebue's play of "The Stranger" he fell on the stage in a state of exhaustion and almost immediately expired while the scene was rendered doubly unpressive by his having just before exclaimed, in the words of the drama "There is another and a better world!" His distressed circumstances, the recent loss of a son by death and other family misfortunes, had preyed greatly on his spirits so that he may be said to have died of a broken heart.—*Theat. Diet.*

PALMER (John) the first projector of

P A L

mail coaches, was a native of Bath where he was brought up as a brewer but subsequently solicited and obtained a patent for a theatre in his native city Being led by his profession to travel about from place to place to witness and engage rising performers he was struck with the insecurity of the usual manner of conveying the mails, and matured in his mind the existing plan of mail coaches. He succeeded in his object, but not without great opposition, and the utility of the scheme soon becoming manifest he was made controller of the post-office with a salary of 1500*l.* per annum. Some disputes, however occurring a party grew up against him which he was not powerful enough to encounter and he was suspended in 1792 On subsequent petitions however he was reimbursed by parliament, although very inadequately to his promised reward. He died in 1818.—*Monthly Mag.*

PALMER (SAMUEL) an English printer of eminence who died in 1732. He published a General History of Printing from the first invention of it at Ments to its Propagation and Progress through most Kingdoms in Europe particularly its Introduction and Success in England 1733 4to and he was also the author of a Printer's Grammar 8vo —*Org.*

PALMIFRI (MATTEO) an Italian man of letters was born at Florence in 1405. He was several times employed in offices of magistracy and rose to the supreme dignity of gonfalonier of justice. He died in 1475 His most considerable work was a chronicle from the creation down to his own times, which was continued to 1482 by a native of Pisa nearly his namesake Matteo Palmieri. He also wrote *The Life of Niccolo Acciaioli*

De Captivitate Pisorum published by Muzerato *Della Vita Civile*. In imitation of Dante he composed three books in terza rima entitled *Città de' Viti* never printed but extant in MS. In consequence of some theological notions condemned as heretical it was solemnly burnt a fate which some writers have erroneously attributed to the author.—*Voss. Hist. Lat. Trebisch.*

PALMQVIST (MAGNUS baron) a Swedish nobleman president of the council of mines in his native country. He was long engaged in military service and was distinguished for his skill in fortification, and his acquaintance with mathematical science. He died in 1729 aged sixty nine. In the *Journal des Savants* for 1690 is a letter from Palmoquist, to M. Regis on the solution of an arithmetical problem.—PALMQVIST (FREDERIC) another Swedish mathematician was a member of the Academy of Sciences at Stockholm, to whose Transactions he was a contributor. He also published several works in the Swedish language of which the most important are, *An introduction to Algebra*, 1741 4to, *A Treatise on the Force and Density of Bodies*, 1749; and *The Principles of Mechanics* 1756 8vo.—*Bug. Univ.*

PALOMINO DE VELASCO (A ANTO-

P A M

(no) one of the most eminent of the Spanish painters, born near Cordova in 1653. After having studied his art under Valdes, he went to Madrid for improvement in 1678. He was employed by the king, and appointed royal painter to which title was added a considerate pension in 1690. His works at Valencia, Salamanca, Grenada, and at Cordova, added greatly to his reputation, and he distinguished himself by the works of his pen, as well as his pencil having published a treatise entitled

El Museo pictorico, y Escala optica, Madrid 1715 24, 3 vols. folio which contains the theory and practice of painting, and the lives of the most celebrated Spanish painters. The latter part has been translated into French and Palomino's Lives of the Spanish Painters, and his Notices of the Cities, Churches and Convents where their works are preserved, were published in London the former in 1742 and the latter in 1746 8vo. This artist died at Madrid in 1726.—*Bug. Univ.*

PALSGRAVE (John) a learned English divine and grammarian of the eighteenth century a native of London educated at the universities of Cambridge and Paris. In this latter city he soon acquired a very extensive knowledge of French literature and so intimate an acquaintance with the principles of the language that being selected by the court to instruct the queen Mary wife of Louis XII and sister of Henry VIII of England in the tongue of her adopted country he actually compiled a grammar of it for her use the first of the kind ever produced and what is yet more remarkable in a foreigner accompanied it with many judicious regulations for more correct pronunciation. He eventually returned to England and graduated as bachelor in divinity at Oxford where he obtained from the king the situation of a court chaplain with a stall in St Paul's cathedral and the living of St Dunstan's in the East in the city of London. His grammar is entitled *L'Élarcusseme de la Langue Française* folio 1530. His only other production was a translation of Fulonius Latin comedy *Acolastus*. His death took place in 1554.—*Athen. Oxon.*

PAMPHYLIUS an ancient painter flourished in the time of Philip king of Macedon. He was the master of Apelles and had a school at Sicyon, where he was the first that taught his art upon mathematical principles.—*Suidas Aed. Pictor.*

PAMIGER or PAMINGER. There were two eminent German composers of that name in the sixteenth century father and son LEONARD the elder was a good scholar as well as a musician, and was the intimate friend of Martin Luther. He composed a great variety of church music, printed in four vols. which appeared at different periods, after his decease in 1560 under the superintendence of his son, Stephanus. The latter born in 1526, studied under Luther and Melanchthon, to whom he was recommended by his father at Wittenberg, and afterwards suffered much persecution on account of his having embraced

P A N

their religious opinions. He became in 1568 rector of the chair at Oettingen; but the same cause forcing him to quit that place, he retired to Nuremberg where he supported himself principally by the sale of his father's works, and by teaching at the Carthusian convent in that city. His death took place in 1603.—*Bug. Dict. of Mus.*

PANARD (CHARLES FRANCIS) an ingenious French poet was born about 1690 at Courville near Chartres where he had a trifling employment and lived some time in obscurity until the comedian Le Grand having seen some of his pieces encouraged him to write for the stage in which department he became very successful. Marmontel calls him the La Fontaine of the Vaudeville both from the naivete of his writing and the simplicity of his character. His works are occasionally incorrect and negligent, but they are always stamped by native sentiment, wit, and good sense. He knew perfectly well how to sharpen the point of an epigram, but his satire was always directed to the vice not to the person. He died in 1765. His works were printed in 6 vols 12mo entitled *Théâtre et Œuvres diverses*.—*Nécrologie Française. Bug. Dict.*

PANCIROLUS (Guy) a learned professor of jurisprudence descended of a noble family and born at Reggio in 1523. He early displayed an extraordinary genius, which he cultivated with much assiduity at Ferrara Parma, and other of the principal Italian universities. In 1547 he obtained the second professorship of civil law at Padua which he retained till 1564 when he vacated it on being elected to that of the Roman law. Philibert duke of Savoy giving him an invitation to Turin he accepted it in 1571 the rather than he considered himself to have some grounds for complaint as to his treatment at Padua. In this capital he continued to fill the professor's chair in jurisprudence upwards of eleven years, during which period he produced an ingenious work *De rebus inventis et desperatis*, written in the Italian language. His eyes at length failing him and the sight of one becoming totally lost Pancirulus returned to Padua, where he passed the remainder of his life. Besides the work alluded to, which Salmon translated into Latin he was the author of a treatise *De Nomismatibus antiquis, De quatuordecim Regionibus Romae curruque Edicibus Commentarii in Novitiam utriusque Imperii et de Magistris* folio,

De clavis Legum Interpretibus, De Magistris Municipal et Corporibus Artificum &c. His death took place about the close of the sixteenth century.—Niceron.

PANKOUCKE (ANDREW JOSEPH) a bookseller at Lille in Flanders, where he died in 1753, aged fifty two. He was the author of several popular and useful compilations, and some original works, including "La Bataille de Fontenoy, Poème héroïque, ou Vers burlesques, par un Lillois Natif de Lille en Flandre avec des Notes historiques, critiques, et morales, pour l'intelligence de ce Poème," 1745, 8vo, intended as a criticism,

on Voltaire's poem on the same subject, and "Art de dessouler la Bâtie" of which a poet humous edition appeared in 1773, 3 vols. 12mo.—PANCKOUCKE (CHARLES JOSSE) son of the preceding, was also a bookseller and a man of letters. He was born at Liège in 1726 and at the age of twenty-eight he settled at Paris, previously to which period he had made himself known by some publications from the press, and mathematical pieces which he had sent to the Academy of Sciences. His house became the resort of the most distinguished authors and he conducted himself with great liberality to those with whom he was connected in his literary enterprises. He engaged in the publication of the "Méthode de France" and various other periodical works and established the "Moniteur" under the direction of H. B. Marot, since duke of Bassano. He also formed the plan of the "Encyclopédie Méthodique" consisting of a number of distinct dictionaries of the various branches of art science and literature, of which many parts had been published in 1822. Panckoucke died December 19 1798. He was the author of "De l'Homme et de la reproduction des différents Individus," 1761 12mo., Traduction Libre de Luctece" 1768 2 vols. 12mo., and other works.—Biog. Univ. Biog. Nouv. des Contemp.

PANTALEON (HANNY) a learned physician and historian was born at Basel in 1522. He studied divinity but changing his design he taught dialectics and natural philosophy at Basel for forty years. At an advanced age he devoted himself to medicine and took the degree of MD practising with much reputation until his death, which took place in 1595. He composed various works the most useful of which now is an account of the eminent men of Germany entitled "Paeopographia Herorum et Illustrorum virorum Germanorum" dedicated to the emperor Maximilian II who gave him the title of count Palatin. He also published

"Historia Militaris ordinis Johannitarum Rheniorum ac Melitensium Equitum" Chro nographia Ecclesiae Christi" Diarium His toricum," and "Comedea de Zacheo publicam præcepta" 1546 8vo.—Melchor Adam.

PANVINIUS (ONURINUS) called, by Ma nuel Helvius Antiquatus, from his incessant labour in antiquarian pursuits was a noble Venetian of the sixteenth century born in 1529. He became a member of the society of the Lermits of St. Augustine and rising high in the favour of cardinal Alessandro Farnese followed that prelate to Sicily. A spurious and imperfect edition of his first work, "A Chronicle of Popes and Cardinals," having appeared in 1557 at Verona he was induced to supersede the publication of a more accurate copy. He afterwards wrote a continuation of Platina's

"Lives of the Popes," with annotations on the original work. His other productions were "Topographia Romana," "De Primate Petri," "De Antiquo Rito Baptizandi De Romanorum Nomibus," "De Ira cum plus et Ludo Circenarius," "De Repub

licis," "De Regis Sepulchris mortuorum apud veteres Christianos," and four treatises on Roman antiquities, to be found in the collection of Gravina. He also published an edition of the "Fasti Consulares." Panvinius died in Sicily in 1568.—Nouv. Dict. Hist.

PANZER (GOTTFRIED WILHELM FRANCIS) an eminent bibliographer, born at Seisbach in the upper palatinate of the Rhine in 1729. He studied at the university of Altdorf where he took the degree of doctor of philosophy in 1749 and afterwards that of doctor of divinity. Returning to his native country he became a minister at Eyselwang and subsequently pastor of the church of St Sebald at Nuremberg. He exerted all his efforts to suppress such religious practices as appeared to be relics of pagery and in particular he introduced into his parish the custom of public confession. His death took place July 9 1805. His principal work is "Annales Typographici ad Artis in ventam originis ad annum 1536 post Maittarnum Denusi abhorumque doctiss. viror. curas in ordinem redacti amendati et aucti, Norimb 1793—1803 11 vols. 4to." He also wrote an account of early printed Bibles, and on other subjects connected with the history of typography.—Biog. Univ.

PAOLI (PASCAL) a Corsican officer distinguished by his exertions to maintain the independence of his native country. He was born in Corsica in 1726 and was the second son of Hyacinthus Paoli, a man of considerable influence in the island who had frequently taken an active part in the management of political affairs. The circumstances of the country at length inducing him to remove with his family to Naples. Paoli was there educated at the jesuit's college. He was still engaged in the prosecution of his studies when his countrymen, who had long been struggling for freedom against the Genoese by whom they were held in subjection sent him an invitation to become their chief. He accepted the proposal and going to Corsica, he was appointed to the supreme government of the island in July 1755. Having organized a regular plan for the conduct of affairs both civil and military Paoli opposed the Genoese with such spirit and success, that after they had earned on hostilities against him for nearly ten years they entered into a treaty with France in pursuance of which a body of French troops was sent to their assistance, and finding themselves still unable to conquer the island they at length made a formal surrender of their claims of sovereignty over it to the French government. The duke de Choiseul endeavoured to prevail on Paoli to submit to the new arrangement, and accept of the office of commander in chief under the authority of France. But he passionately rejected all overtures of accommodation and opposed with vigour the dangerous enemies he had now to encounter. At first he was successful and a much greater force than had been anticipated was found requisite for the subjugation of Corsica. Fresh bodies of troops were sent thither and over powered by numbers, Paoli found it necessary

P A P

to commit his personal safety by flight from his native country. He made his way to the coast, and embarking on board an English vessel, on the 16th of June 1769 he sailed to Leghorn whence he afterwards proceeded to England. Here much attention was paid him, and he obtained from the government a pension of 1 500/- a year. After an interval of twenty years, the Revolution in France presented to Corsica exile new and flattering prospects for himself and his compatriots. In 1789 the island was recognised by a decree of the National Assembly as a department of France and Paoli being invited to resume his station at the head of affairs, resigned his pension and took his departure from England. On the 23rd of April, 1790 attended by deputies from Corsica, he presented himself at the bar of the National Assembly at Paris, where he was received with enthusiasm and he took the oath of fidelity to the French government. The progress of the Revolution disappointed the hopes which he had conceived but he continued the connexion with France till after the execution of Louis XVI when he abandoned his allegiance and was invested with his original dignities of president of the Consulta or national council and commander-in-chief of the island. He was encouraged to adopt these measures by the promise of assistance from Great Britain and in February 1794 an English army landed in Corsica, under sir Gilbert Elliot afterwards lord Minto. On the 14th of June following a meeting took place of deputies from the different parts of the island when through the influence of Paoli a decree was made declaring the separation of Corsica from France and its union to the British empire. Paoli subsequently returned to England in consequence of some differences with the viceroy sir G. Elliot. Having had the misfortune to lose the bulk of his property through a commercial failure at Leghorn he was reduced to difficulties on his return to London but his pension being restored he was relieved from his embarrassment and he passed the remainder of his days in tranquillity. He died at his residence in the Edge ward road, London February 5 1807.—*Aitana's Atheneum* vol 1. *Bug Univ.*

PAPEBROCK (DANIEL) a Flemish jesuit who assisted in the compilation of the "Acta Sanctorum" commenced by Rosweide and Bollandus. [See BOLLANDUS JOHN] Papebrock, in conjunction with Henschenius another jesuit, published the *Memoria of Saints* for the month of March in 3 vols. folio, in 1663 those for April in 3 vols. in 1675 those for May in 7 vols. 1680—85—88 of which the first only appeared during the life of Henschenius. The work was carried on under the direction of Papebrock, till his death which happened June 29 1714, in the eighty sixth year of his age.—*Diet. Hist. Bug Univ.*

PAPILLON (JOHN) the son of an indifferent French engraver was born at St Quentin in 1661 and was very successful as an engraver on wood. He is also said to have been

P A P

the inventor of printing papers in imitation of tapestry to furnish rooms. He died about 1698—His son JOHN BARTING MICHAEL, was born at Paris in 1698, and excelled the same art still more successfully. His engravings possess considerable merit, particularly those which represent foliage or flowers. He was the author of an interesting work, entitled, "Traité historique et pratique de la Gravure en Bois." He died in 1776.—*Strutt. Morris. Diet Hist.*

PAPILLON (THOMAS) a French lawyer was born at Dijon in 1514. He was the author of the following works, *Commentaria in quatuor praeceps titulus, lib. praeceps Digestorum De Directa Hereditate Substitutionibus Libellus de Jure accrescendi.* He died in 1596 at Paris.—There was also a PHILIBERT PARISOT a learned canon of La Chapelle-aux-Riche Dijon who wrote a work entitled "La Bibliothèque des Anteups de Bourgogne." Dijon 1742 2 vols. folio. He died in 1758.—*Mores. Diet Hist.*

PAPIN (DENYS) an eminent natural philosopher and physician who was a native of Blois in France. After he had finished his studies and taken the degree of MD he made a visit to England and in 1680 he was admitted a fellow of the Royal Society. He assisted Mr Boyle in his philosophical experiments, and made himself known as an ingenious practical philosopher. Being a Protestant, the revocation of the edict of Nantes prevented him from returning to his native country and on leaving England he settled at Marburg in Germany as a teacher of mathematics. Papin chiefly distinguished himself by his researches concerning the power of steam and the influence of mechanical pressure in retarding the abolition of liquids. He suggested the principle which led to the invention of the steam engine (see NEWCOMEN) but is best known for an invention of his own denominated Papin's Digester consisting of an air tight iron vessel in which water &c may be heated considerably beyond the boiling point of which a description was published under the title of "The New Digester or Engine for the Softening of Bones." He was also the author of *Fasciculus Dissertationum de quibusdam Mechanicis Physicis, and Ars nova ad Aquam Ignis adminicculo efficacissimum elevandam.* He died in 1694.—*Diet Hist. Bug Univ.*

PAPIN (ISAAC) a French divine probably of the same family with the subject of the last article as he was born at Blois, in 1657. He studied theology at Geneva but was refused the usual testimonies of proficiency in consequence of his departure from the standard belief of the Calvinists. He then visited England, and took orders in the established church in the reign of James II and afterwards became professor of divinity among the French refugees at Danstic. Disturbed by the hostility of Jansen with whom he had a literary controversy and driven from the situation he occupied he became a Roman Catholic, and wrote in defense of that church. He died

at Paris in 1709; and his writings were published collectively in 1723, 3 vols. 8vo.—*Niceron*.—*Moresi*.

PAPON (*Jean Pitrais*) a French historian and member of the Institute born near Nice in 1734. Having finished his studies, he was admitted into the congregation of the Oratory, but he quitted that society to become keeper of the library at Marseilles. While in that situation he commenced his principal work, *Histoire générale de Provence* 1777-86 4 vols. 4to for which a pension of 2000 francs was bestowed on him by the states of Provence, and he also expensed the largess of the late king, then the count de Provence to whom the history was dedicated. The abbé then settled at Paris, whence he removed to the department of Pay de Dôme during the storms of the Revolution, and after remaining there some years he returned to Paris where he died of apoplexy in 1803. He was the author of *Voyage itinéraire de Provence* 1787 2 vols. 18mo *Histoire de la Révolution de France* published posthumously 1815 6 vols 8vo *Epoques mémorables de la Peste et Moyens de se préserver de ce Fléau* 2 vols. 8vo, besides other works.—*Bibl. Univ.*

PAPINI ^N a celebrated Roman lawyer. He was born in the year 173 and became pretorian prefect under the emperor Severus who had so high an opinion of his worth that at his death he recommended his son Caracalla and Geta to his care. The first having brutally murdered his brother enjoined Papini to compose a discourse in accusation of the deceased in order to excuse his barbarity to the senate and the people. With this mandate the prefect not only refused to comply but he nobly observed that it was easier to commit a parricide than to excuse it and that slander of innocence was a second parricide. Caracalla enraged by this refusal secretly induced the pretorian guards to mutiny and demand their leader's head and apparently to satisfy them he was executed in 212 in his thirty seventh year and his body dragged through the streets of Rome. The reputation of Papini as a lawyer stood very high, and he had a great number of disciples. He composed several works among which are twenty seven books of Questions on the Law nineteen of Responses or Opinions two of Definitions, two upon Adultery, and one upon the 'Laws of Ediles'. —*Moresi*. —*Scrib. Ossiet.*

PAPPUS an Alexandrian philosopher and mathematician who flourished in the fourth century under Theodosius the Great. He was the author of some annotations on the *Almagest* of Ptolemy, a mathematical treatise translated by Commandine in 1568; a description of some of the principal rivers in Africa, a work on military engines, &c. together with several other treatises, most of which have not reached posterity though some of them have been abridged, and others enumerated by Maria Manèse. Charles Manœopus collected and published all that is now known of

his writings, in one fine volume, Bologna, 1690.—*Hutton's Math. Diet.*

PARABOSCO (*Girolamo*) an Italian poet and miscellaneous writer, was born in the beginning of the sixteenth century at Piacenza. He was a musician, and a maestro di cappella. His comedies which are six in number possess much originality. The best edition was published at Venice in 1560. He also wrote novels in the style of Boccaccio and Bandello which were published in 1558 with the title of *I Diporti di M. Girolamo Parabosco*. His letters, tragedies and other works, consisting of *Motti*, or bon mots, are now almost forgotten.—*Tiraboschi. Naso's Diet. Hist.*

PARACELSIUS or **PHILIPPUS AUREOLUS THEOPHRASTUS AB HOCHEIM** a celebrated empiric and alchymist, born at Einsiedeln near Zurich in Switzerland in 1493. His father William ab Hohenheim a physician is said to have been the natural son of a Teutonic knight. After some education at home he visited France Spain Italy and Germany with a view to improvement in medicine and the arts and sciences connected with it especially chemistry. In the course of his travels he became acquainted with some remedies not in common use among the faculty (probably preparations of mercury) by means of which he performed extraordinary cures and obtained great reputation. Returning to Switzerland he taught medicine and surgery at Basel delivering his lectures partly in the German language for want of a sufficient knowledge of the Latin at length having cured John Lichtenfels, a rich ecclesiastic of a dangerous disease and being precluded by a decision of the magistracy from obtaining the stipulated reward for which he was obliged to sue his patient he was so enraged at the disappointment that he grossly abused the judges and becoming apprehensive of their resentment, took his departure from the city. He then led a wandering life in Alsace accompanied by his pupil Opornus, who disgusted with his violence and intemperance at length left him to pursue his wild career alone. Paracelcus professed an utter contempt for the practice of his medical contemporaries and boasted of an intercourse with spirits, and the possession of the philosopher's stone and the elixir of life but he disgraced his pretensions by dying in the forty-eighth year of his age after a few days illness, at the hospital of St Sebastian at Salzburg in 1541. Among the writings attributed to Paracelcus are some on surgery chemistry and theology many of which remain unpublished. A collection of his works in 11 vols. 4to, was printed at Basel in 1589 and they were also printed at Geneva in 1608 with a preface containing an account of the author.—*Metz. Adam. Teissier Eloges des H. S. Morby Poliphil. Hutchinson's Bibl. Med.*

PARADIN (*WILLIAM*) a French historian of the sixteenth century the time of whose birth and death are unknown. He wrote several works of which those are the principal *Historia sui Temporum*, translated into

P A R

French in 1558, "The History of Arisane; respecting the various of the Peatouch," "Annales de Bourgogne," "De Moribus Gallicis Historia," "Mémoires de l' Histoire de Lyon," "De rebus in Belgio, anno 1543 gestis," "La Chronique de Savoie;" "Historia Galliae a Francia I coronacione ad annum 1550," "Historia Ecclesiae Gallicanae," "Memorials insignes Francie Palmerum." He was dean of Beaujouan.—*Le Long Edit. Hist. de France. Merv.*

PARCIEUX (Antoine de) an ingenious French mathematician, member of the academies of sciences at Paris, Stockholm and Berlin and censor royal. He was born near Uzes, in 1703 and was of low parentage but was enabled through the gratuitous benevolence of a friendly individual to study at the college of Lyons where he cultivated mathematical learning with great success. He afterwards settled at Paris where he attracted notice by his skill in the construction of sun dials. He published "Traité de l'Usage des Régions Rectangulaires et Sphériques" 1741 4to dedicated to the Royal academy. "Essai sur les Probabilités de la Durée de la Vie Humaine" 1746 4to. "Mémoire sur la Possibilité d'amener à Paris les Eaux de la Rivière de l'Yvette" 4to and several other works. He died in 1768.—*Bug. Univ. Dict. Hist.*

PARCIEUX (Antoine de) nephew of the preceding and also eminent as a mathematician. He was born near Nismes in 1753 and he applied himself with such ardour to literature that when quite young he composed a tragedy called, "Oxone" altered from one written by Thomas Corneille. At length he became professor of mathematics at Paris and often supplied the place of Brisson professor of natural philosophy at the college of Navarre whose lectures he had assiduously attended. In 1779 he gave a course of lectures on experimental physics and he was afterwards employed to form a cabinet of that science at the military school of Brienne. On the establishment of the Lyceum at the Pantheon he was nominated professor. Among his works are "Voyages du Calcul Géométrique et d'Astronomie," "Traité élémentaire de Mathématique," "Traité des Annuités ou Rentes à l'ermes &c." He was preparing a complete course of natural philosophy and chemistry of which he had sent only the first volume to the press when he fell a sacrifice to fatigue occasioned by over attention to his studies in 1799.—*haut. Dict. Hist.*

PARDIES (Juvatius Gaston) a learned and ingenious Jesuit of the seventeenth century a native of Paris, or as others say of Pau, in Gascony born 1636. In the earlier part of his life he cultivated the belles lettres with great success, and some of his lighter compositions were much admired on account of the airy elegance and delicacy of their style. Subsequently he devoted the whole of his attention to severer studies and became celebrated for his proficiency in mathematics and general philosophy his reputation for which procured him a professorship in the

P A R

college of Louis XIV. Some of his works were well known in England especially a controversy carried on by him in 1672 with Sir Isaac Newton, whose theory of optics he impugned, the substance of which is to be found in the Philosophical Transactions. His Elements of Geometry, too, became familiar to the English reader in Hart's translation, which has gone through several editions. His other works are "Lettre d'un Philosophe à un Cartésien de ses amis," "Discours sur la Connaissance des Bases Horologium Thaumatopædum duplex," "De Motu et Nature Comète," "La Statique ou la Science des Forces Mouvantes," "Recherches du Mouvement de la Lumière" and "Discours du Mouvement Local." In 1673, having employed himself diligently in administering the comforts of religion to the prisoners confined in the Buret during the Holy week he caught a jail fever than prevalent among them which occasioned his decease.—*haut. Dict. Hist.*

PARE (AMBROSE) an eminent surgeon, was born at Laval in the district of the Maine in 1509. He was appointed surgeon in ordinary to king Henry II in 1538 and he held the same office under Francis II, Charles IX and Henry III. He was on one occasion of great service professionally to Charles IX who proved his gratitude by sparing him in the massacre of St. Bartholomew although a Protestant. He died in 1590. Pare was a bold and successful operator and rendered real services to his art particularly in the practice of tying divided arteries and in the treatment of gun shot wounds. His works were universally read and translated into most of the languages of Europe they consist of numerous treatises and were translated into Latin by his pupil Guillotin with the title of "Ambroise Parac Opera, novis iconibus elegantissimis illustrata et Latine doctae." —*Eloy. Dict. Hist. de la Med. Rec's Cyclopædia Halle. Moreri.*

PARENT (ANTHONY) a learned French mathematician born at Paris in 1666. He received his early education at Chartres and while at school was particularly attracted by the study of gnomonics on which he wrote a treatise and he acquired skill in forming sundials. He then went back to Paris to study the law but his strong attachment to the mathematical sciences superseded every other pursuit and shutting himself up in the college of Dormans he gave way to his inclination leaving his retreat only to attend the lectures of De la Hire and Sauveur at the royal college. Wishing to obtain a practical acquaintance with mathematics as applied to military tactics he made two campaigns with the marquis d'Aligre. He afterwards devoted his time entirely to the study of physical and mathematical science including anatomy botany and chemistry. He was admitted into the Academy of Sciences as an adjunct professor of mechanics, and in 1716 he was appointed assistant geometer. He died of the small pox the same year. The Measures of the Aca-

PAR

study of Scotland contains many papers by M. Picard, who also published 'Elements of Mechanics and Natural Philosophy' 'Mathematical and Philosophical Researches' and a treatise on arithmetic.—*Martin's Big Philo.*

PAREUS vs PARE. There were three of the same name, father, son, and grandson all eminent for their learning and abilities. DAVID the elder, was born of Protestant parents at Frankenstein in Silesia. His father, whose name was Wiegler an appellation which the son afterwards elevated into Pareus, from a Greek word of the same signification, becoming a widower contracted a second marriage the consequence of which was that his offspring were neglected and sent to different trades, the subject of this article being first placed with an apothecary and afterwards with a shoemaker. The strong bent of his genius towards literary pursuits triumphed however eventually over his difficulties, and being fortunate enough at length to secure the instructions of Schilling his progress was equally sound and rapid. He obtained the professorships of the humanities and of divinity at Heidelberg, where he entered warmly into the controversies carrying on between the Lutherans and the Calvinists having abandoned the tenets of the former for the stricter discipline of the latter party. While reagent at this university he acquired the esteem of the elector palatine and other persons of high rank and consideration and in 1589 printed, under their auspices, an edition of the Scriptures, with a commentary. In 1592 he was elected an ecclesiastical counsellor and the year following took his doctor's degree. In 1617 appeared his famous Commentary on the Epistle to the Romans which was speedily dispersed all over Europe but the doctrines it contained militating very strongly against regal prerogatives and the divine right of kings, James I of England was so incensed at its pronulgation that he ordered it to be burnt publicly in London by the hands of the common hangman David Pareus dying in 1638 his son JOHN PHILIP collected his exegitical works, and published them with a life prefixed, in three folio vols. at Frankfort in 1647. The latter who was born at Hembach in the spring of 1576 and became rector of the college of Neustadt was the author of several valuable works the principal of which are Calligraphus Romanus, 8vo, 1620, Lexicon Craticum 8vo, Klecta Symmachiana, 8vo, Analecta Plautina, Lexicon Plantinum, and other treatises illustrative of his favourite author Plantus of whose works he published an excellent edition and in defence of whose fame he entered into a controversy with the learned John Gruter as remarkable for the reading it evoked as for the acrimony with which it was carried on. He died at Hanau in 1648, his son, DANIEL PAREUS having preceded him to the grave thirteen years before. This young man was a scholar of great promise and besides an original History of the Palatinate of Bavaria, and a work entitled *Medalla Historiae Ecclesiast-*

PAR

icae

the "post published editions of the works of Lucretius, Minimus and Quintilian with valuable notes, as well as an elegant selection from the writings of the best Greek authors under the title of *Malleficium Atticum*," when his career was cut short by the hand of an assassin who murdered him for the sake of plunder.—*Nov. Diet. Hist. Big. Uni.*

PARFAIT (FRANCIS) a French writer distinguished as a dramatic historian who was born at Paris in 1696 and died in 1753. Among his works are *Histoire générale du Théâtre Français depuis ses origines jusqu'à présent*, 15 vols. 12mo. *Mémoires pour servir à l'Histoire de la Poésie*, 2 vols. 12mo. *Histoire de l'ancien Théâtre Italien* 12mo and *Dictionnaire des Théâtres* 7 vols. 12mo.—*Dict. Hist.*

PARINI (JOSEPH) a modern Italian poet who raised himself to eminence by his talents, which he employed in satirizing the vices and follies of his age and country. He was the son of a poor peasant and was born on the shores of Lake Pusane about seven leagues from Milan. His docile disposition attracted the notice of some monks who bestowed on him a gratuitous education to fit him for some subordinate ecclesiastical office. A thirst for learning induced him to acquire further knowledge by his own exertions but his prospects of clerical promotion were blighted by an attack of paralysis in his nineteenth year which rendered him a cripple for life. He first exerted his poetical talents to procure the means of support for himself and his widowed mother, but he was obliged to struggle through nearly twenty years of obscure indigence and neglect till he emerged into reputation and competence. This change in the literary fortunes and situation of Parini was produced by the appearance of his fine satirical work *Il Giorno* or *The Day* a poem, intended to exhibit a sarcastic and humorous delineation of the character and manners of the Milanese nobility which appear to have been highly deserving of his animadversions. Parini was also the author of several lyric compositions, some of which display the same strain of moral satire as the *Giorno*, on which his celebrity chiefly depends. Towards the close of his life he enjoyed a large share of popularity which he constantly exerted to promote peace and union among his fellow-citizens. Once when the democratic spirit ran high at Milan and the people were tumultuously assembling with cries of 'Viva la République! Morti ai Tiranni ai Patrini!' Parini issuing forth from an adjoining hotel in dignified exclamation, 'Viva la République, e morte a nessuno canaglia stola!' "The republic for ever and death to nobody you stupid people." The crowd struck with surprise and admiration after cheering the champion of their rights, quietly dispersed. He lived much esteemed and respected to his seventeenth year and died very generally regretted.—*Big. Uni.*

PARIS (FRANCIS) usually called the abbé Paris was the son of a counsellor to the par-

P A R

hament and was born at Paris in 1690. He embraced the ecclesiastical profession and took deacon's orders, and in the disputes occasioned by the bell Unigenitus, he attached himself to the Jansenist party. Upon the death of his father the abbe Porez renounced all claim to his patrimonial inheritance in favour of a younger brother and devoted himself to a life of poverty living in a poor little house in the suburb of Marcey where he passed his time in prayer and in making stockings for the poor. He died in 1727 and was buried in the churchyard of St Medard, and on his death the Jansenists made great use of his credit to revive their sinking fame by making his tomb the seat of their pretended miracles, and so far did the delusion gain ground that in 1732 the court found it necessary to have the churchyard walled up. The abbe Paris wrote a "Commentary on the Gospel of St Matthew," an "Exposition of the first Chapters of the Epistles of St Paul to the Romans" on the Galatians, and An Analysis of the Epistles to the Hebrews. — *Dact Hist. Douglas's Criterion.*

PARIS (MATTHEW) an English historian was a Benedictine monk of the congregation of Clugny in the monastery of St Albans and died in 1259. He is said to have been universally accomplished and a man of rare integrity freely censuring all that he found wrong in all orders of people without regard to rank or power. His principal work is his *Historia Major* of which we have only remaining the annals of eight kings from the beginning of the Conqueror's reign to the end of that of Henry III, the latter years being added it is supposed by William Rushanger a monk of the same monastery. It is a valuable history composed with great candour and impartiality. He also wrote *Historia Minor* or an abridgment of the former which is extant in MS. and some other works which are supposed to have perished. — *Vetus Hist. Lat. Nicholson's Histor. Lib.*

PARISOT (PIERRE) also called Norbert born in 1697 at Bar le Duc. He entered into holy orders and assumed the habit of a Capuchin friar in which capacity he afterwards was despatched by his order on a mission to India. Here his conduct gave great offence to the jesuits, who procured his recall in 1744 after he had been about four years in the country which induced him on his return to France to publish a work highly vituperative of the society entitled "Historical Memory of the Missions in the Indies." His own order however so far from supporting him on this occasion found much to displease them in his book on their own account, and the indignation which it excited among them operated so strongly that the author withdrew into England and there supported himself by introducing a manufactory of tapestry. After visiting part of Germany and the Peninsula, he at length returned to his native country became reconciled to his order and again with a sickness which seems to have been inherent in him abjured it. His principal work is

P A R

a "History of the Society of Jesus, from its first Foundation by Ignatius Loyola," in 8 vols. His death took place in 1770. — *Eng. Univ.*

PARK (MUNRO) an enterprising traveller who fell a victim to his repeated attempts to explore the interior of the African continent. His father was a farmer and he was born near Selkirk in Scotland September 10 1771. He was educated for the medical profession, and after having studied at Edinburgh for three years he was apprenticed to Mr Anderson a surgeon of Selkirk whose daughter he subsequently married. On quitting this situation he went to London and then made a voyage to the East Indies as constant-surgeon on board one of the Company's vessels in the course of which service he had an opportunity of making some botanical collections at Benecoolen of which an account may be found in the Transactions of the Linnean Society. Returning to England he engaged in an expedition to the intertropical regions of Africa, to trace the course of the river Niger under the patronage of the African Society. He arrived on the coast of Senegal in June 1795 and having made himself acquainted with the Mandingo language he commenced his journey in the course of which he encountered great dangers in spite of which he prosecuted his undertaking till he had reached the banks of a large river which appeared to be the object of his researches. The state of destitution to which he had been reduced rendered it almost impossible for him to proceed and he therefore returned towards the coast, and arrived in England at the end of the year 1797. Of his interesting discoveries he published an account in his *Travels in the Interior of Africa* in 1795 96 and 97. In 1799 having married the lady already alluded to Mr Park engaged in practice as a surgeon at I'ebien in his native country in 1801 and contented with the fame he had acquired he would probably have sought for no new adventures nor have exposed himself to fresh peril, but for the extraordinary inducement held out to him in a proposal from government, to engage in a second expedition of discovery in the tract he had before visited but with much more ample resources than on the former occasion. Towards the close of 1803 he entered on the undertaking provided with an escort of thirty soldiers, and accompanied by other individuals furnished with commodities for trading with the natives of the countries through which they might pass. Mr Park transmitted to the British settlement on the coast, an account of his progress till he embarked with some of his followers in a boat on the stream which he had previously discovered but beyond that point no certain intelligence of his fate has ever been received. After all hope of his return was at an end, governor Maxwell of Goree despatched a person to the inland part of the country to learn, if possible what had become of the unfortunate traveller and his companions and the result of the messenger's enquiries was a vague report that Mr Park and his friend Mr Max-

P A R

tyn had been drowned, in attempting to avoid the pursuit of a barbarous chief, whom they had unmercifully offended, and that all the other Europeans of the party had previously died from fatigue or disease. An account of Park's second journey, so far as his own narrative extended, with a memoir of his life, by Mr Wickwar was published in 1815.—Quarterly Review.

PARKER, lord Morley (HINCHIN) a literary nobleman of the reign of Henry VIII. He was the son of sir William Parker knight, and derived his title from his maternal grandfather lord Morley. He was educated at Oxford and was summoned to parliament in the twenty first year of Henry VIII. He was one of the barons who signed the memorable declaration to pope Clement VII threatening him with the loss of his supremacy unless he consented to the king's divorce. Of his works only one has been published entitled *A Declaration of the 9th Psalm* the rest remain in manuscript, in the king's library. He is said to have written several tragedies and comedies, of which not even the names are remaining.

Certain Rhymes and the Lives of Sestors are also mentioned as his, but nothing is now known of them except a few lines quoted in our authours. Lord Morley died in 1556.—*Ath Oz Park: Royal and Noble Authors Writen i Hyst. of Poetry Phillips's Thesaurus by Sir E Brydges.*

PARKER (MATTHEW) archbishop of Canterbury a prelate of great learning and accomplishments as well as of uncompromising principles, and much consistency of mind. He was a native of Norwich born 1504, and was educated at Corpus Christi (Bene t.) college Cambridge of which he was successively fellow and master and during his eventual elevation became a liberal benefactor to the society. In 1533 Anna Boleyn appointed him her chaplain when she obtained from the king a license for him to preach the reformed doctrines and subsequently procured him a king's chaplaincy which he held through that and the following reign. Edward VI raised him to the deanship of Lincoln but on the accession of queen Mary his well known and inflexible attachment to Protestantism caused him to fall into disgrace at court and to be deprived of all his preferment. A charge brought against him of having contracted a marriage was the causative ground of his degradation and while in retirement, he took up the subject in a treatise, which he composed, and entitled

A Defence of the Marriage of Prests. After narrowly escaping the stake more than once, the accession of Elizabeth again restored him to safety to his former rank in the church, and ultimately to the primacy. He was especially careful as to the morals, both of the higher and inferior clergy, but his severity in respect to conformity led him to measure which have been justly deemed demonstrative of a bigoted and persecuting spirit. He exerted himself in procuring a more general distribution of the scriptures, himself taking a very prominent part in the rendering that trans-

P A R

lation of them familiarly known by the name of the "Bishop's Bible" and also in the construction of the present liturgy of the church of England. He was, besides, the author of a funeral sermon on the death of Bucer and in addition to the theological works already mentioned gave strong evidence of his general learning, industry and research by a treatise

On the Antiquity of the English Church an edition of the works of Matthew Paris, and by the encouragement he gave to the cultivation of the ancient Saxon language. He was also a sound practical as well as theoretical musician, and not only composed several melodies for parts of the Liturgy but makes some very ingenious observations on church music in general in a translation which he completed of the Psalter. His death took place in May 1576 and although during the Cromwell usurpation his tomb in Lambeth chapel was ransacked yet his remains were afterwards collected and restored to their original resting place.—*Strype's Life of Parker Big Brit*

PARKER (RICHARD) an English sailor noted as the leader in the dangerous mutiny which took place on board the squadron of lord Bindport in the spring of 1797. Parker was born at Exeter about 1760 and having received a decent education he entered into the navy and served during the American war. On peace taking place he retired from his professional duties, and married a woman with some property which he dissipated, and having incurred some debts he was imprisoned at Edinburgh. He was at length released and sent on board the royal fleet at the Nore, as a common sailor where he displayed a spirit of insubordination to his officers but he so far acquired the confidence of the men that on the mutiny arising he was appointed admiral of the fleet. The revolt having at length been suppressed, through the prudent management and firmness of lord Howe Parker was put in confinement and after undergoing a trial at Sheerness he was hanged on board the Sandwich to which ship he had belonged and his body was exposed on the coast of the Isle of Sheppey. He suffered June 30 1797 the plaining in his last moments great calmness of mind, and penitence.—*Monthly Mag*

PARKER (SAMUEL) bishop of Oxford, in the reign of the second James, a prelate of considerable talent and learning but contemptible from his versatility and time-serving disposition, qualities which he appears to have inherited from his father a lawyer who after exhibiting the greatest subserviency to the parliamentarian party veered round at once on the death of the protector and received his reward in the appointment of a sergeant-at-law and a seat on the Exchequer bench. His son the subject of this article was born in the autumn of 1640 at Northampton and having been brought up in the strictest principles of puritanism, entered himself at the age of nineteen, at Wadham college Oxford, where as well as at Trinity college, to which he afterwards removed, he distinguished himself as

P A R

much by his ascetic mode of life as by his indefatigable application to books. His religious opinions, however soon underwent a change more compatible with his temporary interests and a work which he published entitled, *Testammas Physico-Theologica de Deo, &c.* attracting the notice of the primate Sheldon that prelate gave him a stall in Canterbury cathedral, with the archdeaconry of the diocese annexed. In the ensuing reign James to whom the pliancy of his disposition made him peculiarly acceptable forced him upon the fellows of Magdalen college as their president and still farther advanced him to the see of Oxford favours which the new prelate returned by writing in favour of the Romish doctrine concerning the Eucharist and the efficacy of the intercessions of saints duly canonised by papal authority. His next work was entitled, *Reasons for Abrogating the Test imposed upon all Members of Parliament, &c.* which met with great approbation at court although he is said at this very time to have been either so incensed in his public professions, or so alarmed at the probable consequences to which the attempt to render his principles general might lead that he addressed a private expostulation to the king recommending his conversion to the reformed church. The scarcely-concealed disdain with which all the most respectable persons of both communions at length treated him, is said to have had a strong effect upon his health both mental and bodily and materially to have accelerated his decease which took place at Magdalen college in the spring of 1687. Besides the works already mentioned bishop Parker was the author of a Demonstration of the Divine Authority of the Law of Nature and the Christian Religion a work of merit. A History of his own Times in Latin and English published by his son of the same name. The Case of the Church of England fairly Stated and other polemical tracts.—*Bug Brt.*

PARKER (THOMAS) lord Parker afterwards created earl of Macclesfield, was raised to the office of lord chancellor in May 1718 having succeeded lord Cowper. After holding the estimation for several years with credit and respectability he was accused of corrupt practices in selling the post of master in chancery and the fact being proved he was displaced and sentenced to pay a fine of 30 000*L.* This proceeding is said to have originated in the displeasure conceived by the prince of Wales, afterwards George II at an opinion delivered by lord Macclesfield on the subject of a dispute between the prince and his father as to the custody of the children of the former. His lordship was removed from office in 1725 and his death took place in 1732, when he was succeeded in his title by his son, GEORGE PARKER second earl of Macclesfield, who was president of the Royal society. This nobleman devoted himself to scientific inquiries and was an active promoter of the act of parliament for the reformation of the calendar or introduction of the new style in England in 1752,

P A R

on which subject he delivered a speech in the house of lords, which he afterwards published. He died in 1766.—*Collins's Parerga.* Edit.

PARKES (SAMUEL) an ingenious and scientific professor of chemistry was born at Stourbridge in Worcestershire in 1759, and educated at Market Harborough under Dr Addington. He was principally eminent as an experimental chemist, and in 1806 published a most interesting and valuable treatise on the science entitled a *Chemical Catechism,* of which many editions have since appeared. This work he followed up in 1818 by an *Essay on the Utility of Chemistry in the Arts and Manufactures* and in 1829 by his *Rudiments of Chemistry illustrated by examples* an abridgment of his first treatise which he was induced to publish on account of an unprincipled attempt to pirate the work only suppressed by an injunction from the court of Chancery. His last production was *Chemical Essays principally relating to the Arts and Manufactures of the British Dominions* printed in 1813 in eight octavo volumes. Mr Parkes was a fellow of the Society of Arts and of various other literary and philosophical associations at the time of his decease which took place at his house in Mecklenburg square London December 23 1829.

Anno Regis.

PARKINSON (JOHN) one of the earliest and most industrious cultivators of the science of botany in England. He was born in 1567 and adopting the profession of pharmacy he settled in London and was appointed apothecary to king James I. In the following reign he obtained the further title of principal botanist to the king. He had a large garden near the metropolis where he appears to have cultivated many of the plants which he has described. He probably died soon after the publication of his *Herbal* in 1610. The titles of his works are *Paradise in sole Paradiso terrestre* or a *Garden of all Sorts of pleasant Flowers* which our English Air will permit to be nured up &c and *Theatrum Botanicum* or *A theatre of Plants*, or an *Herbal* of a large Extent, containing therein a more ample and exact History and Declaration of the physical Herbs and Plants there are no other Authors, 1640 folio.—*Pultney Hutchins* son's *Bug Brt.*

PARKHURST (JOHN) an English divine and poet of the sixteenth century. He was born in 1511 at Guildford in Surrey and was educated at Magdalen college Oxford and afterwards became a fellow of Merton where he also acted as a tutor and had among his pupils Jewel the celebrated champion of the English church. He was presented to the rich living of Cleve in Gloucestershire in the reign of Edward VI but on the death of that prince he was obliged to leave the kingdom on account of his religious opinions. He found an asylum at Zurich in Switzerland whence he returned when Elizabeth succeeded to the throne and in 1559 he was raised to the bishopric of Norwich over which he presided fourteen years dying in 1574. He translated

P A R

part of the Apocrypha, in the Bishop's *Bible*, and he published a volume of Latin poems, entitled *Ladiora, sive Epigrammata Juvenilia*, highly praised by Fuller.—*Wood's Athene Oxoniensis, Fuller's Worthies.*

PABKHURST (Jean) a learned ecclesiastic and divine who was a native of Catesby in Northamptonshire. He was educated at Rugby school in Warwickshire, whence he removed to Clare Hall Cambridge where he obtained a fellowship. He took holy orders, but held no preferment; for being possessed of an independent fortune he devoted himself entirely to literary researches. He was well skilled in the Hebrew language and like some other Oriental scholars, he was an advocate for the Hutchinsonian philosophy. He published a valuable Hebrew and English Lexicon, also a Greek and English Lexicon of the New Testament, and a tract in defence of the divinity of Jesus Christ. He died at Epsom in Surrey, in 1797 aged sixty-eight.—*Gent Mag Suppl to Encyclop Brit.*

PARMENIDES a philosopher of the Eleatic sect, who flourished about BC 504. He was a native of Elea, where he was a man of wealth and influence and also distinguished in civil affairs until introduced by Diocletian, a Pythagorean to the study of philosophy. He wrote the doctrines of his school in verses of which a few fragments remain in the collection *De Poena Philosophica*, by Henry Stephen Parry 1773. Parmenides became the disciple and successor of Xenophanes the founder of the Eleatic sect, but adhered more closely to the doctrine of Pythagoras than his master. Telesius revived the opinions of Parmenides in the sixteenth century.—*Brucker Ensdid.*

PARMENTIER (Jean) a scientific French navigator born at Dieppe in 1494 was originally a merchant. He was the first pilot who conducted ships to the coast of Brazil and the first Frenchman who discovered the Indies as far as Sumatra where he died in 1530. He wrote two rare and curious books entitled *Description nouvelle des Dignitez du Monde et de la Dignite de l'Homme* and *Moralites tres-excellentes en l'honneur de la Beante Vierge Marie mise en rime Françoise et en Personnages par Jehan Parmentier Paris, 1531 4to, black letter*. He also drew several maps and charts, both spherical and plane, of great use to navigators.—*Nous Diet Hist. Brault Manuel du Libraire*

PARMIGIANO a very eminent painter whose real name was Francesco Mazzola, was born at Parma in 1503. He was brought up by two uncles painters, and at the age of six years he had already created himself a reputation by an oil painting of the baptism of St John in one of the churches at Parma. At the age of twenty he went to Rome, to study the works of the great masters particularly of Michael Angelo and Raphael, and so well did he profit by his application, that it was said at Rome, "that the soul of Raphael had passed into the person of Parmigiano." He was painted by Clement VII for whom he painted

P A R

a picture of the Circumcision at the Vatican. The sack of Rome in 1527 obliged him to take refuge at Bologna, where he painted several altar pieces for the different churches. On his return to Parma, he was engaged to paint in fresco the vault of La Maddalena delle Steccate, where was his famed chiar oscuro of Moses breaking the tables of the law one of the greatest compositions of the Lombard school both for sublimity of conception and beauty of execution. Parmigiano was devoted to the strange infatuation of pursuing the search of the philosopher's stone and after wasting his own fortune and large sums that had been advanced to him for the works he was engaged in at the Steccata, he was prosecuted by the confraternity. He fled to Casale Maggiore where he died of grief and disappointment at the age of thirty seven. His style is distinguished by its seductive grace and elegance, his designs are rather tasteful than correct and though his heads are full of expression they are not always free from affectation. His colouring was most beautiful and he was a complete master of the chiar oscuro. He is supposed to have been the first artist in Italy who employed the point for etching. Some of his plates are very spirited but from the early stage of the art at that period they are not distinguished by much clearness or delicacy.—*D'Argenville Pilangton Bryan's Diet of Paint and Eng.*

PARNELL (Thomas) an English poet was descended of a Cheshire family. His father having followed the parliamentary cause in the civil wars of Charles I upon the Restoration went to Dublin where Thomas was born in 1679. He was educated at Trinity college and taking orders in 1705 he was presented to the archdeaconry of Clogher. He then came to England every year and became connected with Addison Congreve Steele and other wits in power but towards the latter part of Queen Anne's reign when the Tories became triumphant, he deserted his former friends, and linked himself with Swift, Pope Gay and Arbuthnot. He afforded Pope some assistance in his translation of Homer and wrote the life prefixed to it but being a very bad prose writer Pope had a great deal of trouble in correcting it. Being intimate with all the Scriblerus tribe he contributed to the *Origin of the Sciences* he also wrote the *Life of Zollus* as a satire on Dennis and Theobald with whom the club had long been at variance. He wrote several excellent papers in the Spectator and *Guardian* in the form of vases. By means of Swift's recommendation to archbishop King he obtained a prebend and the valuable living of Finglass. On the death of his wife in 1718, to whom he was tenderly attached, he fled to wine for consolation and contracted habits of intemperance which ultimately shortened his life. He died at Chester on his way to Ireland in 1717 and was buried in Trinity church without any monumental record. A collection of his poems was published by Pope after his death. They are pleasing and possess much fancy ease spright-

P A R

lness, and melody of versification, while their sentiments are elegant, and morally pure. An other posthumous volume was published at Dublin in 1758 but these are by no means calculated to raise his reputation, being in every way inferior though they have been added with the former in the collections of English poets—*Volumes 5 Left Left by Goldsmith, Nichols's Poets.*

PARR (RICKARD) a divine was the son of a clergyman and was born at Fermoy in the county of Cork in 1617. He was sent to England in 1635 and entered as a servitor of Exeter college Oxford of which he became chaplain and fellow. In 1643 at bishop Usher retired to that college from the tumult then prevailing in the nation. He observed the talents of Mr Parr and made him his chaplain. He was instituted to the living of Camberwell in Surrey where he was much admired and esteemed, both for his preaching and the benevolence of his character. At the Restoration he was created DD and had the deanery of Armagh and an Irzal bishopric offered to him, both which he refused but accepted a canonry of Armagh. He died at Camberwell in 1691. He was the author of a Life of Archbishop Usher prefixed to that prelate's letters folio 1686 which is the most ample account we have of Usher Christian Reformation being an earnest persuasion to the speedy practice of it, &c &c 1660. *Sermoms &c &c —Ait. Or Lyons's Environs, Manning and Bray's Surrey.*

PARR (SAMUEL) a learned divine and eminent critic, was the son of an apothecary of Harrow in Middlesex where he was born January 15 1747. At the age of six he was admitted into the celebrated school of his native place which he headed in his fourteenth year. He was soon after called upon much against his inclination to assist his father whom he subsequently induced to send him to Emmanuel college Cambridge but unable to support a continuance of the expense he accepted the situation of an usher under Dr Sumner at Harrow. In 1769 he entered into deacon's orders but did not receive those of priest until 1777. In 1771 he was created AM at Cambridge by royal mandate for the purpose of qualifying him to succeed Dr Sumner who died the same year. He accordingly offered himself as a candidate for the mastership of Harrow school but not succeeding he gave up the situation of assistant, and opened a school at St Albans where he was followed by no less than forty five of the scholars from Harrow. At this time he married a Miss Mauleverer a Yorkshire lady by whom he had three sons and three daughters. The establishment at St Albans ultimately failing he gave it up in 1776 and became master of the grammar-school at Colchester whence in 1778 he removed to take charge of that of Norwich. In 1780 he was presented to the rectory of Astbury in Lincolnshire, and the following year received the degree of LL.D. In 1783 he obtained the perpetual curacy of Hatton in Warwickshire where he put up his future residence

P A R

and was about the same time presented by bishop Lowth to a prebend in the cathedral of St Paul. In 1803 Mr Francis Burdett, in a dissertation of his open and liberal political sentiments presented him to the valuable living of Grafham in the county of Huntington which proved the extent of his preference in the church for all which notwithstanding his claims as a man of profound learning and great intellect he was indebted to private friendship alone. Dr Parr commenced his career as an author in 1760 by the publication of *Two Sermons on Education* and in the following year printed *A Discourse on the late Fast* which in consequence of its adherence to the politics of the Jacobite contest with America excited great attention. In 1797 he assisted his friend, Henry Homer in a new edition of the learned Scotian William Bellenden (*Bellendenus*). That republication he inscribed to Messrs. Fox and Burke and lord North the character of whose oratory he drew with uncommon elegance force and felicity. Making use of the same opportunity to assail that of their political opponents who were in possession of power he necessarily put an end to all hopes of preferment from the side of government, on which account a subscription was made by the Whig club which secured him an annuity of 300*£* per annum. In 1799 he republished the *Treaty by Warburton and a Warburtonian*, to which he prefixed some severe strictures on bishop Hurd. In 1790 he engaged in the controversy on the real authorship of White's *Bampton Lectures* from which it appeared that his own share in them was by no means inconsiderable. In 1791 his residence was in some danger of destruction from the Birmingham rioters in consequence of his intimacy with Dr Priestley but happily their gothic and discreditable barbarity was in this instance turned aside. On this occasion he published a forcible and eloquent tract entitled *A Letter from Irenopolis to the Inhabitants of Eleutheropolis*. On Easter-Tuesday 1800 he preached his celebrated Spital sermon in which he smartly attacked the social doctrine of Mr Godwin in his *Political Justice*. This discourse he soon after published, with a great number of notes to some of which Mr Godwin replied with no small animation. On the death of Mr Fox appeared his *Characters of the late Right Hon. Charles James Fox*, selected and in part written by Philopatris Verbiogenesis being a collection of testimonies in praise of that statesman printed and illustrated by the doctor himself. In 1819 he republished *Speeches by Roger Long and John Taylor of Cambridge with a Critical Essay and Memoirs of the Authors* and towards the close of his composed a pamphlet which did not appear until after his death defending bishop Hulme from the charge of having become a convert to the church of Rome in his last sickness. The death of the eminent scholar took place at Hatton, March 26, 1825 in his seventy ninth year. Although equalled by some of his contemporaries in verbal criticism, in various ap-

elegant classical knowledge he seems to be entitled to the lead among the scholars of his day. It is possibly however to be regretted that he did not exert his Horatian powers upon subjects of adequate and permanent interest, on which account his sermons and tracts, although written with great vigour and elegance will fail to secure lasting attention. His prodigious memory and extent of research rendered him, like Dr Johnson, astonishingly powerful in conversation. Although possessed of something of the warmth of a political partisan Dr Parr was highly disinterested and independent, and evinced singular benevolence and benignity in his general deportment and few men appear to have been more venerated and beloved. Of all his family two daughters alone survived him. He also left a widow a lady whom he married in a very advanced period of life.—*Am. Biog.*

PARR (THOMAS) an extraordinary in stance of longevity was born in Shropshire in 1483. He was a labourer and at the age of one hundred and twenty he married a widow. In 1535 the earl of Arundel took him to the court of Charles I, but the change of diet and air affected his health and he died at the age of one hundred and fifty two years and nine months. His body was opened by Dr Harvey who found no signs of internal decay. Parr had a grandson who lived to the age of one hundred and twenty.—*Life by Taylor the Water Poet.*

PARRHASIUS an ancient celebrated painter was a native of Ephesus and was contemporary with Zeuxis whom he is said to have excelled. According to Pliny he was the first who gave symmetry and just proportion in his art and as an instance of his power in expressing the complications of character and sentiment he is said to have painted the genius of the Athenian state sickle and inconstant mild and passionate Clement and cruel just and unjust, proud and humble. His other celebrated pieces were a portrait of Theseus a groupe of Meleager Hercules, Perseus and Andromeda, with Castor and Pollux. He became singularly vain and arrogant, and affected a ridiculous splen doir of dress. Xenophon makes Parrhasius an interlocutor with Socrates in a dialogue on the pictorial art and a work of his furnished the subject of an elegant epigram in the Greek Anthology.—*Pliny Hist. Nat. lib. xxv Certo Date Vt de Pittori Ant.*

PARRHASIUS (AULUS JANUS) the assumed name of Giampolo Parisio an eminent philologist, born in 1470 at Cesena in Narnia. He taught at Milan with much reputation and was much admired for his graceful delivery. He went to Rome during the pontificate of Alexander VI, but was obliged to fly to Milan, in order to avoid the consequences of his friendship with cardinal Bernardino Capranica and Silvio Savelli who fell under the displeasure of the pope. He next repaired to Vicenza, where he was elected to the chair of eloquence, but the states of the Venetians being laid waste by the troops of

the league of Cambrai he withdrew to his native country where he laid the foundation of the Cesenate academy. He was invited by Leo X to be professor of eloquence at Rome, but being a martyr to the goat, he soon returned to Cesena, where he died in 1553. His works were published by Henry Stephens in 1567 &c, and consist of letters and treatises on classical subjects, the principal is entitled *Liber de rebus per Epistolam Quæ sit*.—*Gen. Dict. Movet. Sacra Ora.*

PARRY (CALEB HILLIER) MD FRS an ingenious physician and natural historian of Bath, father of captain Parry the commander of the Polar expedition. Besides numerous professional publications on the rise and progress of various disorders, Dr Parry is advantageously known as the author of *A Treatise on Wool* containing the result of a series of experiments on this staple commodity of Great Britain to which his attention was originally directed by the circumstance of king George the Third presenting two Merino rams, of the purest breed to the Bath and West of England society then in its infancy with a view to ascertain the practicability of producing in this country wool of equal fineness with the best of that of Spain. But his principal work is the *Elements of Pathology* printed in 1816 an original and valuable treatise. He died March 9 1822 having been deprived of the use of his faculties by a sudden attack of paralysis in 1816.—*Am. Biog.*

PARRY (J H) an ingenious antiquary who combined great literary attainments with highly polished manners. He was the son of a Welsh clergyman rector of Llanferres in Denbighshire and was born at Mold in 1787. After receiving a university education he became a member of the Temple in 1807 and having served the usual number of terms was called to the bar in 1810. His professional labours had already procured him considerable forensic reputation as well as a fair share of emolument, when his life was cut short unluckily in consequence of a blow which he received in the street. As a writer he is known by his edition of the *Cambrico-Briton*, *The Cambrian Plutarch*, *The Transactions of the Royal Cambrian Society* and other works illustrative of ancient British history and the antiquities of the Welsh principality. His death took place in 1825.—*Am. Biog.*

PARSONS (JAMES) an eminent physician and antiquary born at Barnstaple in Devonshire in 1705. He received his early education in Ireland whether his father had removed on obtaining the appointment of barrack master but his medical studies were prosecuted at Paris under Astruc, Lecat and other celebrated professional men. He afterwards took his degree at the university of Rheims, and returning to London in 1736 he assisted Dr James Douglas in his anatomical works, and also commenced medical practice in 1740 he was chosen a fellow of the Royal Society and in 1751 admitted a licentiate of the college of Physicians. He had previously obtained the situation of medical attendant to

P A R

the public infirmary in St Giles's parish, but he devoted himself chiefly to the obstetrical branch of his profession. He was a fellow of the Andoverian society and was acquainted with Dr Stukely bishop Lyttonson Henry Baker Dr Gowin Knight, as well as with several men of science abroad with whom he kept up an extensive correspondence. In 1769 ill health induced him to retire from business, and he went to Bristol with a desire to seek a warmer climate but relinquishing his purpose he returned to the metropolis, where he died April 4th 1770. Dr Parsons was the author of a tract on the analogy between the propagation of animals and that of vegetables and other works on anatomy and physiology as well as several papers in the Philosophical Transactions but his most remarkable production is his *Remains of Japhet being Historical Inquiries into the Affinities and Origin of the European Languages*, &c a work displaying extensive learning and much ingenuity — Hutchinson's Biog. Med. Nichols's Lit. Anec.

PARSONS (PHILIP) an English clergyman and miscellaneous writer who was a native of Dedham in Essex and was educated at Cambridge, where he proceeded M.A. in 1776. He had previously obtained the living of Wye in Kent, with the mastership of a free grammar school and in 1767 he was presented to the rectory of Eastwell to which was subsequently added that of Snaves both in the same county. He published in 1774 *Astronomic Doubts or an Inquiry into the Nature of that Supply of Light and Heat, which the superior Planets may be supposed to enjoy* 8vo *Dulouges of the Dead with the Living* 1778 8vo *Six Letters on the Establishment of Sunday Schools* 1786 8vo and some poetical pieces besides a work containing an account of monuments and painted glass in the different churches in the county of Kent 4to. Mr Parsons died at Wye in 1812 aged eighty—*Gent Mag.*

PARSONS (WILLIAM) an English comic actor of great eminence. He was born February 29th 1736 and was a native of England but he made his first appearance on the stage at Edinburgh in 1758 and soon established a high reputation as a representative of old men. In 1763 he came out at Drury lane in the character of Fitch in the Beggar's Opera and was much admired in that as well as other characters in low comedy. His love of acting not at all interfering with that of the manager Garrick he became a favourite with him as well as with the public, and was much benefited by his instructions. Having afterwards joined Colman's company at the Haymarket he was for many seasons the chief support of that theatre. His death took place February 3d, 1795. In the conception and performance of such parts as Forecht in "Love for Love" Corbaccio in "Volpone" and sir Frostif Plagiary in the Critic his excellence was always unavailed and his appearance never failed to extort the genuine applause of universal laughter. To his thes-

Bios. Dict. — Vol. II.

P A R

tical talents, he added considerable skill in the art of painting particularly fruit pieces.—*Theo. Diet. Jones's B. Diet.*

PARSONS or PERSON (BOSSUAR) a famous English jesuit, born in 1546, at Nether Stowey in Somersetshire where his father is said to have been a blacksmith. He however obtained a university education having been a student at Balliol college Oxford where he took his degrees in arts, and obtained a fellowship. According to Fuller he was expelled from his post with disgrace having been charged with embezzlement of the college-money. He then went to Rome and entered into the order of the jesuits and in 1579 he returned to England as superior of the Catholic missionaries. Two years after he was obliged to leave the kingdom hastily in consequence of his political intrigues when he again took refuge at Rome where he was placed at the head of the English college. His political sagacity and active disposition induced Philip II to employ him in some preliminary measures, at the time of his projected invasion of England by the Spanish armada and after the failure of that scheme Parsons rendered himself formidable to the government of queen Elizabeth by his attempts to promote insurrection and procure the assassination of that princess. He seems however to have carried on his plots with a degree of caution that argued a prudent regard for his own safety and while Garnet and others of his brethren became the victims of their zeal he kept himself secure from danger and died in 1610 at Rome where he had for twenty three years presided over the English college. He was the author of a Conference about the Succession to the Crown of England which he published under the name of Dolman with a dedication to the earl of Essex besides other works.—*Fuller's Worthies. Biog. Brit.*

PARUTA (FILIPPO) learned antiquary was a nobleman of Palermo, and secretary to the senate. He wrote several works but the one by which he is principally known is *Sacra descritta con Medaglie* published at Palermo in 1612. It was enlarged by Leonardo Agostini and printed at Rome in 1619 and at Lyons in 1657. Havercamp also published a Latin edition of it, 3 vols. folio 1733 which forms part of the Italian Antiquities of Gravina and Burmann. Paruta died in 1659 —*Landi Hist. Lit. de l'Italia*

PARUTA (PAUL) a noble Venetian, was born in 1540 and succeeded Contarini as hisuriographer of the republic in 1579. He became governor of Bracia, and finally was chosen a procurator of St Mark. His death took place in 1598. His works are, *Della Perfezione della Via Polonica*, 1582 4to; *Discorsi Politici* both of which are much esteemed for their depth and sagacity. A History of Venice from 1513 to 1551 with the Addition of the War of Cyprus in 1570-72 4to, 1605. It is written in a grave, dignified style, and for its exactness and impartiality it is considered one of the best works of the class in the language. A new edition

g R

of it was given by Apostolic Zeal in 1702. The integrity and zeal of Paolo Paruta were so esteemed that he was called the *Cato of Verona*.—*Champfleury. Niceron. Truhanchic.*

PASCAL (BLAISE) a very distinguished French mathematician and philosopher was born at Clermont in Auvergne, in 1623. His father, who was president of the court of Aida, in his province, and a man of considerable learning, relinquished his office when Blaise, his only son, had reached his eighth year in order to settle at Paris and superintend his education. From his infancy he showed marks of an extraordinary capacity and such an aptitude for the mathematics, that his father who feared that it would impede his acquirement of the learned languages having precluded the study of geometry he reached by himself and without assistance from books of any kind to a proposition tantamount to the thirty second of the first book of Euclid. He was then allowed to freely indulge his genius in mathematical pursuits and at the age of sixteen, composed a *Treatise on Conic Sections* which attracted the admiration even of Des Cartes. In his nineteenth year he formed an admirable machine for making an easy and expeditious method of making all sorts of arithmetical calculations with the eye and hand only. In his twenty fourth year he distinguished himself by various ingenious experiments confirmatory of the theory of Torricelli in respect to the weight of the atmosphere by which the reputation of his scientific sagacity was extended through out Europe. He also solved the problem proposed by father Mersenne which was to determine the curve described in the air by the nail of a coach wheel in motion now commonly known by the name of the cycloid. He also drew up a table of numbers which he called an *Arithmetical Triangle* the no less of which however is shown by Dr Hatton to have been previously entertained by Cardan Stifelius and others. Unhappily about this time M. Pascal, induced by the perusal of the books of some of the ascetic divines who make virtue consist in an abstinence from pleasure of every kind and eternal self mortification, gave himself up to the most supererogatory practices. In the fulfilment of this absurd theory he not only adopted a rigid system of prayer and extreme mortification but relinquished science itself as a source of enjoyment. He wore an iron garde next his skin notwithstanding the extreme delicacy of his constitution and was in the habit of striking it with his elbow to increase the pain when he desired a vision or sinful thought had involuntarily occurred to him. But Nature cannot be wholly controlled however abstracted from the world he could not be entirely indifferent to all that was passing in it, and especially interested himself in the contests between the Jesuits and Jansenists. Taking the side of the latter he wrote his celebrated "Provincial Letters," published in 1656, under the name of Louis de Montalte which attack upon the detestable casuistry

of some of the most distinguished leaders of that dangerous body has, in the estimation of Voltaire rendered him the *first of French satirists*. Of all the books published against the jesuits, none did them more injury or inflicted greater mortification than these celebrated letters which were translated into all the European languages, and which while they interest more serious readers by their solidity and by their wit and pungency prove attractive to those of every description. Pascal was only thirty years of age when he produced this celebrated work yet he had become exceedingly infirm and concerning his end to be approaching he redoubled his austerities and mortifications until he became afflicted with the most melancholy hypochondria. He imagined that he saw a deep abyss on the side of his chair that he was favoured with a kind of vision and exhibited other marks of a disordered imagination. After languishing in this state of occasional nervous imbecility for some years he died at Paris August 19 1662 in the thirty ninth year of his age. Towards the close of his life he occupied himself wholly in pious and moral reflections which he wrote down on slips of paper as they occurred to him. These have been published in thirty two chapters, under the title of *Penitées de M. Pascal sur la Religion et sur quelques autres Sujets* which collection bears the marks at once of his genius and his infirmities. The works of Pascal were collected together and published at Paris in 1779 under the superintendance of the abbé Bossuet, who ranks him as a man who inherited from Nature all the powers of genius and who was at the same time a geometer of the first rank a profound reasoner and a sublime and elegant writer an opinion which had previously been pronounced in still stronger terms by Bayle.—*La Vie de Pascal, par Madame Perier. Hutton's Math. Dict. Bayle.*

PASCHAL (CHARLES) an eminent writer on ethics, antiquities, and jurisprudence in the beginning of the seventeenth century. He was a native of France where he was a counsellor of state and was the intimate friend of Guy de Faucon de Pibrac whose life he wrote. He likewise published an elaborate work in ten books *De Cœsara*, Paris, 1610 4to, and *Loyd Bat* 1671 8vo *Virtutum et Virtuum Characteres*, Paris 1615, 8vo and a treatise, "*De Legato*" 1623 12mo. His death took place in 1655 at the age of seventy-nine.—*Satibi Introit. in Hist. Lx.*

PASCASIUS RATBERTUS a celebrated Benedictine of the ninth century was born at Sommeys, and was carefully educated by the monks of Notre Dame. He took the religious habit in the abbey of Corbeil of which he became abbot. About the year 831 he wrote a treatise *On the Body and Blood of Christ* in which he maintained that after the consecration of the bread and wine in the Lord's Supper nothing remained of these symbols but the outward figure, under which

P A S

the clerical body and blood of Christ were really present. This doctrine then being quite new caused a violent controversy in which most of the learned men of the time took part, and which finally induced Finschewalde to resign his abbey and he died soon after in 1655. His other works are "Commentaries on St Matthew on Psalm XLIV and on the Lamentations of Jeremiah;" "The Life of St Adelard" "treating "De Puto Virginis De Corpus Christi," etc. His works were collected and published by father Hermann, in 1618.—Cass. Dug.

PASOR (Geron) a learned divine and cause of the seventeenth century. He was professor of divinity and Hebrew literature at the university of Frascati whether he had removed from Herborn, in Germany. He was the author of *Lexicon Graeco-Latinum in Novum Testamentum*, which has gone through many editions, and other philological works. He died in 1637.—Pason (MATTHIAS) son of the preceding was first professor of mathematics at Heidelberg, whence he removed to England and in 1626 settled at Oxford, and gave lectures on the Eastern languages and mathematics. In 1629 he went to Groningen where he obtained the professorship of ethics, and he afterwards occupied the chair of theology and the Hebrew language. He died in 1638, aged fifty-nine leaving some miscellaneous tracta written in Latin.—Bry. Wood. Bug Uss.

PASQUIER (Sauvage) a celebrated lawyer and man of letters, was born at Paris in 1528 and being admittad as an advocate, became one of the most eloquent pleaders of his time. He particularly distinguished himself against the jews, and was chiefly instrumental in causing their exclusion from the university. He was rewarded by Henry III with the post of advocate-general of the chamber of accounts. He died in 1615. He wrote a great deal both in verse and prose, of which his Latin poems are much the best. His most important work is his *Recherches sur la France* of which he published seven books and three more were printed after his death. It contains much interesting information and lively observation but not a great deal of judgment. He also wrote *Catechisme des Jeunes*. *Lettres d'Exhortation aux Peuples, etc. pour obvier aux Seditions qui semblaient nous menacer pour le Fait de la Religion*. —His son, NICOLAS, a master of requests, left a volume of entertaining "Letters."—Mauri. New Dict. Hist.

PASQUINI (Bartolomeo) a native of Rome, born in 1640 considered one of the most eminent dramatic composers of his time. He was contemporary with Corelli, and played in the same orchestra with him and Gostini. He is also celebrated as being the musical instructor of Gasparini and Durante. Of his works, the only two now much known are his

Dow à Amore e Flora, "an opera performed at the opening of the Capranica Theatre in 1679, and an Allegorical Drama, performed at Rome in 1686 in compliment to

Christina of Sweden on her visiting that capital.—Bug. Diet. Mex.

PASS or PASSE (Crispin de) an eminent engraver and man of letters, was born at Utrecht about 1560, and is said to have been the pupil of Theodore Gessert. How long he lived is unknown, but his fame was highest from 1610 to 1643, in which year he published at Amsterdam his famous drawing book, in Italian French High and Low Dutch, with forty-eight plates. His next work was, "La structure du Roi et l'Exercice de monter à Cheval par Meunier Antoine de Plevin" adorned with some excellent cuts. He also was at the entire expense of "Holland a Horologie," in which he employed the best Flemish engravers. The works of Crispin Pass are very numerous, among which were his *Virgil*, *Ovid* and *Homer* and his "Hortus Floridus" extremely scarce and valuable. He is supposed to have come to England, but at what period is unknown. His plates, though occasionally stiff and formal possess much originality. His two sons, CRISPIN and WILLIAM his daughter MAGDALEN and his grandson, SIMON all distinguished themselves, and gained considerable fame in the art, and William and Simon passed some time in England but the particulars of their lives are not known.—Walpole. Strutt. Bugas's *Dict. of Painters and Engravers*.

PASSERAT (Jules) a native of Troyes in France who studied jurisprudence under Jean Cujas and became professor of rhetoric at the Royal College at Paris. He wrote commentaries on the poems of Catullus, Tibullus and Propertius, orations Latin and French poetry; a tract "De Latitudinibus inter se cognationes," and other works. He had also a share in the famous *Satire Médiépée* directed against the League. Passerat died in 1602 aged sixty-seven.—Diet Hist.

PASSERI (Jules BAPTISTE) a painter and poet, was the disciple of Domenichino, but did not distinguish himself in either art. He wrote an interesting work, entitled "Lives of the Painters, Sculptors, and Architects who flourished at Rome in his own Time." It is written in a very impartial spirit, and was published at Rome in 1772. Passeri died in 1779.—His nephew, Jules Passeri also a painter was born at Rome in 1654 and was a scholar of Carlo Maratti, under whom he made great progress. One of his most esteemed works is at Paris, and represents St Jerome meditating on the last judgment. He died in 1714.—Pillington. D'Argenville.

PASSERI (John BAPTISTE) an eminent antiquary was born at Gabio in 1694, and on the death of his wife in 1738 he entered into the ecclesiastical order and obtained the office of vicar-general of Pescara. He died in 1786, in consequence of a fall from his carriage. His principal works are, *Lucanus Actio Minora Passari* and *Discourse on the History of the Fouls of the District of Pescara*. *Dissertations on ancient Monuments in the Museum Cleopatrae*; "Pictures

P A T

Hippocratis in Venetia in usum collectoris Dissertationibus illustratae, the second and third volumes of the "Thesaurus Communis Antiquariorum Andicorum"; and the fourth volume of the "Thesaurus veterum Diptychorum conservatorum" with many other credits too numerous. In 1780 was printed at Rome the first volume of an extensive work entitled, "Thesaurus Communis Selectissimum."—*Nouv. Dict. Hist. Sacri Oev.*

PASIONEI (Domenico) an Italian ecclesiastic and man of letters, born at Fossombrone, in the territory of Urbino in 1602. He pursued his studies in the Clementine college at Rome, after which he went to Paris with the papal nuncio, cardinal Granvela. In 1628 he was employed as a secret agent of the court of Rome in Holland and subsequently in Switzerland and other countries. He was appointed titular archbishop of Ephesus by Innocent XIII.; was made a cardinal and secretary of the briefs by Clement XII. and at length became keeper of the Vatican library. He died in 1761. He published an account of his negotiations in Switzerland under the title of "Acta Legationis Helvetica folio; and he displayed his regard for literature by forming a library at the Clementine college and by the encouragement he gave to the collation of MSS. of the Old Testament in the Vatican library for the use of Dr Kennicott in the publication of his Hebrew Bible.—**BARTHOLDI PASIONEI** nephew of the cardinal published a collection of ancient inscriptions, with annotations. 1763 folio.—*Biog. Univ. Diet. Hist.*

PATERCULUS (Carlo ZELLINE) an ancient Roman historian, who born in the year of Rome 735, of a family in Campania which had borne various important offices in the state. He served under Tiburtius in Germany as commander of the cavalry and in the first year of that emperor's reign was nominated praetor. Nothing further is known of him but the praises he bestowed upon Sejanus have led to a supposition that he was a partisan of that minister and involved in his ruin. His death is placed by Dodwell in the year of Rome 794, in his fiftieth year. Paterculus composed an abridgment of Roman history in ten books, of which the greater part has perished, and unfortunately that which remains is incurably corrupted, only one manuscript having been discovered. His style is pure and elegant, and he excelled in a brief and forcible manner of drawing character but his connections with Tiburtius and Sejanus rendered him an admirer of those detestable persons, and warped his representations of the actions and characters of the republican party. The most esteemed editions of this classic, are those of Burmann, Leyden, 1719; of Rohrbachius, Leyden, 1779 and of Krausius, Leipzic, 1800.—*Venit. Hist. Lett. Diet. Hist. of Harvard's Class.*

PATERSON (Samuel) a writer on bibliography and miscellaneous literature. He was born in London in 1726, and having been deprived of his parents while young, and consigned to the care of an unfeathered quondam,

P A T

he was sent to France, where he had an opportunity for gaining a general acquaintance with the value of books, and on his return to England he engaged in trade as a bookseller in the metropolis. Not being successful in this pursuit, he became an antiquarian, when he turned his previous knowledge to good account, and obtained great credit for his skill in forming catalogues of books and manuscripts, and arranging them for sale. He also produced some light and amusing works of his own composition, including "A Journey through part of the Netherlands in 1766, by Coriat, Junior" 1769 3 vols. 12mo; and "Joueria, or the Book of Scrape" 1772 2 vols. 8vo. His principal work as a bibliographer is his "Bibliotheca universalia selecta; a Catalogue of Books, ancient and modern, in various Languages and Faculties and upon almost every Branch of Science and Polite Literature" 1786 8vo. Mr. Paterson died March 29 1802.—*Nichols's Lit. Anec. Dublin's Bibl. Dec.*

PATIN (Guy) a French physician and letter writer born at Houdain near Beauvais in Picardy in 1602. He studied at the college of Beauvais, and afterwards at Paris and was designed for the church. His inclination led him to prefer the medical profession and having applied himself closely to the requisite studies he was admitted a physician at Paris in 1627. He became very eminent as a practitioner and at length he was made professor of medicine at the Royal College. He died in 1672. He was the author of several medical tracts of little importance but his *Lettres* published posthumously attracted great notice. They contain the current wit of his time interspersed with satirical observations and amusing anecdotes, carelessly thrown together in a manner that indicates their not having been designed for the press by their author. The first volume was published at Geneva, in 1683 and its unexpected success occasioned the speedy appearance of two more volumes, and the three were reprinted at Paris. In 1716 an addition to this correspondence was made by the publication of *Nouvelles Lettres de feu M. Guy Patin trées du Cabinet du M. Charles Spes* Amsterdam 2 vols. 12mo. All the letters were written between 1662 and 1672.—**PATIN** (Charles) second son of the foregoing, a physician and medicinalist. He was born at Paris in 1633 and he made such an astonishing progress in Latin and Greek literature that he was admitted to the degree of M.A. at the age of fourteen. He then studied the civil law and was made a counsellor of the Parliament of Paris but he relinquished that profession for medicine, in which he took the degree of doctor and delivered lectures on the practice of physic. He also acquired considerable reputation as a physician, but in 1668 he was obliged to leave France, to avoid the resentment of some persons in power whom he had offended. He then travelled in Germany, Holland, England, Switzerland, and Italy after which he settled at Basil, but the war between France and

P A T

Germany rendering his situation dangerous, he removed to Padua in Italy, where he was made professor of medicine in 1676. Three years after, the state of Venice bestowed on him the order of St Mark. In 1681 he received an intimation that he might return to France but he was tempted to remain at Padua, by an appointment to the professorship of surgery with an increased salary. He died of a paroxysm of the heart, October 2, 1693. Among his works are, "Introduction à l' Histoire par la Consommation des Médaillles 1668 1686," "Familia Romana ex antiquis numismatibus, folio," "Imperiorum Numismata, folio;" "Itinéraire Numismatique, &c." Relations Historiques et curieuses de diverses Voyages en Allemagne Anglterre Hollande &c. 1700; "Lycaceum Patriorum, sive Icones et Vite Professorum Pataviniensium 1682 pub. docentum, &c. The wife and daughter of Paua were learned in dies, and members of the academy of the Rectorian at Padua, of which he was president.—*Hutchinson's Biog. Med.*

PATKUL (Joh Rantzio count) a Lusatian who distinguished himself by his opposition to the dominion of the Swedes over his native country in the latter part of the seventeenth century. The schemes of the ingrate being frustrated, Patkul left Livonia and was employed as political agent in Saxony by Peter the czar of Russia. Charles XII of Sweden having obliged the Saxon government to surrender him a prisoner, he was condemned and executed on the charge of treason in 1706.—*Biog. Univ.*

PATRICK (SIMON) an English prelate was born in 1696 at Gambsborough in Lancashire in which town his father carried on the business of a mercer. After being well grounded in grammatical learning he was sent in 1646 as a sizar to Queen's college Cambridge of which he became a fellow in 1647. In 1651 he obtained the degree of M.A. and took orders from Dr Hall the ejected bishop of Norwich and in 1658 he graduated B.D. and became vicar of Battersea. In 1661 he was elected by a majority of the fellows, master of Queen's college in opposition to a royal mandate, but the affair being brought before the king in council he was ejected. He was presented to the living of St Paul's Covent-garden in 1667 and endeared himself much to his parishioners, by remaining with them during the plague. In 1668, having received some sight at Cambridge he took his degree of D.D. at Oxford, and became chaplain to the king. About the same time he composed a treatise intended to expose the character and manner of preaching of the nonconformist ministers, entitled, "A Friendly Debate between a Conformist and Nonconformist," which he subsequently with much caution allowed to be too indiscriminately severe. He followed this publication with his "Christian Sacrifice showing the successful end and manner of receiving the Holy Communion;" "The Devout Christian;" "Advice to a Friend;" "Jesus and

P A T

the Restoration Justified," "The Glorious Reconciliation;" and various other pieces moral. In 1672 he was made prebendary of Wimborne-st. st., and in 1676 dean of Peterborough, where he completed the "History of the Church of Peterborough," which had been begun by Simon Gunton. During the reign of James II he was one of the ablest defenders of the Protestant religion and in 1688 took part in a conference with two Roman priests, in the presence of that king and his brother-in-law the earl of Rochester whom he wished in vain to make a Catholic. After the Revolution he was advanced to the see of Chichester whence in 1691 he was translated to that of Ely where he died in 1707 in high reputation for learning, talent, and piety. Besides the works already alluded to Bishop Patrick wrote Commentaries on the historical parts of the Old Testament and Paraphrases on the books of Job, Psalms, Proverbs &c. which are deemed the most valuable of the whole. After having been frequently reprinted they were published in 2 vols. folio and with Lowth on the Prophets, Arnald on the Apocrypha and Whiby on the New Testament, have been recently published in &c. as a complete commentary on all the sacred books.—*Biog. Brit.*

PATRICK (ROBERT) an English divine and philological writer. He published "A Chart of the Ten Numerals in Two Hundred Tongues with a Descriptive Essay" 1815, 8vo. "The Death of Prince Bagration" a poem 1813 8vo and a sermon on the state of manners in an English sea port besides a variety of articles in the Classical Journal. He was vicar of Sculcoates near Hull in Yorkshire and chaplain to the dowager marchioness Townshend. His death took place in February 1815 at the age of forty five.—*Biog. Univ.*

PATRICK (Dr SAMUEL) a learned and industrious critic who belonged to Eton college in the former part of the eighteenth century. He published a great number of useful works relating to classical literature including "Plauti Comediarum quatuor cum Notis Operae" Lond 1724 8vo; "Hederici Lexicon amicale Gracum, 1727 4to; "Clavis Americae sive Lexicon Vocabulorum Omissorum quae Continguntur in Iudeo et potissimum parte Odysseia," 1727 8vo often republished; "Celticae Geographiae Antiquae, recognita castigata et aucta," 1730 8vo. Dr Patrick died in 1768.—*Biog. Univ.*

PATRIN (EUGENE LOUIS MATTESEN) a mineralogist, distinguished for his interesting discoveries in geology. He was born at Lyons in France in 1748, and was destined by his parents for the bar but he preferred the study of natural history and physical science and he was permitted to follow his inclination. After having acquired a knowledge of chemistry and natural philosophy he travelled to the north of Europe, and then to Germany and Poland; and in 1786 he undertook a journey to Siberia, to investigate the structure of the Ural mountains. He returned

P A T

the following year to Edinburgh, with a quantity of mineral specimens which he had collected; and after an absence of ten years, he revisited his native country and resided at Paris. He was chosen a member of the National Convention for the city of Lyons, but he took little interest in the events which agitated that assembly in which he voted for the banishment of Louis XVI. He was afterwards proscripted, and obliged to conceal himself during the reign of terror. On the creation of the school of Marseilles, he presented his museum of minerals to that institution, of which he was made Historian and he remained in the Journal published by the professors. He died in 1812. His principal work is, *Histoire Naturelle des Minéraux*, 5 vols. forming a sequel to the works of Buffon. He was a member of the Institute, the academy of Petersburgh, &c.; and a contributor to several periodical works of science.—*Big Univ.*

PATRICE (Paris) a French minor poet, was born at Caen in 1545. He was designed for the law, but dedicated himself to poetry and at the age of forty attached himself to the court of Gaston d'Orléans. He lived to the great age of eighty-eight, and becoming religious as he advanced in life endeavoured to suppress the licentious productions of his youth. Of his works there are extant a collection of versos, entitled, "La Ménestrelle de Dieu," 1590, &c.; "Pléiade des Comédies"; and "Miscellanea Poemata." The piece by Patrice which is most known, however, was written a few days before his death and is called "The Devil." Although of a serious cast, it has singularly enough found its way into most of the English poet-books, in a translation, commencing "I dreamt that I dwelt in my father's sky," owing to which odd appropriation, the English version is probably much better known than the French original.—*Nom. Diet. Hist.*

PATRIZI or PATRICIO (FRANCESCO) an Italian philosopher and philological writer of the sixteenth century. He was a native of Lecce, and studied at the university of Padua. After travelling for some time, he became professor of philosophy at Ferrara, whence he removed to Rome, and died in that city in 1597 at the age of sixty-seven. He was a professed admirer of the Platonic philosophy, and published a Latin work, entitled, "Oratione Zenobia, Hermosa Triumphi, et aliorum ex Scriptis Platoniciorum collatio, Cr. et Lat. Latina Dissertationes Historicae," Ferrara, 1591. He also wrote "A parallel between the Antients and Moderns as to the Military Art" besides other works on rhetoric, poetry, geometry, &c.—*Traité Biogr. des H. S.*

PATRU (Caron) a distinguished French plater and man of letters, was born at Paris in 1624. After visiting Rome he returned to Paris, and applied himself seriously to the study of the law. He was admitted a member of the French academy in 1660, and on his admission he pronounced an oration of thanks, which gave no small satisfaction, that it became thenceforth a rule for every new

P A U

member to deliver a similar harangue. Upon every point relating to language, Patru was strongly inclined; and Voltaire acknowledges his assistance in his remarks on the French language. Boileau and Racine submitted their works to his judgment, and though he was generally severe they seem to have pleased by it. In spite of his talents, Patru fell into a state of indigence, and being obliged to sell his library Boileau purchased it and generously invested upon his returning it during his life. His opinions were accepted, and being visited by Bonnet during his last illness he refused to talk on the subject. On his death-bed he received a visit from Colbert, who brought him, but too late a donation of five hundred crowns from the king. He died in 1681. He is principally known by his *Plaidoyers*, which are five from the bar humours which formerly pervaded the bar. He also wrote orations, letters, and lives of some of his friends. The best edition of his works is that of 1732, 2 vols. 4to.—*Morer. Ann. Diet. Hist. Ancien.*

PATTISON (WILLIAM) a poet was born at Farnham in Surrey, in 1706 and was the son of a farmer but his father not being able to give him an education suitable to his literary propensities his landlord the earl of Thanet took him under his protection and placed him at Appleby school in Westmoreland. He then proceeded to Sidney college Cambridge but having a violent quarrel with his tutor to avoid threatened expulsion he took his name out of the college-book and came to London. He plunged into all the pleasures of the metropolis and was in a short time reduced to the deepest distress until Curll the bookseller finding some of his compositions well received took him into his house, where he died of the small pox in 1737 in his twenty-first year. His poems were published in two volumes, octavo, in 1728.—*Lyt's preface to his Poems.*

PAUNCTON (ALFRED JOHN PITT) a French mathematician, born in 1736. From the poverty of his parents, his education was neglected till he was eighteen years old when he received some instructions from a charitable ecclesiastic and he afterwards studied at Nancy, where the exact sciences principally attracted his attention. He then went to Paris, and became a mathematical teacher. In 1768 he published, "Théorie de la Vie d'Arribalzaga"; and in 1780 appeared his Méthode ou Traité des Mécanismes, Poésie et Mémoires des Anciens Peuples et des Modernes, &c., the most valuable work of the kind extant. Pauncton obtained the chair of mathematics at Strasburg, which he was obliged to quit in consequence of the Austrian invasion. He then settled at Dôle, till 1785, when he removed to Paris, on being appointed mathematician to the *Commission des Temps*, and he was also appointed an associate-correspondent of the Institute. He died June 15, 1798.—*Big Univ.*

PAUL OF BURGOS, a learned Jew born in that city in 1352. He embraced Christian-

P A U

sky and became successively archbishop of Toulouse, bishop of Carthage, of Bayeux, and finally patriarch of Aquileia. He died in 1255. He has left additions to Nicolas de Lyra's "Postille" a treatise, entitled "Formacionis Scripturarum"; with other learned works. His three sons were also Christians. Alphonse was bishop of Bergos and wrote an abridgment of the Spanish history. Gonçalo, the second was bishop of Placentia and Alvernia; the third published a history of John II king of Castile.—*Moreri.*

PAUL THE DEACON or **PAULUS DIACONUS**, also called **WARTHFRIDUS** and **PAULUS MONACHUS**, was born at Frinili in the eighth century and was educated in the court of the Lombard kings at Pavia. On the capture of Desiderius, the last king of the Lombards by Charlemagne he retired to the monastery of Monte Cassino where he took the habit. He wrote a "History of the Lombards" and as he was an eye witness of many of the events he mentions, his statements are held to be generally correct. It was printed at Hamburgh in 1611 and is also contained in Muratori's *Rerum Italic. Scriptores*. —*Dugdale. Moreri.*

PAUL OF SAMOSATA so named from the place of his birth flourished in the third century and was one of the first who entertained the opinions known by the name of Unitarian or Socian. He was chosen bishop of Antioch in 260 but venturing to broach his new doctrine, he was deposed in 270. He refused to submit to his sentence and was supported by Zenobia, queen of Palmyra but on the capture of that monarch by the emperor Aurelian Paul was expelled and what became of him afterwards is unknown. His great wealth proved that his character as a pastor was not unimpeachable since it was neither derived from his ancestors, nor acquired by his own industry. His followers were called Paulinists for a long time after.—*Lorden. Miller's Church Hist. Gibson.*

PAUL (St VINCENT de) an ecclesiastic of the church of Rome was born in 1576 in a voyage which he made from Marseilles to Barbadoes the ship was captured by the Turks and he remained a considerable time in slavery under three masters, the last of whom he converted. Returning to France Louis XIII made him abbot of St Leonard de Chenuine, and he had also the living of Clachy. In 1609 he became tutor to the family of Emanuel de Gondi but on the death of madame de Gondi he retired to the college de Bonne Enfance whence he was removed at the direction of the house of St Lazarus. His life was a continued series of good and charitable works. Of the benevolent institutions of France, the following are principally indebted to him for their establishment: the hospitals de Bicêtre de la Salpêtrière de la Pitié those of Marseilles for galley slaves, of St Etienne for pilgrims, of le Saint Nom de Jesus for old men, of the Charitable Virgins for the sick poor an hospital for foundlings, &c. During ten years, he Vincent presided in the council of

P A U

confidence under Anne of Austria, and he deserved none but the most worthy to be promoted to positions. He died in 1660, and was canonized by Clement XI in 1737.—*Dicit. Huius. Moxon.*

PAUL OF VENICE (father) a celebrated ecclesiastic and historian of the sixteenth century whose proper name was Pietro Serpi. He was born at Venice August 14, 1552, and was the son of Francesco Serpi a merchant of that city. He entered young into the religious order of the Servites, and in his twentieth year he was appointed chaplain to the grand duke of Mantua, and made lecturer on the canon law by the bishop of that city. After two years, he returned to Venice, and having received the degree of doctor of theology he became provincial of his order for the regulation of which he composed a new body of statutes. He was afterwards raised to the office of procurator general of the Servites and being under the necessity of residing for a while at Rome he consigned his private affairs at Venice to the care of a friend, who having abused his confidence endeavoured to persuade him to remain at Rome for the sake of obtaining promotion in the church. Father Paul in reply to this advice, observed that he was so far from coveting the dignities of the court of Rome that he held them in abomination. His treacherous correspondent betrayed his sentiments and brought on him the imputation of being a heretic while his liberal intercourse with eminent protestants contributed to increase the prejudices against him in the breasts of the scions of popery. In the beginning of the seventeenth century a dispute took place between the pope and the Venetian government on the subject of ecclesiastical immunities, which was carried to such extremity, that his holiness at length laid the state under an interdict. Father Paul on this occasion showed himself a strenuous advocate for the cause of liberty and by his writings against the encroachments of the papal government, he gave the highest offence to the court of Rome whether he was summoned on pain of excommunication to answer for his conduct. The Venetians were about to throw off their spiritual allegiance, when the affair was compromised, and a reconciliation took place. Father Paul had however acted too prominent a part in this dangerous rebellion against ecclesiastical despots to be allowed to escape unpunished and to the vengeance of his political enemies may be attributed an attempt which was made to assassinate him in 1607. He received many dangerous wounds from a band of ruffians, and probably owed his recovery to the skill and attention of the celebrated surgeon Fabrizio ab Acquapendente who was rewarded by the senate of Venice with the order of St Mark. Father Paul employed the latter part of his life in writing the history of the council of Trent, in which he has developed the intrigues connected with the transactions of that famous assembly with a degree of boldness and veracity which renders the work one of the most interesting and im-

P A U

present production of the class to which it belongs. The literary and scientific labours of father Paul were extended to various branches of knowledge, he was not only deeply skilled in the canon law but he was also distinguished for his acquaintance with anatomy. He appears to have discovered the valves of the veins which contribute to facilitate the circulation of the blood, though those writers are mistaken who represent him as having foreshadowed our countryman Dr Harvey in the discovery which has immortalised his name. The death of this great man took place January 24, 1622, and he is said to have expired after uttering the words "Esto perpetua," which have been construed as a prayer for the prosperity of Venice. The history of the council of Trent was first published in London in 1619 having been transmitted to this country through the medium of the English resident at Venice, sir Harry Weston, a personal friend of the author. It has been translated into English by sir Adam Newton and sir Nathaniel Brent; and a more recent translation was projected by Dr Johnson in the early part of his literary career but never executed. He proposed to have added the notes annexed from the French version of father Cœrnat published in 1736 2 vols. folio. The works of father Paul were printed at Verona 1761 2 vols. 4to and at Naples, 1790, 24 vols. 8vo.—*Hug. Mervi. Biog. Univ.*

PAULINUS St BARTHELEMI (JOHN PHILIP WARDWELL) a barefoot Carmelite and missionary to the East Indies born in Lower Austria, in 1748. His parents were peasants and at the age of twenty he took the religious habit, and having studied theology and philosophy at Prague, he entered into the novitiate of the missions of his order at Rome and learnt the Oriental tongues at the college of St Panteleimon. In 1764 he embarked for the coast of Malabar and after passing fourteen years in India he was honoured with the title of vicar-general, and at length with that of apostolic visitor. He was then recalled to Europe to give an account of the missions in India and to correct the catechisms, and other elementary works printed at Rome for the use of the missionaries. He removed from Rome to Vienna in 1798 when the French invaded Italy; and he was secretary to the congregation of the Propaganda at the dispersion of that society. He returned to Rome in 1800, and pope Pius VII appointed him counsellor of the congregation of the Index, and inspector of studies at the Urbino college of the Propaganda. He died January 7, 1806. He wrote an account of his travels translated into French and published at Paris under the title of "Voyage aux Indes Orientales," 1805, 3 vols. 8vo, and he was also the author of several works relative to the languages of India, and the state of Christianity in that country of which an account is given by the managing authority.—*Biog. Univ.*

PAULINUS, an ecclesiastical writer descended from an illustrious Roman family was born at Bourges in 333. After filling some ecclesiastical posts in the empire he married a

P A U

Spanish lady, who converted him, and he was ordained a priest. He settled at Nein, of which he became bishop in 409. He died in 431. His works consist of poems and letters, written with much elegance and strength; they were published at Paris in 1546, and at Antwerp in 1622. Paulinus appears to have corresponded with all the great men of his time, by whom he was much esteemed and caressed, being of a most amiable and liberal disposition.—*Dugan. Mitner. Sacri Ossæ.*

PAULINUS, parson of Aquileia in the eighth century, was born at Friuli in 726. He is honoured by the Catholics with the title of saint on account of his zealous defence of the orthodox doctrine of the trinity on which he published several treatises. He was high in favour with the emperor Charlemagne who gave him many preferments, and finally made him patriarch of Aquileia. He died in 804 and a complete edition of his works was published at Venice in 1737 by John Francis Medina a prior of the congregation of the Oratory.—*Dugan. Cave. Milner.*

PAULLI (SAMON) a Danish physician and naturalist, born in 1603. He was the son of Henry Pauli physician to the queen dowager of Denmark and after having studied in the universities of Germany he went to Paris and returning to Württemberg he took his degrees in 1630. Two years after he was appointed to the medical chair at Rostock and in 1639 he was invited to Copenhagen to become professor of anatomy at the college of Frick. He afterwards became first physician to Frederick III of Denmark and he died at Copenhagen in 1680. He was the author of a treatise on the properties of plants used in medicine Rostock 1639 4to of which an improved edition was published at Frankfurt in 1708 "Icones Flora Danicae cum explicationibus Copenhagen, 1647 4to." "Commentarius de abusu Tabaci et Herbas Them," 1661 &c. several times reprinted besides other works.—*SIMON PAULLI* a son of the preceding relinquished the medical profession and settled as a painter at Strasburgh where he published several works on geography and improved editions of some of the writings of his father. He also produced "Historia Lit toraria sive dispositio librorum omnium fiscalium ac artium secundum materialm" 1671 8vo, which notwithstanding its imposing title, is only a catalogue of the books he kept for sale.—*Huet. Biog. Univ.*

OLIGERI FACTI another son of the elder Simon distinguished himself by his financial publications. He was bred to commerce and having been appointed secretary to the Indian company he became one of the richest merchants in Denmark. In the midst of his prosperous speculations he became deranged, and after setting up for a prophet and committing many extravagances, he was made a bankrupt, and quitting his family he went to Paris, and prepared a plan for the conquest of Judea, and the rebuilding of Jerusalem. He was at length impressed at Amsterdam for publishing a book, in which he ridiculed Christianity and trav-

P A U

suggested a project for establishing a new religion on his return. After experiencing various adversities, he died in obscurity at Copenhagen, in 1715. He published "The Dove of Noah, or Good News from Canaan," Amsterdam, 1690, "The Triumph of the Sons of Light over the Sons of Darkness," and other books with equally strange titles.—*Adding a History of Human Policy*, vol. iv.

PAULMIER sieur de GRENTEMESNIL (Jacques le) a miscellaneous writer born at Caen in Normandy, in 1687. He received a classical education but on leaving college, he relinquished the study of literature and served for several years in the army. At length he returned to Caen and at the age of forty five resumed his studies, and as Huet informs us, wrote a number of works in prose and verse in the French, Italian, Spanish, Latin, and Greek languages. His most important production was "Observations on the ancient Greek and Roman Authors," and a "Description of ancient Greece," both written in Latin. He died in 1670.—**JULIAN LE PAULMIER** the father of the former studied medicine at Paris, and having taken the degree of doctor he became one of the most eminent physicians of his time. He published several works relating to his profession, and died at Caen in 1688 aged sixty-eight.—*Huet Orig de Cœn. Bug. Univ.*

PAULLUS AEGINETA a Greek physician a native of the island of Aegina, supposed by Le Clerc to have lived in the fourth century though others, with greater probability place him nearly two centuries later. He travelled through several countries in search of knowledge and particularly visited Alexandria then famous for its library. He wrote on surgery and Fabricius ab Aquapendente is said to have copied freely from that part of his works, the materials of which Paulus had probably derived from the writings of his predecessors. There have been many editions of his productions which were translated into Latin and commented on by John Wisther of Andernach whose annotations, with those of Gopil and Camotius, appear in the edition printed at Venice 1555 &c.—*Hutchinson's Bug. Med.*

PALLUS (Julius) a celebrated Roman lawyer who flourished in the third century of the Christian era. He exercised for many years the profession of an advocate at Rome and being made an imperial counsellor under Severus and Caracalla, he distinguished himself by the boldness with which he delivered his opinions. Under Heliogabalus he was honoured, but the emperor Alexander Severus recalled him raised him to the consular dignity and appointed him praetorian prefect, after the death of Ulpius. Some of his numerous professional works are still extant.—*Bug. Univ.*

PAULUS (Peter) grand pensionary of Holland, was born in Dutch Flanders in 1754. He was employed in the marine department of the state, in which he displayed great activity and intelligence, but having by open

P A Y

expression of his opinions, offended the stadholder's government, he was removed from his situation in 1787 when he retired to France. In 1793 he presided at the first assembly of the provisional representatives of Holland; was a member of the naval committee, negotiator of the treaty of peace with France, and deputy from the province of Holland at the deliberation which related to the convocation of a constituent assembly. He died March 27th, 1796. Paulus was the author of a *Commentary on the Treaty of Utrecht*, 1775, 3 vols. 8vo. a "Memoir on the Equality of Mankind," which passed through several editions, besides other works.—*Sing. Univ. Bug. Univ. des Contes.*

PAUSANIAS, a Greek geographer of the second century, supposed to have been a soothsayer or rhetorician and a native of Coeonia in Cappadocia. According to Philostrotus he studied under Herodes Atticus, and afterwards resided at Rome though he held an office at Athens. He wrote a valuable description of Greece still extant besides other works which are lost. Among the best editions of the "Descriptio Graecie" are those of Kuhnau, Leipzig 1696 folio and of Paquin, Leipzig 1794-97 4 vols. 8vo. There is a French translation by Claver and one in Eng. bush by Taylor 1797 3 vols. 8vo.—*Festus Hist. Greec. Bug. Univ.*

PAUW (CORNELIUS de) a German canon was born at Amsterdam in 1739 and died in 1799 at Xanten near Aix-la-Chapelle. He was uncle to Anacharsis Cloots who figured at the French Revolution and his opinions were in some respects as singular. His principal works are "Recherches philosophiques sur les Américaines les Egyptiennes, et les Chinoises" 7 vols. 1768 and "Recherches philosophiques sur les Grecs," 2 vols. 8vo, 1767. He has much learning and ingenuity his style is agreeable but full of paradoxes, and of those free opinions once so much in vogue in France and which greatly recommended him to Frederick the Great of Prussia.—*New Diet. Hist.*

PHACHAM (Hirwaj) an ingenious writer of the seventeenth century a native of North Mims Herta. Little is known of his private history farther than that he was a graduate of Trinity college Cambridge and that a portion of his life was passed in Italy in the study of the fine arts of which he was a passionate admirer. He was the author of "The Valley of Variety," "The Gentleman's Exercises," 4to, "The Worth of a Penny," "Miserere Entitaneica," 4to "Thalia's Banquet" and other tractates but the work by which he is principally known is his "Complexe Gentleman" which has been repeatedly reprinted, and though now obsolete, enjoyed at one period a great share of public favour. The time of his decease is supposed to be about the year 1640.—*Bug. Brit.*

PEACOCK (Brinsford) whose name is also written Peacock, Bishop of Chichester a learned prelate of the fifteenth century by birth a Welchman, born in 1390. He re-

doubtless obtained at Oxford, he studied and afterwards obtained many preferments in the city of London, where he acquired the descent and patronage of the prebendaries of Gloucester who raised him to the bishopric of St. Asaph in 1446. After presiding over this one five years, he exchanged it for that of Chichester; but falling into disgrace with the court of France, on account of a work in which he denied the real presence, he was solemnly deprived, and suspended close prisoner to Thorney Abbey notwithstanding his having submitted to a public recantation of the opinions he had advanced in his writings which were burnt at Oxford in 1457. The principal of these is a tract entitled "A Treatise on Faith," &c. 1458 Bishop Peacock survived his disgrace only three years dying in confinement.—*Life by Lowe.*

PEARCE (NATHANIEL) a scathing adventurer was born of respectable parents at West Acton in Middlesex and went to see a ^{an} early age. He resided for some years in Abyssinia, where he was a favourite of the king, and beloved by the people. He went to Cairo with the intention of revisiting England having collected a great number of curiosities for the British Museum and had proceeded to Alexandria where he was seized with a bilious fever which put an end to his life on the 15th of August 1820. He was buried in a Greek convent his body according to his desire being carried by six English sailors. He left his MSS. to Mr Salt the consul-general in Egypt.—*Gent Mag.*

PEARCE (JACOB) bishop of Rochester a prelate of distinguished learning and piety born in Holborn London where his father was a driller in 1690. From Westminster grammar school he went off to Trinity college Cambridge where he obtained a fellowship through the interest of the lord chief-justice Parker afterwards earl of Macclesfield. The same patronage also procured him a living in Essex, and the vicarage of St. Martin's in the Fivdes, London but his friend going out of power Dr Pearce who had now obtained the degree DD. from the archbishop of Canterbury remained stationary for a time though still noticed occasionally by the ministry till 1739 when he was promoted to the vacant deanship of Winchester. Nine years after the bishopric of Bangor was bestowed upon him, not only without solicitation, but contrary to his wishes, which pointed entirely to a private life. He was with difficulty prevailed upon to accept it and though translated to Rochester with the deanship of Worcester annexed in 1756 he anxiety to retire from the high station to which he was thus involuntarily raised, was so甚 acute, as well as strong, that at length in 1768 the government yielded to his repeated request and allowed him to resign the more valuable appointment, his deanship in favour of Dr Thomas, retaining however, the bishopric, to the rocking from which there existed some objections of an ecclesiastical nature. Bishop Pearce was as distinguished for his charity and mildness, as for his learning. His enriched

the library, which, in the beginning of the present century, contained 3000 vols. with 1000 on theological subjects and another thousand. Of these the principal are, "A Commentary on the Gospels and the Acts," 4to 3 vols., two Letters to George Middleton in defence of Bishop Waterfield, a reply to Wotton on the Miracles, a Review of the Text of Milton, an edition of "Longinus the Sublime" with a Latin translation annexed and another of Cicero's Offices, four volumes of Sermons, &c. His death took place in 1774.—*Life prefixed to Commentary.*

PEARSON DD (EDWARD) a learned and pious divine, was born on the 25th of October 1755 in the city of Norwich. He was never placed at any public school but derived all early education from private instruction and his own industry. In 1778 he was entered at Sidney Sussex college Cambridge and proceeded to the degrees of BA., 1782 and MA. 1785. In 1786 he obtained the Normana prize for an Essay on the Goodness of God as manifested in the Mission of Jesus Christ, which was soon afterwards published, in conformity to the will of the founder. In 1792 he took the degree of BD and during a considerable period Mr Pearson filled the situation of tutor to the college in 1797 he was presented by his kind and esteemed friend Dr Elliston the master to the rectory of Kempstone Nottinghamshire. In the same year he married Susan the daughter of Richard Johnson, esq. of Beauchamp-street, Covent-garden. In 1807 he was chosen by the trustees to preach the Warburtonian lectures at Lincoln's Inn which he completed early in 1811. In 1808 on the death of Dr Elliston he was elected master of Sidney Sussex college on which occasion he received by royal mandate the degrees of DD and in the same year was appointed vice-chancellor. In 1810 he was elected by the university to the office of Christian advocate. The arduous duties connected with these various and important appointments had visibly affected his health, and whilst taking his customary walk in the gardens of his parsonage at Kempstone, he was suddenly attacked with an apoplectic seizure from which he never recovered sufficiently to articulate but expired on the 17th of August 1811. The works of Dr Pearson besides that already mentioned, are the following Discourses to Academic Youth, A Letter to a Member of the Senate of the University of Cambridge and "Remarks on the Theory of Morals." The Warburtonian Lectures were also published as well as several family prayers, written by him.—*Private Correspondence.*

PEARSON (JOHN) bishop of Chester a learned and pious prelate of the seventeenth century. He was the son of an English divine, rector of Shering Norfolk where he was born in 1618. From thence he went off, on the foundation, to King's college, Cambridge, and was ordained in 1645, upon the Restoration, to Salisbury cathedral. The following

P E C

year, had keeper Finch, whose domestic chaplain he was, presented him to the living of Ticehurst, Sussex; but on the success of the Puritanical party, he was one of the many ministers ejected on account of his nonconformist principles. In 1650, however, he was appointed to St. Clement's, Eastcheap, in the city of London, and hence, after the Restoration, in succession, lady Margaret professor of divinity and master of Jesus college in the university of Cambridge, with the rectory of St. Christopher's, London, and a stall at Ely. In 1660 he was removed to the mastership of Trinity college, and in the course of the same year admitted to the revenue of the Rectory, a task for which his previous publications had announced him to be peculiarly qualified. The death of bishop Williams in 1673, made room for his advancement to the episcopal bench and he accordingly was raised to the vacant see of Chester over which diocese he continued to preside till his death in 1686. The work by which he was principally known, is his celebrated "Exposition of the Creed," originally delivered by him in a succession of discourses from the pulpit at St. Clement's. This able treatise first appeared in its present shape in 1659 4to, and has since gone through many editions. Previously to that he had in conjunction with Mr. Gunning, carried on a polemical controversy on the subject of secession from the Romish church, with two treatises of that communion, a garbled account of which appeared in 1658 at Paris. His other works are, "Anapæta Cyprianica" and a vindication of the letters of St. Ignatius against the attacks of Dulles.—*Eng. Brit.*

PEARSON (MARGARET BOLIVARUS) a lady distinguished for her skill in the art of enamelling or painting on glass. She was the daughter of Samuel Paterson, the well-known bibliographer and miscellaneous writer and she became the wife of an artist named Paterson in conjunction with whom she established a manufactory of stained glass at Hampton. Among the various productions which remain as monuments of her almost unrivalled excellence in her profession may be mentioned her copy of the Cartoons of Raphael of which she executed two sets one for the late marquis of Lansdowne, and another for sir G. P. Turner. Her death took place in February 1803.—*Gent. Mag.*

PECHANTRE (NICOLAS DE) a French wit and poet, was born at Toulouse in 1588. He wrote several tragedies, which were much esteemed, viz. "Goliath Le Sacrifice d'Abraham"; "Joseph Vendu par ses Freres;" and "Le Mort de Nero" concerning which a short anecdote is related. He happened to leave the play of this tragedy in a public-house, in which he had written, "Ici est ton œuvre tord." The innkeeper, conceiving that he was concerned in some conspiracy gave information to the magistrates and Pechantre was taken up but on presenting his paper in the hands of the men who seized him, he eagerly exclaimed, "Ah! there it is, the very scene which I had

P E C

planned for the death of Nero!" "Il voulut évidemment déchirer," Re-died ut Propterea 1700.—*Mémo. Bel. Hist.*

PECK (FRANCIS) a learned antiquary, was born at Stamford in 1672. He was educated at Trinity college, Cambridge, where he took the degree of M.A. in 1707 and having entered into orders, became rector of Gedney in Lincolnshire, which was his sole preferment. The same year he published his "Antiquæ veris Angliae," or Antiquities An acts of Stamford in Lincoln, Rutland, and Northamptonshires. In 1728 he published the first volume of the work by which he is most known, entitled "Dunciæ Cantabrigiensis, or a Collection of diverse scarce and curious Pieces, relating chiefly to Masters of English History," of which a second volume appeared in 1739. The same year he displayed his industry in "A complete Catalogue of all the Dunciæ written before and against Poetry in the Reign of King James II." In 1730 he edited "Nineteen Letters of the truly rev. and learned Henry Hammond DD." His next publication was, "Memoirs of the Life and Actions of Oliver Cromwell as delivered in Three Discourses of his writer in Latin" and "New Memoirs of the Life and Poetical Works of Mr John Milton," 2 vol. 8vo. This was the last of his labours, his death taking place in 1745. He left behind him a great number of manuscripts for some different works, which he had in contemplation. Of his MSS. the greater part of which came into the possession of Sir Thomas Care the most valuable were five volumes in 8vo faintly written out for the press, under the title of "Monasticon Anglicanum supplementum novis Additamentis, which are now in the British Museum.—*Nichol's Lit. Ann.*

PECKHAM (JOHN) archbishop of Canterbury in the reign of Edward I and was born in Sussex about 1240. He took his doctor's degree at Oxford and proceeded to France and obtained a canonry in the cathedral of Lyons, and thence to Rome where the pope appointed him auditor or chief judge, of his palace. In 1270 the pope consecrated him archbishop of Canterbury upon his agreeing to pay his holiness the sum of 4,000 marks which he was so slow in remitting that the pontiff threatened to excommunicate him. In 1282 he went in person to the prince of Wales, to endeavour to effect a reconciliation between him and the king; but being unsuccessful, he excommunicated the prince and his followers. He died at Merton in 1292. He was a man of great state and pomp, but of an accessible and liberal disposition, and appears to have been a severe disciplinarian. His theological works remain in MS.; two only have been printed "Collectanea Bibliostritatis quinque;" and, "Perspectiva Communiæ." He founded a college at Wingham in Kent, which at the dissolution had an annual revenue of £44.—*Tanner. Corp. Wharfed. Anglia Sacra.*

PECQUET (JOUY) a physician and economist of the seventeenth century distinguished

peint's college at Aragon, where he displayed extraordinary abilities, and particularly applied himself to the investigation of ancient medals, inscriptions, and other monuments of antiquity. He then removed to Aix, and became a student of law, after which he went to Italy and remained for some time at Padua, where he acquired a knowledge of mathematics and the oriental languages. In 1605 he visited England, examined the public library, and formed an acquaintance with the famous Camden and other English learned. His connections with the learned and ingenious contemporaries were very extensive and he numbered among his friends, Neptune Faria, the Italian philosopher and the celebrated master Rebecus. He also lived on terms of the greatest intimacy with Duvair first president of the parliament of Aix, who afterwards took holy orders and became bishop of Lavaur and who was a man of distinguished learning and abilities. Peiresc became a counsellor of parliament in 1607 and when Duvair in 1616 was appointed to the office of keeper of the seals, he accompanied him to Paris, where with an unusual degree of disinterestedness he made use of his influence with his friend rather for the benefit of others than for his own and the only preferment he would accept was a small benefice at Gouesnes, which he obtained in 1618. After the death of his friend Duvair in 1621 he returned to Aix, where he continued his scientific and literary pursuits, and his commerce with men of letters till his own death which happened in June 1637. Many of the letters of Peiresc have appeared in different collections and he left several unpublished works.—*Bug Uva*.

PEIROUSE (PHILIP) Picot, baron de la, a naturalist born at Toulouse in 1744. He turned his attention to the office of magistracy in company with the youths of his uncle the baron de la Penrouse whose title and fortune he inherited in 1775. He had obtained the post of advocate general of the chamber of waters and forests, in the parliament of Toulouse which being abolished, he devoted himself entirely to the study of natural history and till the commencement of the Revolution he employed the greater part of his time in travelling and making observations. His first publications related to fossils, and was entitled " Description de plusieurs nouvelles espèces d'Orthocerasites et d'Ornithocerasites," Erlang 1781 folio. He had however previously communicated to the academy of Toulouse memoirs relating to the plants and minerals of the Pyrenean mountains, among which he had fixed his residence. In 1795 he published an account of the new works in the county of Foix which was translated into German by Kastner. After the convocation of the States General in 1793 Peirouse was employed to draw up instructions to the deputies for the provinces of Languedoc and in 1790 he was appointed one of the administrators of the district of Toulouse; but the state of affairs induced him to resign all public functions in

1793. He was, notwithstanding, imprisoned during eighteen months, under the tyranny of the Jacobins. On his release, after the execution of Robespierre, he resumed his philosophical researches; and he was successively nominated inspector of mines, and professor of natural history at the central school of Toulouse. In 1802 he was appointed mayor of Toulouse which office he held till 1806; and during his administration he founded a botanical garden, a cabinet of chemistry and physics, public library, a museum, and other important establishments. The academy of sciences at Toulouse, which had been suppressed in 1793 being restored in 1807, he was appointed perpetual secretary. He died October 18 1818. Besides the works mentioned, he published an Account of a Journey to Mont Perdu a peak of the Pyrenees "Tables sur les thymophiles des Massif des Pyrenees et des Causses observées dans le Département de la Haute Garonne" 1799. *Histoire abrégée des Plantes des Pyrenees, et itinéraire des Botaniques dans ces Montagnes, 1813* besides memoirs in the transactions of various learned societies, and other productions.—*Bug Univ.*

PELAGIUS the Greek appellation of an asceticism of the fifth century for which he exchanged that of Morgan bearing the same signification in the language of his native country Wales. He appears to have been originally a man of undistinguished character and to have passed the earlier period of his life in the monastery of Bangor of which he was a monk or as some say abbot. Soon after the commencement of the century in which he flourished he went to Rome where he wrote a treatise which he addressed to pope Innocent the First, in 405 entitled "Liberius Fides" which denied the doctrine of original sin and asserted that of free will and the possibility of man's being saved by his own merits. In advancing these opinions Pelagius appears to have been carried on by his zeal against lukewarmness and indifference in religion beyond what he had at first contemplated. This work drew upon him the attacks of Augustine and Jerome, the censure of several councils, especially that of Carthage and the excommunication of the pope who denounced, in the strongest terms, the opinions of heresy which is still known by his name. Celestine his disciple and countryman, accompanied him into Palestine where he was well received by the bishop of Jerusalem, and exhibited much ingenuity before a congress of prelates held at Diopolis. On the accession of Zosimus to the papal chair Pelagius was for a while countenanced by that pontiff, but soon fell into disgrace, and the whole influence of the new pope was exerted with Honorius, the emperor to procure his banishment. On this he retired once more into his native country where which St Germane, of Auxerre, wrote a refutation of his opinions. It has been asserted by some that Pelagius received his education at Cambridge; this, however is disputed by the learned Cave, while he admits that he was a Briton by birth. He was the

P R E

author of several other treatises, "De Virginitate," "Sedis et Democritus," &c., and sundry works illustrative of his opinions. The time and place of his decease are alike uncertain.—*Diplo.* *Cow.*

PELL (John) an eminent mathematician born in 1616 at Southwark in Surrey of which place his father was minister. He studied first at Cambridge, where in 1630 he took the degree of M.A. and the following year he removed to the university of Oxford. He was said to have been deeply skilled, not only in mathematics, but also in the ancient and several of the modern languages. In 1643 he was appointed mathematical professor at Amsterdam, and in 1646 the prince of Orange made him professor of philosophy and mathematics in the Schola Illustres, which he had founded at Breda. In 1652 he returned to England, and two years after Cromwell employed him on a mission to the Swiss Protestant cantons and he remained as resident at Zurich till 1658. His negotiations appear to have done him no disservice with the royalists at home, notwithstanding he had been an agent of the Protector whose death took place before Pell arrived in England. In 1661 he was ordained and soon after presented to the rectory of Fobbing in Essex and appointed chaplain to the bishop of London. He afterwards obtained another living and he received the degree of D.D. and might probably have reached high promotion in the church, but he was careless of his own interest and engrossed by his mathematical studies. His negligence of his private affairs involved him in difficulties, and he was arrested for debt and confined in the King's Bench prison, whence however the benevolence of his friends soon released him. He then resided at the college of physicians, but in about a year he removed to the house of a relation at Westminster where he died December 12, 1685. Dr Pell made some improvements in Algebra, and was the author of "Arithmeticae et Chist. Longianissima de vnu Circuli mensura," Amsterdam 1646 4to; "Idea of Mathematics," London 1651 1mo and "A Table of ten thousand square Numbers for use in an Appendix," 1672 folio, besides other works.—*Martin's Biblio. Phil.*

PELLEGRINI There were two of this name: **Aurelio**, born at Padua, in 1574, was an artist of considerable eminence many specimens of whose painting are still preserved in the country where he was much patronised by the then Duke of Mantua. His death took place in England in 1641.—**CAVILLO PELLEGRINI**, an Italian ecclesiastic, was born at Capua, in 1596, and is favourably known as the author of a history of the kings of Lombardy, written in the Latin tongue, as also of a treatise on the antiquities of his native city. He died in 1650, at Naples.

PELLEGRINO. There were two of this name: **Tullio**, born in 1587 and deceased. De Bologna, from the place of his nativity was the son of a Milanese architect, who brought his son up to his own profession, in

P E L

which, as well as in painting, he soon rivaled the best artists of his day. The palaces de Sforza, of Pavia, built for cardinal Borromeo, the fortifications of Romona and Astrea, the exchange in the latter city, and, above all, the palace of the Esorial in Spain, are monuments of his genius. Philip the Second, in reward of his services on this last occasion, gave him a patent of nobility, and a pension of 100,000 crowns, with which he retired to Milan and died there in great esteem with the Italians, in 1592.—**PELLASERIO**, of Modena, a painter who flourished in the early part of the sixteenth century was a scholar of Raphael d'Urbino, whom he assisted in painting the Vatican, besides producing some original pieces of great merit. On the death of his master he returned to his native city where he fell, in 1538 while attempting to save the life of his son, who had killed an antagonist in a tournament.—*Bryson's Dict. of Paint. and Eng.*

PELLETIER (BERTHARD) an ingenious French apothecary born in 1761 at Bayonne, and settled at Paris, where he practised with much repute and became a member of the Institute and of the Academie des Sciences, to both of which societies he contributed several useful papers. He was also the editor of the *Journal of Natural History* and wrote a treatise on the properties of arsenic. He fell at length, a victim to arsenic, his death which took place in 1797 being considered to have been much accelerated by the effects of oxyhydrogen gas inhaled during his chemical experiments.—*New Dict. Nat.*

PELLETIER (CLAUDE) a French statesman born in 1630 at Paris, where he practised for some time as an advocate. On the death of his elder Colbert, in 1665, Pelletier was appointed to the vacant post of comptroller-general which situation he continued to fill about fourteen years when he resigned it, and retired into private life. He edited the *Adventures of Scuderie*, and other tract by Pierre Patou and published a selection from the works of some of the early Christian writers. His death took place in 1711.—*Ibid.*

PELICAN (CONRAD) a learned German divine, of the reformed community who flourished in the sixteenth century. He was the son of respectable but not opulent parents, of Reichen in Alsace, where he was born in 1501. He was partly educated at the university of Heidelberg and in 1525, when only sixteen years of age, was induced to take the habit of a Monks unknown to his parents. In 1531 he was advanced a priest, and obtained great reputation for learning and knowledge in the Catholic church, until led to peruse the writings of Luther when he began to entertain doubts, which soon appeared in his preaching, and gradually led to the necessity of his seeking an asylum, with Zwingli, at Zurich, where he fully confirmed the principles of the Reformation, and remained. He subsequently employed himself in a public exposition of the books of the Old and New Testaments, in

T E L.

which he claimed himself intimately acquainted with Hebrew learning, and which extended to five volumes, folio. He died, much respected for learning and integrity in 1556. His works which have been collected, amount in the whole to seven volumes, folio.—*Melchior Adam, Vt. Govr. Novri.*

PELLICER (Joan António), a Spanish bibliographer who was librarian to Charles III and a member of the Royal Academy of Sciences. He was a native of Valencia, and studied at the university of Salamanca, where he distinguished himself by his attention to history and antiquities. He died at Madrid in 1800. Among his works are an *Essay towards a Library of Spanish Translators*, 1778 4to, and a history of the royal library at Madrid the printing of which was interrupted by the invasion of Spain by the French in 1808. He published a valuable edition of *Don Quixote* with notes.—*Big Uva.*

PILLIISON FONTAVER (PAUL), an eminence French writer born at Besiers in 1634. He was of a Protestant family and his paternal ancestors had occupied judicial situations in the provincial parlements. He displayed while young an extraordinary aptitude for study and a fondness for points literature and being destined for the legal profession he gave a proof of his talents and industry by writing a commentary on the *Institutes of Justinian* at the age of twenty one. In 1649 he was appointed secretary to the king and has his history of the French Academy which he produced about the same time procured him the extraordinary honour of being admitted a member of that learned institution though there was no vacancy. He was afterwards made deputy to Fouquet, intendant of the finances who being arrested and prosecuted Pilliison was involved in his disgrace and was committed to the Bastille where he remained about five years. He spent a part of this period in the study of the Bible and books of religious controversy and on recovering his liberty he abjured Protestantism and set about writing works to promote the conversion of his brethren to the Catholic faith. He got again into favour at court, and attended Louis XIV as historiographer in his expeditions to Holland. In 1674 he was appointed master of requests and in 1675 he obtained the stewardship of the abbey of Clugny and St. German de Pres, and afterwards other benefices. He continued to the end of his life a zealous member of the church which he had joined and employed his pen in the composition of various religious treatises, one of which concerning the Eucharist, he was prevented from finishing by his death which took place February 7, 1696.—*Gaston Falloux* elder brother of Paul, was also admitted for the bar and became a counsellor at Bourg en Bresse but being a Protestant, he relinquished his profession and settled at Paris, devoting his time to literature and society. He died in 1677 aged fifty-four. He was the author of *Miscellaneous Questions on Natural and Moral Philosophy*—*Pavoni, Novri. Big Uva.*

P E M.

PELLOUTIER (Gaston) pastor of the French Protestant church at Besiers, member of the academy of that city, and ecclesiastical censor, was born at Lodève in 1662. He is highly distinguished by his book, entitled *Histoire des Cévennes et particulièrement des Gardes et des Géorgines, depuis les Temps Fabien jusqu'à la Paix de Ryswick, par les Gardes*. This work is full of learning and curious research; the best edition is that of M. de la Bastide Pons, 1770. Pelloutier also contributed many valuable papers to the memoirs of the Berlin academy. He died in 1737.—*New Dict. Hist.*

PHLOPIDAS a robust and patriotic Thessalian the friend of Epaminondas, and the associate of his victories. While at Athens, to which city he had retired from the usurpation of the Lacedemonians, over his native city he organised a conspiracy among his banished countrymen which had for its object the restoration of liberty to Thessaly. This he accomplished with their assistance partly by valour and partly by stratagem about the year 373 of the Roman era, and afterwards confirmed the newly gained independence of his country by defeating her enemies in a pitched battle at Pegaea. He held also a distinguished command at Leuctra, and during all the actions fought in the Boeotian war Alexander the tyrant of Phera, in violation of the sacred character of an ambassador threw him into prison to recover his freedom; however and at length fell in battle against his old enemy in the year of Rome 390 about 304 years before the birth of Christ.—*Plutarch.*

PEMBERTON MD (Hawey) a learned physician mathematician, and mechanician was born at London in 1694. After studying grammar and the higher classics, he repaired to Leyden where he attended the lecture of Boerhaave and then visited Paris to perfect himself in anatomy. On his return to London, he assiduously attended St. Thomas's hospital but seldom practised owing to his delicate state of health. In 1719 he again visited Leyden and graduated MD and soon after became intimately acquainted with Dr. Hooke Mr Isaac Newton and other eminent men and was himself much distinguished for his scientific acquirements. Being chosen professor of physic at Gresham college he undertaken a course of lectures on chemistry which did him great credit, and at the request of the college of physicians, he also revised and improved their *Pharmacopœia*. After a long life, spent in the improvement of science Dr. Pemberton died in 1771 in his seventy seventh year. His principal works are a "View of Mr Isaac Newton's Philosophy," "Lectures on Chemistry," "Observations on Poetry;" "On the Alteration of the Style and Colour;" "On reducing Wright's and Measures to one Standard." A Dissertation on Religions," with numerous papers addressed to the Royal Society.—*Chambers's Biog. Dict.*

PENMBLE (WILLIAM) a controversial divine of the seventeenth century whose talents and abilities gave great promise of future

successor, which was not short by his desire to be the author of it. He was born in 1620 at Epworth, a small village in East Kent, and received his education at Magdalen College Oxford, of which society he became fellow tutor and lecturer in divinity. He was the author of " *Biblicidismus, Grammaticus* ;" " *De formarum originis* ;" " *De sensibus intervali* ;" etc. Twelve years after his death which took place in 1662 his works were collected and printed in one folio volume.—*Athen. Oxon.*

PENN (Sir WILLIAM) an English admiral who appears to have been a native of Bristol, though descended of a family holding considerable estates in North Wiltsire. He was employed in the war with the Dutch after the overthrow of royal government in England, and he was subsequently sent to the West Indies, together with Admiral Venables, when after an ineffectual attempt on Hispaniola they took the island of Jamaica. Penn concurred in the measures for the restoration of Charles II., who bestowed on him the honour of knighthood and he served under the duke of York against the Dutch, and was present at the victory gained over Opoem in 1665. His death took place in 1670, at the age of forty-nine.—PAWN (WILLIAM) a celebrated theologic secretary and legislator was the son of Sir W. Penn and was born in London in 1646. After some previous taintion, he entered as a commoner at Christchurch, Oxford in 1660, and while at the university he displayed his inclination for fanaticism, by frequenting the meetings of the nonconformists, a circumstance which exposed him to the displeasure of his father. To cure him of his heresy he was sent to France and afterwards he entered as a student of law at Lincoln's Inn. He staid there however but a short time for in 1666 he was at Cork in Ireland, where he met with a person he had known at Oxford, who had become a proselyte to Quakerism and he found the principles of his friend so congenial to his own that he immediately adopted them. This step produced an open breach with his father on his return to England but he was too zealous a professor to be reclaimed by harsh treatment, and in 1668 he was committed to the Tower for preaching against the established church. While in confinement, he composed a tract entitled " *No Cross, No Crown*, A Discourse showing the Nature and Discipline of the Holy Cross of Christ, which is considered as the best of his writings. He was no sooner released than he re-commenced preaching, and he was in consequence arrested, together with his companion William Moseley, and indicted at the Old Bailey sessions for illegally holding forth in Grapen-court-street, in the city of London. Though acquited by the verdict of the jury they were vindictively imprisoned in Newgate by order of the court. On obtaining his liberty, Penn visited Holland and Germany as a missionary; but he hastily returned to England, in consequence of the illness of his father who died on the 20th of March 1670.

whom he offered a consolation prize to his son, which happened shortly after his death and settled at Blackhamsworth, in Hertfordshire. Becoming heir to very considerable property he determined to employ the influence he derived from it, in propagating the principles he had adopted. Great part of his inheritance consisted in crown debts due to the estate of Admiral Penn, for advances of money he had made for the sea-service. In lieu of these claims Mr. Penn obtained from Charles II. a grant of a vast tract of land in North America, to the south of the provinces of New England and New York. He sailed in 1681 to examine his newly acquired territories, with a band of persecuted Quakers, who followed his fortune and having entered into a treaty with the Indian natives, he founded the city of Philadelphia, and the settlement received from the proprietors the appellation of Pennsylvania. He abolished negro slavery in his dominions and established a code of laws for their internal government which contributed much to the prosperity of the colony. Penn became a great favourite at the court of James II., whose measures for allowing liberty of conscience he advised or recommended in consequence of which he incurred the suspicion of being a jesuit in disguise from which suspicion he thought it necessary to justify himself by an appeal to the press. The Revolution placed the Quakers, in common with other dissenters, under the protection of the laws in the exercise of their religion and Penn having witnessed this favourable change in their substance returned to America where he was joyfully received and found the affair of his settlement in a prosperous condition. After residing in Pennsylvania some years, he left it to negotiate some matters with the British government, relative to the commerce of the colony whether he did not again die there dying at his seat at Rosecombe in Berksire in 1718. Besides the tract already mentioned Penn was the author of " *Primitive Christianity revived in the Faith and Practice of the People called Quakers*. A Brief Account of the Rise and Progress of the Quakers, &c which with his journal, life, original letters and other papers, were published in two volumes folio, in 1795.—See *Brit. Voltaire's Lett. on the English nation*.

PENNANT (Thomas) an eminent English naturalist and antiquary born at Downing in Flintshire the seat of his family in 1726. He studied at Queen's college, Oxford, and afterwards removed to Oriel college in the same university which he left without taking a degree. His first production was an account of an earthquake felt in Flintshire April 1750 which appeared in the *Philosophical Transactions* in 1756 and the following year he was chosen a member of the Royal Society of London, through the influence of the Swedish naturalist, Linnæus, with whom he corresponded. He commenced in 1761 a body of " *British Zoology*" which first appeared in 4 vols. folio, and was republished in quarto and octavo, and translated into German by C. Theophr. Müll.

This work was followed by his "Indian Zoology," 1766; "Synopsis of Quadrupeds," 1771; "Genera of Birds," 1773; "History of Quadrupeds," 1781; "Arctic Zoology," 1786 and "Index to Buffon's Natural History of Birds," 1787, which are his principal works relative to the department of science which he chiefly cultivated; but he also published a number of detached essays and papers in the Philosophical Transactions on a variety of subjects. In 1765 Mr Pennant took a journey to the continent when he visited Buffon, Haller, Pallas and other eminent foreigners. He was admitted into the Royal Society in 1767 and in 1769 he undertook a tour into Scotland of which he published an account in 1771 and a second volume appeared in 1776 relating to a second tour in the same country and a voyage to the Hebrides. In 1778 he published a tour in Wales to which was afterwards added in another volume a journey to Snowdon. He produced in 1782 a narrative of a "Journey from Chester to London;" and in 1790 appeared his very unusual and popular work "An Account of London &c." In 1793 he professedly took leave of the public in a piece of autobiography which he styled "The literary Life of the late Thomas Pennant" but this did not prove to be his last publication as he subsequently contributed to the press a "History of the Parishes of Whiteford and Holywell" in his native county. He died December 16 1798 at his seat in Flatbush. After his death appeared

Outlines of the Globe comprising a View of India beyond the Ganges, of the Malayan Isles, &c. 4 vols. 4to forming a portion of a very extensive undertaking which was never completed. This posthumous publication was succeeded by a "Journey from London to the Isle of Wight 1801" a "Tour from Dovring to Alston Moor 1801" and a "Tour from Alston Moor to Harrogate and Brimham Craggs 1804." The character of Pennant stands higher as a naturalist than as an antiquary and it is by his skill in the selection of interesting subjects for discussion, and by his facility of illustration that he has attracted so many admirers rather than by the extent of his researches or the profundity of his observations. Though he made no great discoveries in science yet he improved on the labours of his predecessors and the popularity of his productions shows that he possessed the happy art of communicating an interest to the subjects of which he treats.—*Life by Himself*—*Neath. Rev. Genl Mag. Edt.*

PENNINGTON (Isaac) a writer of considerable estimation among the society of friends. He was born in 1617 being the son of an alderman of London who sat as one of the judges of Charles I for which he was arrested at the Restoration, and imprisoned in the Tower where he died. The subject of this article is said to have received a learned education and to have attended one of the universities. He is represented by himself and says as having been early impressed with no-

Born. Decr.—Vol. II

tion of the want of a more civil and refined religion. Thus disengaged, he attended the preaching of George Fox, and being led finally to join the quakers, he soon began to experience the harsh persecutions to which that rising sect was then subjected. He resided for the most part on his own estate in Buckinghamshire and endured no fewer than six long imprisonments some of which could scarcely be deemed legal, even under the conviction and other oppressive acts then enacted. All this he bore with a meek and quiet spirit, in strict conformity with his principles until his death in 1679. The latest edition of the numerous writings of this amiable and lovable enthusiast is in 4 vols. 8vo. Some of his letters were also published in 1796 in an octavo volume. All his writings breathe a genuine spirit of philanthropy deeply tinged, however with mysticism, which of course confines them to the persons of persons of his own persuasion.—*Penn and Lillian's Testimony prefixed to his Works.*

PENROSE (Thomas) the son of a Berkshire clergyman born at Newbury in that county in 1743. Having received a classical education at Christ church Oxford, where he had developed a talent for poetical composition of no mean promise he from some unexpected cause suddenly entered the royal marines, and served as a lieutenant on board a king's ship, in the early part of the American war. A severe wound which he received in action induced him to retire from the service, after which he renewed his academical pursuits, and taking orders, served the church of his native town for some time in the capacity of curate but gave up that situation on obtaining the living of Brechinster and Standerwick Somerset. There is an edition of his poems with a life prefixed now become comparatively scarce. It appeared soon after his decease which occurred at Bristol Hot-wells whether he had gone for the benefit of his health in 1779.—*Ackels's Lit. Anec.*

PENNY or AP HENRY (John) commonly known by his assumed name of Martin Mar prelate was born in Wales in 1589. He studied first at Peterhouse Cambridge where he graduated BA in 1584, and afterwards proceeded to Oxford where he obtained the degree of MA and was ordained a priest. He preached for some time both at Oxford and Cambridge with great reputation but soon rendered himself notorious, by embracing the sentiments of that body of the clergy who were denominational puritans. In 1608 he published a brace of tracts to prove the necessity of more attention to religious instruction in Wales, both of which being written on puritanical principles, gave great offence. The controversy between the church and this body having now become exceedingly virulent, the latter to whom the public presses were shut printed many productions privately which were the labour of a club of writers, of whom Penny was supposed to be one of the most active. Of these tracts that which gave the greatest offence bore the name of 'Mar

the May-prison, which contained a bitter satire upon the kingship and all its supporters. A warrant being granted for his apprehension, he retired into Scotland, where he employed himself in drawing up the basis of a petition to be presented to the queen. With this he secretly returned to England, and lived in concealment near Stepney, until discovered and apprehended by the virtue of that petition, it was sentenced in the first place to prosecute him for the books printed in his name but at the time was one that could be legally done. A new and most iniquitous step was taken to reach his life by indicting him for seductive words and rancour against the Queen's most excellent Majesty tending to stir up rebellion among her subjects. No evidence was produced to criminate him except expressions taken from his own private papers, which it was held implied a denial of the Queen's authority; and upon this sort of proof he was adjudged guilty of felony and condemned to death. He pleaded in vain the utter illegality of this sentence, it was determined that he should die and archbishop Whinfield was the first man who signed the warrant for his execution which took place with great precipitation and in a manner as harsh and cruel as the sentence itself was illegal and unjust. This victim of excess and inconsiderate zeal on his own part and of a vindictive spirit of revenge on that of his enemies, had connected himself with the puritans termed Separatists who in respect to church government, had embraced all the notions of the future independents. Although a man of talents and learning he was doubtless heated and indignant, a fact which by no means prevents his treatment from being a disgrace to those who inflicted it. His chief publications are "Martin Mar prelate Theses Marianianæ," "A View of publick Wrants and Disorders in the Service of God; Exhortation to the Governors and People of Wales," "Reformation no Enemy to her Majesty and the State," Sir Simon Synd's Hymn and Cry &c. Most of these were full of low scurrility and personal satire with which however the numerous rephrises to them equally abounded.—*Brock's Lives of the Puritans. Strype's Life of Whitgift.* Athen. Oxon.

PERPUSCH (Johann Christopha) the son of a Protestant minister resident at Berlin where he was born about the year 1657. He discovered at an early age a strong genius for music, and by the due cultivation of his talent became one of the soundest theoretical musicians of that or any other age. When only fourteen years old, his reputation as a performer prompted him to be appointed instructor of the harpsichord to the prince royal, at the personal suggestion of the queen. About the commencement of the following century Perpusch quitted Germany for England and was soon after employed in adapting operas for the stage at Drury Lane theatre. In 1713 he took his doctor's degree in music at Oxford and although he subsequently obtained a sum of six thousand pounds with his wife,

figures de l'Opéra, yet he still continued to follow music as a profession, and is known to having introduced the air in the "Boggs's Opera" for Gay and Hack, composing also a new overture for that piece which has continued to be printed with every succeeding edition of the work. In 1747 he became a fellow of the Royal Society having previously drawn up their account of the ancient genus which appeared among the Philosophical Transactions of the preceding winter. He was also the author of a valuable treatise on Harmony. His death took place in 1746.—*Sherley's Hist. of Mus. Raw's Cyclop.*

PEPYS (SAMUEL) secretary to the admiralty in the reigns of Charles II and James II. He was born at Brampton in Huntingdonshire of a branch of an ancient family of the same name of Cottenham in Cambridgeshire and was educated at St Paul's school in the metropolis, whence he was removed to Magdalene college Cambridge. He early acquired the patronage of Monck afterwards earl of Banastre, who employed him as secretary in the expedition for bringing Charles II from Holland. On his return he was immediately appointed out of the principal officers of the navy which post he maintained during those memorable events, the plague the fire of London and the Dutch war. In 1673 when the king took the admiralty in his own hands, he appointed Mr Pepys secretary to that office and being an excellent man of business it is generally allowed that he first introduced regularity and order into that important department. In 1684 he was falsely accused of being a papist but without a shadow of proof; and soon after the admiralty being put into commission he for some time lost his place of secretary. He was still however employed under lord Dartmouth in the expedition against Tangier and often accompanied the duke of York in his naval visits to Scotland and coasting cruises. When Charles II assumed the office of lord high admiral he was again appointed secretary and held the office from that time to the Revolution strictly commanding himself during the reign of James II to the duties of his office. On the accession of William and Mary he resigned, and published his Memoirs, relating to the navy for ten years preceding, a well written and valuable work. He led a very retired life from that time and having survived his lady by whom he had no offspring he resided for two years before his death to the seat of a naval friend at Cleapham, where he died May 26, 1703. With his great skill and experience in naval affairs, he was otherwise widely informed and besides being a good critic in painting, sculpture and architecture, was versed in history and philosophy such indeed was his reputation, that in 1684 he was elected president of the Royal Society which office he held for ten years. He left a large collection of MSS. to Magdalene college Oxford, consisting of naval memoirs, prints, and five large folio volumes of ancient English poetry begun by Sackville, and copied down to 1700, from which fine

"*Episodes of Ancient English Poetry*" by Dr. Percy are far the most part selected, which the last year or two, Mr. Pope has become still more known, by the publication of his very interesting and interesting diary by Lord Brougham, which journal, though it contains his own judgment and very character with extreme fidelity and vivacity, affords a most curious and instructive picture of the operation of the Restoration, and the absolute court of Charles II. on the habits, manners, and conduct of the people at large. His frequent invective against all the careless mis-government, and consequent decline of the country in foreign estimation under Charles, with the preceding vigorous management of Cromwell, is peculiarly striking. Nor can the journalist always hide the contagious nature of such examples even in his own conduct; and as it is evident that this diary was never so used for general perusal, it probably amounts to one of the most aesthetic as well as among records of the description that ever was published.—Pope's Diary. Gregor. Nichols.
Ed. Am.

PERCEVAL, the name of a noble English family the head of which from the epoch of the Hanoverian succession has borne the title of earl of Egmont. The first thus ennobled was John SPENCER, born in 1683, at Horton in Yorkshire who distinguished himself in the early part of the last century as an active member of the house of commons. Soon after the accession of George I he was made an Irish peer by the title of baron Perceval and after going through the intermediate grade of viscount, obtained an earldom in 1733. He was a good herald and learned genealogist and besides a history of the family from which he sprang he published a tract on the precedence of the peers of Ireland. He was also the author of a treatise on the test act, and of another on the colourisation of Georgia, a measure in which he took a very lively interest. At his death in 1748 he was succeeded in his titles and estates by his son of the same name born in 1714, in the metropolis. In 1762 he obtained the English barony of Lovel and Holland, and the year following was placed at the head of the admiralty having previously filled a situation in the household of the prince of Wales, and then of joint postmaster general. He wrote several political pamphlets especially one entitled, *Faction overruled*, and died in 1770, having been out of office nearly four years prior to his decease.—The hon. SPENCER PERCEVAL, second son of the preceding bore 1769 his education at Hoxton and Trinity college Cambridge of which he became a master about the year 1775. On quitting the university he entered himself of Lincoln's Inn, with the view of following the law as a profession, and practising the Common bar. In the mean time he soon distinguished himself as a sound constitutional lawyer and obtained a silk gown. In 1790 he represented Northamptonshire in parliament, and five years after his legal abilities, which had attracted the notice of the nobility, aided

by family influence raised him to the office of colonel-governor. In 1802 he became vice-president, and died that evening till their wives, on the formation, of the navy ministry after the death of Sir Fox, he remained the zenith of his career being appointed controller of the exchequer on the second of March in that year, on the principle of Catholic emancipation. In this high and responsible post he continued, till the 13th of May 1812, when, while in the act of approaching the door of the house of Commons, a person named Bellingham, who had for some time previously presented a variety of memorials respecting some alleged ill treatment received in Russia, discharged a pistol at him in the lobby, the bullet of which entering his breast, deprived him almost instantaneously of life. The assassin who asserted that he had been waiting with the view of destroying lord Liverpool, Gower late ambassador to the court of St. Petersburg made no attempt to escape, and was instantly arrested. He was brought to trial on the 13th and although a plea of insanity was set up by his counsel was found guilty and executed on the 18th of the same month. The barony of Arden is also vested in a junior branch of this family — *Wadpole's Catalogue Great Mar.*

PERCIVAL, M D (THOMAS) an eminent physician of the last century a native of Warrington Lancashire born in 1740 After studying medicine at the universities of Edinburgh and Leyden he returned to England in 1765 and settled at Manchester where he practised with great repute He was the author of a variety of very able treatises on medical subjects, especially some 'Observations on the deleterious Qualities of Lead,' and 'Medical Ethics.' A Father's Instructions to his Children He also wrote 'Moral and Literary Dissertations &c' and papers in the 'Transactions of the Manchester Philosophical Society' of which institution he was the founder and first president. He attempted to establish public lectures on mathematics, the fine arts and commerce, in that town, but met with sufficient encouragement to desist but sincere disinteresse from the church of England he likewise sought to obtain support for dissenting academies at Warrington and Manchester but was equally unsuccessful Dr Percival died highly respected both for talents and conduct, on the sixth of August 1804. His works were published in 1807 in four volumes octavo, by one of his sons—
Mr. Morris referred to Warrington

PERCY ("Popes") bishop of Dromore in Ireland, a prelate of considerable learning and ability, distinguished also by his proficiency in the study of the antiquities of his country. He was descended from the ancient race of Maynoothmen, and was a native of Athlone, in the county of Westmeath, where he was born in 1729. Having graduated at Christ Church, Oxford, in 1753, in 1756 he obtained the degree of B.D. at Trinity College, Dublin, and M.A. at the same University. In 1759 he was appointed chaplain to the King, and in 1772 raised to the diaconate.

P E R

Carte, which he resigned four years after for the Irish bishopric of Down. The most popular of his works are, his "Reliques of Ancient English Poetry," in 8 vols. 8vo, a collection of great interest; and a poem, "The Hermit of Warkworth." He was well skilled in the Icelandic and several of the Oriental languages, especially the Chinese, from which he made some translations, and in particular one entitled, "Hua Kien Chouan." His other writings are, "A Key to the New Testament," a new version of "Solomon's Song," with translations of Mallet's "Northern Antiquities"; and of some pieces of Icelandic poetry he also published a curious domestic record, long extant in the Percy family and known as

The Northumberland Household book, a document valuable for the light it throws on the manners, habits, &c., of our ancestors. His death took place at his episcopal palace at Downe on September 30, 1611.—*Gent. Mag. March 1. Lit. Ans.*

PEREVILLE (HARDOUIN DE BEAUMONT de) archbishop of Paris in the seventeenth century was a prelate of much learning and no mean talents as an historian. His father filled a situation in the household of cardinal Richelieu, who patronised the son and contributed to his advancement. He became a member of the Sorbonne and was afterwards one of those appointed to superintend the education of Louis XIV. In 1647 he published a treatise entitled, "Institution Præcepta," which gained him considerable credit but the production by which he is most advantageously known is his life of Henry IV. About 1661 wrote a work of great merit for the accuracy and impartiality with which it is composed. He survived his elevation to the metropolitan see only four years, dying in 1670.—*N. & Q. 11. Hist.*

PEREIRA DE FIGUEIREDO (Antônio) a Portuguese divine and historian, born in 1723. He was educated at the jesuitic college at Villa Viçosa, and in 1744 he was admitted into the congregation of the Oratory at Lisbon. After having distinguished himself by some useful works on education he employed his pen in defending the rights of his country against the court of Rome. Joseph I to recompense his services appointed him deputy in ordinary of the tribunal of concord which office he held from its creation in 1768 till it was abolished. In 1769 by the king's command, he quitted the habit of his order to fill at court the double employment of first interpreter of languages in the foreign and war offices, which he held till his death, in August 1777. His works, original and translated are very numerous, including a translation of the Bible into the Portuguese language, with a preface and notes, 23 vols. 8vo, and Histories of the Old and New Testaments.—*Bibl. Univ. de Coimbra.*

PERKINS (J. A.) Reckless, a native of Spanish Basque, who first practised in France the art of trapping the deaf and dumb. He appears to have opened a school at Cézilie, which probably did not succeed, as he soon

P E R

moved to Bordeaux. Having taught a dumb person at Biarritz to pronounce a few words, he was employed to communicate instruction to a youth of fortune, whose proficiency proved so satisfactory on examining before Louis XV in 1751, that he bestowed on Perce a pension of 300 francs. In 1765 he was further rewarded by a patent for the office of royal interpreter. He died at Paris, September 13, 1780 aged sixty-five. His method of instruction was different from that of the abbé L'Epée, whose pins he attached in a letter published as a periodical work; and he was also author of a Memoir, and Observations on the Deaf and Dumb read to the academy of sciences and of a Dissertation on the articulation of an inhabitant of Otaibite, published in the Voyage of Bougainville.—*Bibl. Univ.*

PEREZ (don Arrosto) a Spanish statesman, who was the natural son of Gonzalo Perez, secretary of state under Charles V and Philip II. Antonio after having finished his studies at Alcalá, and travelling in foreign countries returned to Spain possessed of talents and intelligence which qualified him to fill with reputation the office held by his father. Having engaged in an intrigue with the *peones d'Eboli*, the mistress of Philip II and procured the assassination of a person who had discovered his treachery, he was in the first instance condemned to imprisonment in the castle of Tovena. Further proceedings being instituted against him, he was tortured, notwithstanding which he escaped from custody and took refuge in the province of Aragon. There he was a second time arrested, and conducted to Saragossa, where he found means to interest the people in his favour and thus avoided being delivered up to the inquisition. At length he sought an asylum in France whence he went to London and was well received by queen Elizabeth and her favourite Leicester. Returning to Paris, Henry IV bestowed on him a pension and he employed his time in arranging "Mémoirs" of the transactions in which he had been engaged a work displaying just observations and views worthy of an enlightened statesman though his silence respecting his connexion with the princess d'Eboli and his obvious enmity to his sovereign detract from the value of his narrative. He died at Paris in 1611. His letters as well as his memoirs, have been often published.—*Bibl. Univ.*

PEREZ (Antonio) an eminent Spanish lawyer born about 1585. He studied at Brussels and Louvain and having travelled in France and Italy, he returned to Louvain in 1614 to occupy the chair of jurisprudence. Six years after he accepted the lucrative employment of intendant of the army but he soon resumed his academic functions and remained till his death in 1672 having, during the last fifteen years, been afflicted with loss of sight. His works are "Institutiones Imperiales Brevisimatis digestae;" "Annotationes in Pandecta;" "Annotationes in Codicem;" of all which there are several editions.—*Bibl. Univ.*

P E R

P E R

PERELLE (Davide), a Neapolitan musician, descended of a Spanish family born in 1711, and educated under Gallo and Mancini. On quitting the Conservatorio he went into Sicily and brought out his first opera at Palermo in 1741. In that capital he remained about seven years, during which period he acquired considerable reputation, which was yet further increased on his subsequently visiting Naples and Rome. In 1752 he accepted an invitation to Lisbon, given him by the king of Portugal who appointed him his chapel master in which capacity he continued to serve that monarch twenty-seven years, when he died at the age of sixty-seven. He was the author of twelve operas of which his "Alessandro nell'Indie" written at Rome in 1750 and recomposed at Lisbon in 1755, is the most celebrated and may fairly rank with the productions of the best masters. Although totally deprived of sight for some years previous to his decease he continued to dictate compositions in parts, and wrote a dirge afterwards performed at his own funeral. The general style of his compositions bears the stamp of science and energy but is considered some what deficient in grace.—*Burrey's Hist. of Mus.*

PERGOLESI (Giovanni Battista) a native of Casoria in the Neapolitan territories, about ten miles distant from the capital. He was born in 1710 and received the rudiments of a musical education at the conservatorio dei Poeni in Greco Crudo under Gaetano Greco. His genius outrunning the pedantry which prevailed at that seminary he persuaded his friends to remove him, at the age of fourteen and bring left to the dictates of his own genius, soon surprised every one by the rapidity with which he mastered the difficult art of composition and the graceful simplicity of the interesting melodies which he produced. His first opera, however, "Dei Perseverant," performed at the second theatre in Naples, was but very coolly received, nor did his version of the "Olimpade" of Metastasio which he brought out at Rome, meet at first with more success. It was not till his celebrated mass, written for the duke of Mafra, and performed in the church of San Lorenzo a production which has been so much admired and so often copied that his fame rose at once to its zenith, and he was placed in the first rank of musical composers. A languishing consumption, during which he wrote his celebrated cantata, "Orfeo e Euridice" his beautiful "Stabat Mater" and "Salve Regine," (the last of his compositions,) carried him off in 1737 in his thirty-third year. After his decease his "Olimpade" was revised at Rome, and received with a degree of enthusiasm which fully atoned for the neglect it had before experienced. Dr Burrey considers the works of Pergolesi as forming a great and modern school being the principal pillars of a style of composition both for the church and the stage which has been ever since predominant.—*Burrey's Hist. of Mus.*

PERICLES one of the most illustrious

statesmen of ancient Greece, was a native of Athens, and son of Xanthippus, who gained the battle of Marathon against the Persians. He received the usual liberal education given to Athenians of rank and attended the lectures of Anaxagoras and Zoro. Although connected by family with the aristocracy the party of nobles being headed by the celebrated Cleon, he courted the favour of the people, and soon acquired considerable influence by his eloquence, which was of the most lofty and persuasive kind. He obtained in the first instance the banishment, and subsequently the recall of Cleon and on the death of the latter, he became the undoubted master of Athens. He contrived always to occupy the attention of the people either by plotting new colonies, forming expeditions, or undertaking great public works to increase the splendour of the city and gratify Athenian pride and taste. In order to supply the expenses of this magnificence, he removed the public treasure of Greece from Delos to Athens, on a plea that the latter would alone protect Greece from the barbarians, the object for which the money was deposited. He subsequently made himself master of the important island of Eubaea. The subjugation of Samos took place a few years afterwards, which, it is said he undertook at the instigation of the celebrated courtesan Aspasia, whose beauty and accomplishments obtained so great a mastery over him that he divorced his wife that he might marry her. It was after a second expedition to suppress a revolt of the Samians, that he pronounced the celebrated funeral oration which was so grateful to the Athenians, that the women crowded round him to crown him with garlands. At length a party among the people began to exhibit some jealousy at his great power and it was with difficulty that he could by his tears as well as oratory free himself from a public charge of unrighteousness and immorality and stoned an attack upon his old tutor Anaxagoras, by sending him out of Athens. When the Spartans taking the part of the small states of Boeotia demanded reparation of the injuries done by Athens, he persuaded the people to refuse all conciliation, and thus brought on the celebrated Peloponnesian war which was followed by the memorable plague at Athens, in which it required all his abilities and fortitude to sustain his own courage and the spirits of the Athenians. In order to divert their attention he fitted out an expedition against Epidaurus, but being unsuccessful he was fined and displaced by the Athenians, who, however soon restored him to power. His close of life was very melancholy the plague had deprived him of his two legitimate sons, and of many relations and although, to comfort him, the Athenians enrolled his son by Aspasia a freedman, he fell into a state of lingering decay, and died BC. 429 after having ruled the famous democracy of Athens longer than any other citizen. Pericles, although by no means a pure philosopher exhibited many marks of a great and enlightened mind. His philosophical adven-

she had raised him above the superstitious prejudices of his age, and his spirit was not only unprejudiced, but his love of祖国 was informed by the best taste. He was deeply interested very soon in these events, but the creation of such offices as the Parlement, the Chambre, the vicariate of the bishop, and the formation of numerous states by Philip and Alfonso, stamping that character of these not upon the production of Aragon, which tended to great long after it had lost all political dominion. He was less scrupulous in favoring the ambition and spirit of apprehension of his countrymen, which conduct led to great disasters; and he also too much favored the corruption of manners, in which he participated.—*Philosoph. Theologica.*

PERIER (Jean Coeuravive) an eminent mechanist, member of the academy of Sciences, born at Paris in 1702. After having distinguished himself, in conjunction with his brother, Charles Perier des Graviers, by the construction of a centrifugal pump for the duke of Orléans, he made repeated visits to England to examine the steam engines, and other important machines invented or improved in this country. The fruit of his studies and labours was an establishment at Chalifet, where four reverberatory furnaces were erected and steam-engines, cylinders for paper-making, machines for cotton-spinning &c. were constructed. In 1780 the brothers Perier undertook to supply various parts of Paris with the water of the Seine, and formed a joint-stock company for that purpose. The same year they erected steam-engines on the île des Cygnes, to set in motion mills for grinding corn, instead of the water-wheel, rendered useless by the freezing of the river Seine. During the revolutionary war 1,500 pieces of brass were cast at the foundry of Chalifet, under the direction of Mongré. The Perier suffered greatly by the depreciation of specie, and other causes, which induced them at length to employ their establishment only in making machinery for manufacturers. J. C. Perier created a foundry of brasses for the navy of Liège. He was admitted into the academy of Sciences, in the section of mechanics, in 1785; and he died August 17, 1812. He was the author of an essay on steam-engines, and other memoirs in the collection of the academy.—*Biog. Univ.* *Biog. Mus.* *de Contes.*

PERIER (Aymar) of a different family to the preceding, was born at Graviers, in 1776 and studied among the fathers of the Cemetery of Lyons. Dying, at the age of twenty three, father of no issue at Lyon, he endeavoured to introduce into that country fers such as are used in Catalonia. His father having acquired a property in the coal mines of Arles, in 1804, he became one of the managers, and introduced there considerable improvements. Aymar Perier joined his brother, Casimir, in establishing a bank at Paris, the available capital of which was devoted to the promotion of various undertakings, in the success of which he wished greatly to his know-

ledge of chemistry and mechanics. After the death of J. C. Perier, he purchased the manor of Chalifet, where he had projected some advantageous alterations in the foundations, when he was taken off by death, April 2, 1821. He was an excellent chemist, and published many articles in the *Annales de Châlons.* He belonged to the general council of manufacturers established to the house department, and to other public bodies; and he was one of the first promoters of the plan for lighting the streets, *&c.* with gas.—*Biog. Unio.*

PERINGSKIOLD (Jens) a learned antiquary, was born at Strengsøe, in Sjælland, in 1656, and was the son of Laurentius Fredericus Peringer, professor of rhetoric and poetry. In 1669 he was appointed antiquarian professor at Upsal in 1680 secretary and antiquary to the king of Sweden and in 1719, successor to the chairmen for antiquities. His works are much valued by Swedish historians and antiquaries the principal are, "Hist. Hållnæs regia," from a Runic MS., "Hist. Wiklimesianae. Theodoricus Veronensis ac Nisusburgum," &c. copied and translated from an ancient Scandinavian MS., "Saxo's Historia Regum Septentrionalium, with two translations; and, "Monumenta Sacra-Gothica," 2 vols. folio, 1715.—*Norw. Bibl. German.*

PERINO DEL VAGA, otherwise PIETRINO BUONACCORSI, the most distinguished of Raphael's pupils, and assistant in the Vatican, was born in Tuscany in 1500. He was considered the first designer of the Florentine school after Michael Angelo, the imitation of Isaac in the Stasim; the taking of Jericho, Joseph sold by his brethren, Jacob with the vision and others among the frescoes of the Loggia, are his. Perino's principal fame lies in Genoa, where he presided over the establishment of the Design police, and bore every performance befitting the spirit of Raphael's school. He debased much of his fame by his impetuosity, and by his intemperate course of life; nevertheless, he is, however, to be considered as the founder of the school of Genoa. He died in 1547.—*Pictoribus Itali.*

PERION or PERRION (Jacques) a learned doctor of the Sorbonne, was born at Cormery in Touraine, in 1300. At the age of seventeen he entered a Benedictine monastery at his native place, where he died about 1365. He gave eloquent treatises of several of the ancient authors and philosophers, but the correctness of his version has been called in question. By a particular decree of the university of Paris, he was appointed to defend Aristotle and Cicero against Hessec; and he discharged his task with success. His principal works are, "De Distinctione H. et.," "Misteria Absit. Babylonii;" "Topographia Theologica, lib. n." "De Quinque Languore Galliorum et quinque regionibus Galliae;" "Liber de Statuorum Vicinum qui Primitur ab Ecclesiis appulerunt sub nomine quatuor;" "Quintus," in Latin, "De Vita re-

P E R

Sainte-Joseph Christi;" and "De Vita Virginali et Ascensione," with versions of Plato, Aristotle, Democritus, &c. &c.—*Nicolaus Tempor Episcopus des Hellenorum Graecorum.*

PERLEBNIUS. There were two learned Dutch writers of this name in the seventeenth century, father and son.—*AVRONY* the elder is principally known as the author of an elaborate treatise on the study of divinity. He died in 1672.—His son *JAMES*, who soon eclipsed the reputation of the other was born in 1661 at Duss, in Holland, and accompanied his father to Denmark where the latter had been elected to the Oriental professorship. Here he obtained the instructions of Hogerius and Cuper till 1671 when he went to Utrecht, and studied under Grotius. He afterwards removed to Leyden and applied himself with great success to history and the belles lettres. Soon after he accepted the headship of the grammar school at Delft which he superintended with great credit till 1681; and then resigned it on being chosen professor of rhetoric and history at Franeker. After filling this situation about twelve years, he obtained a similar one with the Greek professorship annexed at Leyden. Among the principal of his writings are "Curtius in Integrum Resolutus Animadversores Historiae" "Origines Egyptiacae et Babylonicae" 2 vols. a commentary on the "Mémoirs de l'Académie" an Historical commentary on the Transactions of the Seventeenth Century an edition of the works of Abu Alaa in two octavo volumes, with some orations and valuable tracta on subjects of astro-arian research. He died at Leyden in 1717.—*New Diet. Hist.*

PERKINS (ELIAS) a physician who exerted his profession at Plainfield in the United States of America in the latter part of the eighteenth century. He was the inventor of a method of curing diseases by the application of brass and iron pins which were termed metallic tractors and the doctrine on which he professedly grounded his invention was called from the author Perkinism. He applied his tractors at first to patients labouring under gout, rheumatism and analogous disorders and (probably through the force of imagination) he effected some cures. Fame magnified his success, and the supposed discovery attracted some notice in England and much more in Denmark where Abildgaard Rafi Herboldt Baag, and other medical men of repute engaged in the study of the mystery of Perkinism, which some of them endeavoured to connect with electricity. The fury of this ridiculous quackery was demonstrated in England by the experiments of Dr Heygorth and in Denmark its credulity received a death-blow from the well directed satire of an anonymous writer. Perkins, the inventor of the tractors, carried his pretensions so far as to profess to cure the yellow fever by the application of his instruments but he died of that disease notwithstanding the use of his boasted remedy about the end of the last century.—*BENJAMIN DeVERE'S FRANCK*, son

P E R

of the preceding visited England for the purpose of selling the metallic tractors, and wrote some pamphlets in order to recommend them.—*Biggs' Year.*

PERKINS (WILLIAM) a learned divine, was born at Marston, in Warwickshire in 1558 and was educated at Christ college, Cambridge where he at first led an extremely dissolute life but afterwards became reformed. Being chosen fellow of his college he took orders, and first preached to the prisoners in Cambridge jail. He subsequently became preacher at St Andrew's church Cambridge, which was the only preferment he ever obtained. He died in 1602. He was a rigid Calvinist, and the treatises which he published in defence of his doctrines involved him in a controversy with Arminians, which lasted until his death. He was also for some time suspended by archbishop Whitgift for having subscribed or declared his approbation of the book of discipline. His works were collected and published in 1606 in 3 vols. folio and are written in a much better style than was usual in his time they have been translated into German Dutch French Spanish Italian and Latin.—*Parker's Church Hist. Brook's Puritans.*

PERUVFTY There were two ingenious writers of this name contemporaries and relations both natives of Rouen en Forêt. Of these *JAMES* the elder was born about the close of the seventeenth century and is known as the author of a work "On the Abuses of Education" 12mo, a "History of the Reign of Cyrus" 12mo 3 vols. "Letters on Physiognomy" 3 vols. "Counsels of Friendship" "Memoirs of Remarkable Citizens of Lyons," 2 vols. 8vo, and "A Picture of Lyons" of which city he was historiographer, and a member of the academy whence in his writings he calls himself somewhat affectingly a "Soldier of the Church of Lyons." His death took place in 1777.—*AVRONY* Joseph the second was born in the spring of 1716. He assumed the Benedictine habit, and after sailing to the Maldives and back settled at Berlin where he was elected a member of the Royal Academy and was made librarian to the king. His works consist of "An Account of a Voyage to the Malouine Islands," &c., "A Dictionary of Painting, Sculpture and Engraving" 12mo, "A Dissertation on America and the Americans" written in answer to Pauli "On the Fables of Egypt and Ancient Greece" 8vo 2 vols., and a "Mytho-Hermetic Dictionary." He passed the latter period of his life in his native country where he died at a very advanced age, about the commencement of the present century.—*New Hist.*

PERON (FRANCIS) a French naturalist and voyager, born in 1775 at Crilly in the Bourgogne. After having received a good education, he entered into the army in 1795 and was sent to Germany. He was made a sub-lieutenant, for his good conduct at the siege of London, and in December 1795 he was made prisoner by the Prussians, at the battle of Kalle-

P R R

P R R

colonist. In about a year he was discharged, and having lost the sight of one eye, he was discharged from the service, and returned to Ceylon in August, 1795. He then obtained admission into the school of medicine at Paris, where he applied himself closely to his studies, and also attended the lectures of the professors of natural history. When the expedition to the South seas, under captain Baudin, had been projected, Peron, with some difficulty, obtained the situation of zoologist. The vessels appointed for this service, the Geographer and the Naturalist, sailed from Havre October 19, 1800, and returned to France in April 1804. They had visited New Holland and many of the Australasian and Polynesian islands; and during the whole of the voyage Peron seized every opportunity for augmenting the stock of science by making collections and observations. After his return he was employed in conjunction with captain Freycinet to draw up an account of the voyage, and with M. Le Sueur to describe the new objects of natural history which had been procured. Peron died December 14, 1810. His works are, "Observations sur l'Anthropologie," and, "Voyage de Découvertes aux Terres Australiennes, 1807-1816" 3 vols 4to.—*Bibl. Univ.*

PEROT (Nicolas) archbishop of St. Ponto a learned prelate of the fifteenth century author of an excellent translation of Polybius, and of a commentary on the writings of Martial entitled "Corinopis" in which he displays deep erudition and great research into the domestic habits and manners of the ancient Romans. He also wrote a treatise on grammar and another on the vices of Nature. Perot in early life filled the situation of secretary to cardinal Bessarion and is said to have been the involuntary cause of that prelate's failure in his attempt upon the papacy. In spite of the intrigues of his enemy cardinal Alain the concile had, it seems, elected Bessarion to the vacant triple-crown and a dispensation was actually dispatched to absolve him when Perot positively refused to admit them as his emanation was. He died, busily engaged at his studies. The prelate, disgusted at the disrespect shown them retired; and Alain, seeing upon the circumstances prevailed on the body to proceed to a fresh election. Perot died in 1460.—*Bibl. Univ.*

PEROUSE (Jean FRANCOIS GALAUP) de la a French navigator distinguished for his talents, and still more remarkable for the mystery attending his fate. He was born at Albi, in Languedoc, in 1761 and entered at an early age into the naval service of his country. During the American war he had the command of an expedition sent to Hudson's bay when he destroyed the trading establishments of the English. After the restoration of peace the French government having determined on the prosecution of a voyage of discovery M. de Perouse was fixed on to conduct the undertaking. Two vessels, the *Pomone* and the *Astrolabe*, were placed under his command,

and leaving Toulon in 1785, he proceeded, in the South sea, and having visited the coasts of California, and other places, he crossed the Pacific to continue his researches on the eastern coast and islands of Asia. In April, 1787 the ships sailed from Macassar towards the north, and after passing the islands of Formosa, Quelpart, the coast of Corea and Japan they sailed between Chinese Tartary and Saglekwa island where they landed and at length on the 6th of September they arrived at the harbour of St. Peter and St. Paul at Kamtschatka. There they stayed to refit the ships and they experienced the utmost hospitality from the Russian local authorities. The commander had also the satisfaction to receive letters from France informing him that he had been promoted to the rank of chef-d'escadre or commodore which event M. Kastoff the governor of Kamtschatka, as soon as he heard of it, celebrated by a discharge of all the artillery of the place. From St. Peter and St. Paul Perouse sent copies of his journals, &c. to France by M. de Lapeyre, who proceeded overland across Siberia to Petersburg and on the 30th of September the vessels sailed in search of further discoveries. They crossed the equinoctial line without meeting with any land till the 6th of December when they saw the Navigator's islands, and a few days after they landed at Maouna, one of that group. Here M. de Langlé the captain of the *Astrolabe*, M. Lamasson the naturalist attached to the expedition and ten other persons, were killed in what appears to have been an unprovoked attack of the natives. After this misfortune Perouse visited Oyohava, an island near Maouna, and then steered for the English colony in New South Wales. On the 23rd of January 1788 they made the coast of New Holland and on the 26th anchored at Botany bay at the very time governor Philip with the whole of the colonists embarked under his direction was sailing out of the bay to the then newly projected settle of Port Jackson. The French left Botany bay in March, and in a letter which the commodore wrote in the preceding month he stated his intention to continue his researches till December when he expected to arrive at the Isle of France. This was the latest direct intelligence received of the fate of the expedition and M. d'Entrecasteaux, who was despatched by the French government, in 1791 in search of Perouse was unable to trace the course he had taken, or gain any clue to the catastrophe which had befallen him and his companions. Very recently however the attention of the public has been excited towards this mysterious affair by a notice published by the French minister of the marine, purporting that an American captain had disclosed, that he had seen in the hands of one of the natives of an island in the tract between Lombok and New Caledonia, a cross of the order of St. Louis, and some medals, which appeared to have been procured from the shipwreck of La Perouse. In consequence of this information, the commander of a vessel

P E R

which sailed from Toulon, in April, 1696, on a voyage of discovery, received orders to make researches in the greater specified, in order to restore to their country any of the shipwrecked crew who may yet remain in existence. Other intelligence, relative to the wreck of two large vessels, on two different islands of the New Hebrides, was obtained by captain Dillon, the commander of an English vessel at Tucoro, in his passage from Valparaiso to Poughkeepsie in May 1696, in consequence of which that officer has been despatched to the New Hebrides to ascertain the authenticity of the report he had received. The voyage of La Perouse was published in French in Paris, 1797, 4 vols. 8vo and an English translation in 3 vols. 8vo, appeared in 1798 from which the preceding account is partly derived.—*Bugl. Univ. Amer. Amer. paper* vol. n.

PERRAULT the name of four brothers, who flourished at Paris, of which city they were natives, in the seventeenth century.—**CLAUDE**, the elder, born in 1613, was originally a physician but having a decided taste for the study of architecture made that science his profession and rose to great eminence in it, as well as in painting and sculpture all which attainments he is said to have acquired without any other instructor or assistance than his own genius and application. Voltaire calls his celebrated facade to the palace of the Louvre "one of the most august monuments of architecture in the known world." He published a translation of Vitruvius with highly finished drawings of his own, 1673, at the request of Colbert as also, *Me moires pour servir a l'Histoire naturelle des Amanus*, 2 vols. 1676 with plates.

ESSAI DE PHYSIQUE 12mo, 4 vols. 1688 the year of his decease and *Roueill de plusieurs Machines de nouvelle Invention* 40 published two years after his death—**CHARLES**, born in 1643 equalled his brother in his love for the fine arts and rose far above him as a man of letters. He was educated by his father a French advocate for his own profession at the college of Beauvais. Being fortunate enough however to attract the notice of Colbert, that minister appointed him secretary to a society which, founded under his own auspices eventually ripened into that of the Academie des Inscriptions. In this situation he gave such satisfaction that his patron afterwards gave him in succession the posts of controller of the buildings and comptroller general of finance which he held till the disgrace of Colbert in 1683, and then retired with a well-earned reputation into private life. His principal work and one which gave rise to an animated, not to say an acrimonious dispute between Boileau and himself is his

Boileau de L'Ami le Grand in which he maintains the superiority of modern writers over those of antiquity. His other productions are "La Perseuse," 1668, a poem of considerable merit very popular in its day "Le Cabinet des Beaux Arts," folio a musical translation into French of the fables of Fau-

P E R

res; "A Parallel between the Ancients and Moderns"; "Observations on the Writings of Longinus," &c. His death took place in 1705.—**PIERRE PERRAULT** also held a situation in the financial department under Colbert, and wrote "De l'Origine des Fontaines";—**NICOLAS** was the author of a work entitled, "La Morale des Jésuites;" and died a doctor of the Sorbonne, in 1661.—*Bugl. Univ. Amer.*

PERRIER (CHARLES) or DUPERRIER, a French poet was born at Aix in Provence, and first devoted himself to Latin versification, having a quarrel with the celebrated Scarron whom he boasted of having forced they referred their differences to Menage, who decided in favor of Perrier and called him The Prince of Lyric Poets. Perrier afterwards applied himself to French poetry and took Malherbe for his model but as thus he was not very successful though he twice gained the prize of the academy. He died in 1672. His Latin poems may be found in various collections, but they have never been printed separately.—*Bugl. Univ. art. Duperrier*

PERRIER (FRANCIS) a French painter and engraver was born at Mâcon in Burgundy about 1590. His father opposing his design of becoming a painter he ran away from home, and in partnership with a blind man he begged his way to Rome where he became intimate with Lanfrance who admitted him into his school. On his return to France he passed some time at Lyons where he painted the Carthusian cloister. He then proceeded to Paris, and was employed by Simon Vouet. In 1635 he returned to Rome where he applied himself to engraving the principal antique statues and bas reliefs. He stayed there ten years, and on the death of Simon Vouet he went again to Paris, where he became professor of the academy and died in 1660 — *Fallington. Scott. D'Argenville.*

PERRON (JACQUES DAVID) cardinal of St Agnes, a prelate highly distinguished by his talents, natural and acquired. He was born of a noble Niègois family Nov 23 1556 and exhibited so singular a precocity in literary attainments, that at the age of twenty he was introduced to Henry II of France as a perfect scholar. In fact he appears at this period to have been familiarly versed in all the learned languages, especially in Hebrew as well as in the sciences of ethics and mathematics, for the acquisition of much of which he was indebted solely to his own unassisted efforts and industry. The personal of the works of Aquinas is assigned to the cause which conducted principally to his abandoning the mode of faith in which he had been brought up, and recollecting himself to the church of Rome less caustic scruples have however found reasons equally strong for the adoption of this measure in the honours and rewards to which it led. Certain it is, that his zeal for making converts was even only equalled by his subtlety and impetuosity as a controversialist, while his efforts at length

assumed their highest position of honour in serving a papal legate at least, of Henry IV. In the service of this prince he distinguished himself as an active and able diplomatist, especially in his negotiations with the papal see, carried on for the purpose of procuring his master a formal absolution, and in concluding which he was fortunate enough to secure the consent of both parties. At the special request of Henry he now composed his "Reply to King James the First of Great Britain," and received in reward of his zealous services, the bishopric of Berriac and the archidiaconate of Senon, with the dignity of grand chamberlain of France in succession. Pope Clement VIII at length put the crowning distinction to his career of greatness, by elevating him to the purple. Beside the creation already mentioned, De Ponson composed another in answer to the celebrated Dr Plessis Mornay. "On the Assessment of the Ecclesiast." as an account of his conference with this his great rival in ability is also to be found among his works, which were collected and published after his decease in three volumes, Latin, with a life prefixed. His death took place at Paris, in 1618.—*Nouv. Diet. Hist. Mém.*

PERRONET (Jean Roussoeur) an eminent French engineer of the last century. He was born in 1706 and studied the principles of architecture under Beauvais. The bridges of Orléans, Neuilly and Nantes, and the canal of Burgundy are among the monuments of his skill as well as some of the finest roads of France which he improved in his capacity of director-general of roads and bridges. The management of the school of engineers at Paris was confided to his superintendence, and several literary societies, foreign and domestic, admitted him among their members. The Royal Societies of London and Stockholm among the former the Academy of Sciences among the latter the king also marking the sense he entertained of his merits, by conferring on him the cross of the order of St. Michael. He published a work "On the Mode of constructing grand Arches of Stone, from 200 to 300 Feet in Width;" and a "Description of Bridges, embracing those of his own construction." His death took place at Paris in 1784.—*Biog. Univ.*

PERRY (John d' Abbenement (Nieuwstad), a distinguished member of the French Academy born at Clamecy sur Marne in 1666. Being of a Protestant family he was sent for education to the college of Reims, where he studied the law, and he was admitted to practice at the bar; but he quitted his profession for that of Historian, and employed his pen with great industry especially in translations of the classics. He possessed a sound judgment and lively fancy and wrote with freedom and eloquence, constituting the period at which he lived; but his works are so general expanded by the more recent production of succeeding writers. Among the authors he translated are, Minotius Felix, Tuccius, Lutetius, Aretius, Thucydides, Xenophon, Cicer-

and Frontinus. After having resided at Paris for some time, he left it in consequence of the civil war, and went to reside on his estate at Abbenement, where he died in 1726. Perronet displayed an unusual degree of versatility as to religion, for after renouncing the profession of Protestantism in which he had been educated, he returned to it again. There is however no reason to question his sincerity in his altered motives would rather have led him to continue a Catholic.—*Distr. Hist. Biog. Univ.*

PERRY (James) a native of Abberdon, in Scotland the son of an eminent builder born October 30, 1756. He received the rudiments of education at the chapel of Garnock under the rev W Farquhar (father of Mr Walter Farquhar) whence he was removed to the high school in his native city. In 1771 he was admitted of the marshal college in the university there and commenced a course of study for the Scottish bar. His father failing in business in 1774 he proceeded first to Edinburgh and afterwards to England with the view of at once completing his education and gaining a livelihood. In pursuit of the latter object he engaged as clerk to Mr Dunwidde a manufacturer at Macclesfield with whom he remained two years, employing his leisure hours in the perusal of the best authors, and cultivating the friendship of several of the principal inhabitants by the display of his talents in a society established there for the purpose of moral and philosophical discussion as well as by several literary essays. In the beginning of 1777 he quitted Manchester for the metropolis and soon after was retained by Messrs Richardson and Urquhart as a writer in the "General Advertiser" and the London Evening Post, in which capacity he reported the memorable trials of admirals Keppel and Palliser seceding up from Portsmouth daily and unremitted, eight columns of proceedings taken by him in court, a circumstance which raised the sale of the paper many thousand a day. In 1781 he projected and was the first editor of the "European Magazine" which situation he quitted in little more than a year for that of editor of the "Gazette" with an express stipulation that he was to be left to the free exercise of his own judgment and political opinions in the conducting of it. In undertaking this task he had the merit of suggesting an improvement in the manner of reporting the debates in parliament substituting the employment of a succession of reporters for that of a single one as had hitherto been the practice. By these means he completely superseded Mr Woodfall's successor, in the "Morning Chronicle" a paper which he afterwards purchased himself and carried on (after the death of his friend Mr Gray who joined him for a few months in conducting it,) as sole editor and proprietor. Mr Perry had more than once an opportunity of coming into parliament, being solicited to that end both by Mr Pitt and lord Shelburne but firm to the cause he had adopted, he declined both offers. He was twice prosecuted under an article of information, the first time for printing the "Re-

P E R

sition of the Derby Meeting," and secondly for a pamphlet respecting his present Master, Duke prince of Wales, copied from the *Advertiser*. On the former occasion he was defended by lord Erskine, on the latter he pleaded his cause in person with great tact and ability, and both times obtained a verdict of acquittal. For a considerable time previously to his decease, his declining health compelled him to relinquish all share in the conduct of his journal, and for the four last months of his life he had retired altogether from London to Brighton, where he died December 6, 1821, in his sixty fifth year. For a great many years the *Morning Chronicle*, under the management of Mr Perry, might be deemed a sort of official organ of the Whig opposition, a feature which it has gradually lost since his death, partly in consequence of the merging of the Whigs into a more general party distinction, but probably in a still greater degree occasioned by the loss of an individual who had for so many years enjoyed the friendship and confidence of their principal leaders. Mr Perry died in possession of a very handsome fortune amassed in a long course of useful industry and active exertion.—*See, Bay.*

PERRY (SAMUEL) was born at Aston near Birmingham, and educated for the medical profession. Being convicted in 1795 of a libel published in the *Argus*, an opposition paper of which he was then editor, he withdrew to Paris, where he became the friend, and subsequently the fellow-prisoner of Thomas Paine in conjunction with whom he narrowly escaped the guillotine during the reign of terror. Their execution was only delayed by the circumstances of the paler accidentally turning on its sword their dungeon door by which means the red chalk, the sign of destruction, was left in the hands of the prison during the visit of the officers. The mistake was soon discovered, but fortunately for the captives the critical moment had arrived, Robespierre became himself a victim, and they were liberated. On his return to England, Mr Perry was imprisoned on his entreaty but liberated on a charge of malversation. He after wards purchased the *Statesman* newspaper, which he edited a few years, and then sold. He published several political tracts, and died suddenly of the rupture of an artery of the heart, on the day in which he was liberated from prison under the merciful act, early in 1823. He was seventy-eight years of age.—*See, Bay.*

PERIUS FLACCUS (Aulus) a celebrated Roman orator, born AD. 54, at Velturn in Etruria. He lost his father while young, and being sent to Rome, he studied grammar and rhetoric, and afterwards became the pupil of Cicero, the Stoic philosopher with whom he formed an intimate friendship. He was also acquainted with Lælius Bassus, the lyric poet, Lucretius, author of the *De rerum Natura*, and the philosopher Damocles. Pausus belonged to the opposition party, but he appears to have held no public office, having died prematurely, AD. 45. His works consist of six orations,

P E S

displaying elevation of sentiment and elegance of style, occasionally obscured by somewhat levity of expression, and by allusions to the manners and customs of his time. They have been often published in conjunction with the natives of Juvenal, as in the very useful edition of Medea, which contains a prose translation and notes, 1789, 2 vols. 8vo, reprinted in 1813. Among the principal pastoral translations of Petrus may be specified those of Dryden, Dr Brewster, Drummond, Horace, and Gifford.—*Vetus de Post. Lat. Latinus Prodigia in Petrus.* Edis.

PERUGINO (Pietro) an eminent Italian painter whose family name was Vassalli, was born at Perugia in 1446, and was the disciple of Andrea Mantegna at Florence. He rose to considerable eminence, and was employed by Sixtus IV to paint several pieces for his chapel at Rome. On his return to Florence his avaricious disposition involved him in a quarrel with Michael Angelo, and he was so severely arraigned by the Florentine poets, that he was obliged to retire to Perugia. The same vice proved the cause of his death, for being in the habit of carrying all his money about him for safety he was once robbed, and though he recovered the greater part of his property his grief had been too severe for his strength, and he died in 1524. His touch was light, and his pictures were highly finished; his female figures were particularly graceful, but his manner was stiff and dry and his outlines were often incorrect.—*Pilkington.*

PERUZZI (Bagnacavallo) an eminent painter and architect, was born in 1461 at Acquapendente, in the diocese of Viterbo. He went to Rome, where he was employed by Alexander VI in decorating his palace and also in several chapels and convents, which he painted in fresco in a very grand style. The branch in which he particularly distinguished himself, was in perspective and architectural views, which he represented with such fidelity and precision and so able a management of the chiaroscuro, as to become perfect illusion; his imitations of the human body were also much admired. One of his most esteemed works is at the Farmacia at Rome, in which he has represented the history of Parus, embellished with ornaments in imitation of stucco, so admirably executed, that Titian is said at first to have been deceived by it. The life of Peruzzi was a series of disappointment and misfortune. Having with great difficulty saved a little property he was plundered of it at the sacking of Rome, and he was finally poisoned by the jealousy of a rival in 1526, in the prime of his life. He is said to have written a treatise on the antiquities of Rome, and a commentary upon Vitruvius.—*Tiburtius.* Bryan's *Dict. of Paint.* and Bay.

PERSEILLE (Charles Ernest) a French poet, was born at Paris in 1712. He was brought up to the law and notwithstanding his disinclination to his profession, he regularly attended business, and became the assistant to M. Le Tellier of Bay, a former-prepared. He wrote two or three comedies in verse, entitled

"Ecole de Temps," and, "Ecole en Partie," which were highly successful, and "La Maternite de l'Humanite," which was never performed; besides some fables which were esteemed. He was also the author of "Letters on Education," and a "Discourse on the Contingent Laws of the Kingdom." He died in 1768.—*Dic. Hist.*

PESTALOZZI or PESTALUZ (HANS) a distinguished German philosopher famous as the inventor of a new mode of instruction for youth. He was born of a good family at St. Gall January 12, 1746. Left an orphan in his infancy and without fortune, he acquired early habits of industry and adopted from his situation the employment of a teacher. Guided by experience he formed a novel plan for ameliorating the lot of the indigent, by far nishing them with the means of mental improvement; and he developed his ideas in a fictitious narrative entitled "Lieslhard and Gertreda" printed at Leipzig in 1781 1787 which has passed through many editions and been translated into most European languages. Pestalozzi was powerfully seconded in his philanthropic projects by M. Tschaurer, bailiff of Wildenstein, a rich Swiss proprietor whose character he has traced in his romance under the appellation of Arner. He composed many other works with reference to the same object, among which may be mentioned a weekly paper for the country the numbers of which were republished in 3 vols. 8vo., "Letters on the Education of the Children of Indigent Parents. Reflections on the Progress of Nature in the development [education] of the Human Species." "Image for my Absorbery or Elements of Logic for my Use." In 1799 the Helvetic government appointed Pestalozzi director of an orphan house at Staats, in the canton of Unterwald; and, on the dissolution of that establishment, the chateau of Hergiswil, four leagues from Berne, was granted him, where he carried on his plan of tuition. The number of pupils which flocked to him, induced him to remove his seminary to the castle of Vevoux, in 1803 the change of Zurich nominated Pestalozzi member of the Helvetic Consilium, summoned by Buonaparte to Paris, and he subsequently received from the emperor of Russia the order of St. Vladimir. He closed a long life of labours for the benefit of society on the 17th of February 1807 at Brugg in Switzerland. Messrs. Ananay, Derval, Charnasse, Julian Haymond, and others, have published accounts of Pestalozzi's mode of instruction; and the Helvetic Diet having appointed a commission to examine his establishment, the abbe Gerard of Fribourg, one of the members, drew up a report on the subject, published in 1805.—*Dic. Nauv. des Contemp. Edit.*

PESTEL (FASCIUS WILLIAM) a celebrated German jurist, born at Hanau in Westphalia in 1744. He became professor of public law at Leyden in 1765, when he published a discourse, "De discione ex negotiis Iustis publicis in civitate indumentorum." The revolution of 1789 occasioned the removal of Pestel

from his office, and he retired to Germany but for 1803 he was honourably recalled, and resumed his functions. He died in 1803. His principal works are "Fundamenta Jurisprudentia-matricula de lectione et usum auditorum," 1773 of which a fourth edition, much enlarged appeared in 1788, and which has been translated into French, Dutch, and German, and "Commentarii de Republica Batavica," 1 vol. 8vo. in the new edition of 1798, augmented to 3 vols. 8vo.—*Dic. Nauv. des Cont.*

PETAGNA (VINCENZO) an Italian physician and botanist, born at Naples in 1724. He was educated among the jesuits, after which he studied medicine. In 1770 he became attached to the service of prince Karoly, the Austrian minister at Naples, with whom he travelled in Italy and Germany, and on his return to his own country he employed himself in setting in order the collections of objects relating to natural history and especially insects, which he had collected. He then made a visit to Sicily to examine the productions of that island. Subsequently he became professor of botany in the university of Naples and he was a fellow of the Royal Society of London, and other scientific associations. His death took place at Naples, October 6 1810. He published "Institutiones Botanicae Naples, 1785 5 vols. 8vo. Specimen Insectorum Calabria alternum," 1785 4to. "Institutiones Entomologicae" 1790 2 vols. 8vo. "Delle Facoltà delle Piante" 1797 3 vols. 8vo.—*Dic. Nauv. des Contemp.*

PETAU (DENYS) or DIOSCUREUS PETAVIA, a learned jesuit born at Orléans in France August 21 1583. Such was his early proclivity in literature that he became professor of philosophy at Bourges at the age of nineteen. In 1600 he entered into the order of the jesuits seeking his profession at their college of Clermont at Paris, and he was afterwards sent to Rheims in Picardy to teach rhetoric. Thence he was removed to the college of La Flèche, in the province of Anjou and finally to the college of Clermont at Paris, where his death took place December 11 1637. Father Petavius displayed a universal genius, and acquired a critical knowledge of the most important living and dead languages, and more than a superficial acquaintance with all the liberal arts and sciences. He composed tragedies and wrote Latin, Greek, and even Hebrew poetry which has been praised by Groton. But Petavius owes his fame to his writings on history chronology and divinity. His treatise entitled "Opus de Documentis Temporum" 1627 1630 3 vols. folio comprises a vast mass of evidence relative to the synchronisms of ancient history of which almost all subsequent writers on the subject have availed themselves and his judgment of this great work, called "Rationarium Temporum," is one of the best compendiums of general history extant. In his "Opus de Theologia Disputativa," 3 vols. folio, he displays an equal extent of learning in discussing the doctrines of Christianity. Among the other publications of this celebrated writer

See "Umnologus," folio 1; Tabula Chrysologorum Regum," and editions of the works of Symmachus and Chrysostom.—Pervenit. M. M. B. Big. Univ.

PETER OF BLOIS, or PETRUS BLERSENUS, a learned ecclesiastic of the twelfth century a native of Blois in France who was in England in the reign of Henry II as the archdeaconary of Bath and afterwards that of London. He was the intimate friend of John of Salisbury to whom he wrote a number of epistles still extant containing some interesting facts and observations relating to the times in which he lived. Besides his epistles, he wrote books "De Studio Scriptiorum" "De Officio Episcopi" "De Vita Clericorum curialium &c." He died in 1200.—*Tributarius. Cate de Scriptis Ercini.*

PETER surmounted Chrysologus, a Roman Catholic saint, was born at Imola in the fifth century and was educated by Cornelius bishop of that city. He was elected bishop of Imola in 433, and died before 451. He acquired the surname of Chrysologus from his great eloquence in the interpretation of that word being golden speaker. He wrote a great number of homilies in a quaint style but concise and elegant also A Letter to Eutyches the Archimandrite in which he decries against the sentiments of that monk and expresses his abhorrence of the conduct of the patriarch Flavianus. The best edition of St Peter Chrysologus is that printed at Augsburg 1758 folio.—*Cate. Diction. Sacrae Scripturae.*

PETER OF CLUGNY or PETER the VENERABLE a French monk was descended from the noble family of the counts de Blois-Bourges and was born in Auvergne in 1090. He became abbot of Clugny in 1125 and at the same time was chosen general of his order in which he instituted a rigid discipline. He met with a great deal of trouble from his predecessor Pontius, who had regarded his abbacy on a visit to the Holy Land but who upon his return endeavoured to get possession of it again by force for which he was excommunicated and Peter remained firm in his seat. He then applied himself to the refutation of the doctrine of Peter de Bruys and became one of his rigorous persecutors. In 1140 he afforded shelter to the unfortunate Abelard and by his intercession at Rome he prevented the execution of the unjust sentence which had been pronounced against him. He died at Clugny in 1156. He acquired the surname of Venerable from the gravity of his deportment. He wrote a treatise in four books, against the Mahometans and caused the Koran to be translated into Latin. His works consist chiefly of polemical pieces against Jews, Patriarchians, &c. and Letters some of which are curious and interesting. They were published at Ingolstadt in 1566 and at Paris, with the notes of Duchesne and Maunder in 1614. This last edition was inserted in the 2nd volume of the "Bibl. Patr."—*Cate. Diction. Morari Miller's Ch. Hist. Eccles. Diet. Hist.*

PETER the HERMIT a fanatical monk of

P E T

America, who about the close of the eleventh century, crossed almost the whole of Europe to the first of those attempts upon the Christian power in Palestine, then known by the name of the Crusades. Peter, who had himself made a pilgrimage to Jerusalem, impelled by the difficulties and indignities he had undergone in his progress towards the holy sacrifice, flew at his return to Pope Urban the Second, and under the auspices of that Pontiff preached to an assembly of more than four thousand of the clergy with thirty thousand laymen that met at Fincham, the apparently wild project of precipitating the whole of Christendom into the plains of Syria, in order to drive the Mahometans from Jerusalem. The success of his enthusiastic haranguer was proportionate to the boldness of his scheme and the ignorance of his audience nearly the whole of whom instantly took the vow and their example was soon followed according to contemporary authority by more than six millions of persons in various countries, who professed themselves the soldiers of the Cross. Peter whose personal exertions among the Continental provinces had been terminating himself led the way through Hungary at the head of a rude undisciplined multitude of more than three-hundred thousand men whose excesses of fanaticism, robbing the population of the countries which they traversed in their march against them, this circumstance combined with disease and the want of the necessities of life spread devastation among their ranks, so that a comparatively small number survived to bring their mad attempt to an issue which was temporarily successful. Peter distinguished himself by his personal courage at the storming of the holy city and having witnessed the accomplish ment of his undertaking finding too perhaps his influence over his followers diminishing returned to his native country where he founded the Abbey of Noirmoutier and died its first superior.—*Mosheim. Big. Univ. Gibson.*

PETER ALEXANDROVITCH czar of Russia, usually termed Peter the Great was born May 30 1672. He succeeded to the crown on the death of his half brother Feodor in 1682 but his sister Sophia an ambitious princess exerted the Streitites or guards, to memoiry the maternal relations of Peter and causing his elder brother Ivan to be assassinated with him in the nominal sovereignty obtained for himself the regency and assumed the title of autocrat. In 1689 Peter effected a revolution in the government, freed himself from the influence of the princess Sophia, whom he confined in a monastery and banished her minister Galitzin. Ivan was permitted to retain the title of czar but without any share of authority and he survived till 1700 when he died leaving three daughters, one of whom, Anna Ivanovna, afterwards became empress, and another gave birth to the unfortunate Ivan VI. The czar Peter had no sooner become emancipated from the power of his sister and her partisans, than he

P E T

began to display indications of that extraordinary character and powerful genius, which enabled him to project and execute schemes of importance for the benefit of his subjects and his own aggrandizement. It was his object to raise the Russians from that state of semi-barbarism to which they were plunged, and to do this to secure a place among the civilized nations of Europe. His principal counsellor was a Geneverine, named Lefort, and through his advice he paid particular attention to naval and military affairs. In 1695 he equipped in person in the siege of Azoff, which place was yielded to him in 1696, by the treaty of Carlowitz. But his most singular proceeding was that of travelling as a private person in the suite of his own ambassador. In 1697 he undertook his first tour through different European countries, to study the customs and manners of civilized nations. He went through Germany to Holland and at Zierden he worked as a journeyman shipwright in the dock-yard, and acquired a practical knowledge of various useful arts. He then visited England, where he continued his studies of naval architecture; and it is both curious he engaged the best workmen he could procure, and sent them to Russia. Having proceeded to Livonia, he there received intelligence of the rebellion of the Swedes, to which he immediately returned home, crushed the insurrection and having disbanded that body of troops, he caused two thousand of them to be arrested, and distributed the remainder to different regiments. His turbulent sister, who had prompted this revolt, was destined to permanent accusation. The most important transaction in the reign of this prince was his war with Sweden which he commenced in 1700 by the siege of Narva. His troops being but imperfectly acquainted with European tactics, were at first defeated by the well-disciplined forces of Charles XII, but while the latter was occupied in Poland and Gustavus Peter repaired his army and made himself master of Ingria and Carelia. In 1703 he took Mossberg, and in 1705 Novgorod on the Neva, where he laid the foundations of Petersburg, which afterwards became the seat of the imperial government. In the ensuing years he conquered Livonia and Esthonia, and, at length, in 1710 Charles XII having attacked him at the famous battle of Poltava, the Swedes were entirely defeated, and their fugitive monarch sought an asylum in Turkey. Hostilities taking place between the Grand Signor and the latter the Russians under his command marched into Moldavia, and encamping on the banks of the Pruth, they were surrounded by the enemy. From this perilous situation they were released by the intercession of the czarina Catherine, who succeeded in inducing the grand vizier to agree to a negotiation. To the other mortification of Charles XII, who had calculated on sharing in a victory which would wipe away the disgrace he had incurred at Poltava. The Russian general, however, was obliged to surrender Azoff, as the price of the treaty

P E T

with the Turks, which he signed at Fredrik in 1711. Charles XII being killed, the war with the Swedes was terminated in 1721, by the peace of Nyenscht, in virtue of which Russia obtained full possession of Livonia, Esthonia, Ingria, and part of Carelia; and as those provinces may be considered as the granary of the north of Europe, they gave a predominant influence in the political balance to the powers who then enjoyed them. It was after the conclusion of this peace that the czar of Russia proclaimed Peter I emperor, and conferred on him the title of "the Great." In 1716 the czar had made a second foreign tour in the course of which he visited Denmark and Holland and afterwards went to Paris. While he engaged in this journey his eldest son the czarevitch Alexie, discontented with the schemes of his father secretly quitted Russia, and went to Vienna, and thence to Naples. The emperor soon after has some Russian noblemen, who persuaded the young prince to return home and acknowledge his disobedience and submit himself to the mercy of his offended parent. He was declared to have forfeited his presumptive right to the throne and was condemned to death and in 1718 his father died or was executed in prison leaving a son who nine years after became emperor of Russia. Peter now declared his younger son whom he had by the empress Catherine, his successor and the death of that child taking place when he was only two years old the father gave himself up to the most intemperate transports of grief, and passed three days in total affliction and abstinence. The senator Dolgorukof at length broke in upon his retirement, and persuaded him to return to reason and resume the management of public affairs. He then published a decree vesting in the reigning emperor the right of designating a successor and this ordinance was regarded as a fundamental law in Russia till 1797. In 1723 Peter I engaged in an expedition against Petrosia, and taking the field in person he made himself master of Der bend. By the peace which followed he procured the cession of the provinces of Ghiniss, Mazandaran, and Asterabad. He died in consequence of a strangury January 28th, 1725, leaving two daughters, one of whom, Elizabeth Petrovna, subsequently assumed the throne but he was immediately succeeded by his widow [See CATHERINE I.] The character of Peter the Great was strongly marked, and its distinguishing trait seems to have been good sense, or sound judgment. That he sometimes suffered himself to be swayed by passion and prejudice, and that he exhibited some striking instances of inconsistency must be admitted, but the former fault may fairly be attributed to his defective education, both moral and intellectual, and the latter to the peculiarity of his position. That he was fully sensible of the value of that world empire of which he set the foundation may be concluded from an anecdote related by Frederick the Great that once when the czar asked his

and her sister reading the works of Madame de Lambert. In Brest, a page of which she translated for his late master he exclaimed, "Ah! how happy are you, my children who are taught in your youth to read useful books, and have in every respects such an education as I would receive." He used frequently to say that he would willingly have lost one of his degrees if he had learned in his youth. In Rouen he not only transplanted the arts of war and peace manufactures commerce and moral science, but he also made provision for the diffusion of literature among his subjects, by founding schools, colleges, an observatory a became garden, printing-offices, libraries, and museums.—*Vallière's Life of Peter L. Stanhope, Associate, Zoffy Hot Days, Aug. 1801.*

PETER (CHARLES) an English divine and biblical critic who was a native of Cornwall. He received his education at Exeter college Oxford and took the degree of M.A. in 1713. Two years after he was presented to the living of Beconson, and in 1717 he obtained the rectory of St. Hilary both in the county of Cornwall. In 1731 he published *A Critical Dissertation on the Book of Job*, &c., in which he exhibited a very respectable degree of learning and acuteness and as one of the antagonists of Warburton he obtained the commendation of Lowth. He died February 1774, at a very advanced age and a volume of his sermons on several occasions was subsequently published.—(cont'd. May)

PETERS (HOC) a noted fanatic in the reign of Charles I. was the son of a merchant of Fowey in Cornwall. He was educated at Trinity college Cambridge where he received the degree of M.A. in 1642 but it is said that he was ultimately expelled for irregularity of conduct. He then went on the stage but was afterwards allowed to take orders, and was for a time lecturer of St Sepulchre's in London but being prosecuted for an intrigue with a married female he abandoned to Rotterdam where he became a poor pastor of the English church. He subsequently went to America where he remained seven years and then returned to England and took part against Charles I. He became one of the most useful tools of Cromwell owing to his extreme popularity with the soldiers and lower classes by his burlesque humour andirical pronouncements. When the king was brought to London for trial Peters, according to Sir Philip Warwick was really and truly his gaoler. He was vehement for the execution of Charles, and after the restoration suffered as a regicide. Some of his "Discourses," and his "Last Legacy to his Daughter" have been printed. There is some reason to believe that the strong part taken by Peters against Charles I has tended to exaggerate the undeniably points of a character which at best was very indifferent.—*Life by Hervey Granger.*

PETITION DE VILLENEUVE (Jacques) a French revolutionary statesman who was originally an advocate at Charente, and was

chosen deputy from the Town Hall of the half-Haute of the city to the States General. The character the conduct, and even the talents of Pétion have been variously represented, and while some portray him as a Cossack and others as an Aristocrat, both parties were, perhaps, equally mistaken. The important situations which he successively occupied, and which gave him a great influence over public affairs, may however be considered as a presumptive proof that he was not so despicable as he has been sometimes described. In the early part of his career he frequently acted with Mirabeau, but he did not join in such of the measures of that wily demagogue as were calculated to impede the extension of liberty and equality of national rights and privileges. In October 1789 he was appointed a member of the first Committee of General Safety and on the 4th of December 1790 he was elected president of the National Assembly. In June following he became president of the Criminal Tribunal of Paris, and when the assembly was informed of the flight and detention of the royal family Pétion, together with Barnave and Latour-Maubourg were appointed commissioners to attend the return of the unfortunate monarch. On this occasion Pétion is said to have behaved with less attention to his captives than Barnave though he treated them with less insolence than the other commissioner. He was elected to the important office of mayor of Paris November 14 1791 and in consequence of his supposed implication in the riotous attack of the Paris mob on the Tuilleries on the 10th of June 1792 he was suspended from his functions by the king on the 6th of July but was restored by the Assembly on the 13th. His behaviour on the memorable 10th of August has by some been interpreted as the result of weakness and irresolution and by others as the effect of an hypocritical design to avoid betraying his real character as an abettor of the disgraceful violence of that period. In the imprisonment of the royal family and other members of the ruling party he took a very active part and being nominated a deputy from the department of Eure and Loire to the Convention which met in September he became the first president of that assembly soon after the death of the king Pétion was accused of having contributed to the massacres of the prisoners of Paris by the Septembrists; but against this charge he successfully defended himself. He seems now however to have become the peculiar object of jealousy to Robespierre and being included in the proscription of the Girondists, which took place May 31 1793 he was confined in his own house in the custody of a gendarme, from which he contrived to make his escape and with some other deportees of the same party, he took refuge in the department of Calvados, where they in vain endeavoured to avoid themselves of the persecutions against the terrorist. Some time after the body of Pétion, with that of Basot, one of his confederates, was found in a field, in the department of

P E T^{**}

th Givenda, half devoured by wolves, and it was supposed that he had perished from hunger. His works were printed in 1792, in 6 vols. 8vo.—*Bug. Nouv. des Curios.* *Bug. Univ.*

PETION (ALEXANDER SAUZÉ) president of the republic of Haiti, born at Port-au-Prince, April 2, 1770. He was the son of a colonist named Dubois, who possessed considerable property in St Domingo, and his mother was a free mulatto. His father bestowed on him a liberal education, and he showed an early disposition for study. He was scarcely twenty when the revolutionary commotions broke out in the island, and he was one of the first who took arms. He was soon made an officer of artillery and he obtained the rank of adjutant-general during the civil war, and the English invasion previously to the arrival of general Leclerc at St Domingo. After the English had left the island Petion joined general Rigaud a man of colour like himself in opposing the projects of Toussaint L Overture. Rigaud being unsuccessful embarked for France with many of his best officers among whom was Petion. They both returned to St Domingo with general Leclerc under whom Petion held a colonel's commission. The violent measures adopted by Leclerc and his successor Rochambeau induced Petion to quit the French service and forming a union with the negro, general Dessalines they declared war against the French whom they at length expelled. Assisted by the English they succeeded in establishing the independence of Haiti in 1804. Petion obtained the government of the western district, of which Port-au-Prince was the capital. Dessalines becoming chief of the republic, assumed the title of emperor; and his conduct having given offence he was assassinated in 1806. Christophe his lieutenant was elected president of Haiti by the senate but he chose rather to take the title of king, and behaving in a tyrannical manner he was obliged to submit to a partition of his dominions. All the southern and western part of the island acknowledged the authority of the senate by whom Petion was elected president, January 27, 1807. A civil war took place between the rivals but Petion retained his office in spite of all opposition till his death in 1818, when he was succeeded by his lieutenant, general Boer.—*Bug. Univ.*

PETIT DE LA CROIX (France) a learned French Orientalist, was born in 1654 and was the son of the king's Oriental interpreter. At the age of sixteen he was sent by Colbert, to reside for some time in the East. He returned to Paris in 1680 and two years afterwards he was sent to Morocco, as secretary to the embassy under M. de St Amand to Moulay Ismaïl. He next accompanied the French ambassador against Algiers, as secretary interpreter of the marine, with that capacity he was employed in some important negotiations with Tunis and Tripoli, in which he acquitted himself greatly to the satisfaction of Louis XIV who, in 1698, appointed him Arabic professor of the Royal college. He died in 1713 at

P E T

Paris. His works are all translations, of which the following are the principal. "The Oriental Library of Haji Cala," "The History of all the Mahometan Monarchies," from the Turkish; "General State of the Ottoman Empire," "History of Georgia Khan," "History of Timur Beg," and "Persian Tales," which were published after his death, of which he says, that they were Indian plays turned into Persian stories by the dervies Meches, who gave him leave to transcribe them.—His son, **Louis ALEXANDRE MARIE**, was also Arabic professor in the Royal college, and translated the canon of Soliman II for the instruction of Moreau. He died in 1751.—*Mévr. Nouv. Dict. Hist.*

PETIT (ANTHONY) a physician and medical writer of eminence born at Orleans in 1718. He studied at Paris, and in 1746 he was admitted doctor regent of the faculty of medicine, some delay in granting the diplomas having taken place in consequence of his indigent circumstances. His industry and merit procured him promotion. In 1760 he was chosen a member of the academy of Sciences, and in 1768 professor of anatomy at the Jardin du Roi. He died October 21, 1794 at Olivet a village near Orleans, where he had for some time lived in retirement. His works are *Tracté d'ostéologie* "Rapport au Favoir de l'Inoculation" Paris, 1768 8vo "Recueil de Proces concernant les Nausées tardives," 1766 2 vols. 8vo, &c.—*Bug. Univ.*

PETIT (FRANCIS POURPOUR DU) a physician and oculist, who was a native of Paris. He acquired considerable skill in the treatment of diseases of the eye and wrote on the operation for the cataract. He also produced other works, and contrived an instrument for measuring the various parts of the eye which he called an ophthalmometer. His death took place in 1761 at the age of seventy-six.—*Elev. Diet. H. de la Med.* *Bug. Univ.*

PETIT (JONN LEWIS) an eminent surgeon and anatomist, born at Paris in 1676. He studied dissection under Lautre, when very young and in 1690 he was placed with M. Castel a surgeon of ability with whom he stayed two years, when he attended the practice of Maréchal at the hospital of La Charité. In 1692 he was employed in the military hospitals in Flanders and afterwards remained some time at Tourway as assistant-surgeon major. In 1700 he was admitted a master of surgery at Paris, where he settled and gave public lectures. He became a member of the Academy of Sciences in 1715 and he also was admitted into the Royal Society of London and the other learned associations. In 1730 he was appointed master of the college of surgeons, and repeatedly held the office of provost of that body. In 1734 he took a journey to Spain to attend the prince Don Ferdinand when he resisted the very tempting proposals made to induce him to stay in that country. He died April 17, 1759. His principal production is "A Treatise on the Diseases of the Bones;" but he also published

P A Systeme de Physique, and other works.—
Montpellier, 1659.

PETIT (PIERRE) a mathematician and natural philosopher, born at Montpellier, in France, 1625. Having studied the exact sciences with success, he accepted a civil office at the desire of his father but soon relinquishing it, he went to Paris in 1655, and cardinal Richelieu, to whom he had been recommended gave him the appointment of provincial commissioner of the artillery and sent him to visit the harbours of France and Italy. He was entrusted with Pascal with whom he repeated the experiments relating to the vacuum in physics and improved on the discovery of Torricelli. About 1649 he was made intendant general of fortifications and soon after enabled for his services. He died August 20 1677. He was the author of several works on experimental philosophy and astronomy; and he wrote a treatise on chronology in defence of Joseph Scaliger.—*Mars et ses Petits*. *Bibl. L'iss.*

PETIT (PARIS) a French physician eminent for his acquaintance with classical literature. He was born at Paris in 1617 and studied medicine at Montpellier where he took the degree of M.D. but he did not engage in the practice of his profession. Returning to Paris, he resided for some time with the president Lanugnon, an tutor to his sons and afterwards as a literary companion with M. Hoccol, first president of the chamber of accounts. Having taken a wife in his old age, he died shortly after in 1657. Several of the works of this writer are distinguished for the originality of their subjects, as well as for the learning and ingenuity displayed in them. Among these are "Liber de Motu Animalium Spontaneo" 1660 8vo. "De nova cura durioris morborum Pathos" par Transfusionem Sanguinis 1667 8vo in which he objects to the then fashionable speculation relative to the cure of diseases by the transfusion of blood. "De Amazonsis Dissertation" 1665 12mo. the best known of all his works and

"De Natura et Membri Anthropopigatorium Dissertation" 1668 8vo. Petit also published at Paris in 1663 "Selectorum Poematum lib. II cum Dissertation. de Europa Portico" 8vo. and in 1726 appeared his Commentary on the first three books of Ariosto with the Life of Petrus Martius, etc.—*Hutchinson's Bibl. Med.*

PETIT (SAMUEL) a learned divine of the reformed church born at Niort, in 1596. His was admitted to the ministry at his native place when very young and soon after appointed professor of theology and the Greek and Hebrew languages, in the college of that city of which he afterwards became principal. His extraordinary reputation for learning procured him the friendship of Petrus Seiden Vaudou, Gassendi, Horacius, and other eminent men among his contemporaries and he not only received a flattering invitation to accept the office of honorary professor in the university of Franeker, but also accepting offers of

retirement from page Ulisse VII, who wished him to go to Rome to manage the library in the Vatican Library. He however preferred remaining at Niort, where he died December 12 1643. Among his works are "Eclogae Chronologicae de Anno Atro, et de Anno et Periodo veterum Romantorum," "Leges Africae" and, "Miscellanea Observations."—*Bibl. Uss.*

PETITOT (JEAN) an artist of Geneva, the inventor of enamel painting, born in 1607. He was originally by trade a jeweller but having a strong passion for the arts, accompanied his brother in law, Bordin into Italy where he obtained possession of some chemical extracts, useful in the preparation of colours. To these were afterwards added others, which he is said to have acquired from sir Theodore Magrave physician to the court of Charles the First of England whether the two friends had proceeded on quitting Italy. That unfortunate monarch was much pleased with Petitot, and, together with his whole family sat to him; but on his execution the artist retired with precipitation into France where they were well received by Louis the Fourteenth and realized considerable property. On the revocation of the edict of Nantes Pataot, who was of the reformed church, was thrown into prison but at length obtaining his liberty returned to his native city where he continued to reside for some time till he quitted it at length for Leydy in the canton of Horne, and died there in 1691. He was a man of mild disposition and amiable manners, as may be inferred from the fact of his having lived with his friend Bordin for nearly half a century without a single misunderstanding. Indeed, the friendship of the two artists seems to have been cemented as much by congeniality of disposition as by their habit of working on the same piece in concert. Petitot executed the heads and hands of the portraits, while the other operated upon the hair draperies, &c.—A son of the same name followed his father's profession but with far inferior success, in the English metropolis.—*D'Argenville's Vie du Peintre Napoléon à Aix.*

PETIVIUS (JAMES) an eminent English botanist, who practised as an apothecary in London and obtained the office of apothecary to the Charterhouse. He was a great collector of natural curiosities, and formed a museum of which he published an account, and which extended his reputation among men of science both at home and abroad. He was chosen a fellow of the Royal Society and becoming acquainted with Ray he assisted him in arranging for the press the second volume of his History of Plants. He died April 29 1718 and his collection was purchased by sir Hans Sloane. He published, *Musæ Philomathæ Centauriæ decim" 8vo. Gnomophylacti Naturæ et Artis Decades decim," 1709, folio, with plates. "A Catalogue of Mr Ray's English Herbari," folio, with figures and smaller tracts and papers in the Philosophical Transactions. Some of his pieces were pub-*

lated and republished in 8 vols. folio, in 1787
—*Edinburgh*, 1800. *Mod.*

PETRARCH (*Petrarchus*) one of the most celebrated names in the literature of the middle ages, was born in 1304 at Arezzo in Tuscany. His father was a notary of Florence who having taken part with the Ghibelline faction shared their fate and being banished took up his residence at Avignon. The subject of this article was designed for the professor of the law and with that view after being instructed in grammar, rhetoric, and rhetoric, was sent to study civil law at Monza, Padua and Bologna. He very early discovered such a predilection for polite literature that his father in anger threw his Virgil and Cicero into the fire and it was not until his death that Petrarch found himself at liberty to pursue his inclinations. This event took place when he was about the age of twenty two, on which he enrolled himself in the clerical order but only received the tonsure. About the same time he obtained the patronage of the Colonna family and might have expected a rapid advancement in the ecclesiastical profession but that his inclinations and habits of life were by no means adapted to the clerical character. It was in his twenty seventh year that he first saw at Avignon the beautiful Laura whom he has rendered so celebrated in those poems which have clusely conducted to his permanent reputation. His passion for this lady appears to have been real but her identity was not only a subject of controversy during his life-time, but has been almost ever since. In 1364 the abbe de Sade in his "Mémoires pour la Vie de Petrarch" adduces reasons for believing that she was the daughter of Audibert de Noves, syndic of Avignon and the wife of Hugues de Sade, one of the abbe's own benefactors; an hypothesis which however has been assailed with considerable force by lord Woodhouselee who implies, from the way in which the object of his regard could not have been a married woman. Whether real or a mere metaphysical passion, (the latter of which supposition is countenanced by Gibbon,) when stripped of the colouring of romance it amounts to little more than an vague idea, which gave much of the colouring to the imagination and literary composition of Petrarch, although after reading his poems his mind, and serious writings, it is difficult to conceive that it was not founded on real literary passion. As he had other amours, however, which were very thing but platonic, it may be presumed that employed as he otherwise was, his alleged misery was not altogether unbearable. To this mysterious attachment is attributed his love for travelling which induced to dissipate his vagueness. In 1336 he journeyed in a tour through Italy after which he travelled upon that retreat which has made the name of Vaucluse, a solitude about fifteen miles from Avignon, so famous in the annals of love and gallantry. Here he wrote the first compositions of his works, particularly his Italian poetry, many of his Latin epistles, in prose and verse, and his elegies; his trans-

tions on a "Galician Life" and on "Religions Triumphant" and part of his poem on Africa, which works earned him to the highest plaudits of reputation. He accordingly received a complimentary letter from the Minors of the age, Robert, king of Naples and in 1350 was invited by the Roman senate to be crowned poet in the capital which ceremony was performed with much magnificence and he received a diploma, wherein the title and prerogatives of poet-immune were revived after a space of 1300 years. He soon after obtained an archdeaconry in the church of Parma and in 1366 Clement VII gave him a priory in the diocese of Pisa. In the following year he composed his carolus dialogue with St Augustine in which he confesses that his penance for Laura still held dominion over his soul. In 1346, that lady whoever she was, appears to have fallen a sacrifice to the pestilence then raging throughout Europe which also deprived him of his great patron cardinal Colonna. In 1350 he again visited Padua and obtained a canonry and wrote an elegant letter to the emperor Charles IV to induce him to come and settle the distracted state of Italy. In 1360 he was sent to Paris to compliment John king of France on his liberation from English captivity and was received with great distinction. His last journey was to Venice in 1373 and on his return to Avignon he fell into a languor which terminated in his sudden death in the night of July 18 1374 being found dead the next morning in his library with his head resting on a book. Petrarch was undoubtedly one of the most memorable characters of range and nation, and although his countrymen may have estimated his genius at too high a rate, he merits the applause and admiration of posterity. Of the several kinds of writing in which he distinguished himself his Italian poetry is that on which his fame is now clusely founded. Although frequently deformed by artificial conceit, his sonnets and canons abound in elevated conceptions simple pathos, and elegant description couched in language and versification which in the opinion of the best Italian critics have never been surpassed in that language. His treatises on moral philosophy and on politics, together with one or two historical works, are what might be expected from an age just reviving from barbarism. In divinity he was strictly orthodox, and wrote a treatise "De aliis ipsius et methorum Ignorantia" in which he exhibits great distrust of human reason but at the same time has the merit of reducing the dominion of astrology and of chance. The most valuable of his prose writings are his letters, which although diffuse and pedantic abound with curious facts and frank and lively notices of himself. But it is not only as an author that Petrarch is indebted to posterity. The works of Cicero were the special objects of his inquiry and to him is owing the discovery of the singular spirit of that great man. Although his work dealing

was shortly confined to Italy again, his narrative preserved him the present of a Greek Honoraria summae Compagnie, which he presented to the republic of Venice. He also appears to have found the earliest collection of medals in Europe. The editions of the works of Petrarch, which have been loaded with and less commentary by his contemporaries, are almost incomparables; but the best is that of Venice 1738, 2 vols. 4to. He has also had no fewer than twenty-five biographies, among whom the abd de Sade is deserved the most instructive and curious. Lord Woodhouselee also published in 1810 an "Historical and Critical Essay on the Life and Characters of Petrarch." — *Tribuschi. Abd de Sade. Woodhouselee.*

PETRI (SERVUS) a learned writer was a native of Leuvenstein in Friesland and flourished in the sixteenth century. He became secretary and librarian to cardinal Granville at Reichen, he afterwards went to Louvain and Cologne where he was chosen professor of law. He was likewise historiographer to the state of Friesland. He translated some of Plutarch's works into Latin and wrote the following — "Oratiorum de amato multicipi Graecae Lingue" "Chroaicon Ducum Brabantis vita" Continuatio Chronicorum Episcoporum Ultrajectensem Note in Eusebium Beocoriam &c." De Origine Frisorum. He died in 1597. There was also a Peter PETRI bishop of Leuvenstein who published several theological works and died in 1580 — *Peter Andre Bibl Belg.*

PETRONIUS ARBITER (Aulus or Titius) a Roman satirist was a favourite with Nero and generally supposed to be the same whom Tacitus mentions as proconsul of Hispania, and afterwards consul. He is said by that author to have discovered a capacity for the highest offices, but abandoning himself to voluptuousness he became one of the companions of Narc, and the superintendent of his licentious pleasures. This favour proved his ruin by exciting the envy of Tigellinus, a still greater淫棍 than himself who accused him of being engaged in a conspiracy against the emperor. Being arrested on this charge he was condemned to death on which he caused his veins to be opened and died about the year 66 so he had lived, with perfect undiffidence. He sent, as a last legacy to Nero a sealed paper reprobating that master with his infamous and unnatural debaucheries. His "Satyripon," which is written in very elegant Latin as a farce of verse and prose relating to rapes and stonies, serious and ludicrous, intermixed with the most disgusting obscenity. A new fragment was discovered at Tras in Umbria, in 1664, the genuineness of which has been justly generally admitted. On the other hand some additional fragments, produced by Model in 1694, are deemed spurious. The publications of this author have caused him to be much studied by the curiosi literati, and France, Germany and Holland, have produced critics and commentators, but no English critic has endeavoured to illustrate his impudence. The Harmer edition of 1747 can be usually

described as the best, although some prefer preferring that of Asturian, Leipzig, 1751. (See — *Vulgar Poet. Lat. Spelt Capo.*)

PETTY (Sir WILLIAM) a celebrated practical philosopher, who was the son of a fisherman at Ramsey in Hampshire where he was born May 16 1623. He appears to have displayed a genius for mechanics, even in childhood but after previous education at a grammar-school at Ramsey, he went to the university of Caen in Normandy at the age of 16 years, and stayed there about two years. Returning to England, he obtained some office connected with the navy, which, however, he only retained till he had saved the sum of sixty pounds. He went abroad in 1643, to study medicine and anatomy and having visited Leyden Utrecht, Amsterdam and Paris, he came home three years after. In 1658 he obtained from the parliamentary government a patent for a copying machine and though the invention did not turn out profitable his ingenuity attracted notice and introduced Mr Petty to the acquaintance of several men of science. He next took up his residence at Oxford where he was appointed assistant professor of anatomy and practised as a physician. Such was his reputation that at his house were held those philosophical meetings which gave origin to the Royal Society. Soon after he obtained a fellowship at Brasenose college, he was created MD March 7, 1649 was admitted into the College of Physicians in June 1657 in the beginning of the following year he succeeded to the professorship of anatomy and was chosen professor of music at Gresham college shortly afterwards. In 1652 he was appointed physician to the army in Ireland and also to the lord lieutenant. After the suppression of the Irish insurrection, he was made one of the commissioners for the division of forfeited lands and when Henry Cromwell obtained the houerancy in 1655 he appointed Dr Petty his secretary and clerk of the council. He was chosen MP for the borough of West Loo in the parliament convened in January 1658 and on the 6th of March following, he was impeached of high crimes and misdemeanours in the execution of his office as Irish commissioner by sir Iliffe Fenwick the member for Woodstock, the issue of which proceeding was his removal from his public employments in 1659. He then retired to Ireland, till the restoration of Charles II, when he was made a commissioner of the court of claims. He became one of the first fellows of the Royal Society and was a member of its council. To this learned association he presented a model of a double-hulled ship, designed to move against wind and tide and he so far perfected the scheme, that a vessel constructed on it, made a voyage from Dublin to Holyhead in July 1668. He continued for two years after to make improvements in his plan, but at length relinquished it altogether. In 1666 he drew up a treatise entitled "Veritas Sapienti," containing an account of the natural world and especially with a method for ascertaining

P E T

He realized a great sum of property through the great fire in London the same year; and in 1667 he married the daughter of Mr. Matthew Walker and subsequently he engaged in various profitable speculations, having set up iron-works, opened coal-mines, and established a pilchard fishery in Ireland. He continued for several years to occupy himself in literary and scientific pursuits, particularly in the formation of a philosophical society in Dublin, of which he was chosen president in November 1664. At length he was seized with a mortification in the foot, occasioned by the gout in consequence of which he died at his house in Fleetstreet London December 16 1667 and he was interred at Ramsey his birth-place. He was the author of a treatise on "Political Antinomies," and several other productions of which a list may be found in the first of the annexed authorities.—*Hutchinson's Big Med Martin & Big Petty*.—PETTY (WILLIAM) marquis of Lansdowne was descended from Sir W Petty and was born in 1737. He succeeded to the Irish title of earl of Shelburne, on the death of his father in 1761 and in 1763 he obtained the office of president of the board of trade which he resigned to join the train of opposition led by Mr Pitt (lord Chatham) with whom he returned to office in 1766. When a change of ministry took place in 1768 he was again displaced, and he continued to be a parliamentary antagonist of his master till 1786 when he was nominated secretary of state for the foreign department. On the death of the premier the marquis of Rockingham, he was succeeded by lord Shelburne but he was soon obliged to give way to the coalition between lord North and Mr Fox. In 1784 he became an English peer by the titles of marquis of Lansdowne and earl of Weymouth. He now employed himself in the cultivation of science and literature at Bowood his seat in Wiltshire and he collected a valuable library the MSS. belonging to which were after his death purchased for the British museum. His death took place in 1805. Lord Lansdowne was twice married. By his first wife the daughter of earl Granville, who died in 1771 he had a son who succeeded him, and died without issue. By his second wife lady Louisa Fitzpatrick he became the father of the present marquis. The subject of this article was one among the numerous conjectured authors of "Junius's Letters."—*British Peerage*.

PETTY (WILLIAM) an English lawyer who was a native of Yorkshire and became treasurer of the Inner Temple, and keeper of the records in the Tower. He died in 1657, leaving a great number of MSS. collected from records and other authentic materials, chiefly relating to the laws and constitution of England, which are preserved in the Inner Temple Library. He was also the author of "The Ancient Rights of the Commons of England," proving that they were over an hundred part of Parliament, 1600, two thousand, in defense of that work, "Mischievous Parliament," 1600 1601 and

P E Y

"The Commonwealth," 1739, folio.—*Bridge- water's Leg. Bk.*

PEUCER (CARTER) a physician and mathematician, born at Bouson in Lorraine, ca. 1523. He studied at Wittenberg, where he took the degree of doctor of medicine, and obtained the professorship of that science. He married a daughter of Melanchthon, the reformer whose principles he countenanced to diffuse and whose works he edited. Being imprisoned, on account of his opinions, for ten years, he wrote his observations on the metabolism of body which he was allowed to read, making a kind of ink with burnt crusts of bread infused in wine. He died in 1562. His works are "De principiis Divinitatis Generibus" 1554, 4to; "Vita Illustrissimi Medicorum" and other tracta. He also assisted Melanchthon in the enlarged edition of *Corus's Chronicle*.—*Hutchinson's Big Med Martin & Big Petty*.

PUTTINGER (COWRAS) a celebrated scholar was born at Augsburg in 1465. He was appointed secretary to the senate of that city and was employed in the diets of the empire and in various courts of Europe. He died in 1514. His works are, "De Robes Gotthorpi Romanorum Veterum Fragmentis in Augusta Vindelicorum," Sermones Conviviales," in the collection of Schmidius De Incastellis Romanus imperii et gentium communisimis subiecto to the former and to Procopius. Puttinger is however best known by an ancient history called from him "Tabela Puttingeriana" formed under the reign of Theodosius the Great, and showing the roads by which the Roman armies passed at that time to the different parts of the empire. It appears to have been written by a Roman soldier unacquainted with geography and knowing nothing but what respected the roads and pieces of encampment. A very scarce and magnificent edition was published by F C. Scheit at Vienna, in 1753, folio.—*Classicus Antiquus*.

PEYER (JEAN COUARD) an anatomist, who was a native of Schaffhausen in Switzerland. He was the first who accurately described the intestinal glands, which in a state of health separate a fluid which serves to lubricate the intestines, and which have been termed, glandula Peyeriana. His works are "Exercitationes Anatomico-Medicae de Glandulis Intestinae" 1677 "Primum et Pythagore Exercitationes Anatomicae" 1682 "Methodus Historiarum Anatomico-Medicarum" 1679 "Panergia Anatomica et Medicina," and "Experimenta nova circa Pancreas."—*Hutchinson's Big Med.*

PEYRERA (ISAAC) a native of Borrassa, born 1595. He was descended of Catalan parents, and professed the reformed doctrine, but entertained many singular opinions among others, the existence of a race of pre-Adamites, and published a work in support of his theory. For this he was confined a short time at Bruxelles, till the intercession of the prince of Condé presented his release. Peyrera afterwards became a convert to the church of Rome and abjured his heretical

P R Y

wpkins in presence of the press however, before the tract already mentioned, he was the author of an "Account of Circassia;" "An Account of Iceland;" "On the Restoration of the Jews," &c. His death took place in 1875.—*Moor.*

PYRON (JEAN FRANÇAIS PYRON) a French historical painter was born at Aix in the department of the Bouches-du-Rhône in 1764. He went early to Paris, where he became the pupil of Lagrenée the elder, and devoted himself to the study of the works of Poussin, to whose inspiration he owed the first prize of painting, which he obtained in 1773. He visited Rome as a student of the French school. In 1783 he was chosen a member of the Royal Academy, and in 1787 director of the royal manufacture of the Gobelins, of which situation he was deprived by the Revolution. His principal works are *Cleopatra* devoting herself to prison, to obtain the burial of her father, now in the Louvre; *Socrate forçant Alcibiade* from the scene of a courtesy; young Athénaïs drawing lots to be sacrificed to the sun-god &c. His style is grave energetic and generally correct; his colouring transparent and soft, and his drapery simple and graceful. He died in 1820.—His brother JEAN FRANÇOIS PYRON born in 1740 and died in 1784 at Goudelourde where he was commissioner of the colonies. He is the author of a work entitled *Essai sur l'Espagne et Voyage fait en 1777 et 1778* &c Geneva, 1780 2 vols. in which he displays great knowledge in antiquity and the fine arts with such fidelity as to render it still very useful to travellers.—*Bibl. Univ. des Contemp.*

PEYRONNEL (CHARLES). There were two scientific and ingenious French writers of this name father and son. The elder born in the winter of 1700 at Marseilles in an advanced age known as the author of some valuable observations on the topography of Ann Arbor over great part of which he travelled collecting rare coins and medals with great success. He was secretary to the French embassy at Constantinople, and afterwards consul at Smyrna in which latter situation he was succeeded by his son. His other publications are, some commercial tracts, an oration on marshal Villars, and a dissertation on coral besides some papers to be found in the transactions of the Académie des Inscriptions, of which he was a member. His death took place in 1757.—The son who died at an advanced age in 1790, was an indutious, as well as an acute author and published an

Historical Account of the Antient Inhabitants of the Banks of the Danube and the Borders of the Black Sea," &c. "Remarks on the Monarchs of the East," &c. "On the Commerce of the Equinox," 2 vols. See "Les Numéros," a work which has gone through several editions; "On Volney's Considerations on the Turkish War." "On the Alliance between France and Switzerland, the Grisons &c. See and Political Economy of France" 2 vols.—*Bibl. Univ. des Contemp.*

P F E

PERRY (Maurice, Marquis of) was born at Paris, and was son of Auguste, who had the honour of being the minister of Louis XVI in the art of nations. He was appointed inspector-general of the roads, till making himself odious by the leniency of his behaviour he was banished to his estate, and he died soon after in 1778. His poems are written with eloquence, but sometimes with negligence; his works are "Zélie ou Hélène" a poem, in six cantos, "A Letter from Ovid to Julia" "Les Soirées Héloïsiennes Alcibiades et Franc-Comtoise;" "La Rosière de Salenay," "Les Campagnes de Malibos, 3 vols. &c. now of great value in France; "Several Fugitive Poems published in the Almanach des Muses" An indifferent Translation of Catullus. There also said to be a MS. entitled *Les Soirées Provençales*, not inferior to the Soirées Héloïsiennes.—*Diret. Hist.*

PFANNER (TOMAS) a learned German antiquary of the seventeenth century a native of Augsburg where he was born in 1641. He became keeper of the archives to the duke of Saxe Gotha, in whose capital he died in 1717. From his intimate acquaintance with early German history he had obtained the appellation of the Living Chronicle of Saxony. His works are "A History of the Assemblies of 1652" "History of the Peas of Westphalia, &c. On the Principles of Historical Faith" and "On Pagan Theology"—*Diret. Hist.*

PFEFFEL (CHRISTIAN FREDERIC) jurist, consult and diplomatist, was born at Colmar in 17. He studied first under the celebrated Schefflin whom he assisted in his *Alsatia libri*. He became secretary to the count de Lomé ambassador from Savoy to France. He then became the friend of the count de Brühl and was employed in several negotiations. In 1758 he was sent to Ratisbon, during the diet, as counsellor of state and chargé d'affaires. Thence he proceeded to the court of Bavaria, where he remained until 1768, when he was recalled to Versailles, and became juris consult to the king. He also obtained the charge of state-mestre of Colmar in conjunction with his wife. He was sent by the French ministry to Deux Ponts, to treat of the indemnities of the duke and other German princes; he was still there when he received the order for his retirement from his public functions; his property was confiscated, and he was placed on the list of emigrants. He remained in the service of the duke of Deux Ponts until the death of that prince when he returned to Nurnberg. He died in 1807. His principal works are "Abéché Chronologique de l'Historie et de l'Etat publics d'Allemagne" "Recherches Historiques concernant les Droits du Pape sur la Ville et l'Etat d'Avignon avec des Pièces justificatives;" "Etat de la Pologne;" "Discussions Historiques."—*Bibl. Univ. des Contemp.*

PFEIFFER. There were two of this name Averyse a learned German writer,

P H A

one from 1550; of *Loveresching*, and *Justitia et Iustitia*, both in Latin and a plain German; his most popular work with the public was *Mosae*, and other Oriental treatises, found in an acute and discriminating judgment, rendered his Biblical criticisms especially valuable. They are contained in his "Canticum Mosae," "De Moysi," "Pompeiius Moshach," "Schwartz's Symmetria Antiquorum Hierarchorum;" "De tribulatis Iudeorum," and other tracts. He was also the author of some philosophical treatises, a complete edition of which, in two quarto volumes, was published at Utrecht. He was held in great esteem for his literary attainments at Wittenberg and Leipzig, in both which universities he used lectures on the study of the Oriental languages, and was afterwards placed at the head of the ecclesiastical polity of Lebec, where he died in January 1596.—*Louis PAGINUS* born 1530, at Leucene, of which city he was afterwards the chief magistrate, distinguished himself as a gallant soldier and a skilful tactician in the civil wars of Charles the Ninth of France, especially at Meaux and Montreuil sur le Risle, of the former of which occasions the preservation of that monarch was mainly owing to his prudence and ability. The adherence of the Swiss cantons to the Gassion party was also materially promoted by his instrumentalities. His death took place in 1594.—*Morol. Reg. Univ.*

PHAEDON founder of the Eleatic school of philosophy so called from Elea, the place of his birth. He flourished towards the close of the fifth century before the Christian era, and from the condition of a slave, rose to be the disciple of Socrates, and the friend of Plato. By the latter he was held in such esteem that one of that sage's most celebrated treatises on the immortality of the soul is called after his name. When Socrates was put to death by his countrymen B.C. 400 Phaedon retired to Elea, where he passed the remainder of his days. He was the author of some philosophical dialogues, and on his decease was succeeded in his academy by Phisthenes of Elea.—*Enc. Lat.*

PHÆDRUS, an elegant Latin writer a native of Tarsus born a few years previously to the destruction of the Library of Rome by the first Caesar. He was afterwards the slave of Aspasia, who educated him, but in the following reign he fell into disgrace at court through the envy of the favorite Scipio. The fables of this master of which there are five books, written in iambic metre are remarkable for their wit and keenness, as well as for the purity of their style. They were first published by Pierre Pitotus (Pithous) about the close of the sixteenth century since which time they have gone through many editions, and are generally used as an elementary book in schools. Cicero mentions another of this name, a follower of Epicurus. There was also, in modern times, a rhetorician at Bonn, Elementus at the Vatican, about the middle of the sixteenth century, who assumed this name from having appeared at the theatre as

P H A

an actor in a tragedy of *Socratis*. His 1559 a comedy of *Amor et Amicitia*, written in Latin, was published in Germany, and his *Amor et Amicitia*, written in Italian, in Florence, which he met with death, from an accident, prevented his giving to the world.—*Vest. Petri Lat.*

PHAEHR, MD. (Thomas) a native of Pforzheim, who in 1559 graduated at Oxford as doctor of physic, having translated the propositus of the law for which he was originally intended, and in the study of which he had made some progress at Lincoln's-inn. He was the author of two legal tracts, *ur. twits* and *precedents* but the work by which he is principally known is his translation of the first nine books of the *Azazel*, in Alman drives. The rhythm of this poem, which was printed in black letter in 1562 is singularly harmonious, little adapted as the metre may be thought for heroic poetry. His death prevented the completion of the translation and appears to have been unexpected as we find from the last page that the concluding lines of it were penned in a very short time before his decease. Dr Twyne afterwards published a continuation of the work. Dr Phæhr was also the author of the story of Owen Glendower in the *Mirror for Magistrates* and of some mystical translations from the French of no great merit. His death took place in the summer of 1590.—*Reg. Brit. Worth. Hist. of Eng. Poet.*

PHAI ARIS of Agrigentum a Sicilian tyrant whose cruelty and the horrid instrument by which he wreaked his vengeance on those who fell under his displeasure have rendered his very name a proverb to posterity. He is said to have been by birth a Cretan who having arrived at supreme power in the country by his adoption by the most iniquitous practices, thought to secure it by the influence of terror. A statuary named Penitius, whose sycophancy equalled his skill as an artist constructed for him an engine of torture, in the shape of a hollow bell of brass, in which the unfortunate victim being enclosed, and fire put beneath the cross of the materials which within produced sounds resembling the bellowing of the animal. The only just act recorded of Phælens is, that he made the constructor of this diabolical piece of machinery the first sacrifice to his own invention. After a sanguinary reign of eight years, the citizens at length were driven into insurrection, the tyrant was seized and with a severe, but just, retaliation consumed by a slow fire in his own hall, A.C. 563. The story told of his meeting at a disputation held between Abra and Pythagoras, is wonderfully apocryphal, from the anachronism it involves, and the letters supposed to have passed between the former of these philosophers and himself, of which there are two editions, Paris 1670, and Oxford 1693, are no less so. The question of their authenticity however gave rise to an animated discussion between Dr Bentley and the hon. C. Boyle.—*Morol.*

PHAVORINUS (Barrois) the Latin apologist assumed by Guerini, a native of Savona, in the vicinity of Genoa, who, ac-

During the twentieth century he study age, he a collector of manuscripts, applied himself to the collection of classical literature with great perseverance and success. Pollio and Lucan were among his instructors, and John de Medici afterwards Leo the Tenth, was his teacher. In 1515 he was appointed to represent the Florentine Library and two years after was elevated to the diaconate of Ravenna. This learned prelate translated the *Apologeticae* of Stobaeus, and was the author of a tract entitled *Contraepos et Horti Adversaria** but the production by which he is most advantageously known is his lexicon of the Greek language compiled with great care from Herodotus, Suidas, and other authorities. This valuable work first appeared at Rome in 1573, and was reprinted with many improvements by Burattoli at Venice, in 1713. His death took place in 1557.—*Festus*, *Bald. Grec.*

PHERECRATES a Greek comic poet flourished about 480 BC. He was the inventor of a measure called from him the Pherecratia, consisting of the three last feet of an hexameter the first being invariably a spondee. Some few fragments of his comedies have been preserved and have been elegantly translated into Latin by Gronae and a piece cited by Plutarch relative to ancient music has been particularly noticed by M. Buratti in the memoir of the academy of inscriptions. He wrote with the utmost purity of style and notwithstanding the license of the ancient comedy he is said never to have injured any individual by the slightest allusion.—*Festus Post Grec. Moret. Cambridg. Observ.*

PHEREKYDES a philosopher of the isle of Samos was the first preceptor of Pythagoras, and flourished about 600 BC. Josephus is of opinion that he studied philosophy in Egypt; and this is not improbable as a strong resemblance may be discovered in his doctrines to the dogmas of the Egyptian school. From the circumstance of his predicting the events of a storm and of an earthquake both of which took place he has been regarded as possessing supernatural powers though he only availed himself of his superior knowledge of the phenomena of nature to impose upon the multitude. He was the first who wrote a theogony of the sacred gods as prose; but from his symbolical manner of delivering his opinions, it is difficult to form any idea of his doctrine. According to Clever he was the first philosopher who wrote on the immortality of the soul; he also taught the doctrine of the transmigration of the soul afterwards adopted by Pythagoras.—Another Pythagorean wrote a history of Athens, and flourished about 636 BC.—*Stanley's Hist. Phil. Clever's Test. Grec.*

PHIDIAS, an Athenian sculptor who flourished in the 5th Olympiad, celebrated for works of art of marvellous excellence some of which are supposed to be still existing. He laboured in ivory a famous statue of the Olympian Zeus and also another of Minerva sixty cubits in height on the shield of which were

represented the sons of the founders, the giants, the Lapiths, and the Amazon; and on the back, the figures of thirty deities. Being employed by Cimon to cast a golden statue of Minerva, he was accused by some jealous rivals of having embezzled part of the precious metal entrusted to him, on which he left Athens, and erected at Elia, where he erected his admirable column statue of Jupiter. He died BC. 432.—*Pinkl. Hist. N. Inst. Cor. Archit. Statuarii, &c.*

PHILIPHUS (*Phainon*) a learned but intemperate rheumician and diplomatist of the middle ages. He was born at Tolomise, in the march of Aragon, in 1398, and studied at Padua, where he filled the professor's chair in rhetoric till his removal to Venice. The Senate soon after took him into the service of the republic and sent him in the capacity of their ambassador to John Palaeologus. While in the East he married, in 1419 Theodore, daughter to the learned Chrysostom and through the interest of the latter rose so high in the confidence of the emperor that he was deputed by him to solicit succours from the German courts against the Ottoman arms while his father in law sailed for England on a similar errand to Richard the Second. He afterwards returned to his native country and dedicating himself to literary pursuits, read lectures in his favourite science at Venice Bologna and other cities of Italy till he finally took up his abode at Florence under the auspices of the celebrated Lorenzo de' Medici. The popularity acquired by his talents was, however, at length lost by his arrogance, and with it the favour of his patron. A charge has been brought against him, arising perhaps, merely out of his well known vanity as the foundation on which it is built seems very insufficient that he destroyed a unique manuscript of one of Cicero's treatises in order to conceal his own plagiarisms. He was the author of a work *'On Moral Discipline'* *'On Erie Convivial Facetiae, &c.'* with several other miscellaneous pieces both in prose and verse a complete edition of which was printed at Bade in one folio volume 1750. His death took place in 1461.—*Tirshophi*

PHILIPON of Athens, a Greek poet, contemporary with Meander, to whom only he was considered as ranking second in dramatic composition. Plautus is said to have copied from his comedies, but as a few only of his fragments have come down to posterity, there is little opportunity of judging how far the imitation was carried. Of these, which were originally collected by Hugo Grotes, Cumberland has printed an English translation. The time of this author's birth has been assigned to the three hundred and seventy third year before the Christian era; and he is said to have survived a whole century, dying at length through excessive laughter, according as an old sign from a countryman's basket. AC 274.—*Festus Post. Grec.*

PHILIDOR (*Armenz*) a master of chess, of some reputation in his profession but far more celebrated as the best chess-player of his

and so only their sign. His father, Michel Philidor, was chamberlain to Louis XIV., and changed his name to Philidor, from a compliment paid him by that monarch who once called him so in allusion to a famous chess-player of that name. He practised his art, who was born in 1726, the situation of a page in the royal band where he made no great a proficiency under Campra, that he composed a very successful motet with full chorus, before he had attained his twelfth year. As he grew up, his fondness for the game of chess increased into a passion, in order to indulge which he travelled over great part of Europe, engaging every where with the best players, but by no means abandoning his musical studies at the same time. In the course of his progress he came to London, about the year 1753 when he set to music Dryden's "Alexander's Feast," which although it never was printed is said to have elicited the approbation of Handel himself. He continued in England some time during which he printed his "Analysis of Chess," a book which has since gone through numerous editions and is considered a standard work. On his return to France being disappointed of the situation of chapel-master to the queen, he devoted his attention to the comic opera, of which in conjunction with Beaumarchais and Duni, he may be considered the master. There are twenty-one operatic pieces of his composition, of which "Le Maréchal" produced in 1751 ran more than a hundred nights. Philidor afterwards returned to England and in 1779 set the "Carman Secular" esteemed the best of his works. His death took place in 1795 in London where he was very generally esteemed for his integrity and severity of manners. A short time previously to his decease he played two games of chess at the same time blindfold against two of the most distinguished amateurs, one of which he won the other was a drawn game.—Ross's Cyclop. *Biog. Diet. of Mus.*

PHILIPPON DE LA MADELEINE (Louis) a French writer was born at Lyons in 1736. He studied the law at Beaucaire where he scolded and filled some public office. In 1755 he was created librarian of the ministry of the interior and on the Restoration in 1814 he received a pension from Monsieur now Charles X. with the title of honorary intendant of his finances. He died in 1819. He published a great number of works, of which the following are the most celebrated: "Jean d'un Richelet de Vendeville"; "Choix de Comédies de M. Philippon de la Madeleine"; "L'Élève d'Épouse"; "Discours sur la Naissance et les Moyens de rappeler les Anciennes Capitales"; "Sébastien et son voisin Gédéon de promouvoir aux Tailleurs"; "Grenadier des Gens du Monde"; "Dictionnaire portatif des Poètes François morts depuis 1600, jusqu'en 1800," preceded by an abridged history of French poetry; "Discours sur l'art des Rimes"; "Voyage de Cyrus, par Ramsey"; "Mémoires choisis des Comédiens de la Bruxelle" with a notice on the

method. "Philidor des échecs inventé et enseigné, which were played at the Théâtre de Vendeville, in conjunction with MM. Lapey, Thétigny, Vincent, Suger and the painter Clémé."—*Biog. Mus. des Contemp.*

PHILIPS (Aurasmus) a poet and dramatic writer, who was a native of Leicestershire, and studied at St John's college, Cambridge, where he obtained a fellowship. On quitting the university he went to London and became one of the literary wits who frequented Button's coffee house, and a friend of Steele and Addison. The publication of his "Pastorals," involved him in a war with Pope who ridiculed them in papers in the "Guardian" in consequence of which Philips threatened to inflict personal corrections on the satirist. Soon after the accession of George I. he was put into the commission of the peace, and in 1717 he was appointed a commissioner of the lottery. He was one of the writers of a periodical paper called "The Freethinker;" and Dr Boulton the conductor obtaining preferment in Ireland, Philips went thither with him and was made registrar of the prerogative court at Dublin. At length he purchased a life annuity of £600, and returned to England in 1748. He survived but a short time dying in consequence of a paralytic seizure at Vauxhall Surrey June 16, 1749. He was the author of

The Distress Mother a tragedy 1712 taken from Racine. The Briton 1728 and Humphrey Duke of Gloucester 1723 both tragedies also and he wrote The Life of Archbishop Williams.—Johnson's Lives of the Poets. *Biog. Dres.*

PHILIPS (CATHERINE) a literary lady much distinguished in her own time for her wit and accomplishments, was the daughter of Mr Fowler a merchant of London where she was born in 1651. She was educated with great care and when very young became the wife of James Philips, esq. a gentleman of Cardiganshire and afterwards accompanied the viscountess Duncannon to Ireland. At the request of the earl of Orvry she translated Corneille's tragedy of Pompey which was several times acted in Dublin. She was, however, chiefly celebrated for her occasional poems, which were not formally published until after her death, which took place from the small-pox in 1684, in the thirty-third year of her age. They then appeared in folio, under the title of "Poems by the most deservedly admired Mrs Catherine Philips, the Matchless Orlando." To which are added M. Corneille's Pompey and Horace Tragedie, with several other Tragédies from the French." Mrs Philips, who had assumed the posthumous name of Orlando, was highly esteemed by the most eminent of her contemporaries. Bishop Taylor addressed to her his "Meditations and Offices of Friendship" and Cowley wrote an ode on her death. Poetry has by no means sanctioned all this estimation and the poetry of this lady is at present scarcely known or regarded.—Bellard's British Library.

PHILIPS (FARRAR) an English lawyer was born at Prestbury in Gloucestershire, in 1676.

He studied at the Middle Temple, and became "Admitted" in his profession. He was a zealous partisan of Charles I., and wrote several political pamphlets in his favour, the principal of which is entitled "Vox et unicorum; or King Charles I no Man of Blood, but a Martyr to His People." He was for some time silent, and spent much time and money in searching records and writings in favour of the royal prerogative, for which he was rewarded by the place of one of the commissioners for regulating the law, which he held only two years. His other works are, *Considerations against the dissolving and taking away the Courts of Justice*, by Oliver Cromwell, for which he received the thanks of the speaker Lenthall, "Teneatis non tollatis" or the necessity of preserving Tenures in Capite and by the Knight's Service. "The Antiquity and Economy of pre-emption and purveyance for the King." He died in 1650.—*ibid.* *Genl. Arr.*

PHILIPS (John) an English poet who was the son of the Rev. Stephen Philips, archdeacon of Salop, and was born at Bampton in Oxfordshire December 30 1676. He was educated at Winchester School and Christchurch Oxford and at the latter place he produced his poem, entitled *The Splendid Shilling*, in which the sonorous cadence of the blank verse of Milton is adapted to familiar and ludicrous topics. He also wrote

Blenheim a poem in celebration of the Duke of Marlborough's victory, but his principal work is his *Cyder*, a Georgical poem in imitation of Virgil. His early death which took place at Hereford, February 15 1708 probably deprived the world of some greater efforts towards obtaining a niche in the temple of Fame. A monument was erected for him in Westminster Abbey at the expense of his patron Sir Simon Harcourt.—*Johanns. L. et. of the Poets.*

PHILLIPS (Edward) one of the nephews of Milton, was the son of Edward Phillips, esq. of Shrewsbury who married the poet's sister Anne, and became secretary in the crown office. He was born in London in 1630 and was educated under his celebrated uncle. The time of his decease is not certain. He published two small works in Latin, one on the ancient chorusses as tragedy and comedy and another of the most celebrated poets of the age of Dante. He is, however better known by his compilations and especially by his *Theatrum Pictarum* or a complete Collection of the Poets." London 1675 which Varro as of opinion was before used by the revision and correction of his uncle Milton, who is especially tractable in the preface. In 1690 a new edition of the "Theatrum," with valuable additions, was published by Sir Egerton Brydges. Wood attributes to Edward Phillips a General English Dictionary, a Supplement to Speed's "Theatre," a Companion Latin Dictionary a poem on the Coronation of James II an edition of the poems of Dryden and of Newhaven-

dogs, and several treatises and compositions which exhibit him as an author of considerable merit next to his "Theatrum." His nephew William Phillips, brother of the preceding, was also educated by his uncle Milton, so when grown, in the first instance, he presented himself a warm adherent and published "Milton's Defence" in answer to the "Apology pro Rego." On the Restoration, he changed with the times, and wrote a "Satyr against Hypocrites," in the spirit of the prevailing opinions. His other writings are "Mosaica, or the Prophetic Almanack for 1680," "Mosaica, or Augl. Theatrica" "Dictionarium Mosaicum" "Marcus Verus," "A Continuation of Heath's Chronicle," and various temporary pamphlets, which have reached mortified obscurity. The death of this writer, whose character and conduct seem to have been very exceptionable is not recorded—*Athen. Oxon.* *Life of Edward Phillips*, by Sir E. Brydges.

PHILLIPS (Thomas) a Roman Catholic divine was born at Ickford, in Buckinghamshire and was educated at St. Omer. He entered the society of the jesuits, which he afterwards quitted, and after travelling on the Continent, he obtained a prebend in the collegiate Church of Tongres. Is the decline of his life he retired to the English college at Liège where he died in 1774. He wrote "The Life of Cardinal Pole" which although a work of considerable ability from its natural writing occasioned much violent controversy. *The Study of Sacred Literature Stated and Considered* and "Philemon" a tract giving an account of his own life. He is also said to have been the author of elegant verse translations of *Lauda Sion Salvatorem* and *Censura Communianorum Conciilii & Lapide*. His sister Elizabeth to whom he addressed some pleasing poetry was the mother of the Benedictine nun at Ghent—*Eccles. Mag. 1796 Cod. MS. Ath.*

PHILLIPOT or PHILPOT (John) a herald and antiquary who was a native of Folkestone in Kent. He was rouge dragon and afterwards Somerset herald. He made a visitation of his native county in the years 1619, 1620 and 1621 as marshal and deputy to Canterbury, then Clarenceux king at arms; and soon after he began to make his historical survey of Kent, which he seems to have continued till about the year 1640 soon after which the civil war involved him in misfortune, and he lived some time in poverty and obscurity till his death, which happened in 1645.—*Thomas PHILLIPOT* his son was educated at Clare-hall, Cambridge and died in 1696. He published, in 1659 his father's collection, under the title of *Villae Cantabrigiæ, or Kent Surveyed and Illustrated* folio, a second edition of which appeared in 1778. T. Phillipot also published poems; and a Discourse on Heraldry.—*Hasted's Hist. of Kent*, *Pruf.*

PHILO an architect of Byzantium, established about the commencement of the third

country before the Christians, and that he had himself an ordinary baptism. This was not baptism intended to him yet came, nor on the construction and management of structures of war another on "The Seven Wonders of the World."—Pantaenaeus, a Jew of Alexandria, born of wealthy parents, and deeply well versed in the doctrine of the Greek philosophers, as in the peculiar tenets of his own people. The partyism which he felt for the Ptolemies seems indeed to have caused much confusion in his mind through his attempts to amalgamate their philosophy with the Mosaic laws and institutions, and rendered it difficult to decide how far his opinions predominated in favor of either. In the year 42 of the Christian epoch, the citizens of Alexandria, having lodged a complaint against the Jews residing there, charging them by the mouth of their envoy Apion, with disaffection to the Roman sovereignty Philo was selected on the part of the accused to defend their cause before Cæsar; a service which he found attended with considerable danger and narrowly escaped, with his life not being permitted even to speak upon the subject of his mission. This, however did not prevent his again visiting Rome in the succeeding reigns. There are several editions of his works, which first appeared at Paris in 1552 the last and best is that of Manguy London, 2 vols. folio, 1746. The precise time of his decease is uncertain but he is reported to have embraced Christianity before his death.—Cave Duper. Moray.

PHILOLAUS of Crete, a celebrated Pythagorean philosopher who flourished BC. 373. He was a disciple of Archytas, and flourished in the time of Plato who purchased from him the written records of the Pythagorean system, contrary to an express oath taken by the society of Pythagoras to keep secret the mysteries of their sect. It is probable that among those books, were the writings of Timaeus, upon which Plato formed the dialogue which bore his name. Philolaus fell a sacrifice to political jealousy being suspected of a design so acquire arbitrary power over his countrymen. The Golden Lute of Pythagoras has been ascribed to this philosopher who treated the doctrine of nature with great subtlety but equal obscurity reforming every thing that exists to mathematical principles. He has been erroneously denominated the author of the true system of the world reviewed by Copernicus, against whom he wrote evidence that Pythagoras acquired it in Egypt.—Diog. Laert. Bruck.

PHILOPHEMEN. The last great commander among the ancient Greeks. He was the son of Gorgon, and was born at Megalopolis, in Arcadia, BC. 223. Although an orphan, he was carefully educated, and early distinguished himself by his skill in arms, and in defense of his country against the Spartans. His family became poor, or consequence-in-chief of the Achæan league, and after a long and troublous course of warfare, he made the Spartans tributary to the Achæans, and abo-

lished slavery of Lycurgus, which had lasted 700 years. This country was by his advice restored to the Messenians, who had now forsaken themselves to the Achæans; and owing to their misfortune, this decree of the alliance against Sparta was nullified, and it was believed that the Lacedæmonians should no longer admit equal members of the Achæan league. Philophemus assisted by Lycurgus, father of the historian Polybius, remained as long as he was able but was obliged to yield to the necessity of the times. The fall of this great man was very tragic. The Messenians having availed from the league, he marched against them, and being obliged to retreat, fell from his horse, and was taken prisoner on which event Diocles the Messenian general threw him into a dungeon and the ascendant faction ordered him to die by poison. Just as he was about to take off the fatal draught, he received intelligence that the Achæans had returned and gained a victory on which he uttered an exclamation of joy, and calmly emptying the cup, expired BC 183 at the age of seventy. His unhappy fate excited great grief and resentment throughout the league and the Achæans having taken Messene the perpetrators of his death were manacled on his tomb and a yearly sacrifice was instituted to commemorate his memory. Philophemus received the epithetic appellation of *The Last of the Greeks*. Platner.

PHILOSTORGIIUS an ancient ecclesiastical historian was born in Cappadocia, in 368. He pursued his studies at Constantinople but few particulars of his life and no account of his death are recorded. He wrote an ecclesiastical history in twelve books, which begins with the contests between Arius and Alexander and terminates in the year 425. As he was brought up an Arian he was partial to the opinions of that sect, but his work contains many curious things in relation to the antiquities of the church. An abridgment of it extant is Photius, which, with some extracts out of Suidas and other authors, was published by Goethenius, Geneva, 1645, &c. and subsequently after a short revision, by Valerius, Paris, 1673, folio, and by Reading London, 1720, 3 vols. folio. *Vide Hist. Græc. Duper. Cave*

PHILOSTRATUS (Flavio) an Athenian or rather according to Sozomen, a Lycian writer under Severus, who, with a view to discredit Christianity wrote the Life, and an account of the Miracles of Apollonius Tyaneus. From the absurdities and contradictions with which his book abounds, it is doubtful how far the author who undertook the task at the special command of the emperor, followed tradition, or drew on the sources of his own invention. Charles Blount, in 1690, published an English translation of part of it, which in the original has excited the attention of many learned and acute critics. The best edition of it is that by Gottlieb Glaser, Leipzig, folio, 1700.—*Vide Hist. Græc.*

PHILOXEVUS. The name of a lyric poet

PHO

and varieties of antiquity were in the island of Cyrene, and equally interested for his wife and himself. He was in great favour with Demetrius of Syracuse, and is said to have obtained a diaurust from that prince by a law suit. Seeing the dia placed before the tribunal, at a banquet, he desired to enter into conversation with a judge on his own place, and in reply to the magistrate's inquiry said, he was endeavouring to obtain some information respecting the Norbae, but that his late friend had accused himself, on account of his youth, and referred him to the full-grown dia before his master. A work of his, that "his slaves were as long as that of a crane, and all judges," has also been handed down to posterity; while his compositions, which though their genius is admitted, were supine and by Plutarch as innovations, are entirely lost.—*Big. Diet. of Mus.*

PHLEGON, a Greek writer, born at Tralles, a city of Lydia. He was one of the learned freedmen of the emperor Adrian, and survived at least to the eighteenth of Antoninus Pius. He was the author of various works, of which the most important was that entitled, *Olympiaca, or Chronicles*, in sixteen books, brought down to the 139th Olympiad, AD 137. One of these alone is extant in Phocae. He also wrote a treatise *De Mirabilibus* and another *De Longava*, parts of both of which have reached modern times. The best edition of these fragments is that of Mommus, Gr. Lat. 4to. Leyden 1680. The titles of his remaining works are preserved by Suidas, but the history of Adræus published under his name was written by Adrian himself. An eclipse mentioned by Phlegon has been made the subject of much controversy having been deemed corroborative of the miraculous darkness at the crucifixion but Dr. Sykes, in a Dissertation on the Eclipse mentioned by Phlegon in answer to Whiston reduces it to a natural eclipse of the sun which happened November 24, in the first year of the 202d Olympiad, and not in the fourth of that in which the crucifixion took place.—*Murex. London's Life of Whiston.*

PHOCION an Athenian commander and one of the most virtuous characters of antiquity was of humble descent, but received a liberal education under Plato and other philosophers. He served his country with great distinction both in the cabinet and the field, and especially against Philip of Macedon. Although no able general, like ad good politician, he was the friend of peace hence he was a constant opposer of all the orators, and of Demosthenes among the rest, who never failed to disconcert and foil prospects of an accommodation. The ungratified enmity and opposition, caused Demosthenes used to oblige to him. The Athenians will certainly sometime or another in a mad fit, put these to death." " And then, Demosthenes," he replied, " in a sober cool." His acknowledged power, constituting his unceasing dominion, caused him to be chosen general forty-five times. When Philip entered Ath-

PHO

ens, with the intent of destroying Athens, Phocion was desirous of an accommodation, but being overruled by Demosthenes, the "last bulwark of Athenian merit." On the death of Philip he checked the joy of the Athenians, and disengaged the monarchic alliance to the young Alexander. After the departure of Thessaly, he was employed to manage the affairs of Alexander, and succeeded. On the death of the latter Phocion again discontinued the attempts to claim of the Macedonian rule, which he perceived could not succeed. The result proved the accuracy of his foresight; and when in consequence the Athenians sued for peace, he was despatched to treat with Antipater and succeeded, but upon very hard terms, comprising the surrender of the citadel, Hippodrome and Demosthenes; the dismemberment of a great number of the lower cities, and the admission of a garrison into Macedonia, a fact commanding the Phocæans. Phocion was much employed in the conspiracy which followed, but used his authority only to alleviate the evils which had arisen from the neglect of his counsels. In the contest between Cassander the son of Antipater, and Polyperchon, Phocion aided with the party which opposed the latter who affected to restore the democracy of Athens. The arrival of Polyperchon with a powerful army giving the democratic party the ascendancy with the proverbial inconstancy of the Athenians, Phocion and a great number of his friends, were condemned to die and drink poison, BC 318. So great was the fury of his enemies, that his body was denied a funeral in his own country and was carried by a slave and buried in the territory of Megara. Such was the unmerited end of one of the most conversant, disinterested and virtuous men of antiquity. After his death his countrymen, regarding their injustice condemned his accusers, and after having his ashes brought home at the public expense, erected a brazen statue to his memory.—*Plutarch. Corin. Nupt.*

PHOTIUS a patriarch of Constantinople, celebrated about the middle of the sixth century for the brilliancy of his talents and the depth of his erudition. He was a native of the capital, the asceticism policy of which he was afterwards called upon to superintend, and originally distinguished himself by his learning and ability as a layman, but having at length entered the church, Photius on the expiration of the patriarch Ignatius, by Budaeus, consecrated him to the vacant see 808. During the succeeding ten years, a controversy was carried on with much animosity between him and the bishop of Rome, each party endeavoring and outshining the other; the consequence of which was the complete separation of the eastern and western churches. Budaeus, his power being at length taken off by his nephew and successor in the empire, Michael the third, that prince was in his turn assassinated by Basilus, the Macedonian, who then descended the throne in 866. But Photius distinguishing him for the master was in the following year restored, to make way for the

protector of his old enemy Ignatius, and was forced to retire into banishment. On the death of that prelate in 1676, Piazzetta, by a flattering extraction of a forged document respecting the genealogy of the emperor, acquired his favor and being restored, maintained himself in the patriarchal chair during the remainder of that reign, but was at length arrested, on insufficient grounds, of conspiring against the new sovereign, Leo the Philosopher; where that prince once more supported him, and sent him, in 1685, into confinement in an Armenian monastery, where he died in 1691. This learned, though trifling prelate was the author of a *Histoire*, containing 30 volumes of 250 writers, of the "Monumens," a digest of the ecclesiastical laws, acts of councils &c. under fourteen heads; a "Lexicon of the Greek Language;" and numerous epistles. Of the former of these works there are two editions, that of Vienna, 1691 and that of Rome, 1692. Of the Lexicon, printed at Leipzig in 1690, there is a much more accurate copy in manuscript at Cambridge. The Letters appeared in one folio volume, in 1691. — *Cone. Patricius.*

PHIRLEAS or FREAS (Jesu) a learned and ingenious English author born in London about the end of the fourteenth century and educated at St. John's college Oxford in which society he obtained a fellowship, and was subsequently inducted to the living of St. Mary Bristol. Soon after he went to the Continent, and having continued his studies with great perseverance and success at Ferrara, Florence, Padua and other Italian universities, gave lectures in medicine and the belles lettres, in all the above named cities, to the equal advantage of his reputation and fortune. In 1465, pope Paul II offered him the bishopric of Bath which he accepted but a rival candidate is said to have despatched him by poison previously to his consecration. The acquisition of this piece of preferment which proved so fatal to him is attributed to his having dedicated a masterly translation of Diocletius Siculus to the pontiff intended to, His other works are, Translations of part of Xenophon and of Symmachus de Laude Caiilli, dedicated to John earl of Worcester with some miscellaneous poems and epistles. *Warton's Hist. of Poetry.*

PIA (P. H.) a distinguished chemist, was born at Paris in 1791. In 1770 he was made notary or sheriff and he deserved to my opinion his administration by useful established means, one of which was for the recovery of drowned persons, and was extremely successful. He also perfected the instruments for the conveyance of air to the lungs. His establishment was nearly destroyed during the Revolution, and Pia, leaving a large fortune did to almost a ruined indigence in 1799. He wrote "Description de la Boute d'Estompe pour les Bébés des Nouveaux," 1770, "Détails sur l'Établissement que la Ville de Paris a fait en Faveur des Paroissiens noyés," 1773.—*Rev. Unio. des Centres.*

PIAB, a man of colour, general of the dependencies of the state of Venezuela, distinguished himself in his military career by the most indefatigable activity and brilliant valour. When Bolívar after his landing at Guanare, marched on Caracas, he collected to Piar a considerable body of infantry and when the former was repulsed, Piar managed the retreat with great skill, and afterwards beat the enemy in several encounters. He was the idol of the soldiers, and his ambition increased with his success. Tired of playing only a secondary part in the state, he aspired to that of supreme rank. To arrive at this it was necessary to sacrifice the whites, and to commence by Bolívar himself. His scheme was, however, discovered, and being arrested, he was tried by a court martial, and was declared guilty of a conspiracy tending to cause a mutiny among the mulattoes and the Indians, exciting them to massacre the whites, to possess himself of the supreme command, and he was sentenced to be shot. Bolívar made several vain efforts to save him, but was at length obliged to sign his death warrant. Arrived outside the gates of Angostura, Piar placed himself in front of the soldiers and opening his breast, he commanded them to shoot. He fell pierced with seven balls. His ambitious projects were soon forgotten but his feats of arms are still celebrated by the warriors of Colombia.—*Eug. Uare.*

PIAZETIA (JOHN BAPTISTE) an artist, was born at Veneice, in 1683. He was a great follower of the style of Spagnoletti and Gessi, exciting surprise and horror by his sudden contrasts of light and shade but his method of colouring produced dissimilarity and spots on the canvas. His chief excellence lay in caricatures in which he was, perhaps, unparalleled, he also succeeded greatly in busts and heads for cabinets. He died in 1754.—*Pilkington by French.*

PICARD (JOU) a distinguished French astronomer and mathematician who was a native of La Flèche. He embraced the ecclesiastical profession and became prior of Rillé in Anjou but subsequently settling at Paris, he was made astronomer to the Academy of Sciences. In 1671 he was sent by Louis XIV to Utrecht in Denmark to make astronomical observations and on his return to France he brought with him the MSS. of Tycho Brahe. He was the conductor of the "Connaissance des Temps" for which he made calculations from 1679 to 1683. Picard commanded the measurement of a degree of the meridian, in France; and he first applied the telescope to quadrants and also observed the phosphorescent light in the vacuum of the barometer. He wrote in his optics, magnetism &c.—*Hutton's Math. Dict.*

PICARÈTEL (O. N.) prior of Neufchâtel, a member of the academy of Dijon, died in 1794. He wrote "Les Deux Abédoniens, Histoire Philologique," "L'Histoire Méthodologique Homologique et Romantique," year I Anno 1783." He commenced a great work,

edified "or Disciple Apologétique" which was to have contained the refutation of all the heresies which have existed in the world since the establishment of Christianity, but the decline of his health obliged him to relinquish it. His brother who died about the same time, was successor of the marble table of the palace of Dijon and also member of the academy of that city. He was the author of a "Journal des Observations du Baronnet de Lavalier" and of some estimable poems. Their sister madame Guyton Moreau, is known by several German and Swedish translations. — *Histoire des Contemp.*

PICART (BERNARD) A French engraver born in 1673. He first studied the art of design under his father and then applied himself particularly to architectural engraving. Being a Protestant, he was reduced to emigrate from France, in consequence of the religious persecutions which occurred under the government of Louis XIV when he settled at Amsterdam. He worked chiefly for the booksellers and the principal publications in which he was concerned were "Histoire générale des Cérémonies, Mœurs, et Coutumes Religieuses de tous les Peuples représentées en 343 Figures dessinées de la Main de B. Picart" 9 vols. folio. "Superstitions anciennes et modernes, préjugés vulgaires qui ont induit les Peuples à des Usages à des Pratiques contraires à la Religion" 1733 2 vols. folio another of his works was entitled "Le Temple des Mœurs." His death happened in 1733. A posthumous collection of his engravings was published at Amsterdam.—*Dictionnaire Hist.*

PICCINI (NICOLAS) one of the most industrious and original composers of the Neapolitan school of music. He was born at Bari near Naples in 1728, and was intended for the church, a destination which the decided talent evinced by him for music induced his father reluctantly to forgo. Having studied twelve years at the conservatory of Santa Croce, under the celebrated Durante he commenced his professional career in 1754 with the comic opera "La Donna Dispettosa" which was very favorably received at the Florentine theatre in Naples. He then went to Rome where his "La Buona Figliola" placed him at once at the head of his profession and met with a success beyond all precedent, being performed in a short time on the boards of every musical theatre in Europe. For fifteen years he contested the rage at Rome when the rising reputation of Astafid, a far inferior composer induced him to quit that capital for France having already set to music according to his choice, above 200 operas. On his arrival in Paris, he began to study the language under Marmontel and by the assistance which he afforded him reset six operas of Quinault. The opera of Roland, however his first original one in this country was scarcely brought out, before a contest commenced, one of the most famous in musical annals. Gluck at this time was to the zenith of his reputation, and the dispute respecting the comparative similitude

of the German and Italian schools, was divided at Paris into two parties, the one composed being, perhaps, the only persons in the capital who did not carry it on with animosity. A singing school being soon after established, Piccini was placed at its head, till the breaking out of the Revolution, when he returned to his native country but was received there with great coldness by the government, and forbidden to appear in public. He was remissed in comparative indigence and poverty till 1799 when Beaumarchais invited him again to Paris, and restored his emoluments, appointing him also inspector of the national conservatory. In this situation he remained till his death in 1801.—*Life by Grignaud.*

PICCOLOMINI the name of a noble Italian family long seated at Siena, which has in various ages produced eminent statesmen, warriors and scholars. Among the latter class the most distinguished are, *Alessandro*, born in Siena in 1608. He was an orator of great ability and acuteness, as well as of deep erudition, and is said to have been the first who treated of philosophical subjects in the modern Italian. His application to severer studies did not however prevent the cultivation of the belles lettres, and several dramatic pieces of his composition are said to have been deservedly popular in their day. He was also the author of a treatise "On the Theory of the Planets" *Moral Institutes*

On the Sphere and the Morality of Hobbes. A licentious dialogue satirized, *Delle belle Creanze delle donne* has been ascribed to him but the internal evidence contained in the work renders the testimony to say the least suspicious. He died in 1578 archbishop of Patras and cardinal of Siena.

—*Francesco Piccolomini* born in 1580 in the same city acquired a great reputation over all Italy for his learning during the latter half of the sixteenth century and held various professorships in different universities. His principal works are, a treatise on "The General Philosophy of Man," printed in folio, and some commentaries on the writings of Aristotle. His death took place at Siena in 1604.—*Ezra Silvius Piccolomini* afterwards pope Paul II (see Paul II), was of this family in compliment to whom James Amman, a Lucchese successively bishop of Massa and Fossato assumed the name on being raised to the purple in 1610. He wrote an account of the transactions of his own times, from 1466 to 1469 and at his death, which took place a few years after the last mentioned date, at the age of fifty-seven, having the fourth added upon his property and with it founded and endowed the hospital of Sopra Susto at Rome.—*Tribunali, Moretti.*

PICHETRUE (CHARLES) a celebrated French general, whose talents became developed during the progress of the war which originated from the Revolution. He was born at Arbois in Franche Comté, in 1761, and his parents belonged to the lower ranks of society. He received his early education at the seminary of Arbois and studied philosophy among the

other soldiers at that time. Showing a decided partiality for the cause of freedom; three officers sent young Pichegru to Paris, where he was received with enthusiasm at their college of Bâleens. He did not, however, as was reported, enter into any religious order; but quitting Bâleens, he entered in the 1st regiment of artillery. His merit soon attracted the notice of his officers, and he was raised from the ranks to be a sergeant. In 1789 he had been made an adjutant; and on the Revolution taking place he was still further promoted. He was then appointed to the command of a battalion of the National guard, among whom he introduced order and subordination. In 1792 he served on the staff of the army of the Rhine, and rapidly advanced from the rank of general of brigade to that of general of division, till, in 1793, he took the chief command of that army just after it had been almost disorganized by the disaster which had occurred at the battle of Wagrambourg, and in the retreat to Dorn. Notwithstanding he was interrupted in his plans by the jealousy of Houché who joined him with the army of the Moselle and assumed a superior authority he succeeded in restoring discipline and confidence among the troops the fruit of which was the victory of Haguenau, gained December 23, 1793. In February 1794, Pichegru took the command of the army of the North, where he was embarrassed by many difficulties, arising from the flight of general Dumouriez and Lafayette and the pernicious influence of the conventional commissioners, St Just and Lebas. But Pichegru surmounted the obstacles thus opposed to him, recalled his soldiers to a sense of their duty and undertook the conquest of Holland the most brilliant of all his exploits. On the 19th of January 1795, he secured Amsterdam; and in the beginning of February he had made himself master of the whole country without any enemy to oppose him. Soon after he received orders to direct the operations of the army of the Rhine and Moselle and as he still retained the chief command of that of the North and of the Somme and Maine he had the control of a larger body of troops than any other general who was not a sovereign prince. Going to Fance, the National Convention appointed him commandant of that city in April 1795 that he might rescue the dungeon of the Terrorists, which he happily effected. In the course of the same year he obtained some advantages over the enemy towards the Rhine, and took Mainz on the 20th of September but having received a check in November his enemies took advantage of the circumstance and obliged him to abandon his command. He then retired to a private life, and some time after he was offered the post of ambassador to Sweden which he did not accept; and in March 1797 he was chosen deputy from the department of Fance to the council of five hundred. He only remained his office till the 4th of September when a new revolution taking place, he was one of the sixty-five deputies who, together with Carnot and Brumalius two of the chiefest-

men, were dismissed by their constituents on account of a popular conspiracy and condemned to imprisonment. Pichegru, with others, went into Capoë, where he made his escape to England. Escaping to the service of the insurgents against the government of Bonaparte, he went to Fance in the early part of the year 1804. He was soon arrested, and committed a prisoner to the Temple, where he was found dead, (having been strangled) on the 6th of April. Whether Pichegru died by his own hand, or by that of an assassin employed by the party into whose power he had fallen is a question which has been frequently and warmly agitated between the admiring and the enemies of Bonaparte, who, in this country at least, was openly accused of having ordered the murder of his captive.—*Dictionnaire des Biographies*. *Biog. Univ.* *Biog. Nouv. des Contemporains*.

PICHOM (THOMAS JOHN) doctor of divinity and administrator of the hospital of Mâna, where he was born in 1731. He attached himself to M d'Arancourt bishop of Figuera, who made him canon of the church of Mâna. He was also historiographer to Mousnier. His works are numerous the principal are "La Raison Triomphante des Nouveautés," "Traité Historique et Critique de la Nature de Dieu," "Cartel aux Philosophes," "La Physique de l'Histoire," "Mémoire sur les Abus du Celibat dans l'Ordre des Dominicains," "Mémoire sur les Abus dans les Mariages," "Des Etudes Théologiques," which contain some philosophical ideas which contrast very strongly with the spirit of his other works and have been severely reprobated. "Secret et Couronnement de Louis XVI précedé de Recherches sur le Sacre des Rois de France et suivi d'un Journal Historique de ce qui s'est passé à cette Cérémonie," of which the journal only is Pichon's. "Parade de l'Académie de Helvétie," "Les Arguments de la Raison en faveur de la Religion et de la Sacerdoce." Pichon died in 1812.—*Biog. Nouv. des Contemporains*.

PICET (Baptiste) an epicurean of Geneva, born there in 1655. Having completed his studies in the college of his native city he travelled over a great part of the European continent, and visited England. On his return through the Low Countries he resolution as a theologian proffered him an offer of the divinity professorship at Leyden. This, however, he thought proper to decline, in favour of a similar situation at Geneva, which he filled with great credit and ability till his decease in the summer of 1724. Among his works on devotional subjects are, "Christian Morality" 12mo, 5 vols.; "Christian Theology" a Latin treatise, in 3 vols. 4to; "On Indifference in Matters of Religion"; together with a variety of sermons, religious tracts, pastoral and other letters, &c. As an historian, he is adventurously known by his "Annals of the Welsh and Breton Countries," 4to, 8 vols.—*Nova. Dict. Bibl.*

PICLUS (Alessio) or (Alessandro) Pico di Mirandola, one of the celebrated Italian learned of

the fifteenth century, who contributed to the varied and difficult of learning in Europe. He was born in 1460, and was the son of the power of Mirandola and Comacchio. Having been deprived of his father when young, his mother did not suffer his education to be neglected, and such was the progress he made in his studies, that at the age of fourteen he was sent to the university of Bologna. He afterwards visited the most noted seats of learning in Italy and France. In 1486 he erected on his own estate, a villa which he called *Pratino* in praise of which he wrote a Latin poem. He is said to have been acquainted with twenty two languages when he was but eighteen. Trabemus, his contemporary says he was master of all the liberal arts, that he cultivated with success Latin, Greek and Hebrew literature was an admirable poet and the most learned philosopher and subtle disputant of the age. Setting at Florence, he addressed a panegyric to Lorenzo de' Medici whose patronage he obtained. In 1486 he went to Rome where he published theses on various subjects, challenging all the world to debate with him the propositions contained in them. But instead of opponents such as he expected he encountered an accusation of heresy and thirteen of his propositions being censured by pope Innocent VIII he was silenced, and thought proper to leave Rome. He then returned to Florence where he composed an apology for his opinions and in 1488 took up his residence on an estate near Florence given him by Lorenzo de' Medici devoting his time to various literary pursuits. After the death of his friend Lorenzo he returned to Ferrara, having previously disposed of the estate of Mirandola to his nephew. The latter part of his life was dedicated to the study of theology and he wrote a work entitled *Hecataplana*, relating to the beginning of *Genesia* and another on the *Psalmi*. His death took place at Florence in 1496. Pico is one of the learned men whom Nauclé has thought it necessary to vindicate from the charge of being a magician. He was extremely regarded by his contemporaries as a very remarkable personage and the older Scaliger styles him "Monstrum sine vita" while Palafox says he was the phoenix among the great genitures of his time. His works were published collectively in 1601 folio.—*Life of Pico* by *Graenwald*. *Bug Uso*—*Jean Francis Pico*, nephew of the former also cultivated literature with great success. He wrote a life of Jerome Savonarola works on theology and Latin poetry. He was married in his own castle of Mirandola, together with his son by his nephew Galvani Pico, in 1523.—*Froben Thauer Viver Duct. Tivoliensis*.

PIERCE (Edward) an English painter in the reigns of Charles I and II, well distinguished both in history and landscape. He wrote connected chronicles of stupendous and buildings of churches, the greater part of which were destroyed in the fire of London in 1666. He worked some time with Van dyke and an-

swer of his poems are seen at Hatfield castle. He had three sons, one of whom became eminent sculptor and designed the statues of Sir Thomas Gresham and Edward III at the royal anchorage.—*Wikipedia's dissident*.

PIERRE (Comteville de la) or Copeland à Lapide a Jesuit, born in the diocese of Léige who became professor of theology at Louvain and afterwards at Rome. He was the author of a great many religious works, including commentaries on the Scriptures, which are much esteemed. The latter have been published in ten volumes folio. He died at Rome in 1637 aged seventy-one.—*Dicit. Hist. Bug Uso*.

PIGALLE (Jean-Baptiste) a celebrated French sculptor. He was a native of Paris, and studied his art in Italy, where he made himself familiar with the famous monuments of antiquity. Returning to France, he became chancellor of the academy of painting at Paris, and was made a knight of the order of St Michael and appointed sculptor to the king. He died in 1783. Pigalle executed statues of Mercury and Venus, for the king of Prussia a figure of a girl taking a thorn from her foot the monument of Marshal Saxe besides many other works of less importance.—*Bug Uso*.

PIGHIUS. There were two learned ecclesiastics of this name uncle and nephew who flourished in the sixteenth century. They were both natives of Campea in the Dutch province of Overijssel.—*Albert*, the elder born in 1500 received his education at Louvain and Cologne and exerted himself especially as a champion of the Romish church against the progress of the reformed doctrines. His principal work in which he enwraps with much acrimony against Luther and Melanchthon is entitled "Assertio Hierarchie Ecclesiastice" folio. His other writings are, "On the proper Method of celebrating the Easter Festival" A Defence of Astrology, and a tract On the Sciences the Equinox etc. His death took place in 1548 at Utrecht where he was provost of the church of St John.—*Stephanus Vimander* the younger of the two was born in 1520 and went early to life to Rome where he passed ten years in devoting himself to the study of classical literature and the antiquities in which that capital abounds. The reputation he had acquired for learning induced the prince of Jelgers and Cleves to place his son Charles, a young prince of great promise under his tuition, but his pupil dying prematurely Pighius celebrated his good qualities and talents, to the full development of which time only was wanting, in a eulogium entitled "Hercules Produs." His other works are, "Anales ac Facti Romanorum Magnitudines et Provincias," and the first good edition ever published of the works of Valerius Maximus; His letter is in 1565. He eventually obtained a canonry at Flanders where he was the master of the grammar school and died there in 1604.—*Mauri*.

PIOMA (Giovanni Battista) a Milanese

son of *Foujou*, born 1320. He received the education in the university of his native place, and became professor of eloquence there. *Foujou* was the author of a work entitled "The Prince," a "History of the House of *Han*," a "Treatise on the Life and Writings of *Aristote*," and some miscellaneous poems. His death took place in 1373.—*Thierry*.

PIGNEREAU (M.) Bishop of *Audren* was born in the department of the *Aisne* in 1740. In 1770 he went to a missionary to *Cochin China*, with the authority of the pope and the title of spiritual vicar of that country. He gained the esteem of the king *Cuong Schung*, who confided to him the education of his only son. M. Pignerœu when Bishop of *Audren* resembled his zeal for the prosperity of his flock, but the troubles which disturbed the empire of his protege obliged him to fly to the town of *Saint-Gaud*, whence he proposed in taking the assistance of France. The king of *Cochin China* was surprised by three ambitious brothers, who overthrew his empire and forced him to seek an asylum in the isle of *Pulo-Wa*. The bishop departed for France in 1787 taking his pupil with him. He formed an offensive and defensive league between France and *Cochin China* and returned with the title of ambassador extraordinary to the court of that kingdom. Before his arrival at *Cochin China*, the French Revolution broke out, and all help was refused him. He did not lose his courage but going to the Isle of *Pulo Wa*, he brought from thence *Cuong Schung* who profiting by the discontent of his subjects, who were tired of the usurpers, regained his empire in 1790. He created M. Pignerœu his first minister and under his direction he founded several important manufactures. The bishop translated for him a *Treatise on Tactics* into Chinese and instituted schools, to which fathers of families were obliged to send their children at the age of four years. He died in 1800 and was buried by the missionaries at *Cuong Schung* disengaged with their ceremony caused him to be disinterred and rendered his funeral honours after the manner of the *Cochin Chinese*—*Bib. Noss. des Contemp.*

PIGNORIUS (Lorenzo) a learned ecclesiastic of *Padua*, born there in 1571. He studied at the university of that city and having formed an intimate acquaintance with the celebrated Galileo, that philosopher presented him the office of a professorship at the public lecture at *Pisa* an appointment, however which his love of retirement and of leisure for pursuing his studies in his own way, induced him to decline. He was the author of several important works, written in the Latin language, particularly of a treatise intended to shew a light on the ancient Egyptian monuments. This book, which evinces much reading, is entitled "Moses Iacob." He also wrote: "On the treatment and offices of the slaves among the Ancients;" "On the early history of *Pisces*;" some miscellaneous papers, &c. Cardinal *Zenobio Barberini*, who

introduced him into *Vatican*, dedicated the book to *Pius IV* during a ceremony at *Turin*, where he died the following year of the plague.—*Nous. Hist. Ecl.*

PIGNOTTI (Lorenzo) an Italian historian and poet was born at *Piglione* in *Tuscany* in 1739. Being left an orphan he was brought up by an uncle at *Aversa*, and was placed at a seminary in that city where by his brilliant progress, he attracted the notice of this bishop, who encouraged him to his studies and even offered him a chair in the seminary which he declined, not being willing to enter into the monastic state. In consequence of his refusal his uncle withdrew his protection and through the kindnesses of his brother in law Pignotti obtained studies in the university of *Pisa*. After taking his degrees in medicine he went to *Florence* and was created professor of physic in the new academy of the archduke Leopold. In the mode of his more abstruse studies, Pignotti amused himself with composing fables which have not the conciseness of those of *Zoep* or *Phebus*, nor the naïveté of *La Fontaine* but are pleasant and elegant. He also published a poem, entitled "La Treccia rapita" in which contrary to other comic poets, who make the主旨 speak in the most vulgar language, he has blended a kind of dignity with the ridiculous. His great work the history of *Tuscany* is divided into five books, in which he depicts, in a striking manner, all the vicissitudes of that country and in five dissertations added to his history he has treated of important questions which throw a great light on the epochs of which he writes. His health declined under this great labour and in 1801 his government dispensed with his public lessons, and he was afterwards created historiographer of the court, member of the council of public instruction and finally rector of the university of *Pisa*. He died in 1812 and was buried in the Campo Santo of *Pisa* where a monument is erected to his memory.—*Bib. Univ. des Contemp.*

PILLES (Rouss de) a writer on painting, was born at *Clisson* in 1655, and was brought up to the church but having a great taste for painting he became tutor to the son of M. *Amelot* whom he accompanied in a tour to Italy and when his pupil was appointed ambassador to *Venice*, *Lisbon* and *Dortmund*, De Pilles accompanied him as his secretary. In 1691 he was sent by the French ministry into Holland, as a secret negotiator; but his errand being discovered, he was imprisoned for five years, during which period he composed his "Lives of the Painters." His other works are, "An Abridgment of Anatomy for the Use of Painters and Sculptors," "Conversations on Painting," "Elements of Painting," and "Abrégé de la Vie des Peintres, avec des Réflexions sur leurs Ouvrages et un Traité du Peintre parfait," which has been translated into English, with an appendix on the English school of painting. Pilles died in 1708.—*Nous. Hist. Ecl.*

PINKINGTON (James) Bishop of *Boscombe* in the sixteenth century. This Ireland

protestant was a native of Rivington, Lancashire, where he was born in 1559 and studied at St John's college, Cambridge, over which society he was afterwards selected to preside. On the restoration to power of the Romish party in England, master Mary doctor Pilkington was, in common with many of his brethren, forced to flee to the continent, where he remained, till the death of that princess and the accession of Elizabeth paved the way for his return. Soon after this event he was elevated to the see of Durham, which valuable preferment he held till his decease. Among his writings is a valuable Commentary on the Books of the Old and New Testaments. His death took place in 1595.—*Bug. Brit.*

PILKINGTON (LAWYER) a sprightly and entertaining author, the friend of Swift, and intimate with many of the wits of the period. Her maiden name was Van Lewen, she being the daughter of a physician of that name, of Dutch extraction but practising at Dublin, where she was born in 1712. When very young her mental as well as personal charms obtained her many admirers, one of whom the rev Matthew Pilkington himself a man of wit and talent, she was soon united but the marriage proved an unhappy one through the jealousy of her husband which appeared not to have been excited without sufficient foundation. A temporary separation was followed by a reconciliation and the parties came together to London where similar disagreements taking place they finally parted. The impatience thrown upon her character by these too well-grounded suspicions appears to have seriously injured her in the opinion of her friends as we soon after find her confined for debt in the Marshalsea, and depending on charity for support upon her pen. On her liberation she attempted to maintain herself by the sale of books and commenced business in St James's parish with a capital amounting, it is said to no more than five guineas. Such a speculation failed as might have been anticipated, and she was afterwards indebted for her subsistence partly to her writings and partly to the bounty of her literary acquaintances. Among the latter Colley Cibber was very kind to her and assisted her materially in the disposal of her works, one of which containing memoirs of her own life was written with much talent, and embracing anecdotes of many of her contemporaries produced her a handsome sum of money. She also wrote a variety of miscellaneous pieces, in a light and elegant style as well as two dramatic compositions, "The Romish Father" a tragedy and "The Turkish Court, or London Apprentice" a comedy. A habit of intemperance in the use of opiate liquors, contracted during the period of her distresses, at length undermined a constitution naturally good, and carried her off in her thirty-eighth year, at Dublin, during the summer of 1750.—*Memoirs. Bug. Down.*

PILIPAY or **BIDPAV** an ancient oriental philosopher of whom nothing is known, except that he was the successor and namesake of Boos. Dux.—Vol. II

Dedhatil, an ancient king of India. He is celebrated for his book of *Apologetica, or Fablia*, a work replete with moral and political precepts. It is called in the Indian language, *Kalile Wadimose*, a name signifying "The Fox," which animal is made the principal interlocutor. It is said to have been written 2000 years BC.; but the work contains many proofs that it was of a much later period. It has been translated into most modern languages and the best European version is said to be that of M Galland in French 1716, 2 vols. Another work attributed to Pilipay was also translated by the same writer and was entitled *Le Manfruge des Isles Flotantes ou la Bambade* —*D'Herbelot. Histoire des Ludes Orient.*

PINDAR, the most famous lyric poet of ancient Greece was a native of Cynocephala, near Thebes, in Boeotia. The time of his birth is uncertain but he was at the height of his reputation at the time of the expedition of Xerxes BC 480. Of the particulars of his life but little is known but he appears to have courted the gr at by racyonistic verses, which were at the service of those who paid for them. Two of his principal patrons were Phœnix of Agriopentum and Hieron of Syracuse and he also celebrated the city of Athens, in a manner which excited the displeasure of his countrymen who imposed a fine upon him which the Athenians doubly repaid and erected a statue to his honour. He is said to have died in the public theatre at the age of fifty five and his memory was held in such honour that on the capture of Thebes, first by the Lacedemonians and afterwards by Alexander the house in which he had lived was spared. Pindar composed a great number and variety of pieces but those which have reached posterity are odes, celebrating the victory in the four great games of Greece, the Κυριακη Ιπητεια Νομειαν and Isthmian. These possess the characteristics of far rapidity and variety for which he is so prais'd by the ancients, but are frequently obscure to the modern reader from the difficulty of comprehending the point and beauty of much of the allusion which must have been well understood by his contemporaries. No poet has been more highly praised than Pindar who is loftily extolled by Plato Horace Quintilian and Longinus. Besides his bold dithyrambs, Horace notices his pathetic and mournful commemorations of departed excellencies, all which are unfortunately lost. No writer has been more unmercifully snarled by modern poets than Pindar; the failure in catching his peculiar spirit being so notorious, that a Pindaric ode is degenerated into a sort of burlesque composition. The latest and best edition of this admired poet is that of Heyne, 1790, &c. which contains the *Great Scholia*. There is an English version of Pindar by Gilbert West which is much esteemed.—*Fest. Pat. Grec. Novari. Preface to Odyss. by Gilbert West.*

PINE (Jesse) an eminent engraver, was born in 1690. Of his birth and education

PIN

None is known, except that he gave illustrations of King James classically instructed. He is best known for his heraldic prints, ten in number representing the tapistry hangings in the House of Lords which were so highly approved, that the parliament passed an act to secure to him the emoluments arising from them. He engraved five other plates to accompany them; a view of the creation of Charles Brandon, duke of Suffolk by the House of Peers, with Henry VIII on the throne the same with the reigning king on the throne and the Commons at the bar; the House of Commons and the Trial of Lord Lovat in Westminster hall. His also engraved the whole text of Horace and Virgil's Eclogues and Georgics which he illustrated with ancient bas reliefs and gems. These with Magna Charta are his principal works. In 1743 he was made Blue mantle to the Herald's college and afterwards engraver of signet seals and stamps. He died May 4 1756.—*Wikipedia*

PINELLI (John VINCENZ) an Italian nobleman celebrated as a book-collector. He was descended of a Genoese family but was born at Naples in 1633. He studied at Padua, and settling in that city he formed at a vast expense a most valuable library of printed books and manuscripts. He died in 1661. The library after being vastly augmented by his successors, was on the death of his descendant Maffei Pinelli, sold to two London booksellers Robson of Bond-street and Edwards of Pall mall who removed the books to London in 1790 and sold them by auction. An excellent catalogue of this collection was compiled by the abbé Morelli, and published in 5 vols. 8vo, from which were made an abstract as a sole catalogue.

17 G 8vo.—*Tiraboschi*

PINGERON (Jean CLAUDE) a French writer, secretary of the museum of Paris, and member of the academy of Barcelona, was born at Lyons in 1730. He took arms in the Polish service, in which he became captain of artillery and engineer. He travelled a great deal in Europe and in 1776 he accompanied the abbé Sadi Séauve in his journey from Caen to Meudon (Sable). In 1779 he was concerned in the *Journal d'Agriculture du Commerce, des Arts, et des Finances*, to which he contributed more particularly articles on public utility. He died at Versailles, in 1795. His works are principally translations, they are, *Traité des Vertus et des Inconvénients, from the Italian of the marquis de Hyne*; *Conseils d'un Mere à son Fils*, of Madame Picotomini Gérard; "Essai sur la Peinture, of Count Algarotti"; "Traité des Violences publiques et particulières, avec une Dissertation sur les Désavantages des Magistrats"; "Les Absoluts" of Racine; "Voyage dans la Grèce Antique, of the Abbé Bonnier"; "Vies des Archéologues grecs et romains," from Miltias, with numerous translations from the English, and other languages, accurate and deserving.—*Bibl. Nove. des Comptes*.

PIN

PINGRE (AUXIANCE GUY) a celebrated modern astronomer and mechanician born at Paris in 1711. He adopted the ecclesiastical profession and entered among the canons regular of St. Augustine but quitted that order to devote himself to the study of mathematics. In 1749 he was elected a member of the Academy of Sciences at Paris and in 1753 a correspondent of the Academy of Sciences at Paris, to the members of which learned society he furnished many important contributions. At length he was made keeper of the library of St. Geneviève and in 1760 he went on a voyage to the island of Diego Rodriguez, in the Indian Sea, to observe the transit of Venus. In 1767 he published a

Mémoire sur les Lieux où le Passage de Vénus le 3 Juin 1769 pourra être observé avec le plus d'avantage 4to and he went himself to St. Domingo to observe that phenomenon of which voyage an account was published in 1773. He subsequently undertook another voyage for the promotion of science the particulars of which were also laid before the public. M Pingré was for several years employed in making calculations for the National Almanac and on the establishment of the National Institute he became one of the members. His death took place in 1796. Besides the works above noticed he published *Cométographie* 2 vols. 4to.

Mémoire sur les Découvertes faites dans le Mer du Sud 4to; and *Description de Pékin* —*Bog Univ. Det Hæ*

PINKERTON F.S A. (JOHN) an ingenious and prolific but eccentric writer born in Edinburgh Feb 13, 1758. He was the third and youngest son of James Pinkerton, a dealer in hair descended of a respectable family originally settled at a village of the same name in the neighbourhood of Dunbar. After acquiring the rudiments of education at a small school in the suburbs of the Scotch metropolis, he was removed in 1764 to one of a more respectable character at Lanark kept by a brother in law of the poet Thomson. On arriving at a proper age his father articled him to a writer to the signet, in whose office he continued five years, but did not neglect the cultivation of a taste for poetry which he had early imbibed, and of which the first fructus appeared in 1776, in the shape of an elegy called *Craigmiller Castle*. On the death of his father in 1790, he came to London where he settled the following year and published an octavo volume of miscellaneous poetry under the unassuming title of Baynes, with dissertatione. On the Final Transition of Poetry and "On the Tragic Drama" prefixed. That work he followed up the succeeding year by two others one in quarto, containing *Dithyrambic Odes*, &c. the other entitled "Fables in Verse." A passion for collecting medals, accidentally excited in his boyish days by coming into possession of a small but rare one of the emperor Constantine drew his attention to the importance of all books published on the subject, and led him to draw up a Manual

for his own use which gradually grew into a very extensive and complete "History of Scotland," printed by Dodsley, in 1764, in 8 vols. 8vo, a compilation in which he was much indebted to the assistance of Moses Dovey and Scouphen. This book has since gone through two other editions, the last by Mr Hartwood. Mr Fingherton's other works are, "Legom on Literature" published in 1765 under the assumed name of Heron in which he depreciates the value of the ancient authors, and recommends a new system of orthography even more fantastical than that advocated by his countryman Elphinstone. The book, however, obtained him the acquaintance of Horace Walpole of whose witfulness, &c. he published a collection after his decease under the title of "Walpoliana," in two small volumes, with a portrait. "Ancient Scottish Poems from the (presumed) Manuscript Collection of Sir Richard Maitland, Knt. Lord Privy Seal of Scotland, &c." comprising Pieces written from about 1490 till 1586 with Notes and a Glossary. It is unnecessary to add that this "Collection" is a literary forgery.

The Treasury of Wit, 1787 2 vols. 1780, under the fictitious name of Bennett. Dissertation on the Origin and Progress of the Scythians or Goths, being an Introduction to the Ancient and Modern History of Europe. A Collection of Latin Lives of Scottish Saints, 8vo. 1789 now scarce, an edition of Barbour's old Scottish poems. The Bruce 3 vols. 8vo. in the same year. The Medicinal History of England &c." As Enquiry into the History of Scotland, preceding the Reign of Malcolm the Third. 8 vols. 8vo. 1789 reprinted, with additions 1795.

Scottish Poems, reprinted from scarce editions 3 vols. 8vo. Edinburgh Sketches, or Portraits of Illustrious Personages of Scotland, with Notes 2 vols. 8vo. 1795-1797. The Scottish Gallery 8vo. 1799. Modern Geography digested on a New Plan 2 vols. 4to. 1802 reprinted 3 vols. 1807; General Collection of Voyages and Travels 19 vols. 8vo. "Recollections of Paris," 8 vols. 8vo. Now Modern Atlas, in parts 1809 and

Poetry or a Treatise on Rocks, 2 vols. 8vo. 1811 but lost original work. Mr Fingherton of late years, resided almost entirely at Paris, whether he had first proceeded to Paris, and where he died March 10 1826—Ans. Reg.

PINSON (François) an eminent French advocate, born in 1612 at Bourges. He was the author of a number of works on subjects connected with politics and jurisprudence. The principal of these are a "Treatise on the Pragmatic Sanction of Louis the Ninth and of Charles the Seventh" another "On Benefices" two volumes, "Des Régales," and "Notes communes sur les Indulgences." His death took place at Paris, in 1661 —Kew. Dic. Hist.

PINTURICCI (Bartolomeo) an eminent painter the disciple of Pietro Perugino, was born at Perugia, in 1454. He painted chiefly in bluish and greenish but he also excelled

in portraits. His chief work was the History of Pope Pius II, in ten compartments, in the library at Siena. His style was effective, but he made use of too splendid colours, and introduced abundance of gilding. He is said to have died of chancroid at the following circumstance. Being engaged to paint a Nativity for the monastery of St Francis, at Sienna, he passionately insisted that every thing should be removed out of the room in which he worked, and obliged the monks to remove a great chest, become rotten from age. In the attempt it burst and discovered a board of 500 pieces of gold to the great joy of the fathers, and the mortification of Pinturicci. His death took place in 1513. Fabian Entwistle. Paddington.

PIOMBO (Sebastiano del) also called VFNEZIANO an eminent painter was born at Venice in 1485. He was the disciple of John Bellini and afterwards of Giorgione from whom he took his style of colouring. He served at great excellence as a portrait painter. Being induced to go to Rome to adorn the houses of a rich merchant of Ferrara, he became acquainted with Michael Angelo, who encouraged him to enter the lists with Raphael. His greatest work as his "Resurrection of Lazarus," now contained in our National Gallery. This was painted at the marriage of Michael Angelo, who is said to have furnished him with the design and retouched it when finished. He was greatly esteemed by Clement VII who gave him the office of keeper of the signet, whence he was called del Piombo in allusion to the lead of the seal. This post obliging him to take the religious habit he relinquished the profession of a painter and lived at his ease the remainder of his life. Of his portraits the most distinguished were a likeness of Julius Caesar, painted for cardinal Ippolito de Medici, those of pope Paul III of Aragon and of Clement VII.—D' Argenville. Paddington.

PIOZZI (Hester) a widow, and great admirer of learned men, born in 1739 the daughter of John Salisbury esq. of Havelock Cambridgeshire. Early in life she was distinguished in the fashionable world by her beauty and accomplishments. In 1765 she accepted the hand of Henry Thrale esq. a lawyer of great eminence in Southwark, which brought her then represented in parliament. Soon after commenced her acquaintance with Dr Johnson, of whom she at a subsequent period published "Anecdotes," in one 8vo volume which appeared in 1782 being her maiden effort in authorship. Mr Thrale dying in 1781 his lady retired to Bath and, in 1784, accepted the address of signor Piccioli, a Florentine, who taught music in that city. A warm attachment from her old friend, upon the subject, entirely dissolved their friendship; and soon after her marriage she accompanied her husband on a visit to his native city during her residence in which she paid visits to Mrs Mary Gostick, and Mrs Scott, in the production of a collection of

piece in verse and prose, entitled the "Pleasant Philology." Of this work a few copies were printed in 1786, but it was never published. Her other writings are, the "Three Warnings," a tale, in imitation of La Fontaine, in which it has been asserted, but on insufficient authority, that she was assisted by Johnson; "A Translation of Boileau's Epistles to his Garrison," first printed in Mrs. Wilkes's Miscellany; and a Prologue to the Royal Supplicants;" "Observations made in a Journey through France, Italy, and Germany," 2 vols. 8vo 1789. "British Synonymy or an Attempt at regulating the Choice of Words in familiar Conversation," 2 vols. 8vo. 1796. and "Retrospection of a Review of the most striking Events &c. and their consequences, which the last 1800 Years have presented to the View of Mankind," 2 vols. 8vo 1801. Mrs. Price whose abilities were more lively and agreeable than profound, became a second time a widow and died at Clifton, May 8 1801 in her eighty-second year.—See *Bibl. Gen. Mag.*

PIPER (Charles Colver) a Swedish statesman who was the principal minister of Charles XII. Born in obscurity he raised himself to eminence in the state, by his talents, and obtained the favour and confidence of Charles XI. who placed him about his son and successor with whom he became a favourite counsellor. He attended that prince in all his campaigns and is supposed to have recommended the expedition to Russia, the result of which was so disastrous to the Swedish monarch. Count Piper was present at the battle of Poltava, when he fell into the hands of the Russians, who treated him with much rigour; and, after being removed from one place of confinement to another he died in the fortress of Schlobenborg in 1716.—His son **Charles Fabritius**, Count Piper was the favourite of king Adolphus Frederic, and arrived at the first employments in the state, but his son-in law count Brabe, having been haboured in 1736, he resigned his offices, and retired into the country where he died, in 1770.—See *Ust.*

PIPER (Francis a.) an English connoisseur. He was the son of a Kentish gentleman of good means, and, succeeding to a plentiful fortune, indulged his passion for horsemanship, designing and executing without seeking an divine emblem from his performances. He had a talent for drawing these remarkable for singularity of expression, or whimsical combination of features; and by a singular view of any remarkable countenance which he met in the street, would retain the likeness so exactly in his memory that it might be supposed that the person had not passed since for it. He frequently made a journey through the Continent on foot, to increase his field of observation, the result of which was the production of many striking pieces, in his own peculiar vein, which are esteemed exceedingly curious. The greatest part of these are mezzotinted sketches, as he never applied regularly to the art. They

were, for the most part collected by a surviving brother. He died in 1749, by the mistake of a surgeon, who picked an artery in bleeding him.—*Whigham's Anecd.*

PIPER (Jules) See *Jules*.

PIRANESI (John Barron) a celebrated architect, engraver, and antiquary, was born at Venice, probably about 1711 although one recent says in 1731. He passed the greater part of his life at Rome, of which capital he made it his study of ancient and modern art; he was an enthusiastic admirer. Being master of a singularly bold and free manner of etching he executed a great number of plates, by which he became well known to the curiosities throughout Europe. The earliest of his works appeared in 1743, and consist of designs of his own, in a grand style and decorated with views of Rome, which show the magnificence of his ideas. His other works are composed in the following list: "Antichità Romani," or Roman Antiquities, contained in 218 plates, on atlas paper which with descriptions in Italian form four volumes, folio "Fasti Consulares, Triumphalesque Romanorum."

Del Castello dell' Acqua Giulia," 21 folio plates "Antichità d' Albano e di Castel Gandolfo," 25 plates "Campus Martius Antiquae Urbis," with descriptions in Latin and Italian 54 plates, "Archî Thraebali Antichità Tempii ed Amphiteatru" 31 plates "Trofei d' Ottaviano Augusto," 10 plates, "Della Magnificenza ed Architettura di Roma," 44 plates, with above 200 pages of letter press in Italian and Latin "Architettura diverse" 27 plates "Carceri e Invenzioni" 16 plates, full of wild and picturesque concepions, about 130 Views of Rome in its present state With respect to these works, it is allowed that his inventions display much grandeur and fertility but that his real objects although extremely picturesque are not always faithful on account of the scope he was impelled to give his imagination. Piranesi was extremely irritated against lord Chaylwood and his agents for some real or imaginary neglect and in consequence composed letters of justification addressed to that nobleman as of a singularly bold and free manner of etching, he executed a great number of plates, by which he became well known to the curiosities throughout Europe. The earliest of his works appeared in 1743, and consist of designs of his own, in a grand style and decorated with views of Rome, which show the magnificence of his ideas. His other works are composed in the following list: "Antichità Romani," or Roman Antiquities, contained in 218 plates, on atlas paper which, with descriptions in Italian, form four volumes, folio "Fasti Consulares, Triumphalesque Romanorum," Del Castello dell' Acqua Giulia, 21 folio plates "Antichità d' Albano e di Castel Gandolfo," 25 plates "Campus Martius Antiquae Urbis," with descriptions in Latin and Italian, 54 plates "Archî Thraebali Antichità Tempii ed Amphiteatru" 31 plates "Trofei d' Ottaviano Augusto" 10 plates; "Della Magnificenza ed Architettura di Roma," 44

were shown in her father's meadow; and two sons, Francis and Peter, settled at Paris, continued his work, now amounting to 32 volumes, folio.—*Nous. Diet. Hist. Belg. Unit.*

PIECKHEIMER (SEBASTIAN) an historical and philological writer styled by the German Protestant the Xenophiles of Nuremberg, where he was born, in 1470. He was the son of a counsellor of the bishop of Eichstadt, among whose troops he entered at the age of eighteen; but his father wishing him to adopt the profession of the law, he studied with that view at Padua, and then at Pisa. He also applied himself to mathematics, theology, medicine and the Greek language; and after seven years residence in Italy he returned to Nuremberg. He then married, and was admitted into the senate. In 1499 he obtained the command of the troops sent by his fellow-citizens to the succour of the emperor Maximilian against the Swiss, and on the conclusion of peace he received the title of imperial councillor. Being dismissed from the senate, through the influence of political intrigue, he applied himself to literary pursuits but on the death of his wife he resumed his magisterial station. He died at Nuremberg December 26, 1530. *Bug. Unit.*

PIROMALI I (PAUL) an Italian Dominican monk in the sixteenth century whose labours have contributed to the promotion of Oriental literature was a native of Calabria. He was sent as a missionary into the East, and was stationed a considerable time in Armenia, whence he passed into Georgia and Persia. Upon his return to Italy by sea, he was captured by a Barbary corsair and carried into Tunis. Being ransomed he went to Rome where he gave an account of his mission and was sent in the character of papal nuncio into Poland, by pope Urban VIII. The same pontiff employed him in revising the Armenian version of the Bible, and afterwards sent him a second time to the East, where he was, in 1655 promoted to the bishopric of Naxekavank in Armenia. Over that see he presided nine years, and then returned to Italy where he was nominated bishop of Bagnozzo in Calabria. He died at the latter place, in 1667, and is highly commended for his religion, benevolence, and other virtues, as well as for his extensive erudition. He was the author of a "Latin and Persian Dictionary" in Armenian and Latin Dictionnaire a Rubrerie for the correction of Armenian books, all which productions have been esteemed of great utility. He was also the author of several theological and controversial treatises, which have been much valued by those of his own persuasion.—*Nous. Diet. Hist.*

PIRON (AUGUST) a celebrated French poet, and dramatist, born at Dijon, July 9, 1755. His father, Anne Piron, who was an apothecary manifested considerable talents

in business enterprise, having written悲劇 poetry in the Bourguignon dialect, which possessed his much provincial nativity. The son received a good education, and displayed his inclination for poetry very early. When he arrived at maturity however, he perceived the necessity of applying to some trade, and endeavoured to qualify himself for the profession of an advocate. He took his degrees in the faculty of law at Besançon, and was about to be admitted to practice at Dijon, when his parents experienced a reverse of fortune, which obliged him to relinquish his design. He remained however for some time at Dijon, leading a life of idleness in the midst of which his literary efforts were confined to the production of a few satirical epigrams. At length he became sickly a disorder which he quitted to go to Paris, where he found himself without money or credit, and from the weakness of his eyes almost in a state of blindness. He was employed however as a copyist by the chemist de Bellalot with a salary of forty sous a day, a which arduous situation he soon relinquished; and it was with difficulty that he obtained the payment of his painful salary. He was next engaged to write for the Théâtre de la Comédie Opéra and his first piece was "Arloquin Deuxième," composed in two days. His success induced him to persevere, and in 1780 appeared his comedy of "Les Fils ingrats," the title of which he afterwards altered to "I Ecœs des Pères." His next dramatic effort was a tragedy "Callisthen" 1790; followed by "Gustave Vasa," 1793, and in 1798 he produced his chef-d'œuvre "Moton-mane" a comedy which labours characterizes as excelling in plot, style, humour and vivacity almost every other composition of the kind. Piron afterwards wrote "Forsaid Corse," a tragic drama, and some other pieces, acted at the Théâtre de la Foire. In the latter part of his life he made repeated attempts to gain admission into the French Academy but the satirical effusions in which he had indulged himself had made him so many enemies among the academicians, that he was finally rejected. To recompence him for his disappointment, the king at the solicitation of Mme. de Montesquieu, gave Piron a pension of 1000 livres. His death took place Jan. 21, 1773. His best works were collected and published in one volume 1820, and his Poésies Divines were printed at Neuchâtel, 1775 and 1793 8vo. His works entire form seven volumes, unless, in the edition of Rigoyer de Jaligny, 1776.—*Bug. Unit.*

PIRAN (CATERINA DE) an Italian lady the daughter of Thomas Piron, an astrologer of Bologna, was born at Venice in 1563. She went to France at the age of five years, and was married to one Gasparo Castel at fifteen. Her husband died about ten years after, and his fortune being much entangled in law Caterina depended upon her pen for subsistence. She was permitted by Charles VI of France who provided for her children. The year of her death is uncertain. She wrote

—*The Life of Charles V, King of France*,” at the desire of Philip the Good, Duke of Burgundy; and it is considered his best work. It was published by the abbé Le Bouc, in his “*Dissertations on the Ecclesiastical History of Paris*.” She was also the authoress of “*An Hundred Stories of Troy in Rhyme*,” “*The Treasure of the City of Domes*,” “*The Long Way*;” “*The Moral Precepts of Christian of Poitiers*, translated by Anthony Wedderburn, and others; and “*Epistles à Ordres Disciple de Prudesse, & Hector &c.*” etc. on *Vive François, et dédié à Charles V de France* —*Disc. Hist. Lord Oxford’s Works*.

PISO (WILLIAMS) a Dutch naturalist, who in the beginning of the seventeenth century practised medicine at Leyden, and then at Amsterdam. He accompanied the prince of Orange in his voyage to Brazil, taking with him two young German students, Marggrave and Kraatz, to assist him in his researches into natural history. After the death of his master, he appears to have entered into the service of the elector of Brandenburg Frederick William. The date of his death is not known. The discoveries of Piso and Marggraves were published by Lescot, under the general title of *Historia Naturalis Brasiliensis*, 1664, folio; and a more complete account appeared in 1695, entitled, “*De Iadicis ariacinae et Naturali et Medica*, lib. xiv. —*Sig. Univ.*

PISOCCHI (FRANCESCO ANTONIO) a man of Bologna, considered by his countrymen as the father of the modern Italian school of singing. He was born about the year 1660 and originally attempted the stage but failing in consequence of some personal defects, entered into holy orders, and became chaplain-musician at the court of Anspach. In 1700 he returned to Bologna, where he established his academy of singing and reckoned among his pupils many of the most distinguished vocalists of his time. On a sudden his voice appears to have left him, owing, it is said, to the irregularity of his life; but he eventually lived to recover it and after once more rendering in his former capacity in Germany retired at length into a convent in his native country where he died in 1730. He composed five operas, as well as some sacred music, which has been much admired.—*Burton’s Hist. of Mus.*

PISTORIUS (Johr) a polemic of the sixteenth century born in 1546 at Nidau. His education was originally directed with a view to his becoming a physician, but he speedily abandoned the study of medicine for that of jurisprudence, and rose to be one of the counsellors of state in the court of Baden-Durlach. His religious opinions as freight underwent a change; he renounced himself to the church of Rome, and taking holy orders distinguished himself with all the ardour of a puritan, by writing against the works he had adopted, in a variety of controversial treatises, turned against Lutheranism and its professors. He was also the author of some historical and apologetical works. Among the former are his accounts of the histories of Poland and of Germany (the latter a valuable

work) each contained in three folio volumes. His other and most curious production is “*Ariste Calviniatione Scriptorum*” etc. Pitcairn having graduated as a Master in theology, obtained some valuable ecclesiastical preferment, and died in 1608, prior of the abbey of Fife, and provost of the cathedral of Brechin with the rank of imperial canon.—*Murie. Next Dict. Hist.*

PITCAIRNE (ARCHIBALD) an eminent physician descended from an ancient Scottish family in the county of Fife, but born at Edinburgh in 1624. He was educated at a private school at Dalkeith, whence he removed to the university of Edinburgh to study philosophy, divinity and the civil law. He afterwards went to Paris where he changed his pastime and applied himself to medicine. He returned to Edinburgh and after a second visit to Paris he settled in his native country a short time before the Revolution. He was admitted a member of the College of Physicians at Edinburgh and in 1656 he published a tract, entitled *Solutio Problematis de Inventione* relating to Harvey’s discovery of the circulation of the blood. In 1652 he accepted an invitation to become professor of medicine at Leyden but returning to Scotland the following year to fulfil a matrimonial engagement he was prevailed on to remain at Edinburgh where he continued to practise as a physician till his death, which happened October 13, 1713. His works are “*Dissertationes Medicinae*” “*Elementa Medicinae Physico-mathematicae*” “*Dissertatio de Legibus Naturae*” besides the tract already mentioned and his Latin poems. A collective edition of his writings appeared at Leyden 1737 4to.—*Hirschmann & Blay. Med. Bibl. Brit.*

PITHOU (Ferd.) an eminent French writer on jurisprudence and philosophy born at Troyes in 1539. He studied classical literature at Paris under Turnebus and the law under Cujas at Bourges and at Valence. At the age of twenty one he was admitted an advocate but adopting the principles of Calvinism, he returned to Troyes, whence he was invited to Sedan by the duke of Bouillon. He then went to Basil where he published the life of the emperor Frederic Barbarossa, by Otto of Freisingen and the history of Phineas Diaconus. In 1570 he returned to France and he was at Paris during the massacre of St Bartholomew a day of which he narrowly escaped becoming one of the victims. He afterwards returned to the Catholic church and became bailiff of Toulouse and deputy attorney-general to the chamber of justice at Geneva. He was employed in many public affairs and he used all his influence to promote the subsistence of the city of Paris to the authority of Henry IV. His death took place in consequence of the plague at Nogent-sur-Seine, November 1 1596. Besides many other works, he published the first edition of the fables of Plautus, the MS. of which had been discovered by his brother and also the “*Purgatorium Venetum*” of Cicero.—*Pritzel (France)* the brother of Peter was a close-

BIT

soil of the parliament of Paris, and one of the most learned men of his time. He was born at Troyes in 1595. Receiving a Calvinist he travelled in Germany Italy and England; but returning to France he was received into the Catholic faith. He was attorney general of the chamber of justice re-established under Henry IV he assisted at the conference of Fontainebleau between Du Perron and Mornai and he was appointed one of the commissioners to determine the boundaries of France and the Netherlands. He died in 1621. F. Pithou shared in the literary labours of his brother and was the author of "Pathos." —Moreri *Biog. Univ.*

PILICLS (Baronius) a German mathematician who was a native of Salzburg and became tutor and afterwards chaplain to the elector palatine Frederic IV. He died at Beidelberg in 1613, aged fifty two. Besides some works on theology he published "Trigonometria lib. v." Georg Joach. Rheticus Magus Casus Doctrinae Trigonometricae editio a B. Piusco, and, "Thomae Mathematici Rhetici, nunc primum in lucem editus a B. Piusco, 1613," which last work Moutoux strangely ascribes to Petrus as the author.—**PITRACUS (SAMUEL)** a learned physician, nephew of the preceding was born at Zutphen in Dutch Guelderland, in 1637. He studied at Deventer under J. F. Graevius and afterwards went through a course of divinity at Groningen and was admitted to the ministry. Returning to Zutphen he was placed at the head of the Latin school there and in 1663 he was nominated rector of the college of St Jerome at Utrecht where he presided thirty two years. He died February 1 1717. Besides publishing editions of Quintus Curtius Scæcum, and other ancient authors, he produced "Lexicon Latino-Belgicum," 1704, &c. and "Lexicon Antiquatum Romanorum," 1713 2 vol. folio which last is his principal work.—*Biog. Univ.*

PITOT (HIPPOLYTE) a French mathematician born in 1695. Till the age of twenty he paid no attention to learning and when he was fifty he obtained from the tutor of his son instruction in Latin that he might be able to read mathematical works in that language. Accident having thrown in his way a book on geometry he was seized with a sudden inclination for the study of that science and he pursued it with ardour. He was sent to Paris, where Boscovich assisted him with advice gave him the use of his library and sometimes associated him in his labours. In 1722 he began to make himself known to the public by inserting in the *Mercure Francais* his calculation of the eclipse on the eve of the third of May 1726 and the exact precision of his deduction was verified by subsequent observations when the phenomenon took place. He also solved the famous problem of Kepler relative to the first equation of the planets and he invented an analytic method of tracing lines corresponding to the measures of the great mechanicks in 1731. Being admitted

PIT

into the Academy of Sciences in 1736, he furnished many contributions to the journals of that society. In 1731 appeared his "Probleme in Mathematice des Voyageurs," one which was translated into English, and which procured him admission into the Royal Society of London. He was afterwards employed in many public works as an engineer. His death occurred December 27 1771.—*Biog. Univ.*

PITS (JOHN) in Latin *Pitus*, an English biographer born at Aton in Hampshire, about 1360. He studied at Winchester school and New college Oxford after which he went to Douay and Rheims and then to the English college at Rome where he remained seven years. Having taken holy orders he returned to Rheims to teach the Greek language and rhetoric. The civil war in France obliged him to return to Pont-de-Nousson Troyes and Ingolstadt, where he took the degree of D.D. The cardinal of Lorraine gave him a canonry at Verdun, and the duchess of Cleves afterwards made him her confessor. He was subsequently appointed dean of Liverden in Lorraine where he died October 17 1616. His works are: *De Legibus Fractiis Theologicis* Trever 1595, &c. *De Beatitudine Ingolstadt* 1595 *De Perigrinatione lib. viii* Dusseldorf, 1604 &c. *Relationum Historiarum de Rebus Anglicis seu de Academis et illustrissimis Angliae Scriptoribus tomus primus*, Paris, 1619 &c. This volume was to have been followed by two more containing accounts of the English kings bishops &c.—*Wood's Athan. Oxon.*

PITT (CHARLES) an English clergyman and poet of the last century the friend of Young. He was born in 1699 at Blandford, in the county of Dorset, and received his education at Winchester whence he was elected off upon the foundation to New college Oxford. In 1722 a relation of the same name residing at Stratford-on-Avon presented him to the family living of Pimperne where he passed the remainder of his life in the performance of his clerical duties, and the pursuit of elegant literature equally respected for his talents and beloved for the courtesy of his manners and the benevolence of his disposition. The composition by which he is principally distinguished is his translation of the *Eneid* which is inferior to that of Dryden in strength and spirit, may fairly vie with it in taste and the harmony of its versification. "Aeneas' Art of Poetry" was also rendered by him into English, in which he has been very successful in preserving the spirit of the original. Mr Pitt died in 1748, and was buried at Blandford, where there is a monument erected to his memory.—*Johson's Eliz. Preface to Wharton's Virgil.*

PITT (THOMAS) the founder of the noble family of that name was born at St Mary Blandford, Dorsetshire in 1658. Towards the close of the same century he became governor of Madras, where he resided many years, and realized a large fortune, great part

of which was produced by the purchase of a large diamond, for 50,000*l.*, which he sold to the king of France for more than five times that sum. A rumour prevailed in England that governor Pitt had acquired this jewel, rallied after him the Pitt党和者; which report gained additional currency by a sort of poetical adoption of it, by Pope in a passage commencing with the following couplet:

Asleep and naked as an Indian boy

An honest factor stole a gem away,
Such credit was ultimately given to the story
that Mr Pitt was induced to compose a narrative of the manner in which he really became possessed of the diamond. In 1716 he was made governor of Jamaica, but did not hold that situation for more than a year. He sat in four parliaments, for Old Sarum and Thirsk, and died in 1756. Governor Pitt was the grandfather of the celebrated earl of Chatham, the latter being the offspring of Robert Pitt, esq. of Boscawen Cornwall, his eldest son.—*Brit. Peerage.*

PITT (WILLIAM) earl of Chatham a celebrated modern English statesman was the son of Robert Pitt, esq. of Boscawen Cornwall as related in the preceding article. He was born November 15 1708, and educated at Eton whence in January 1726 he went as a gentleman commoner to Trinity college Oxford. On quitting the university he entered the army as cornet in the Blues and in 1735 became representative in parliament of the family borough of Old Sarum. His abilities soon displayed themselves in a sphere so congenial with their tendency and joining the opposition party, then headed by Frederic prince of Wales, he soon distinguished himself as a powerful opponent of sir Robert Walpole, who avenged himself by taking away his commission. His occasional eloquence was first displayed on the Spanish question in 1738 and he rapidly attained the first rank as a parliamentary orator securing at the same time the esteem of the nation as an able and vigorous opposer of impolitic and unconstitutional measures in general. To popular applause was added the solid bequest of 10,000*l.* by a codicil added in 1755 to the will of the celebrated Sarah, duchess of Marlborough. It was in 1743 that the duke of Newcastle first proposed him to George II, for the post of secretary at war; but his opposition to Haukevian predictions had rendered him so distasteful to that monarch that he was decidedly rejected, and the resignation of the Pelham party followed. Necessity however, soon produced their reinstatement, and in 1746 Mr Pitt was made vice-treasurer of Ireland, and afterwards paymaster-general of the forces, in which office he distinguished himself by his strict disdain of equivocal official pretences and private embezzlement. In 1756 commenced the connection of the Pitt and Grenville families, by the marriage of Mr Pitt with Eliza daughter of Richard Grenville, esq. of Wotton, Bucks. In 1758 he joined Mr Legge in opposing the

restitution of the military treated, with France, Count and Russia, in defiance of Hanover, an account of which step they and the Grenvilles were immediately disassociated. Such however was his popularity that in 1756 he was recalled, and made secretary of state and the vigour infused into the public councils by his presence soon displayed itself both at home and abroad. He was still hostile to the war in Germany at least under the conduct of the duke of Cumberland and thereby incurred so large a portion of royal displeasure that in April 1757 he was again dismissed from office, with his friends lord Temple and Mr Legge. The public discontent was manifested so loudly on this occasion, that in the June following it was found necessary not only to re-instate him and his friends but to leave the formation of the new ministry to their arrangement. Of this administration he was the soul and he diffused his own spirit through every department of the state. The celebrated war administration of the eminent statesman is a subject for history rather than for biography on which account it is only necessary here to observe that under his vigorous auspices the years 1756 1759 1760 and 1761 were marked by a series of the most signal successes France with her navy annihilated scarcely possessing a colony in any part of the world. In the midst of these triumphs George II died and Mr Pitt, finding himself thwarted under the new monarch by the influence of the earl of Bute, resigned in October 1761. On his retirement his lady was created baroness Chatham and a pension of 3,000*l.* per annum was granted for the life of himself lady and eldest son. In 1764 he highly distinguished himself by the decided part which he took against the unconstitutional employment of general warrants the illegality of which he maintained with his usual energy and eloquence. On this and other popular grounds over William Pynsent, of Somersetshire bequeathed him his estate. In 1766, owing to the distraction of the public councils, he was again called to assist in the formation of a cabinet, under which arrangements he took to himself the office of lord privy seal and was raised to the peerage by the title of earl of Chatham. Unsupported by lord Temple and inadequately seconded otherwise he resigned in 1768 and subsequently took a leading part in many popular questions, and more especially attached the proceedings of the house of Commons in reference to the Midland election, and the doctrine of lord Mansfield in respect to habeas. He opposed with all the force of his eloquence the ignorant and infatuated proceedings which led to the inglorious American contest, and made motion after motion for closing the branch after it had been effected, prophesying the result with melancholy accuracy. His anxiety on this subject may even to clothe the immediate cause of his dissolution, for in April 1778, when the duke of Richmond moved an address to the throne

PIT

to acknowledge the independence of America, lord Chatham was led to oppose it with so much energy, that in rising a second time to advert to the reply made by the duke to his arguments, he started and fell back in his seat. He was caught in the arms of some lords who stood next to him, and conveyed home, and the house immediately adjourned. From this state of exhaustion he never recovered, but died on May 11, 1778, in his seventeenth year. His death, rendered peculiarly impressive by the foregoing circumstance, excited general sympathy; his remains were honoured with a public funeral and a monument in Westminster abbey his debts were paid by the nation, and an annuity of 4,000*l.* per annum, out of the civil list was annexed to the earldom of Chatham. Prudence sagacity and energy formed the leading outlines of this statesman's character which, aided by an eloquence singularly bold ardent, and animated rendered him peculiarly effective as a British orator. All his sentiments were liberal and elevated but he was hasty and impatient of contradiction, and possibly exhibited a too great consciousness of his own superiority. His private was as estimable as his public character to use the language of lord Chesterfield, it was stained by no vice nor sullied by any baseness. Upon the whole connected as he is with a brilliant national era which took its chief features from his counsels, he will ever remain a highly popular character in English estimation. Nothing beyond a short poem or two by lord Chat ham had appeared until the publication by lord Grenville, in 1804, of his "Letters to his nephew afterwards the first lord Lonsdale" which contain much excellent advice to a young man clothed in easy and familiar diction and reflecting equal honour on the author & friend.—*Collins's Peerage by sir E. Brydges. Ann. Reg.*

PITT (WILLIAM) second son of the preceding was born May 29 1759. He received a private education in the first instance and at the age of fourteen was entered of Pembroke-hall Cambridge under Dr Protzman, now bishop of Winchester. On quitting the university he visited France, and studied at Hârring and on his return became a student of Lincoln's-inn, and in 1780 being then of age was called to the bar. He only attended the western circuit once or twice when he was introduced into parliament by sir James Lowther a representative for his borough of Appleby. His maiden speech was delivered in support of Mr Burke's financial reform bill and he also spoke with considerable energy in favour of a reform in parliament. He was often chosen and acted as a delegate at one of the assemblies held in Westminster for the promotion of that measure. On the breaking up of lord North's administration, he took no share in that of the marquess of Rockingham, but upon its dissolution became chancellor of the exchequer, at the age of twenty three, under the premiership of the earl of Shelburne. A general peace

PIT

soon followed, which being made the ground of complaint by a rising opposition, the ministry was dissolved, and the moderate Fox and North coalition took its place. On his retirement from office, Mr Pitt requested his friends for a reform in parliament, and submitted three specific motions on the subject, which although supported by Mr Fox then secretary of state, were rejected. On the failure of the celebrated Indian bill of the latter which produced the disunion of the ill-assorted coalition Mr Pitt, although at that time only in his twenty-fourth year, at once assumed the station of prime-minister by accepting the united posts of first lord of the treasury and chancellor of the exchequer. Although strongly supported by the sovereign, he stood opposed to a large majority of the House of Commons, and a dissolution took place in March 1786. At the general election which followed the voice of the nation appeared decidedly in his favour and some of the strongest aristocratical interests in the country were thereby defeated. Mr Pitt himself being returned by the university of Cambridge. His first measure was the passing of his India bill establishing the board of control which was followed by much of that important naval and financial regulation, which gave so much relit to the early period of his administration. The establishment of the ingenious, but as to direct consequences, decisive scheme of a sinking fund followed in 1786, which machinery supported and aliviated as it has been by some of the stupendous minds of the country supplies one of the most striking instances on record of the man not in which the human intellect may be caught in the chasm which separates the abstract from the practical. Whatever the utility of the sinking fund in the regulation of funded sale and purchase as a retrospective mode of liquidating the public debt its pretensions are now set at rest for ever. A commercial treaty with France followed in 1787 and soon after the minister began to exhibit that jealousy of French aggression which but for the manifest unpopularity of hostilities which shook his resolution might have involved the two countries at war. A similar spirit was displayed towards Spain respecting the free trade at Notha Sound and in defence of the neutrality against the machinations of France which last interference met with general approbation. In 1788 Mr Pitt displayed his firmness by resisting the doctrine of the opposition that the regency during the king's indisposition devolved upon the prince of Wales by right. The minister maintained, and certainly more constitutionally than it lay in the two remaining branches of the legislature to fill up the office as they should think proper; administering, at the same time that the prince could not be passed over in nominating to that post. By the adoption of this principle he was enabled to pass a bill greatly restricting the regent's power which the king's very undivided sovereignty. One of the most momentous periods in modern history had now arrived. The French Revolution broke out,

and produced a vibration on every neighbouring wave; and it, moreover, was created in Great Britain, which, previously contented as she had been on subjects of parliamentary and general national nature, in a great measure broke up the previous bearing of party. A war against French principles was declared on the one side, under which designation all usurpation was opposed, without distinction; while, on the other, the friends of rational rectification found themselves unmercifully confounded with a great mass of ignorant and heated characters, who exposed some of the wildest and most visionary notions of the innovation of France. Under the state of things a vigilant eye and a steady hand were obviously necessary to steer the vessel of state, amid a conflict of opinions so violent and alarming, and the manner in which Mr Pitt exercised the almost unlimited power which he possessed will necessarily be judged of differently by different parties. To make alarm as effective as possible to encourage the dissemination of high principle of government, and involve in common obloquy all measures of opposition, and all projects of reform to augment, according to the apparent urgency of circumstances, restrictions upon personal liberty and make temporary sacrifices of the spirit of the constitution to what he deemed the public safety: such, according to one body of judges, were the principles of Mr Pitt's government at this important crisis while alive, and specially the most inflexible, as being the most rich and fearful, would have had him pass much further and purely on a conservative principle, would, as a liberal or constitutional man, have left him nothing to preserve. The measures which led to the war with France are judged of in a singular manner; but whatever the opinion entertained, the minister certainly had the nation with him in the commencement of hostilities. The details of the momentous contest which followed form an object for the biographer. Great Britain, on the whole, was triumphant in her own element; but during the life of Mr Pitt the conflict on the continent was fearfully in favour of France. The suspension of cash payments in 1797 the necessity of attacking to home defence, the alarming mutiny in the fleet, and the accumulation of the public burdens, which still press so heavily on the nation, were some of the most bitter fruits of this extraordinary struggle which were, however on the other hand, alleviated by a commercial monopoly that, assisted by the temporary operation of an unlimited paper note materially modified consequences both in form and in fact. In 1800 the grand project of the Irish union, well accomplished, the true policy of which measure preserving the implied assistance of wise and good government to Ireland, can scarcely be questioned. Soon after the accomplishment of this important event, the hopeless aspect of the war with France, as respects to the object with which it had commenced, began to turn the national attention towards peace, and Mr Pitt, sensible that it

were could be accomplished correspondent with the generous high terms of His country's engagement to notice. The slight terms of his retreat, not indeed publicly avowed, but communicated to his friends, was the apportionment he found in the highest quarter to all further concession to the Irish Catholics, in consonance to the expectations held out by the nation. He accordingly resigned his post in 1801, and the crisis of revolutionary fervour having for some time abated, he retired with him into retirement the esteem of a strong and powerful party who hailed him as "the pilot who had weathered the storm." The peace of Amiens succeeded, and the Addington administration, which conciliated it Mr Pitt supported for a time, and then joined the opposition, and spoke on the same side with his old antagonist, Mr Fox. The new master who had removed the way unable to maintain his ground, resigned, and in 1804 Mr Pitt once more resumed his post at the treasury. Returning to power as a war minister he exerted all the energy of his character to render the arduous contest successful, and found means to engage the two great military powers of Russia and Austria in a new confederacy which was dissolved by the fatal battle of Austerlitz. Mr Pitt, whose state of health was previously declining, was sensibly affected by this event, and his constitution weakened by an hereditary gout, and injured by a too liberal use of wine, by way of stimulant, rapidly yielded to the joint attack of disease and mortal anxiety. The parliamentary attack upon his old associate lord Melville not to be wholly purged either by ministerial influence or the defensive merits of the case, is thought to have deeply wounded his feelings and complicated his mental depression. A state of extreme debility ensued which terminated in death encountered with great calamity and resignation on the 23d January 1806. As a minister it would obviously be impossible to sum up the character of Mr Pitt in terms that would not encounter a host of prepossessions or prejudices on every side. It is, however pretty generally conceded, that his genius was better adapted to the regulative process of peaceful and domestic government, than for the arrangement and conduct of that warlike exertion which his policy entailed upon the country. At the same time it must be confessed, that he had to encounter the career of overwhelming and powerful energies the result of a social crisis of extraordinary character and excitement. If therefore he can be acquitted of a political want of foresight in overlooking such a conflict, the disastrous result of the warfare in establishing French ascendancy on the continent, may be regarded as the effect of causes, which no allowances could have altogether controlled. What might have been the character of his administration had not the French revolution interposed, it is somewhat difficult to ascertain. According to the tenor with which he set out in life, and as the son of lord Chatham, such constitutional and political improvement

was to be expected from him, and much prudent and useful legislation he certainly effected. In highest points he was possibly more the man of expediency than of principle. It has been seen how he advocated and dropped the subject of parliamentary reform. In a similar spirit, he spoke and voted in favour of the abolition of the slave trade, but although supported by the voice of a decided national majority he would not make a substantial measure of it, as was done without difficulty by his immediate successor nor have we to trace any decided social amelioration to his influence setting aside the contingent advantages arising from the extension of trade and manufacture. As a financier he was expert in practice rather than scientifically grounded while the waste and profusion of his warlike expenditures were extreme and will long be felt in their consequences. In respect to mental constitution although love of power was certainly his ruling passion, he was altogether above the meanness of avarice and his personal disinterestedness was extreme. So far from making use of his opportunities to acquire wealth, he died involved in debt which negligence and the demands of his public station rather than extravagance had led him to contract, his tastes being ample and dazzling splendour and parade. Mr Pitt possessed no advantages of person and physiognomy a loftiness approaching to stately was the habitual expression of the latter in public, although in private circles he has been described by an intimate friend as peculiarly complacent and at ease. His eloquence if not more elevated or profound, was upon the whole more perfect than that of any other orator of his time, being remarkably distinct, copious, and well-exposed. Although neither illuminated by the flashes of genius which characterised his father's oratory or by the impetuosity which distinguished the eloquence of Burke, it was more uniformly just and impressive than that of either, while the indignant severity and keen sense of his oratorical gifts were unequalled. On the whole Mr Pitt was a master of commanding power, and still lesser possessions; and how ever numerous and respectable the monuments, he died in possession of the esteem and attachment of a large majority of the more influential portion of his countrymen. A noble funeral was decreed to his honour by parliament, an also a grant of 40,000*l.* to pay his debts and monuments have been erected to him in Westminster abbey, Guildhall, and in various parts of the kingdom. Possible the exact rank that will be assigned to this celebrated statesman by impartial posterity cannot yet be anticipated.—*Oxford's Life of Pitt.* *See Register Addit. 1 Eng. Dist.*

PITTACUS, a warrior and philosopher one of the seven sages of Greece was born at Mitylene, in Lesbon, about 650 BC. In a war with the Athenians, he challenged and unequaled in single combat their general Phormion, and when offered as a reward so much of the enemy's land as he chose, he would accept no more than he could measure

by a single end of the javelin, and he compensated half of that to Apollo. Having succeeded the tyrant Melanthus over Mytilene, he was placed at the head of its government, and distinguished himself by his wise administration and useful laws. After ten years' government he resigned his authority and going into retirement he died in 570 BC. His maxims were many of them inscribed on the walls of the temple at Delphi.—*Universal Hist. Brander's Hist. of Philos.*

Pius II (*Aeneas Sylvius*) was a member of the noble family of Piccolomini. He was born at Corsignano, in the Marches in the year 1405, and his abilities at a very early age introduced him to the notice of cardinal Dominicus Capreoli, as whose secretary he officiated at the council of Basle in 1431. His diplomatic talents were afterwards employed in mediating a peace between the courts of England and Scotland. On his return to the Continent he was appointed secretary to the council of Basle and obtained the benefice of St Lawrence at Milan, in reward for his defence of that assembly against the usurpations of the see of Rom. He was subsequently employed in various embassies by the emperor Frederic III with whom he became a great favorite as well from his literary attainments, as from his abilities as a statesman; and he received from his hands the public investiture of the papal crown of poverty. Pope Callistus III raised him to the papacy in 1455, as reward for his services, especially for his exertions in the diets called at Bamberg and Frankfurt, to organize a league against the Turks and thus prevent their dying he consecrated him in the pontifical chair in 1458, on which occasion he assumed the name of Pius II. One of the first acts of his pontificate was the appearance of a bull condemning all he had previously written in defense of the council of Basle, while in the meantime crusade he proceeded with much determination and vigor commanding all Christian princes to assist him, and was actually proceeding to place himself at the head of a considerable body of his own troops when death put a stop to his enterprise at Ancona, on the 14th of August, 1464 in the seventh year of his reign and fifty ninth of his age. He appears to have been a man of a strong mind and lively and intriguing talents, principally bent on confirming and extending the temporal power of the papacy in which design he was very successful. Two editions of his works have been published, one at Basle in folio, AD 1551 another in 1780, at Helmstadt. They consist principally of minutes of the proceedings at the council of Basle, a poem on the crusades, a history of Bohemia, a romance entitled "Euryalus and Lucretia," two books on cosmography with memoirs of his own life, letters, &c. Gobat's his biography published a biographical memoir of him after his death at Rome which was reprinted at Frankfurt in 1616. His personal courage as well as prudence were great; of the latter quality several of his epistles prove which the

metabolized his own sufficient proof, and he has been generally mentioned one of the best scholars that ever wore the triple crown—Mort.

PIUS VI (pope) whose secular name was John Angelo Braschi, was born at Cesena in 1717. On the death of Clement XIV in 1774, he succeeded to the papal throne, and he shortly after made a reorganization in the financial department, and also improved the museum of the Vatican. But the greatest of his undertakings was the draining of the Appenine marshes, and the sea, overflowed with water, containing pestilential effluvia which gave rise to numerous diseases, and depopulated the surrounding country. While however this pontiff was successful in his domestic administration, he had the mortification to witness the absolute decay of the temporal power of the holy see. In 1789 he made a visit to the emperor Joseph II at Vienna, to endeavor to dissuade him from the prosecution of some ecclesiastical reforms which he meditated; but the journey was wholly useless, though the death of the emperor put a stop to his scheme. Pius encountered many other misfortunes. In France he witnessed the confiscation of the property of the church and the suppression of the religious orders, in virtue of the decree of the National Assembly in Germany the congress of Ems, for the abolition of the anachorite in 1788, in Naples, the contempt of his authority by withholding the customary tribute of a horse and, in 1792 he lost Aragon and the county of Valencia, which were reunited to France. But all this was only the prologue to greater adversity. In the first coalition against France the pope ranged himself among the enemies of the republic. In January 1793, Basserville, the French secretary of legation, was massacred during a popular commotion at Rome. After the victory of Bonaparte in Italy in 1796 general Augereau marched into the territories of the pope who, unable to resist, was glad to accept of an armistice which was signed at Bologna, June 13. The pope having received hospitality, Bonaparte attacked and beat his troops at Senio the 2nd of February 1797 and proceeded towards Rome. He stopped however to treat with ministers sent by his holiness and on the 19th of February was signed the treaty of Tolentino by which the pope lost Romagna, Bologna, and Ferrara. December 28, 1797 in consequence of another convention, in which general Dupont was killed, Joseph Bonaparte, the French ambassador, spilt Rome. An army commanded by general Berthier entered that capital February 10, 1798, and on the 15th proclaimed the establishment of the Roman republic, governed by consuls, a senate, and a tribune. The pope, after the deprivation of his authority was conducted to France as a prisoner, and he died at Valence, August 25, 1803. In 1808 his body was removed to Rome, and solemnly interred.—*Life of Pius VI* by Dugay.

PIUS VII (pope) or **BARNABUS CLEMENTE ALAMONTES**, the successor of Pius VI, was born at Covene, August 14, 1740. He was raised to the cardinalate in 1785, and he held the bishopric of Lodi, where he was visited by Bonaparte in 1796; and having conciliated the favor of that leader, he was, through his influence promoted to the papacy in March 1800 and on the 24th of July 1801 he signed the concordat, which removed the schism of the Gallican church. He went to Paris in 1804, to assist at the coronation of the French emperor; and he after wards refused to confer a similar favor on Louis XVIII. By a decree of the 17th of May 1809 the emperor Napoleon put an end to the temporal power of the pope uniting his territories to the French empire and Pius VII himself was detained as a prisoner at Fontainebleau where he remained till the overthrow of Bonaparte when he returned to Rome to resume his authority. He died there August 20, 1823 and was succeeded in the pontificate by cardinal Sella Genga, who assumed the appellation of Leo XII.—*Cest Mag*

PIZARRO (Francisco) the name of a celebrated Spanish adventurer, one of the conquerors of the New World. His origin and early habits were sufficiently humble his being the free of an illicit connexion between a peasant girl and an Indian of Truxillo, in the neighbourhood of which place he first saw the light, about the close of the fifteenth century. Receiving neither support nor countenance from his father he was thrown entirely upon his mother's resources who to far from being in circumstances to give him even an ordinary education employed him as a shepherd, and left him totally illiterate. The spent seventeen which at that period pervaded Spain, indeed him at length to quit his inglorious occupation, and, in company with some other soldiers of fortune, to seek an improvement of his condition by a voyage of discovery towards the newly-found continent of America. In 1532, the adventurer, whom the enterprising disposition and daring temper of Pizarro had gained him considerable influence sailed from Panama. Diego Almagro a person of as obscure an origin as himself and Hernando Luque an ecclesiastic, being joined with him in the command. The Spaniards arrived after experiencing several difficulties in Peru, where taking advantage of a civil war then raging in that country they became the allies, and eventually the conquerors, of Atahualpa, or Abahualpa, as he is variously called the reigning Incæ. Treacherously seizing upon the persons of the research at a friendly banquet to which they had invited him and his whole court, they first compelled him to purchase at an enormous price a temporary respite from a death which they had determined he should eventually undergo; and having succeeded in extracting from him, it is said a box full of the precious metals by way of ransom, after a mock trial for a pretended conspiracy condemned him to be burnt, allowing him to be first strangled, as a

P L A

served for becoming a Christian. The news of their success brought a considerable accession of strength from Europe to the invasion, and Pierrot, in order to consolidate his empire, founded, in 1535, the city of Lima, which he intended as the capital of his possessions but the discord between the chiefs of the expedition which even a sense of their common danger had from the beginning failed wholly to suppress, when this their sole bond of union was withdrawn, broke out into open violence, and in the struggle which ensued Atahualpa, now in his seventy-third year was defeated, taken prisoner, and strangled by Francisco Pizarro, brother to the general. This catastrophe which took place in 1533 was avenged four years afterwards by the son of the victim, and bearing the same name who having organized a conspiracy against the destroyers of his father, broke into the palace at Lima, and after an obstinate resistance succeeded in dispatching Francisco Pizarro. It is impossible to refuse to this adventurer the credit of considerable military as well as political talent though the one was gained by his extreme basity the other by his perfidy and heartless dismemberment. His assassination took place June 26 1541.—*Historical List of America.*

PLACIUS (VINCENZ) a learned jurist, was born at Hamburg in 1688. He studied at Helmstadt, and after travelling in France and Italy he returned to his native city where he practised at the bar and was appointed professor of morals and eloquence, which post he held until his death in 1699. His principal work is a curious bibliographical piece respecting anonymous and pseudonymous writers entitled *De Scriptis et Scrupulis anonymis et siue pseudonymis Syntagma*, together with the Catalogus Auctorum suppositorum, of Rhodus. He also wrote *De Jusnotitio pento*, &c., *De Arte exercitandi*, &c., *Carmen Juvenale*.—*Moor, Biting Diet.*

PLACE (FRANCIS) an engraver was a native of Dundee in Durham. He was originally intended for the law and came to London to study but he was obliged to leave the Metropolis in 1665 on account of the plague. He then went to York and was at great expense in attempting to make parchment, in which he failed. He painted and engraved only for his own amusement, and he refined a process of 3000 to draw the royal navy. He died in 1728. His productions, which are very few prove him to have possessed great abilities above all, his etchings from Gravelle are excellent his portraits or miniatures are also good. He executed the plates for Gouderon's *Book of Insects*, with views in York stone, &c.—*Street, Lord Oxford's Catalogue of Engravings.*

PLACE (JOUAUX DE LA) a French protestant divine, was born about 1596. Losing his parents at an early age, he was brought up by four aunts, all maid-servants. He studied in the protestant seminary at Soissons where he became professor of philosophy, and afterwards

P L A

of divinity. The opinion of De la Place upon original sin was communicated to cartesian in 1645 by the syndic of Chateauneuf, and several learned theologians endeavoured to refute it; but De la Place continued silent. He died in 1665 and his works are "An Exposition of the Song of Songs;" "A Treatise on Types;"

"On the Order of the Divine Decrees;" "On Free Will;" "A Treatise concerning the Imputation of Adam's First Sin;" "A Compendium of Divinity;" "Dialogue between a Father and Son relative to a Change of Religion" &c. &c. The whole were published at Fronsac in 1659 and 1705, in 2 vols. 8vo.—*Mabillon, Huit Eccl. Morav. Nov. Dis. Hist.*

PLACE (PÈRE DE LA) Louis, Philosophe à Place, a French magistrate and writer was born at Angoulême in 1580. He was appointed by Francis I advocate of his court of aids at Paris and Henry II afterwards made him first president of the same. On the death of Francis II he openly professed the protestant religion, and when the first civil war broke out he retired into Picardy but soon the prince in 1562 he appeared before the king, and vindicated himself from many charges which had been preferred against him. He was then appointed by the prince of Condé superintendent of his household; but upon the rupture of the prince and the court in 1566, he retired to the castle of Vé in the Valois, where he remained until Charles IX granted the Protestants a toleration peace in 1569, he then returned to Paris, and resumed his office which he retained until he fell a victim in the terrible massacre of St Bartholomew. He was a man of sound judgment and clear discrimination of which he gave a proof in his *Commentaries on the Rees of Religion and of the Commonwealth* from 1590 to 1591. He also wrote "A Treatise on the Excellence of the Christian Man;" a "Treatise on the Right Use of Moral Philosophy in Connection with the Christian Doctrine" &c.—*Moor, Disc. Hist.*

PLACE (PÈRE ARMAND DE LA) a French writer born at Calais in 1707. He was for many years director of the *Mémoires de France* but he principally distinguished himself by his translations of English productions. He died in 1723. His history labours comprise *Théâtre Anglais*, 1716, 8 vols. 16mo, on the model of the *Théâtre des Graces* of F. Bourne; *Histoire de Tom Jones*, 1717 4 vols. 16mo, a free translation, often reprinted; *L'Orphelin Anglais*, and several tragedies, including "Vénus Sauvage" translated from Otway.—*Sig. Noss. des Comptes.*

PLAENTIUS or PLAISANT (JOHN) an ecclesiastic of the order of St Dominic, passed the greatest part of his life at Maidstone, where he is supposed to have died about 1540. He wrote an abridged history of the bishops of Tonbridge and Liege, entitled "Catalogus annalium Leodiensium," in which he displays his credibility by adverting all the fables of the ancient chroniclers. He also published a poem called "Pagan Poverans," of which all the

PLA

works commenced with P. One Ubbione, a Franciscan under Clément le Gouraud, finished another joint, with all the words "translated by C. They were printed together at Lyon in 1596.—*Seez. Dict. Hist.*

PLAISTRETT (Jouer de la) a French Protestant divine, born near Poitiers in Poitou, in 1529. On the revocation of the edict of Nantes, he accepted an offer made him by the queen of Navarre to become pastor of a French church she had founded at Copenhagen. On the death of that princess he removed into Holland, and died at Utrecht in 1576. He wrote "Ecole de Morale" 6 vols. 1560. "Traité de la Conscience," "Traité de l'Orgueil," "Traité de la Foi Divine," "Traité de la Résurrection." *Le Marc des Janssens*; &c. &c. Some of these have been translated into English. He was also one of the antagonists of Bayle against whom he published some tracts.—*Morer. New Dict. Hist.*

PLANQUE (François) a physician born at Avignon in France in 1596. He studied medicine at Paris, after which he passed many years in retirement, occupying himself with scientific researches. He was more than fifty years of age when he took the degree of M.D. at Rheims. Returning to Paris he continued to devote himself chiefly to study, employing his talents as a practitioner only for the benefit of his friends. He died September 19 1665. He was the author of several medical works among which the most important is "La Bibliothèque choisie de Médecins virtu Osseux persécutés, tant François qu'Etienne que," Paris, 1648-70, 10 vols. 4to or 32 folio. 1680. The subjects of this work are arranged in alphabetical order; and the collection was compiled by Génis, who placed before the last volume a life of the author. Planque had prepared a Medical Bibliography of which he printed a specimen only.—*Morer. Vols.*

PLAISTIN (Cassanorius) an eminent printer who was born at Mont-Louis near Toulouse, in 1514. He settled at Antwerp where he formed a large establishment, and printed a great number of important works, to some of which famous pretences are added in his name but his claim to these is doubtful. His principal performance is a Polyglot Bible printed after that of Alcalá, but the figure with which Philip II recalled the money advanced for this undertaking nearly occasioned its failure. He died at Antwerp in 1569 with the title of counsellor to the king of Spain. He possessed a fine library which he bequeathed to his grandson, Baltazar Mantua.—*Morer. New Dict. Hist.*

PLAMUDES (MAXIMUS) a monk of Constantinople, flourished in the fourteenth century. It is said by some that he was sent ambassador to Venice, by the emperor Andronicus the elder; but Poggio affirms that he was living in the time of the council of Basil. He was persecuted and imprisoned by the Greek emperor, on account of his attachment to the Romish church, and at the price of

PLA

his liberty he was obliged to write down twenty capitula. He compiled a Greek "Anecdota," a collection of epigrams from those of Musaeus, Philostratus and Aegialeus; it was printed at Florence in 1494, and at Basel, but in 1500. He also wrote a romantic history of Sleep, and made a collection of his fables, and translated several Latin works into Greek.—*Vasili Post. Græc. Bellat.*

PLATER (Felix) a celebrated physician was born at Basle in 1500. He obtained the medical chair in his native place and raised the university of Basle to high reputation, to a medical school by his learned lectures, for fifty years. He was a skilful astrologer, and well versed in history and natural history. He is said by Heller to have been the first who taught that the crystalline humour of the eye has the power of a convex lens, in bringing the rays to a focus on the retina. His works are, *De Partibus Corporis Humanæ Structuræ et Usu* lib. vi. "De Meliorum Partium Generatione Deinceps" *De Fo-tribus Praecox Medicis* tom. iii.; *Observationum in Homines Affectiones plurius*, lib. m., *Quaestiones Medicarum paradoxarum et endoxarum Contenta posthuma*, published by his brother Thomas in 1623. He had two nephews, likewise physicians and professors, one of whom wrote *Observationum selectarum Mantuae* annexed to his uncle's *Observations* in 1620 — *Haller. Hist. Med. et Antiqu. Egy. Diet.*

PLATINA (Bartolomæo) an historian whose family name was De Sacchi, but who chose to be called Platina, the name of the place of his nativity in 1470. He studied at Mantua, but going to Rome Paul II appointed him one of the apostolical abbreviators. When Paul II dissolved this college he was dismissed with seventy other learned men but venturing to complain and even to remonstrate so boldly with the pontiff on this proceeding he was seized and imprisoned. He was afterwards tortured and impaled by the same pope on suspicion of being implicated in conspiracy against him with the other Roman academicians of Pomponius Letus, but nothing being discovered, they were accused of disputing the immortality of the soul, and were all remanded to prison and again put to the rack. His sufferings were compensated by Sixtus IV who, in 1475 made him keeper of the Vatican library. Platina's principal work was his "Lives of the Roman Pontiffs," composed in elegant Latin with a degree of force then uncommon. His greatest fault is his partial acumen in speaking of some contemporary popes, among whom he does not spare Paul II. He also wrote a Latin "History of Mantua, from its origin to the year 1464" and a "Life of Nero Capozi," with treatises on miscella neous topics. He died in 1519.—*Tischbirek. Moruz.*

PLATNER (JOHN ZACHARY) a German physician and novelist born at Chemnitz, in 1636. He studied at Leipzig and Halle, and took his doctor's degree in 1716. He abra-

works entitled for improvement, in Switzerland Savoy, France, and Holland; and, in 1720, arrived at Leipzig, where the following year he was appointed professor of anatomy and surgery. In 1724, he obtained the chair of physiology, in 1737 that of pathology and in 1747 that of therapeutics. About the same time he was nominated perpetual dean of the faculty and consulting physician to the court of Saxony. His death took place in 1747. Besides a number of treatises and memoirs, he was the author of *Institutiones Chirurgiae cum medicina cum anatomia, adjecto Index nosocomiorum fortissimorum de 1745* 8vo, often republished and translated into Dutch and German.—PLATNER (Evarist) a physician and moralist, son of the preceding, was born at Leipzig January 1st 1744. He took the degree of doctor of medicine and became professor in that faculty and perpetual dean, and to those academical titles he added in 1789 that of decanvir of the university of Leipzig and tutor counsellor to the elector of Saxony. He was the oldest among the professors and his numerous pupils, who regarded him with filial affection styled him the Nestor of the university of Leipzig. In 1816 the king of Saxony appointed him a member of a commission charged with the preparation of the outline of a new law relating to the liberty of the press. His death took place May 12 1818. He published a great number of important works on medicine and philosophy. Among the former are Anthropology for the Physicians and Philosophers 2 vols. 8vo and *Quæsiotum Physiologicum libri duo* 1794 8vo and among the latter *Philosophical Aphorisms*, 2 vols. 8vo. A Dialogue on Atheism and "Elements of Logos and Metaphysics," 8vo — *Hagi Unis.*

PLATO one of the most illustrious of the Greek philosophers, and the founder of the academic sect was an Athenian by descent but born in the island of *Ægina*. He was of illustrious origin his father Aresius being a descendant from Codrus, and his mother Perictione from Solon. The time of his birth is fixed in the first year of the eighty-eighth Olympiad but Brucker thinks that it may be more accurately assigned to the third year of the eighty-seventh Olympiad or BC 430. His parents first called him Aristocles, but his name was subsequently changed to Plato on account of the breadth of his shoulders. As he gave early indications of original genius he was educated with great care and in the first instance applied himself to the arts of poetry and painting which, after composing an epic poem and a drama, he resigned for the study of philosophy under Socrates. He remained a regular pupil under that philosopher for eight years, and, like his other disciples committed the substance of his master's doctrines to writing but so intermingled them with notions of his own that Socrates would scarcely acknowledge them. On the prosecution of the latter, the conduct of Plato was disinterested and noble in a high degree,

and so he abominated all his during his imprisonment the world over the heretical charges, called "Panæ," which, with most of the writer's own opinions, conveyed the substance of the sentiments of Socrates on the immortality of the soul. On the death of his master Plato repaired in the first instance to Megara, and afterwards visited Magna Græcia, where he attended the celebrated school of Pythagoras, whose doctrine he subsequently blended with the more simple system of Socrates. He next studied mathematics under Theodorus of Cyrene and thence repaired to Egypt, to acquire astronomy and an insight into the Egyptian mysteries, where, it is by some believed, that he derived his doctrine of transmigration and the immortality of the soul. Others suppose that he at the same time acquired a knowledge of the Hebrew scriptures; but all these suppositions rest upon mere conjecture. On his return to Athens he opened a school for the instruction of youth in philosophy in a small garden, which was his patrimony situated in the public grove for gymnastic exercises, termed the Academy. Here he attracted by a crowd of hearers of every description including persons of the first distinction, and among other illustrious names to be ranked among his disciples are those of Dion, Aristotle, Hippocrates, Lycurgus, the orator Demosthenes, and Isocrates. Jealousy is sufficiently abundant on public admissions, and it is to be regretted that the name of Xenophon is to be joined to that of Diogenes the cynic, in the list of his personal opponents and detractors. A visit which he paid to the elder Dionysius of Syracuse at the age of forty proved a disastrous event in the life of Plato, whose attractions produced an excellent effect on the king's brother-in-law Dion but, so might be supposed, were lost upon the tyrant himself, who contrived that in his passage home he should be seized and sold as a slave to the inhabitants of his native island of *Ægina*, then at war with the Athenians. From this state of servitude he was quickly removed by the voluntary generosity of Amoris, a Cynic philosopher and Dionysius, reduced of the sum produced by his low-minded peculations wrote letters of apology and besought him to return to Syracuse. Plato nobly replied, that philosophy would not allow him leisure to think of Dionysius. At the request of Dion however he reluctantly repaired to the court of Dionysius the younger, moved it is said, by the hope that he might induce that ruler to establish his visionary republic. He was well received for a time but jealousy and distrust gradually increased, and a year following he returned home. When peace was restored, with a view to ensure the return of his friend Dion from exile, he was again induced to visit Sicily, at the earnest request of Dionysius, in whom jealousy of his friendship to his brother-in-law again produced distrust and, after much.caution and some rigorous treatment, the philosopher was allowed to finally depart, with

P L A

excellent presents. On his return to Athens Plato founded his school, and no provision could withstand his desire to quit his peaceful retirement, where he could enjoy the benefits of his robust constitution and great temperament, until his death in his eighty-ninth year BC 348. On the decease of this celebrated philosopher, who passed his whole life in solitary silence and there were erected to his memory; the day of his birth was adopted as a festival by his followers; and it was the fashion to engrave his head on gems, some of which have reached modern times. The reverent character of Plato has been differently represented, but in the midst of the excessive veneration of his admirers, and the shade of his enemies, there is sufficient evidence that he was highly and deservedly esteemed for his moral worth and virtue, and for his gentle, urban and courteous manners. His writings consist of thirty-five dialogues and twelve epistles, the style of which reveals a strong tincture of the poetical spirit which pervaded his earliest productions. Some of his dialogues are peculiarly elevated by sublime and glowing conceptions and enriched by a copious splendid and harmonious flow of diction. The better part of these, even when he is treating of abstract subjects, are beautifully clear and simple; but others are unfortunately cumbrous and dimmed with the obscurity of the Pythagorean school. For an account of the philosophy of Plato we refer our readers to the first two of our authorities, as an adequate account of it will suit the limits of a work of this nature. Involved in a maze of words, his doctrine mock the understanding after the most elaborate analysis; and their partial adoption by the Christian world has led to endless speculation often indeed ingenuous and beautiful; but at the same time in quite as great a degree perplexing and illusory. In the seventeenth century, Gata, Cudworth, and Henry More perplexed themselves with the theories of Plato which are now more easily appreciated; a natural result of the deductive and experimental spirit of later times. So long however as grand and lofty conceptions will delight, the reveries of a mind like Plato's will retain no mean portion of admiration. His doctrine concerning God, Mind, Matter, the Immortality of the Soul, Archetypal Forms, &c. exhibits that order of temperament which may be philosophically termed the devout, and in consequence there exists in a large body of mankind a strong antinomian sympathy with its spirit and tendency. The writings of Plato were originally collected by Hermann, and published by Abbes, in 1513 fol. An elegant and correct edition after the Greek text of Henry Stephan, and the Latin version of Ficimius, was published at Drotz Regn, 1755, 12 vol. 8vo. English versions of Plato's Dialogues have been published at various periods; but the best is that of Tropaeus Stephanus, 1757-8, 4 vol. 8vo, the whole of which have been re-published, with the additional works of Plato, by Thomas Taylor, with copious notes, 5

vol. 4to. 1804.—Bridger's *Hist. Philos.*, English, 4to. Fabrich's Bibl. Græc.

PLATOFF, or **PLATOW**, brother of the Countess, was born in the southern part of Russia, about 1763. He entered young on military service and in 1806 and 1807 he had the rank of Lieutenant-general in the Russian army sent to the assistance of Prussia. He was afterwards employed against the Turks in Moldavia, and was made a general of cavalry. When the French invaded Russia, in 1812, Platoff was again called into actual service and though he was defeated at Grodno and obliged to retire into the interior he returned during the retreat of the enemy from Moscow and with twenty regiments of Cosacks, he harassed them in their flight, and contributed greatly to the advantages gained over them. In 1813, after the battle of Leipzig he entered France and was at Paris with the emperor Alexander whom he accompanied to England. At London he was the object of popular admiration and a magnificent sabre was presented to him. In 1815 he commanded the Cosacks destined for the second invasion of France and he again made his appearance at Paris. After the restoration of peace he retired to Tchernash where he died in February 1818.
—*Bog. Univ.*

PLAYFAIR (John) a distinguished natural philosopher and mathematician born at Berwick near Dundee in Scotland in 1748. His father was a parochial clergyman of the Scottish church and having finished his education at the university of St Andrews he received ordination and succeeded to his father's benefice in 1772. After holding it some years he resigned it and gone to Edinburgh where he obtained the mathematical chair in that university. In 1778 he published in the Philosophical Transactions a paper "On the Arithmetic of Impossible Quantities" and on the establishment of the Royal Society of Edinburgh, he was appointed one of the secretaries. To the first volume of its Transactions he contributed an "Account of the Life and Writings of Matt. Stewart, Prof of Mathematics at Edinburgh" and an essay "On the Causes which affect the Accuracy of Barometrical Measurements" and several other communications from him appeared in the subsequent volumes. Professor Playfair devoted much time to the study of geology and in 1810 he visited the Alps, for the purpose of making geological observations on the structure of those mountains. He adopted the opinions of Dr James Hutton which he developed in his "Illustrations of the Huttonian Theory of the Earth," 4to. His death took place at Edinburgh, July 10, 1819. Besides the publications already noticed, he was the author of "Elements of Geometry" 8vo, and "Outline of Natural Philosophy" 2 vol. 8vo.—*Gent. Mag. Ann. Reg.*

PLAYFAIR (William) an ingenious mechanician, draughtsman, and author born in the neighbourhood of Dundee, 1759 and brother to the professor of that name. Discovering an

and some of the sciences, he was bound to a professor of the name of Solvile, the principal engineer of the Royal Engineers, having his laboratory at Woolwich. At the expiration of his term, he went to Birmingham, and was engaged there for some time by Mr James White, a manufacturer, in the works of John Clegg as the engineer he recommended, and finally at Frankfurt-on-the-Main, a member of the parliament of Bourgogne, and from his description of a telegraph then lately erected on the mountains of Solvile, constructed two working models of the instrument, which he sent to the duke of York, and hence the plan and alphabet of the machine came to England. Although about this time an eager desire to distinguish himself as a political writer became his ruling passion, he did not yet abandon his taste for the arts, but successively obtained several patents for useful inventions. After residing some time in London he repaired to Paris, where he erected a rolling-mill on a new plan, for which he obtained an exclusive privilege from the king; but, on the breaking out of the Revolution, becoming obnoxious to Barrere by the expression of anti-republican principles, he narrowly escaped an arrest, and returned to England. As scarcely a subject of public interest in politics or political economy has occurred lately without eliciting a pamphlet from his prolific pen, it becomes impossible to express even his publications. Those by which he is more generally known are, "The Historical Surveyor. The Commercial and Political Atlas," 1795. "The History of Jacobinism, 1795, "Statistical Tables, exhibiting a View of all the States of Europe," &c., 1800; and an Inquiry into the Causes of the Decline and Fall of wealthy and powerful Nations," 4 vols., 1805, reprinted in 1807, a new edition of Adam Smith's Wealth of Nations, with supplementary chapters, &c. 3 vols. 8vo, 1806. "A Statistical Account of the United States of America, translated from the French," 8vo, 1807. British Family Antiquity, 2 vols. 4to, "A Vindication of the Reign of George III." "Political Portraits in this new Age," 2 vols. 1813; and "France as it is." In his opinions Mr Playfair was strongly attached to the Pitt school of politics; his "Surveyor" and "Atlas" display considerable ingenuity in simplifying statistical details, by means of geometrical lines and figures. He died February 11, 1803.—See, May.

PLAYFOULD (John) an ingenious writer on musical subjects, born in 1615 at London. He followed the business of a music-seller and in the course of his occupation became intimate with most of the eminent composers of his time, whose works he was in the habit of publishing. Being himself also an excellent judge of music and very judicious, he contributed much to the improvement of the art of printing music, by an invention which he called the "new red note," the usual types previously in use being all square and distant. The hint of this improvement he is supposed to have taken from Matthew Lark,

who, nearly at the same time, had the same idea in his "Red notes." Improved and enlarged by him, a musical instrument, now called the organ of change, was introduced in the rules of composition to render good harmony. Besides a variety of musical parts, printed in the "Musical Collection" an annual work, in 1665, entitled "An Introduction to the Skill of Music," which ran through ten editions. His death took place in 1668.—See, Dix. of Mus.

PLEMPHUS (Venerius PENTHERAT) a Dutch physician, was born in 1601 at Amsterdam, and graduated at Leiden, in which university he had applied himself with great success to the study of medicine. He became afterwards professor of physic at Leiden, and with all that prudence which induces many persons even of acknowledged ability to act themselves against any thing which is not concurred by long custom, exerted himself vigorously against the use of the Persian herb, then recently introduced into the Materia Medica by the jewell Newark Falset, under the assumed name of Convolvulus. The treatise in which he commenced his attack upon this invaluable medicine is entitled "Antiverae Convolvulus Persianus Falset, repudiat a Mappa Prostern." His other works are, "Ophthalmographia, sive de Oculi Pathesi, Actione, &c. &c.; " Fundamenta, et Institutiones Medicinae;" "On the Diseases of the Hair and Nails;" "On the Plague;" "On the Miasma," &c. and a Latin translation of the two first books of Avicenna. He died in 1671.—Morari, Mus. Diet Hist.

PLINY THE ELDER, or CAJUS PLINIUS SECUNDUS, a celebrated Roman naturalist, born A.D. 23 at Verona, as according to some, at Comæ, going to Rome, he studied under the philosopher Appion; and he is supposed in his youth to have belonged to the court of Caligula. When about twenty-one, he resided some time on the coast of Africa, and he afterwards served in the army in Germany. Returning to Rome at the age of thirty, he became an advocate, and pleaded several causes with reputation. He passed part of his time at Cumæ, in superintending the education of his nephew, and during great part of the reign of Nero he seems to have remained without public employment. At length he was appointed procurator to Spain, where he staid till after the accession of Vespasian who is supposed to have raised him to the dignity of a senator. The latter part of his life was dedicated to literature. He wrote the "History of his own Time," in thirty-one books, which is lost, and his "Natural History," in thirty-seven books, one of the most precious monuments of antiquity except. Pliny became the victim of his attachment to science; for being at Misenum during the eruption of Vesuvius, his anxiety to make observations on that phenomenon prevented him from taking proper precautions for his safety and he was suffocated by the sulphureous vapour. The opinion which prevails for his death appears to have been that in which the

date of Horace, Virgil, and Ovid, were discovered. At the first part of the emperor Titus' reign he became a Platonist. His works, see those of Hippolytus, 2015, 5 vols. folio, and 1713, 3 vols. folio, and that of Franck, Leipzig, 1714-16, 10 vols. folio.—Morel, *Antiquité Grecque*, Chap.

PLINY THE YOUNGER, or CAIUS CÆCILIUS PLINIUS SECUNDUS, nephew of the preceding. He was born at Comæ, where his father Cæcius held an honorable station. His education was carefully supervised so as much was his proficiency that at the age of fourteen he composed a Greek tragedy. He studied rhetoric under the best masters, and having obtained a military commission in Syria, he exhibited the opportunity of applying to philosophical researches, in connection with his professional duties. Having been adopted by his uncle, at the age of eighteen he became an advocate, and soon acquired great eminence in the forum. Under the tyrannical sway of Domitian he distinguished himself by his patriotism and public spirit; and when that emperor presented the professor of philosophy Pliny assisted them by his friendship and liberality. He became tribune of the people, and exercised the office of the priesthood and after the death of Domitian, he was prefect of the treasury consular, governor of Bithynia and Pontus, censor of the Eumenian way and at length augur. He held the government under Trajan, with whom he was a great favorite. Returning to Rome he divided his time between public affairs and the pleasures of society and literature, till his death, which happened about A.D. 113. He wrote much which has not been translated into English by Lord Omey and by Macmillan.—*Vasius*. *Biog. Univ.*

PLOT (Roxas) an English naturalist, born in 1650. He was educated at Oxford where he was appointed professor of chemistry in 1683, having been previously keeper of the Ashmolean museum, which he greatly augmented. He conceived the plan of a complete natural history of England, the only parts of which that were properly executed were his "Natural History of Oxfordshire," 1677 folio, and "Natural History of Staffordshire." He also collected materials for the counties of Kent and Middlesex; but these remain in manuscript, except a "Notice of some Antiquities in Kent," 1714, 8vo. Having resigned his professorship, Plot was made royal biographer by James II in 1686. In 1694 he was appointed Master of the Mint, and archivist of the board's office. He died of the stone in 1695. Dr Plot was a fellow of the Royal Society, and secretary to that body, in whose Transactions we several of his communications.—*Biog. Brit.*

PLUTARCHUS, a learned but visionary phi-

losopher of the third century, born at Chaeronea, about the year 45. He was educated at Athens, twenty-eight before he began to devote himself to the study of nature; where finding the best scholars at Alexandria unable completely to settle his opinions, least length became the disciple of Ammonius, and the most distinguished Platonic and leader of the Eclectic school. With this master he spent eleven years, when he exhibited the opportunity afforded him by the expedition of the emperor Gordian against the Parthians, to travel into Persia and India, and to make himself acquainted with the Orphic philosophy. On the death of his patron, he remained a while in Syria, after which he returned to Rome, about the year 225, and there read lectures in philosophy. Porphyry being one of his pupils. The treatise of Plotinus, fifty-four in number, were distributed by Porphyry in six classes, called "Enneads," the Greek text of which with a Latin version by Ficius, was published at Basil, 1590, folio. His death took place in 200.—*Brucker*.

FLOWDEN (Eustyn) an eminent English lawyer and reporter in the sixteenth century. He was a native of Shropshire and studied both at Oxford and Cambridge, where he is said to have applied himself to medicine which he relinquished for the law and became reader at the Middle Temple. In the reign of queen Mary he attained the rank of sergeant at law, but being a Catholic, he received no further promotion under Elizabeth. His death took place in 1585 at the age of sixty seven. His works consist of "Commentaries or Reports, containing law-cases argued and determined in the reigns of Edward VI, Mary and Elizabeth." Danes Barrington's style of Flowden the most accurate of all reporters.—*Wood Bridgeman*.

PLOWDEN (FRANCIS) an English ecclesiastic of a Catholic family who followed James II to France. His mother was maid of honour to the wife of that prince and the son was educated at St German on Laye and afterwards placed at the English seminary at Paris. Having taken orders among the Catholics he became connected with the abbe Bourlier who persuaded him to omit taking the degree of doctor rather than sign the now compulsory at that time required from divines of the Gallican church. His party connections are said to have prevented him from obtaining a cardinal's hat, and the same cause hindered him from being employed as a missionary in England, where he resided three years. Returning to France, he took up his residence among the doctors of the house of St Charles, at Paris, and continued there the greater part of his life. There are several works extant of the abbe Plowden, one of which, entitled "Traité du libérament de J. G." 1778, 3 vols. 12mo, excited among his brethren a long controversy in which, however the author himself took no part. He died about 1787.—*Plowden (CHARLES)* a postle, of the same family with the foregoing, born in England in 1755. He was sent to France for education, and entered

of his life, he returned to his native country, and became professor of botany at Leiden, and continued to contribute to medical and literary periodicals. He wrote for *Leiden*, and *Dutch*, while the year 1770, intended to remain their country in retirement, and be witness of the most interesting events for that century. His afterwards became president of the Catholic college of Utrecht, in Leiden; and in 1800 he took a journey to Rome, to transact some affairs relative to his order. His death took place, on his return to England, at Jouges, in Sussex, June 12, 1801. A list of his writings may be found in the subjoined authorities.—*Say's, Univ.*

SLUCAS (Noël Arvensis) a learned French writer, born in the diocese of Bayeux in 1680. In consequence of the death of his father, he was left when young to the care of his mother, who provided for him the advantages of a good education. At the age of twenty-two he became professor of rhetoric in the college of his native city, and he afterwards filled the chair of rhetoric. He was about to enter into holy orders, when the bishop of Bayeux offered him the presidency of his college, which he accepted; but being dissatisfied as an appear of the bell Unguiculus, he chose rather to resign his situation than to sign the formula of extraction which was presented to him. He then retired into Normandy and acted as a private tutor; and of towards going to Paris, he supported himself by giving lessons to young persons on history and geography. He relinquished that employment to devote himself to the composition of his famous work, entitled, *Speculae de la Nature, ou Description sur l'histoire Naturelle et les Sciences*, which was published at Paris in 1730, 9 vols. 12mo. In consequence of being afflicted with deafness, he quitted Paris in 1749 and retiring to l'Isle-sur-la-Sorgue St. Martin he passed the rest of his days in religious exercises and theological studies. He died of apoplexy November 19, 1761. Besides the *Speculae de la Nature* which has been translated into English, the abbé Plessis was the author of *Histoire du Clerc, considérée sous les idées des Poëtes, des Philosophes, et de Ménée*, 1739 2 vols. 12mo; "La Mécanique des Langues, et l'Art de les Ecrire," 1751, 12mo; and other works.—*Say's, Univ.*

PLUNNET (Léopold) a medical professor and botanist of the seventeenth century, born in 1645. Little is known of his original education, except that the latter is supposed to have been completed at Cambridge, where he is said to have graduated. Afterwards he practised as an apothecary in the city of Worcester and raised a botanic garden there, which gained him some notoriety, and, after a life passed in struggles against adversity, led at last to his being appointed, towards its close, royal professor of botany at Hampton-court, and superintendent of the gardens there. Plunnet differed much with Fellow and Sloane, whom he speaks very

highlyly in his treatise on the subject of plants, in many of which he describes them as inferior to, or worse than, those which he himself had depicted, in his "Prodromus," which first appeared in four volumes folio, between the years 1691 and 1696, and contains upwards of 2000 plates. His other publications are, "Athenaeum Botanicum," 1696, a valuable work, accompanied by numerous species; "Athenaeum Botanicum," 1696, 1700; all of which were collected and reprinted at Hamburgh, with a Latinized index, in 4 vols. 1696. He died in 1706, leaving an herbarium of 8,000 plants, now in the British Museum.—*Parkinson's Herbarium.*

PLUMIER (Charles) a French botanist of the seventeenth century, born in 1666, at Marseille, and educated at Thonon. He entered into the order of Minims, but he devoted his time and attention rather to the study of botany than of theology; and was so interested in this his favorite science, that after performinging a great part of the south of France in the pursuit of indigenous plants, he accepted an invitation made him by the government of Louis XIV. to proceed to St Domingo, for the purpose of bringing home a catalogue and specimens of the natural productions of the island. He executed this commission so well to the satisfaction of his employer, that he was subsequently despatched on two several voyages to the West Indies, having similar discoveries for their object, and explored on those occasions not only the French islands there, but part of the coast. He was preparing for a fourth expedition when his progress was arrested by death at Cadiz. Plumier who had acquired a considerable knowledge of mathematics and mechanics, as well as of botany, under Malpighi, at the time of his decease held the appointment of botanist-royal with a pension. His works are, "Nova Plantarum Americanarum Genera," 4to, 1708; "On American Plants," false a treatise "On Condylid;" and another "On the Art of Turnery," 4to. Retired last something by the abrupt termination of his last undertaking, the main object of which was to study the nature of the Peruvian bark in its recent state. His death took place in 1706.—*Ross's Cyclop.*

PLUNKET (Oliver) a Roman Catholic duke under avocation of Armagh, went to Rome at an early age, and there took the degree of doctor in divinity. He received the title of prelate of Ireland from pope Innocent XI. In September 1699, he was arrested on a charge of treason, and being sent to London, he was examined at Tyburn in 1702. It is melancholy to add, that the life of this unfortunate and respectable man, whose innocence was subsequently established, fell a sacrifice to a base conspiracy in those plottings times, between some priests of a scandalous life whom discretion he had consulted, and certain persons under sentence of death, who finally entreated for their passing.—*Nova Diet. Hist.*

PLAISTOW (Anthony) a native of Bowes, Durham, a son of Baynes, whose son was born in 1795, and whose afterwards, on entering law-lobby, he obtained a-salary. This piece of preference he resented as involving the financial profligacy in the authority of Parliament, for which apprehension his previous studies had admirably qualified him, as is evident in his edition of "Chaucer Chaucer," printed in seven double-page volumes. His other works consist of "A Treatise on Fidelity," 8 vol., in which he controverts the doctrine of Hobbes, with regard to the moral disposition of the human race. Another, "On Justice," 1800, 8 vol.; "A Dictionary of Errors," 2 vols.; and "Fathers Examined," three, 2 vols. His style is at once nervous and elegant; and he retained his faculties till the advanced age of twenty-four when an apoplexy put an end to his existence in 1820.—*New, Diet. Hist.*

PLUTARCH a celebrated Greek philosopher and historian of the second century who was a native of Chæronea, a town of Boeotia. He studied at Athens, under Ammonius, and afterwards travelled in various parts of Greece and then went to Alexandria, in Egypt. At every place he visited he uniformly cultivated the acquaintance of the priests and other learned men; and from the result of his own observations and their communications, he collected those stores of intelligence which are displayed in the various works which he composed. At length he took up his residence at Rome, where he remained nearly forty years. His lectures on philosophy obtained for him much reputation; and among his hearers was Trajan who afterwards became emperor. That prince, as a mark of his favour invested Plutarch with the censorial dignity, and made him proconsul of Illyricum. In the latter part of his life, he retired to his native place, where he was elected archon or chief magistrate, and he also became a priest of the Delphic Apollo. His death took place in 119, at the age of sixty nine. As an Astrologer, Plutarch has been the object of general admiration, on account of his "Lives of Illustrious Greeks and Romans," with regard to which Vesey tells us, that Theodore Gaza said, "If he was obliged to throw into the sea all the books in the world, this should be preserved to the last." The other works of this writer, which are extremely numerous, relate to moral and natural philosophy and theology. Many of his compositions are no longer extant. Among the most valuable editions of the works of Plutarch are those of N. Stephen, Park, 1572, 13 vol. 8vo; and of Robert, London, 1774—1781, 13 vol. 8vo. The three last were published separately by Baynes, London, 1795, 8 vol. 4to; and by Coote, Park, 1800, 7 vol. 8vo; and the fourth, or Miscellaneous Treatise, were edited collectively by Wythstrock, Oxford, 1795, 6 vol. 8vo, reprinted in 15 vol. 8vo. The best English translation of the Lives is that of the Abbe Gouffier.—Plutarch. Scott's Index, p. 286. 12.

PLUVIERE (Antoine) a member of the Siege M. Henri Quatre, to whom he dedicated an epigram. He was born of a noble family in Gascoigne, and was educated by his master with several diplomatic missions, especially one to the Low Countries. But it is in his former capacity that he is principally known to posterity, from his having been the first who reduced the art of riding to a system in France, and published a work on the subject, entitled "L'Art de monter à Cheval," 1616. His death took place in 1630.—*Biog. Univ.*

PUGOCK (Rawas) a learned English divine and Oriental critic, who was a native of Oxford. He was born November 8, 1608, and was educated at Thame school, whence, at the age of fourteen, he removed to Magdalen-hall, Oxford, and two years after to a scholarship at Corpus Christi. In 1628 he took the degree of B.A. and in 1636 he proceeded M.A. Such was his proficiency in the knowledge of the Eastern languages, that he undertook to prepare for the press such parts as had not previously been edited of the Syriac New Testament, from a MS. in the Bodleian Library and the work was printed at Leyden, 1650, 4to. In 1659 Peacock had been ordained to the priesthood by the bishop of Oxford, and soon after he was appointed chaplain to the English factory at Aleppo. He arrived there in October 1650 and immediately applied himself to the cultivation of Oriental literature. He was employed by archbishop Laud to make collections of valuable and curious MSS. and came for the university of Oxford, and in 1656 that prelate induced him to return to England to fill his newly founded Arabic professorship. After giving a course of lectures at Oxford, part of which he subsequently published he undertook a second voyage to the East and remained some time at Constantinople collecting ancient MSS. He came home in 1660 and had the mortification to find his generous patron a privy councilor in the Tower, and the death of that protestant and the political changes which occurred, might have consigned him to obscurity if not to want, but for the protection of the learned Selden, whom he assisted in the publication of part of the annals of Eusebius, under the title of "Origines Allectiorum," 1661. He was presented by his college to the rectory of Chidley in Berkshire, whether he retained on being deprived of his professorship, after the execution of archbishop Laud. In 1667 however Selden procured for him the restoration of his salary, and the following year he was appointed Hebrew professor at Oxford, to which the king, then a prisoner in the Isle of Wight, added the rich manor of Chidley-hall, and the place was confirmed by the parliament. In 1669 he published "Scriptures Historia Antiqua," 4to, one of the best of his works, reprinted at Oxford in 1683. In 1680 he was deprived of his salary, for refusing to subscribe the suggestion required by the parliament, and it was with great reluctance on the part of the uni-

and his wife, and their eldest son, "the author of the *Book of Life*." In 1622 he published his "History of the Monarchs of Ireland, from the time of a. Poer Macree," and he followed in 1623 his *Polygraph State*. In 1626 appeared his edition of the *Annals of Ulster*, in Arabic, with a Latin version, &c., &c. The *Breviary*, in 1628, enabled him to renew his church professorship; and the same year he printed an Arabic translation of Govind's work on the Truth of Christianity. Notwithstanding he experienced but little patronage or encouragement, he continued his labours, and in 1633 published an Arabic and Latin edition of the "Siculus Dynasties" of Abdallaghian, 2 vols. 8vo. He died at Cork, September 12, 1639, having composed on the Minor Prophets, and other topics besides those above noticed.—HOWARD FOXON. His eldest son, Roger of Rost, in Wilts., published, with the assistance of his father, an Arabic work called "Pellionimus antiochenus," also "Epistles Alii Justinus et Iosephus," &c. His son York, 1671, 4vo.—THOMAS FOXON another son, translated into English a work of Maimon Ben Israel.—*Eng. Univ.*

FUCOCHE (RICHARD) a divine and Oriental traveller, distinctly related to the subject of the foregoing article. He was born at 1704, at Southampton, where his father was master of a free-school, and he received his education at Corpus Christi college, Oxford, and took the degree of LL.D. in 1728. He engaged in a voyage to the Levant in 1727 and after visiting Egypt, Arabia, Palestine, and other countries, he returned home through Italy and Germany in 1748. He published, in 1743-45, "A Description of the East," 2 vols. folio, comprising an account of those parts of the world in which he had travelled, and containing much curious information. He obtained preference in Ireland, being made prebendar of Waterford, in 1744; and accompanying Lord Chesterfield, as chaplain, to Dublin, when that nobleman was lord lieutenant, he was made archdeacon of St. Patrick's. Under another canopy, the date of December, he was promoted to the see of Ossory in 1754; whence, in 1765, he was translated to Elphin and Meath. He died of apoplexy in September, the same year. Dr. Fucoche was the author of some papers in the Philosophical Transactions, and the Archaeologia, and he was the donor of some manuscripts to the British Museum.—*Nichols's Lit. Ann.* *Aldis's Gen. Bibl.*

FOLLLINUS, or FOLLINUS (CHARLES LOUIS BARRE 3d) a German historian, who published several *Memoirs of his own Life*. He was the son of a military man, and the grandson of a minister of state, and was born in 1697, at Lorraine, near Cologne. He received his education at a school founded by the king of Prussia for noble youths; and on leaving that institution he made a pilgrimage in France as a volunteer, in 1708. Returning to Prussia, he was made a gentleman of the king's chamber, and being dis-

graced for his attachment to the Jacobite cause, he became a general soldier, serving under various counts of Gallas, of Brandenburg, Spain, and the pope; Finsch and Holstein; every where wherever he ranged in the country in which he found himself; and afterwards having been deprived, pension, and even pension, so had ended his services. At length, on the accession of Frederick II to the throne of Prussia, Follinus obtained permission to return home; and he was entertained at the court of that prince, as a sort of Marquess before holding, however, the offices of chamberlain and master of the confection. He died in retirement in 1756. His "Memoirs" were published in French, at Leipzig, 1736, 2 vols. 8vo; two additional volumes appeared soon after; and, two more at Berlin, in 1751. He is also said to have been the author of "La Saxe galante," 1737, 8vo, containing an account of the career of Augustus king of Poland, and other anonymous works.—*Eng. Univ.*

FUELNER (CHARLES WILHELM) a German chemist, born at Leipzig in 1732. He took the degree of M.D. at the university of his native place and obtained the office of counsellor of the mines to Saxony, and chemical manager of the porcelain manufactory of Meissen. Besides some other works relating to medicine and chemistry he published "Chemical Essays on the Art of Dying," Leipzig, 1778-79, 3 vols. 8vo; and "The Guide for Dyers, especially in dying Woolen Cloth and Stuff," 1785, 8vo, which was translated into French. He also wrote the articles on metallurgy for the "New Survey of Nations," Leipzig, 1777, 1781. His death took place April 15, 1796.—*Eng. Univ.*

FOGLIO BRACCIONI, one of the early promoters of literature in Italy was born at Terranova in the Florentine territory in 1480. His father was a notary in depressed circumstances, but he was educated at the public school of Florence where he learned Latin under John of Ravenna, and Greek under Minato Chrysostom. On completing his education he went to Rome, where he obtained the office of writer of epistolae licetariae; and in 1510 attended John XXII to the council of Constance, where he witnessed the heretical trial and execution of Jerome of Prague of whose suffering and defense he gave an account, which proves that he regarded those proceedings with a severe and philosophical spirit. In 1498 he undertook the embassy task of negotiating the negotiations for secret negotiations; and in that of St. Gall discussed a complete copy of Quintilian, with a part of the *Augmentationes* of Valerius Flaccus, and Pothier's *Commentary on Cicero's Orations*. In other religious houses he disseminated several of the Roman writer's manuscripts, which had been given up as lost; and by himself or his friends circulated copies of the works of Silius Italicus, Lucretius, Vergil, Nicetas Machabeus, Ammianus Marcell,

Italy, Germany, and Scotland. In 1442, at the invitation of cardinal Branciforte, he visited Spain; but the comparative backwardness of the country at that moment caused him to return, after being received with the ceremony of a small banquet. Resuming his post of secretary, he continued his studies, still obliged to fly from Naples with pope Pius II, whom he was then prisoner; and after paying a heavy ransom, returned to Florence, and attached himself to Cosimo de' Medici, whose patronage he pursued. In 1465 he put away a companion, by whom he had four sons children, a son at that time commissary to the officers of the Roman fleet, and married a beautiful girl of eighteen, on the principle of reform. In 1469 he published his " Dialogos on Nobility," one of the most finished of his works; and new productions from time to time followed, which, however, led to no further promotion, until Nicholas V, a former friend, succeeded to the papal chair, who rewarded him liberally, and also warmly encouraged his attention to literature. In 1483 he was chosen chancellor to the Florentine republic, which office did not impede his literary industry which was singularly manifested by his latest production, a

"History of Florence" which had not reached its last polish at his death in 1519 at the mature age of seventy-seven. Little can be said for the moral character of Poggio, who was personally licentious, and quarrelsome, and intemperate in controversy to a disgusting degree. No impetuosity, however, seems to lie against his integrity and his sentiments are in general liberal and amply. As a writer he may be deemed the most elegant composer in Latin, (the language of all his works,) of that period, and he was also a considerable proficient in Greek. His writings are numerous, and upon various topics. Many are discussions on moral arguments, and in some of them he by no means spares the vice of the clergy. A few are philosophical, and several controversial the remainder are chiefly translations, corrections, and letters, the chief fault of which is diffuseness. His "Historia Florentina," which comprises the period from 1350 to 1455 aims at the style of composition of the ancient historians, but is regarded as too partial to his contemporaries. It is to be found in the collections of Gravina and Mazzoni. The whole of the works of Poggio were published together at Basel, 1588, which edition is the most esteemed.—*Life by Skeat.* *Florentine.*

POINSETT (ANTHONY ALexander HENRY) a French dramatist, who was the son of a notary, and was born at Rethel-en-Ardenne in 1752. His first production, a bad comedy on the spurts of "Tibulle et l'Aurore," appeared as early as 1782; and in 1787 his comedy, "L'Impudent," was performed. Through the reception of these plays was by no means flattering, he persevered in his career, and wrote at different times for all the Parisian theatres. He likewise published poetical compositions, including an heroic oda, entitled "Catharinus Tibulle, à l'Amour IV." In 1790 he went to Italy; and on his return he visited

France, where he was well received by Voltaire. He subsequently occupied a temporary position, had made a journey into Spain, and planned projects of introducing Voltaire's comedy in Spain for Tudor music. But death put an end to his projects, for he was deceased a short time after his arrival in Spain, as he was residing in the Convento de los Carmelitas at Cordova, June 7, 1799. He was a member of the Ardequin society at Rouen and the academy of Dijon. His principal dramatic work is "La Comte, ou le Bal des 5 à 6 mois," a comedy in one act, displaying the fashionable manners of his time; but with regard to this piece, Falstaff has accused him of plagiarism.—*Biog. Univ.*

POINSINET DE SEVRY (LOUIS) cousin of the foregoing was born at Vauville, Picardy 16, 1733. After completing his studies with credit at the college de la Marche he published a collection of poems, the success of which encouraged him to adopt the profession of an author. His next literary production was a translation in verse of the works of Anacreon, Bion, and Moschus, which was followed by a successful tragedy entitled "Brinella," the subject of which was taken from the Iliad. His "Ayes" a tragedy was not so well received, and he therefore quitted the drama to write for the bookstall; though long after, in 1789 he published "Ces de Utica," a tragedy inferior to both his former plays. The Revolution, of which he was an ardent admirer deprived him of a pension, which he had enjoyed from the Society of the Duke of Orléans, in whose family his father had held a situation but he subsequently obtained voice from the national convention being comprised among the men of letters to whom their bounty was extended. He died at Paris, March 11, 1804. His works, original and translated, are numerous, including a French version of Pliny's Natural History, with critical notes, Paris, 1771-82, 12 vols. 4to., the Comedies of Aristophanes, with the Fragments of Menander and Philemon, in French, 1784, 4 vols. 8vo., and "Nouvelles Recherches sur la Science des Mosaïques, Inscriptions, et Hiéroglyphes antiques," Maastricht, 1776, 4to.—*Idem.*

POIRIER (Pierre) a French enthusiast, was born at Metz in 1646. After studying at Hesdorff and Basle, he became parson of Amvel, in the duchy of Deur-Pont, where he wrote his "Coptes et Malas de Dieu, Asias, et Male," in which he principally followed the maxims of Des Cartes. This work created a great sensation in the philosophical world, and was noticed by Bayle, and defended by the author. In 1678, during the troubles in which his country was involved by the war, he withdrew into Holland, and meeting with the notorious Antwerp Breugelmans, the heretic, her various disciples; and from that moment he became the most bitter enemy to every kind of philosophy which was not the effect of divine illumination, and fighting most bitterly against the system of Des Cartes. In 1680 Mr. Poirier removed to Rhenish-Hungary, not far from Leyden, where he passed his

POI

seen in various medical books, and in others of his time, by Jean Baptiste, Jeanneau, and others. He died in 1772. His works were: "Le Clematis Divin," 1766; "Le Drapier," "Le Drapier répété," written in collaboration, at Paris; "The Power of Good Men in all Parts of Christendom;" "The Fundamental Principles of the Christian Religion, &c., &c." "De Natura Naturae et Origine et Receptione, &c., &c.—English's Abst. Phil. Medicina. Morbi.

POII (MICHAEL LE) Léon Pise, an eminent physician, was born at Nancy in 1687 and became first physician to Charles duke of Lorraine. He wrote a work entitled "De Capacitate et Curae principis Interno Corporis Humanus Adhucum, &c., &c., &c." in Chrestienae Medicinae tom. Vetus cum Recensatione Monstrorum collecti, of which Bartschus had so high an opinion that he republished it at Leyden, 1736, with a preface of his own.—His son, Charles le Pise, was born at Nancy in 1715, and became consulting physician to Duke Charles III and to Duke Henry II, whom he induced to establish a school of medicine at Pont-a-Mousson, of which he became dean and first professor. He died in 1735, a victim to his zealous efforts to check the ravages of a pestilence at Nancy. He wrote "Selectiones Observationes et Considerationes de proutis hactenus Morbus," published by Bouthouet in 1723, which contains many valuable observations derived from long experience; "Discours de la Nature Causes, et Remèdes des Maladies populaires accompagnés de Dystomies et autres Fluxes de Venes" in which he particularly considers the febrile nature of dysentery. Physician Comitis Speculum," &c.—*Haller. Hist. Med. Elog. Dic.*

POISSON (RAIMOND) a French actor and dramatic writer of the seventeenth century. He was the son of a mathematician, and losing his father when young, he was patronised by the duke of Croquili, governor of Paris, but his inclination induced him to relinquish his prospects of rising at court, and go on the stage. He obtained great celebrity in low comedy and was noticed by Louis XIV. He died at Paris in 1690, leaving a number of theatrical compositions, published collectively in 1687 and 1743, 2 vols. 12mo.—His son, Paul Poisson also eminent as a comic actor, died at St Germain-en-Laye, in 1732, having retired from the stage about ten years before.—Pierre Poisson son of the preceding, was famous as a dramatic performer, both in tragedy and comedy. He was born at Paris in 1696, and died at St Germain in 1765. He wrote two comedies, of which "Le Fiacre en échec" and "L'Imposteur de Campagne," are noted especially.—His brother, P. Alexandre Poisson de Buzenval, supported the restoration of his family as a comic performer. His father had preserved him a commission in the army which he quitted; and went to the Rue Faubourg, and on his return to France he became an actor, in spite of the opposition of his father, which however was withdrawn on presenting

POI

that he performed successfully during his absence. He died at Paris—Dug. 1766.—
POISSONNIER (Pierre-Jacques) an eminent physician, was born at Dijon, in 1700, and in 1734 he succeeded M. Dubois as professor of physick in the college de Dijon.—In 1746, being sent physician to the French king, he went to Rome, to attend the emperor Charles III in his illness; and while in that country, he exhibited at the Accademia experimenta relating to the composition of quicksilver, of which his afterwards gave an account to the Academy of Sciences. On his return to France, he was made controller of taxes and inspector-general of physick, and his discovery of distilling spirit from sea-water procured him a pension of 15,000 livres. During the minority of Robespierre he was impeded with his family; but on his death he was restored, and died in 1797 or 1798. He wrote several treatises on the malady incident to women, the fever of St Domingo, &c.—*Dit. Hist. Genl. Mag.*

POLE (REGINALD cardinal) an eminent statesman and ecclesiastic, born in 1450, was the son of Sir Richard Pole lord Montacute, cousin to Henry VII by Margaret, daughter of the duke of Clarence, brother to Edward IV. He received his early education under the Carmelites of St. George whence he was removed to Magdalen college, Oxford. He entered into clerical orders at an early age, and had several benefices conferred on him by Henry VIII with whom he was in the first instance a great favorite. In 1519 he visited Italy, and, taking up his abode at Padua, became highly distinguished for his attachment to platoian literature. He returned to England in 1525 but, on the breaking out of the affair of the divorce from Catherine of Aragon, probably withdrew to Paris. Nothing could exceed the solicitude of Henry to obtain the concurrence of his kinsman in that measure, but he was so far from succeeding that Pole soon thoroughly imbued with the maxims of the church of Rome drew up a treatise, *De Mistice Ecclesiastico*, in which he compared the king to Nebuchadnezzar and exalted the emperor Charles V to revenge the injury of his aunt. The consequence of this conduct was the loss of all his preferment in England, in return for which, he endeavored to form a party against Henry in England; a design which terminated in the destruction of his brother lord Montacute, and of his aged mother then become countess of Salisbury who fell victim to the vindictive spirit of Henry on the public scaffold. The circumstance of the court of Rome was extended to Pole precisely in proportion as the power of that of England was exerted; and besides being raised to the dignity of cardinal, he was employed in various negotiations, and, among others, in promoting a peace between the emperor and France. He was also appointed one of the three papal legates to the council of Trent; and, at the death of pope Paul III, was seriously thought of for his successor. On the accession of Mary I, Montacute was restored, and he was invited to England, where he liv-

simply distinguished himself by his talents, and was soon admitted into the society of the Accademia dei Lincei, and into the Accademia Nazionale dei Lincei, and made a member of the Royal Society, and took a prominent place among the most eminent scholars of his time. He died at Rome, Italy, after the last illness of his life, which was a long one, and was at the same time elected member of both the Universities ; and while he lived with much anxiety in what he deemed the prosperity of his country, he made several military preparations for the advancement of learning. His particularly opposed, although in vain, the war with France, to aid the cause of Philip II., and seems to have acted consistently even when most踧ient. He was lying ill of an intermitting fever when Many expired, and it was thought his death, which soon followed, in November 1595, was hastened by his anticipation of the ruin of the Catholic cause. Cardinal Pute, seems not to have been a man of commanding talents, either in a political or literary sense ; but he merits great esteem for his mildness, generosity and comparative moderation, in an age where parsimony was deemed lawful on all sides.—*Big Brit. Hist.*

POLEMBURG (Cornelius) a painter, was born at Utrecht in 1590, at seventy-four years of age made a journey into Italy, to perfect himself. He worked on a very small scale, and his larger pictures are not much esteemed. Charles I sent for him to England. Rubens commended him much, and had several of his paintings. He distinguished himself chiefly by his landscapes, in which he copied nature with much truth. His touch is light, and his skies are particularly remarkable for the transparency of their coloring. He died in 1660.—*Narr. Diet. Hist.*

POLEMON an eminent Platonic philosopher, was born at Città. In his youth he led an exceedingly disorderly life, but in one of his fits of intoxication, happening to enter the school of Xanthippus, who turned his discourse to the subtleties of interpretation, that moment he changed his life, and devoted himself to the study of philosophy, and ever after practised the severest austerity. Such was his progress, that on the death of Xanthippus he succeeded him in the chair of the academy. He died B.C. 170.—There was also a rhetorician of the same name, who flourished in the reign of Trajan, of whom some orations are extant, which were printed at Tivoli, in Greek and Latin, in 1637.—*Miceri. Suidas. Dicq. Lat.*

POLENTI (Jesu, marquis) a learned mathematician and engineer was born at Padua in 1683, and was appointed professor of mathematics and mechanics in that city. He was a member of the Royal Academy of Sciences at Paris, the科学院 of Berlin, of the Royal and at Padua, the Royal Society of London, and of the Institution of Engineers. He was chosen member of the Venetian Republic experiments of the rivers and canals throughout the republic, and pope Benedict XIV made him surveyor of St. Peter's. He possessed a lively

and imaginative genius, and could easily delineate, and, with facility, compare with the greatest men of his time. "Discourse on the Antiquities of the Romans and Greeks," 5 vols. folio ; "Discourse upon the Temple of Diana di Ercolano;" "Antiquities Vizianenses."—*Polycr. Narr. Diet. Hist.*

POLERM (Olofsson) a Swedish engineer, born at Whist, in Gotland, in 1661. His talents having attracted attention, Charles XI sent him to travel for improvement, when he resided some time at Paris. George I afterwards invited him to Hanover, to superintend the working of the mines of the Elector, and advantageous proposals were made to induce him to remain in Germany but he preferred returning to serve his native country. To him Sweden owes a great number of ingenious and useful inventions, serviceable in mining, draining, and making docks and canals and he particularly displayed his genius, and the extent of his conceptions, in the plan which he gave for the construction of the canal of Trollhättan, and the basin of Linköping. Polhem was rewarded for his services with a patent of nobility the title of counsellor of commerce, and was created a commander of the order of the polar star. He was also a member of the academy of Sciences at Stockholm to whose Transactions he furnished many interesting contributions. His death took place August 31, 1751.—*Big. Univ.*

POLI (G. Savarese) an eminent naturalist, was born at Molfetta, in Italy in 1746, and studied in the university of Pisa. He was a member of the Royal Society of London, and became director of the military academy of Naples where he died in 1825. He wrote a "System of Natural Philosophy" which has gone through ten editions and a work on Testaceous animals, which is much esteemed.—*Gent. Mag.*

POLI (Manlio) a distinguished chemist, was born at Lucca, in 1662. He went to Rome, and there invented several new operations, and had a public laboratory. Poli having discovered a secret in the art of war communicated it to Louis XIV who rewarded him with a pension and the title of his engineer but he declined availing himself of it, preferring the interest of mankind to his own. On his return to Italy Poli was employed by Clement XI but he came back into France in 1713, and had care for his family when he was attacked by a violent fever which carried him off in 1714. He wrote a work entitled, "Il Trifido degli Acidii," to prove, that instead of being the cause of a great number of diseases, acids are in the contrary sovereign remedies. It contains a variety of remarkable experiments and researches, which render it worthy of attention.—*Narr. Diet. Hist.*

POLENNAC (Marcellin de) a statesman and cardinal, was born of an illustrious family at Fay-on-Velle in Languedoc, in 1666. He studied philosophy in the college of Mar-

and, however, enabled himself to sit down at the piano which was always open to him in his rooms. In 1810 he returned to Paris, and on the death of John Frémont, he composed all his services to present the election of the prince of Cagliari; but his efforts proved unsuccessful, and it was with great difficulty that he got back to France. His failure caused the displeasure of Louis, and he retired for some time to his abbey of Bon Port, where he composed his "Anti-Libertine." In 1805 he went to Rome and was employed in various diplomatic missions of importance, for which he was created cardinal in 1713, and master of the chancery royal. On the death of Louis XIV he associated himself with the cause of the regent, and was banished in 1718 to his abbey of Aulne, and was not recalled till 1730. In 1734 he went to Rome, and was appointed agent for France ministry there. He was associated to the archbishopric of Auch, and made a commander of the order of the Holy Trident. He died at Paris in 1744. His Latin poem of "Anti-Libertine" has been frequently reprinted, and translated into various languages. It is distinguished by the purity and elegance of its diction and the happy turn of its expression. He confirms the absurdities of the Epicurean system and puts in their place the reveries of Des Cartes. The cardinal possessed a large collection of antiquities, dug up from the ruins of Rome, and formed a project of diverting the course of the Tiber in order to search for the relics in its bed, but his finances did not enable him to put it into execution.—*Moreri, Novis. Diet. Hist.*

POLI (ALEXANDER) a learned Italian, was born at Florence in 1679. He completed his philosophical studies in the college of the Society Pic, where in 1700 he was appointed professor of rhetoric; and in 1708 for the use of his class, he published a "Compendium of Perpetua Philosophy." In 1716 he was sent by his order to teach theology at Genoa, and he afterwards became professor of eloquence at Pisa. He died at Florence in 1732. He wrote a book on jurisprudence, entitled, "De Patriis in Testamento condicione Potestatis" but his rising power was Greek literature, and he devoted many years of his life to a translation and illustration of Homer with the commentary of Eschilus. His other works are, "Martyrioplasm Homericorum casu dignorum, &c. Orationes ad Acad. Plinianas."—*Edwards' Vol. Ital.*

POLITIANO (AURELIO) a learned and eloquent scholar of the fifteenth century, born in 1454, at Monte Polciano, in the Florentine principality, whence he derived the appellation by which he is more usually known than by that of Giulio, his family name. The first publication which brought his reputation was a Latin poem on the conversion of Giuliano de' Medici. He assumed the ecclesiastical habit, and applied by his accomplishments the favor of Lorenzo the Magnificent, who made him tutor to his children, and presented him with a ca-

rency to the cathedral of Florence. Among his early compositions of his religious life, are "A Discourse of the Ministry of the Priest," "A Discourse of the Sacrament of Baptism," "A Collection of Good Homilies," besides some philosophical treatises on the human soul, and a drama on the story of Neptune, produced in 1493. This interplay was not to music, of which science he was unfortunately dead, that his death-knife had been accustomed by his preceptor. An unfortunate attachment to a lady of distinguished rank had brought on a severe illness, which he much increased by meeting one of her in a fit of enthusiasm to rebuke her conduct on his late. His death was the consequence in 1494.—*Wycliffe. Eng. Unit.*

POLLEXFEN (Sir HOWARD) an English lawyer and judge of considerable reputation under Charles II was born in Devonshire. In 1696 he sat as one of the members for the city of Exeter and he was retained as one of the council for the bishops. After the Revolution he was knighted, and was appointed chief justice of the common pleas; but he held this office a very short time, dying in 1698. His "Arguments and Reports" were published in 1709 in folio. Burnet calls him "an honest and learned, but perplexed, lawyer."—*Bridgeman's Legal Hist.* Prince's *Workshop.*

POLLIO (CARUS ASSETUS) an eminent orator and scholar of the Augustan age, the friend and patron of Virgil, Horace, and of other literary men, and the intimate associate of Maecenas. He filled the office of censor A.U.C 714, and displayed his military talents in Dalmatia. His literary productions are stated to have been far above mediocrity; but unfortunately all those dramatic, forensic and historical have perished in the lapse of ages. His birth is supposed to have taken place about seventy-six years before the Christian era, which epoch he survived four years, and died at Tarculum, the ancient Forumi.—*Lyc. by Munro.*

POLO (MASCO) a celebrated traveller of the thirteenth century was the son of Niccolò Polo a Venetian merchant, who, accompanied by his brother Matthew had presented to the court of Kubilie, the great Khan of the Tartars. This prince being highly entertained with their account of Europe, made them his ambassadors to the pope, on which they travelled back to Rome, and having obtained a couple of missionaries, once more visited Tartary accompanied by the young Marco, who became a great favorite with the Khan. Having acquired the different dialects of Tartary he was employed on various embassies; and after a residence of seventeen years, all the three Venetians returned to their own country, in 1295, with immense wealth. Marco afterwards served his country at sea against the Goumara, and being taken prisoner, remained many years in confinement, the release of which, he effected by communicating the history of the travels of his father and

MONTAIGNE, under the title of "Della Montaigne," in the "Litterarum Latinarum" of the same author, published at Venice in 1569, was it has been translated into various languages, the best edition of which is one in Latin, by Lelio, 1674, and another in French, published at the Hague in 1675, in 2 vols. He relates many interesting things, but the greater part of his subject has been verified by succeeding travellers, and it is thought that what he wrote from his own knowledge is both curious and true. He not only gave a better account of China than any previously published, but likewise furnished an account of India, of several islands in the East Indian, of Madagascar, and of the coast of Africa. His ultimately regained his liberty, but of his subsequent history nothing is known.—*Trotwood's Rass's Cyclop.*

POLLUX (Julus). There were two ancient writers of this name. The first and most celebrated was an Egyptian by birth, born at Naucratis in that country, in the later part of the second century. He devoted himself early to letters, and settled at Athens, where he read lectures on ethics and eloquence till his reputation as a scholar procured him the appointment of prosector to the emperor Commodus. For the use of his illustrious scholar he drew up the catalogue of Greek & Egyptian, in ten books, which, under the name of "Onomasticon" is the only one of his works that has come down to posterity; although he was the author of several more. His death took place A.D. 236, when he had nearly attained his sixtieth year. Of his "Onomasticon" there are two editions, the Aldine, printed at Venice in 1508, and that of Amsterdam, 1796, folio.—The second, who lived two centuries later, is known only as the author of a medical treatise, entitled, "Historia Physica," of which there is an edition printed in 1775 at Bologna.—*Fabrizii Bibl. Grec.*

POLYGENUS There were more than one writer of antiquity who bore the name of the most celebrated of whom flourished under Antoninus and Verus, in the second century. He appears to have been by birth a Macedonian, and is principally known as the author of a work on military tactics, entitled, "Strategemata, &c." Isaac Casaubon published an edition of it, which was reprinted at Leyden in 1650, on an improved scale, bearing on the title page, "Polyeni Strategemata, liber octo, Iusti Valeri interprete Praesertim Misericordius recognit. Inscil. Casauboni nomen satis Notis adject." This is by far the best edition. There is also an English translation of it in 8vo, 1730. Fragments of other works of the same writer have descended to posterity in quotations, but none of any length or interest.—*Ibid.*

POLYBIUS, an ancient Greek historian, was born at Megalopolis, in Arcadia, about B.C. 200. His father Lepidas was prator of the Achaean republic, and the friend of Philopoemen. He was brought up to arms and public affairs, and was employed on several embassies, and giving advice to the Romans,

whereupon he, George Long, in his "Life of Polybius," says, "he obtained, under the influence of his talents, a remarkable opportunity to gain a knowledge of the Roman character, manners, and customs, for one of the foremost Roman writers, Scipio Africanus, was then in command under Scipio in Italy. His reputation, however, presented him to Scipio, and by his learning, talents, and integrity, he ingratiated himself with the two sons of Scipio Africanus, adopted by the Scipio family, through whose interest he obtained the alliance of his countrymen, after a detention of seventeen years. He himself, however, chose to remain at Rome, and afterwards to accompany Scipio in his expedition into Africa. When the Africans were again involved in a war with the Romans, he hastened to the army of the consul Mummius, in order to moderate its fury, and by his probity and disinterestedness, secured so much credit from both sides, that he was entrusted with the care of settling a new form of government for the cities of Greece. He afterwards accompanied Scipio to Numidia, and upon the death of his great friend and benefactor returned to his native country where he died in consequence of a fall from his horse in his eighty-second year B.C. 121. Polybius was the author of a "Universal History" beginning at the second Punic war to the subversion of the Macedonian kingdom, a period of 135 years. Of this great work five complete books only are extant, with considerable fragments of twelve more. Their loss is much regretted, no author of antiquity being more valuable for accuracy, fidelity and military and political information, conveyed with little attention to the graces of composition. The best editions of Polybius are that of Casaubon, 1609 folio, of Gronovius 3 vols. 8vo, 1670 and of Leppig 1789 9 vols. 8vo. Polybius has been translated into English by Hampton.—*Ibid. Cato. Vetus Hist. Grec.*

POLYCARP (St.) a Christian father and martyr, probably born at Smyrna during the reign of Nero was a disciple of the apostle John and was by him appointed Bishop of that city and he is thought to be the angel of the church of Smyrna, to whom the epistle in the second chapter of Revelations is addressed. Ignatius also much esteemed Polycarp, who, when he was condemned to die, comforted and encouraged him in his sufferings. On the event of a controversy between the Eastern and Western churches respecting the proper time for celebrating Easter Polycarp undertook a journey to Rome to confer with Anatolius but though nothing satisfactory took place on that subject, whilst at Rome he vigorously opposed the heresies of Montanists and Valentinians, and converted many of their followers. During the persecution of the Christians under Marcus Aurelius, Polycarp suffered martyrdom with the most heroic fortitude, A.D. 160. His "Epistles to the Philippians," the only one of his pieces which has been preserved, is contained in Archbishop Wake's "Glossary Epistola"—*Grec. Latvian. Miltain. Dugay.*

POLYVOTUS, a famous painter of antiquity who painted statues, and decorated temples. He is considered to have excelled particularly in single figures; and a statue of a likeness of the king of Persia was in such like proportion, that visitors came from all parts to study it as a model. A statue of a boy, executed by him, was valued at a hundred talents.

—*Brit. Mus. Nat.*

POLYMOTUS, a painter of Thessaly, flourished about 450 BC. He painted the temple of Delphi, and part of the Pecile at Athens, particularly for which it was deserved that he should be supported at the public expense. He was the first who, departing from the antique hardness, painted women in thin and liquid garments, and separated their hair as to disclose their teeth.—*Brit. Mus. Nat.*

POLYMYNITES, a musician of ancient Greece born at Colophon, in Ionia, equally celebrated for his performances on the lute and lyre. Plutarch speaks of him as the inventor of the Hyper Lydian measure, the lowest of the five original modes, being half a note below the Dorian. This alteration he accomplished by relaxing the tension of the strings more than had been previously practised.—*Burton's Hist. of Mus.*

POMBAL (SEBASTIAN JOSEPH CARVALHO MELL, comte d'Oeyra, marquis de) a famous Portuguese statesman, born at Beira, in the territory of Coimbra, in 1699. He was the son of Emanuel Carvalho a gentleman of the second class, and he studied the law at the university of Coimbra but preferring a military life to the magistracy for which he was intended, he procured a commission in the royal guards. The natural violence of his temper involved him in errors, which excited the animosities of his superiors, in consequence of which he thought proper to retire from the service. He took up his residence at his native place, and soon after returned in opposition to the wishes of her friends, a lady of a noble and ancient family. Tired of misery he obtained a new introduction to court, and through the patronage of the queen, he was appointed ambassador to the court of London in 1739. His residence in England appears to have had a decisive influence on his future administration, and it was here that he became acquainted with the reciprocal interests of England and Portugal, and gained correct ideas of the power and prosperity to which a nation may attain by industry. Here likewise he acquired a just notion of the mercantile system, and of the measures best calculated to support it; and thence he afterwards endeavoured, with indefatigable zeal, and with the most despotic authority to put in practice in his own country. He was recalled in 1746 and through the influence of his former protectress was sent to Vienna to adjust a dispute between pope Benedict XIV and the emperor Maria Theresia, relative to the partitioning of Aquileia. His wife dying, he now married the young countess Van Horn, niece of the celebrated general of that name; and this union established his ascendancy over the queen of

Portugal, who was an Amazzone, and the death of the king in 1750 increased his power. Joseph I, to reward his services, made him minister of state for foreign affairs. The object of the new ministry was to improve the commercial resources of the kingdom, and stimulate a spirit of industry among the people; and it also seems to have been his intention to increase the revenue, and to depress the nobility, and to establish a marked equality to the industrial order of the country; whence arose a spirit of opposition to his measures, which led to many public disorders. He was, however, enabled to carry some of his plans into execution, and was proceeding to prosecute these effectually when some misfortune occurred from the dreadful earthquake at Lisbon in 1755. On this occasion he displayed the most active benevolence towards the distressed citizens, and did every thing in his power to relieve their sufferings and necessities. His services procured him deserved respect, and the king rewarded him with the title of count d'Oeyra. In the following year he was made prime minister of the country and he now assumed a most unlimited power in every department of the state. Many of his measures were arbitrary and severe but the licentiousness of the age, and the character of the people, served to excuse, if not to justify, his proceedings. The attempt to assassinate the king for which the duke of Aviz and others of the nobility suffered in 1758 was ascribed by the minister to the intrigues of the priests, and it afforded him a pretext for the banishment of these fathers from Portugal. He persevered in the system of policy which he adopted, notwithstanding he was continually adding to the number of his enemies till at length, on the death of the king, in 1777 he was disgraced, and ordered to retire to his estates, and he died at Penafiel, the place of his exile, May 8, 1782.—*Biog. Univ. Rom. Cyclop.*

POMET (Ferran) a celebrated French druggist, was born in 1638 and educated by professors at Paris. He collected drugs from all parts of the world at a great expense and made a catalogue of all the drugs in his magazine, and of all the varieties in his cabinet. He died in 1699 on the very day on which a pension was granted to him by Louis XIV. He wrote an excellent work entitled, *Histoire Générale des Drapier*; the most complete work that had ever been written on the subject.—*Nouv. Dict. Hist.*

POMEY (France) a jesuit, and long time professor of the lower classes at Lyons, died in 1673, at an advanced age. He was well acquainted with the Latin writers, but his works are deficient in correctness and method. They are, "A French-Latin Dictionary;" "Vies Latines," a good abridgment of the dictionary of Robert Estienne; "Institution Universelle," *Collection Scolastique en Mémoires;* "L'Étienne, ou Traité des Particulars des Anciens, a curious book in Latin;" "Traité des Particulars;" "Pantheon Mythologique;" "Nouveaux Rétourne Considérations;" "Nouv. Dict. Hist."

1866, became a member of the Society of Friends, and was elected a deacon in 1871. He was a man of great personal worth, and his influence was much sought after. His wife died in 1878, and he died in 1888, at the age of 77 years, in Easton, Pa., where he had resided since 1870. He was a member of the Abolitionists, the Quakers, the Friends of Peace, the Western Conference of the Methodist Church, and the Friends of Temperance. He died of apoplexy in 1888.—
Wm. Dyer, Jr.

POMFRET (*Jours*) a poet, was born in Bedfordshire in 1557, and studied at Queens's College, Cambridge, where he took his degree in arts and taking orders, he was presented to the living of Maldon in Bedfordshire. In 1580 he came to London, for instruction to a larger and considerable living, but he was stopped by Compton, Bishop of London, who on account of no equivalent expression in his poem of the "Chorus," thought him unfit for the clerical habit. He was, however, convinced of his worth, but meantime for Pomfret, being consequently destined in London, caught the small pox and died of it in 1583. His "Chorus" has been highly popular from its suitability to all tastes and ideas of comfort, and staunch mirth. His poems were published in 1600 and some additional pieces appeared after his death.—Johnson's *Poets*.

POMPADOUR (*Jeanne Antoinette Poisson, marquise de*) mistress of Louis XV was born in 1721. According to Voltaire, she was the daughter of a farmer at Forêt-sous-Jouarre, whose wife became the mistress of M. Lamoignon de Tonnerre, a former-governor. The mother, an unprincipled and intriguing woman, promoted the marriage of her young and beautiful daughter with M. Léonor d'Albret, the nephew of Tonnerre, and afterwards procured her introduction to the king, which led to her guilty elevation. She succeeded in the king's favour the duchesse de Chateauroux, who died in 1744, and in 1745 she was created marchioness of Pompadour. She used her influence with her lover in promoting the progress of the fine arts, which the courtier cultivated with considerable success, and part of the wealth lavished on her was devoted to the collection of books, paintings, and statuary. But her capacity and extravagances were unremitted. She obtained a pension of 240,000 francs, and in 1756 the place of lady of the palace to the queen, who appears to have made no opposition to the appointment. She interfered frequently in the affairs of government, both as to domestic and foreign policy; and the seven years' war with Prussia, as ambassador to France, was one of the most active she prosecuted. Her death took place

April 16, 1906.—*John Pomp, Big, Colo.*
POMP (Giovanni) an Italian violinist,
was born at Venice in 1851. His first work
was "Crescent Pomp," 8 vol. box, which
was much noticed for its beauty, exec-
eution and originality. He next gave a very
large number of performances in America,

POMPEY THE GREAT or **CNEUS POMPEIUS MAGNUS**, a celebrated Roman statesman and warrior, the contemporary and rival of Julius Caesar. He was the son of Pompeius Strabo, an illustrious family, and was born 105 B.C. After having studied the art of war under his father, at the age of twenty-three he raised three legions of troops, with which he marched to the assistance of Sylla, then carrying on war with Marius and his partisans, and three years after having recovered Sicily and Africa, he was honoured with a triumph. After the death of Sylla he carried on war against Sertorius, in Spain and having conquered that leader he again triumphed, in the year of Rome 691. He was then made consul and re-established the tribunals and carrying the Roman arms into Asia, he vanquished the kings of Armenia and Pontus, and pursued his victorious course through Media, Armenia, Colchis, Judea, and other countries. His services were rewarded with another triumph which was celebrated during two days with the utmost magnificence. Pompey then uniting with Caesar and Crassus, formed the first triumvirate. That union was broken by the death of Crassus and the mutual jealousy of the surviving parties, which, after a while, occasioned a civil war between them. Pompey on the approach of Caesar to Rome with a hostile army of veteran troops, crossed the Adriatic to Epirus, and a battle between the rival chiefs taking place on the plains of Pharsalia, the former was utterly defeated. He then fled to Egypt, where he was immediately assassinated by order of the minister of Pharao the king of that country B.C. 48. Cicero says of this commander, that he was born for greatness, and that he was capable of attaining the highest eminence by his eloquence, but he chose rather to seek for military
—Historia. M. Cicero.

POMPEIUS (JEAN JACQUES DE FRANCE, comte de) A French man of letters, was born of a noble family at Montauban in 1700. He was brought up to the law and became first president of the court of Aix-en-Provence, where he indulged his taste for literature, and produced his tragedy of "Diane." Being well versed in the learned languages, and master of the modern, he became a favorite of Louis

PONI
simply in the name of the author, and without any signature, was introduced in the literary circles of Paris. In 1769 he was admitted into the French Academy; and in his frequent discussions on metaphysics, made an open attack upon the prevalent credulity of the day, which drew upon him the formidable penance of Voltaire and his associates, who finally drove him into retirement, where he died in 1784. The principal works of this writer, whose talents were respectable, consist of dramatic pieces, *Sacred Odes*, *Instructions of the Georgia Translations from Machiavelli and Lucretius*, and *Dissertations*.—His brother Jean Goujon, born in 1715, became archbishop of Vannes and successor to Louis XVI. He was a prelate of considerable merit as an ecclesiastic, and the author of a great number of theological tractates, besides a "Critical Essay on the present state of the Republic of Letters," 1743; and "The Proper Use of Secular Authority in Matters of Religion," 1753.—*New, Diet. Hist.*

POMPONIUS (PEYRAN) a metaphysician, was born at Mirepoix in 1469, and delivered lectures on the philosophy of Aristotle and Averroës at Périgueux and Bologna. He composed a celebrated little treatise, "De Immortalitate Animæ," in which he was supposed to doubt the immortality of the soul on the ground that all natural reason was against it, and Leo X was induced to suppress the work by a bull, and caused Augustin Nyphus to compose a treatise with the same title, in refutation of it. This discussion was referred to the arbitration of Bembo who supported Pomponatus and obtained leave for him to publish a second edition. He also wrote a book "De Incarnationibus," and a treatise on *Fate and Free Will*. He died in 1525.—*Gest. Diet. Bruxell. Natura.*

POMONIUS LATUUS (JULIUS) sometimes styled Peter of Calabria, a learned and witty man of the fifteenth century and to have been the natural son of a Neapolitan nobleman. He prosecuted his studies at Rome under Laurentius Valla, whom he succeeded as professor of rhetoric. He also founded an academy which was suppressed by pope Paul II, and many of the members were imprisoned, and some of them tortured; but Sixtus IV released them, and restored Pomponius to his office. He wrote several works in Latin relative to Roman history and antiquities; and he edited the writings of Sallust, Pliny the Younger, and Cicero; and commented on those of Quintilian and other classic authors. His death took place at the age of seventy in 1500.—*Thiébault, Diet. Hist.*

PONTANUS (Jean SPOLIATIUS) was born at Carcassonne in 1490, and became tutor to Alphonse, the young king of Aragon, whom secretary and counsellor of state he otherwise was. This prince abdicated against his father and Pontanus remained there; but not being compensated as he considered he deserved, he wrote a work against Ferdinand, entitled "Dialogue sur l'Injustice," in which he presented successively Charles VIII of France,

Henry VII of England, and Maximilian I of Austria; and he made himself a present of a pension by the creation of the position of the historian of his master. He wrote "The History of the Wars of Ferdinand I and John of Aragon," with a large number of warlike notes and maps, published at Madrid, in 1584, 4 vols. folio. His prose works were afterwards published separately, but both these collections are scarce.—*New, Diet. Hist.*

PONTANUS (JEAN ISAIE) histiographer of the king of Denmark, and of the province of Gueldres, died at Nuremberg in 1540. His works of research are most numerous; he possessed very little imagination, and his poetry is little more than measured prose. His works are "Annales Domitiorum, Historia, una cum chronographia quatuor Regum Urbinatique Descriptio;" "Discoponentes Chronographia de Rheni diversis regionibus et novis Populis adserente Ph. Chrysostomus;" "Observationes in Tractatum de Globis Caelesti et Terrestri auctore Roberto Hesio;" "Discussions Historicae;" "Origines Fenniae;" "Historia Utric." "Life of Frederik II king of Denmark and Norway."—*New, Diet. Hist.*

PONTAT (JONES) a French ecclesiastic was born at St. Helens de Hauteville in the diocese of Avranches in 1600. He became vicar of the parish of St. Genevieve des Ardennes and postulatary of the church of Paris. He died in 1720. He wrote a great "Dictionnaire des Cas de Conscience;" "Scriptura Sacra ab ipso alijs constant;" "Exercitatio Spiritus, pars iustitiae, exercitare et consolari les Malades;" with several other pious tractates.—*New, Diet. Hist.*

PONTAULT (SEBASTIEN BRAVIAIS DE) an eminent French engineer, in the reign of Louis XIV. He entered the army at the age of fifteen, and so distinguished himself by his bravery at the siege of Rochester, that the king gave him the post of commissary of artillery. He wrote an important work, entitled "Les gloires des Conquêtes de Louis le Grand comprenant tous les opérations de war, from the battle of Martrou, in 1648, to the taking of Maastricht in 1673. There were several editions of this, the principal called the Grand Banquier. Pontault died in 1674, and the work was carried down to 1694 by other hands.—*Perrotet, Les Hommes Illustres.*

PONTE (Jacques) called also IL BARBARO, and IL BARBAR VECCHIO was born at Bassano in 1510, and was the pupil of his father, Francesco da Ponte, a respectable painter. He afterwards went to Venice and became the disciple of Bassano. On the death of his father he moved at Bassano, where he died in 1596. His style so much resembles that of Titian that he has often been called his pupil. He commanded by virtue of grandeur of style, but he was endowed to subjects of less energy; and even in landscapes, his figures are generally below the sentiment. His colouring and composition are

positioned himself; the first at a distance surrounding a beautiful office, and the last being but a small sum of gold, and the latter a bleeding visoray, with triangular forms and the most contorted postures with parallel lines. His profane pieces consist of sonnets, lyrics, madrigals, etc. He died poor, about Francis Lander, John Holland, and Justice, all of whom Abingdonian Composers to the last.—*Pilkington, by Frost. D'Argenlie. Sir J. Reynolds's Works.*

PONTEADERA (JULIAN) a native of Pisa, and professor of botany at Padua, in the course manuscript of the eighteenth century writer,

*Compendium Tabularum Botanicarum in quo Plantae 273 in Italia super detecte recentiori 1718 4to 2 De Forum Naturae, 1780, 3 Antiquorum Latinarum Grammaticae et Grammaticae et Exordinationes, Padua, 1740.—*Hans. Diet. Hist.**

PONTOPPIDAN (ERIC EURISON) a Danish divine born in 1616 in the Isle of Funen. He obtained various preferments in the church and at length the bishopric of Drontheim in Norway where he died in 1678. He was the author of a Danish grammar Latin poems and other works.—**PONTOPPIDAN (Lours)** nephew of the foregoing died in 1706 aged fifty eight. He published *Theatrum Holsteinia Danica* 9 vols. folio besides some religious pieces in his native language.—**PONTOPPIDAN (Eric)** his son, was born in 1698 at Aarhus in Jutland where the father held a clerical office. He was educated partly at Copenhagen and in that university he took his degrees in theology in 1718. After having been employed as a private tutor to the son of a Danish officer he was, in 1721, appointed governor to the young duke of Holstein Ploen. He subsequently obtained ecclesiastical preferment. In 1735 he was chosen one of the royal chaplains, in 1738 professor extraordinary of theology at Copenhagen and in 1747 he was elevated to the bishopric of Bergen. He died in that city December 20, 1764. Pontoppidan wrote a great number of works the most important of which are noticed in the Biographie Universelle. Among them are *Annales Ecclesiæ Danicæ, 1741—1753 4 vols. 4to*, and *An Essay on the Natural History of Norway* of which an English translation was published in London, 1755, folio.—*Adams. Gen. Eng.*

POOL (MATTHEW) an eminent nonconformist divine was born at York in 1614, and educated at Emmanuel College Cambridge where he took the degree of M.A. Having taken orders in 1644 he became minister of St Michael Le Querne London. In 1654 he engaged in a controversy against the Socinian opinions of John Biddle, and in 1656 formed an institution for the maintenance of poor students at the university His sentiments being Presbyterian, he was, in 1658, ejected from his living by the enforcement of the Act of Uniformity on which he published a Latin treatise, entitled '*Ex Chrestiano in Deserto.*' Possessed of a small independence he consigned himself to his retire-

ment in the transmission of his elaborate work, the "Synopsis Cœlestium," which vast body of Biblical criticism was first printed in five volumes folio. While thus employed, he however found time to write some tracts against popery which wielded much sway on the part of the Cœlestines, and his name was put down by the infamous Titus Oates in the list of persons whom it was pretended they purposed to assassinate. Alarmed by this career strange and the apparent intention of some persons to waylay him, he retired to Amsterdam, where he died in October 1679. Besides the "Synopsis" which exhibits extensive learning and great critical skill Mr Pool was author of "A Letter to the Lord Charles Fleetwood" of a brief Latin poem of much elegance and of several sermons and epistles. He also commenced Annotations on the Bible which were finished by other hands, and published in 1685, in 3 vols. folio and frequently reprinted.—*Athen. Oxon. Eng. Brit.*

POPE (ALEXANDER) a celebrated English poet, was born May 21 1688 in Lombard street London where his father a linen draper acquired a considerable fortune. Both his parents were Roman Catholics, and, as he himself asserts of gentle blood. Soon after the birth of his son who was of very delicate constitution small and much deformed the father of Pope retired from business to a small house at Twickenham near Windsor Forest, and owing to his attachment to the exiled king not choosing to vest his property in the public securities he lived frugally on the capital. The subject of this article was taught to read and write at home and at the age of eight was placed under the care of a Catholic priest named Taverne from whom he learned the rudiments of Latin and Greek. Being fond of reading he became acquainted at this early period with Ogilby's version of Homer and Sandys's translation of Ovid's Metamorphoses which books first turned his attention to poetry. He was successively placed at two otherschools; the first at Twyford, and the second at Hyde park-corner where he formed a play taken from Ogilby's Homer interwoven with verses of his own and procured it to be acted by his school-fellows. About his twelfth year he was taken home and privately instructed by an other master and to this period is assigned his earliest printed poem the *Ode on Solitude*. He subsequently appears to have been the director of his own studies, in which the cultivation of poetry occupied his chief attention. He particularly exercised himself in imitation and translation of which his versions of the first book of the *Thædus*, and of the *Sappho to Phæn.* made at the age of fourteen, afford a remarkable testimony. He was sixteen when he wrote his *Pastorals*, which presented him the friendship or notice of several eminent persons, including sir William Temple, Wycherly, Walsh, Dryden, and others. His *Ode for St Cecilia's Day* and *Essay on Criticism*, were his next performances of note, the latter of which was written in 1709 and published in 1711, in which year also

POP

appeared the "Elegy on an Unfortunate Lady." He had now acquired that height of reputation which enabled him to venture to demand from his master the alloy of eloquence and pleasure, nor was Pope of a disposition to yield them. He hence enlisted with Addison Phillips in consequence of an innocent comparison of that writer's pastures with his own, in the "Governess," and with the inimitable critic John Dennis, owing to a heterogeneous alliance to him under the name of Apelles in the "Essay on Criticism." The "Elegy on an Unfortunate Lady" was rapidly followed by the justly celebrated "Rape of the Lock" grounded on a trifling incident in fashionable life. In this production the poet displays admirable vivacity and the most polished wit, but its imaginative power is chiefly conspicuous in the exquisite machinery of the Sylphs wrought into it as an afterthought for the poem first appeared without it. This happy addition was dictated by Addison a poet of advice which Pope subsequently upon no very direct evidence attributed to literary jealousy. He next published the

Temple of Fame altered and modernised from Chaucer which was followed in 1719 by his Windsor Forest commenced at sixteen. In the same year he published proposals for a translation of the Hindu by a subscription which were received with rapid and spontaneous encouragement and the first volume containing four books, appeared in 1719 in 4to. An open breach with Addison recurred till publication owing to an alleged jealousy on the part of the latter to whom a rival translation of Homer published under the name of Tickell was attributed by Pope who vented his resentment in the keen and polished lines commencing "Cora" be the verse &c Whether by Addison or Tickell the rival version soon sank before that of Pope who was enabled by the great success of his subscription to take a handsome house at Wickenham, to which he removed with his father and mother. About this time he wrote his celebrated and impassioned "Epistle from Eliza to Abelard" one of the most vivid and impressive of all amatory poems. In 1727 he republished his poetry in a 4to volume to which he prefixed an elegant preface and in 1729 completed the Hindu which he dedicated to Congreve. In 1727 actuated it is feared by the love of acquisition alone he undertook the editorship of Shakespeare's works a task for which he was wholly unfit and a severe castigation from Theobald laid the foundations of a lasting enmity between them. With the assistance of Bronte and Fenton he also accomplished a translation of the Odyssey the subscription to which brought him a considerable sum. In the mean time he had formed many friendships and among others one, which had the reputation of being tender with Martha Blount, the daughter of a Catholic gentleman near Reading who became his intimate confidant and companion through life. A sort of literary faction also convened with the celebrated lady Mary Wortley Montagu, which after much interval

POP

and correspondence, numbered (see Wright, *Mary Wortley Montagu*) brother Merton等等. In 1737 he joined Swift in a publication of *Miscellanies*, in which he inserted a satire "Of the Nation, or Art of Singing," illustrated by examples from the leading poets of the day. As a decisive stroke in *Ramsey's Warbler*, in 1738 he sent out the first three books of his "Dunciad" a mock heroic poem, the object of which was to overwhelm all his antagonists with indelible ridicule. It is a finished example of diction and versification but displays no such brittleness ofihility and occasional infelicities that on the whole he scarcely gains by it as a poet what he loses by a man. Permanent satire, to which he was first encouraged by bishop Atterbury appears in most of his subsequent productions. One of these an "Epistle on Timo" which contained an attack on the Duke of Chandos under the name of Timo was deemed particularly ungracious and impudent and he in vain sought to clear himself from the charge of voluntary insult. Being particularly connected with the tory party he had necessarily become intimate with lord Bellingbroke to whom suggestion the world is indebted for the

Essay on Man first published anonymously

in 1733, and the next year completed and avowed by the author. This work will probably always stand in the first class of ethical poems as demonstrative of an extraordinary

power to manage argumentation in verse although not without prosaic lines, and betraying indications that the author did not fully comprehend the system which he was advancing.

The "Essay on Man" was followed by

"Imitations of Horace" accompanied by a

Prologue and Epilogues to the "Satires," and by Moral Epistles or Essays, which exhibited

him as a satirist of the school of Boileau with more spirit and poetry but at the same time with greater negligence and equal coarseness.

The persons whom in these works he treats with most severity are lady M. W. Montagu and lord Hervey. At the bookseller having

published some letters written by Pope which had been secretly conveyed to him, the latter affected great anger yet there is some

evidence to countenance the notion that he contrived the plot himself in order to form an excuse for the publication of a 4to volume of

letters in his own name for which he took subscriptions.

In point of composition they are elegant and sprightly although studied and artificial but as many characteristic epithets are given from those of his correspondents the collection is on the whole interesting and valuable.

In 1742 at the suggestion of War-

burton he added a fourth book to his Dunciad intended to ridicule useless and foolish studies in which he thought fit to attack Colley Cibber then poet laureat. Cibber retaliated by a pamphlet which told some ludicrous stories of his antagonist, and so irritated the latter that in a new edition of the "Dunciad" he disposed Theobald his original hero, and promoted Cibber in his place who, although a great coxcomb could scarcely be deemed a

the most popular poet of his time, and he was buried in the same churchyard, near the spot where he died. In 1744, the last year of his life, Pope was created a canon of the cathedral of St. Paul's, London, and in 1749 he was made a canon of the cathedral of the Holy Trinity, Dublin. He died at his residence in the Strand, London, on May 25, 1744, and was buried in the church of St. Peter ad Vincula, Covent Garden, London. His remains were removed to Westminster Abbey in 1771, and a monument was erected to him by Bishop Warburton, his latest literary champion and biographer. Both the moral and physical character of Pope has, within these last few years, been studied and discussed with painful minuteness. Vain and insatiate, he seems to have been equally open to flattery, and prone to resentment; but one of his greatest weaknesses was a disposition to sacrifice, in order to acquire reputation and applause, which is pretty deemed indicative of littleness of mind. He was not, however, incapable of generous and elevated sentiments, and was as firm in his attachments as impulsive in his dislikes. He had always a decided regard to his independence, which, in one to whom money high concessions and the superfluities of life, more especially the luxuries of the table, were by no means indifferent, is the more remarkable. He has been accused of meanness towards his literary confraternity, but certain stories of a nature to impeach his integrity are now no longer believed, especially as something like an indiscretion to do him justice, either as a poet or a man, has been manifest in those who related them. As a poet, while his vision to invention is bounded, the tendency to set him aside altogether, in compliment to certain metaphysical distinctions, in regard to the primary source of poetical feeling, is fictitious and futile. No English writer has carried further some notion of "imitation," splendour of diction, and the only poetical art of vivifying and adorning every subject that he touched. His *Hymn of the Blest*, and "Epistles from Eliza to Abigail," are alone sufficient to impeach the exclusive theory which would deny him the merit and power of a poet, leaving his wit, his brilliancy, and his satire to be ranked as they may be. Of the various editions of Pope's works, it is only necessary to mention that of Warburton (excluding the Homer) 9 vols. 8vo; and those of Johnson, Warren and Bowles, the last in 20 vols. 8vo, 1806. See, *Brit. Johnson, Warren, and Bowles's Lives.*

POPE (of Tiverton) a minister, was born at Dodington, in Oxfordshire, about 1300, was educated at Oxon, whence he went to Gray's-inn, and was called to the bar, and in 1333, he became clerk to the crown in chancery. He held several situations, and received the honour of knighthood. On the accession of Edward VI, being a Roman Catholic, Pope did not enjoy any great or lucrative post, but in the reign of Henry VIII he was made privy counsellor and confidant to the household,

and was present at the trial of Anne Boleyn, and at the execution of her. He was created a knight of the Bath in 1534, and was made a baron of Tiverton, in 1540, by Henry VIII, and died in 1549.

POPE (William) a physician, half-brother to Sir John Whalley, Bishop of Chichester, was born at Faversham in Kent, in 1594, but in what year is unknown. His wife educated first at Trinity college, Cambridge, and afterwards at Wadham college, Oxford. He was Gonville professor of astronomy in 1620, and three years after he was made one of the first fellows of the Royal Society. He then travelled for two years, and on his return he was made regius professor of the church of Chester. He received a pension of £100 a-year from bishop Ward, whence he wrote. His other works are, *The Old Man's Wish*, an imitation of Horace, with curious notes, "The Museum of Monsieur Du Vall a notorious highwayman; " "Select Novels from the Spanish and Italian, " "Moral and Political Fables" "The Catholic Ballad," &c. He died in 1714.—*Ward's Curious Professor. Atk. Oxf. N-novis & Poem.*

POPHAM (Sir HENRY RHOES) a naval officer, and knight commander of the Bath, was born in Ireland in 1702, and rose to the rank of Lieutenant during the American war. On the peace he employed himself in commercial pursuits in the East Indies, and commanded a country ship in which he discovered a passage for navigation at Pale Po-mang. In 1754 he returned to the service and being considerably useful to the duke of York in Holland was appointed master and commander and soon after post-captain. He was next employed in the Baltic and in 1800, appointed to a command in the East Indies. In 1805 he entered the Red sea, and secured advantageous terms of commerce for the English merchants. On his return home however his conduct was vigorously attacked in the House of Commons on the score of interested views but as the sequel his proceedings were adequately defended, and nothing further took place. He was afterwards engaged in an expedition against Benbow Ayna, as stated, without adequate authority, and being brought for it to a court martial, he was sentenced to be reprimanded. He finally obtained the situation of commander-in-chief on the Jamaica station, and had but just returned to England, when his decease took place at Chatham, September 12, 1808. He published "A Statement of His Treatment since his Return from the Red Sea" and "A Description of the Prince of Wales's Island."—*Gent. Mag.*

POPMAN (Sir JOHN) an English lawyer, was born at Hemyngworth, in Hampshire, in 1551. In 1576 he was made sergeant-at-law, solicitor general in 1579, attorney general in 1585, and in 1594 he was promoted to the rank of chief justice of the Court of King's

Brougham, who was called to the bar in 1826, one of the most brilliant and learned men of his time, who, notwithstanding his talents, was in his own judgment unworthy of that office, and who, though he had no enemies against him, His general character was not much esteemed. His works are, "Sceptics and Critics judged in the Time of Queen Elizabeth;" "Romances and Adventures from Castle and Minster" (published at the Courts of Westminster in the latter end of Queen Elizabeth);—*etc.* Dr. *Laud's* *Saint Werburgh*. *Parker's* *Worship*.

PORDEHOME (John Astbury LATTICE) an Italian painter was born near Udine in 1486. The beauty of his colouring and noble and easy style caused him to be preferred by many to Tiziano; and as great was the jealousy of the latter that Pordehome was obliged always to carry arms for his defence. He was loaded with favours by Charles V who gave him the title of chevalier. He painted chiefly in fresco, and his works exceed several of the critics of Italy, but he is particularly distinguished by his picture of St Augustine, and two chapels painted in fresco at Vicenza.—His nephew *JULIUS LACANTIUS PORDEHOME*, born at Venice, and died at Augsburg in 1561, was the pupil of his uncle, and painted in fresco. The magistrates of Augsburg were so pleased by the works which he executed there that they honoured his memory by particular inscription.—*D'Argenville*.

PORLIER (Juan Diaz) a Spanish officer who distinguished himself in the wars which succeeded the occupation of Spain by Bonaparte. He was descended from an ancient family of which a branch had been long settled in the Canaries but he was born at Cartagena in South America, where his father held a high public station. After having been educated under the care of his uncle Antonio Porlier marquis de Bazarra who was minister of justice under Charles IV he entered into the navy and served as a midshipman at the battle of Trafalgar. When the cry of independence spread through the Peninsula in 1808 Porlier was among the first to obey the call of his country, and having joined a regiment stationed at Valencia, his gallantry and enterprising spirit were displayed in no other, in the vicinity of that city where he defeated a body of the enemy's troops with a very inferior force and took many prisoners, for which exploit the Junta of Asturias made him a colonel. Soon after this event he raised a Guerrilla corps, of which he became the leader and distinguished himself in a series of brilliant actions. It was during the warfare he carried on in Asturias that he gained from his soldiers the appellation of El Marqués, or the Little Marquis, by which he was afterwards known. His return from Santander, closely pursued by a corps four times more numerous than his own, excited great admiration, and raised so high an opinion of his talents, that the regency appointed him captain-general of Asturias, in which station he remained till the restoration of Ferdinand VII. After that event Porlier speedily

dashed his forces at the mouth of the Minho, where he had gained considerable success, which he made in impetuous assault, for procuring the dissolution of Congress, was unsuccessful; and being betrayed by his countrymen, he was delivered to the military authorities, condemned to death, and executed October 3, 1814, fulfilling with the most heroic firmness for which he contended to the last to consider as a just cause.—*Hawkes's Hist. Rev. of the Spanish Revolution*. *King Novis de Cossio*.

PORPHYRIUS, a philosopher of the Platonic school of philosophy distinguished for his fidelity to the Christian faith, was born of an honorable family at Tyre, A.D. 232. He was introduced at an early age to the study of literature and philosophy, under the Christians Oregus while the latter was teaching at Caesarea, in Palestine. He then went to Athens, where he cultivated rhetoric, under the famous Longinus, who changed his Syrian name, which was Malchos (king), into that of Porphyry as something synonymous and more pleasing to Greek ears. It is surely owing to this able teacher that the writings of Porphyry exhibit so many proofs of erudition, and so much elegance of style. He subsequently proceeded to Rome where, at thirty years of age, he heard Plotinus, under whom he studied the eclectic system for six years, and being of a melancholy temperament, was with difficulty persuaded by his master from putting an end to his existence in order in the spirit of the Platonic doctrine, to release his soul from its wretched prison, the body. In order to divert his melancholy he visited Sicily and took up his abode at Lilybrium, where according to Ambrose and Jerome he composed those famous books against the Christians which by reason of his name and authority and the artlessness and learning with which they were written were supported by particular edict, under Constantine and Theodosius. The circumstances of the life of Porphyry are little known after his arrival in Sicily except that he died at Rome at the end of the reign of Diocletian, about the year 304. He wrote a great number of books, the greater part of which in consequence of the mistakes and above described, have perished. From the fragments which remain, he appears to have been a writer of great erudition and eloquence, neither of which can altogether stand for his scepticism his credulity and the very doubtful honesty of much of his fanaticism. Of the pieces of Porphyry which have escaped the depredations of time and religious狂人 the few following. "De Abstinentia Uro Animalium," "De Vita Pythagorum," "Anteuentum ad intelligibilem docentes," "De Ante Nympharum," with a fragment, "De Stygo," were printed at Cambridge in 1655. "An Epistle to Ambo, an Egyptian priest" was published in Greek and Latin, at Oxford, by Thomas Gale together with *Isambardus*, 1670, folio. He also wrote "The Life of Plotinus," prefaced to his "Enneads," which

FORST (Ferdinand) a celebrated Portuguese violinist—*Born. 1770. Studied Violin under Cava, Larivière, Baillot.*

FORSTOHL (Maurice) represented the "Prinzip of Harmony," a celebrated musician, born in 1799, at Naples. He was placed at an early age under the famous Almavivite Scardini, by whom instructions he made a rapid progress towards eminence in the science. On quitting the Conservatoire he travelled into Germany, and in 1777 produced his first opera, "Adriano e Tecla," at Vienna, which met with such success in that capital that it speedily found its way to the theatres of Venice and London. The popularity it enjoyed at Vienna was the more remarkable from the difficulties the composer had to encounter in the peculiar taste of the emperor Charles VI who at first thought his style too severe but at length became one of his warmest admirers. From Germany he went to Venice, where, in 1796, he brought out his "Stile," against the "Caro" of Leonardo Vinci, to which it was considerably inferior but in his succeeding efforts he far surpassed that composer. At Dresden, the Naples of Germany as far as regards music his career was still more prosperous, and in this city he first introduced to the public his pupil Mingozzi, whose personal charms and musical abilities rendered her eventually celebrated throughout Europe. In 1773 Forstohl came to England for the purpose of supervising the Italian opera, then established by certain of the nobility in opposition to Handel, but although his efforts were worthy of his reputation and supported by the talents of his great scholar Paisiello their success was not proportionate to their merit, and the composer left that country in disgrace. He became afterwards master of the Incorporated Conservatoire at Venice whence he retired to Naples, and died there, in 1797, in great indigence. As a composer he was considered a model of style in recitative, and is said to have been the author of fifty operas, and a man of wit.—*Biog. Dict. of Muso.*

FORSON (Rochambeau) a celebrated critic and classical scholar professor of Greek in the University of Cambridge. He was born December 16, 1759 at East Ruston, in Norfolk, where his father was curate of the parish, and to him he was indebted for the first rudiments of his education. He received some further instruction at the village school, and also from the vicar of Ruston; after which he was sent to Eton, through the patronage of some gentlemen, who witnessed and admired his early proficiency and inclination for the study of classical literature. In 1777 he became a student of Trinity college, Cambridge, whence he gained a prior model, and in 1781 he was elected to a fellowship. He proceeded M.A. in 1793; and not choosing an ecclesiastical order, he relinquished his fellowship. In 1794 he was unanimously elected Greek professor, and two years after he began the publication of "The Tropidor of Hippocrates" with valuable annotations. Un-

fortunately he confined his labour only through four of those doctors—"Hippocrates," "Cæsarius," "Thessalus," and "Mædoci." He also assisted in editing the *Grecian History*, published at Oxford, 1799, a volume, and he corrected the text of the *Annotations of Hippocrates*, for a second edition, which appeared from the Glasgow press, in two volumes octavo. He deservedly enjoyed the reputation of being one of the best Greek scholars and critics of the age; notwithstanding which he experienced little patronage or support, a circumstance partly attributable to his peasant habits, which were proverbial and not quite consistent with the rules of society. Towards the latter part of his life he was appointed Librarian to the London Institution, with a salary of £500. a year, and his death took place September 25, 1808, at his apartments in the house then belonging to that establishment in the Old Jewry. His decease was occasioned by apoplexy and his body having been subjected to anatomical examination it was discovered that his skull was one of the thickest that had ever been observed. He was the author of *Letters to Mr Archdeacon Travis, in Answer to his Defence of the Three Heavenly Witnesses*, 1790 8vo in which he is thought to have completely invalidated the much contested text, 1 John v. 7 and after his death Professor Monk and Mr Blomfield published his "Adversaria or Notes and Exemplifications of the Greek Poets;" and his Tracts and Miscellanies were edited by Mr Kidd. Many of these are full of irony and humour of the most racy and popular kind, which, with other articles abounding with learning and critical acumen, appeared in various of the literary journals. Acuteness of discernment, solidity of judgment united to intense application and a stupendous memory rendered professor Forson a complete critic in the most honourable sense of that appellation. This eminent scholar married Mrs Leman, sister to Mr Perry the proprietor of the *Morning Chronicle* which journal had to boast of many of his fugitive pieces. It is pleasant to add, that the friendship of his brother in law contributed much to the alleviation of discontents, which bounded circumstances, and an independent spirit if not aided by a due share of prudence, never fail to venture.—*Monk. Biog. xxvi. Brit. Civil. xii.*

ORTA. There were several of this name eminent in the sister arts of painting and music, as well as for their literary attainments. **Hector della Fonte**, a Florentine monk of the fifteenth century, called from his profession, H. Fr. Fonte, and sometimes Fra Bartolomeo was born about the year 1490, and was a pupil of Rosselli. He became intimate with the celebrated Raffaello d'Urbino; and these two great artists are said to have mutually improved by reciprocal instruction. Boldness and generosity of design and expression are the principal characteristics of his pictures, which are all taken from my general his-

the author, and died 1842.—*—* He was born at Paris, and educated there at a grammar school, and learned Latin, French, and English, and is said to have been the original author of the former three. This education, however, did not qualify him for any literary or professional course, so a position in the fine arts, and his talents were turned to be dissevered. He was the author of several various works, among the principal of which are a treatise "On Natural Magic," 1801; "Physiognomy," 1810; "Du Diabolismus," 1811; "De Occulte Liturgie Roth," 1812; "On Physiognomy as connected with Astrology," &c. He had also prepared an Encyclopedia, as well as two literary atlases, and died in 1815.—*Jean-Pierre Portail*, naturalist, from his instructor was born at Castel Novo, in 1755; he excelled as well in France as in oil painting, and died at Venice, in 1800.—There was also an eminent scholar *Bruno Porta*, a native of Naples, who studied under Paganini. He was born in 1597, and became professor of philosophy at Pisa. His works are treatises on "The Colors of the Eyes," "On Phrenos and Pain," "On the Human Mind," &c. His death took place at Naples, in 1594.—*Moorer*. *Nom. Diet. Hist.*

PORTALIS (*Jean-Baptiste Marie*) counsellor of state, and minister for religious affairs in France under the reign of Napoleon. He was born at Bourganeuf, in Provence April 1, 1775, and he was at the commencement of the Revolution one of the most distinguished advocates of the parliament of Aix. He was no less eminent for his knowledge and talents than for the liberality of his principles, which he particularly manifested in a memoir which he published in 1776, entitled "Constitution sur la Validité des Mariages des Protestants en France." He pleaded with success against the count de Mirabeau, in defence of the countess who wished to procure a separation from her husband; and he had signified himself repeatedly both as a lawyer and a statesman, previously to 1790, when he refused the offer of his fellow-citizens to place him at the head of the departmental administration. Having deserted in his retirement, he took refuge at Lyons, and afterwards at Paris, where he was arrested as a suspected person, and imprisoned till the conclusion of the tyranny of Robespierre. Under the republican constitution of the year 8, he became a member of the Council of the Ancients; and in November, 1795, he was chosen secretary to that body, of which he was at length made president. In this station he won the advocacy of many of the fugitives from which had been persecuted during the revolutionary times. Supporting the violent measures of the Directory; in 1799, he was placed on the list of proscription; but he

was released, and sent again to the council of Ancients, where he was received by most favorably. A rich English merchant, named Mr. Johnstone, had a son, Johnstone, who resided at Portofino, Italy, and was immediately employed. Towards the end of the year he was made a member of the council, and he was soon a member of the committee for the improvement of the civil code. He was afterwards charged with the direction of all offices relating to public worship; and he was principally concerned in the formation of the Committee with the pope. In 1802 he was elected a candidate for the Conservative Senate; and in July 1804, Napoleon nominated him minister for religious affairs, and grand master of the Legion of Honor. His death took place August 25, 1807. *Portalis* was a member of the second class of the Institute; and in 1800 he read to that assembly a memoir on the attorney-general Regnier. He left a posthumous work, "Sur l'Orage et l'Abord de l'Egypte Philosophique pendant le Directoire," published at Paris, 1809, 2 vols. See—*Biog. Univ.* *Biog. Mus.* *des Contemp.*

PORTE DU THREL (*François Jean Garnier de la*) an impious French writer, born at Paris in 1742. He received a good education and entered young into the army. After serving with reputation as an officer in several campaigns, and having obtained the cross of St. Louis, he retired, to pass filling place and devoted himself to classical studies. In 1770 he published a French translation of one of the tragedies of *Aeschylus*; and in 1775 the other of *Callicles*. The following year he was appointed a member of a committee ordered by government to collect charters and other historical monuments; in consequence of which he went to Italy and after remaining there several years, he returned, bringing a collection of valuable papers, part of which he published in conjunction with M. de Bruey in 1791, 3 vols. folio. He also engaged with Rochfort in a new edition of the *Théâtre des Grecs* of *Julien Duvivier* for which he furnished a version of all the tragedies of *Aeschylus* except. In 1794 he published a new translation of *Zaïdah*, with the original text. He also, in concert with MM. Gonot and Coray, translated the *Geography* of Strato; and produced several other works relating to ancient literature. *Le Porte du Threl*, who was a member of the Legion of Honor, died, after a long and painful illness, May 20, 1815.—*Biog. Univ.*

PORTERUS (*Basilus*) a learned protestant divine of London. He was a native of York, being born in that city in 1735; and, having received the rudiments of a classical education at the grammar-school of Ripon in the West Riding of the country, was admitted, in the intermediate year of a class at Clowes's college, Cambridge. At the university he distinguished himself by his talents and accomplishments, which became objects of his patronage, appointment of Cambridge, made him one of his domestic chaplains in 1767; soon after which he resigned his fellowship and

selected an electing committee, which he assisted in arranging for the election of Bishop Ponsonby. The timely proceedings of the committee gave him an opportunity a still at Peterborough cathedral, and the valuable rectory of Lambeth, both which he held, with some other benefices of minor importance till in 1776, he was raised to the see of Chester, at the express instance, it is said, of Chamberlain, queen to George III. Eleven years after he was transferred to the bishopric of London, over which diocese he continued to preside till his decease in 1803. Bishop Ponsonby was a man of deep judgment and considerable ability; while, in his earlier years at least, he appears to have possessed a poetical talent much above mediocrity, as is evinced by his poem 'On Death,' which gained the Somers prize in 1759. He is also said to have assisted Mrs Hannah More in the composition of a religious novel entitled "Cecilia in Search of a Wife;" a report to which greater credence has been given from the close intimacy and presumed coincidence of religious bias between the parties. His grave writings are a life of his early patron, archbishop Suter with a variety of sermons, charges, and other devotional tracta, which have been collected and published subsequent to his decease.—*Life of Ponsonby, doc Reg.*

LORTUS. There were two eminent scholars of this name in the sixteenth century father and son.—FRANCIS, the elder a native of Candia, the ancient Crete was born in 1511 and educated in the tennis of the Romish church at the court of Hercules, duke of Ferrara. The death of his patron and severe rage and a change which had begun to take place in his religious opinions, induced him in 1551 to retire to Geneva, where he afterwards openly embraced the doctrine of the reformed faith, and became Greek professor. He was the author of some very able and learned annotations on the works of Xenophon Thucydides, Plutarch, &c. and of a useful appendage to Constantine's lexicon. His death took place in 1581.—EDWARD the younger did not disgrace the reputation which his father had acquired and is advantageously known as the compiler of a lexicon in Greek and Latin, of the Doric and Ionic dialects, in two octavo volumes. He also translated Studies, and superintended the publication of the works of some other ancient classics. He held successively the Greek professorship at Leiden and Heidelberg, and died in 1610.—*Morer.*

POMONIUS, or POSSIDONIUS, a Stoic philosopher, who was a native of Apamea in Syria. His works are all lost, and but little more is known of him, except that he was the contemporary of Pompey and Cicero, the latter of whom, in the first book of his treatise on the service of the Gods, writes Possidonus his metropolitan friend. This philhellene philosopher had his school at Rhodes, and Pompey, when he returned from Syria, visited the sage, wishing to hear his discourses. Finding, however, that he was suffering under a severe fit

of the gout, the visitor began to assure the stoical disengagement of his victim; but Pompey immediately began to deliver a lecture on the principles of the Stoic philosophy, in the course of which, as his disorder became positively distressing, he continually announced, "O pain, pain be as thou art as thou wilt, thou shalt never induce me to acknowledge thee to be an evil."—CHARLES, of Alexandria, a celebrated mathematician who calculated the circumference of the earth from astronomical observations is supposed to have been the same with the Rhodian philosopher though some consider them as distinct individuals. Some fragments of his writings remain published in 1820, under the following title "Posidonii Rhodici Heilensis Doctrinae collectae auctio Jacob. Bala accedit Wittmachi Adnotatio."—*Bieg Univ.*

POSSELI (EMMETT LOUIS) an eminent German historian born about 1768, at Baden, where his father held the office of an ecclesiastic counsellor. He was educated at Gottingen and Strasburg and having taken the degree of LL.D. he was called to the bar. This profession not suiting his taste he obtained the professorship of law and rhetoric at the gymnasium of Carlsruhe and became private secretary to the margrave of Baden. He then devoted himself to the cultivation of German historiography; and his reputation procured him the offer of employments in Prussia, and in 1791 he was made bailiff of Garzesteck, near Rastadt. He became a warm admirer of the French Revolution and wrote in Latin an account of the early wars between France and the confederate powers, and he published a History of the Trial of Louis XVI and various other works, relating to contemporary history. At length he became attached to general Moreau and undertook to write the history of his celebrated retreat from Bavaria. When that officer was prosecuted in 1804 Posseli became alarmed for his own safety, as consequence of his connexion with him. He quitted the territory of Baden, and wandered from one place to another in a state of mental distraction which ultimately induced him to throw himself out of a window at Heidelberg, when he fractured his skull and died in a few hours. This melancholy accident happened June 11 1804. A list of his works may be found in the annexed authorities.—*Bieg Univ. Bieg. Novum de Contempt.*

POSEVIN (AVRONUS) a learned jesuit, born at Maastricht, in Italy in 1583. After finishing his studies, he went to Rome, where he was employed as tutor to the nephew of cardinal Mercurio Gondomar. In 1609 he was admitted into the order of St. Ignatius, and he was employed by his superiors as their agent with Emanuel Philibert, duke of Savoy, whom he promised to induce the jesuits to settle in his states, and to adopt severe measures against the Waldenses. Pope Gregory XIII. sent him to make the diagnosis which had arisen between the king of Poland and the order of Massony, in which he succeeded;

and he was accepted by other diplomatics of
that day—de Clémire and Gouffrey. He returned
to Angiers in 1207, and remained for nearly three
years, devoting his time to religious duties and literary studies. His afterwards
went to Rome, where he interested himself es-
pecially in the reconciliation of Henry IV of
France with the Holy See, so as to give further aid
to the pope, who forbade him to interfere any
further in the business. He died at Paris,
in 1213. His works are " *Mémoires, ou de
Notes Monastiques*, " 1596, 8vo.; " *Histoire
des Religions, ou Rituales Ecclésiastiques*, " 1599,
folio, 2 vols.; and " *Apparitions Sacré*, " 1602-3,
3 vols., folio.—ARMAND POISSYAN, nephew
of the preceding, physician with reputations as
a physician at Mantes, at the beginning of
the 17th century. He was the author of
" *Généalogie Mémoires et Monastiques De
nos Histoires*, " 1617 folio, and other works.
—*Nouv. Dict. Hist. Relig.* U.S.A.

POSTEL (Guillaume) a Norman jesuit,
born at Dolais in 1516, of obscure pa-
rents, who left him an orphan at a very early
age. His docility, and the appearance of a
profound talent, however raised his friends,
through whose assistance he reached the met-
ropolis, and there became a novice in the
college of St Barbe. His reputation for ge-
neral learning and antiquarian research, pointed
him out to France I as a proper person to
be employed in a design he had formed of
introducing into France a more extensive ac-
quaintance with Oriental literature, and Postel
was in consequence despatched to the Levant,
for the purpose of procuring rare manuscripts,
etc., in the selection of which he displayed
much judgment, and acquired in consequence
the favour of the chancellor Poyet, who at his
return enriched him with a handsome ap-
pointment and the title of Professor Royal of
Languages and Mathematics. The disgrace
of his patron, however as is not unfrequently
the case, involving that of his dependants,
Postel was banished and led for some time a
wandering life during which period his re-
verence appear to have affected his intellect
and his ideas in their arrangement turning to
religious erudition; he became possessed with
many wild and extravagant notions the
publication of which brought him under the
censure of the inquisition at Venice, and he
was thrown into a dungeon, but was at length
restored both to his status and to liberty.
His case, however, was far from complete,
however as though he held for a short time a
priesthood at Vienna, and even made his
peace with the French court, which permitted
him to resume his functions at Paris, a return
of fanaticism induced him to flee from society
and shut himself up in a monastery where he
died, in the autumn of 1551. The notorious
work " *De Tribus Impostoribus*, " has been
attributed to him, but on insufficient evidence.
Of those to which his claim is better ascer-
tained, see " *Chron. Alençonneum*, " 1620.
1597; a curious treatise " *On the Origin of
Moses*;" " *On the Learning of the Phenom-
enons*;" " *The Concord between the Gospel*

and the Khan;" " *On the Way of India*;" " *On the Native Languages*;" " *A History of the Greeks*;" and " *A Description of Hispania*;" most of which are still
unpublished.—*Nouv. Dict. Hist. Relig.*

POOLELTHWAITE (Mallory) a Eng-
lishman, member of the bar, antiquary, supposed to
have been born in 1707. Little is known of
his birth or education, but much acuteness
and sense residing in displayed in his writings,
the principal of which is his " *Dictionary of
Trade and Commerce*, " 1731, 3 vols. a work of
considerable utility. His other publications
are, especially " *On the Adverse Expeditions*;"
" *On the Commercial Injuries of Great Brit-
ain*, " 1732, 2 vols.; " *Great Britain's True
System*;" " *The Merchant's Public Consulting
House*" and other Commercial Tracts. Mr.
Poolelthwaite was a fellow of the Antiquarian
Society and died 1767.—*Circus Literaria*,
vol. i.

POTINGER (John) a poet and antiqui-
tarian writer born 1647. He was a native of
Winchester where his father was head-
master of the grammar school, in which he was
educated. After graduating A.B. at Corpus
Christi college Oxford, he entered at the
Temple and was in due course called to the
bar. Besides a variety of minor pieces, he
composed " *A Pastoral Reflection on Death*,"
and translated Tacitus's " *Life of Agricola*. "
He appears to have practised very little in
his profession, but having married into the
family of Erke chancellor of the exchequer,
became controller of the pipe-office. His
death took place at Highworth, in Wiltshire,
in 1733.—*Engl. Memoirs*.

POTHIER (ROBERT JEAN) an eminent
French lawyer was born at Orléans, in 1692.
He became professor of law in the university
of his native city and early distinguished him-
self by an edition of Justinian's *Code* very
accurately arranged which he published in
1746, 3 vols. folio. He died unmarried, in
1778. Although constantly engaged in his
profession, he found time to compose two very
elaborate works entitled " *Costumes d'Or-
léans*, " 1773-4 and " *Costumes du Duché d'
Orléans*, " 1773 on the introduction to
which last work is deemed necessary. He
was also author of various professional treatises,
all of which, with the publications not
mentioned, were republished 1776, in
4 vols. folio. A *Thesaurus of Fables* has also
been once printed from his MSS., Orléans,
1776, 2 vols. folio.—*Nouv. Dict. Hist.*

POTOCKI (Count LOHATIS) a Polish
nobleman, who was grand-marshal of Lithuania,
and member of the committee of public in-
struction, till the destruction of the Polish
monarchy. He died in 1809 at the age of fifty-
eight. Count Potocki translated the *Logic of
Coddington* into the Polish language and was
the author of several other works, which were
collected and published by one of his friends.
He interested himself greatly in the attempts
to free Poland from the yoke of her more
powerful neighbours, and after the overthrow
of Kościuszko, with whom he co-operated, he

was appointed and sent a professor of Physick, Mathematics, and Chemistry, King's College, Cambridge.

POTT (John Mervin), an eminent English chemist, born at Huddersfield, in 1694. He studied theology, which he abandoned to devote himself to medicine and chemistry; and he was admitted M.D. in 1720. Having previously prepared a chalybeate, he subsequently prepared a nitre, under the title of "Sanguiferous Chalybeate Subsiduum Mortificum," 1726, &c. He settled at Bury where he was admitted into the Academy of Sciences; and on the foundation of the college of medicine and surgery he was called to the chair of chemistry to which was added the direction of the royal laboratory. He made some important chemical discoveries, and published "Chemical Researches in Lithia-graevity," and other works. He died March 20 1777.—See Univ.

POTT (FANCIVAL) an eminent practitioner in surgery of the last century, to whom the science is especially indebted for many valuable improvements both in its practice and at the construction of instruments. He was born in 1713, in Threadneedle-street, London, and was intended by his friends for the church, but feeling a strong bias towards the profession, at which he eventually so highly distinguished himself they were prevailed upon to place him under Mr. Neuret of St Bartholomew's hospital, in which institution he rose gradually to be first assistant, and afterwards principal surgeon. This latter appointment he retained in 1749. In 1765, having been elected a fellow of the Royal Society in the course of the preceding year, he delivered a course of lectures on anatomy and surgery which excited considerable attention. He also a great variety of valuable discussions, "On Herpes," "On Epilepsia Lachrymata," "On Hydrocoele," "On Cataract," "On Wounds of the Head," &c. He invented many new instruments, and improved others with great ability and ingenuity, and was especially celebrated for the mildness and humanity of his treatment. This acrobatic operator and excellent man died at his house in Holborn-square, in the winter of 1778 having resigned his situation at St Bartholomew's the year preceding. His son-in-law, Dr. John Earle, his successor, has published a complete edition of his works.—See *Biog. Brit.*

POTTER, a name of considerable note in the annals of the English church, from the number of learned and able divines who have borne it. Of these BASILIUS POTTER, born at Newgate, in Lancashire, in 1578, died 1628, was a divine, and eventually prescot, of Chichester, in the County of Oxford. He held several benefices in Lancashire, but in 1606, being called to the see of Chichester, resigned his former charge to his son, THOMAS, Canon of Lancashire, a learned and some eminent divine, and had about the year 1616, the same year removed to London, where he became a member of the Inner Temple, he practised, and afterwards printed, and having

obtained the appointment of Master of Magdalen College, at the express request of Charles I, with whom he was a personal friend to "devote to a new project Plot, entitled 'Christian Monarchs.' " This tract appeared in 1620, soon after which he was called to the deanship of Worcester. In 1625, being at that time vicar-chancellor of Oxford, his devotion to the royal cause entangled him with the parliament, and on the breaking out of hostilities he sacrificed all his place for the king's service. In 1645 he was advanced to the field-deanery of Durham, but his unexpected death within two months of his presentation prevented his being ever installed. Besides the pamphlet already mentioned he was the author of a controversial treatise on predestination, and a translation of father Paul's history of the disputes between the see of Rome and the Venetian republic. —JOHN POTTER, private and metropolitan the most celebrated of the name, born in 1574, was a prelate of great learning and exemplary manners, although the general amiability of his private character was somewhat marred by a pride which led him eventually to disinherit his eldest son, for an unequal alliance. This circumstance is perhaps the less excusable as hereditary prejudices could have no share in producing it his own father having been a linen-draper, in no great way of business, at Wakefield in Yorkshire in the grammar school belonging to which town he received the rudiments of a classical education. At the usual age he became a member of University college Oxford, where in his twentieth year, he published a work in one octavo volume entitled "Varianae Lectures or Notes ad Platarchi librum de audientis Poethi, et ad Basilii magni Orationem ad Juventutem, quo modo cum Fructu legitere possint Graecorum libri." The next year he became fellow of Lincoln college where he distinguished him self as an able and popular tutor and in 1637 printed a new edition of Lycophron in folio, which is yet considered the best of that difficult author. Soon after his literary reputation was established, by the appearance of his "Archæologia Graeca, or the Antiquities of Greece" in 2 vols. 8vo, a standard work which has gone through a variety of editions, and is considered an almost indispensable vade mecum to the classical student. In 1646 he became chaplain to Tendit, archbishop of Canterbury, and two years afterwards to Queen Anne, on which occasion he graduated as doctor in divinity. In 1675, being then regius professor of divinity, he was raised to the see of Oxford, and on the death of Archbishop Wake, in 1707, was advanced to the primacy. Archbishop Potter sustained his high station with much dignity and popularity till his death, in 1707. His works, in addition to those already mentioned, are, "A Discourse of Church Government," 1690, an edition of "Cassius Alexandria," 1716, and a history of Chichester, Gloucester, and other diocesan works, printed together, in 3 vols. 8vo, at Oxford, in 1753.—FRANCIS POTTER, son of

a clergymen's son, rector of Kilhampton, at the county of Devonshire, was born at Maynooth, which parish his father was the incumbent. He received his education at Worcester and Trinity colleges, Oxford, and in 1697 succeeded his father in his Somersby living. The presentation of a newly invented hydraulic machine to the Royal Society procured him to be elected a fellow of that body which his talents as a mathematician, and even as a painter seem surely to warrant, although an absurd treatise which he wrote on the Number of the Beast in the Revelations impeaches not only his character as a sound divine, but also, to a certain extent, as a man of understanding. Some time previously to his decease he had totally lost his sight, and died at length at Kilhampton, in 1678.—RENÉZ FORTIN, A.M. was a native of the county of Norfolk; born in 1731, graduated at Emmanuel college Cambridge A.B. 1741, A.M. 1758. He was an admirable classical scholar and highly distinguished himself by his excellent translations of the works of Zephyrus, Euripides, Sophocles, all equally remarkable for the spirit and fidelity with which they are rendered. The first of these appeared in 4to, 1777 reprinted in two vols., in 1779, the second in 1781 & the last in 1788. His other writings consist of some miscellaneous pieces in verse which exhibit the possession of a pleasing vein of poetry, a translation of the Oracle concerning Babylon and a Reply to Dr Johnson's Attack on Gray in his Lives of the Poets. Mr. Fortin held a stall in Norwich cathedral, with the livings of Kepingland and Lowstoffe in Suffolk at the latter of which he died in 1804.—*Father's Worthies. Aiken Oxon Big Brat.*

POTTER or POTER (PAUL) a Dutch painter born in 1625 at Enckhuysen in the province of Holland. His works which are become equally rare and valuable, are peculiarly distinguished by the effect of his sun rays upon his landscapes and cattle in producing which he has distanced all competitors. He died young at Amsterdam in 1654. The paintings of that artist are deemed very valuable. For one small picture in the collection of earl Grosvenor that nobleman gave 9000 guineas.—*Pilkington. D'argenville. Vers de Peint.*

POUPART (FRANÇOIS) a French physician, celebrated as an entomologist and a good anatomist. He was born at Mâcon about the year 1660 and graduated in medicine at Rheijsia. A fragment described by him still bears his name, and several of his tractates, especially those connected with the history of insects, are accurate and ingenious. Among these latter are a "History of the Formicae Lat. and the Formicae Piles," "On the Natural History of the Læschi," "On Hymenopterous Insects," &c. He became a member of the Académie des Sciences, and died in indigent circumstances at Paris in the autumn of 1709.—*Eley. Diet. Enc. de la Mat.*

POURCHOT (Etienne) a learned Orientalist and philosopher born at Pontoise, in

the neighbourhood of Paris, in 1720. He held the professorship of Mathematics, and of the Colleges of the Grammatical and of Médecine, and lectured on the Hebrew tongue &c. at the Sorbonne. Pourchot was the friend and pupil of Racine, Molière, and many other eminent men of his time, who held him in high esteem for his learning. His "Indo-Chinese Philosophy" have gone through four editions. He was also the author of some other works on philosophical subjects. His death took place in 1784.—*New. Diet. Hist.*

POUSSIN (Nicolas) a painter of great celebrity was born in 1594; at Andely, in Normandy of an ancient but reduced family. Having chosen painting for his profession, he repaired to Paris, where he studied under different masters, and practised his art for a while in the provinces with little celebrity. At length, having attracted the notice of the Italian poet, Marini then at Paris, he was encouraged to go and join him at Rome, where he was introduced to cardinal Barberini. The death of Marini, and the absence of the cardinal reduced him to great straits, and he was forced to give away his works for sums that would scarcely pay for the colours. He was not however to be disengaged, and studied the works of Raphael and Donzelis chino and more especially those of Titian, with great attention, but his taste for the antique at length prevailed and he gave himself up to that learned style by which he is so much distinguished. On the return of cardinal Barberini to Rome he painted for him one of his finest performances the Death of Germanicus which with other works so fully established his reputation, that cardinal Richelieu induced Louis XIII to recall him to France in 1640 in order to paint the gallery of the Louvre. He was received with distinction and honoured with the title of first painter to the king but was so much annoyed by the envy and intrigues of competitors, that he formed an excuse to return to Rome in 1642 and resided there for the remainder of his life. He continued, however to receive his pension under Louis XIV, and the chief part of his productions were purchased by his countrymen with great avidity. He became paralytic before his death, which took place at Rome in 1665 at the age of seventy-and. As an artist Poussin is chiefly celebrated for a style founded upon an accurate study of the antique. Hence a portion of the opinion which an attention to nature at second hand invariably produces, which was, however often stoned for in his historical pieces by pathos and sublimity of expression and by a most tasteful and accurate attention to costume. He had no studied the beauties of the antiquities, and its elegance grand style, correctness, and fine proportion in the smallest of minute art, that nothing can exceed his accuracy in all these particulars. At the same time few painters of history have had their stories with more force and propriety and their works are filled with life of thought, that he has been called "Le Poussin" and

Gore, of North Wales, had obtained the title of Baronet of Penrhyn, and was the author of a well-known work on "The History of the Principality of Wales." This great nobleman of, originally, lowly extraction, was a man of singular and commanding wit, but impulsive, short-tempered, hasty-tempered. His following was numerous, but his character, during an interval, became very bad, and he died disgraced and despised. He had a son, who, with his wife, had a dark-skinned son, whom they gave poor M. Poussin," said the Bishop, "thereveras cunctis illis vixit, 'that you have not one servant.' 'And I you, my lord,' replied the philosophical artist, 'that you have no master' Poussin married the sister of Gaspar Dughet, but never had any offspring. The Geraniæ, and several other of his best pictures, have been finely engraved.—*D'Argenville's Fine Art Paint.* Pilton.

POUSSIN (GASPARD) a very eminent landscape painter was born, according to some writers, in France in 1600, and to others at Rome in 1615. His real name was Dughet, being the person whose name was assumed to Nicholas Poussin. The disposition which he early showed for painting caused him to be placed under his brother-in-law whose surname he assumed and being a lover of the country and its sports, he devoted himself to rural sketches, and became one of the greatest masters of landscape upon record. He practised his art with great distinction in various parts of Italy but chiefly at Rome where he lived a life of celibacy, and freely expended his gains in hospitable attentions to his friends. He worked with extreme care, although nothing can exceed the beauty of his scenery and the precision of his perspective. He particularly excelled in the representation of land-storms, in which every tree seems agitated, and every leaf in motion. In his figures he was less happy and they were frequently supplied by Nicholas. This skilful artist, whose performances are deemed very valuable, died, according to D'Argenville in 1675, and to others in 1663 but the former date is preferred. He engraved eight of his own landscapes.—*D'Argenville's Pict.*

POUTKAU (CLAVES) a celebrated surgeon, born at Lyons in 1725, who was the son of a member of the same profession. He studied at the college of the jesuits in his native city, and afterwards went to Paris, where he became the pupil of Monard, Ledran, and J. L. Petit. Returning to Lyons, he was employed at the Hôtel Dieu, where he became surgeon-major in 1747. In this situation he greatly distinguished himself by his surgical skill, especially in the operation of lithotomy, in which he made some improvements. On resigning his office at the Hôtel Dieu, he was chosen a member of the academy of Lyons, and he engaged in practice as a physician. He died in 1775. Besides his "Précis de l'Opérations de la Pièvre," and "Traité des Maladies de l'Urologue," and other works which appeared during his life, he left some additional pieces, published in 1763, by

the Colonists, under the title of "Mémoires sur l'Opérations de la Pièvre," &c. with wood-cuts.

POWELL (Davys) a learned divine and historian of the nineteenth century, who was a native of Denbighshire, in North Wales, in 1793. He received his education at Oxford; and at the foundation of Jesus college in 1791, he removed thither, and the following year took the degrees of BA and that of MA, in 1795. Having entered into holy orders he obtained the vicarage of Rusheen and Llanfyllin, in his native county; and he also held some office in the cathedral of St Asaph. In 1808 he consecrated DD and the next year DD, soon after which he was made chaplain to sir Henry Sidney, then president of Wales. He died in 1808. Dr Powell published "Cadeau's History of Cambria, with Annotations," 1784, &c., Annotations on the Itinerary and Description of Wales by Geraldus Cambrensis, "Postic Veteris Historia Eti Historica" 1665 8vo, and "De Britannica Historia recte intelligenda, Epist. ad Gul. Fleetwood Civ. Lib. Recordationem." Anthony à Wood says, that Dr Powell also undertook the compilation of a Welsh dictionary, but died before it was completed.—*Berkeley's Bag Lit.*

POWELL (JOHN JOSEPH) an English barrister who distinguished himself by his professional writings. In 1783 he published his "Law of Mortgages," 8vo greatly enlarged in the edition of 1799 2 vols. His other works are an "Essay on the Learning respecting the Creation and Execution of Powers and also respecting the Nature and Effect of Leasing Powers" 1787 8vo, "Essay on the Learning of Devices from their Incipit by Writing to the Consummation by the Death of the Devisee" 1783 8vo, "Essay on the Law of Contracts and Agreements" 1790 2 vols. 8vo. These works have been reprinted and are considered as highly valuable. Mr Powell died June 21 1801.—*Brudenell's Leg. Bibl.*

POWELL (WILLIAM SAMUEL) a learned divine of the last century, who received his education at St John's college, Cambridge where he obtained a fellowship. Having been ordained he was presented to the living of Colkirk, in Norfolk, in 1761, and after holding other parishes, he was chosen master of St John's college in 1765, and he subsequently became vice-chancellor of the university. He was also archdeacon of Colchester; and rector of Freshwater in the Isle of Wight. Dr Powell attracted some notice by the publication of a sermon on subscription to articles of faith though he no further interested himself in the controversy which arose in the church on that subject. He likewise published, "Observations on the Edinburgh Assembly" of Dr Wesley. His death took place in 1775; and a posthumous volume of his "Sermons on various Subjects," 4to, shortly after appeared, with a biographical memoir of the author by his friend Dr Thomas Bayley.—*Gant Mag.*

POWELL (WILLIAM) an eminent English actor, the pupil and protégé of Garrick, who made his first appearance on the stage at Drury-lane, October 1763, in the character of Falstaff. He was received with great applause, and he continued to be the chief support of the theatre during the period of Garrick's temporary retirement, in the course of his tour to the continent. In 1767 he became one of the managers of Covent-garden theatre, and he afterwards engaged in the management of a new theatre at Bristol, where, going to perform with his company in the summer of 1769, he was attacked with inflammation of the bowels, and died July 3, that year, at the age of thirty-three. He was interred in Bristol cathedral and his widow erected a monument to his memory with a poetical inscription, from the pen of the elder Colman.—*Dumas's Life of Garrick*.—*Eaton's Hist. of Bristol*, vol. II.—**GEOFFREY POWELL** an actor of considerable talent who was the contemporary of Betterton and Colley Cibber is mentioned with commendation by Steele in the *Spectator*. He was also a dramatic writer, and died in 1714.—*Bog. Dram.*

POWNALL (THOMAS) a learned antiquary and politician born at Lincoln in 1706. He obtained the office of secretary to the commissioners for trade and plantations in 1745 and he had a situation in the commissariat of the army in Germany. In 1753 he went to America where he successfully exerted himself to suppress the rising spirit of discontent among the colonists against the British government. In 1757 he was appointed governor of Massachusetts bay and subsequently of South Carolina. He remained there till 1761 when returning to England he was nominated director general of the office of control with the military rank of colonel. The latter part of his life was spent in literary retirement and he died at Bath April 25 1805. Governor Pownall as he was termed, was a fellow of the Society of Antiquaries, and a considerable contributor to the *Archæologia*. He was also the author of *Notices and Descriptions of Antiquities of the Province of Gaul* 1788 &c., *Descriptions of Roman Antiquities dug up at Bath* "4to", *Hydraulic and Nautical Observations on the Currents in the Atlantic Ocean*, 1787 &c., and *Intellectual Physics*, &c., besides many political tracts.—**JOHN POWELL**, brother of the preceding who died in 1795 was also an antiquary and was the author of a paper in the *Archæologia* 'On a Roman Tie found at Reculver in Kent.'—*Nichols's Lit. Assoc. Revws.* *Bog. Uss.*

POYNET (JOHN) an English prelate was born in Kent in 1516 and became successively bishop of Rochester and of Winchester. He presented to Henry VIII a clock which pointed like the bough of the day, the sign of the zodiac, the lower constellations, and the tides. It was by Edward VI that he was advanced to the episcopacy; and it was Poynet who drew up the catalogue called king Edward's,

selected in Latin and English the books the late successor of Henry VIII brought to England before his execution which of those of his ignorance of which he withdrew to Scotland, but it is obvious, that whether this was the case or not, as a justificative reason for the English state, he could not have safely remained in England. He died in exile in 1545. Besides his extraction, he was the author of a Latin treatise on the Eucharist and of some theological tracts and sermons, besides a work entitled "*A Treatise of Politique Power*" 1536, 8vo; and another, called "*A Defence of the Marriage of Proster*", 1545, 8vo.—*Gedächtnis Preßed. Hist.*

PRÆTORIUS (MICHAEL) a German ecclesiastic born in 1571 at Creuzberg in Thuringia. He became prior of the Benedictine monastery of Ringelheide in the bishopric of Hildesheim, and was at one period of his life chaplain master to the elector of Saxony. Prätorius was an excellent musician and the author of three quarto volumes, entitled *Syntagma Musicum*, containing a history of the origin and progress of ecclesiastical music to his own time. His death took place at Wolfenbüttel in 1621.—There was also another of this name professor of philosophy at Wittenberg. He was born in 1524 and became rector of the school at Magdeburg. This Prätorius (whose other name is variously called Godescalculus and Abdinus) is said to have understood fourteen languages. A treatise on singing was composed by him in conjunction with Martin Agricola for the use of his school. He died in 1573.—*Bog. Dietet. Mus.*

PRAM (CHRISTIAN) a Danish poet, born in Norway in 1736. He obtained when young the prize of poetry from the Royal Society of Belles Lettres of Copenhagen, and in 1765 he published an epic poem in four cantos called *Stærkædder* from the name of the principal personage, one of the heroes of northern antiquity. He was also the author of three tragedies, *Damon and Pythias* 1789, *Frodo and Fingal*, 1790 and *Olnids and Sophonius*, besides other works. In his old age Pram obtained a lucrative employment in the island of St Thomas in the West Indies where he died in 1821.—*Bog. Uss.*

PRATT (CHARLES) earl Camden, a distinguished British lawyer and statesman of the last century. He was the son of Mr John Pratt, chief justice of the King's Bench, and was born in 1713. After studying at Eton and King's college, Cambridge, where he took the degree of MA in 1739 and obtained a fellowship, he entered as a student at Lincoln's Inn and in due time was called to the bar. In 1754 he was chosen MP for the borough of Downton. After acquiring great reputation as an advocate he was in 1755, appointed attorney general, having the same year been elected recorder of the city of Bath. In January 1762 he was called to the dignity of a sergeant-at-law and elevated to the office of chief justice of the Common Pleas, where he received the honour of knighthood. In the while he presided in this court the Whigs

the approval and implicit reliance, in those days, of the public mind, a general sense of which was diffused in consequence. A large sum of money, however, was required, and being desirous in the first instance to avail himself, before the arrival of George III., of the local influence of the Duke of Bedford, he sent his application to Major-General Pitt, the Home Secretary, and approached him, personally, and opportunely, in the course of the progress of this application, and in the subsequent interval preceding between the publication of the North Briton and the movements of the House of Commons, and other agents of the ministry, was so successful to the friends of liberty in the metropolis, that the city of London presented him, with the freedom of the corporation in a gold box, and requested to have his picture, which was put up in Guildhall, with the following inscription—

Hoc Iacob
Caroli Pitt, Esq.
Sectarii Justitiae C.P.
In Honorem tanti Viri,
Anglorum Libertatis, Legis
Auctoritatis Adi
P. Q. L.
In Coram Municipal
Pars presentis

Hoc Est. Mart. AD MDCCCLXIV

Gothambridge, Arma. Pitt, Ubi.

Similar honours were also paid to the chief-justice by the corporations of Dublin, Bath, Exeter and Norwich. In July 1765 he was raised to the peerage, by the title of Baron Camdon, and about a year after he was made lord chancellor. In this capacity he presided at the decision of a suit against the American gentry who expected Mr Wilkes, when he made a speech, in which he stated, that it was the unanimous opinion of the court that general warrants, except in cases of high treason, were illegal, oppressive, and unwarrantable." He conducted himself in his high station so as to give very general satisfaction, but on his opposing the taxation of our American colonies, he was deprived of the seals in 1770. He came into office again, as president of the council, under the administration of the marquis of Buckingham, in March 1772, on whose death he resigned the following year. He soon after, however, resumed his place under Mr Pitt, and in 1776 he was raised to the title of earl Camden. He died April 18, 1794. This respectable nobleman and upright lawyer is said to have been the author of a pamphlet, entitled "An Inquiry into the Nature and Effect of the Writs of Habeas Corpus," &c.—See *Paroisse, King Utopia.*

PITT (THOMAS JACKSON) a novelist, poet, and historical writer of the last century. He was born in 1738, in Hertfordshire, in 1760. Made his first entry on the stage, but not finding it congenial to that pursuit, he followed law, and became successively an attorney, a solicitor, and writer to the bar. He wrote novels, which, under the pen-name of "Clytie Mardon," he published in 1770, and which displayed some symptoms of genius, but were

soon superseded by a flood of imitative, hasty, trifling, silly, novels, pamphlets, sketches, and a like, so that popularity with a wide circle of readers, the object he had set to the Duke of Bedford, which was denied to the powerful author of the *Life of Nelson* and *Mariam*. Mr Pitt died at Birmingham, in 1814. Among his most numerous publications are, " Landscapes in Verse;" " Seven Caskets, or the Museum of Civil War, a Novel;" " Family Secrets, a Novel;" "Glimpses, or Travels Abroad, and in England;" and "Harvest Home," including some dramatic pieces. He also wrote, "The Fair Circassian, a Tragedy;" besides a Comedy and a Farce.—See *Mag. Eng. Drama.*

PRAXITELES, a Greek sculptor, who was one of the most celebrated artists of antiquity. Neither his age nor his country is distinctly recorded, but he is supposed to have been a native of Athens where he resided, and he appears to have been born about 361 BC. He worked chiefly in marble and executed many admirable statues, especially two of the goddess Venus, one of which, belonging to the inhabitants of Cnidus, king Nicomedes in vain offered to purchase by paying all the public debts of the city. Praxiteles was a favourite admirer of the famous courtesan Phryne, who afforded a model for the statue of Venus, and other beautiful female figures. Many others of his works are specified by Pliny, but none of them are certainly known to be at present in existence.—There was another sculptor named PRAXITELIS who was contemporary with Pompey and who cast statues in metal particularly silver.—Orlandi Abeced. Pitt. Eng. Uso.

PREMONTVAL (ANDRE PERRIN DE GUAY de) a French writer born at Charenton in 1716. After receiving a good education, he rejected the opportunity of becoming an ecclesiastic or an advocate, the choice of which professions had been offered him by his father and quitting his family he went to Paris, taking the name of Premontval which he subsequently used. His taste for the mathematics induced him to open a school for that science at Paris in 1740. But pecuniary difficulties induced him, after long, to leave Paris for Geneva, whether he went on foot accompanied by the daughter of a mechanist named Pigeon who had been one of his scholars, and whom he afterwards married. After wandering in Switzerland, Germany, and Holland, he settled at Berlin, where his wife obtained the office of reader to the princess Wilhelmina of Prussia. Premontval himself was admitted into the Academy of Sciences, and he employed himself in literary composition. But his impulsive temper engaged him in contests with his contemporaries, and he died in a state of mental derangement, September 3, 1764. Besides memoirs and dissertations on mathematical questions, in the *Transactions of the Academy of Berlin*, he published "Premontval contre le Conservat. de la Langue Française in Amsterdam," and various other works, according to the agreed authority.—Bog Uso.

PRESTON (John) an English divine, now known by his title of Bishop of Gloucester, was born at Kington-on-Moreton, Warwickshire, in 1682, and became master of Queen's college, where he was educated as a scholar dependent, after the manner of the old establishment. He subsequently distinguished himself in an academic disputation, held by James I when he visited Cambridge, in which he endeavoured to prove that dogs could make syllogisms, and recommended by James himself, who contrasted him to the effective. For his argument on that occasion Dr Preston was rewarded by a pension of 30*l.* per annum from lord Brouk. His popularity, however, subsequently involved him with the court, notwithstanding which he was made chaplain to prince Charles and master of Emmanuel college, Cambridge, with a view to detach him from his party but without success. He died in 1688. He was the author of several sermons and theological tracts, the principal of which is a *Treatise on the Covenant*.—*Bede's Purview*, *Fuller's Worthies*.

PRESTON (Thomas) an English dramatic writer, who flourished in the earlier part of the reign of Elizabeth. He was educated at Eton, whence he proceeded to King's college, Cambridge, where he graduated M.A. and succeeded to a fellowship. He afterwards was created a doctor of civil law and appointed master of Trinity hall over which he presided fourteen years. Queen Elizabeth on her visit to the university in 1564 was so pleased with his performance in the Latin tragedy of *Dido* that she settled on him a pension of 20*l.* per annum. He wrote one dramatic piece in old metre, entitled *A Lamentable Tragedy full of pleasant Mirth conteyning the Life of Cambyses King of Persia, from the Beginning of his Kingdom unto his Death &c.* A sad tissue of fustian which escaped not the satire of Shakespeare who, in *Henry IV makes Falstaff talk of speaking in king Cambyses vein*. Preston died in 1598.—*Boy Drawn. Pack's Desiderata*.

PREVILLE (Pitran Louis Dusus de) a distinguished French actor born at Paris, November 17 1721. His inclination prompted him to relinquish the profession of a notary for the stage on which he made his first appearance at Lyons, in 1753, when he changed his family name of Dubois for that of Preville, by which he was ever afterwards known. He soon gained great reputation as a comic performer and was called to Paris where his talents attracted the favour of Louis XV. The minister of the king's household having founded a royal school of declamation in 1774, Preville was appointed the director. After a theatrical career of thirty-five years, he obtained permission to retire, only retaining the title of professor of the art which he had exercised with so much distinction. Twice after he appeared on the stage, from motives of benevolence to assist his mother, who had suffered from the stroke of the apoplexy. He retired at length to Lyons, where he died in a state of blindness in 1800.—*Biot. Hist. Eng. Uni.*

PREVOST (Isaac BEAUSSET) a celebrated

French historical philosopher, born in Charente, of poor parents, in 1729. After receiving no regular education, and making some hasty attempts to procure literary employment, he obtained the situation of tutor to the son of M. Boëtie of Montauban, in 1757. At that time he was little acquainted with the exact sciences, but having a great taste for them, he in a few years made a great progress in mathematics. Physics and natural history were the principal objects of his researches and in his course conversed with many eminent cultivators of those sciences among his contemporaries, including Le Sage, Senechal, Jussieu, Fléau and Masson, with some of whom he was connected in the foundation of the academy of Montauban, where he resided. He was also a member of the Society of Physicists and Natural History at Geneva, and of some other learned associations. In 1710 he became professor of philosophy in the Protestant university of Montauban, and he attended with unceasing zeal to the duties of his station till his death which took place June 18 1819. Prevost was the author of only one distinct work, which relates to the vegetable disease called the smut in wheat published at Paris in 1807. He wrote a number of memoirs, which appear in various scientific collections, including accounts of some ingenious and important experiments relative to the cause of dew and others concerning the phenomena of light.—*Big. Uni.*

PREVOST (Paris) a French painter, said to have been the inventor of panoramas. He was born at Montigny near Chateaudun in 1764, and he studied under an artist at Valenciennes, but he owed his merit chiefly to the imitation of nature and of the works of Claude Lorrain and Poussin. His first panorama was a view of Paris, and he afterwards painted seventeen others, including Rome, Naples, Amsterdam, Boulogne Toul, Walgram, Antwerp London, Jerusalem, and Athens. The last two were the fruits of a visit to Greece and Asia, made in 1817. He was engaged in painting a view of Constantinople when he died, of a pulmonary disease, January 9 1823. MM Boaton and Daguerre, the painters of the views exhibited at the Drama, were assistants of Prevost.—*Big. Uni.*

PREVOT D'EXILES (Arverny Fr., xcix) a very fertile French writer was born at Hasting, a small town of Artois, in 1697. He studied with the jesuits, and took the habit of the society which he quitted to bear arms, and as an officer freely indulged his natural taste for gallantry. The unfortunate sense of an humour at length induced him to seek a retreat among the Benedictines of St. Mense, which, however, he quitted in 1739, and retired into Holland, and having no other resource, applied himself to literature for a living. His first production was "Méthode d'en Mémoire de Quelque, qui n'est, relate au Modèle," a romance, which procured him considerable money and reputation. In 1733 he removed to London, where, meeting with but slight encouragement, he returned to France, and ac-

and his name is often mentioned. After his removal from the pulpit he continued his studies in literature. He subsequently wrote a great number of works, including, with translation, to 100 volumes, including a "General History of Voyages," in 54 vols. French, entitled *Le Philosophe*, and *Notes sur les Principes de l'Amour et de l'Haine*. His health was affected with shooting pains, and on the 2nd of November 1765 he was discovered by some persons in an apoplectic fit, in the house of Chassilly. As ignorant physicians being called in, ordered a surgeon, no physician as himself, immediately to open the said wife who was apparently dead, when a loud shriek from the victim convinced the spectators of their error. The instrument was instantly withdrawn, but having penetrated a vital part, the unfortunate wife only opened her eyes to expire. As an original writer, the said Frérot is most distinguished for his novels and works, in which history is blended with fiction. The principal of these besides that already mentioned are "Histoire de M. Cleveland fils naturel d'Oliver Cromwell," 1782, 6 vols. 2mo., "Histoire de Chevalier Griseux et de Monceau à Escout," 1733 12mo., "Le Doyen de Killerton," 1735, 6 vols., "Histoire de Marguerite d'Anjou," 1740, 2 vols., "Histoire d'une Grecque Médonne," 1741, 2 vols., "Campagnes Philosophiques, ou les Mémoires de M. Montcalm," 1741, 2 vols., all which exhibit character, sentiment, and striking situations, but are prolix and ill-planned. Their general air is also heavy, and in endeavouring to be sprightly the author usually fails. He likewise conducted a periodical literary and critical work, entitled *Pour et Contre*. His translations consist of the first volume of De Tocque's History Cicero's Familiar Epistles and several English works, including the Clarissa and Sir Charles Grandison of Richardson whose influence may be traced in his own productions. To these various labours is also to be added "A Portable French Dictionary of Words not in common Use with an Abridgment of French Grammar."—*Norologus Fr. Novae. Diet. Hist.*

PRICE (John) a learned critic who was of Welsh extraction but born in London in 1723. He studied at Westminster school whence he removed to Christchurch Oxford, but having embraced the Catholic religion he went to Florence, and was there admitted a doctor of civil law. Returning home he visited Ireland in the train of the earl of Strafford, the lord deputy; and on the disgrace of his master, he went again to Florence and became keeper of the dental cabinet of medals and antiquities, and afterwards professor of Greek at Rome. He passed the latter part of his life in a country residence, where he died in 1776. His works consist of commentaries on the New Testament, *Notes on Apollonius*, &c., and *Athenaeum Graecum*.

PRICE (Thomas), a dissenting minister, distinguished as a metaphysical and statistical writer. He was born at Llanegwad, in Glamorganshire, in 1725, and was educated at

Wigan, in the native county. Whence he removed to a Dissenting academy in Lancashire. After having for some time served as the family of a gentleman at Stile, Newington, he became pastor of a Nonconformist congregation of Arches, or non-Arian principle, at Hackney where he continued so long as he lived. He commenced his literary career in 1750, by publishing a "Review of the principal Questions and Difficulties in Morals," 8vo., which was followed by "Four Discourses, on Providence, on Prayer, on the Reasons for expecting that various Men shall meet after Death, in a State of Happiness, and on the Importance of Christianity to the Nature of Historical Evidence and Miracles" 1767 8vo. In 1769 he was complimented with the diploma of DD. from the university of Glasgow, and in 1771 appeared his "Observations on Revolutionary Payments and Annuities," 8vo. which established his character as a mathematical calculator. He next published an "Appeal to the Public on the Subject of the National Debt," and during the progress of the contest with our North American colonies, Dr Price advocated their cause in "Observations on the Nature of Civil Liberty the Principles of Government, and the Justice and Policy of the War with America," 1776 8vo., "Additional Observations" and a "Supplement." These tracts provoked the animadversions of a number of writers on the opposite side of the question and exposed him to some obloquy but they also procured him a vote of thanks from the corporation of London presented in a gold box. He engaged in an epistolary correspondence with his friend Dr Joseph Priestley on the subjects of materialism and necessity the substance of which was laid before the public in an octavo volume, in 1773. After the conclusion of the war when Mr Pitt became prime minister he availed himself of the abilities of Dr Price in his schemes for the reduction of the national debt, and the establishment of the sinking fund was the result of his recommendation. At the commencement of the French Revolution he in common with most advocates for freedom, viewed that event as the source of untaxed benefit to society and in a sermon which he published in 1789, "On the Love of our Country" he warmly expressed his delight at the emancipation of the French people. This discourse excited Mr Burke to the publication of his famous "Reflections," in which with little justice he treated Dr Price as a political reactionary. He died April 19, 1791. Besides many papers in the *Transactions of the Royal Society*, of which he was a fellow he published "Remarks on the Christian Doctrine, as received by the different Denominations of Christians," 8vo., and several single sermons, and political pamphlets. Dr Price was an amiable and wise man, of an equable classic temperament, a fact as deducible from much of his reasoning in regard to a sinking fund and the numerous effects of constitutional interest, as in reference to points which were

better qualified to write it.—*His's Gen. Biog.*

PRICE (James) a physician at Guildford, in Surrey, who professed himself to be in possession of the philosopher's stone, or at least of the secret of making gold. He presented some of this manufactured metal to the king and to the Royal Society of which he was a fellow; and he also published "An Account of Experiments on Mercury Silver and Gold made at Guildford in May 1783 at the Laboratory of James Price MD FRS," to which is prefixed an Abridgment of Boyle's Account of a Degradation of Gold Oxford 1723 &c. These pretended productions of precious metals were stated to be effected by means of a red and white powder, the composition of which the author kept a secret. Being compelled by the Royal Society on pain of exclusion to repeat his experiments before Kirwan and Woulfe two skillful chemists, his art forsake him, and after the failure of several experiments he begged for delay previously to an other exhibition. Dreading the exposure which he knew awaited him he soon after put an end to his life August 3 1783 as it is stated by drinking laurel water. He was possessed of a handsome fortune bequeathed to him by a relation in conformity with whose will he had exchanged his original name of Higgabotham for that of Price in 1781. He appears to have been a man of considerable talents but of greater ambition who sacrificed his life to an absurd rage for personal distinction—*Lord Med. Journ. Gurney's Lect. on Chemistry*

PRIDDEN AM FSA. (JOHN) the son of a respectable bookseller in Fleet-street, London, where he was born in January 1758 and continued to reside till his decease in the April of 1820. He was first placed at St Paul's school whence he removed in 1777 to Queen's college Oxford and graduated there in 1781. The following year having taken holy orders he was elected a minor canon of St Paul's cathedral, and employed the opportunities which a residence in the metropolis afforded him of consulting rare books and records in the cultivation of a taste for antiquarian research which afterwards formed his principal pursuit. From the dean and chapter of St Paul's he obtained the livings of Caddington, Berkshire and St George Botolph-lane in the city of London both which he retained till his death. He was also a minor canon of Westminster and a priest of the Chapel royal. Mr Pridden had produced a plan for the uniting Holborn hill with Snow hill, by means of a street raised on arches, which was much approved, but abandoned on account of the expense. He was also the author of several tracts connected with antiquarian subjects, but the principal monument of his labours is a curious Index to the Rolls of Parliament, in six volumes, which occupied the last thirty years of his life.—*Gen. Biog.*

PRIDEAUX (John) a learned English divine, born at Hartford in Devonshire, in 1648. His parents were persons in low cir-

cumstances, but he was brought up well and with little poverty, and education sufficient to become a candidate for the ecclesiastical order at Uptonleigh in his native country. Being disappointed, he travelled on foot to Oxford and from the mean station of assistant in the kitchen of Exeter college, became in the course of time one of the fellows of that society, and in 1668 he was chosen rector. In 1675 he became regius professor of divinity and reader of Christcherches; and he subsequently filled the station of vice-chancellor. In 1681 he obtained the bishopric of Worcester, through the influence of the marquis of Hamilton, who had been his pupil; but in the course of the civil war he was deprived as a loyalist, and died in distressed circumstances in 1650. He was the author of *Principia Controversiarum*, "Theologica Scholastica Syntagma Mathematicum" and other works. He is also supposed to have written *An easy and comfortable introduction to reading all sorts of Histories* which has been ascribed to his son, Matthias Prideaux who died in 1646—*Father's Worthies Eng. Brit.*

PRIDEAUX (HUMPHREY) a learned divine and historian born at Padstow in Cornwall in 1648. He was educated at Westminster school, and Christchurch Oxford, and while at the university he published the ancient inscriptions from the Arundel marbles, under the title of 'Marmor Oxoniense'. This work recommended him to the patronage of the Lord Chancellor Finch afterwards earl of Nottingham who gave him a living near Oxford and afterwards a prebend in Norwich cathedral. The lord keeper North bestowed on him the rectory of Bladon with the chaptry of Woodstock the former of which on taking the degree of DD he exchanged for the benefice of Soham in Norfolk. He was subsequently promoted to the archdeaconry of Suffolk, and in 1702 made dean of Norwich. This was his highest preferment for having the misfortune to be affected with stones in the bladder he submitted to an operation for its removal which being unskillfully performed or not followed up by proper treatment produced such incurable weaknesses as incapacitated him for the public offices of the ministry in consequence of which he consequently resigned his living and dedicated his time to the study of sacred literature. He was highly respected and often consulted on the affairs of the church, and but for the infirmity under which he laboured, he would have been raised to a bishopric. His death took place November 2, 1724, and his remains were interred in the cathedral of Norwich. Besides his great work entitled "The Old and New Testament connected in the History of the Jews and neighbouring Nations," of which there are many editions, he was the author of *The Life of Mahomet*, with a Letter to the Deists," 1700. "Directions to Churchwardens," 1720. "The Christian and Right of Tythes," 1701. "Explanatory Tracts," 1702 &c.—*Biog. Brit.*

PRIESTLEY, LL.D. FRS. (JAMES) an

and Chemistry, which he had studied at Cambridge, and which he now pursued with great interest, and obtained a corresponding degree of classical knowledge. In 1761 he became master of the Dissenting Academy at Darwen, with a view to the ministry. He spent three years at this school, when he became acquainted with the writings of Dr Priestley, which made a great impression upon him, and he thus gradually led into a partiality for the Arian hypothesis. On quitting the academy, he accepted an invitation to become minister of Needham Market in Suffolk, where he professed heterodox opinions, he received little encouragement, and after a residence of three years, he undertook the charge of a congregation at Newmarket, in Cambridgeshire, to which he joined a school. Here his popularity increased, and in 1761 he was invited by the trustees of the dissenting academy at Warrington to occupy the post of tutor in the languages, soon after the acceptance of which post he married the daughter of Mr Wilkinson, an iron-master near Wrexham. At Warrington his political opinions found vent in an

Essay on Government; he also published an *Essay on a Course of liberal Education*, and his useful *Chart of Biography*. A visit to London having introduced him to Dr Franklin, Watson, and Price, he was encouraged to compose a "History of Electricity," which first appeared in 1767, and procured him an admission into the Royal Society having previously obtained the title of doctor of laws from the university of Edinburgh. In the same year he accepted an invitation to preside over a large and respectable congregation at Leeds, where his religious opinions became decidedly Socinian, and he gradually became one of the most strenuous opponents of the authority of the establishment. It was at Leeds that his attention was first drawn to the properties of fixed air, and here he also composed his "History and present State of Dissertations relating to Vision Light, and Colour." After a residence of six years at Leeds, he accepted an invitation from the earl of Shrewsbury, afterwards marquess of Lansdowne, to reside with him as a companion, in the nominal capacity of librarian. While forming a part of the establishment of this nobleman, he occupied himself in scientific pursuits, and in 1773 gave to the Philosophical Transactions a paper on the different kinds of glass, received the prize of Copley's gold medal. This was followed by three volumes, the publication of which forms an era in the history of scientific books, and has made him known to the students of every country of Europe. In 1774, he still residing with Lansdowne, he presented his communication of the composition of glass, maintained by the Royal Society, to the Society of Friends, and George III., our more sober parliament, sent Dr Priestley with his handwriting signed himself a

bifoliate letter of thanks for his services, and in a dissertation reported to his committee, Dr Priestley recommended some changes of the composition of the glass, which were adopted. This service he will easily detectably repaid in his "Dissertations on Matter and Motion," 1775; and the obloquy which then began to hang over him, producing a decline in his noble patron, the consequence was derived, the doctor retaining an annuity of £200 per annum by mutual agreement. He next removed to Birmingham, where he became one more master of a dissenting congregation, and occupied himself in his "History of the Corruptions of Christianity," and "History of the early Opinions concerning Jesus Christ"; both which productions proved fertile sources of controversy, as did also his

Famous Letter to the Inhabitants of Birmingham, clearly written in support of the claims of the dissenters for a repeal of the test acts. The era of the French Revolution had now arrived, which adding to the usual animosity of theological disputes, the consequences proved very fatal to the repose of Dr Priestley. The anniversary of the capture of the Bastille being celebrated at Birmingham by a party who looked favourably upon that event, an opposing mob assembled and although Dr Priestley was not present, they proceeded to his house, which with his library, MSS. and apparatus, was notoriously made a prey to the flames. It is too certain that the outrage was at least not discountenanced by too many excusing both lay and clerical infidels; but, on the other hand, Dr Priestley had necessarily excited exceeding animosity by the undignified nature of his attacks, without regard either to custom or policy. The legal compensation which he obtained for this injury fell considerably short of his real losses, and quitting Birmingham he was chosen to succeed his friend Dr Price at Hackney where he remained some time in the cultivation of his scientific pursuits, until finally pained by party enmity to seek an asylum in the United States, which he reached in 1794 and took up his residence at Northumberland in Pennsylvania. Even in America he endured some uneasiness on account of his opinions until Mr Jefferson became president, when he had the good fortune to oulive all disquiet at this head. In America he dedicated his whole time to his accustomed pursuits, until a severe illness had the foundation of a debility in his digestive organs and a gradual decay followed, which terminated his existence Feb. 6, 1804, in his seventy-first year. Dr Priestley it will be seen, was a forward and ardent nonconformist, chiefly in consequence of extreme simplicity and evenness of character, but no less than animosity towards his opponents than he did; and many who entertained the strongest antipathy to his opinions, were converted from them by his gentleness and prudence in personal intercourse. At a man of science he stands high in the rank of teacher and discoverer, and possibly to no one has philosophical chemistry been so much indebted.

theology will be difficult to find among his theological treatises, but the study of the history of mankind's theory of salvation is quite philosophical necessity, and upon occasions will always ensure the attention of those to whom these subjects may prove attractive. His theological Dr Priestley was always faithfully followed his convictions wherever they led him, passed through all the changes from Calvinism to a Unitarian system, in some measure his own, but to the last remained a zealous opposer of infidelity. Of his very numerous theological controversial works, those most generally esteemed are his "Institutes of Natural and Revealed Religion," and "Letters to a Philanthophilic Unbeliever," and he also published many works on practical divinity. The principal works of this able and active-minded writer have been enumerated in the preceding sketch; but the whole amount to about seventy volumes or tracts in octavo analyses of which will be found in our authority.—*Life by Himself and Son Ross's Cyclop.*

PRINCE (John) an English divine and biographer was born in 1642 at Axminster in Devonshire and was educated at Brasenose college Oxford where he took his bachelors degree in 1664. On entering orders he became curate of Bideford and was afterwards chosen minister of St. Martin's church at Exeter on which he graduated M A at Caius-college Cambridge. From Exeter he removed to the vicarage of Totnes, and next to that of Berry Pomeroy where he died in 1723. He is chiefly known by a work of much accuracy and research entitled *Damnum Orientis Illustris, or the Worthies of Devon* printed in 1710, folio, and again in 1810 4to.—*Wood.*

PRINGLE (Sir John) an eminent physician and natural philosopher was the young est son of sir John Pringle of Stichel, in the county of Roxburgh North Britain where he was born April 10 1707. After studying at home under a private tutor he was sent to the university of St Andrews whence he removed, in October 1727 to Edinburgh for the purpose of cultivating medical science. He staid there only a year being desirous of pursuing his studies under Boerhaave at Leyden where he became acquainted with Van Swieten and in July 1730 he was admitted to the degree of M D. Returning home he settled as a physician at Edinburgh where he was appointed adjunct professor of physiognomy and ethics on which subjects he gave lectures, using as a text-book the treatise of *Pfeiffer*, "De Officio Hominis et Civis." In 1742 he was nominated physician to the head of State, who then commanded the British army on the continent, and soon after physician to the military hospital in Flanders. In March 1743 he re-eproyed from the duty of Commanding the regiment of physicians attached to the British forces in the Nether Lands, and also the royal hospitals abroad. In consequence of three promotions he reached his professorship, the duties of which he had

thoroughly discharged for twenty years. In 1769 he received from the government the commandery of the Order of the Bath, and the Friars. He was in October 1770 elected a fellow of the Royal Society. After the battle of Culloden he removed to the continent and continued there till the treaty of Aix-la-Chapelle, after which he took up his residence in London, and engaged in medical practice. In April 1780, Dr Pringle was appointed physician to the Duke of Cumberland, and soon became known on account of his professional talents as well as his scientific acquirements. In 1786 he published, in a letter to Dr Mead "Observations on the Gout or Rheumatic Fever;" and he also communicated to the Royal Society "Experiments on Septic and Antiseptic Substances, with Remarks relative to their Use in the Theory of Medicine." In 1792 first appeared Dr Pringle's principle work "Observations on the Diseases of the Army;" and in 1793, he published in the Philosophical Transactions an important paper on the Gout Fever. In 1796 he entirely quitted the army, and in July the same year he was admitted a licentiate of the college of physicians. He was made physician to the queen's household in 1761 which honour was succeeded by that of physician extraordinary to her majesty, and in 1766 he became physician in ordinary to the queen. In 1766 he was created a baronet, and in November 1772 on the death of Mr West, he was chosen president of the Royal Society. Ill health induced him to resign this office in 1778, and in April 1801 he removed from London to settle at Edinburgh. But he staid there only a few months, and returning to London died there January 18 1792. He was a member of the Society of Antiquaries and of many other learned associations at home and abroad. His "Six Discourses before the Royal Society on delivering the Coppeisen medal" were published with a Biographical Memoir by Dr Kippen, in 1794.—*Hutchinson's Eng Med.*

PRINZ (Wenzel and Caspar) a native of Weilthurn, in the upper Palatinate born in 1654. His father a magistrate of the town being forced to quit it on account of his religious opinions, retired to Vohenstrauß in the territory of Frankenburg where his son, who had early discovered a strong taste for music, received his first instructions in the principles of that science. Having studied for three years at Altdorf he became director of the music to count Pfraunfels at Dresden, and so accompanied that nobleman in his travels through great part of Germany. On the death of his patron after spending a year at Trebil he returned, and accepted the situation of director of the choir at Sars in Upper Saxony, where he remained till his death in 1717. Among the works which are numerous the principal is a "History of Vocal and Instrumental Music," printed in 1690 at Dresden. In which he commences with the invention of the pipe & tabor, and treats at considerable length of the ancient Greek and Hebrew musical instruments.

clerical rank. He distinguished himself by his eloquence in the cause of the Puritans, and was chosen a member of the House of Commons for Andover, where he sat from 1640 to 1642. He also wrote a book, "The Intelligencer," 1642, and "The New Testament," 1643.

PIERRE CHOLE, or TRICOLE (Montauban) a French historian, was born at St. Léon d'Agout in 1612, and was descended from a noble family. He studied at Leyden, and at Padua. He became the confidant of the fiefs de Rodes, that is to say, of Vendôme, who sent him to him as his negotiator. He was afterwards in the service of the duke of Longueville, from whom finally securing a pension, he determined to settle at Paris. He was educated in the Protestant religion, but meeting with cardinal Barberini, he was by him converted to the Catholic faith. In the ensuing troubles of France, taking part with the prince of Condé, his property was confiscated, and his family exiled. On his return to Paris, he began his history which much displeased the ministers, who threatened to suppress its publication; but Priori remonstrating with the king, was suffered to print his work in 1665. It is entitled *Bouygues Pejell ab Ercouen Ludovic XIII de Rabus Gallicis Historiarum*, lib. xi., the best edition is that of Lepeau, 1686. It presents a clear and impartial relation of the war of the Fronde and the administration of cardinal Mazarin, its style imitates that of Tacitus, and it is replete with characters and portraits. In 1667 he was charged with a secret commission to the embassy of Venice, but he died on the way, at Lyons, of apoplexy.—*Niceron, Biogr. Morat.*

PRIOR (MATTHEW) a distinguished Eng. lish poet, was born in 1664, according to one account at London where his father was a citizen and joined his to another at Wimborne in Dorsetshire. His father dying when he was young, he was brought up by an uncle who kept the Rammer tavern at Charing-cross who acted with great paternal kindness, and at a proper age sent him to Westminster school. He early exhibited a strong taste for classical literature, and when taken from school, with a view of being brought up in the business of his uncle, he attracted the notice of the earl of Dorset, who enabled him to enter himself in 1682 at St. John's college, Cambridge, where he prepared B.A. in 1686, and was shortly after chosen fellow. At college he congegrated an intimacy with Charles Montagu, afterwards earl of Halifax in consequence of which, in 1688, he composed the "Gipsy Queen and City Mouse" a parody on Dryden's "Mind and Practice." He had previously written an "Ode to the Duty" as a college exercise. In 1690 he repaired to London, and was introduced at court by the earl of Dorset, at whose recommendation he was appointed secretary to the English plenipotentiary at the Hague. With this post he now held the title of gentleman of the king's bed-chamber, and being distinguished in the service of the court, he presented an address to William in 1693, on the behalf of queen

Mary; and soon after employed, by his master, in a diplomatic party, at Brussels, sent on the taking of Namur, where he was accompanied by William. In 1697 he was made principal secretary to the commissioners for the treaty of Ryswick; and on his return from that employment, was made secretary to the lord lieutenant of Ireland. He was afterwards appointed secretary to the earl of Portchell and Tatton, successively ambassadors to France. At length he was made under-secretary of state, and while holding that office, was sent to France to assist in the signature of the partition treaty. In 1703 he succeeded Locke as a commissioner at the board of trade, but soon after deserted the Whigs, who had introduced him into office, and joined the Tories, for which no very satisfactory reasons have been assigned. At the beginning of the reign of Anne, besides commemorating the battles of Blenheim and Ramillies, he published a volume of poems, and took some share in the Examen. When the Tories again obtained the ascendancy his diplomatic talents were once more called into action and he was employed in secretly negotiating at Paris the terms of the celebrated treaty of Utrecht. He remained in France with the authority and appointment of ambassador and after the departure of the duke of Shrewsbury in 1713, publicly assumed that character. On the accession of George I he was recalled home, and encountered on his return a warrant from the house of Commons, which placed him in the custody of a messenger. He was examined before the privy council as respect to his share in negotiating the treaty of Utrecht, and treated with great rigour for some time although ultimately discharged without trial. Being reduced to a private station without any provision for his declining years, except his fellowship, he again applied himself assiduously to poetry, and having finished his "Solomon" he published the whole of his poems by subscription in a quarto volume at two guineas. This publication being liberally encouraged by party and produced a considerable sum, which was handsomely doubled by the earl of Oxford, at whose seat the author died, after a lingering illness, in 1721 in the fifty eighth year of his age. He was interred in Westminster abbey under a monument, for which "last paces of human vanity" (as he styles it in his will) he left the sum of 500*l.* Prior seems to have made his way by wit, aptitude, and compassable qualities, rather than by moral or political accomplishments of a superior order. Notwithstanding his admissions into the best company, he is said to have always retained a taste for coarse entertainments and gross employments. As a poet, his reputation has declined of late years, owing probably to the talent in which he principally excels being overladen with contempts of a more serious class, which although, as in the instances of his "Solomon," and "Henry and Nixon," splendid and correct in diction, harmonious in versification, and copious in practical imagery, fail in moving either

the faults or the folly. The great art of their comedy is telling a story with a degree of general sense, and wit, which perhaps, setting aside *La Fontaine*, has never been equalled. His "Alice," a piece of philosophical pantomime of a kindred nature, exhibits also a very judicious use of humour; and for these lighter pieces he now chiefly is, and most likely always will be, read. A "History of his Own Times" was compiled from his MSS., but it contains little from his pen, and is of small value. His poems were published in 1738, in 3 vols. 8vo, and are also in all the collections.—*Big Brd. Johnson's Lays.*

PRISCILLIAN a heretic of the fourth century, who was a native of Spain. He is said to have unit'd in his system the errors of the Gnostics the Manicheans, the Arians, and the Sabellians, to which he added dogmas of his own, viz. that the children of promise were born of their mothers by the operation of the Holy Ghost, whence he inferred that marriage was an abomination that souls were of the substance of God, that they were sent to inhabit bodies on earth as a punishment for sins committed in heaven, and that men could not resist the influence of their stars. The Priscilianists are charged with infamous practices resulting from these opinions and it is stated that no tortures availed to procure a confession of their errors. Hence it appears that the accusations against them must rest principally on the testimony of their enemies, and for the honour of human nature we may conclude that they are exaggerated. At the council of Saragossa in Spain in 380 Priscilian was condemned as a heretic, his party, however was sufficiently powerful to make him bishop of Avila, but he was, with some of his followers, put to death in 387.—*Mosheim's Eccles. Hist.*

PRISCIAN a celebrated grammarian of Caesarea, who flourished at the commencement of the fourth century. He was a disciple of Theodosius a famous rhetorician, and as appears from many passages of his writings, he had embraced Christianity. Little more is known of him than that he presided over a school at Constantinople in 565. He was the author of "De Octo Partibus Orationis," libri xvi, deque Constructione carundem libri ii., and several other works on grammar published by Putsch in the "Grammatica Latina Auctores Antiqui" Hanau 1605 4to; and of a treatise on ancient money and weights. All his writings are comprised in Kreid's edition of the works of Priscian Leipsic, 1819-23, 2 vols. 8vo.—*Big Brd. Juv.*

PRITCHARD (HANNAH) a celebrated English actress born in 1711 whose family name was Vaughan. She was, when very young, recommended to the notice of Booth, as a candidate for the stage, and he encouraged her in that pursuit, but she made her first appearance before the public at the Little Theatre in the Haymarket, in one of Fielding's dramas. She afterwards acted at Goodman's Fields, and even at Berthoumieu fair, where she obtained great applause for her na-

tural and unaffected manner and lively gestures. At length she obtained an engagement in Drury-lane, where she appeared as Harriet in "As You like it," and at once rendered the favourable opinion of her abilities. Her chief excellence was in the personification of tragic characters; and in lady Macbeth, and other heroines of a similar cast, she was almost without a rival among her contemporaries. After remaining on the stage thirty-six years she retired to Bath in 1768 where she died in August of that year, in consequence of a stroke in the foot.—*Thesp. Dict.*

PRITZ (Jens Gissens) a German-Lutheran divine was born at Leipzig in 1662, in which university he was educated. In 1686 he was created doctor of divinity, and became professor of divinity and metaphysics, as well as minister at Zerbst, in Saxony; he held the same situations at Grieswalds, in Pomerania, and in 1711 he finally removed to Frankfurt on the Main where he was principal minister until his death which took place in 1732. He published "Introdacio in Lectiorum Novi Testamenti" much esteemed an edition of the Greek Testament, "De Immortaliate Animarum" an edition of the Works of St. Macarius an edition of Milton's Latin Letters.—*Mauri Novi Diet. Hist.*

PROCACCINI (CAMILLO) an eminent painter was born at Bologna in 1546. He received his first instructions from his father Ermoleo and frequented the school of the Carracci. He went to Milan where he contributed to the founding of an academy of painting. He also went to Rome where the works of Parmegiano and of Michael Angelo formed his chief study. He obtained a high reputation for the beauty of his colouring the fire of his invention and lightness of his touch. He was appointed by the duke of Parma to paint in the cathedral of Piacenza, in conjunction with Lodovico Carracci. He died at Milan in 1626.—His brother GIULIO CESARE also a distinguished painter was born at Bologna, in 1548 and was brought up as a sculptor which profession he quitted for that of a painter. He attached himself to the style of Correggio, and surpassed all his other imitators. He ranks among the greatest artists of his time for vigour of conception and variety and grandeur of colouring. He became head of the academy of Milan, and died there in 1606.—Another brother CARLO ANTONIO, was a good landscape fruit and flower painter; and his son NICOLA was eminent in the same branches.—*B' Argenville Pitturatore*

PROCLUS, a Platonic philosopher and mathematician of the fifth century. He is said to have been descended from Lyca, from his birth-place Lyca, but some state him to have been born at Constantinople AD. 410. He studied at Alexandria and afterwards at Athens, under Syrianus, a Platonist, to the superintendence of whose school he succeeded. He wrote against Christianity, and was answered by Johannes Grammaticus, he was also the author of a treatise on the Mechanics of the Sphere, another on the Geometries

successor of the Archdeacon, Chasseneuil, an ex-pupil of Flot, Bignon, and Hervet, and author of the *Sixième et dixième Mois*, published in 1611. The character of Procope, like that of all the other Diocletians, was eccentric, and disposed to scepticism; nor did he shrink from indulging in heresies and Julianism in the opinions and principles of his master, so that, in the opinion of Charron, he was a confirmed follower of the Platonic dogmatism, the accuracy of which he maintained.—*Diction. Bel.* *Grec.*

PROCOPE COUTEAU, or MICHEL COLTELLI, a physician, born at Paris, in 1624, who was the son of Francis Procope, a Palermite of a noble family, the first who established a coffee-house in France, which became famous at the court of men of letters. Young Procope was destined for the church, but he preferred the medical profession, and having finished his studies, he received the degree of doctor, in 1706. He was deformed, notwithstanding which, his wit and gravity rendered him a great favorite with the women a circumstance which contributed much to his reputation at Paris. His professional writings consist of saucy and humorous tracts including "Analyse du Système de la Trigonométrie designed to explode Hecquet's opinions relative to digestion," and "L'Art de faire des Garçons," a lively piece of badinage, which another writer J. A. Millot, in a work on the same subject, was dull enough to treat as a serious production. But Procope was easily distinguished as a dramatist, and he was the author of "Arlequin Belour," a comedy in five acts, performed in London in 1719; "Pygmalion," a comedy 1741 and other comic dramas. His death took place at Chaillet December 21, 1751. Guérard published in the following year a burlesque poem, entitled, "La Procopiade, ou l'Antithèse du Docteur Procope" 1754. 12mo.—*Bibl. Univ.*

PROCOPIUS of Cesarea, a Greek historian, who was a native of Cesarea, in Palestine. He went to Constantinople where he practised as an advocate in the reign of the emperor Anastasius, to whom he became one of the imperial counsellors, as he was afterwards under Justin and Justinian. He at length held the office of secretary to the famous general Belisarius, whom he attended in his various expeditions, of which he wrote the history. Procopius was subsequently admitted into the senate, and appointed prefect of Constantinople where he is supposed to have died, about 560. His works consist of a "History of his Own Times," in eight books, the first two relating to the Persian war the two following to the war with the Vandals and the remaining four to the Gothic war, and a "History of the Buildings built or repaired by Justinian." But notwithstanding there is extant a kind of general chronicle of the court of Justinian, including a most interesting account of the present history of the empire, the emperors Theodore, and many other individuals. This work, which is entitled "Anecdota" has

received various dispositions among the MSS., some of which show that it was written by Procopius; while others, who should be satisfied, account for its disagreement with the historian's other works, in which Isidore and Theodore are highly panegyrized, by supposing that the Anecdota were composed subsequently to the history at a period when the writer was offended by the disappointment of his expectations of court favour, and being afterwards gratified, he endeavoured to make amends by composing his *Treatise on Eritace*. The works of Procopius were published at Paris, 1662, folio.—*Fabrius. Bibl. Univ.*

PROCOPIUS of Gaza, a Greek rhetorician of the 6th century, who was a native of Palestine. He was the author of a number of orations or declaimations, founded on passages from the works of Homer two of which only are extant, viz a "Eulogy on the emperor Anastasius" and a "Monody on the Ruins of the Church of St Sophia, at Constantinople overthrown by an Earthquake." He also wrote Commentaries on some of the books of the Old Testament.—*Bibl. Univ.*

PROCOPIUS (DAMSTRATI) a native of Moscopoli, in Macedonia, who flourished at the commencement of the eighteenth century. He was a zealous cultivator of literature and in 1720 he published an excellent work entitled "Brerwepyping Irapifexq; &c. An Abridged Account of the Greek Literati of the past Century and of some of those of the present Century." This treatise is inserted by Fabricius, with a Latin translation in his *Bibliotheca Graeca* and a Greek merchant of Pesta named Zavria, a well-informed individual who died a few years since composed a supplement to the work of Procopius, which has never been printed though copies are common in Greece.—*Bibl. Univ.*

PROCOPOWITZ (THEOPHANES) a learned Russian prelate born at Kirov in 1681. He studied in the academy of that city of which his uncle was rector, and he afterwards visited Rome to apply himself to theology philosophy and the languages. Returning home he was appointed to the chair of poetry at Kirov and in 1705 he took the monastic vows, adopting at the same time the name of Theophanes. He subsequently became professor of rhetoric, philosophy and other sciences, and at length he taught theology introducing much more liberal views of the subject than had previously existed among the Russian clergy. Becoming a favourite with Peter the Great, he was made abbot of the monastery of Bratakow, and rector of the academy of Kirov. In 1718 he was raised to the episcopal see of Plaskov and Nacva, and two years after to the archbishopric of Novogorod. He died September 8, 1736. Many of his theological productions were printed in Germany after his death. Among these are, "Christian orthodoxy Doctrina, or Christiana Pisticatio per Christianam Justificationem," Dresden 1738-59, "Christian orthodoxy Theologia" tom. I.—, Königsberg 1773, &c. He

also apologetical treatises, Latin version, and English. He has contributed prints the *Hansard*, and assisted in the foundation of one of the largest libraries in the empire, now belonging to the university of Novogrood.—*Bibl. Ital.*

PRONOMUS an ancient munus of Thebes, celebrated as the inventor of a peculiar kind of flute, on which the performer could play in three different keys, every instrument of that sort previous to his time being adapted only for one. He was held in great esteem by his countrymen who erected a tomb to his memory near that of Epanomides. Pausanias speaks of a hymn composed by him for the citizens of Chalcis, as extant both words and music, in his time.—*Boy. Dict. of Mus.*

PROPERTIUS (*Sextus Auarinus*) an ancient Roman poet was born at Mevania in Umbria, about the year of Rome 700. It is said that his father was a Roman knight, who joined the party of Anthony and being made prisoner at the capture of Perseus, was put to death by Augustus his estate of course being forfeited. This catastrophe which happened when the poet was young did not prevent his acquiring the patronage of Maecenas and Galba and among the poets of his day he was very intimate with Ovid and Tibullus. The time of his death is not recorded but it is usually placed BC 10. Of this poet there are a few books of elegies remaining in which respect of composition he was an imitator of the Grecian Callimachus and he has always been ranked among the most eminent of the Latin elegists. Inferior to Tibullus in tenderness, and to Ovid in variety he is more learned various and ornamented than the former and certainly gave the first specimen of the poetical epistle, which Ovid afterwards claimed as his own invention. The works of this poet have been printed with almost all the editions of Tibullus and Catullus, and also separately by Brouckhausen, 4to Amsterdam, 1709; by Valpinius 1735, by Barthius, 1777, by Burmann and Santafius 1780, and by Knochius Leipsic 1860 8vo.—*Crusius, Litterae of the Roman Poets. Fabriani Bibl. Lat.*

PROTAGORAS a Greek philosopher, who was a disciple of Democritus. He was a native of Abdera, and is said to have been a porter before he studied philosophy in which he however became so eminent that he opened a school at Athens. He is principally noted on account of his having incurred the charge of atheism, from the extreme licentiousness of his public discourses, and being banished from Athens, he went to Ephesus, and afterwards took a voyage to Sicily in the course of which he died but in what year is not known. He belonged to the Eleatic sect of philosophers, and he flourished BC 422.—*Stanley's Hist. of Philos.*—*Eng. Hist.*

PROTOGENES a famous ancient painter, was a native of Canea in Crete, a city subject to Rhodes, and had flourished about three centuries before Christ. —The early part of his life was passed in obscurity, but his merit coming

to the knowledge of Apelles, that artist resorted to jealousy, encouraged him in every way. This violent jealous story of the two artifices, which these two artists became suspected. Apelles having invaded at Rhodes, went to the house of Protagenes, who was from Crete. Being asked by the servant what colour he would leave, he took a pencil, and drew a coloured line of extreme thinness upon a board, and bid her show that to her master. Protagenes, on his return drew within it another coloured line and again went out. Apelles renewed his visit, and with a third colour divided this line by so fine a stroke that it was impossible to subdivide it. Protagenes was then convinced that it was Apelles, and hastened to meet him. On the siege of Rhodes by Demetrios Poliorcetes, Protagenes is said to have continued tranquilly working at his house in the suburbs and being asked by Demetrios why he ventured to remain without the walls of the city he answered, that he well knew that the king was at war with the Rhodians but not with the arts, with which answer Demetrios was so pleased that he gave him a guard for his protection. Protagenes was also a sculptor and his bronze figures were much esteemed. He wrote two books on design and painting.—*Plut. Hist. Nat. Dat. Pittor. Attic.*

PROYART (*Larivain Bonaventurier*) a French historical writer born in 1743 in the province of Artois. After having finished his studies in the seminary of St Louis at Paris, he adopted the ecclesiastical profession, and devoted his time to public instruction. For a long while he discharged the functions of sub-principal of the college of Louis le Grand and he was afterwards employed to organize the college of Fay which under his direction, became one of the most flourishing schools in the kingdom. At the commencement of the Revolution, the abbé Proyart, who had obtained a canonry in the cathedral of Arras was deprived of his preferment, and obliged to emigrate to the Netherlands. He returned to France on the conclusion of the concordat and on the publication of his work entitled

Louis XVI et ses Vertus aux Prises avec la Perverrité de son Siècle. Paris 1803 5 vols. 8vo he was arrested and confined in the Bastille. Being attacked with dropsy on the chest, his friends procured leave for him to be transferred to the seminary of Arras, where he died March 22 1808. His works are numerous, amounting to 17 vols. 8vo, and including "Histoire de Lorraine, Kakougo, et autres Royaumes d'Afrique," 1776, "La Vie du Dauphin Père de Louis XV" 1783, "Histoire de Stanislas, Roi de Pologne, Duc de Lorraine et de Bar" 1784 and "La Vie de Marie Léocadie, Reine de France."—*Bibl. Nost. des Contemp.*—*Eng. Hist.*

PRUDENTIUS, or **CLEMENTS PRIMI**, **DENTIUS AURELIUS** a Spanish poet, soldier, and judge of the foreign country. He was born at Saragossa about the year 340, and being a Christian, began in his fifty-seventh year to write devotional poems, which, how-

Gren admissus, and their Summary. "A short account of the progress of the writings, from 1660 to 1680," 1680; that of "Dover, and Kent," 1687; that of "Sheffield, and the Peak," 1688; that of "Derby, and the Peak," 1689; and that of "Nottinghamshire, and the Peak," 1690, etc. The author's "History of the English Revolution" was published in 1690, and "The History of the English Revolution" in 1691, and "The History of the English Revolution" in 1692, but the date of 1690 is given in the "Preface." *Congr.*

PRTYGE (WILLIAM), a Cheshire antiquary, who travelled and collected materials in Cheshire, and elsewhere, in the first century. He was the author of a work entitled, "Minesotogia Cheshirensis," 1710, folio, relating to the subterraneous riches of the country which he inhabited, and of "An Antiquity Coram-Britannica, or an Essay to preserve the Ancient Cymric Language," 1730, &c. Among the materials which he had collected for the improvement of the latter treatise was a curious relic of British antiquity consisting of five plays or interludes in the old Cornish dialect, founded on the scripture history of Jesus Christ. An account of these productions was published in the *Archæologia*, by Davies Harrington, and they are now preserved in the British Museum.—*Medieval Register for 1779 Beg Univ.*

PRYNNE (WILLIAM) a learned lawyer and antiquary was born of a good family at Swanswick in Somersetshire in 1600. After an elementary education at the grammar-school at Bath, he was placed at Oriel college, Oxford where he remained, until he graduated B.A. in 1620. He then removed to Lincoln-s-man to study the law, and became barrister beucher and reader of that society. His attendance upon the lectures of Dr Preston, a distinguished man, strongly attracted him to that sect, and he began to write books in the spirit of his party so early as 1637 successively attacking the drinking of healths, love locks, popery and Arminianism, all which he deemed the enormities of the age. About the close of 1638 he published, in a hundred spirit, his elaborate work against theatrical exhibitions, entitled "Histrio-Mastix," which book although it caused by archbishop Abbot's chaplain, in consequence of some reflections upon female actors that were construed to be levelled at the queen (who had acted in a pastoral after the publication of the work) brought a persecution upon the author in the star-chamber. The sentence pronounced upon him affords a memorable instance of the oppressive spirit of that arbitrary tribunal which condemned him to a fine of 5 000*l.*, to be expelled the university of Oxford, and Lincoln-s-man, to be de graded and disbarred from his profession of the law, to stand twice in the pillory, loosing an ear each time, and to remain a prisoner for life. All this was inflicted with rigour, chiefly at the instigation of Laud, who revenged in the affairs of Arminianism and episcopacy. Prynne bore his sufferings with extraordinary fortitude, and continued writing against prelacy in prison, until, for a silent piece, entitled "Newes from Ipswich," he was again sentenced by the star-chamber to a fine of 5 000*l.*, to lose the remainder of his ears in the

pillory which he suffered to such effect that the author of *The Histrio-Mastix* died before he was removed for transportation to Guernsey, thence, and afterwards to the island of Jersey. His spirit was not, however, to be subdued, and he continued to write until the middle of December 1650, when, being chosen representative for Newport in Cornwall, the house of commons issued an order for his release. He returned home, with other sufferers, in "unlawful" processions, and petitioned the Commons for damages against his persecutors. On the impeachment of Laud, he was employed as chief manager of the prosecution and when the parliament became victorious was appointed one of the visitors to the university of Oxford where he laboured strenuously to advance the cause of presbyterianism. He warmly opposed the independents when they acquired ascendancy and used all his influence to produce an accommodation with the king being one of the members who were excluded and imprisoned on that account. He afterwards became a bitter enemy to Cromwell, who confined him more than once. With the other excluded members he resumed his seat in 1659 and displayed so much zeal for the Restoration that general Monk was obliged to check his impetuosity. He sat in the healing parliament as member for Bath and on the Restoration was appointed to the office of chief keeper of the records in the Tower. He was likewise made one of the commissioners for appeals, and for regulating the exchequer. He laudably occupied his later years in writings connected with his office in the Tower and finished his laborious life at his chambers in Lincoln-s-man in 1669. He was a man of extensive learning and indefatigable industry, but wanted genius and judgment. His works of which Wood has given a catalogue amount to 40 vols. folio and 8vo, the most valuable of which is his "Collection of Records," 3 vols. folio. As a man he possessed the ungovernable zeal, party spirit and personal chafefesteness which were not uncommon during that eventful period, and although of an unassumable temper he must be respected as an undaunted assertor of liberty, and a conspicuous sufferer in its cause.—*Bug Brit. Huds. Granger.*

PRZIPOCOVIUS (SAMUEL) a Polish knight and distinguished writer among the Unitarians of the seventeenth century, was descended from a noble family, and born about the year 1592. He studied at Altdorf until his adherence to unitarian doctrines obliged him to remove to Leyden. On his return to Poland, he was advanced to several posts of honour and made use of his influence to encourage the propagation of his own opinions, and the establishment of unitarian churches throughout Poland. Their flourishing state induced him to compose a "History of the Unitarian Churches in Poland"; but his work was lost during the persecutions which they afterwards suffered. On these reverses he himself procured an asylum with the elector of

Hanoverian, who gave him the appointment of professorship, in 1763 a syndic of universities. In 1765 he employed him to conduct the correspondence with their brethren in other nations, the object of which was to advance their mutual purposes. He died in 1770 at the age of seventy-eight, just as the elector of Hanoverian, at the instance of the sovereign of Prussia, had against his own inclination, was about to banish him from his dominions. The works of Francesco, which are very numerous, were collected in one volume folio, in 1692, and may be considered as the seventh volume of the collection, entitled "Bibliotheca Fratrum Polonicae." —*Life prefixed to Works.* Francesco's *Life of Rousseau.*

PSALMANAZAR (Groves) assumed the name of a man of letters, who is chiefly known as a literary impostor. He was born of Catholic parents, in the south of France, in 1679. His mother being abandoned by her husband, sent her son to a school kept by some Franciscan friars in the neighbourhood of the place where she lived, and he was afterwards placed in a college of the jesuits. He then studied among the Dominicans and having finished his education, he acted as a private tutor. Leaving his situation, he engaged in several adventures, and at length, having stolen from a church where it had been dedicated, the habit of a pilgrim, he roved about in that character subsisting on charity. Afterwards he descended to the condition of a common vagrant, and then became servant to the keeper of a tavern, whose house he left clandestinely and renewing his wandering mode of life he conceived the project of professing himself to be a Japanese convert to Christianity who had found his way to Europe. As he did not find this scheme very profitable, he adopted the more romantic character of a heathen native of the island of Formosa, and in order to support his pretensions he contrived a new language which he called the Formosan. At this time he became acquainted with a clergyman named Imes who was chaplain to a Scotch officer in Flanders. Psalmanazar for that was the name he now adopted, was not able to impose on this person, but Mr. Imes, conceiving he could turn the imposture to good account, persuaded the pretended Formosan to suffer himself to be converted to the church of England, which being agreed to the clergyman and his new disciple went to London, where the latter was presented to Dr. Bishop Compton, Dr. Gibson and others and the former was rewarded for his zeal with church preferment. Psalmanazar had the daring audacity to translate the Church Catechism into his newly-invented Formosan language, and he published a history of Formosa, which, favored by the guillibity of the public, passed through two editions. In the meantime he was sent to study at Oxford, and a controversy was carried on between his patron and Dr. Halley, Dr. Mead, and some other less credulous persons, who had from the beginning refused to admit his pretensions. The imposture at length became clearly ac-

knowledged, and the culprit deserted by those whom he had deceived, then returned to France, the fair outcome of his course being no support. He settled in London, where he resided many years, and was much employed by the booksellers, particularly in the history part of the "Universal History" published in 1747. Towards the close of his life, he drew up an autobiographical memoir in which he exposes much contortion for the deception which he had allowed himself to practice till death took place in 1763. (London's *Govt. Biog. Eng. Usq.*)

PSELLUS (Michael) a Greek writer of the eleventh century was tutor to Michael, the son of the emperor Constantine IX. He wrote in a variety of branches, theological, legal, mathematical, medical, and political and his works are highly eulogized. On the de-thronement of his pupil in 1078 by Nicephorus Botaneiates he was sent to a monastery where he died the same year. He wrote "De Virtutis Ratione," "Dialogus de Energia et Operatione Deitatis," "De Sanctissima Trinitate, cum Cyrillo contra Nestorianos," "Paraphrase in Cantica Caeciliae," "Ex opere Legionis Versibus Grecis," "Compendium quatuor Artium a. de quatuor Mathematicis Scientiis." —*Voss. Hist. Grec. Bibliog. Diet.*

PTOLEMY (Claudius) a celebrated astronomer, mathematician and philosopher of antiquity born at Pella in Egypt about the year 70 of the Christian era. Although subsequent discoveries have overthrown his solar system, the basis of which was the revolution of the sun round the earth as its centre yet it is impossible to deny him the praise of being a bold and original thinker far superior both in intellect and acute reasoning to most of his predecessors. As a geographer his merits are undisputed and many of his observations appear to have been the result of a personal knowledge of the countries he describes. With music as a science his acquaintance was familiar and extensive although his writings on the subject are in parts unintelligible to modern comprehension. For this science indeed he betrays a degree of passionate fondness amounting to absolute enthusiasm, and disposes with very little ceremony of the opinions of all former writers who treat of it. Of eight different forms of the diatonic scale, however which he gives us (three of which he himself lays claim to) but one is at all compatible with modern ideas. His *Treatise on Harmonics* was printed at Oxford, in 1652 by Dr. Wallis who executed his task with great learning and industry. An edition of his geographical works appeared at Basel in 4to in 1553 and at Amsterdam, in folio 1618 while his "Magna Constructio" a compilation from anterior writers on astronomical subjects was long held in especial esteem by the medieval astrologers and adepts of the middle ages under its name of "Almagestum," so called from its Arabic version. There is a Latin translation of this work. In Ms. * Bodl.

monies." He accepted and exhibited the action
of the government of the republic, and his
whole opposition of the nobility, though
numerous, is, in "the History of Europe,"
described as having been of small
size, while he had an opportunity in the
service of Maximilian Philibert, Duke of
Mantua, Marquis of Monferrat.

PUFFENDORF (ISAAC), so named from the
complexity of which he wrote a native German
university law at Helmstedt in the last days of
the republic, but having exhibited a taste for
literature, joined to considerable poetic talent,
was recommended by his master and sent to
Italy, where he became a dramatist. Of his writings
for the stage, which were of that de-
scription of comic pieces then known by the
name of "Minnes," none have survived the
losses of time. A collection of his "Moral
Sentences" has been more fortunate, and was printed
towards the close of the sixteenth century
under the superintendence of the learned
John Grotius. He is said to have been an
especial favourite with the first Caesar and to
have reached the zenith of his reputation
something less than half a century before the
birth of Christ.—*Vestit. Post. Laz.*

PUFFENDORFF (SAMUEL) a celebrated
German professor and writer on history and
jurisprudence. He was born in 1631 at a
village near Chemnitz, in Misnia, where his
father was minister. He received his education
at the universities of Leipzig and Jena, after which he engaged in the office of private
tutor in the family of the Swedish resident
at the court of Copenhagen. War took place
between Sweden and Denmark and on the
siege of Copenhagen, in 1657, the Swedish envoy
with all his suite were committed to close custody
while in prison Puffendorff employed him
self in writing his "Elementa Jurisprudentiae
Universae" which he published at the Hague
in 1660, with a dedication to Charles Louis,
the elector palatine. That prince soon after
appointed him professor of the law of nature
and of nations, in the university of Heidelberg
where he remained till 1668 when he re-
moved to a similar station in the then newly
founded university of Lund in Sweden.
There in 1678 he published his capital
work, "De Jure Naturae et Gentium" etc. in
which he improved on the speculations of
Grotius; and as he opposed the prevailing
ethical doctrine of the schoolmen he met
with many antagonists, but the value of this
treatise has been long since acknowledged,
and it has even been eulogized by pope Innocent
XI. The king of Sweden, Charles XI,
nominated Puffendorff a royal counsellor,
and made him his historiographer when
he produced his commentaries, "De Rebus
Reformatis sive Gustavo Adolfo usque
ad Revolutionem Suecicam, et ad Regem a
Carolo Gustavo gestis," &c. etc. Owing
to the credit he obtained by this work, he
was invited to Berlin, whence he went in
1690, to write the life of the great elector of
Brandenburg, Frederick William, in prose

terms of which he was honoured with the
title of an "honoured privy counsellor." In
1694 he was called to the dignity of a count
of Branden; and he was solicited by the emperor
Leopold I to visit Vienna, and become
the imperial historiographer, but he declined
accepting the proposal; and his death took
place October 30, in the year above men-
tioned. Puffendorff was the author of several
works besides those already noticed, among
which the most important are, "Compendium
Historiae et Civitatis;" and his "Introduction
to the History of Europe." The latter
has been translated into English and published
in one volume, and afterwards with additions,
in two volumes, octavo, and it has also been
extended in French into a body of universal history
of which the most complete edition is that of Paris, 1753, 8 vols. etc entitled "Introduction
à l' Histoire de l' Univers, par Puffendorff
augmentée et continuée par De Gruy." The
Treatise on the Law of Nature and Nations,
was translated into English by Basil Kennett,
1703, 8vo, and several times reprinted, and
it subsequently appeared, with the notes and
prefatory discourse of Barbeyras translated
by Carew 1749 folio.—Morel. *Soll. Introd.*
in Hist. Lat. Biog. Uni.

PUJOULX (JOHN BAPTIST) an ingenious
French writer born in 1762 at Saint Macaire
in Gauinne. He went to Paris when young
and acquired the reputation of taste and intel-
ligence by the articles which he furnished to
periodical works. He became a contributor to
the *Journal de Littérature Française et Etrangère*, published at Deux Ponts, and he composed
for different theatres a great number of dramatic pieces, which were well re-
ceived. Taking no part in politics, he escaped
molestation during the reign of terror and
in the latter part of his life he was much oc-
cupied with the study of natural history and
philosophy. He was engaged in several literary
undertakings among which were the

Journal de l' Empire, and the *Biographies Universelle*. He died at Paris, April 17
1821. A list of his numerous dramatic and other works may be found in the annexed au-
thorities.—*Biog. Nouv. des Contemp. Biog.
Uni.*

PULCI (LUDOVICO) an Italian poet, born at
Florence in 1431 of whose life little is known
except that he was upon intimate terms with
Lorenzo de Medici and Angelo Poliziano.
His principal work is a poem entitled "Morgante
Maggone" written at the instigation of
Lorenzo the mother of Lorenzo painted
at Venice in 1468. It has been doubted
whether this or the Orlando Innamorato of
Boiardo was first written but it is certain
that the latter was not published until 1496,
and it may therefore be justly considered as the
prototype of Ariosto's Orlando Furioso. The
admirations of the "Morgante" have been ex-
travagant in their praise, as its opponents have
been violent in their censure. It displays
much poetical fire and invention, and purity of
style; but at the same time is so unadorned
and rough, as to be tedious to a modern

written. He wrote also a book with explanatory notes upon the *Liber de laudibus Medicorum*. A singular translation of it, by Maffeo Franco, was printed in "The Library," from which its contents may be well understood. The best edition is that of Paris, with the date London, 1568. An enlarged issue with three printed poems of Luigi Piochi and three burlesque sonnets, written in conjunction with Maffeo Franco. These poems were published together, under the title of "Sonetti di Maffeo Maffeo Franco a Luigi Piochi pesci a facci, che de ridere." He had two brothers, also poets. FRANCESCO was the author of a translation of the *Elegiacs* of Virgil, of a poem on Christ's passion, and of two elegies upon Counte de' Medici and the beautiful Giannetta. LUCA wrote a pastoral romance, entitled "Dridesse d'Amore," an epic romance, the first of the kind that appeared in Italy, entitled "Il Cittifico Calvano," stanzae on the tournament of Lorenzo de' Medici parties, &c.—*Roses a Lovato de' Medici Threshold.*

PULLEN or PULLUS (Roxas) an English cardinal of the twelfth century is supposed to have been a native of Oxfordshire. He studied at Paris, and in 1130 he returned to England, where he contributed to the restoration of the university of Oxford neglected since, ravaged by the Danes. He spared no pains for the diffusion of learning among the British youth and for five years he publicly read the Scriptures which had been neglected in England and in reward he was presented to the archdeaconry of Rochester. After this he returned to Paris and became professor of divinity, but he was recalled by his metropolitan and the revenues of his benefice sequestered until he obeyed the summons, but on appealing to the see of Rome, he gained a decision in his favour. He was invited to Rome and was created cardinal by Celestine II and afterwards chancellor of the Roman church by pope Lucius II. He died about 1150. His only work now extant is his "Septuaginta Liber Parus" 1155 which though somewhat obscure, possesses much judgment, and contrary to the custom of the time, he prefers the authority of reason and the Scriptures to the testimony of the fathers, or the subtlety of metaphysics.—*Dugda. Cast. Leland. Fuller's Worthies.*

PULTENEY (RICHARD) an ingenious physician and botanist born at Longborough in Leicestershire in 1730. He was educated for the medical profession and settled as a surgeon at Leicester, devoting his leisure to scientific inquiries. In 1759 he published in the Philosophical Transactions "An Account of some rare Plants found in Leicestershire;" and the following year "Observations upon the Sleep of Plants, with an Account of that Faculty, Linnaeus calls Vigilia Flora, and an Examination of several Plants, which are subject to that Law." In 1768 he was chosen a fellow of the Royal Society, and he there recommended "A Case of a Man whose Hand was anointed to a very unctuous Ointment." He took the degree of MD at the university of Edinburgh in 1764 when he de-

livered a "Discourse on the Improvement of the English Physician, and particularly of the Physician in Diseases, which are practised as permanent during the continuance of his life." In 1774 he published "A General View of the Writings of Linnaeus," this is said in 1790 appeared his posthumous work, "Historical and Biographical Sketches of the Progress of Botany in England, from the Origin of the Introduction of the Linnaean System," 2 vol. 8vo. He also was the editor of seven papers in the London Medical Journal, and the *Memoirs of the Medical Society*. His death took place October 13, 1801.—*Hill's Cyclop. Biog. Univ.*

PULTENEY (WILLIAM) and of Bath, an English statesman who distinguished himself as the political antagonist of sir Robert Walpole. He was descended from an ancient family and was born in 1688. After receiving part of his education at Westminster school, he became a student of Christchurch, Oxford; and when queen Anne made a visit to the university he addressed to her majesty a complimentary speech on the occasion. After having travelled abroad he returned to his native country to devote himself to politics, and being chosen a member of the house of Commons he joined the party of the whigs, in the later years of the reign of Anne. Under George I he obtained a seat at the council board and was made secretary at war. A dispute with sir Robert Walpole caused his removal to the ranks of the opposition when he joined lord Houghton in conducting an anti-ministerial journal, called "The Craftsman." In 1731 he fought a bloodless duel with lord Hervey which gave offence to the king, who removed Mr Pulteney from the office of privy counsellor, which he had hitherto held, and also from the commission of the peace. These and other marks of displeasure of his majesty at his advisers, only served to increase the popularity of this leader of the opposition, who at length succeeded in procuring the resignation of his rival, Walpole in 1741. The party with which he had acted then came into power and he was himself raised to the peerage by the title of earl of Bath. From that period his favour with the people entirely ceased, and he became more completely the object of public contempt than perhaps any other political leader of his time. His death took place June 8, 1764.—*Biog. Peerage.*

PURBACH or PURBACHIUS (Grazia) a learned German of the fifteenth century so named from the place of his nativity. He was born in 1463, and received his education at Vienna where he distinguished himself both as a good mathematician and a sound classical scholar. He rose to be mathematics professor in the university belonging to that capital; and the science of his day received several improvements theoretical as well as practical, especially as far as respects cases of instruments, and the construction of useful tables in trigonometry, &c. He was one of the best astronomers of his day, and had six

P-U-R

about a translation of Ptolemy's "Almagestum," from the Arabic version, but was prevented by death from completing it. He was also the author of a treatise, entitled "A Theory of the Planets." His death took place in 1661.—*Hawes's Mus. Dir.*

PURCELL (NICHOLAS) an English musical composer of first-rate skill and eminence. He was the son of an able musician and gentleman of the chapel royal, of the same name who dying in 1664, left him an orphan in his ninth year. He was admitted at an early age a chorister in the king's chapel, where he studied music under captain Cook and his successor Pelham Humphrey, and afterwards completed his education under doctor Blow who was so proud of his scholar that at his death his friends thought it worthy of being inscribed on the monument of the deceased, that he was 'Master to the famous Mr Henry Purcell.' In 1676 when only eighteen years old, he obtained the situation of organist to Westminster abbey, and six years afterwards succeeded Dr Edward Law in a similar capacity at the chapel royal St James's. From this period his fame seems to have increased with a rapidity proportioned to his merit, his anthems and church music in general being especially popular in all the cathedrals of the kingdom. Nor were his compositions for the stage and music room less successful no other vocal music being listened to with pleasure in this country comparatively speaking, till the rise of Handel nearly thirty years after his decease. The valuable powers of his genius embraced every species of composition with equal facility, and with respect to chamber music all prior productions seem to have been at once and totally superseded. Of his numerous compositions his celebrated

"Te Deum" and "Jubilate" have been erroneously supposed, by Tudway and others to have been written for the opening of new St Paul's, although the author did not live to see the building finished, the fact however appears, from a copy preserved in the library of Christchurch, Oxford, to have been that they were composed for the celebration of St Cecilia a day 1694. Among his other works of a sacred nature are three full and six verse anthems, to be found in Dr Boyce's collection, a which serves in the key of B flat, with eight anthems preserved in the British museum, and Hyams, Psalms, Motets &c of a singularly sublime cast, in a manuscript bequeathed by deas Aldrich to Christchurch library. Of these the "Te Deum" was constantly performed at St Paul's on the feast of the sons of the clergy, till it was superseded by that of Handel written on the occasion of the peace of Utrecht, which in its turn yielded to that for the victory at Dettingen by the same composer, which still maintains its ground and consequently forms a part of the solemnity on the occasion. Of his instrumental music a collection was published two years after his decease, by Francis Purcell, his executors containing sets in four parts for two violins, tenor and base. Few of his songs appear to have been printed

P-U-R

during his life, but many of them were published afterwards by his widow, under the title of "Orpheus Britannicus." "Ye twixten hundred Dances," contained in this collection, is considered the finest piece of recitative in the language, while his music in "King Arthur" has maintained its popularity unshaken above a century. In 1695, the year of his death, he set to music "Bonduca," and "The Prophetess," an opera altered by Dryden from Beaumont and Fletcher, and, besides the works already enumerated he was the author of a vast variety of Catches Rounds, Glees &c. not less remarkable for their melody than for their spirit, humour and originality. The works of no musical composer were perhaps ever more congenial with the national taste of this country which displayed its gratitude by a monument erected to his honour in Westminster abbey. His death took place November 21 1695.—**DANIEL PURCELL** his younger brother was also a musician but of far inferior reputation. He was organist of Magdalene college Oxford, and composed an opera entitled "Brutus of Alba" as well as another called "The Grove or Love's Paradise." His fame however rests principally on his character as the most facetious punster of his day, and many specimens of this kind of wit are attributed to him in the jest books of the period.—*Burney's Hist. of Mus.*

PURCHAS (SAMUEL) an English divine was born in 1577 at Thaxted in Essex. He was educated at Cambridge where he took the degree of BD. His principal work was entitled "Purchas his Pilgrimage or Relation of the World," 5 vols folio, which was well received, and with Hakluyt's Voyages led the way to all other collections of the same kind, and have been much valued and esteemed. He also wrote "Macrocosmos, or the History of Man" 8vo, "The King's Tower and Triumphal Arch of London." Mr Purchas was rector of St Martin's in Ludgate and chaplain to Abbot, archbishop of Canterbury. He died in London in 1628.—His son **SAMUEL**, wrote "A Theatre of Political Flying Insects" 1657 A copy of the Pilgrim of Purchas is now deemed very valuable.—*Eng. Brit.*

PURVER (ANTHONY) a native of Hampshire who distinguished himself by a translation of the Bible. He was born in low life, and was apprenticed to a shoemaker being afterwards employed as a shepherd being found leisure for study to which he was excited by the perusal of a tract in which some inaccuracies in the authorised version of the Bible were pointed out. He then endeavoured to acquire a knowledge of the Hebrew, Greek, and Latin languages, which he did with very little assistance, and having settled at Andover as a schoolmaster, he completed a translation of the Old and New Testaments into English, which work was published at the expence of Dr Fothergill in 1765 8 vols. folio. As the production of a self-educated scholar, it deserves considerable approbation the author having ge

nearly succeeded in giving a more literal translation of the Scriptures than those who preceded him. He belonged to the sect of the Quakers, among whom he was an occasional preacher. His death took place in August 1777.—*Chalmers's Biog. Diet.*

PUTERANUS (Enricus) or Vander Putten, a learned writer was born at Vanloo in 1574. He went to Italy and became professor of rhetoric at Milan, and historiographer to the king of Spain and was made a citizen of Rome. He returned to Louvain and succeeded Lapius as professor of belles lettres. He was also counsellor to the archduke Albert, and governor of the citadel of Louvain where he died in 1646. His works are "Statuta Belli et Pacis," "Historia Insularum," "Orchestra Burgundica," "Theatrum Historiarum Imperatorum," "Cosmographia de Luxe Sonnum," "De Usu Bibliothecae Ambrosianae &c."—*Bayle. Moreri. & Sans. Onomast.*

PUTTENHAM (Grono) an English poet was born about 1530 and educated at Oxford. He distinguished himself in the court of Edward VI by an eclogue entitled "Elpine." He then made one or two tours on the continent and on his return he became one of the gentlemen pensioners of queen Elizabeth. The only pieces of his extant are "The Art of Poeme" and "The Parthenades," the latter of which was presented to queen Elizabeth as a new year's gift in 1579. "The Art of Poeme" proves the soundness of his judgment, and his candour as a critic and is a curious and entertaining work. It was reprinted by Haslewood in 1811.—*Cæsara Lit. Warton's Hist. of Poetry Gent. Mag.*

PUTNAM (Israæl), a major general in the service of the United States of America born at Salem in the province of Massachusetts about 1713. He was principally noted for his daring courage which he displayed in a singular combat with a wolf in 1739. He was at that time a farmer residing at Pomfret in Connecticut, and his flocks as well as those of his neighbours, being terribly thinned by the ravages of a monstrous she wolf Putnam with a few associates traced the ferocious animal to her den which was a deep cavern in a rock into that place he crept alone with a torch in one hand and a musket in the other and at the utmost personal risk destroyed the creature according to some accounts by strangling her in his arms, after he had wounded her. In the war with France in 1755 he obtained the command of a company, and he served in the expedition against Ticonderoga in the following year. He was afterwards taken prisoner and conveyed to Montreal, but was released on peace taking place when he retired to his farm. On the commencement of hostilities between this country and the colonies he joined a regiment, and soon was appointed a major-general in which capacity he commanded at the battle of Bunker's-hill. He was afterwards employed at New York Philadelphie and various other places, where he maintained a reputation as a bold and skilful officer. His conduct urged him to retire from the

service, and he died in 1790, much regretted by his fellow-citizens.—*Biog. Nouv. des Cons.*

PUTTER (John Swarck) an eminent German writer on history and national policy, who was a native of Isenrode in Westphalia. His father was a merchant, and he studied at Marburg, Halle and Jena, whence he removed again to Marburg in 1742. In 1744 he commenced his academical career, by a course of lectures on the history of the empire &c and in 1746 he became professor at Göttingen. In 1763 he went to Gotha, to deliver lectures to the hereditary prince, in consequence of which he was introduced to the great Frederick of Prussia, and in 1764 on the election of Joseph II as king of the Romans, this learned professor was appointed counsellor to the Hanoverian legation at Frankfort. He was offered the title of sole counsellor at Vienna in 1766 but nothing could induce him to leave Göttingen where he obtained the office of dean of the faculty of jurisprudence in 1797 on the death of Boehmer. He died August 12 1807 at the age of eighty two. His principal works are "Institutiones Juris Publici Germanici," "A Sketch of the History of Germany," "An Historical Developement of the Constitution of the Germanic Empire" which was translated into English by Dr Dornford and published in 3 vols 8vo 1790, "An Essay toward an Academical History of the learned Men belonging to the University of Göttingen," "The Literature of German Public Law," and his "Autobiography"—*Biog. Upss.*

PUY (du) There were several learned and ingenious French writers of this name whose family was connected by the ties of consanguinity with that of the celebrated Thuanus. Of these CLAUDE DU PUY an advocate of some eminence had three sons PIERRE born in 1512 at Agen followed the profession of his father became keeper of the royal library and a counsellor to the king in which capacity he contended for the civil privileges of the sovereign in the bishoprics of Mœts Verdun &c. and published a treatise on the French laws respecting succession to the crown. He was also a sound antiquarian and besides an edition of Thuanus, which he superintended was the author of a variety of valuable works on subjects connected with politics and history. The principal of these are "A Treatise on the Rights and Liberties of the Gallican Church" folio 3 vols. "Historical Remarks on certain Events in French History the Condemnation of the Knights Templars, the Schism of Avignon, &c 4to," "A History of the principal Favourites &c," "On the Majority of the Kings of France Regencies, &c." He died in 1551 and is highly complimented for his talents by Voltaire.—*Chauzier* the second brother took holy orders, and is known as the publisher of Perronneau. He survived his brother Pierre about three years.—JACQUES the third brother was also an ecclesiastic and obtained the priory of St Saviour's. He was the author of a Glossary to the names in the history of his kinsman De

There, and died in 1652.—LUCAS DE PUY, descended of the same family, was born in 1702 at Bayeux, and becoming lieutenants to the prince de Condé, published under the name of Lucas de Segur, a translation of the tragedy of Sophocles. He was also for many years editor of the *Journal des Savans*, and the author of a treatise on criticism, besides many philosophical papers in the *Transactions of the Academy of Sciences*, of which he was a member.—*Bibl. Grec.*

PUY-SEGUR (JANVIER DE CHASTREIN lord of) the name of two celebrated French commanders, father and son. The elder descended of a noble family of Aragon, was born in the commencement of the seventeenth century and entering the army at an early age, served forty-three campaigns, in the course of which he was present in thirty battles, and assisted at a hundred and twenty sieges, yet such was his good fortune, that though he always exposed his person with becoming bravery he never once received a wound. On retiring from the service he amused his leisure hours by compiling his own memoirs, which appeared at Paris about eight years after his decease and are remarkable for their accuracy as well as interest. They embrace a period of more than forty years extending from 1617 to 1658. He enjoyed the rank of lieutenant-general and died in 1682 at his estate in the neighbourhood of Guste.—His son, born in 1655 was also an excellent officer and rose to the dignity of a marshall of France. He was the author of a treatise on tactics, which went through two editions, the first of which was in folio, the latter printed in two quarto volumes appeared five years after his death, which took place in 1745.—*Nouv. Dict. Hist.*

PUZOS (NICHOLAS) a celebrated accoucheur born at Paris in 1686. He was the son of an army surgeon and after having gone through a course of philosophy at the university of Paris, he served in the military hospitals, made several campaigns, and arrived at the rank of assistant surgeon-major. He afterwards settled at Paris, and devoted himself to the obstetrical branch of his profession. Becoming one of the first members of the Academy of Surgery he was, in 1741 made a vice-director and soon after director. The office of censor royal for books on surgery was conferred on him on the death of Petit and in 1751 the king gave him letters of nobility. He died June 7 1758. Puzos was chiefly eminent as a practitioner; but he was also the author of a valuable memoir on Hemorrhages, in the *Transactions of the Academy of Surgery* and of "Traité des Accouchemens, contenant des Observations importantes pour la Pratique de cet Art," published posthumously Puzos 1759 &c.—*Bibl. Grec.*

PYE (HARRY JAMES) an ingenious English writer born in London 1745, and educated at Magdalen college, Oxford, where he graduated LL.D. in 1773. On quitting the university he obtained a commission in the Royal militia, his family being connected with

that country which at a subsequent period he became a candidate to represent in parliament; but on his election after an expensive contest, Mr Pye was the author of a great variety of poetical pieces, the principal of which are an heroic poem, entitled 'Alfred; Facing-don Hill'; 'The Progress of Reformers', 'The Aristocrat,' 'The Democrat' and four volumes of miscellaneous poetry besides translations from Homer, Pindar, Anacreon, Burger &c. together with several Birth-day Odes written in his capacity of poet-laureat. To this situation he was appointed in 1796, and two years afterwards obtained that of stipendiary magistrate of police, both which he filled till his death in 1813.—*Ann. Eng.*

PYLE (THOMAS) a learned and able polymath of the last century a native of Sondes in the county of Norfolk born 1674. From Caues college, Cambridge, he removed on the completion of his university education, to King & Lynn, and having taken holy orders became minister of a chapel there distinguishing himself both by his eloquence in the pulpit and the exemplary tenor of his life. Bishop Headly presented him at length with a stall in Salisbury cathedral, as consequence of the talents and zeal which he displayed in the celebrated Bangorian controversy and in 1732 his revenues were further increased by the addition of the vicarage of St Margaret's at Lynn. He was the author of valuable Paraphrases of the Old Testament, and of the Epistles contained in the New as well as of the Acts and Revelations, which have gone through several editions. Two years after his decease which took place in 1755, his son Philip Pyle prebendary of Winchester published a collection of upwards of sixty of his father's sermons, in three 8vo volumes.—*Bog. Brit.*

PYM (JOHN) a noted parliamentarian in the reign of Charles I. was descended of a good family in Somersetshire where he was born in 1584. He was educated at Pembroke college, Oxford, whence he removed to one of the mns of court, and was called to the bar and placed as a clerk in the exchequer. He was early elected member of parliament for Tavstock in the reign of James I. and in 1626 was one of the managers of the articles of impeachment against the duke of Buckingham. He was also a great opposer of Arminianism, being himself strongly attached to Calvinistic principles. In 1659 he with several other commoners and lords held a close correspondence with the commissioners sent to London by the Scottish covenanters, and in the parliament of 1640 he was one of the most active and leading members. On the meeting of the next or long parliament, he made an able and elaborate speech on grievances, and impeached the earl of Strafford, at whose trial he was one of the managers of the house of Commons. It was the zeal and earnestness of Pym which caused Charles to the imprudent measure of coming to the parliament in person, to seize him and four other members. Nothing intimidated, he remained firm in the interests of parliament, but

thought it necessary some time before his death, to draw up a defense of his conduct, which leaves it doubtful what part he would have taken had he lived until hostilities commenced. In November, 1643, he was appointed lieutenant of the ordnance, and would probably have risen to greater distinction, had he not died of an imposthume in his bowels December 8, 1643. The abilities of this parliamentary leader are acknowledged on all sides; nor does there appear any solid reason to impeach his integrity in what he deemed a conscientious discharge of his duty beyond the imputations and surmises of the opposing party which as may be seen in Clarendon amount to little beyond rumour, and the inference drawn from the fact of his dying rich.—*Clarendon's Hist. of Rebellion.* —*Marshall's Fox-Sermon.* —*Burke's Lives.*

PYNAKER (ANAM) an eminent Dutch painter was born at Pynaker in Holland in 1611. He went to Rome for improvement and became a distinguished landscape painter. His management of light and shade, liveliness of colouring and architectural embellishments are much admired. He died in 1673. His small pictures are most valued.—*Fetherstonha's Dict.*

PYNSON (Bartholomew) a printer, was born in Normandy, but was naturalized in England by the patent of Henry VII whose printer he became. He was the first who introduced the Roman letters into this country and he was eminently successful in his publications, which consist chiefly of law books. He is supposed to have died about 1549.—*Dibdin's Typographical Antiquities.*

PYRRHO an eminent Greek philosopher and founder of the sect of Pyrrhonists, or sceptics, was the son of Phistarchus, of the city of Elea, in the Peloponnesus. He flourished about the 110th Olympiad or BC 340 and applied himself first to painting but aspiring to philosophy, became the disciple of Anaxarchus, whom he accompanied to India in the train of Alexander the Great. Here he made himself acquainted with the opinions of the Brahmins Gymnosophists, and Magi from whom he imbibed whatever seemed favourable to his own natural disposition for doubting. As he advanced in this career he gradually arrived at the conclusion that all is to be doubted and nothing affirmed and formed a new school to establish the principle that every thing is involved in uncertainty. According to Diogenes Laertius he carried his principles to a ridiculous extreme even in common life but the respect paid to him by ancient writers makes it probable that these stories were mere calumnies of the Stoicks his opponents, especially as he was highly esteemed by his countrymen, and after his death the Athenians honoured his memory with a statue. He died about BC 288 in the nineteenth year of his age. The scepticism of Pyrrho is in a great measure ascribed to his early acquaintance with the system of Democritus, and strong distaste for the endless strife of the dogmatists. He left no writings

behind him, but the tenets of his school may be collected from the "Pyrrhone Hypothecae" of Sextus Empiricus.—*Sig. Antioch.* —*Broder's Hist. Philos.* —*Augst.*

PYRRHUS, king of Epirus, one of the most celebrated warlords of antiquity, supposed to be descended from Achilleus, was the son of Xanthes, driven from his kingdom by a revolt. By the assistance of Glaphis, king of Illyria, he recovered his father's kingdom at the age of twelve, but was expelled by his great-uncle Neoptolemus after he had occupied it five years. He returned to his brother-in-law, Demetrios Poliorcetes, and greatly distinguished himself as a warrior at the battle of Ipsus, BC 301. At length, by the assistance of Ptolemy, king of Egypt, he recovered his throne and immediately commenced the career of restless ambition, in which his whole future life was occupied. Of his various expeditions, that with the Roman republie occupies the most distinguished place in history. On this occasion he acted at the head of a general Greek confederacy which determined to assist the Tarentines against the Romans. Leaving his son regent of Epirus, he landed in Italy BC 280 with an army of 25 000 men including 7 000 of the veteran troops of Alexander with a number of war elephants. The course of this eventful war belongs to history, of which is illustrative of the great military abilities of the contending parties, and the rising loftiness of the Romans; it forms a splendid portion. When obliged to return from Italy Pyrrhus gladly seized a pretext to retire to Sicily where he entered into a similar contest with the Carthaginians, and with a like final result. A second expedition to Italy and Sicily, after much arduous and spirited warfare ended very much like the former. Attacks upon Sparta and Argos followed in the latter of which this restless, but accomplished warrior was struck from his horse by a tile thrown at him from the top of a house by an Argive woman and killed while he lay stunned senseless from the blow. Pyrrhus, who was regarded as the greatest captain of his day was unhappily one of those leaders who love war for its own sake. The Romans entertained the highest opinion of his military skill, and Hannibal is said to have placed him next to Alexander. He has been accounted the first who perfectly understood the art of encamping and of drawing up an army, and several volumes which he wrote upon the subject are mentioned by the ancients. He was fond of glory and personally brave even to rashness but his faults, both of ambition and love of war, were counterbalanced by a generous nature which disposed him to acts of kindness, and the performance of many courteous and benevolent actions. —*Plutarch.* —*Uss. Hist.*

PYTHAGORAS the first of the ancient sages who assumed the original ancient title of philosopher, and the founder of the Italian school. The date of his birth is contested, but the most probable era assigned is BC 569. His father Mnesarchus, was an engineer of

PYT

Samos, who travelled with his wife into Phoenicia, where, in the town of Sidon, Pythagoras was born. He was subsequently brought to Samos, where his first master was Crophidas, and he afterwards received instructions from Pherecydes, in the island of Sceyns, whence, it is asserted, that he went to Milesia, and conversed with Thales, who recommended him to visit Egypt. He was received in the latter country with great kindness by Amasis, its king; and he remained there twenty-five years, during which time he became deeply versed in the science and mysteies of the Egyptian priesthood. From Egypt he is said by many writers both Pagan and Christian, to have visited the East; but this is contradicted by the express authority of Antiphon, quoted by Porphyry, which states that he returned directly from Egypt to Ionia, and opened a school at Samos, which, after a while, he quitted, disgusted, as it is said, with the tyranny of Polycrates. Be the motive what it may he passed over into that part of Italy denominated Magna Graecia, and settled at Crotona, a city in the bay of Tarentum, where he opened a school with great success. He also taught his doctrine in many other cities of Magna Graecia, as well as in other parts of Italy and obtained numerous disciples, who held him in a degree of respect little short of adoration. At the same time, as he was a strenuous political reformer and urged the inhabitants, not only of Crotona, but of several other places, to assert their rights and resist the encroachments of their rulers, he raised a powerful opposition against himself, which ultimately led to his destruction. Among the most vicious and powerful of his enemies was Cylon, a wealthy leader of Crotona, whom he refused to enrol among his disciples in revenge for which repulse, the latter surrounded the house in which the Pythagoreans were assembled with a body of adherents, and brutally set it on fire. By this wicked outrage about forty persons lost their lives, but Pythagoras, not being present escaped. After the commissioning of an act of this kind with impunity he deemed it expedient to withdraw, and endeavoured to obtain an asylum among the Locrans, who would not allow him to reside in their country and he returned to Metapontum. Here also finding himself surrounded with enemies, he took refuge in the temple of the Muses, where not being able to procure the necessary supply of food, he is said to have perished with hunger at the age of eighty. The particulars concerning Pythagoras are mixed with incredible fictions and extravagant tales of the wildest description, the propagation of which, there is strong reason to suspect, that he himself promoted. His supernatural pretensions were numerous and extraordinary, and could only originate in the arts of imposture. Such were his pretended adventures in the cave of Crete, his assumption of the character of Apollo and assertion that his soul had lived in the bodies of several persons of preceding ages, whom he specified by name. We must refer to our authorities for an adequate account

P.Y.T

of the doctrines of Pythagoras, who, as we find from the tradition of the Egyptian priests, subjected his pupils to a strict course of discipline. They were in the first instance enjoined a silence of five years, in which they were only to listen, and even afterwards they were to talk with great moderation. They were also obliged to give up their fortunes to the common stock, and to abstain from certain articles of food, and especially beans, with the greatest scrupulosity. In the way of communication he adopted the symbolic plan of the Egyptians, in which veiled manner he treated of God and the human soul, and delivered a vast number of precepts relating to the conduct of life, political as well as civil. He also made considerable advances in the arts and sciences. In arithmetic, the common multiplication-table is to this day called Pythagorean and in geometry he discovered many theorems, and particularly the famous one that in every right-angled triangle the square of the largest side is equal to the sum of the squares of the two shorter ones for which discovery he made a solemn sacrifice. In astronomy, also, he made considerable progress, and even maintained some thing respecting the true system of the world, which places the sun in the centre a science established by Copernicus and Newton. The musical chords are also said to have been discovered by Pythagoras, to whom is attributed the invention of the musical canon, or monochord. To show his veneration for the marriage state, this philosopher took a wife at Crotona, by whom he had two sons who assumed the direction of his school on his death. Whether Pythagoras left any writings behind him has been doubted by the ancients, but the soundest opinions are against the authenticity of several which have been attributed to him. The 'Golden Verses,' which pass under his name, are supposed to have been written either by Pythagoras or Empedocles. Notwithstanding the high encomiums bestowed upon this philosopher, Brucker is of opinion that he owed much of his celebrity to imposture but merited as this stricture probably is, the genus was undisputably of the highest order. The sect of Pythagoras subsisted until the end of the reign of Alexander the Great, when it yielded to the influence of the Academy and Lyceum or at least ceased as a society. The 'Golden Verses,' which may be considered as a brief summary of his popular doctrines, were translated by the dramatist Rowe, in 1707, 8vo.—*Dug Laertius Stanley*

PYTHEAS, a celebrated ancient traveller, was a native of Massilia (now Marseilles) a colony of the Phœceans, and flourished in the time of Aristotle and of Alexander the Great. He was sent by his fellow citizens to make discoveries in the North, and explored all the sea-coasts from Cadiz to Thule, *i.e.* a strait. His principal work, 'The Towns of the North,' is not extant, and has been lost by Polybius and Strabo; but fabulous, while other geographers have confirmed his observations, *s. v. Fenni; Hist. Grec.; Gætæniæ; Geogr. Nat.* &c. *See Del Hes.*
